A FEW CHOICE HEIFERS

sired by a well bred son of

King Tobe Alcartra De Kol

he by King Segis Pontiac Alcartra from the former World's Champion three-year-old, Lady Tobe De Kol, 36.59 lb. butter, 631 lb. milk in 7 days—her dam 31.66 lb.

Will also sell all this year's calves.

Herd under State and Federal Supervision. Prices right.

O. I. MARTIN

Cambridge Springs, Crawford County, Pa.

LOW PRICES ON ACCREDITED STOCK

Heifer calf, born Nov. 12, 1924, well grown and nicely marked.

Dam: Princess Victoria Fayne De Kol. Price, \$50.

Heifer calf, born April 15, 1925. Dam: Queen Francine Pietertje, 535.5 lb. milk, 23.05 lb. butter in 7 days as a four-year-old. Price, \$50.

Heifer calf, born April 11, 1925. Dam: Pauline Victoria Johanna Led. Price, \$35.

ALL THREE FOR \$125

Choice Bull Calves \$25 each. One born March 2, 1925. Dam: A granddaughter of King of the Pontiacs.

One born April 13, 1925. Dam: A daughter of the 23-lb. cow, Queen Francine Pietertje.

KING MADALINE BUTTER BOY, a champion show bull whose four nearest dams average 27.42 lb. butter, heads this ACCREDITED herd and these calves are by him.

GLENN C. GERMAN

ALLEGANY CO. CUBA, NEW YORK

SHOW RING PRIZE WINNERS

Our herd is not only locally noted for individuality but also for production. The milk tests range from 3.5% to 4.2% fat.

This herd is headed by

KING SADIE VALE HENGERSVELD ORMSBY

a grandson of King Korndyke Sadie Vale and Sir Veeman Hengersveld. His dam produced 1,085.6 lb. butter, 24,050 lb. milk in a year.

Let us price you some good ones.

C. F. GILES

Apalachin

Tioga Co., N. Y.

INKA VEEMAN ARTIS

613.0 lb. milk, 29.46 lb. butter at 4 yr., 2 mo., 17 days

655.4 lb. milk, 31.82 lb. butter at 5 yr., 3 mo., 29 days

583.9 lb. milk, 31.20 lb. butter at 6 yr., 4 mo., 17 days

Bred, Raised, Developed and Tested on

RO-AN FARM

also the home of her dam, her daughters, sisters and a number of granddaughters.

This ACCREDITED herd has passed THREE CLEAN Tests and has never housed a reactor.

At the head of RO-AN herd is the splendid bull

ROYAL JOHANNA KORNDYKE

whose daughters are making a splendid showing in official, long-time and C. T. A. work.

Let me price a few good ones to you.

ROY W. CHAMBERLAIN

OUR JUNIOR HERD SIRE

He is by the great sire, King Hengerveld Hartje and from Fawn Beauty De Kol, a cow that averaged in this herd over 90 lb. milk a day for two weeks. Her individuality, like that of her son's will please you.

Cows in this herd make a splendid showing in C.T.A. work.

The herd is under State and Federal Supervision and passed the last test CLEAN.

Will sell Cows, Heifers or Calves. Our stock will please.

RAYMOND D. STRICKLAND

Nicholson, R. D. Susquehanna Co., Pa.

BURKE COLANTHA CANARY LADY

85 lb. milk in a day, 23 lb. butter in 7 days. Bred, raised, developed and tested in this herd.

Note her size, individuality, apparent constitution and capacity.

Others like her in my ACCREDITED purebred herd.

Let me show them to you and tell you my low prices.

C. F. GRIDLEY,

Candor, Tioga County, New York.

PROFITABLE IN THE HANDS OF ANY PRACTICAL FARMER

1918		1921
1919		1922
1920		1923

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

No. 11

The Dairy Industry of New Zealand

By Theodore Macklin

NEW ZEALAND'S forty-five year old dairy industry is one of the most progressive in the world, and that it is only in its infancy is proclaimed in that country on every hand. The present area of $6\frac{1}{4}$ million acres devoted to dairy production can be increased ultimately to at least 10 million acres and probably to 12 million. The grass-producing capacity of each acre can be improved through use of fertilizer, and the butterfat yield per cow can be easily increased 50% or more. These lines of increased output are all under energetic development and give promise of doubling New Zealand's dairy output in the next ten years. Persistent improvement in the quality of product is equally evident. Competition from this source, already important, is therefore to be reckoned with increasingly in the world's markets.

Conditions under which production is carried on in New Zealand permit low cost of production. Nature has been exceedingly good to the dairyman in New Zealand. Due to the equable, mild climate, abundant rainfall, and combination of soil, topography and cheaply obtained fertilizer, a large output of butterfat per acre is realized without the strenuous effort required in continental regions of the corresponding latitude in the Northern Hemisphere. Twelve months of pasturage for cattle is the rule, and investment in barns is not required. Due largely to the conditions just described and to the wide-spread adoption of the milking machine, no dairy country has forged ahead so rapidly in quantity of milk produced per individual farm.

At present about one-half of the cows are milked by machinery. The milking machine has come to stay in New Zealand and is doing there for the dairyman what the binder has done for the wheat grower in the United States. The machine was introduced about the same time that it was in America, and the shortage of labor during the war led to its general adoption. A small milk shed is constructed to house the machinery as the cattle are not housed in barns. The milk shed is generally equipped with a four-cow plant. A man and a boy with this equipment can easily handle from 40 to 50 milking cows. Gasoline is commonly used for power, but with the rapid introduction of electricity for rural use, this type of power is becoming popular on account of the cost and convenience. As to the effect of machine milking upon quality of product, much, of course depends on the care with which the machines are tended. As one factory manager put it, "good milking machine practice can deliver the best

quality of milk; bad milking machine practice delivers the worst."

The development of the dairy industry in New Zealand is not likely to be hampered by other agricultural enterprises. Within the dairy sections the summers are too cool and too moist to favor grain growing on a commercial scale, which is discouraged further by the peculiar fitness of the country for highly specialized dairying. Dairy production, therefore, may be expected to continue to develop very rapidly to the limit of the capacity of the country to produce.

That the dairy industry of New Zealand is expanding at a remarkable rate is amply demonstrated by statistics. In 1916, 3,325,078 acres in 20,251 farms produced 157,760,176 pounds of factory made butter and cheese. In 1923, 6,267,597 acres in 38,818 farms produced 316,236,272 pounds of factory made butter and cheese.

New Zealand has rapidly won the place now held in world markets both by quantity and quality of production. New Zealand butter and cheese, once received in small quantity in London, now represent the largest combined import of a dairy products from any country. Moreover, that country has outstripped Canada as a source of cheese supply and is rivalling Denmark as a source of butter supply. That this growth of exports has been a capturing of the London market with New Zealand prices fully maintained in comparison with those for Denmark and Canada indicates that quality competition has been one essential feature of New Zealand's success. In this accomplishment, credit is due to the mutual work of the Dairy Grading System by the Government and of the loyal support it has had, especially from the farmers' coöperative dairy factory organizations and their leaders. The fact must not be overlooked that the population of New Zealand is small (about one-half that of Wisconsin) and that consequently the trend of exportable surplus will bear rather a direct relationship to the trend of production.

The Dairy Produce Control Board has been created by the dairy farmers of New Zealand under special legislative grant. The board as set up, after an overwhelming majority of dairymen, in a referendum, had registered their approval of the idea, comprises nine representatives of dairy producers, two government representatives, and one appointee from the ranks of private middlemen within or close to the dairy industry. The board is vested with power to execute such sales and merchandising policies as it deems expedient and

helpful. In fact, every phase of the movement of dairy produce destined for export falls within the jurisdiction of the board and its marketing authority. The first activity of the board has been to send a committee of three to the markets in which New Zealand produce is shipped, in order to ascertain all facts and conditions preparatory to exercising any judgment as to what action might wisely be taken. Starting out from the Dominion on April 15, 1924, the three Control Board members assigned to this research spent nearly nine months in vigorous work in Canada, the United States, Great Britain, Denmark, Switzerland and elsewhere. They returned to New Zealand during the fore part of January, 1925, and held the first executive meeting of the full Board to consider the findings on January 28, 1925. As to further activities of the Board along sales or merchandising lines, it is known now simply that provision has been made for absolute control of marketing to be assumed by the Control Board on August 1, 1926.

At least three definite accomplishments by the Board, any one of which would justify its existence, have increased its popularity with the dairy producers. These are the contracts reducing ocean freight and insurance rates on butter and cheese and the research work which has made possible greatly increased understanding of overseas markets and marketing conditions. Through this information, dairymen are becoming for the first time really concerned over a problem not of making but of selling butter and cheese to advantage, a problem overlooked during the long period of continually rising prices. The information-gathering and disseminating features of the Board alone justify its creation and maintenance.

When interest on investment or value of land is taken as a cost, the largest single item in producing butterfat in New Zealand at any particular time may be the annual interest on the value of investment made in the land which any farmer is devoting to dairying. This fact at once makes land values an important consideration in arriving at the individual farmer's cost of butterfat production from his individual standpoint. In 1910 the average prices of dairy farms ranged from approximately \$100 to \$200 per acre. Exceptionally good farms sold up to \$250 and \$325. These, however, represented the upper limit of values. During the boom year of 1919-20 land values mounted on a wave of speculation raising them in cases to \$625 and in exceptions to \$1,000 an acre. The ordinary price during this period was from \$225 to \$425 an acre. In 1924, after most of the over valuation had been squeezed out by lower prices for butterfat and by readjusted mortgage valuations, where foreclosures or bankruptcies had not occurred, land values had settled to (at prevailing exchange) \$133 to \$266 per acre. Only the exceptional farm was considered worth much more than \$354 for actual farming where fourteen years earlier half that figure was near the upper limit.

Upon the conservative estimate of 48 cents butterfat per pound of butter in Wisconsin, New Zealand costs of 32 cents a pound are only two-thirds as great. Yet this New Zealand cost is based on land values which are now one-half greater than in Wisconsin.

Increased world competition in butter and cheese is

being met by New Zealand dairy producers through their coöperative factories representing 89.5 per cent of all the factories which, with the aid of the National Dairy Association and the New Zealand Produce Control Board, are preparing to raise the lower limit for first grade by two points, making 90 score the dividing line between first and second grade instead of 88 score. In fact, this move is the most important item next to the marketing work of the Dairy Control Board in the platform of progress now being pushed by the leaders of the dairymen of New Zealand. It is a move made possible by the general appreciation of the Government Grading System, and by the general application that quality butter and cheese is the only basis by which better merchandising may be made to win even more satisfactory prices.

In order to guarantee high quality products, New Zealand dairy producers are going still farther. They are grading a rapidly increasing proportion of the raw materials from which these products are made and they are paying for quality. Farmers are paid good prices for high quality and discouraging prices for low grade milk and cream. In fact, the poorest in quality is often rejected by a factory, with the assurance due to effective agreements that no other factory will accept this rejected article. By this means New Zealand dairymen expect further to strengthen their position in the dairy markets of the world.

A Comprehensive Program

A FIVE YEAR program for the development of agriculture within the state of Virginia has been worked out by the Agricultural Advisory Council of that State and the various committees have comprehensively covered the field and have laid out an ambitious program for Virginia farmers to follow. In August, 1923, committees were appointed composed of representatives from various organizations and institutions were appointed, each to deal with a specific subject in which they were proficient. After a number of preliminary meetings a special meeting of chairmen and secretaries of the committees was held in March, 1924, at which time the preliminary reports were made. These reports were gone over carefully and suggestions given. After more work on them by the sub-committees they were submitted in August 1924, to a full meeting of the State Agricultural Advisory Council and were unanimously adopted. They are now published in a book of 104 pages so that the information is available to all Virginia agriculturists. Some idea of the scope of the work can be obtained from a perusal of the article "Virginia as a Dairy State" published in this issue which is part of the report of the committee on dairying. This committee made a number of recommendations some of which we will have occasion to refer to in subsequent issues, in fact we intend to keep this book handy as an encyclopedia of Virginia farming objectives.

Congressman Byrns of Tennessee recently referred to the "unavoidable savings in governmental costs." Lead us to 'em.

The Delegate Convention at Grand Rapids

MONDAY at Grand Rapids Convention was a day of getting together. In the afternoon, Joseph Brewer, the electric light magnate of the city, entertained nearly 200 Holsteiners.

After the guests looked over the herd at his establishment, Blythefield Farms, they had a buffet luncheon at the Blythefield Farms Country Club, which Mr. Brewer now owns.

Besides music, the entertainment consisted of two boxing matches of six and eight rounds respectively in which the lads were well matched. Then came a free-for-all in which five husky darkies participated, all getting in the ring together and punching any head they could. This was the cause of considerable excitement as well as amusement. Busses conveyed the visitors to and from Blythefield.

The first official meeting was held in the auditorium of the Hotel Pantlind, Tuesday morning. M. W. Wentworth, president of the Michigan State Association introduced the Mayor of Grand Rapids, Elvin Swarthout, who welcomed the delegates and friends in a brief speech.

President Lowden said it was impossible to have any one stage of agriculture prosperous unless all were. Agriculture must be balanced. Industrial conditions were not long prosperous unless agriculture was also. Organization was needed in the farming industry.

Complete harmony has existed during the past year between the officers and directors. The falling off in registrations, if of inferior animals, may be for the future benefit of the breed. Now prices are down is the time for the young man to start.

Ex-President A. A. Hartshorn said that while destructive criticism tended to destroy, constructive criticism helps build. He believed in organization and coöperation.

Mr. Hartshorn said production and type must both be kept in mind by all breeders. He thought the True Type models gave the idea that a good animal was symmetrical, outside and inside when the truth was a good cow was angular in form. The model showed a cow fitted and just ready to freshen. It should show one in everyday condition.

The Director of Extension Work read an article on the Extension Service in which he suggested a central sales agency to be financed by commissions paid by sellers. He partially reviewed his official report and suggested that extension plans should be made for a term of years.

Recess was then taken until 1:30.

Earl Cooper, Calf Club Leader, told how he and the association worked with the county agents and club leaders to interest boys and girls in Holstein cattle.

W. B. Baird of Waukesha, Wis., asked that C. M. Long tell of the plan used to market Holstein milk in Milwaukee last year.

Mr. Long said the milk tested from 3.2% to 3.5% averaging 3.35%, was pasturized and sold under White Nectar label. Young ladies visited homes and told of feeding value of Holstein milk. About 50% of the pros-

pects tried it out and a permanent trade of 800 quarts was built in six months. High mark was 1,200 quarts daily. Certified milk sold at 25 cents per quart, grade A at 14 cents and common milk at 11 cents.

J. E. McWilliams, of the Detroit Creamery Co., said in fifteen years their business grew from nothing to 3,500 quarts daily. In six years their trade for strictly Holstein milk grew from a case daily to 2,500 quarts at 25 cents a quart without spending a dollar for advertising. Their other supply was 60% Holstein, 40% Channel Island type.

Mr. Oldham, who has been drawing a salary as secretary of the Wisconsin Breeders Association and Mr. Bigler, who has occupied a similar position in the state of New York, went on record as being in favor of drawing money from the Reserve Fund to use for advertising purposes.

G. D. Brill, Jamesburg, N. J., said that in some parts of New Jersey, purebred Holsteins brought little more than grades.

Frank W. Durbin, of Salem, Ore., retails milk from Holstein cows and sells at a premium over the product of fifteen Jersey dairies. He praised the work of Mr. Meyer, their former fieldman.

Tom Pemberton, of Greensboro, N. C., said his state required 3.25% fat test, 8.5% solids not fat which law was brought about by doctors in the Department of Health.

Frank S. Walker, of Woodberry Forest, Va., said that in his state the Guernsey dairies could not stand the competition of the black and white dairies.

Mr. Woods, of Oregon, urged the employment of a western fieldman.

John B. Irwin, of Minneapolis, said he was successfully marketing a 4% Holstein milk.

H. W. Allyn, of Byron, Ill., said that the Certified Milk Commission at their recent Atlantic City meeting came very near forbidding milk standardization.

Mr. Hatch, of Iowana Farms; Frank Morris, of California; J. V. Hopkins, of West Virginia and F. N. Strickler, of Rhode Island, spoke along the lines of milk marketing.

The meeting adjourned until 10 a. m., Wednesday and for a trip to Maryland Farms.

The business session of the delegate convention was called to order by President Lowden at 10.15 Wednesday morning.

H. W. Norton, Jr., Lansing, Mich., of the Credentials Committee reported 133 delegates present. After roll call the reading of the minutes of the last meeting was waived. The secretary read an impressive memorial to the late Wing R. Smith, treasurer for twenty-eight years. Reports of the Auditor, Finance Committee, Superintendent of Advanced Registry, Secretary, Extension Service Committee, Prize Committee and Director of Extension Service were received and placed on file.

The resolution, "There shall be created within the Advanced Registry system referred to in Section 1, a division of Cow Testing Association records. All records recorded in this division shall be known as Cow

Testing Association records and subject to the rules and regulations prescribed by the Board of Directors," proposed by C. M. Long, before the Richmond Convention was brought to the attention of the present meeting. The committee appointed at Richmond reported against the resolution.

Judge Peasley, of the By-Law Committee recommended that the resolution offered by Prof. H. H. Wing, of Ithaca, N. Y., that "cows should be admitted to Advance Registration only on an official record of seven days or a semi-official record of 305 days, and that no record of an animal on semi-official test should be received in which the animal had been milked more than three times a day after the 30th day after calving," should be now adopted. Prof. Wing spoke in its favor urging a simple classification of records. Colonel G. Watson French, of Davenport, Ia., and A. A. Hartshorn spoke in its favor while Fred Field, Floyd Stevens, Frank Walker and J. P. Riordan, spoke against it. Prof. Wing moved that this resolution be laid on the table for a year but was voted down. The resolution was defeated without a roll call.

A full page resolution calling for an expenditure of \$50,000.00 annually for three years for milk advertising purposes was offered as a substitute for the resolution offered by Tom Pemberton, of Greensboro, N. C., Judge Peasley spoke against this on the grounds that the delegates had not an opportunity to study the proposal. L. L. Oldham, Fred Field, J. B. Irwin and Chas. Bigler spoke in its favor. James A. Reynolds said this would mean drawing at least \$50,000 annually from the Reserve Fund. W. S. Kellogg, Prof. Yapp and Charles Wertheimer spoke against the adoption urging that it is largely a matter of individual action.

H. V. Noyes, of Kenwood, N. Y., said that in 1914 the Association was worth \$101,000. (*We may add that for the official year ending April 30, 1919, before the present management took charge of the association, the total assets of the association was \$367,251.26 and the transfer fee was 25 cents. EDITOR.*) And in 1921 it was worth \$497,000. The association lost \$55,000 in 1922, \$30,000 in 1923, \$50,000 in 1924 and is worth \$362,000 in round figures to-day. Mr. Noyes argued for living within the Association's income as being sound business judgment. The Convention then adjourned one hour for lunch.

When the meeting convened at 1:30 o'clock, Judge Peasley reviewed the substitute milk advertising resolution. He said the program of extension work should be for more than a year. It cost him \$1,300 for advertising the first year to establish a demand for Holstein milk in New Haven. The amount of money available in the association would not be enough to count. The George Stevenson suit may show that the association has no legal right to take on such a project. Kellogg and Miller are not quite sure on this legal point. At the present time the Extension program has not achieved results comparable with the expenditure. After the resolution was made optional instead of mandatory it was passed without dissention.

The By-Law Committee recommended that the resolution proposed by W. H. Mott, of Herington, Kansas, that the Board of Directors provide one centrally located office be discussed by the delegates. The resolu-

tion was seconded by Mr. Field. Judge Peasley said the cost of transacting clerical work in Delavan and Brattleboro against Chicago was as three to five. The resolution was lost by a vote of sixty-one to forty-nine.

On the reading of a letter from Dr. Larson, Chief of the Federal Bureau of Dairying, that after July first the Bureau would discontinue the market milk score card, the resolution proposed by Thomas J. Owens, of Kirkland, Washington, "to petition the Chief of the Bureau of Dairying of the U. S. Department of Agriculture to change the perfect score requirements on the official score card from 4% to 3.5%" was laid on the table.

On motion of Franklin N. Strickland, Providence, R. I., the resolution proposed by him, "That the herd test plan started by the Rhode Island Holstein-Friesian Breeders Association and the Rhode Island State College coöperating be recognized by the Holstein-Friesian Association of America" and

"That the Holstein-Friesian Association of America exempt members of the Rhode Island Holstein-Friesian Breeders Association adopting this plan from the double registration fee now charged for delayed registration, since members of the latter association have voted not to sell any male or female to be registered, unless dam shall have produced the amount of milk specified for her age; and all other animals shall not be registered until following minimum records have been made; two-year-old, 7,500 lb.; three-year-old, 8,500 lb.; four-year-old, 10,000 lb." was changed to one commending the Rhode Island plan. Carried by 49 to 5.

The amendment proposed by H. W. Norton, Jr., Lansing, Mich., "No animal shall be eligible for registration that is over two years of age at the time the application for registration is made" was dropped after an explanation by Mr. Norton of other breed association practices.

The resolution offered by Chas. Bigler was changed to have the secretary notify, in case of delegates not being able to attend, the next highest on the voting list who shall be delegates in their stead. Carried.

C. W. Newman's resolution proposing that vacancies caused by death or resignation of Directors, should be filled by appointment by the Board of Directors, only until the next delegate meeting when the delegates shall elect a director to fill the unexpired term, was withdrawn.

Mr. Noyes spoke in favor of the amendment proposed by H. W. Allyn, Byron, Ill., "All funds hitherto set aside by the Board of Directors as "reserve" shall not be drawn upon except by a majority vote of all the Directors at any meeting of the Board of Directors of the Association duly called and held," with an amendment of two-thirds of the directors voting in favor. Carried.

Judge Kellogg spoke against Mr. Allyn's amendment to reimburse Committeemen, Officers and Directors not only for traveling and other necessary expenses but to pay for their services on a "per diem basis." Mr. Kellogg said L. L. Oldham's amendments: "That the Board of Directors elect an executive committee of five, to consist of four directors and the vice-president" and

"that the president be the chief executive of the Association, acting in the capacity of general manager," were illegal under New York State laws. After Mr. Oldham talked for some time, he withdrew both.

James A. Reynolds said in ten years \$211,245.17 has been paid for herd books while the receipts were \$59,062.82 or a loss of \$152,182.35. The average cost of a book is now \$13.61. There were only about 1,000 sold of Volume 51 and 500 of Volume 52. Mr. Reynold's amendment that instead of it being mandatory for the association to publish the herd books, blue books and other literature, it be optional, was lost by a big majority.

The amendment offered by A. C. Oosterhuis, Oconomowoc, Wis., "to refund 50 cents for the return of each registration certificate for cancellation" was withdrawn.

A resolution offered by Mr. Norton authorizing refusal to register animals when their dams were less than a year old at a time of breeding was carried by a vote of 72 to 41.

Mr. D. D. Aitken moved appointing a committee consisting of President Lowden, Secretary Houghton, James Reynolds and T. E. Elder to consider the advisability of incorporation in some other state than New York. Carried.

The nominating committee recommended Mr. Lowden for president; Dr. L. M. Thompson, vice-president; Mrs. Ruth McCormick in place of George A. Fox; Harold Stimson in place of E. A. Stuart, who has resigned; and the reelection of the other retiring directors. Carried with the understanding that this was to be the last year for Mr. Lowden.

Des Moines, Iowa, was selected as the place for the next convention. After a rising vote of thanks to the Michigan breeders for their hospitality, the convention adjourned.

How the Indemnity Funds Will Be Used

GOVERNOR PINCHOT approved \$2,099,000 for indemnity purposes for the two year fiscal period beginning June 1, 1925. Of the above amount \$99,000 will be held in reserve for paying glanders indemnity claims. The balance, \$2,000,000 will be distributed as follows:

One-fifth or \$400,000 will be allocated to the various counties, excepting those completely tested by Area Plan, according to cattle population as heretofore, to be used for paying T. B. indemnity claims under the Individual Accredited Herd Plan.

The remaining \$1,600,000 will be used to pay indemnity claims in connection with Area work.

The first installment (of the \$400,000) amounting to \$100,000 to be used in paying indemnity for cattle condemned under the Individual Accredited Herd Plan has been allocated to the various counties as per paragraph 2 above. Additional allocations on the above mentioned cattle population basis will be made as needed so long as the money set aside for Individual Accredited Herd testing is available.

Because of the limited amount of money for defray-

ing operating expenses and the large volume of other work that we shall be obliged to perform, Bureau veterinarians will not be able to apply many tests under the Individual Accredited Plan. Therefore, owners who have filed application under the individual Accredited Plan and desire to test immediately, may do so by employing their own accredited veterinarian, as provided for in Section 13, Paragraph B of the Ac-

DR. T. E. MUNCE,

credited Plan. Each and every such test, however, to be official, must be authorized in writing to the accredited veterinarian from this office.

The Bureau of Animal Industry will continue its present fixed policy for tuberculin testing both herds under the Individual Accredited Plan and Areas, in the order in which they are signed up and qualify for test.

T. E. MUNCE,
Pennsylvania State Veterinarian.

Failure to use milk in sufficient quantity and of pure quality in infancy and early childhood is, in all probability the greatest sin that parents commit against their children. Upon an adequate milk supply the future of the child and of the race is dependent more perhaps than on any other single factor.—Dr. W. S. Rankin.

PRODUCERS AND CHOICE INDIVIDUALS

Remember that this is an Accredited Herd; that the cattle of this entire county, when recently tuberculin tested, passed 99.2% Clean, and that this herd has always been headed by high class bulls.
Can spare a few good ones raised here.

L. S. BROWN
Saegerstown, R. D. 1, Crawford Co., Pa.

Big Times

DUDLEY WATERS, prominent business man of Grand Rapids, royally entertained the delegates and friends, Tuesday at Maryland Farms. The Maryland herd is a very large one and contains some real good cows. Mr. Waters put on a big feed and apparently could not do enough for his guests.

The banquet on Wednesday evening was held in the Grill Room of the Hotel Pantlind. The speakers were Dr. L. M. Thompson, Prof. O. E. Reed of the Michigan State College Dairy Department, Dr. John Howard Kellogg of Battle Creek Sanitarium and S. T. Wood. There were many amusing stunts pulled off and the musical selections by "The Wolverine Four" were appreciated and generously applauded.

President Lowden was made an honorary member of the Goat Feather Gatherers and presented with the insignia of the order, an all day sucker, by the dual toastmasters Jas. G. Hays and Howard C. Rather.

Prof. Reed startled his hearers by denouncing the resolution passed that day at the meeting anent cow testing associations which he said, were doing more for the dairyman than the Advanced Registry was doing for the Holstein breeder. Dr. Kellogg, who spoke to the breeders at the Detroit meeting, said that his talk was not a rehash of the one given at that time but was the latest medical discoveries. He said milk is the most perfect food of the human race, was the real staff of life, protecting the body against bacteria. The Breeder and Dairyman will have more to say about these two addresses in future issues.

Special from Grand Rapids

AN AVERAGE of around \$765 was realized at the sale which was held Thursday on the West Michigan Fair Grounds and was attended by a big crowd. Fifteen animals sold before luncheon averaged \$747, five of these bringing \$1,000 or more. Starlight Veeman Hengerveld, consigned by John C. Butth of Grand Rapids was struck off to E. M. Bayne of Romeo, Mich., for \$1,900.

The \$1,000 mark was reached nine times during the afternoon. The highest price was \$3,700 for King Rose Ormsby, a dark showy bull calf consigned by Hargrove & Arnold and bid off by F. V. Ainger, Jr., of Northville, Mich., who is building a herd and was one of the big purchasers. C. Goodhue of Raymondale Farms, Vaudreuil, Que., bid \$2,800 for Miss Aaggie Johanna Mercedes, a 30-lb. cow bred to Sir Inka May. She is a very handsome animal consigned by the Minnesota Holstein Co.

Most of the animals were in real sale condition. The selling force was Haeger, Mack and Wood. Michigan buyers took a large percentage of the animals.

"The people who have achieved, who have become large, strong, vigorous people, who have reduced their infant mortality, who have the best trades in the world, who have an appreciation of art, literature, and music, and who are progressive in science, and in every activity of human intellect, are the people who have used milk and its products liberally."—Dr. E. V. McCollum.

General Charles W. Wood

GENERAL CHARLES WATSON WOOD, ex-president of the Holstein-Friesian Association of America, Civil War veteran and senior member of the law firm of Wood and Wood, Worcester, Mass., died at his home in Shrewsbury, Mass., on May 14th, aged 80 years. A man of commanding presence, General Wood's ability as a forceful and magnetic speaker brought him in demand as a public orator at gatherings in all parts of the country and earned for him the title of "The greatest living exponent of dairy cattle and pure milk." Although General Wood was a man of affairs in Holstein matters, he viewed them from the angle of the breeder and dairyman and fought for these principles.

Mr. Wood at the time of his death was identified with Mr. Stevenson and others in their efforts to restore the Holstein-Friesian Association and to place it in a position where it can serve the dairy interests.

Friends and members of the Holstein-Friesian fraternity will regret to learn of his passing

Better Cows Beat Tariff

THE Danish farmers are averaging 270 lb. butterfat per cow a year, Minnesota 190 and Wisconsin 192. This is why the Danes can buy mill feeds in Minneapolis and undersell on butter on the Atlantic seaboard. Did you ever ask yourselves just how long butter consumers will stand for a high butter tariff under these conditions? Would they not be entirely within their rights to argue they should not be taxed in order to protect inefficiency of the United States dairymen? What answer can be given if they should ever appear before the Tariff Commission of Congress with this argument?

Better cows on American farms is the only permanent solution of foreign competition. Reliance on tariff protection is courting trouble.—Northwest Farmstead.

There is more ado to interpret interpretations than to interpret the things, and more books upon books than upon all other subjects; we do nothing but comment upon one another.—Montaigne.

There never was in the world two opinions alike, no more than two hairs or two grains; the most universal quality is diversity.—Montaigne.

THE CORBIN SWITCH HOLDER

Why let the old Cow hug you around the neck when you can keep her tail out of mischief by using this handy device.

You can obtain one and the HOLSTEIN BREEDER AND DAIRYMAN two whole years for a Dollar Bill. Better send today and be ready for fly time.

NOT ABOUT COWS

Our Flag

DURING the war, the Flag of the United States was featured everywhere—on the streets, in public buildings, in private homes and on automobiles. Everywhere one saw the American colors. Much of this is now a thing of the past, and on the days when our country's Flag should be displayed, far too few are seen. To all ages, creeds and classes, the American Flag stands as a symbol of past achievement, present glory and future possibilities. As such it should be kept prominently before the public. For some years, June 14 has been widely observed as Flag Day, and as that day draws near, it is not amiss that we should give a little thought to that for which so many have given so much. Most of us know all too little about the Flag which after all we dearly love.

When America first became a nation, there were, in almost every department of public life, so many units to be welded into a whole. This was true in the matter of a flag for the new nation. During the Revolutionary War several different local flags were carried. In 1776, Washington raised over the American camp at Cambridge, the first ensign of the United Colonies, which was known as the Grand Union Flag of 1776. On its blue field, the crosses of St. Andrew and of St. George were combined, and it bore thirteen alternate red and white stripes. After the adoption of the Declaration of Independence, it was felt that a national emblem of union and independence should be chosen, so on June 14, 1777, the following resolution was adopted by Congress:

"Resolved, that the flag of the thirteen United States shall be thirteen stripes, alternate white and red, and that the Union shall be thirteen white stars on a blue field."

The story has come down to us that Mrs. Betsy Ross, of Arch Street, Philadelphia, made the first official flag, and suggested the five pointed stars.

In 1794, Congress ordered that after May 1, 1795, there should be fifteen stripes, the two new ones in honor of Vermont and Kentucky, which had just been added to the Union. However, this did not last, as in 1818 Congress passed an act providing for the addition of a star every time a new state joined the Union, and decreeing that henceforth the number of horizontal stripes should be only thirteen. Each new star is added on the 4th of July following the admission of the state. Thus, once and for all time, the character of the Flag has been fixed.

FLAG RULES

The late war revealed the fact that very few people were sure of the exact rules governing the proper use and display of the flag. Below are given the rules adopted June 14, 1923, by the National Flag Conference.

1. When to display the Flag. The Flag of the United States should be displayed from sunrise to sun-

set on National and State holidays, on historic and special occasions, or as designated by proper authority. It should always be hoisted briskly and lowered slowly and ceremoniously.

2. When carried with other flags, the Flag of the United States is on the right, that is, the Flag's own right, or when there is a line of other flags it may be in the front of the center of that line.

3. When displayed with other flags. When the Flag of the United States is displayed with another flag, against a wall, from crossed staffs, it should be on the observer's left, and its staff should be in front of the other staff. When a number of flags are grouped, the Flag of the United States should be in the center and at the highest point; when other flags are flown on the same halyard, it should be hoisted first. No flag should ever be placed above it.

4. When displayed with flags of other nations. Each flag must be of equal size and flown from staffs of equal height.

5. The Flag on display. If from a staff projecting from a window sill on front of a building, the Union should go to the head of the staff. When not on a staff, it should be displayed first. Whether the stripes are horizontal or vertical, the Union should be uppermost and to the observer's left. It should be fastened by the top only.

6. When hung out of doors. The Flag should be flown from a pole whenever possible. When over the middle of the street, it should be suspended vertically with the Union to the north in an east and west street, and to the east in a north and south street. If from a line stretched from house to tree, the Union should be away from the house.

7. When used on a speaker's platform. The Flag should be displayed above and behind the speaker. It should never be used to cover the speaker's desk, or draped over the front of the platform. If flown from a staff, it should be on the speaker's right.

8. In unveiling a statue or monument. The Flag should not fall to the ground, but be carried aloft forming part of the ceremony.

9. When flown at half staff. The flag is first hoisted briskly to the peak, then lowered, the width of the flag, to the half staff position. Before lowering it for the day, it is raised again to the peak. On May 30th, the Flag is displayed at half staff until noon in honor of the dead, and at full staff from noon until sunset, for the nation lives and the Flag is the symbol of the living nation.

10. When used to cover a casket. The Flag should be placed so that the Union is at the head and over the left shoulder. It should not be lowered into the grave nor allowed to touch the ground. The casket should be carried foot first.

11. When displayed in Church. The Flag should be displayed from a staff, placed on the congregation's

right as they face the clergyman, with any other flag on the left. If the Flag is in the chancel, then it should be on the clergyman's right.

12. Forbidden Uses. The Flag of the United States should never be draped, nor used as a part of a costume, nor may it be used in registered trade marks, nor for advertising.—*Federal Statute.*

13. Worn out flags. When the Flag of the United States becomes worn or soiled, it should be privately and decently destroyed, preferably by burning.

14. Saluting the Flag. When the Flag of the United States is passing in parade, or is being raised or lowered, the spectators should, if walking, halt; if sitting, arise, and stand at attention, facing the Flag. Men's head dress should be removed with the right hand, and held at the left shoulder. Women should salute with the right hand over the heart. Those in uniform should give the right hand salute. If the National Anthem is played, and no Flag is present, all should stand at attention until the last note is played.

15. Where the United States Flag must be displayed (Pennsylvania State Laws). A United States Flag, not less than three feet in length, must be displayed in each school building and upon or near each public school in clement weather, during school hours. A United States Flag, not less than 52x66 inches must be displayed in all places used for public entertainment or gatherings, except places used for public worship.

PLEDGE OF ALLEGIANCE TO THE FLAG

"I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands; one nation, indivisible, with liberty, and justice for all."

The U. S. Junior Judging Team

Three boys from Hardin County, Iowa, will represent the United States at the International Junior Judging Contest in England. They live in Hardin County but are members of the Franklin County Dairy Calf Club. At the county contest they won over twenty-three other lads of their district. Then they went to the Dairy Cattle Congress, at Waterloo, last fall and

successfully competed with nineteen teams for the state championship. There were eighty individual contestants. Raymond Monahan was champion Holstein judge and Harlan Leonard champion Jersey judge.

Through the victory at Waterloo, the boys became the Iowa contestants at the National Dairy Show where they carried off the national championship, competing against state champion teams from nineteen states. At Milwaukee, Leonard was the champion judge of all breeds and Monahan the champion Jersey judge.

Prominent Iowa dairy leaders, state officials and members of the Legislature as well as Governor Hammill took a great interest in the boys and the Iowa Legislature appropriated \$4,000 to pay the expenses of the team and coach, County Agent B. B. Hamilton, and another man. They left from Montreal, May 29th on the Ascania for Liverpool.

The contest will be held during the week of June 6th at the show near London where they will compete for a gold trophy valued at \$250 besides other prizes. They are expected to judge classes of Friesians, Milking Short Horns and one of the Channel Island breeds. The boys will first look over a number of British herds especially Milking Short Horns and Friesians, as the British Friesian type is considerable different to that generally found in this country, being more on the dual purpose order.

In addition to their English trip they will visit Holland, Scotland, France, and the Channel Islands before they return. They will start from Southampton, England, to New York.

Harlan Leonard had finished high school and was on the home farm helping his father. Raymond Monahan was in college working his way through and is said to have started last fall with just \$6 as funds. The other member of the team, Lester Olson, was still in high school. He is the youngest son of a widow who has raised eight boys and girls.

"None but high-producing cows are profitable and the use of purebred sires is the shortest road."

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JUNE 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Millionaire's Spending Capacity vs. Dairyman's Earning Capacity

THE Holstein-Friesian Association's chief source of income is fees paid by the breeders and dairymen. Its expenditures are directed by the Board of Directors made up largely of wealthy men who breed and own purebred Holstein cattle as a hobby. The following figures show the net loss of the Association for the past three years:

In 1922 net loss for the one year	\$38,530.56
In 1923 net loss for the one year	40,896.15
In 1924 net loss for the one year	56,830.63

Total net loss for the past three years .. \$136,257.34

An educational campaign is necessary. Either the breeders and dairymen will have to be educated to earn more money and pay higher fees or the management will have to be educated to conduct the Association's business on a more conservative and economical basis. If the men who paid the fees directed the expenditures, it would result in a satisfactory solution to the problem.

The breeders of Holstein cattle have been pretty good sports. The total increase in the Association's operating expense for the past five years, has been nearly one and one quarter million dollars, to be exact \$1,209,461.18.

This vast sum of money has been paid largely in increased fees. When you consider that the Association has run behind only \$136,259.36 with the lavish spending under the management of the political millionaire dealing element, the breeders and owners of Holstein cattle must be considered pretty plucky. Just think of it, one and one-quarter million dollars increased operating expenses in five years. Is it any wonder the breeders refuse to register and transfer their cattle and contend that the Association is being extravagantly managed?

One and one-quarter million dollars would go a long way toward starting a new association and we

believe there would be considerable left in the treasury to issue transfer certificates free to its members for many many years to come.

For Better or for Worse

WE have repeatedly called our readers' attention to the fact that the Holstein-Friesian Association is being operated as a millionaire club. Of the 16 directors only one could be classed as a breeder and dairyman, the other fifteen directors if they own Holstein cattle at all, are not dependent upon the returns from their dairy for a livelihood.

At the recent annual convention, the personnel of the directors and officers was not changed in a way that would benefit the breeders and dairymen who constitute 90% of the members of the Holstein-Friesian Association, and own 95% of the cattle. The personnel of the Board of Directors was changed, Mr. Fox of Illinois, dropping out and Mrs. Ruth McCormick being elected a director in his stead. E. A. Stuart of Carnation Farms resigned and Harold Stimson, a son of F. S. Stimson, one of the pioneer Holstein breeders of the Pacific Coast, was elected in his place.

Mrs. McCormick is a daughter of former U. S. Senator Mark A. Hanna, of Ohio, and is the widow of the late U. S. Senator Medill McCormick, of Illinois. Mrs. McCormick is a woman of ability, and is prominent both socially and politically, and while she is interested in Holstein cattle, we believe that the personnel of the Board of Directors of the Holstein-Friesian Association should be made up of practical dairymen, men who follow dairying, and the breeding of Holstein cattle as their major business pursuit.

The calamity that has befallen the Holstein-Friesian Association is thought by many breeders to be due largely to the fact that too many men who know little about the profitable or practical side of cattle breeding or dairy farming are dominating the affairs of the Association. There are too many directors and officers of the Association interested in purebred cattle only as a hobby and pastime, and they seemingly have been trying to conduct the affairs of the Association as they would administer the affairs of their pet hobby.

Association affairs should be administered intelligently and in a business-like manner under a business form of government. The Association may be a hobby to a few millionaires, but it is a major business project to 90% of the members who own over 95% of the cattle who breed them and feed them and milk them as their major business pursuit and depend on the returns from their dairy to feed and clothe their family and educate their children.

The dairyman as a class represents one of the most capable, thrifty and progressive class of citizens of America. Their children are not only educated in the rural schools, but receive college training, and go out into the world as helpers and leaders of men. Surely among the dairymen, owners and breeders of purebred Holstein cattle can be found men who are honest and intelligent, and capable of managing the affairs of the breed association that is of such vital importance to the success of their industry.

The members of the Holstein-Friesian Association

have been fed up on propaganda for the past five or six years regarding the ability and national prominence of men serving on the board of directors, yet the affairs of the association under their management seem to be drifting backwards and if we should take a little itinerary from the Atlantic to the Pacific Coast, and visit all the farms that are being operated as a hobby and pastime by the same group of men that are represented on our Board of Directors, we would find in most instances if not in every instance, these farms are being operated at a great loss to their owners. Is it any wonder then, that the affairs of the Holstein-Friesian Association should be drifting backwards? The first requisite that a director of the Holstein-Friesian Association should have is a thorough and practical knowledge of cattle breeding and profitable dairying. With this must be coupled business ability, good judgment and personal integrity. A Board of Directors composed of such men, we believe would pilot the affairs of the Holstein-Friesian Association to a successful destination, on smaller fees and without going into debt.

New York State Laws

AT the annual convention of the Holstein-Friesian Association at Grand Rapids, Michigan, Mr. D. D. Aitken, introduced a resolution providing for the appointment of a committee consisting of President Lowden, Secretary Houghton, Director James A. Reynolds and Director Thomas Elder, to consider the advisability of incorporating the Association in some other state than New York. We believe that the interests of the members of the Association would be better served had a committee been appointed with power to select a board of officers that will comply with and live within the corporation laws of the state of New York, than it would be for the Association to appoint a committee to review the corporation laws of the various states, evidently with a view of finding some state in which the corporation laws are sufficiently lax to permit the high handed methods to prevail in the association's management that are now being questioned in the courts of the state of New York.

A Well Earned Commendation

THE HOLSTEIN BREEDER AND DAIRYMAN acknowledges with thanks the receipt of volume 28 of the Canadian Holstein-Friesian Herdbook. This is a volume of 1,140 pages, bound in uniform style with the preceding volumes. Besides the usual data and the indices this volume contains the list of members, the constitution and by-laws of the Canadian association, reports of committees and a condensed report of the annual meeting held February 5th, this year. Thus the information is available to the breeders within a short time after the volume closes, a commendable example for other breed associations to follow.

The number of animals registered in the Canadian association during 1924 was 18,440, the largest number ever reported the previous record being 16,221 in 1921. The transfers for the year were 13,389, while the number transferred during 1923 was only 11,704. There was

also a gain in membership, 347 being admitted in 1924 against 253 in 1923. In all 62,050 bulls and 130,900 females have been registered by the Canadian association, a grand total of 192,950.

Making the Combination Easier

THE amendment offered by H. W. Allyn of Byron, Ill., to permit the taking of money from the Reserve Fund by a majority vote of the board of directors instead of unanimous vote, was passed after it had been amended by Director Noyes to read by two-thirds vote instead of a majority vote. By the passage of this resolution, it lays the "bars down" so that money can be taken from the Reserve Fund if 12 directors are in favor of such withdrawal and four absolutely opposed.

We are inclined to believe that this resolution was fostered by the desire of those who wish to further raid the Association's Reserve Fund and who have been prevented from doing so by the vote of one or two opposing directors.

The Herd Books

DIRECTOR JAMES A. REYNOLDS in arguing in favor of leaving the matter of printing the herd books annually arbitrary with the Board of Directors, stated that in the last 10 years, \$211,245.17 had been paid for herd books while the receipts from the sale of the books were \$59,062.82 or a loss of \$152,182.35.

Notwithstanding Mr. Reynolds statement, the delegates refused to pass his resolution, evidently feeling that even though the Association had lost over \$152,000.00 in 10 years in the printing of herd books, they would have a few herd books to show for what purpose the money had been expended, while of the \$200,000.00 expended for extension work in a single year, they had practically nothing to show for it but a decrease in the price and demand for cattle.

What Is It?

ONE of the competitors peculiar to agriculture is the rich man who so loves to take part in farming that he knowingly and willingly carries along the venture at a loss. His product comes on the market in competition with that produced hopeful for a profit; likewise, he buys labor and materials in competition, thus stiffening the market for the needful buyer. Evidently, the Commissioner of Revenue of New York regards the rich man's farming venture as a sporting and not a business proposition. Litigation has arisen in that State over the case of a millionaire who reported a loss of \$24,975 in one year's operation of a stock farm. The Commissioner refused to allow the loss, and now the courts are asked to decide what a rich man's stock farm is. It is plain that the Commissioner understands this rich man's farm as a game of chance or a luxury rather than a business venture, as, indeed, it so seems to practical farmers.—*Maryland Farmer.*

The T. B. Eradication Campaign

MORE than ten million cattle are now under veterinary supervision under a nation-wide drive to control bovine tuberculosis. The official list on the status of the work shows that there was up to the first of April:

Cattle under supervision	10,201,492
Cattle in herds successfully passing the first test	6,777,624
Cattle in fully accredited herds	1,187,908
Cattle tested during (March, 1925)	617,810
Cattle reacting to the test during month	19,841
Cattle on waiting list to be tested	3,498,072
Modified accredited counties, recognized as TB free	69

Reports available show unusual interest in tuberculosis eradication on a county-wide basis. In the first three months of the year the number of "modified accredited" counties, those having less than one-half of one percent of the disease, increased from 53 to 69. Veterinary officials of the United States Bureau of Animal Industry consider that such progress is ample proof of the practicability of eventually making entire states modified accredited areas. North Carolina already has thirty counties officially recognized as practically free from bovine tuberculosis.

Eradication of the disease from cattle is the first step in removing the menace of tuberculosis to hogs and poultry. The suppression of infection among livestock aids likewise in the control of human tuberculosis.

Truck Transportation of Farm Products

TRANSPORTATION of farm products by motor trucks has increased tremendously in the last few years, particularly in dairy and livestock regions. Excepting around the cities, this development has not taken away much trade from the railroads. It seems that motor trucks and railway service to farm districts are complementary and not competitive.

Studies of highway transportation made in Baltimore, Cincinnati, Detroit, Indianapolis, Milwaukee,

Philadelphia, St. Paul and Minneapolis showed that in all of these markets, with the exception of Philadelphia and Baltimore, approximately ninety per cent or more of the milk received is transported by motor truck. Baltimore gets 45% of its milk by truck and the proportion there is steadily increasing. Philadelphia's percentage, 20%, is low because the city's large demands necessitate drawing milk from an area outside the economical motor truck radius. Nevertheless, Philadelphia has been getting more and more milk by truck in recent years.

Contrary to the general belief, rates for transporting milk by motor truck are not lower than the rates charged by railroads. Any way, no instance of this kind was found. In some cases the truck rate exceeded the railroad rate. However, the motor truck usually runs to the farm and gives "pick-up" service and always delivers the milk to the city plant. Railroad shipments of milk have to be hauled by farmers to country railroad stations and then hauled by dairy or city milk dealers from the local terminals to the city distributing plants.

Baltimore dealers estimate that terminal handling costs from one-half cent to one cent a gallon, a charge which is eliminated when milk is brought direct to the plant by truck. Figures were obtained from forty-eight shippers who estimated that shipping by truck saved them an aggregate daily road haul of 117.25 miles. Yet it has been found that producers close to railroad stations are not as likely to ship by truck as those who are farther distant.

Agriculture is the most important key to continued prosperity in 1925. The country has emerged from its paralyzing surpluses of farm products. Farm reserves of wheat are 20 per cent less than one year ago. Corn supplies are the smallest in eight years. This has checked livestock outputs and livestock values have turned the corner. World stocks of cotton and wool need replenishing. Many conditions are in the farmer's favor this year.—"Peaks of Business."

THE PRACTICAL DAIRYMAN

BLOODY MILK

Bloody milk is the symptom of any of the following conditions: Mammitis, injury to the udder, hardening or induration, tuberculous infection of the udder, the eating of acrid or irritant feed, or an excessive allowance of protein feed. The operation of milking may also aggravate a tendency to hemorrhage if the udder is injured or inflamed.

Treatment consists in determining the cause, if possible, and in applying remedial measures. The application of the following general treatment may be sufficient to afford relief in mild cases:

Completely milk out the udder at least four times daily, at regular intervals; bathe the udder with cold water, then dry and apply camphorated oil to the quarter with gentle massage; avoid an excessively rich diet; encourage the animal to utilize as bulky a ration as is consistent with her milk production; administer an occasional dose of Epsom salt (about one pound) as needed, also a half ounce of saltpeter once daily. Should the hemorrhage persist, inject several ounces of a sterile 2 per cent tannic acid solution at blood heat into the affected quarter by means of a milking tube attached to a fountain syringe.

Redness of milk which does not appear until several hours after milking is probably due to contamination of the milk with some one of the chromogenic (color-producing) organisms.—Farmers' Bulletin 1422.

EMERGENCY HAY CROPS

Emergency hay crops are the subject of an article by George B. Mortimer, cropsman of the Wisconsin College of Agriculture. He divides the most suitable of these with reference to their seeding time.

Farmers who are seeding their hay crop now can use a combination of oats and peas to good advantage. The mixture is composed of 1½ bushels of oats and 1½ to 2 bushels of field peas. The varieties of peas most often used are the Scotch, Wisconsin Green, and Canada field pea. In seeding this combination, he points out that it is important that the soil is adapted to pea growing. Experiments at the College show that increased yields can be obtained through inoculation of the pea seed before planting.

The other hay crop to be used in case of necessity is the soybean. Again a division needs to be made according to the varieties adapted to various districts. The Manchou, Black

Eye-brow, Mid-west and Medium Early Green are the varieties which the farmers in the southern part of the State are planting.

The Ito San and Wisconsin Early Black varieties are the best to use through the central part of the State, and the Wisconsin Early Black for the northern part. The sand farmers of central Wisconsin find the soy bean crop most satisfactory for hay.

Soy beans are planted at corn planting time. They produce a good yield per acre of palatable hay, if they are inoculated and sown broadcast at the rate of 1¼ to 2 bushel per acre.

STOCK STUNG BY INSECTS

Cattle are more or less liable to the stings of bees, wasps, or hornets while grazing among clover, alfalfa, or other blossoms. The udder is a frequent point of attack because it is not so well protected by hair as other parts of the body, and, on account of its pendulous position, is more readily accessible to the aroused insect. The sting injects beneath the victim's skin an actively poisonous secretion which is highly irritating and which may eventually prove detrimental to the health and life of the skin. Insect stings, when inflicted in sufficient numbers, have been known to produce a severe, nervous depression, or even the death of the victim.

The injured area should be bathed in a 4 per cent solution of ammonia or a potassium permanganate solution. Internal stimulants may be administered in the form of fluid extract of nux vomica, one-half dram, three times daily.—Farmers' Bulletin 1422.

Soiling crops may be fed either in the pasture or in the barn. When feeding in the pasture is practiced, some waste results from tramping and fouling with manure. Feeding in the barn requires more labor but saves feed, and the cows will do better, if kept in the barn in the middle of the day and protected from the flies. Soiling crops are generally cut daily but may be kept over one day by piling in the shade. Soiling crops are usually fed once a day when scattered on pasture and twice per day when fed in barn.

Neverwed—Huggins was best man at your wedding was he not?

Muchwed—He was not. He was merely the luckiest.

PRINCE AAGGIE OF BERYLWOOD

Reported sold for \$110,000. California's grand champion show bull and sire of show stock. Behind him is the highest yearly backing known, his seven nearest dams average in yearly work 1,181.81 lb. butter.

He is the sire of our herd bull BERYLWOOD PRINCE AAGGIE CHICAGO who is siring splendid animals.

Our herd is ACCREDITED and we can supply your need of good cattle.

L. L. ALLIS

Rummerfield, Bradford Co., Pa.

A Healthy Territory!

On April 1, 1925,

89.2% of the herds in Allegany County, New York, were either Accredited or has passed one clean test. More than one third of the cattle and practically one-third of the herds are Accredited.

The following owners of pure-bred Holstein Accredited Herds live close to Cuba, New York, work their own farms and milk their own cows. They offer YOU cattle that will earn a profit for YOU and invite YOU to look over their herds.

Allegany Co., Canadea, N. Y.

CLUB ACTIVITIES

ST. JOSEPH'S VALLEY CLUB

C. L. Reamer, was elected to succeed R. G. Mangus, as president of the St. Joseph Valley Holstein Breeders' Association at a meeting of that organization in the county agent's office, South Bend, Ind., on the evening of May 13th. H. A. Kring was elected vice-president and E. M. Benjamin was made secretary-treasurer.

The new directors of the organization chosen were: Howard N. Folk, Leo Van Hess, L. A. Brandes, E. M. Benjamin and R. G. Mangus.

DOUGLAS COUNTY CLUB REORGANIZED

George Scheckel of Alexandria, Minnesota was elected president at a reorganization of the Douglas County Holstein Breeders' Association. About forty were present and it is planned to hold a picnic in June and a Holstein show at the Douglas County Fair in August.

Besides Mr. Scheckel, other officers and directors elected were: John W. Lund, Alexandria, vice-president; Fred C. Mead, Alexandria, secretary; J. J. Wilkin, Brandon, treasurer; and Anton Eckberg, Brandon, Andres Hasleton, Alexandria, and Theodore Robbins, Corlos, members of the Board.

WALWORTH COUNTY CLUB

The annual meeting of the Walworth County Holstein Association was held the evening of May 15th, at the Court House, Elkhorn, Wis. Although the attendance was not large, considerable business was transacted.

There are about one hundred members of the National Association in Walworth County of which forty-four have joined the county club. The financial report showed there are nearly \$100 in the treasury at the present time.

The election of officers resulted as follows: President, Elmer Palmer, North Geneva; Secretary, Ben Bachhuber, Elkhorn; Treasurer, James Henderson, Elkhorn. A number of committees were elected or appointed and it was decided to hold the fall sale November 18th. This will be about a week before the state sale which this year is held November 24th in the judging pavilion.

WORLD WIDE DAIRY SITUATION

Official reports show five million pounds less butter in cold storage on May 1 than there was on the corresponding date last year and the amount, 3,700,000 lb. is three million pounds below the May first five year average. New butter is already going into storage but the increase is much lower than in 1924, so that there is a possibility that later reports will reveal considerable shortage as compared with last year. Since grass was available both butter and cheese production will run materially heavier than a year ago but influenced to some extent by favorable butter and cheese markets, condensed milk production is lower.

When it comes to prices, it may be said that they have held at levels which many of the trade neither anticipated nor expected could be maintained. There have been and still are differences of opinion as to whether existing levels are safe from the standpoint of storing risks. Butter prices continue to be about 5c higher than a year ago. Cheese prices are about 4c higher, and the tendency has actually been upward during most of May. Despite the sentiment which persists that prices are too high, the production outlook and the fairly good movement of current receipts at markets are factors which have prevented declines.

Diminishing but still considerable shipments especially of butter are now reaching the markets of Europe from the Southern Hemisphere while the surplus from the North are rapidly increasing. The output of Australia and New Zealand

are still important, although inferior stocks of Australian butter are slow of sale in competition with Siberian offerings. Russian butter export authorities are negotiating for business with expectations that the surplus for export during the coming season will be fully double that of last season.

Exceptionally good weather conditions prevailed in Denmark during April and pasturing started early. The market in Germany for Danish butter fell off during April due to increased domestic production.

Canada has increased her production, particularly in the western provinces. Consumption during the past year is estimated to have been 27.55 lb. per capita, or practically the same as in 1923. This left double the quantity for export.

Cheese production decreased by less than one per cent but net exports of cheese increased five per cent.

During the month of April over seventy million pounds butter were imported into the United Kingdom. This easily constitutes a record for any single month. Imports into Germany decreased from over eighteen million to a little over fifteen and a half million pounds due to seasonable increase of production. There are as yet fewer milk cows in Germany than before the war. The prewar figures were 18,474,000 while in 1924 there were, within the present borders 17,296,000.

During April the exports of butter from this country was 430,167 lb. and the imports 789,140 lb. The exports of powdered milk were 204,524 lb. while 3,757,124 lb. condensed milk and 9,489,949 lb. of evaporated milk was sent out of the country. Practically 1,400,000 lb. of condensed, evaporated and powdered milk were imported during April.

GERMANY MAY BUY AMERICAN HOLSTEINS

A possible market in Germany for American bred Holstein dairy sires of good milk producing ancestry is reported by William A. Schoenfield, Agricultural Commissioner representing the United States Department of Agriculture at Berlin.

There were 18,400,000 cows in Germany before the war but in 1924 there were only 17,200,000. This reduction in cows, coincident with an increased demand for dairy products, resulted in imports of 118,000,000 pounds of butter and 95,000,000 pounds of cheese in 1924 as compared with pre-war imports of 111,000,000 pounds of butter and 47,000,000 pounds of cheese. There has also been a considerable increase in imports of fresh and condensed milk.

The German dairy interests are endeavoring to make the increased demands for dairy products by restoring the dairy industry in that country and they are greatly interested in America and American Holsteins as a source of good breeding stock.

THE EFFECT OF PURE FOOD LAWS

Holland has been shipping large quantities of lard to the British markets but beginning June 1st all lard imported into Great Britain must bear a certificate of inspection satisfactory to the Ministry of Health under the pure food laws.

The United States certificate of inspection has been accepted by the Ministry of Health, but Holland has not yet been able to produce an acceptable certificate. Much Dutch lard contains inedible fat. Holland however, is expected to make every effort to bring its goods up to requirement and obtain a satisfactory certificate.

Acting Commercial Attache Mitchell, stationed at London, states the demand for American lard should improve materially. It is expected that this new ruling will have another effect as it will probably reduce the demand in Holland for American inedible fats used in lard manufacture.

Dorcas—I suppose, in your campaign for the state senatorship, you'll go around kissing all the babies in your district.

Philipa—Nope. Old stuff. Babies can't vote. But the men can.

MRS. DWIGHT HAS NEW HERDSIRE

Mrs. Maud Dwight of South Otselic, New York, recently headed her herd with King Ona Aaggie Sunny Side. His sire was by King Ona and was from Aaggie Cornucopia Colantha, 747.2 lb. milk, 33.23 lb. butter in seven days, 25,986.1 lb. milk, 1,135.51 lb. butter in a year. The dam of the new herdsire is Aaggie Queen of Sunny Side. As a five-year-old she produced 33.94 lb. butter, 702.5 lb. milk in seven days; 1,119.40 lb. butter, 27,498.3 lb. milk in 365 days. As a three-year-old she is credited with 1,067.31 lb. butter, 25,384.8 lb. milk in a year. As a junior two-year-old she made a record of 871.70 lb. butter, 20,398.4 lb. milk. Her three records made in three successive lactation periods average 1,019.47 lb. butter, 24,427 lb. milk.

Both Aaggie Queen of Sunny Side and Aaggie Cornucopia Colantha are daughters of Aaggie Cornucopia Paul 2d, a wonderful cow with six daughters that in year work averaged

AAGGIE QUEEN OF SUNNY SIDE

33.94 lb. butter, 702.5 lb. milk in seven days; 1,119.40 lb. butter, 27,498.3 lb. milk in a year. Picture taken as a heifer. She is dam of King Ona Aaggie Sunny Side, now heading the Waldron Herd.

23,553.8 lb. milk, 1,006.33 lb. butter, a showing that is not equalled for either milk or butter by the daughters of any other cow. She is the only cow to have five daughters that have each made over 1,000 lb. butter in a year and the average of these five daughters is 25,366.1 lb. milk, 1,091.41 lb. butter.

The seven day records of the nine nearest dams of King Ona Aaggie Sunnyside average 31.64 lb. butter, 633.4 lb. milk. The record of his three nearest dams tested for a year, average over 1,200 lb. butter and practically 26,750 lb. milk. Mrs. Dwight has certainly got a bull backed by big records.

Mrs. Dwight has sold King Dixie Keyes, her great Canadian bred herdsire to Clyde Sherman of North Pitcher, N. Y.

LOGICAL AND SARCASTIC

At the meeting of the Wisconsin Chamber of Commerce the third week in May, a representative of the Institute of Oleomargarine Manufacturers introduced the following resolution:

"WHEREAS, Beef fat, pork fat, cotton seed oil, peanut oil, coconut oil, milk, salt and butter are wholesome and nutritious foodstuffs which are eaten in one form or another every day; and

"WHEREAS, The combination of one or more of these fats or oils with milk in limitation or semblance of butter is known as Oleomargarine; and

"WHEREAS, There are many poor people who are not able to buy a more expensive palatable spread for their bread than oleomargarine; and

"WHEREAS, There are about \$50,000,000 invested in this industry which produces about 250,000,000 pounds of oleomargarine per annum.

"Resolved, That the Chamber of Commerce of the United States of America deprecates the passage of laws and the efforts to pass laws prohibiting the manufacture and sale of oleomargarine, prohibiting the use of either one or more of the wholesome foodstuffs used in the manufacture of it, taxing it, and taxing merchants who buy and sell it."

The dairy interests were awake to the proposal and a number of organizations filed protest. The protest of The National Dairy Union read as follows:

"It is needless for me to say that the whole dairy industry of the United States will vigorously protest against the adoption of such a resolution by the Chamber of Commerce of the United States.

"For your consideration I would like to present the following companion resolution and ask your action on it:

"WHEREAS, Silver, copper, nickel and tin are substantial and useful metals used in one form or another every day; and

"WHEREAS, The combination of one or more of these metals in imitation or semblance of money is known as counterfeit; and

"WHEREAS, There are many poor people who are not able to secure a sufficient quantity of real money for their daily needs; and

"WHEREAS, There are many millions of dollars invested in the industry of mining and smelting these metals, producing an adequate supply for all needs;

"Resolved, That the Chamber of Commerce of the United States of America deprecates the passage of laws and efforts to pass laws prohibiting the manufacture and use of counterfeit money made from these useful and valuable metals, prohibiting the use of either one or more of these metals in the manufacture of counterfeit money, taxing it, and taxing merchants who accept or disburse it."

"The dairy interests of the United States, representing an investment of not less than \$2,500,000 in dairy cattle, barns, lands, and farm equipment, and of \$315,800,000 in manufacturing capital employed (according to the Census of 1919) would take the same view of your affirmative action on the proposed Oleomargarine resolution that you would expect the banks and bankers to take should you adopt the above document.

"It also may interest you to know that the total capital employed in Oleomargarine production according to the 1919 Census was \$25,000,000 with but 42 plants, and 2,851 employees producing \$80,000,000 worth of products."

Former Secretary of Agriculture E. T. Meredith is one of the directors of the Chamber and he and Carl R. Grey of Omaha were leaders in pointing out that the Chamber should not discriminate against the dairy business with the result that when the resolution committee reported, the oleomargarine resolution was mentioned by name only and was referred to the Board of Directors with a recommendation that directors give this subject very careful study.

DEFINITIONS OF ADVERTISING

Telling others things you won't like them to know.

Speaking to the multitude instead of to a few individuals.

Duplicating your selling-talk in millions of places.

Telling a story in a day that would otherwise take a year.

Giving a national voice to the merit of your product.

Letting everybody know what only a few people know about your product.

Telling the world why you are proud of your goods.

Spreading the news of your product's merit.

Going to the public instead of waiting for them to come to you.

Making your business safe for success.

Sowing the seeds of ideas that grow into sales and goodwill.

Tens of thousands of salesmen in type.

A wholesale reminding to the public of what you have to offer.

Telling again and again the things that the public ought to know.

Recreating in the minds of the public the sales-ideas in your own mind.

Increasing the radius of your success by increasing the radius of your sales-appeal.

Telling the story in writing instead of in person.

A method of multiplied telling of facts that is the most economical.

A means of making personal effort more productive.

SALES MANAGER—PEDIGREE DIRECTOR

THE FREDERICK COUNTY BREEDERS' SALE

On May 21 at the Fair Grounds, Frederick, Md., was held a consignment sale under the auspices of the Frederick County Holstein-Friesian Association. The sale was managed by County Agent P. W. Chichester of Frederick, County Agent W. C. Snarr of Montgomery County and J. Homer Remsberg, secretary of the Association. The cattle were of extra good quality, apparently the sale committee had made careful selections. All the animals were from tested herds, a number of which were accredited. The auctioneer was Col. E. T. Mercer of Mt. Airy, Md., and the pedigrees were explained by N. W. Petersen, superintendent of Mountain View Farm, Germantown, Md.

In all thirty animals were sold for \$5,410, an average of \$180.33. Four bulls under six months old averaged \$207.50; nine mature cows averaged \$269; fifteen females over two years old averaged \$229.32; and ten under two years old averaged \$113.

The highest price was \$430 which Albert L. Luttgerding & Son of Randalstown paid for Crescent Beauty Burke Pontiac, a very handsome show cow, consigned by Chas. Wertheimer. She had a 27 lb. official record and a C. T. A. record of 13,000 lb. milk, 614 lb. butter. Mr. Wertheimer consigned a bull calf from a granddaughter of Rag Apple Korndyke 8th sired by Rolo Pontiac Fayne, son of the world champion, Rolo Mercena De Kol. The Luttgerdings paid \$350 for him.

J. B. Diamond, Jr., consigned two cows which were struck off, one to H. C. Rodger of Hamilton, Va., for \$355 and the other to J. R. Brown & Son of Gapland, Md., for \$325. Both had good C. T. A. records and were very nice animals.

J. V. Rogers of Vineland Farms, Frederick, Md., paid \$200 for the yearling heifer Spring Syke Beauty Korndyke, consigned by the Springfield State Hospital. This very handsome heifer won first prize in her class at the fair held on the same grounds last fall.

Other purchasers were: M. D. Coblenz, J. Homer Remsberg, Middletown; H. Clyde Cullison, Upperco; Thos. F. DeGrange, Mt. Airy; Harry Davis, Monrovia; Frank Doll, H. C. Swomley, Chas. Wertheimer, Frederick; Geo. Droneburg, Milton Nash, Union Bridge; E. M. King, Germantown; A. F. Lambert, New Windsor; A. H. Myers, Thurmont; L. C. Powell, Woodsboro; E. K. Walrath, Ellicott City; R. S. Young, Buck Lodge.

OUR ACCREDITED DAIRY

Study the Size and Type of these cows, note the producing capacity they show, then remember that they are bred to

TRAVERSE ECHO SYLVIA KING

whose dam produced 33.27 lb. butter, 736.4 lb. milk in 7 days and has two daughters each over 32 lb.

We have the kind YOU want and they're accredited, too.

W. B. KENNEDY & SON,
BRADFORD COUNTY, WYALUSING, PA.

THE NORTHFIELD SALE

An average of \$150 per head was realized for sixty-five purebred Holsteins included in the C. E. Ovestrud dispersal and the Northfield Community sale held April 22 at the Northfield Fair Grounds.

Carleton Nona Piebe Segis, a three-year-old granddaughter of Piebe Laura Ollie Homestead King was sold to C. E. Griffith of Big Cabin, Okla., for \$500. She was consigned by Carleton College and has a seven-day record of 29.43 lb. butter. She is now on semi-official test.

Fayne Star Pauline Heilo was struck off for \$450 to Mr. Griffith as was Fayne Star Pauline for \$460.

B. F. Nelson Farms paid \$450 for Valley View Dean of the Ormsbys and \$300 for Valley View Countess Beets Walker.

The auctioneers were Mack, Hanson and Larkin with Moline as pedigree man.

RHODA BUYS TOP BULL

The top price, \$260, at the sale held on the Northeastern Wisconsin Fair Grounds, De Pere, Wis., May 11, was realized for Crescent Calamo King, just a year old, consigned by Joseph Hoskens of Rockland, Wis. W. H. S. Rhoda of Watertown was the purchaser.

The top price for a female was \$185 which Wm. Gilson paid for Lizzie Johanna Flanders De Kol, consigned by T. R. McGrath.

Twenty cows and heifers averaged \$133 although a number of them young things went for very reasonable prices. The auctioneer was R. E. Haeger of Algonquin, Ill. The fifty head brought \$5,150, an average of \$103. Four bulls averaged \$177.50.

GOOD ATTENDANCE

There were fifty-five purebred Holsteins sold at the Klagos barn Reedsburg, Wis., on April 30. The sale was well attended. The fifty-five animals brought \$5,587.50, an average of \$101.50. The auctioneers were Krause and McCarthy and N. T. Gill was secretary.

CORRECTION, OR RATHER OMISSION

In our May 22 issue on page 330, we reported the sale of King Hengerveld Segis Finderne, the sire that has been at the head of the good herd owned by John W. Myers, of Colfax, Wisconsin, to John Farmer, of the same town. In our report we said that Colantha Hengerveld De Kol 3d, as a junior four-year-old made a seven-day official record of 20.13 lb. butter, 399.3 lb. milk. She did make this record but as a nine-year-old she increased this to 26.69 lb. butter, 525 lb. milk in a week. We regret overlooking this second record and cheerfully make the correction at this time.

King Hengerveld Segis Finderne was sired by Finderne Netherland Korndyke whose dam, Finderne Pontiac Netherland is a daughter of Gordon Glen Pontiac and has a seven-day record of 627.5 lb. milk, 31.05 lb. butter in seven days.

GEORGE SELLS AGAIN

Additional purebred sales are reported by A. B. George, of Carland, Michigan. These are besides the ones reported in our May 22 issue.

Two fine heifer calves went to Mr. Gilles, of Elsie, Michigan, while Albert Latz, of the same town purchased Lady Abbekerk Inka Scott, a daughter of Mercena Abbekerk Scott and Odelia Inka Scott. Mercena Abbekerk Scott was from a daughter of Sir Inka Zelle and was sired by Mercena Abbekerk Pietertje while Odelia Inka Scott is a daughter of Sir Houwtje Alene.

To replace Netherland Korndyke Walker Prince, Mr. George has purchased from J. B. Hurst and B. S. Watson, of Owosso, Michigan, a very fine young bull, Baron Maryland Colantha De Kol, No. 441209. In future issues we hope to tell more about this well bred young herd-sire.

The word "money" originated in Rome, where coin was minted in the temple of Moneta.

"How could you class a telephone girl? Is her's a business or a profession?"
"Neither. It's a calling."

HAMMOND'S "CATTLE COMFORT"

"CATTLE COMFORT"

Sold by Merchants and Seed Dealers
HAMMOND'S PAINT AND SLUG SHOT WORKS, Beacon, New York

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—**CATTLE COMFORT** may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

ON THE HILLS

of Tioga County have been raised some of the best Holsteins that ever came from New York State—big healthy cows that yield large quantities of rich testing milk.

The following breeders of healthy Holsteins whose establishments are located near Owego and within easy driving distance of Elmira, Ithaca, Binghamton or Waverly can supply you with good cattle and invite inspection of their herds.

Cow Testing Association Reports

TESTING IN ARIZONA

A purebred Holstein owned by Broussais Coman, of Phoenix, Arizona, was high cow in the Maricopa County Testing Association for the month of April by the production of 124.6 lb. fat. There were 850 cows tested and their average production was 28 lb. fat, the average test being 3.43%.

Blossom in the herd of V. L. Wildermuth; Min in the herd of Mr. Coman and No. 7 in the herd of A. C. Sanborn, are second, third and fourth with fat production of 83.1, 70.9 and 70.3 lb. respectively.

For the month of March, Clara III in the herd of W. M. Painter and Son was first with a fat production of 84.5 lb. while Blossom in the herd of Mr. Wildermuth; Min, in the herd of Mr. Coman and Madeline, in the herd of W. F. Damon, were second, third and fourth, with a fat production of 81.7, 79.7 and 71.3 lb. respectively.

The reader will note that Blossom and Min are second and third for both March and April. The fat production of Pietje is the highest record made in one month in the history of the association.

A Jersey herd averaged 41.5 lb. fat with the Holstein herd of Mr. Coman and the mixed herd of A. B. Davies second and third with average productions of 38.5 lb. and 39.1 lb. fat respectively.

ASSOCIATION COMPLETES SIXTH YEAR

The Allentown-Kohlsville C. T. A. completed its sixth consecutive testing year with the following results:

Out of 223 entries starting April 1, 1924, 181 finished the year, with reg-

istered Holsteins over 43% of this total. During the year the sale of breeding stock included 37 cows, 14 heifers, 10 heifer calves and 22 bull calves; there were 18 sacrificed through accident or sterility, 11 lost through the T. B. test and 4 died. Members bought only fourteen head.

This is the second highest fat average in the history of the association, the average being 352.52 lb., which, although less than the standard hoped for is the highest fat average of the 165 associations active in Wisconsin during the past year.

The high herd, owned by George E. Schmidt averaged 15,779 lb. milk testing 3.38% or 533.87 lb. fat. This was the highest herd last year and increased their showing by 81 lb. The second herd was owned by Adam Kohl and averaged 437.13 lb.

A Schmidt cow was high with 596.1 lb. fat, 18,499 lb. milk and another member of this herd was third with 521.6 lb. A cow owned by Paul Moritz was second with 571.9 lb.

V. M. Anderson is tester for this association with Wm. Pamperin secretary. They report that three sires are credited with at least 50% of the total number of entries during the year. These sires are Cedar Lawn Canary Paul 6th, Admiral Walker Johanna, and Cloverlawn Johanna Piebe 22d, the first one owned by the Pamperin-Mayer bull association and the last two formerly owned by Andrew Endlich.

MAGNIFICENT HOLSTEIN BULL, four months old. Seventy-five dollars. Two yearling heifers for \$150. Accredited herd. MRS. I. T. SHADE, Harris Station, Ohio.

BREMER COUNTY SCORES AGAIN

For the third time in as many years, Bremer County cows broke Iowa state records, the report of the Bremer No. 1 Cow Testing Association fiscal year shows. The high cow is the purebred Holstein, Aaggie Segis Boon De Kol, owned by F. A. Chester & Sons, of Plainfield, Ia. She is credited with 14,155 lb. milk, 557 lb. fat. The Chester herd consists of twelve purebred and grade Holsteins and their average was 11,814 lb. milk, 418.8 lb. fat but they are beaten for first place by the purebred and grade Holstein herd of F. H. Schmadeke whose ten cows averaged 12,336 lb. milk, 438.7 lb. fat. Holstein herds were third, fourth and fifth.

The champion, Aaggie Segis Boon De Kol, is a seven-year-old and she made her record in eleven months. The value of her product was \$235.65, the cost of feed \$86.58 and the profit \$149.07.

For ten months this cow exceeded 40 lb. fat. During the three years of the association, Aaggie has produced 1,528 lb. fat, 39,852 lb. milk. She is exceeded, however, by two purebred Holsteins owned by Wylam & Son, of Plainfield, Ida Mercedes Walker Segis Girl being credited with 1,861 lb. butterfat, 51,384 lb. milk during the three years while Barbeta Pet has to her credit 1,585 lb. fat, 42,783 lb. milk.

HAD THREE BEST

Al Simpkins, of Minot, N. D., had the three high milk producing cows in the Ward County Association during April. Betty, a purebred Holstein produced 1,686 lb., Gordon Heifer produced 1,590 and Snowball is credited with 1,494 lb.

BAST FIRST AND BAST SECOND

Twenty-five herds containing 270 cows finished the year in the Rockfield, Wis., Testing Association. Thirty-three finished with a production of 365 lb. butterfat.

The ten purebred Holsteins owned by Paul J. Bast, of Rockfield, carried off high herd honors by producing an average of 10,759 lb. milk, 382.4 lb. fat. The value of their product was \$243.46; the cost of feed was \$102.83 leaving a profit of \$140.63.

The nineteen purebred and grade Holsteins belonging to Mrs. Christ Bast, Sr., was second with an average production of 10,785 lb. milk, 378.6 lb. fat. Mrs. Bast owned thirteen cows that produced more than 365 lb. fat during the year.

High individual was a purebred in Mrs. Bast's herd. She is credited with 13,043 lb. milk, 485 lb. fat, average test 3.72%. The value of the product of this cow was \$307.13, cost of her feed, \$125.45, leaving a profit over feed cost of \$181.68.

The low herd in the association produced an average of 5,402 lb. milk, 190 lb. lb. fat. Value of their product was \$101.22, cost of feed, \$64.54, value above cost of feed, \$36.72. The difference in profit per cow between the high herd and low herd is \$103.91.

WISCONSIN COW TESTING

Adolph Feifarek owned the high herd for April in the Oconto Testing Association, their average being 1,559 lb. milk, 48.5 lb. butterfat. The high cow was owned by Chas. De Pouw, of Oconto, she being credited with 1,689 lb. milk, 67.6 lb. fat.

Nine of the 28 herds tested in the La Grange Association exceeded 30 lb. butterfat average during the month. Of the 507 cows tested, fifty-one produced better than 40 lb. fat. The leading herd consisted of seventeen grade Holsteins owned by George Andorfer, their average being 1,014 lb. milk, 36 lb. fat. A member of

this herd produced 1,947 lb. milk, 74 lb. fat, thereby leading for individual production.

The high herd in Denmark Association belonged to Henry M. Larson, of Denmark, his six registered and grade Holsteins being credited with an average of 1,169 lb. milk, 41.8 lb. fat. These cows were milked twice daily. The high herd on three times a day milking was owned by Ed. J. Johnson, also of Denmark, their average being 1,235 lb. milk, 40.7 lb. for nineteen grade Holsteins.

Maita, a grade Holstein owned by Fred Rasmussen, Denmark, led for individual production with 1,539 lb. milk, 61.6 lb. fat.

L. J. Saxton owned the high herd and high individual enrolled in the Mindoro Association during April. His Holstein herd averaged 1,023 lb. milk, 39.3 lb. fat, while the high cow produced 1,651 lb. lb. milk, 62.7 lb. fat, reports Manley Hendrickson, Tester.

Three hundred and twenty-seven cows were tested during April in the Rockfield Association. Thirty-six of these exceeded forty pound fat.

High herd honors goes to Mrs. Christ Bast, Sr., her fourteen purebred and grade Holsteins averaging 1,384 lb. milk, 46.5 lb. fat. Nine grade Holsteins owned by Henry Heidtke were second with an average of 1,086 lb. milk, 40.6 lb. fat.

Mrs. Bast owned the high cow, a grade Holstein, with a production of 2,022 lb., 72.8 lb. fat. Mrs. Bast had ten 40 lb. cows.

There were 460 cows tested in the Racine County Association during April. Of these 87 exceeded the 40 lb. mark. Mitchel Pontiac Bess, a registered Holstein, owned by Wm. H. Tamm, was the leader, she being credited with 1,789 lb. milk, 66.9 lb. fat. In the W. S. Goodland herd, a registered Holstein produced 61.5

lb. fat in twenty days and another 64.6 lb. fat in twenty-four days.

The annual reorganization meeting was held at Union Grove and the following officers were elected: Carl Bjerregaard, president; Clinton Skewes, vice-president; Ray S. Kamper, secretary; and Hans P. Olson and J. M. Christensen, directors.

Nineteen black and whites owned by Casper Klunke averaged 1,215 lb. milk, 47.2 lb. fat in the West Bend Testing Association. A member of this herd led the 434 cows tested by producing 1,986 lb. milk, 81.4 lb. fat.

Fifty-seven cows in this association exceeded 40 lb. fat in April.

IN LINN COUNTY, IOWA

The high cow of the Linn County testing association No. 1 for April is a purebred Holstein owned by Hillcrest Dairy of Marion, Iowa. She is credited with 74.3 lb. fat, her 1,666 lb. milk testing 4.4%. Smith Brothers of Whittier, Iowa, again had the high herd. Their nine Holsteins averaged 43.3 lb.

There are 26 herds in the association, 24 of which received silage. Four owners are starting sweet clover pastures and there is a general movement toward growing more legumes. Prices of feed are somewhat lower and butterfat relatively higher than they were a year ago.

VETERINARIAN BUYS HERD

Dr. C. J. Hoyt a veterinarian of Walden, New York has purchased the herd of sixty Holstein cattle formerly owned by Mrs. Marion Borden Halliday and leased the Borden Home Farm No. 2 at Walkkill. Dr. Hoyt intends to produce certified milk but will not discontinue his veterinary practice.

Apalachin New York

HOLSTEIN HERDS ARE PRODUCERS

A herd of registered and grade Holsteins owned by C. Van Asten led the Rudolph, Wisconsin, testing association for its fourth year by averaging 11,808 lb. milk, 390.3 lb. fat. Buttercup, a member of this herd, was champion cow for the year with a production record of 16,489 lb. milk, 532.1 lb. butterfat. Charles Imig's registered Holsteins averaged 10,555 lb. milk, 367.5 lb. fat, Joe V. D. Loop's registered and grade Holsteins averaged 10,244 lb. milk, 337.4 lb. fat and William Piltz's registered Holsteins averaged 10,008 lb. milk, 330.9 lb. fat.

HOLSTEINS TAKE ALL HONORS IN CUMBERLAND COUNTY

Ivo V. Otto, of Boiling Springs, Pa., owns the three highest producers in the Cumberland County testing association for the month ending May 15, reports tester A. A. Raudabaugh. Patty is credited with 2,262 lb. milk, 95 lb. fat, Dot with 2,064 lb. milk, 76 lb. fat and Dolly with 2,094 lb. milk, 73.3 lb. fat. An Otto cow, Margaret, was in fifth position with 2,016 lb. milk, 70.6 lb. fat. All ten of the leading producers are purebred Holsteins. The one in fourth position is owned by A. N. Lehman with 70.9 lb. fat. J. H. Lear owns one with 66 lb., Paul C. Gible has one with 61.1 lb. and another with 60.2. George L. Snyder is the owner of one with 60.5 lb. while a cow in W. W. Pepper's herd has 59.8 lb. to her credit. These ten cows average 69.3 lb. fat, 1,809 lb. milk with an average test of 3.83%.

The herd of George L. Snyder averaged 1,715 lb. milk, 54.8 lb. fat but it contained only five cows. The Otto herd consists of twenty-one purebred Holsteins and averaged 1,348 lb. milk, 48 lb. fat, beating out for second place eight cows owned by Paul Gible that averaged 1,345 lb. milk, 47.7 lb. fat. The Pepper herd averaged 42 lb. and J. H. Lear's herd of thirteen cows averaged 1,130 lb. milk 41 lb. fat. Raymond Shugart's seven cows averaged 40.8 lb. and nine cows owned by A. N. Lehman averaged exactly 40 lb.

In all 246 cows were tested in 26 herds. Of this number 68 exceeded 40 lb. fat, 33 are credited with 50 lb. or more, 63 produced 1,200 lb. or more of milk.

Mr. Raudabaugh adds to the value of his report by a little news and also by commenting on the work in the association. J. W. Raudabaugh of Carlisle, Penna. Route 7, has headed his herd with a son of Edgemere Refina Segis, a big producer of the Otto herd that has a record made in the Dairyman's Class of 12,000 lb. milk with an average test of 4%. The sire of this young bull is Lothian De Kol Korndyke, the bull that now is in service in the State College herd, the splendid work of his daughters and the individuality of himself and his offspring being the reasons.

A. N. Lehman of Carlisle, Route 2, has headed his herd with a bull bred in the Fred C. Lehman herd. This bull was from Dutch Corner Fayne Walker 103.4

lb. milk in a day, 29.71 lb. butter, 656.5 lb. milk in seven days, 7,400 in one hundred days and 16,250.4 lb. milk in three hundred days. Her sire was Governor Walker Lyons and Betta Walker and her dam was a daughter of Segis Lyons and was from a daughter of Segis Fayne Hengerveld. Mr. Raudabaugh reports:

"All members are making an effort to provide an abundance of pasture as well as silage and leguminous hays for winter feeding. This association is within three months of finishing another year's work and a number of the herds are showing very plainly at this time the result of the owner's cooperation in C. T. A. work. A number of such cases show up very conspicuously among the smaller herds enrolled a year ago."

"Everything is going nicely and we are looking forth to conference time in June when we have our annual get together at State College."

A PROFITABLE HERD

Ten Holstein cows owned by H. E. Wheeler, of Marshalltown, Ia., produced 125,542 lb. milk, 4,245.6 lb. butterfat at a cost of \$866.52 for feed. The milk sold for \$2,668.96 so that the ten cows made for their owner \$1,802.44 above the cost of feed. It cost 69 cents to produce 100 lb. milk and 20 cents to produce one pound of butterfat showing that the cows returned \$2.08 for each dollar spent for feed.

The best cow in the herd, a purebred Holstein, produced for her owner \$220.18 more than what was paid for her feed, reports Harry Haling, tester for the Marshall-Grundy Testing Association.

GRADES AND PUREBREDS

There were 426 cows tested during April in the Clintonville-Bear Creek Association. Of these 62 produced 40 lb. or more butterfat.

Fred Bruss, Clintonville, Ind., owned the high cow, a seven-year-old grade Holstein, with 1,920 lb. milk, 71 lb. butterfat to her credit. Ernest Thoma owned the animal in second place, his ten-year-old grade Holstein producing 1,483 lb. milk, 62.2 lb. butterfat.

Eight Holsteins, seven purebreds and one grade, carried off herd honors, by averaging 1,341 lb. milk, 46.2 lb. butterfat on three times a day milking.

IN A JERSEY COUNTRY

A total of 603 cows were tested in the Lewis County, Ore., Testing Association during April, the average production being 1,047 lb. milk, 37.9 lb. fat. Their average for April, 1924, was 931 lb. milk, 33.6 lb. fat.

Daisy, a grade Holstein, was high for the month with 2,583 lb. milk, 84.2 lb. fat to her credit.

The boss was dictating to the new, pretty and sophisticated stenographer. Suddenly he stopped.

"Am I too fast for you?" he asked anxiously.

She considered him and then replied. "Oh, no, indeed, but you're a trifle old."

TUTS AGAIN FIRST

Tuts, the noted purebred Holstein cow owned by Mast Stoltzfus, of Morgantown, Pa., led the Goodville Cow Testing Association for the year ending May 15, 1925 by the production of 623.9 lb. butterfat and 16,141 lb. milk. Ethel, a stable mate, was second for fat with 573.2 lb.

"TUTS"
Again leader of the Goodville C. T. A. She is owned by Mast Stoltzfus, Morgantown, Pa.

fat and first for milk with 16,578 lb. Both cows are seven years old as is Zuba, purebred Holstein owned by Ira M. Eby. Zuba stands third with 515.5 lb. fat, 13,559 lb. milk. A grade Holstein is fourth

Owners Name	Ave. No. Cows
1. Mast Stoltzfus	21.58
2. Ira M. Eby	16.50
3. Jason M. Eby	12.33
4. Aaron H. Metzler	10.75
5. H. K. Martin	15.75
6. B. L. Blank	12.00
7. Geo. G. Sauder	11.42

MONTOUR VALLEY TESTING NEWS

L. H. Stark, tester of the Montour Valley association reports that during April, 373 cows in 25 herds were tested, 13 produced over 50 lb. fat, 68 over 40 lb. and 49 exceeded 1,200 lb. milk.

The leader for both milk and butter is May, a senior four-year-old registered Holstein owned by A. B. Craig of Sewickley, Pa. May is credited with 78.19 lb. fat, 2,172 lb. milk. A purebred Holstein, Canary, owned by Dr. G. W. Ely is second for both milk and fat, her milk total being 1,950 lb. and her fat 70.20. Registered Holsteins owned by L. J. Stewart and Son and Glass Brothers are fourth and fifth, a cross-bred cow being third.

The leading herd for milk consists of 15 grade and 2 registered Holsteins. It is owned by H. E. Cleland and averaged 34.34 lb. fat. C. W. Scott owner of six grade and four registered Holsteins is second for fat with 33.97 lb. and the Ely herd consisting of seven purebred and two grade Holsteins is third for fat with 33.93 lb. and first for milk with 1020.

Some good records have been made in this association. A grade Holstein owned by H. E. Cleland freshened September 25, 1924, and in seven months and five days has produced 8,684 lb. milk, 329.85 lb. fat. Susie, a registered Holstein three-year-old heifer owned by the Allegheny County Home, freshened on the same date and in the same length of time has produced 9,331 lb. milk, 342.23 lb. fat.

with 500.9 lb. fat, Tilda, of the Stoltzfus herd is fifth with 477.2 lb. fat, 13,007 lb. milk. Jessie, a purebred Holstein owned by Ira M. Eby is sixth with 441.1 lb. fat, grade Holsteins occupy the next two places then comes a purebred with 412.8 lb. fat. She is owned by Jason M. Eby, who owns the two grades in front of her. Another grade is ninth with 410.8 lb. fat while Marion, a four-year-old purebred Holstein owned by Mast Stoltzfus is tenth with 409.8 lb. fat, 12,646 lb. milk.

Not only are the ten highest producers black and white cows but the seven leading herds, those that average 300 lb. or more of butterfat, consists of Holsteins, grade and purebred. As might be expected the Stoltzfus herd is first but is closely pressed by the herds of Ira M. and Jason M. Eby. There are eleven members in the Goodville cow testing association and they own 182 cows. Tester Luke W. Martin, says the average returns per cow are 9,384 lb. milk, 312.3 lb. butterfat, certainly a splendid showing. The herds averaging over 300 lb. of butterfat per cow are listed below:

Breed	Milk	Butterfat
P. B. & Gr. Hol.	10,739	372.5
P. B. & Gr. Hol.	10,935	366.1
P. B. & Gr. Hol.	10,863	363.1
Gr. Hol.	9,684	320.0
P. B. & Gr. Hol.	8,996	310.5
P. B. & Gr. Hol.	9,816	308.0
P. B. & Gr. Hol.	9,140	307.6

When the Cow Testing Association was being formed last summer Mr. Albert B. Craig suggested that if the organization was successful he would give a suitable trophy, but did not think it would be advisable to make any announcement until near the end of the year as it was not his idea that there should be any competition among the members. Mr. Craig has provided this trophy in the form of a silver plate to be competed for on the following basis: Each herd is to be ranked for average production per cow in milk, butterfat and profit over feed cost. These rankings will be added and the herd with the highest place will be the winner. In case of a tie this procedure will be followed with the poorest half of the herds so tied. The winner will have temporary possession until the next association year and when it is won by the same person two years it will then become his permanent possession. In case it is not won permanently and the association is discontinued its possession will then revert to the donor. The only reservation that Mr. Craig makes is that his herds shall be open to the competition to have temporary possession, but will not compete for permanent possession.

"How much milk does that cow give?" asked the summer boarder.

"Well," replied Farmer Applegate, "if you mean by voluntary contribution, she don't give none at all. But ef ye kin get her cornered so she can't kick none to hurt, an able-bodied man kin take away about 'leven quarts a day from her."

ELNORA KING PONTIAC VON HENGERVELD

102 lb. milk in a day; 34.89 lb. butter, 673.1 lb. milk in 7 days. Now twelve years old—notice her type and producing capacity.

IOWA COW TESTING

J. L. Cords, of Elkader, Iowa, owned the high cow and the high herd in the Littleport-Elkader Cow Testing Association during April. June, a grade Holstein produced 1,650 lb. milk, 72.6 lb. butterfat while his herd of grade and purebred Holsteins averaged 1,249.1 lb. milk, 45.17 lb. fat.

There were 360 cows tested and their average per cent was 772.9 lb. milk and 26.9 lb. butterfat, reports Walter Seeman, tester.

Three hundred and forty-seven of the 415 cows enrolled in the McGregor, Iowa Testing Association were milking during the month of April and their average was 604 lb. milk, 25.4 lb. butterfat. Homestead, a purebred black and white owned by Alfagold Farm produced 2,561 lb. milk, 75.6 lb. fat thereby leading the association. Alfagold Farm herd consisting of sixteen purebred Holsteins led for high herd average with 1,247 lb. milk, 43.2 lb. fat per cow.

During April 361 cows enrolled in the Big Four Testing Association produced an average of 651.5 lb. milk, 24.9 lb. fat. The leader was Mabel, a six-year-old grade Holstein owned by L. B. Folsom her production being, 1,521 lb. milk, 68 lb. fat. Mr. Folsom's fourteen grade Holsteins also carried off high herd average with 961.4 lb. milk, 37.3 lb. butterfat.

Twenty-seven of the cows produced 40 or more pounds butterfat and five produced over 50 lb. reports A. A. Haines, Tester.

Eleven grade Holsteins owned by H. B. Wheeler, led the Strawberry Point Testing Association during April reports Theodore N. Rude, tester. Pussyfoot a six-year-old member of the Wheeler herd was the high individual she being credited with 1,620 lb. milk, 61.1 lb. fat.

WEST ALLEGAN ASSOCIATION

A purebred Holstein owned by R. E. Hopkins, led the West Allegan Cow Testing Association by producing 71.1 lb. fat, 1,482 lb. milk during April. Members of this herd stood first, second and third for milk production, the two highest cows each giving 1,572 lb. milk and the third cow producing 1,554 lb. The two-year-old registered heifer owned by Frank Lane, of Bloomingdale, Mich., led in her class with 59.1 lb. fat, 1,554 lb. milk.

PUREBRED LEADS MINNESOTA

April reports of the Minnesota Cow Testing Association show that there are 86 active associations in the state, consisting of 2,174 cows. The highest producer was a purebred Holstein owned by Ernest Paul of the Easton Cooperative Association. She is credited with 99.6 lb. fat. S. A. Smith, of the South Dakota Association had the high herd, his eight grade Holsteins averaging 1,533 lb. milk, 53.5 lb. fat.

FRED LEHMAN STARTS AGAIN

Although Fred C. Lehman, owner of the Greider Stock Farm, Carlisle, Pa., sold out his herd last summer, he could not overcome his love for purebred Holsteins and so has started again. His present herd consists of five granddaughters of King of the Ormsbys, two

SERRADELLA KING DORESS

Now owned by Fred C. Lehman, Carlisle, Pa.

granddaughters of Pontiac Korndyke and several others of noted blood lines.

At the head of his new herd Mr. Lehman has placed the bull Serradella King Doress, a son of Houwtje Segis Butter Boy and Doress Canary Rag Apple. This cow as a five-year-old made records of 28.38 lb. butter, 527.5 lb. milk in seven days, 870.68 lb. butter, 21,207.1 lb. milk in ten months and then freshening again as a six-year-old she recently completed records of 31.36 lb. butter, 615.1 lb. in seven days, 126.81 lb. butter, 2,725.7 lb. milk in thirty days. She is a daughter of Sir Rag Apple Colantha and has 100% the same blood as Dora Riverside Colantha, 805.62 lb. butter, 18,192.9 lb. milk in ten months as

DORESS CANARY RAG APPLE

870.68 lb. butter, 21,207 lb. milk in 10 months as a five-year-old. 31.36 lb. butter, 615.1 lb. milk in 7 days.

a three-year-old and 36.64 lb. butter, 688.5 lb. milk in seven days and 148.82 lb. butter in thirty days as a five-year-old.

Doress Canary Rag Apple is reported as being a very fine individual, practically faultless. She is again on test for 365 days and is expected to make at least 1,000 lb. of butter during the year.

A CASE OF ADAPTATION

In a nation wide survey of agricultural conditions, the Federal Bureau of Agricultural Economics advises that:

Farm labor seems to be generally ample for the demand, due apparently both to some increase in the supply and to the ability of the farmers to so arrange the scheme of production as to get along without labor or with less than in past years.

BIG PRODUCING STRAIN

The card from Superintendent Gardner announcing another big record for Traverse Colantha Walker helps to call attention to the number of tests made by animals of this family. Walker's latest record is 1,267.61 lb. butter, 26,258.2 lb. milk in 365 days. Two different years she has made over 37 lb. butter in seven days. Five different years she has made over 30 lb. butter in seven days. She has a record as a five-year-old of 1,220.21 lb. butter in 365 days. As a senior two-year-old she produced 914.18 lb. butter in ten months, world's record in class.

Traverse Colantha Walker is from the same dam as Traverse Inka Johanna, a cow that for two different years made over 30 lb. butter in seven days, as a five-year-old making 736.4 lb. milk in a week. Traverse Inka Johanna has five tested daughters, two that have each made over 32 lb. butter in seven days and she is dam of Traverse Echo Sylvia King, the handsome bull that heads the herds of A. L. Burlington and W. B. Kennedy, of Wyalusing, Pa. This bull is not only handsome but is also siring splendid stock and as he stands at the head of two accredited herds, both of which are handled on a dairy basis, he will undoubtedly have considerable influence on the breed in Bradford County.

BREED FURNISHES TEN LEADERS

A purebred Holstein owned at Nicholas Farm, Ingleside, Illinois, leads all the cows enrolled in Illinois cow testing association work during the month of April by the production of 2,799 lb. milk, 114.7 lb. fat. Ray Angle of Dakota owns a purebred in second position with 94.1 lb. fat, 2,353 lb. milk, while a purebred owned by Rock River Farms at Byron is third for fat and first for milk with 93.7 lb. and 3,024 lb. respectively. These three cows were each milked four times daily. The Green Bonnet Farms have a purebred in the McLean County Association that produced 93.5 lb. fat, 2,337 lb. milk on three times a day milking while M. M. Baker owns one that produced 90.1 lb. fat, 2,253 lb. milk on twice a day milking while enrolled in the Peoria Association. The ten highest producers were all registered Holstein Friesian cows.

SOUTH DAKOTA PRODUCER

Molly a purebred Holstein owned by F. J. Krug and Sons of Madison, South Dakota was the highest producer for both milk and butterfat in the Chester testing association during last year. She milked just nine months and twelve days and during this time produced 11,542.2 lb. milk, 427.08 lb. fat, her average test being 3.7%.

For seven months Molly produced more than 40 lb. butterfat each month. Her best month was 61.8 lb. and she led the association two successive times. At no time was she especially fed or pampered but received a liberal ration of corn silage, alfalfa hay and whole oats.

The Champion of the South

O. K. L. KATIE PAUL

36.95 lb. butter in 7 days as a junior four-year-old, the Champion of the Southern States, is a sister to our herdsire.

FROM BOTTOM TO TOP

Three years ago last January, Wayne Lewis of Evansville, Wisconsin joined the local cow testing association. At the end of the year his herd was at the bottom of the list. He disposed of the whole bunch and then bought new animals. In the fall of 1923 he purchased the registered yearling heifer, Leda Fobes Canary Korndyke. She freshened October 27, 1924, made 241.8 lb. fat in the following eight months and is still making around 30 lb. a day. He purchased an eighteen month old heifer Lady Windridge Ragapple. She freshened March 29, 1924, as a junior two-year-old and in ten months produced 340.8 lb. fat. He had purchased her dam Lady Windridge Bletia and a young heifer calf with her, in due time she freshened with twin heifer calves and in ten months produced 12,449 lb. milk, 406.8 lb. fat. Mr. Lewis now has four heifers from this cow. The six year-old cow freshened again January 26, 1925, and made 77.9 lb. fat in March leading the testing association. Her daughter, Lady Windridge Ragapple made 65.1 lb. fat in April and also led the association for that month although she freshened twenty days before she was three years old. Two additional purebreds are Beryl Johanna Segis and Thomas Snip Korndyke. Beryl made 523.5 lb. fat in 10½ months and Snip 597 lb. in ten months. The grades in the Lewis herd also made nice records.

IN THE MIDDLE BUCKS ASSOCIATION

During April, 26 herds were tested in the Middle Bucks testing association. The high herd consisted of purebred and grade Holsteins and was owned by Linfred Benner of Langhorne, Pa., their average being 35.4 lb. fat. A purebred Holstein owned by C. J. Koller of Solebury, averaged 32.24 lb. The Benner herd led for milk production with an average of 1,017.1 lb., followed by the purebred Holstein herd of Eugene Stapler, of Yardley with an average of 772.8 lb., while the Koller herd averaged 962.8 lb.

DAIRYMEN BUY HOLSTEIN BULLS

Jans Jansma and C. E. Pinnick, dairymen living near Billings, Montana, have each recently purchased registered Holstein bulls from the Hofstetter Holstein herd at Lewistown, Montana. County agent Charles Ruzicka assisted them in making the purchases.

Crop conditions in the Judith Basin country seem quite favorable although the season is rather backward. Spring wheat is up and looks to be in good shape. This information is of April 25.

Diner (contemplating piece of chocolate cake the waiter has set before him) —"I say waiter, I ordered Washington pie. Shouldn't the icing be white?"

Waiter—"Only on George Washington pie, sir. This is Booker T. Washington pie."

HILLSIDE VOLUNTEER HEADS INDUSTRIAL SCHOOL HERD

Hillside Volunteer, the handsome yearling bull recently advertised in the BREEDER AND DAIRYMAN by Hillside and Springbrook Farms at Trucksville, has been sold to the Luzerne County Industrial School for Boys, at Kis-Lyn, Pa. This bull is a son of King Pontiac Maple Knoll Ormsby and Hillside Rosemary. The "King" was by King of the Pontiacs from Maple Knoll Helen, a 33 lb. daughter of King Korndyke Hengerveld Ormsby and therefore a sister to Ormsby Korndyke Lad. Daughters of the "King" are making big records and are noted for their high test. Hillside Pontiac Rose as a junior four-year-old made 34.97 lb. butter in seven days with an average test of 7.36%, Hillside Pontiac Jean as a five-year-old is credited with 30.60 lb. with a test of 6.88%. Rose as a junior two-year-old made 25.24 lb. butter in a week, 102.62 lb. butter in thirty days, the highest record ever made for thirty days by a heifer of her age in the state of Pennsylvania. Hillside Pocono Constance at 22 months of age, is credited with 2,059.5 lb. milk, 95.57 lb. butter in thirty days, world's record for age.

Hillside Rosemary has an official record of 30.74 lb. butter, 460.8 lb. milk with a butterfat test of 5.34%. She is the dam of Hillside Pontiac Rose it can be seen that Hillside Volunteer and Hillside Pontiac Rose are full brother and sister.

Hillside Herd is one of the oldest in Pennsylvania and for many years has enjoyed an enviable reputation for the health and production of the cows composing it and for the lines of breeding represented therein.

The milk produced at this establishment is sold in the city of Wilkes-Barre and the periodic inspections by representatives of the City Board of Health show that not only is the health of the herd and of the help working around it maintained at the highest possible level but that the product is pure and clean, the bacterial count being remarkably low.

Dallas P. Honeywell is responsible for the feeding of the general dairy as well as the cows on test and he and his son Jack personally milk the test cows, the boy milking at 10 a. m. and 4 p. m. and the father attending to the work at 10 p. m. and 4 a. m.

PARDNERS IN HERDSIRE

Charles Braatz & Son and Leslie Frye, of Waupun, Wisconsin, have jointly purchased Unecda Polkadot Adventurer, formerly senior herdsire of the Golden Rule herd, which is accredited. This bull has been at the Golden Rule Farm for six years, and is an animal of excellent quality, and a County Fair prize winner. His seven nearest dams have official records that average 31 lb. butter in seven days. This bull was brought to Wisconsin by E. J. Bristol of Oakdale.

E. D. & F. H. Jones, proprietors of the Golden Rule Stock Farm, plan to make Harvester Matador Spofford, a bull they own, their senior sire.

BECOME ACQUAINTED WITH ORMSBY SENSATION 3D

now heading Spring Brook Herd. His sire, Ormsby Sensation, you know, of course.

His dam, as a two-year-old, produced 14,331.8 lb. milk, 628.3 lb. butter in a year.

His daughters, in my herd, are bound to please you. You know one of his sisters produced 853.07 lb. butter, 20,564 lb. milk in 305 days, the world's record for a two-year-old.

S. T. WITMER
Union Deposit, Dauphin Co., Pa.
Herd under State and Federal Supervision.

GET THE SON OF Hillside Rhododendron

35.15 lb. butter, 543.8 lb. milk in 7 days, 2,759.7 lb. milk, 147.95 lb. butter in 30 days, a show cow of magnificent proportions.

He was sired by Charlevoix Rookwood Prince, son of Sir Pietertje Ormsby Mercedes 40th and Rookwood Zwellie Riblet, 728.3 lb. milk, 33.93 lb. butter in a week; 3,019.6 lb. milk, 135.83 lb. butter in 30 days. She and her dam both have good yearly records.

This bull was born April 26, 1925, is right in every way, about 7/10 black, well marked. His dam and sire's dam average 34.54 lb. butter, 636 lb. milk in 7 days; 141.89 lb. butter, 2,889.6 lb. milk for 30 days.

HILLSIDE AND SPRINGBROOK FARMS
Trucksville, Pa.

Herd recently passed Another Clean Test.

THEY TRADED HERDSIRES

Sir Pietertje Ormsby Boy was owned by Nelson and Hanson, of Clarissa, Minnesota, and Sir Lyons Ormsby Bess was owned by John Friday, of Oregon, Wisconsin. Both breeders were in search of a new herdsire and after examining each other's bulls, a trade was made.

Sir Pietertje Ormsby Boy is a son of Sir Pietertje Ormsby Mercedes 41st and his dam has a 26.45 lb. seven-day butter record. This bull has been shown at the local county fair and has never been defeated while his sons and daughters have been consistent winners. Seven of his daughters enrolled in cow testing association work have averaged 48 lb. of butter in a month and two of the seven were first-calf heifers.

The bull which Mr. Friday traded is a son of Sir Korndyke Bess Pontiac, his dam has a 28-lb. seven-day record and is credited with producing 885 lb. in a year.

Last year the Friday herd averaged better than 11,000 lb. of milk. He was paid for 142,631 lb. and Mrs. Friday figured that they used nearly 10,000 lb. more for feeding calves and for table and cooking purposes.

The Friday establishment is known as Lucky Day Stock Farm. On it are purebred Duroc Jersey hogs and Plymouth Rock fowls. Clarence, the nine-year-old son, owns a purebred heifer calf and is enrolled in the local calf club. The Friday herd consists of 30 purebreds and has been Federally accredited for four years.

SHOW COW MAKES GOOD

Queen Johanna of Enterprise purchased from Charles Van der Schaaf of Sparta, Wis., to be added to the herd owned by the Janesville School for the Blind recently completed a seven-day record of 23.09 lb. butter, made three months after calving. During the first 75 days of her lactation period this cow has made exactly 250 lb. butter. She will be remembered as the second prize four-year-old at last fall's National Dairy Show.

FROM MINNESOTA TO WISCONSIN

A half interest in Sir Inka Skylark Homestead was recently purchased from the Minnesota Holstein Company, by Nic Weinandy & Sons, of Cochrane, Wisconsin. The dam has a record of 1,000 lb. butter in a year made as a three-year-old, and is a daughter of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, formerly world's champion cow. The senior sire at the Weinandy establishment is Count Segis Pontiac Lass, a son of King Segis Pontiac Count.

MORE VETERINARY STUDENTS

The total student enrollment this year in all the accredited veterinary colleges in the United States and the one in Canada is 590 compared with 571 a year ago and as against 738 for the year preceding that. The gain, though slight, appears to mark a turning point in a field of technical study which many factors have

influenced in recent years. Motor transportation, by supplanting animal power to a large extent, has been a depressing factor while, on the other hand, interest in suppressing animal diseases and improving livestock sanitation has been gradually increasing. The active nationwide campaign to eradicate tuberculosis among farm animals is a conspicuous example.

The Bureau of Animal Industry recognizes 15 accredited veterinary colleges in this country and 10 foreign colleges. From the American and the one Canadian institutions, 160 veterinarians were graduated during the school year 1923-24 as compared with 241 the previous year. There is an increase in the number of freshmen during the present school year despite the fact that the technical standards of the profession are higher than formerly as indicated by the present four year course of study and training which supplants the three year course in force a few years ago.

HEADS HERD WITH SHOW BULL

The state school for the deaf located at Delavan, Wisconsin, is building a purebred Holstein herd and headed it by a grandson of King of the Pontiacs that was first in his class as a two-year-old at the Wisconsin State Fair and was second at the National Dairy Show.

W. J. Rosenow is herdsman of this institution under Farm Superintendent Jones. C. M. Householder, agriculturist of the State Board of Control is largely responsible for the installation of purebred Holsteins at the Deaf School and other state institution farms.

STARTS NEW HERD

John Weigand of Lomira, Wisconsin, purchased three head of purebred Holstein cattle from the Clover Lawn Farm owned by John Puls of Hartford, Wisconsin. There were two heifers and a young bull. One of the heifers is backed by fifteen dams with year records averaging 954 lb. butter, while back of the other heifer is nineteen yearly records that average 1,012 lb. butter.

HAS GOOD RELATIONS

Charles E. Tuffley & Son of Boscobel, Wisconsin, has recently purchased a new herdsire. His sire is a son of "Creator" and his dam is a granddaughter of Sir Pietertje Ormsby Mercedes. As a two-year-old heifer she made over twenty lb. butter in seven days in her first lactation period.

GOOD FOR THEM

Twelve mature cows, twelve heifers, and a young bull were sold by George Eliot, of Oxford, Iowa, to the Commissioners of Iowa County, and will form the nucleus of a Holstein herd which will be placed on the County Farm.

"Stop, stop," said the old lady, "There's a man just fallen out of the door."

"It's all right," said the driver of the auto bus, "He's paid his fare."

A Fine Pair

At a Bargain Price

PLANTS, SEEDS AND BULBS

MAMMOTH YELLOW SOY BEANS for sale. \$3.00 per bushel, any quantity. J. M. CREDLE, Scranton, N. C.

CHERRY TREES—2 Montmorency, 2 E. Richmond, 4 to 5 feet high. The four for \$1.00. Guaranteed delivery. Catalog free. NICHOLS NURSERIES, Dansville, N. Y.

ALFALFA SEED—90% pure, \$7.00 per bushel. Hulled white sweet clover 90% pure, \$5.50 per bushel. Track here. Sacks free.

GEO. BOWMAN, CONCORDIA, KANSAS.

SEED CORN—Golden Glow. Cold Resistant, kiln dried, germination 97%. Graded \$6.00 bushel. Members Wisconsin Experiment Association. ROPENSCHMIT BROS., Cross Plains, Wis.

GENUINE PORTO RICO POTATO PLANTS—State inspected, \$2.00 per 1,000 F. O. B. Please order early.

BUTLER & ELLIOTT, SYCAMORE, GA.

WHITE BLOSSOM SWEET CLOVER—Clean and certified, 10 cents per lb.; Bromus Grass guaranteed free from Quackgrass, 8 cents per lb. PURE SEED FARM, COGSWELL, N. D.

MILLIONS FROST-PROOF CABBAGE PLANTS—All leading varieties; 1,000, \$1.75; 500, \$1.10; 300, 75c. postpaid; special price in large lots. Tomato plants ready last of May and June at same price. SCOTT BROS., Franklin, Va.

STATE TESTED FANCY ALFALFA SEED—Best grade. Red, Alsike, white and yellow blossom sweet clover, grass seed; samples and prices on request. Order early, supply limited. THE PURITY SEED FARMS, Box 188, JEROME, IDAHO.

SEED CORN—REID'S YELLOW DENT—Same type as the \$1.000 ear. Hand picked, fire dried, yield 90 bushel per acre. High germination, nubbed, shelled, and graded. \$5.00 per bushel F. O. B. mill. 10 days approval. Sacks 50c. WAVERLY MILL & ELEVATOR CO. WAVERLY, ILLINOIS.

FOR SALE—Seed Potatoes, pure white sprout, Green Mountain type or Russetts \$1.85 per 150 lb. sack F. O. B. here. Car lots shipped, draft bill lading attached, inspection allowed. Less car lots, send money order or check. GROVER-SCHULTHEIS COMPANY, INC. Horneil, New York.

SEND—\$1.00 for 8 potted geraniums, all double, postage paid. V. T. SHERWOOD, Charles-town, N. H.

PLAN BEFORE YOU PLANT—Send for our descriptive and very distinctive catalog on Fruits and Ornamentals. Our STOCK makes good or WE do. Five hundred acres of fruit and ornamental trees under cultivation.

FINGER LAKES NURSERIES, 471 Washington St., Geneva, N. Y.

LIVE STOCK

OHIO IMPROVED CHESTERS—April Far-rowed. Pedigree furnished. F. W. KLAMMER, Mera, Minn.

MISCELLANEOUS—FOR SALE
HOMESPUN CHEWING AND SMOKING TOBACCO—5 lb., \$1.25; 10 lb., \$2.50; 20 lb., \$4.50. HICKORY RIDGE FARMS, Mayfield, Ky.

KARAKUL FUR SHEEP—Breeding stock for sale of the best to be found in America. Address, ALEX ALBRIGHT, DUNDEE, TEXAS.

NATURAL RED LEAF TOBACCO, direct to consumer, prepaid; best grade. Five pounds, \$1.75; 10 lb. \$3.25. Smoking, 5 lb. \$1.25; 10 lb. \$2.25. W. B. ADAMS, SHARON, TENN. Reference, Bank of Sharon.

CEMETERY MEMORIALS from Vermont marble and granite. Reduced prices. Artistic designs. Send for our new catalogue. THE TEMPLE BROTHERS, RUTLAND, VERMONT.

UNLEACHED HARDWOOD ASHES improves meadows, pastures, orchards, wheat, oats, corn, lawns, flower gardens. Free Circular. Agents wanted. GEORGE STEVENS, PETERBOROUGH, ONTARIO, CANADA.

GET OUT OF THAT RUT—"600 ways to make money," 300 pages, only \$1.00. This book contains the information you have been hunting.

D. W. MCBRYDE, NEW ALBANY, MISS.

ALFALFA LEAF MEAL—Something new. Made from alfalfa leaves without the stems. Low in fibre, high in protein, rich in vitamins. A grand food for poultry. Prices, \$2.50 per cwt., or \$49.00 per ton, f. o. b. Middletown, Conn. Made at Lamar, Colorado, by the Lamar Alfalfa Milling Company. MEECH & STODDARD, INC., Middletown, Conn., Distributors for Eastern United States.

DOGS

PEDIGREED GERMAN POLICE PUPPIES for sale. Edwin Von Saalech Rudelsburg bloodlines. J. H. LEICHTER, CAMERON, W. VA.

FOR SALE—Collie pups, \$3 and \$5. ELI D. WEIRICH, Shipshewana, Ind.

SABLE AND WHITE COLLIE PUPPIES. Eligible to register.

SMITH SEYMOUR, NEW MILFORD, CONN.

BOOKING ORDERS PEDIGREED WHITE COLLIE PUPS—Sable head marks. Some with body spot. Shipment when 8 weeks old. Also few older puppies. GLENAGE COLLIE KENNELS, Boonton, N. J.

DEMAND FOR BLUEBIRD BULLS

S. H. Bird & Son, owners of the Mound Prairie Farm, Byron, Wisconsin, are having a good demand for purebred bulls. Recent sales were to Andrew Hodorf, of Eden, Wisconsin, and Harvey H. Frautchy of Orangeville, Illinois. Mr. Hodorf took Bluebird Ormsby Count 12th, born April, 1924. The dam of this young bull has a seven-day-record of 27 lb. of butter.

Mr. Frautchy took Bluebird Ormsby Count 13th. The dam of this young bull as a two-year-old made 22 lb. of butter in a week, and 450 lb. fat in a year. Her dam is a record daughter of Pauline Aaggie Grace, 31.50 lb. butter with a year record of 768.1 lb. butter. Both young bulls will head purebred herds.

BUILDING A GOOD BUSINESS

H. E. Casey of Sweet Home, Arkansas, has purebred Holstein and Jersey cows and operates a milk route, furnishing his customers with milk, butter, cream and cottage cheese. He puts up a special milk called "Casey's Special" for babies and invalids which is recommended by city officials and leading physicians of Little Rock. Years ago he adopted the slogan "Satisfaction with good milk," and his business has grown ever since. Great care is exercised in the preparation of his dairy products and the Casey plant ranks first among the rural dairies of Pulaski County.

REVIVE THE POUND

The Pound in which stray animals were kept was an important institution in the days of the early settlers, particularly in the eastern states. In San Antonio, Texas, they now have a pound master whose duty it is to look after forgotten and abandoned automobiles found in the city streets.

In 1924 the pound made a profit of \$2,062 after all expenses were paid, largely through payments made by automobile owners who had parked too long in restricted streets.

NOW HAS PUREBRED HERD

Soren Olsen of Superior, Nebraska, last fall traded a scrub bull for a purebred Holstein bull calf, making the deal with the officers of the Nebraska Dairy Special. Evidently Mr. Olsen was sold on the purebred proposition for about the middle of April he returned from a trip to Colorado bringing with him twenty-one head of purebred Holstein cows and heifers. Some of his neighbors are talking of following his example.

CALIFORNIA PRODUCERS

Thirteen Holstein cows with an average butterfat record of more than 350 lb. are owned by B. L. Hayden, a rancher near Merced, California. During the past calendar year nine cows in this herd averaged 10,561 lb. milk, 410.2 lb. fat.

DE KOL PIETERTJE PAULINE

96 lb. milk in a day
2,700 lb. milk in 30 days
17,000 lb. milk in 11 months.
Has now been in milk over 8 months and is giving 60 lb. daily on twice a day milking.

Her son, by my herdsire Maple Grove Clever Koningen Glista will be sold in the **CRAWFORD COUNTY COOPERATIVE SALE**

to be held June 24 and 25, at Cambridge Springs, Pa.

He is a very good individual, is well grown and marked like his dam. Don't overlook that he comes from an AC-CREDITED herd.

MERLE W. ONGLEY, Centerville, Pa. R. D. 4.

Every Purebred in My Herd

has passed Three Clean Tuberculin Tests.

They graze on a Limestone pasture, the best cow feed in the world.

They are Producers and their Size, Type and Individuality will please YOU.

And my prices are Low.

H. A. STOTTLEMYER, Hagerstown, Md. R. 5.

KING RAG APPLE PLUM COPIA

is now in service in our herds. His dam made 30.47 lb. butter in 7 days, 120.63 lb. butter in 30 days with a daily milk average of 92.3 lb. as a five-year-old, and as a six-year-old made 33.26 lb. butter in 7 days.

He will be bred to daughters of GRAND CHAMPION SEGIS 2d.

YOU know their Quality.

Our herds contain 120 head and are under State and Federal Supervision. **L. N. MACK & SON** and **FLOYD E. MACK**, Montrose, Pennsylvania

WEST VIEW HERD NOTES

J. S. Oliver of Franklinville, Pa., is building a purebred herd and recently purchased six females from Merle W. Ongley of Centerville, Pa. Five of these animals were milkers and all were raised at the Ongley establishment, at the head of which is Maple Grove Clever Koningen Glista whose dam as a heifer produced 10,000 lb. milk in a year while enrolled in cow testing association work. As her milk for the year averaged 4.1% fat she made a very nice butterfat record. As a junior four-year-old she was officially tested and is credited with a seven-day record of 20.60 lb. butter, 461.5 lb. milk. Her dam was an A. R. O. granddaughter of King of the Pontiacs and her sire was a grandson of that same great bull.

The Ongley herdsire was by a son of Glista Coreva, 593.5 lb. milk, 34.08 lb. butter in seven days. She has a record made in the Cornell University herd of 13,310.5 lb. milk, 607.93 lb. butter in ten months and most of this time she was milked only twice a day. She is justly regarded as one of the greatest cows ever in the Cornell herd.

Mr. Ongley calls his establishment West View Herd. This herd is accredited, no tuberculosis has ever been found in it. Mr. Ongley has his cows enrolled in testing association work and they have made splendid records year after year. One of his cows De Kol Pietertje Pauline has just finished a C. T. A. record of 457 lb. fat, 13,780 lb. milk. At the time she started in this work she had been milking more than a year and did not freshen again until she had been on test five months. She was milked only twice a day. Now in her second year she is making at the rate of 16,000 lb. milk and 600 lb. fat. Although she has been milking over eight months she is still giving 60 lb. daily on twice a day milking. This great producer has made 96 lb. milk in a day, 2,700 lb. in 30 days and 17,000 lb. milk in eleven months. We are informed that Mr. Ongley is consigning her son to the Crawford County Coöperative Sale which will be held June 24 and 25 at Cambridge Springs, Pa. The man to whom this bull is struck off will get an animal which he may confidently expect to sire both producers and fine individuals.

IN WEST VIRGINIA

Metis, a registered Holstein owned by Kanawha Farms, near Charleston, led the Tri County West Virginia Testing Association during March, by the production of 2,010 lb. milk, 72.4 lb. fat. A stablemate, Latalee, was second with 2,040 lb. milk, 67.3 lb. fat.

Sammy Junior.—Fadder, was your people well to do?

Sammy Senior.—No, my son, but dey was hard to do, so dey allus got along.

A thoroughly honest and upright man is one who tells the whole truth about a second-hand car which he is trying to sell to a fellow he doesn't care for.

TAKES PRECAUTIONS

At Shillington, Pa., the Berks County Home has a herd of accredited Holsteins. Recently steward Harvey M. Grill and three directors visited the stockyards at Lancaster, Pa., and purchased twenty-two steers, which will be fattened at the farm and slaughtered for use in the commissary. In order to insure that no infection should be carried into the stables, the steers were tuberculin tested before being taken to their new home.

A large portion of the food used at the County Home is produced on the farm. The last week in January the Home butcher killed five hogs with an aggregate weight of 2,225 lb. or an average of 445 lb. About 350 tons of ice was stored this year in order to keep the food fresh and sweet.

PICKED A GOOD ONE

The Holstein herd at the State Sanatorium, Oakdale, Wisconsin, was recently enlarged by the purchase of a purebred Holstein that had been kept as a family cow at West Branch. In her new home she freshened recently, and in her first month milked 2,039 lb. which was 1.74 times her weight. Her milk tests from 4.3 to 4.6% fat. Her work gratifies Harry E. Colby, who is superintendent of dairying at the Oakdale Sanatorium, particularly so as she dropped a heifer calf, sired by a good bull. Mr. Colby is well known to the Holstein fraternity, and a few years ago was one of the leading Holstein journalists in the United States.

HE KNOWS THE GAME

A. W. Mattern, of Waterloo, Iowa, who has had a long experience as a dairyman, will go into partnership with a son-in-law at Deep River, Iowa, and operate a Holstein dairy. Mr. Mattern formerly worked on a Holstein dairy farm in Minnesota, and then later on the Orville Hamer Farm, at Waterloo, one of the best Holstein establishments in that neighborhood. Holstein enthusiasts everywhere will wish the new firm success.

BUYS AN ORMSBY

August Hoppe of Ringle, Wisconsin, recently purchased King Pontiac Lomita Ormsby, from Louis Harrington, of Plover, Wisconsin. This bull is by King Bess Johanna Ormsby, a son of Bess Johanna Ormsby. His dam, Lomita Topsy Segis has a seven-day-record of 27.71 lb. butter and 554.1 lb. milk, while for 260 days she is credited with 801.33 lb. butter.

AS A REWARD OF MERIT

The National Dairy Association is offering a certificate to every dairyman who has five or more cows that make 300 lb. butterfat during a year while enrolled in a cow testing association. To obtain such a certificate the tester or county agent has to send in a list and particulars to the association's headquarters at Washington, D. C.

AMATEUR PICTURE CONTEST

To the Breeders and Dairyman:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of mature cows will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

A FEW CHOICE HEIFERS

sired by a well bred son of

King Tobe Alcartra De Kol

he by King Segis Pontiac Alcartra from the former World's Champion three-year-old, Lady Tobe De Kol, 36.59 lb. butter, 631 lb. milk in 7 days—her dam 31.66 lb.

Will also sell all this year's calves.

Herd under State and Federal Supervision. Prices right.

O. I. MARTIN

Cambridge Springs, Crawford County, Pa.

MEMBERS OF THE BOILING SPRINGS HERD

occupied the first three places in the Cumberland County Testing Association for May. Their average production was 81.43 lb. FAT, 2,140 lb. milk. The entire herd, 21 in all, averaged 1,348 lb. milk, 48 lb. FAT. You can find cattle that will please you in this Accredited Herd.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

Milk is the Real Staff of Life

From Dr. John Harvey Kellogg's Address at the Holstein Friesian Banquet, Grand Rapids, Michigan, June 3, 1925

MILK has been a great factor in lifting the human race from a state of savagery to its present high pinnacle of civilization.

Only in those countries in which the dairy industry has been well developed and milk and its products freely used has the race attained its greatest heights of physical, mental and moral development.

Anthropologists formerly attributed this racial superiority to the use of flesh foods; but McCollum and others have pointed out that not meat, but milk, is the magic food which gave civilization of Western Europe the thighs and sinews with which to climb to greater heights than any other has achieved in the history of the world.

Modern nutrition researches have shown that plants provide everything that an animal needs for its sustenance. All life and energy come from the sun. It is the function of the plant to capture the sunshine.

The green leaf is the trap in which the mighty electro-magnetic forces of sunlight are caught and solidified. The plant is the original source of all food and in eating beef one is only taking second hand the grass and corn on which the ox was fed.

Grains are defective foods. There is something in the green leaf that the body must have for its upkeep. A man can live on grains plus greens.

The pioneers of civilization soon discovered the inadequacy of cereals and turned to the milk producers, the cow, sheep, goat, ass, reindeer, and other herbivorous animals for help. These industrious grass eaters they employed to gather greens from the meadows and hillsides and deliver to them the quintessence of their wide gleanings, in milk, the most wonderful of all the products of nature's food laboratories.

The most glaring defect of the modern dietary is lack of lime. The bones are the framework of the body. Height depends upon bone development. The bones consist largely of lime and hence it is reasonable to regard the deficiency of lime in our daily food as at least one cause of the great loss of stature which has occurred since the Civil War.

Milk is rich in lime, while meat contains almost no lime at all. An ounce of milk contains as much lime as a pound of meat. The body loses from one-third to half a dram of lime daily. A quart of milk will make good the loss which would not be made good by twenty pounds of beef or mutton.

This fact alone will justify a serious campaign for the education of the public to use milk more freely.

Milk supplies the same food elements supplied by meat and in better form. Milk is more easily digestible than meat and is more perfectly assimilated than meat.

For the infant milk supplies exactly what the developing being requires, with the exception of iron. Milk is rich in casein, an easily assimilable tissue building element. The fat present furnishes substantial fuel material for maintaining bodily heat and is supplemented by a large portion of milk sugar constituting about four per cent of the milk.

That milk is a protective food is another important fact. It not only supplies elements for tissue building and energy protection, but serves as a protection against harmful bacteria. Milk sugar feeds acid-forming bacteria which are always present in great numbers. These bacteria produce lactic acid. Putrefactive bacteria are very sensitive to acids and cannot grow in their presence. Consequently, although putrefactive bacteria are always present in milk, putrefaction does not take place but souring occurs instead, and sour milk is entirely wholesome.

If meat were at once excluded from the nation's bill of fare and one pint of milk per capita substituted in its place the mortality rate would in a short time be reduced 20 to 30 per cent and after a few years of such dietary our present mortality rate would without doubt be cut in two in the middle.

Dr. Cotton, superintendent of the state insane asylum at Trenton, N. J., has decided after long study and investigation that much insanity of the present age is caused by diseased colons. The removal of 600 infected colons restored the patients to sanity and they were able to return to their homes.

I tried to convince Dr. Cotton to reform the colon. I suggested substituting milk for meat in the diet.

Dr. McClellan at the state hospital at Dayton, Ohio, gained satisfactory results by substituting milk for meats in the diets of his patients. Twice as many patients were discharged from the institution last year as the year before as a result of cutting down on the meat and substituting milk.

Poisons produced by the wild bacteria which flourish in the colon of "mixed feeders" are recognized as one cause of premature old age. Their circulation in the blood causes hardening of the arteries. They are the chief cause of biliousness, headache, neurasthenic symptoms and a great variety of morbid conditions. Hence the suppression of putrefactive changes in the colon is a matter of the highest importance.

We are rapidly becoming a toothless race largely because of the deficiency of lime in our national bill of fare. If we would stop throwing skim milk down the sewer and feeding it to the pigs and would use it instead in bread making we would be taking a long step toward the tendency toward toothlessness. Such a change in the diet doubtless would put some thousands of dentists out of business just as the lacto-vegetarian diet would decrease the business for the doctors and druggists.

The chief trouble with the dairy industry is that farmers do not ask enough for milk. Compared with meat at present prices, milk is worth thirty-five cents (35c) a quart.

A Good Susquehanna County Herd

WITHIN a short distance of Factoryville, Pa., is the farm of Robert I. Springer, owner of a good producing Holstein herd. Mr. Springer is a typical Susquehanna County Holstein breeder and dairyman who does the most of the work on his own farm and cares for his own dairy. There are a number of attractive cows in the Springer herd: One of these, Maid of Beech Ridge, was one of the first animals in the herd and she has an official record of 560.3 lb. milk, 26.29 lb. butter made as a five-year-old. So much did Mr. Springer think of her that he used one of her sons as a herdsire and his near neighbor, Raymond Strickland used another son of this cow. Although these two breeders get their mail from different post offices their farms are very near together and they have occasionally exchanged herdsires.

ROBERT I. SPRINGER AND MABEL BEETS MODEL

The influence of the George Stevenson herd is shown in many herds in the Keystone State. In this aggregation of producers you find several including Beauty Napol Segis, a granddaughter of the famous Keystone Beauty Plum Johanna, a cow that produced 1,294.71 lb. butter in a year as a senior four-year-old, world's record in class at time of making. This cow was run in strictly official test the whole of the year and her record has never been equalled in strictly official work by any other animal under full age.

One of Mr. Springer's favorite cows is Mabel Beets Model, a very handsome individual. Her sire, King Model Pontiac Korndyke was from Pauline Pontiac Pet, a 20 lb. three-year-old by Korndyke Pontiac Pet from Aaggie Pauline Sarcastic, a famous old show cow with a 36 lb. official seven-day butter record. Korndyke Pontiac Pet was a son of the former world's

champion Pontiac Pet, 37.68 lb. butter in seven days. King Model, sire of King Model Pontiac Korndyke, for a number of years headed the Bloomingdale herd. His dam, Mabel Segis Korndyke, was the first animal under full age to be credited with a 40 lb. official seven-day butter record and is at once associated by breeders with the Bell herd in which she spent several years.

King Pietje Aaggie Pontiac is the very handsome bull that heads this herd. It is needless to say anything about his individuality, his picture speaks for itself. He is one of the finest bulls we have ever had the pleasure of examining and is backed by big producing strains. His sire, King Pontiac Alcartra Pietje needs no introduction to the readers of the BREEDER AND DAIRYMAN for he is without doubt the greatest sire ever in northern Pennsylvania. His sons and daughters and his grandsons and granddaughters have won high honors in many show rings and although many of his daughters are in herds where they never have had an opportunity to make official records yet numbers of them have been tested to substantiate the claim of his ability to sire producers as well as fine individuals.

King Pontiac Alcartra Pietje was by King Segis Pontiac Alcartra long at the head of the Arfmann herd. This bull was from K. P. Alcartra, 30.87 lb. butter in seven days, 121.29 lb. butter in thirty days, world's records in class at time of making while as a Junior two-year-old, she made a world's record in year test. She was from a 31 lb. daughter of the 29 lb. foundation cow, Alcartra Polkadot, and her sire, as the name indicates, was by King of the Pontiacs.

King Segis Pontiac Alcartra was sired by King Segis Pontiac who in turn was by King Segis from Pontiac Clothilde De Kol 2d from the first 37 lb. cow and the first cow to make over 1,000 lb. butter in a year.

The dam of King Pontiac Alcartra Pietje was Fairmont Zerna Segis Pietje, 608.4 lb. milk, 35.61 lb. butter in seven days, world's record in the junior four-year-old class at time of making.

Four successive generations of high record animals are the four direct descendant dams of King Pietje Aaggie Pontiac. His own dam, Aaggie Cornucopia Pauline Girl 2d is credited with 564.2 lb. milk, 31.79 lb. butter in a week. Her dam, Aaggie Cornucopia Pauline Girl, has an official record of 542.4 lb. milk, 25.31 lb. butter. She was from Aaggie Cornucopia Pauline 2d, 679.4 lb. milk, 31.05 lb. butter in a week and 2,842.8 lb. milk, 128.98 lb. butter in thirty days, daughter of the famous world's champion Aaggie Cornucopia Pauline, 659.2 lb. milk, 34.32 lb. butter in seven days and 137.62 lb. butter in thirty days as a senior four-year-old. Her butter records were world's records at time of making and stood at the head of the senior four-year-old class for nearly eight years. She was foundation cow of a wonderful strain of record animals, several of which also won honors in the show ring.

The dam and sire's dam of King Pietje Aaggie Pontiac have seven-day records that average 33.73 lb. butter, 586.3 lb. milk and his three nearest dams average 30.9 lb. butter, 571.6 lb. milk or 81 2/3 lb. milk daily during the week of their official test.

A Colorado Holstein Community

IN 1880 a family named Sinton left Ithaca, New York and settled at Colorado Springs, El Paso County, Colo. In August of that year they started a dairy near East Willamette with a dozen red cows. At first they delivered 44 quarts of milk daily at 10c a quart, using a little pony to draw the cart. They delivered a good product and their trade increased. They bought ranch after ranch and herd after herd until they dominated the industry in county and state as producers, purchasers and deliverers of milk to customers. The Sinton Dairy Company annually sells over one million gallons of milk and cream. Two years ago they purchased the William Bates ranch of 1,150 acres and here they keep 125 Holsteins, purebreds and grades. Near Kelker they have leased the 5,000 acre Fairmount Park ranch and here they have 200 head of grade Holsteins with registered sires.

In 1924 Herbert Sinton and Henry Lewing bought from Asa T. Jones a herd of 200 high grade Holsteins headed by registered sires. This is known as the Holland dairy and is kept on land which is still owned by Mr. Jones. Here special milk is produced which retails at 17c and is sold under a 4% fat guarantee. The standard milk averages 3.6% fat. A waiting list

of special customers takes all the butter manufactured by this concern.

Early this year M. M. Sinton retired from active management of production but is still president of the concern. Ira Ullom is general farm manager, Herbert Sinton, nephew of the president is secretary and general manager of the company and Ernest Sinton is assistant secretary.

George T. Sinton manages the Turkey Creek dairy and farm owned by Senator Spencer Penrose. Here there is a herd of 100 purebred Holsteins. The Sinton Dairy Company markets the milk.

The Sintons sell goat milk as well as cow's milk. There are several herds of purebred goats in this neighborhood, Toggenbergs, Nubians and Saanens. The Arnold dairy owned by Mr. and Mrs. R. H. Arnold contains 60 head of high grade and purebred Holsteins and some Jerseys. The milk produced here is sold as "special" milk and is in great demand for children and invalids.

The many prizes won at great fairs by cattle owned by the Modern Woodmen Sanatorium has made the name of this establishment and Colorado Springs nationally known. The Woodmen herd contains 135 head and is the largest registered Holstein herd in the state. In the past four years their great cow, Zwingara Segis Clothilde has been exhibited 22 times and won grand championship 19 of the 22 times. We are sorry to say however that they had the misfortune recently to lose this cow.

Another large herd of registered Holsteins is owned by the Colorado School for the Deaf and Blind. Here the cows are milked by machines driven by electricity. One cow in this herd, Sally Clothilde Netherland 2d recently made a record of 37.05 lb. of butter, 631 lb. of milk in seven days.

There are other large purebred Holstein herds in this vicinity, one owned by the Myron Stratton home, one by the Union Printers home and yet another by the El Paso County Poor Farm. The product of these herds is consumed in the institutions to which they belong. In addition, many dairymen use purebred sires and have some purebreds among their grades.

Forty years ago El Paso County produced but one-sixth of the dairy products locally consumed and milk, butter and cheese consumed in Colorado was brought in from other states, but because of the splendid climate, pure water and nutritious food and the growth of the dairy herds not only does the county produce sufficient supplies for home consumption but at certain seasons exports butter as far as Atlantic and Gulf ports. Efficient health and agricultural departments and the enforcement of pure food laws have helped bring about this satisfactory condition of affairs.

"In every field of marketing, progress is being made through the practice of *standardization*. Those who are taking the lead in the move to standardize dairy products are to be commended for their good work. The markets for manufactured dairy products, especially butter, have always placed a higher value on the product of high quality. Similar rewards will come from improvement in the quality of milk and cream."

We are rapidly becoming a toothless race largely because of the deficiency of lime in our national bill of fare. If we would stop throwing skim milk down the sewer and feeding it to the pigs and would use it instead in bread making we would be taking a long step toward the tendency toward toothlessness. Such a change in the diet doubtless would put some thousands of dentists out of business just as the lacto-vegetarian diet would decrease the business for the doctors and druggists.

The chief trouble with the dairy industry is that farmers do not ask enough for milk. Compared with meat at present prices, milk is worth thirty-five cents (35c) a quart.

A Good Susquehanna County Herd

WITHIN a short distance of Factoryville, Pa., is the farm of Robert I. Springer, owner of a good producing Holstein herd. Mr. Springer is a typical Susquehanna County Holstein breeder and dairyman who does the most of the work on his own farm and cares for his own dairy. There are a number of attractive cows in the Springer herd: One of these, Maid of Beech Ridge, was one of the first animals in the herd and she has an official record of 560.3 lb. milk, 26.29 lb. butter made as a five-year-old. So much did Mr. Springer think of her that he used one of her sons as a herdsire and his near neighbor, Raymond Strickland used another son of this cow. Although these two breeders get their mail from different post offices their farms are very near together and they have occasionally exchanged herdsires.

ROBERT I. SPRINGER AND MABEL BEETS MODEL

The influence of the George Stevenson herd is shown in many herds in the Keystone State. In this aggregation of producers you find several including Beauty Napol Segis, a granddaughter of the famous Keystone Beauty Plum Johanna, a cow that produced 1,294.71 lb. butter in a year as a senior four-year-old, world's record in class at time of making. This cow was run in strictly official test the whole of the year and her record has never been equalled in strictly official work by any other animal under full age.

One of Mr. Springer's favorite cows is Mabel Beets Model, a very handsome individual. Her sire, King Model Pontiac Korndyke was from Pauline Pontiac Pet, a 20 lb. three-year-old by Korndyke Pontiac Pet from Aaggie Pauline Sarcastic, a famous old show cow with a 36 lb. official seven-day butter record. Korndyke Pontiac Pet was a son of the former world's

champion Pontiac Pet, 37.68 lb. butter in seven days. King Model, sire of King Model Pontiac Korndyke, for a number of years headed the Bloomingdale herd. His dam, Mabel Segis Korndyke, was the first animal under full age to be credited with a 40 lb. official seven-day butter record and is at once associated by breeders with the Bell herd in which she spent several years.

King Pietje Aaggie Pontiac is the very handsome bull that heads this herd. It is needless to say anything about his individuality, his picture speaks for itself. He is one of the finest bulls we have ever had the pleasure of examining and is backed by big producing strains. His sire, King Pontiac Alcartra Pietje needs no introduction to the readers of the BREEDER AND DAIRYMAN for he is without doubt the greatest sire ever in northern Pennsylvania. His sons and daughters and his grandsons and granddaughters have won high honors in many show rings and although many of his daughters are in herds where they never have had an opportunity to make official records yet numbers of them have been tested to substantiate the claim of his ability to sire producers as well as fine individuals.

King Pontiac Alcartra Pietje was by King Segis Pontiac Alcartra long at the head of the Arfmann herd. This bull was from K. P. Alcartra, 30.87 lb. butter in seven days, 121.29 lb. butter in thirty days, world's records in class at time of making while as a Junior two-year-old, she made a world's record in year test. She was from a 31 lb. daughter of the 29 lb. foundation cow, Alcartra Polkadot, and her sire, as the name indicates, was by King of the Pontiacs.

King Segis Pontiac Alcartra was sired by King Segis Pontiac who in turn was by King Segis from Pontiac Clothilde De Kol 2d from the first 37 lb. cow and the first cow to make over 1,000 lb. butter in a year.

The dam of King Pontiac Alcartra Pietje was Fairmont Zerma Segis Pietje, 608.4 lb. milk, 35.61 lb. butter in seven days, world's record in the junior four-year-old class at time of making.

Four successive generations of high record animals are the four direct descendant dams of King Pietje Aaggie Pontiac. His own dam, Aaggie Cornucopia Pauline Girl 2d is credited with 564.2 lb. milk, 31.79 lb. butter in a week. Her dam, Aaggie Cornucopia Pauline Girl, has an official record of 542.4 lb. milk, 25.31 lb. butter. She was from Aaggie Cornucopia Pauline 2d, 679.4 lb. milk, 31.05 lb. butter in a week and 2,842.8 lb. milk, 128.98 lb. butter in thirty days, daughter of the famous world's champion Aaggie Cornucopia Pauline, 659.2 lb. milk, 34.32 lb. butter in seven days and 137.62 lb. butter in thirty days as a senior four-year-old. Her butter records were world's records at time of making and stood at the head of the senior four-year-old class for nearly eight years. She was foundation cow of a wonderful strain of record animals, several of which also won honors in the show ring.

The dam and sire's dam of King Pietje Aaggie Pontiac have seven-day records that average 33.73 lb. butter, 586.3 lb. milk and his three nearest dams average 30.9 lb. butter, 571.6 lb. milk or 81 2/3 lb. milk daily during the week of their official test.

A Colorado Holstein Community

IN 1880 a family named Sinton left Ithaca, New York and settled at Colorado Springs, El Paso County, Colo. In August of that year they started a dairy near East Willamette with a dozen red cows. At first they delivered 44 quarts of milk daily at 10c a quart, using a little pony to draw the cart. They delivered a good product and their trade increased. They bought ranch after ranch and herd after herd until they dominated the industry in county and state as producers, purchasers and deliverers of milk to customers. The Sinton Dairy Company annually sells over one million gallons of milk and cream. Two years ago they purchased the William Bates ranch of 1,150 acres and here they keep 125 Holsteins, purebreds and grades. Near Kelker they have leased the 5,000 acre Fairmount Park ranch and here they have 200 head of grade Holsteins with registered sires.

In 1924 Herbert Sinton and Henry Lewing bought from Asa T. Jones a herd of 200 high grade Holsteins headed by registered sires. This is known as the Holland dairy and is kept on land which is still owned by Mr. Jones. Here special milk is produced which retails at 17c and is sold under a 4% fat guarantee. The standard milk averages 3.6% fat. A waiting list

of special customers takes all the butter manufactured by this concern.

Early this year M. M. Sinton retired from active management of production but is still president of the concern. Ira Ullom is general farm manager, Herbert Sinton, nephew of the president is secretary and general manager of the company and Ernest Sinton is assistant secretary.

George T. Sinton manages the Turkey Creek dairy and farm owned by Senator Spencer Penrose. Here there is a herd of 100 purebred Holsteins. The Sinton Dairy Company markets the milk.

The Sintons sell goat milk as well as cow's milk. There are several herds of purebred goats in this neighborhood, Toggenbergs, Nubians and Saanens. The Arnold dairy owned by Mr. and Mrs. R. H. Arnold contains 60 head of high grade and purebred Holsteins and some Jerseys. The milk produced here is sold as "special" milk and is in great demand for children and invalids.

The many prizes won at great fairs by cattle owned by the Modern Woodmen Sanatorium has made the name of this establishment and Colorado Springs nationally known. The Woodmen herd contains 135 head and is the largest registered Holstein herd in the state. In the past four years their great cow, Zwingara Segis Clothilde has been exhibited 22 times and won grand championship 19 of the 22 times. We are sorry to say however that they had the misfortune recently to lose this cow.

Another large herd of registered Holsteins is owned by the Colorado School for the Deaf and Blind. Here the cows are milked by machines driven by electricity. One cow in this herd, Sally Clothilde Netherland 2d recently made a record of 37.05 lb. of butter, 631 lb. of milk in seven days.

There are other large purebred Holstein herds in this vicinity, one owned by the Myron Stratton home, one by the Union Printers home and yet another by the El Paso County Poor Farm. The product of these herds is consumed in the institutions to which they belong. In addition, many dairymen use purebred sires and have some purebreds among their grades.

Forty years ago El Paso County produced but one-sixth of the dairy products locally consumed and milk, butter and cheese consumed in Colorado was brought in from other states, but because of the splendid climate, pure water and nutritious food and the growth of the dairy herds not only does the county produce sufficient supplies for home consumption but at certain seasons exports butter as far as Atlantic and Gulf ports. Efficient health and agricultural departments and the enforcement of pure food laws have helped bring about this satisfactory condition of affairs.

"In every field of marketing, progress is being made through the practice of *standardization*. Those who are taking the lead in the move to standardize dairy products are to be commended for their good work. The markets for manufactured dairy products, especially butter, have always placed a higher value on the product of high quality. Similar rewards will come from improvement in the quality of milk and cream."

The Fern Ledge Holstein Herd

IN the northeastern corner of Susquehanna County, Pa., off the beaten track usually travelled by men in search of Holsteins is the little village of Thompson around which is a Holstein community which includes a number of accredited herds. In size, type and producing ability the herds in this community are second to none for they have been built up during a number of years by a bunch of men whose sole business is dairy farming, men who have chosen the purebred Holstein cow as the best producing and most profitable milk machine known. One of these Holstein breeding establishments is Fern Ledge Farm owned by E. R. Gelatt and Son.

The present Gelatt herd was started in 1916 by the purchase of the A. R. O. cow Maple Lane Maid DeKol 4th from the veteran Holstein breeder George E. Stevenson. This cow had been bred to Prince Segis Johanna Korndyke a son of Prince Segis Korndyke and

THE GELATT HERD IS NOTED FOR GOOD TOP LINES.

Keystone Plum Johanna, 29.35 lb. butter in seven days, 22,190.7 lb. milk, 1,052.96 lb. butter in a year, full sister to the famous Keystone Beauty Plum Johanna. In due time Maple Lane Maid DeKol 4th dropped a bull calf which was kept as a herdsire. There are daughters and granddaughters of this bull at present in the herd and you would be apt to pick most of them out if you look over the dairy. They are naturally hornless, are of medium size with well shaped udders, and their type and straight top lines would appeal to you as being characteristic of the type generally associated with the noted Keystone Beauty Plum family.

In the Gelatt herd are granddaughters of King of the Pontiacs, Colantha Johanna Lad and King Pontiac Alcartra Pietje. There are three daughters of Cream-elle Korndyke Konigen a well-known show bull

formerly owned by A. L. Bowell, who owns a near-by herd.

One of the cows that would be sure to please you is Fern Ledge Mercedes Walker. She is just about five-year-old at the present time. Freshening as a three-year-old she averaged 40 lb. milk a day for the entire lactation period, and is a steady, persistent producer. She is a very handsome animal and is a daughter of King Pietje Walker and Mercedes Greenwood Pauline, one of the foundation animals in the herd which contains three of her daughters all by different sires.

Jessie Aaggie Pauline Lass is another cow of which the Gelatts are very proud. She has produced 71 lb. milk in a day under ordinary farm conditions and has given 12,000 lb. milk in a year. She has no official record, having never freshened except when farm work was pressing and there was no opportunity to give her a record. She has both daughters and granddaughters in this herd.

The herdsire is King Ormsby Endercamp owned jointly with O. P. Walker and Sons and A. L. Bowell and Son whose farms are nearby. This bull is a very handsome fellow, well marked and well bred. His sire is King of the Ormsbys, the well-known son of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke 2d, with four seven-day records ranging from 30.22 lb. butter to 38.22 lb. and four year records ranging from 1,034.33 lb. butter to 1,290.9 lb.

The dam of King Ormsby Endercamp is Vander-camp Segis Aaggie Jewel 533.6 lb. milk, 29.37 lb. butter in seven days and 21,110.5 lb. milk, 904.32 lb. butter in a year. Her dam is a good record daughter of Woodcrest Aaggie Jewel Son and she is from Queen Segis 3d, whose dam Queen Segis was by the famous sire King Segis. Vander-camp Segis Aaggie Jewel was a daughter of Judge Segis whose daughters are noted for both individuality and production and who was by King Segis from a 29 lb. three-year-old daughter of Judge Hengerveld De Kol. The records of the dam and sire's dam of King Ormsby Endercamp, average 33.80 lb. butter, 662.9 lb. milk for seven days and their year records average 1,097.61 lb. butter, 23,014.3 lb. milk. The record of his three nearest dams average 30.32 lb. for seven days and his seven nearest dams average exactly 30 lb.

There are around thirty head of purebreds in the Fern Ledge Herd which is on the accredited list. Fern

JESSIE AAGGIE PAULINE LASS
71 lb. milk in a day, 12,000 lb. milk in a year in everyday work.

VANDERCAMP SEGIS AAGGIE JEWEL
29.37 lb. butter in 7 days; 21,110.5 lb. milk, 904.32 lb. butter in a year. Dam of King Ormsby Endercamp.

TYPE AND PRODUCING CAPACITY
COMBINED
are found in the Gelatt herd.

Ledge Farm contains one hundred and sixty acres, the farm being purchased about forty years ago by the father of the present senior member of the firm. Mr. E. R. Gelatt is now sixty-four years old and as his health is not good, the duties of management devolve on his son Hugh, who so far is unmarried and lives with his parents. Hugh is a capable farmer and manager and added to his home training by taking a two years course at Pennsylvania State College so that scientific knowledge supplements farm experience.

A comfortable, capacious, wooden barn houses the animals. Although no water buckets are as yet installed, it is lighted by acetylene and the floors and gutters are of concrete. A silo furnishes succulent food for the animals in winter and is available for supplementing pasture in dry summer. The barn windows

KING ORMSBY ENDERCAMP
by King of the Ormsbys from a 904 lb. year record daughter of Judge Segis. Herdsire owned jointly by Gelatt & Son, Bowell & Son and Walker & Sons.

are so arranged as to admit of ventilation without throwing any draught on the animals. There are a large number of buildings and as the farm is rolling, the buildings are situated so that extensive picturesque views can be enjoyed.

Thompson is about twenty-five miles from Montrose, the county seat, and as Mr. Gelatt says, "few buyers think there are any good cattle far away from the main road." As a matter of fact animals that have won high honors in great show rings and made remarkable records both in official and long time tests were picked up from small farms and were developed in noted breeding establishments to which the unthinking public gives all the glory instead of placing it where most of it rightfully belongs.

Virginia as a Dairy State

FEW States in the Union have as many natural advantages for the development of the dairy industry as Virginia. Its first great advantage is that of location. One-third of the people of the United States live within a radius of less than 400 miles from the capital of this State. This gives Virginia dairymen a tremendous advantage in getting their products to the most profitable market. In addition to being well located, Virginia has a climate and soils especially adopted to dairying. The winters are not so cold or so long as those in the States to the north and west of us, which means a saving in housing and expensive feeds. Our summers are not so long or so hot as the States to the south of us, which means less trouble from flies and other insects. Innumerable running streams furnish an abundance of pure fresh water and our soils are well adapted to practically all the crops

needed for dairy feeds. With all of these great advantages Virginia should be and is rapidly becoming the leading dairy state in the east.

Not until recent years have Virginia farmers paid very much attention to dairying but there has been a tremendous increase in interest in this line of work since 1910 and at the present time Virginia has more purebred cattle, more cow testing associations, and more real dairymen, than any other state in the South Atlantic Division. The census report for 1920 states that the increase in dairy cows since 1910 was 17.2% but the increase in the value of milk and dairy products sold was from \$7,704,326 to \$19,167,935 which is 148.8%. In 1910, 4,300 farms in Virginia were selling milk, cream and butterfat. In 1920, 13,700 farms were selling these products. At present 8% of all the farmers of the State are selling dairy products, not including farm butter. When farm butter is included, 44% are selling dairy products.

While we have no accurate census statistics on the increase in the number of purebred dairy cattle in Virginia we know that there has been a tremendous increase in the last few years. The last census credited Virginia with 9,586 purebred dairy cattle which was a greater number than was credited to any other South Atlantic State.

The State Dairy and Food Division furnishes the following interesting statistics in regard to the growth of the dairy industry in the last few years. In 1911 there was a total of only 22 manufacturing plants in operation in the State. In 1922 there were 38 creameries and milk plants, 82 ice cream plants and 6 cheese factories. The total pounds of butterfat handled in 1911 was 1,347,000, by 1922 this had increased to 8,691,000. The butter manufactured in 1915 was 350,000 pounds while the butter manufactured in 1922 totaled 3,306,000 pounds. The number of gallons of milk handled by creameries and milk plants in 1915 was approximately 4,400,000 and in 1922 was 19,500,000 or an increase of about 400%.

The natural development of the dairy industry in Virginia has been around the cities where the demand for milk has been strong and it is generally believed that the whole milk market of Virginia is just about supplied, but when we consider the small average per capita consumption of fluid milk in our Virginia cities we can see that there is still considerable room for expansion of our whole milk market. For instance, the people of our six leading cities consume only .38 of a pint of milk per capita daily, while the people in the city of Washington consume an average of .9 of a pint per capita daily and the average per capita consumption for the United States is 1 pint. Therefore to bring the consumption of fluid milk up to the average of the United States, or even of Washington, our cities could increase the use of milk by 32,500 gallons daily, which is more than double the present consumption. The remainder of our population could increase the use of milk by 121,000 gallons daily, which is twice as much as is now sold in the six largest cities in the state together with Washington. In terms of profitable cows producing an average of 6,000 pounds of milk yearly, this extra fluid milk consumption would require 76,000 cows.

Down in Tennessee

RIVERSIDE DAIRY FARM is located near Knoxville, Tenn., along the banks of the Tennessee River. There are 300 acres in this farm of which 275 acres are tillable. The farm is owned by J. A. Kreis a prominent business man of Knoxville, who has been breeding Holstein cattle for nearly seven years. At the present time there are at least one hundred animals in the herd of which fifty are milking cows and the same number of heifers, two years old and younger.

At the head of the herd are the bulls Risinghurst King Maxie Hope and Zeldenrust Pontiac Segis. The dam of the first bull, as a senior four-year-old, is credited with 599.1 lb. milk, 36.28 lb. butter in seven days and his two nearest dams average 33.44 lb. butter. He is a very handsome bull, light in color and, ex-

CLEMENTINE PONTIAC CHESTERFIELD

One of the great cows in the Riverside Dairy. She was grand champion at the Eastern Tennessee Division Fair and has produced 95 lb. milk in a day.

hibited at the 1920 Eastern Tennessee Division Fair held at Knoxville, won first prize in his class and grand championship.

Zeldenrust Pontiac Segis is leased from the University of Tennessee. He was exhibited as a senior calf in 1919 and was first in his class at the Indiana State Fair. Then he was exhibited at the Kentucky, Tennessee, Georgia and Alabama State Fairs, the Memphis Tri-State Fair, Chattanooga Interstate Fair, and the Southeastern Fair held at Atlanta, and was first prize calf and junior champion at these seven events, the leading cattle shows of the South Atlantic States.

There are a number of splendid animals in this herd but the one that would most probably attract your attention is Clementine Pontiac Chesterfield. Exhibited at the Eastern Tennessee Division Fair, which is held annually at Knoxville, she was grand champion in 1920 and senior champion in 1921. The latter year the Riverside herd carried off two championships, six first and six second prizes, evidence enough of the quality of the animals.

The product of this herd is consumed in the city of Knoxville. Mr. Kreis has found purebred Holstein cows to be profitable dairy animals. In developing his herd, he breeds for both type and production and claims that these two points together with profit mak-

ing ability are important in order to succeed. The herd has been accredited for the past three years. No surplus stock is sold. The surplus bull calves are slaughtered and the females kept as it is intended to increase the herd until it contains one hundred purebred Holstein-Friesian cows.

Mr. Kreis and one of his brothers who, by the way, is also owner of a registered Holstein herd, are interested in the great marble quarries around Knoxville. From these quarries marble of high quality is obtained which is shipped to many different states for use in great buildings.

Like many other leading business men, Mr. Kreis was raised on a farm and so was his wife but in neither instance were they dairy farms. The love of a good animal and the business opportunity presented by the nearness of the great Knoxville market for milk are the principal reasons for the existence of this large Tennessee Holstein breeding establishment.

Northwestern Pioneer Alfalfa Grower

CAPTAIN BULLOCK is credited with being the pioneer of alfalfa growing in the Northwest. He owned a ranch not far from the city of Deadwood, S. D., and on this ranch he grew alfalfa. His acreage and crop increased so fast that in 1882 he had more than he could use on the ranch. He tried to sell but could find no buyer. No one wanted that kind of hay. Finally he made a proposition to a man named Lee who had a small dairy and was peddling milk in Deadwood and his proposition was that if Lee would feed two loads of alfalfa instead of the usual hay and his cows did not double their milk production, not a cent was to be paid; if the milk produced was doubled, the Captain was to be paid at the usual price of hay. Afterward questioned, Capt. Bullock said he had received the money but he was not prepared to say whether or not there was a hundred per cent increase in the milk production.

It seems to be the fashion to question the value of some of the so-called agricultural extension work. Governor Hartley returned unsigned the printing requisition of the Washington state department of agriculture for the monthly "News Letter" issued by that department for free distribution.

PRODUCERS AND CHOICE INDIVIDUALS

Remember that this is an Accredited Herd; that the cattle of this entire county, when recently tuberculin tested, passed 99.2% Clean, and that this herd has always been headed by high class bulls.

Can spare a few good ones raised here.

Saegerstown, R. D. 1, Crawford Co., Pa.

Records and the Guernsey Breeders

MAY 13, the American Guernsey Cattle Club held its forty-eighth annual meeting in New York City. The Secretary's report showed an increase in membership of eighty-nine, a 2.7% increase in registrations and an increase of 7.7% in transfers. The membership increase, however, was far surpassed by the number of new breeders, 1830, added to the records. There was a decrease of 9.7% in the number of advanced register certificates issued and 6.8% in the number of breeders doing advanced register work.

Thoughtful men interested in Guernseys question the wisdom of some of the advanced register work as at present conducted. An attempt was made to abolish the 365 day test and have all records made for a period of 305 days with the animal required to freshen again within thirteen months from the date of freshening for the lactation period in which the record is made. After a long and somewhat heated discussion the motion was tabled for one year.

President Scoville spoke from the floor reviewing advanced registry work from the earlier days until the present. He said that under the leadership of Mr. Caldwell the American Guernsey Cattle Club championed tests based on a full year, feeling that the short time tests furnished only an inadequate guide to the producing value of an animal. He was inclined to believe that, at the time these tests were inaugurated, no one anticipated that the cow would be kept in milk over the entire year but that there should be included within the year both the milking and dry periods.

Mr. Scoville said "Human nature, however, soon made this testing into a competitive game very much like horse racing. Horse racing in this country started with a few farmers who brought their horses to the track without any special training with the idea of determining who had the fastest horse, but it soon became a highly specialized business and to-day no horse in the racing game is ever used for anything else.

"To a certain extent the same tendency has been exhibited in the dairy world and to-day we have barns specially constructed, in charge of men whose salaries would often make a college professor jealous and under conditions which entirely disregard all items of expense."

The argument was brought up that the year tests as at present conducted have little if anything in common with the requirements of the farmer dairyman who wants a cow that will produce and reproduce, one that will drop him a calf once a year and make a profit over the cost of her feed and care. A number of the arguments brought forward might have been taken from the pages of the BREEDER AND DAIRYMAN although we know that they were not but we are proud of the fact that we were the first breed journal to seriously question the advisability of racing cows and to point out that the monied fanciers with their high priced herds-men who, as one of the Guernsey breeders said, "drew salaries that were the envy of a college professor" are not working for, but rather, against the man on the farm who does most of the work of caring for his herd.

Some years ago one Guernsey breeder suggested that in order to maintain development along economical

and natural lines, the breed associations will eventually prescribe that no cow should be admitted to the advanced register whose record has not been made at a profit and this year he confirmed what he said several years ago, and added:

"There are many men who have sporting blood and they are willing to pay enormous prices for cows and to develop them under abnormal conditions to do things that they can never do under normal conditions. The farmer who buys the bull produced under those abnormal conditions hoping to make a living out of the progeny is going to meet with disaster.

"You may change your methods from 365 to 305 and you may run the gamut, but you can't solve an economic problem in an uneconomic way. I don't believe that this Advanced Register test is going to commend itself to the farmer until you can demonstrate to his satisfaction that the sires he is buying of you are going to improve the daily conditions under which he is making his living.

We Wonder Why

A STATEMENT comparing the costs of state governments for the years 1919 and 1923 was recently issued by the Bureau of the Census. The cost of government has greatly increased in the United States since the world war and this increase is largely in the cost of state and local governments and not of the Federal government. Government cost has increased in every state in the United States in this period, the largest increase being in New York, from 63½ million to 108 million dollars. The three largest percentage increases are in Delaware which has increased from \$1,100,000 to \$4,800,000, West Virginia which has increased from \$4,600,000 to \$16,800,000 and Iowa which has increased from \$10,900,000 to \$40,500,000 per year. The smallest percentage increase is in Idaho which has increased from \$2,900,000 to \$3,500,000.

Massachusetts is the only state that has decreased its state debt from 1919 to 1923. The largest increases in state debt recorded were in Oregon and South Dakota. South Dakota holds all records as to per capita debt. In 1923 it had a debt of \$90 per capita. In Iowa in this period the state debt increased from 25c to \$6 per capita. The grand total of all the state debts in the United States increased in this period from \$744,000,000 to \$1,419,000,000 while the annual cost of state government increased from \$542,000,000 to \$933,000,000.

THE CORBIN SWITCH HOLDER

Why let the old Cow hug you around the neck when you can keep her tail out of mischief by using this handy device.

You can obtain one and the HOLSTEIN BREEDER AND DAIRYMAN two whole years for a Dollar Bill. Better send today and be ready for fly time.

NOT ABOUT COWS

Oh, Say, Can You Sing?

MUCH has been said and written about our National Anthems, for we seem to have two. At intervals, efforts are made to have one written that will be easier to sing than "The Star Spangled Banner" and more typically American than "America," the air of which is the English national anthem "God Save the King." Yet, so far, these two have never quite been displaced for the powers that be have not yet agreed upon a successor. This being the case, wouldn't it be a wise and patriotic thing for every one hundred per cent American, of whom we hear so much these days, to learn the words of the national anthem, so as to be able to sing it out lustily. It never was the air that bothered people in singing "The Star Spangled Banner." It's the words—people don't know the words. In any audience in this country to-day, very few of them can sing the first verse through correctly, to say nothing of the others. It would be a grand thing, if, on the coming July Fourth, every red blooded American took time to sit down and learn his national hymn.

A couple of years ago, Dr. C. A. Barbour quoted the following to a Baptist convention and it was afterwards published in the *Standard*.

"Oh, say, can you sing from the start to the end,
What so proudly you stand for when orchestras play it,
When the whole congregation, in voices that blend
Strike up that grand tune, and then torture and slay it?
How valiant they shout when they're first starting out,
But the dawn's early light finds them floundering about
'Tis the Star Spangled Banner' they're trying to sing
But they don't know the words of the precious brave thing.
Hark! The twilight's last gleaming has some of them stopped
But the valiant survivors press forward serenely
To the ramparts we watched, when some others are dropped
And the loss of the leaders is manifest keenly
Then 'the rocket's red glare' gives the bravest a scare
And there's few left to face the 'bombs bursting in air';
'Tis a thin line of heroes that manage to save
The last of the verse, and the home of the brave."

Recreation

THINGS in this world are seldom divided quite equally. Some people have too much money—some not enough. Some have too much avoirdupois—some not enough. And some people work too much—and some not enough. But, for so many years the doctrine of work has been preached that there is danger that the doctrine of play will be overlooked. All work and no play makes Jack a dull boy. It also makes his parents stupid men and women. In days gone by, life was so strenuous for everyone, that grown-ups did not believe in play. In the grim battle to maintain an existence, there was not a moment's respite, lest the enemy gain ground. Such time as was not spent in work was spent in the deep sleep of exhaustion. To-day, people are better paid and work less

hours. In home and work shop there are labor saving devices of which our forefathers never dreamed, devices which mean for men and women a larger leisure.

Those who understand the training of the human mind have seen the educational value of organized, supervised play. They realize that it gives children the opportunity to exercise some of the qualities that should be used in later life—honesty, courage, courtesy, good sportsmanship. If this is true for children why not for grown-ups?

But in the minds of many people there seems to be a lingering idea that recreation is only for the frivolous minded among older people, a waste of time for those who should be engaged in more sober minded occupations. Nevertheless, the fact is that the life of to-day calls for recreation and lawful amusements, and those who do not know how to play should be instructed. Just what form such diversion should take depends entirely upon how the working hours are spent. The man in the office needs active play—golf, tennis, baseball. The manual laborer needs restful play—fishing, motoring, watching others perform.

The tendency of to-day has been to let recreational mediums fall into the hands of the professional element, who commercialize them, using them as a means of making a living. The result is that the vast majority of people are on-lookers, instead of participants. They enjoy sports with their minds but not with their bodies. A game of croquet in which one takes part is more beneficial than a big league baseball game at which one is only an onlooker. The best results from any activity come from putting one's self into it, and good clean outdoor sports are the best outlet for energies, the best banisher of troubles, and the best builders of sound minds in sound bodies.

A Dust Killer

VERY often it is impossible to enjoy delightful porches and lawns because no sprinkling wagon is used on the roadway. Every passing motor car raises a cloud of dust that spreads for rods. However, it is no longer necessary for farmers to endure the dust nuisance. There is a substance that can be purchased and sprinkled over the road, and the dust is laid for the summer. That substance is calcium chloride, a by-product of chlorine which is found largely in common salt. It is a commercial product and may be purchased from several dealers in different parts of the country. It comes in drums containing around 400 pounds, and one drum will cover 150 feet of roadway, 15 feet wide, if the dust is not too heavy. In the latter case use one drum to every 100 feet. The best way to apply it is to use a scoop shovel, shaking the calcium off evenly. It will not injure rubber, but is bad for leather. The cost may vary, depending upon the shipping rate, and the amount

needed will depend on the condition of the roadway. From three to five dollars should cover the cost per hundred feet, spreading it fifteen feet wide. The difference in the amount of dusting needed, indoors and out, should justify the expense. Having an affinity for moisture, the road where it is used looks as though there had been a slight shower. Any who are interested may learn where this dust killer may be purchased by writing to this magazine.

Swedish Farmer Boy Travels

RECENTLY a young farmer, Ulf Olsson, of Skane, Southern Sweden, visited Iowa College and was entertained at luncheon by the Ames Rotarians.

Speaking of agriculture in his own country, he says that the labor problem is not serious there. On his home farm, which contains 2,500 acres, forty laborers are kept throughout the year while others are hired at harvest and spring time.

The dairy herd consists of five hundred cows, all Holsteins which he explains is the predominant breed in Southern Sweden, although there are some Ayrshires. The farm is equipped with milking machines but these are not used except when necessary for the Olssons prefer hand milking.

The principal crops, besides hay and pasture, are winter wheat and sugar beets, about 250 acres of each being grown each year on Mr. Olsson's farm. Both winter wheat and oats yield higher in Sweden than in this country. Wheat makes 55 to 60 bushels per acre and oats 60 to 70. Barley and clover are important crops, while alfalfa is coming into considerable importance in Swedish agriculture. The common rotation system requires about seven or nine years for a complete cycle and includes one rest year in which the land is worked, but no crop is grown. Plowing on the Olsson farm is done with an English make of steam plow which turns six furrows and has a capacity of 25 acres per day.

Mr. Olsson has been in the United States for the

past four months studying general agriculture and is particularly interested in dairying and American farm machinery. He is twenty-eight years of age and since coming to this country has traveled down the entire length of eastern coast to Florida, across the southern states to California, north to Oregon and then east and south through the northwestern states. At New Orleans he purchased a motorcycle because he wished to see more of the country and has traveled 8,500 miles since purchasing his wheel. After a course of University training in Sweden, he is spending four years in observation and travel. His voiced impressions of the United States are: "It is very big, the people are progressive and rich."

Honors for Holstein Boy

AN unusual record is being made by Floyd A. Harper of Middleville, Mich., who has been elected to three national honorary fraternities in two college terms.

Floyd was admitted Alpha Zeta, the honorary agricultural fraternity, last term and into Phi Delta Epsilon, journalistic honorary fraternity, early this spring. This last named honor was in connection with his election as editor-in-chief of the *Michigan Agriculturist*, the magazine compiled and run by the students of the Michigan Agricultural College. Mr. Harper has just been chosen a member of Phi Kappa Delta.

These honors have come to him because of his work and ability. He is captain-elect of the cross country team, vice president of the Dairy Club and has also been prominent in religious and college social activities.

Floyd was valedictorian of the 1922 graduating class of the Middleville high school. He is the youngest son of W. R. Harper, who is secretary of the West Michigan Holstein Breeders' Association and owns a large Holstein dairy farm located near Middleville.

The dexterous management of terms, and being able to fend with them, passes for a great part of learning, but it is learning distinct from knowledge.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Contributing Editors

EUGENE B. BENNETT HELEN C. NEWMAN
J. H. LEWIS

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance. Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JUNE 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

More about the Delegate Convention

IN reporting the Holstein-Friesian Delegate Convention held at Grand Rapids, Mich., the first week in June, some of the agricultural papers made a number of mistakes. One of the mistakes common in several reports was that the association had adopted a new rule which "gave the president of an organized state association the power to name delegates for vacancies not filled by the regular election. In unorganized states, the chairman of the Executive Committee of the National Association is given this power." The quotation is from that usually reliable authority, *"The Breeders Gazette."*

The Bigler resolution was to this effect but was not brought before the Convention. In its place was a substitute resolution which provided that in the case of inability of any properly elected delegates to attend the convention, the secretary of the National Association should be enabled to fill the same by declaring elected the next from that state in order of votes received until all vacancies were filled. This was the resolution as passed.

Considering the fact that in every state there are a large number of members of the National Association that are not members of the state association and that in every state association there are some members who are not members of the National Association, it can be readily seen that the legality of Mr. Bigler's original proposal is very doubtful. In fact, we believe it utterly illegal. It is interesting to speculate how and why so many different papers obtained a wrong interpretation of the Convention's action.

Milk Marketing an Individual Proposition

THE discussion on advertising Holstein milk brought out that a number of enterprising breeders were already successfully marketing milk from their cattle at a material advance over the prices for common milk. F. M. Peasley of Connecticut,

Frank Walker of Virginia, Charles Wertheimer of Maryland, J. E. McWilliams of Michigan and Frank W. Durbin of Oregon, told how they had successfully marketed Holstein milk without any assistance from the National Association either for newspaper advertising, plans or fieldmen.

Marketing a herd product is an individual proposition. Not every man is so located that he is able to reach a retail market; not every man has the ability to operate a retail milk business in addition to his other businesses of farming and cattle breeding.

Manifestly, it is unjust to tax the breeder who has to sell his milk at ordinary milk prices in order to promote the business of the man who is better located. This is "robbing Peter to pay Paul."

Judge Peasley said that it cost him \$1,300 for his first year's advertising to place the product of his Holstein dairy on the New Haven market. In answer to questions, he said he believed the investment paid him but he pointed out that the Association did not have \$1,300 on hand for every man who might wish to sell milk at a premium.

Cow Testing vs. Advanced Registry Work

COW testing associations are doing more for the dairy industry than the advanced registry is doing for the purebred breeders, was one of the declarations made by Prof. O. E. Reed, head of the Dairy Department of the Michigan Agricultural College. This statement startled the banqueters the evening after the delegates' meeting. Prof. Reed urged the Holstein breeders to "stop kidding themselves" and said that in the race to make large records, Holstein owners as well as owners of other purebred dairy cattle had lost sight of the ability to make milk and butterfat at a profit over the cost of feed and labor.

In Michigan four years ago there were eleven cow testing associations; now there are 110. Over 70% of the association members have Holstein cattle. Genesee County has fifteen per cent of her cows on test and 9.9% of the cows enrolled in C. T. A. work in the United States are purebreds. Focusing attention on the milk pail and feed bills has led to a general disposal of scrub sires and now over 95% of the Michigan C. T. A. members are using purebred sires in their herds.

Prof. Reed emphatically condemned the resolution passed that day by the delegates which, while commending C. T. A. work for grade cattle, inferred that it was of little value to the purebred industry. The substitute resolution which was passed was brought before the convention by the by-law committee and had no sponsor. Prof. Reed intimated that the man or men responsible for drawing up the resolution were not at all proud of the "child of their brain."

Referring to the criticism that the cow testing association rules were not uniform in different states, the Professor said the Dairy Science Association, of which he was president, was to meet in July. One of the matters which would come before that Association was the question of uniform, nation wide C. T. A. rules

and he believed that any discrepancies would be straightened out.

We venture to prophesy this will not be the last time that Professor Reed will be asked to speak to an audience composed of Holstein men and women. He has a message that is worthy of careful consideration by everyone interested in the black and white breed.

Southern Association Forming

THE resolution on milk advertising which Tom Pemberton of North Carolina introduced at the Grand Rapids Convention caused the most discussion. It was not very vigorously supported by the other Southern delegates and the two men who appeared most in favor of it were the state secretaries of Wisconsin and New York. The delegates from the Southern states held a meeting during the noon recess on Wednesday. Although Mr. Pemberton was invited, he was not present. At the meeting referred to it was decided to form a Southern States Holstein-Friesian Association. The sponsors of the movement think that they know more of their problems than can any man located in a Chicago office or any other office far distant from the scene of operations. They will ask for the 50 cent refund per transfer applied for by Southern breeders. The money derived from this source will be used towards supporting a field man to work in the Southern states and the Holstein men of this territory believe they can make up the balance required.

Standard Livestock Grades

USE of standard market classes and grades for livestock is urged by the United States Department of Agriculture as one means of reducing distribution costs in the industry and of assisting the producer in learning the kinds of animals the market demands and why some bring more money than others.

More than \$10,000,000 worth of meat animals are sold daily in the United States. Nearly one-third of a million cattle, hogs, and sheep bring this total. The production and marketing process is a complicated one, and the animals produced and marketed are of every description, weight, age and condition of fatness. Some are grown and fattened on the farm or ranch which produces them; others change hands several times from birth to slaughter.

Secretary of Agriculture Jardine has indicated on several occasions since assuming office that standardization is the crux of the agricultural marketing situation. Standardization in any industry is a mark of progress, and it is especially important in an industry so involved as the livestock industry.

T. B. Eradication Increases Demand for Purebreds

TUBERCULOSIS eradication work not only paves the way for a healthier herd but also for the introduction of more purebred animals.

Figures recently secured from three Pennsylvania counties show clearly that farmers increase the number of purebred animals in their herds as the reactors are eliminated. In Bucks County where 101 herds were

tested, there is an increase of 31.4% purebreds and a decrease of 6.9% grades.

In Washington county there was an increase of 15.6% purebreds after the test was made and a decrease of 19% grades while in Somerset County the increase in purebreds after the test was made was 17.4% while the number of grades in the herds showed a decrease of 2.5%.

If this increase in the number of purebreds contained in tested herds is nation wide, its beneficial influence on the purebred business is difficult to estimate. Dairymen who do not have the assurance that their herd is free from tuberculosis are not inclined to invest money in purebreds with a view of improvement, feeling that when the herd is tested, the purebreds may have become infected. When the grade herd has passed a clean test it is natural for the owner to aim for even further improvements and to bring in purebreds from herds already accredited.

Ten Months' or Twelve Months' Records

MR. HENRY MORGENTHAU, JR., publisher of the *American Agriculturist*, states that in New York, the leading Holstein state, there are 106 owners of purebred dairy cattle making yearly records. Of this number only five are breeders of purebred Holstein-Friesian cattle and Mr. Morgenthau is one of the five.

The secretary's report shows that there are 4,705 breeders of Holstein-Friesian cattle living in the state of New York who are members of the Holstein-Friesian Association, or about one breeder in every 1,000 in the state of New York who are members of the Holstein-Friesian Association, are making long-time, official records. These are interesting facts.

At the annual meeting of the Guernsey breeders and also at the recent convention of the Holstein-Friesian Association of America, considerable time was devoted to discussing the merits and demerits of the 305-day test period versus the 365-day test period. Surely there are very few Holstein breeders in the state of New York vitally interested in this particular discussion.

Forced official records have lost their popularity, regardless whether they are long time or short time records. The question of the value of forced official records has gotten beyond the experimental or theoretical stage. They have not withstood the test of practical application. If we review the path of the wave of the craze to make forced official records, we find it strewn with financial failures and bovine cripples. On the other hand, the breed is and always has been maintained and improved by the plain breeders and dairymen. Their path is marked by prosperity, the animals which they breed and own represent the best in type, conformation and producing capacity which the breed affords. This class of breeders have measured the value of their animals by normal, hereditary, economical production and have found the cow testing association plan superior to other plans of determining economical milk and butter producing qualities of the animals which they own and breed.

It is not official records nor is it forced records that the dairy public demands. It is economical and normal production which leads to constructive breeding and profitable dairying. Cow testing association records come nearer filling the requirements than do official records.

If official records are to have any bearing on the normal hereditary milk and butter producing qualities of the animal then they must not be produced under forced, abnormal conditions and their duration must conform to the natural lactation period of the animal. It would seem that the adoption of the 305-day period would be a step in the right direction even for the five Holstein breeders in the state of New York to follow.

Your Pictures May Win a Prize

IN the Amateur Prize Picture Contest which THE HOLSTEIN BREEDER AND DAIRYMAN is conducting, several breeders have withheld sending their photographs because in our announcement, advertising the Contest, we used the words "Mature Cows." This is an error on our part; we meant producing animals.

We trust that any of our readers who have not sent their pictures for the Contest because they do not have pictures of mature animals, will send their entries in promptly before the Contest closes. This Contest is not confined to mature animals but to females that have freshened or are in milk.

Now don't be afraid to enter. Take your camera or borrow one if you don't own one, snap a few pictures of the milking dairy and some of your pet cows, pick out the best group and the best single pictures and send them along. You stand just as good a chance of winning the first prize of \$25.00 as any one else.

Records

COW Testing Association records are continually growing in popularity among the breeders and dairymen. Their value in assisting to eliminate "Boarders" and to select breeding stock in purebred herds, as well as grade herds, is being more fully appreciated.

Breeders are not looking for official certification as to the milk and butter producing qualities and butterfat percentage as set forth in the so-called official record. They are not interested so much in what a cow has produced but what she will produce. They are applying the same "Horse Sense" to the dairy business as they apply to any other business.

For example, if they want to purchase an automobile they would not go to the "Junk Dealer" and buy a car that had been driven 70,000 miles with a certification to that effect from its former owner, but they would go to some reliable dealer who sold new automobiles, and when they purchased the car they would require the seller to give them a guarantee that the car would give service.

Dairymen generally are learning from experience that the breeders of purebred dairy cattle who maintain their breeding herds under working dairy conditions, can supply the best foundation animals and that

barn records or Cow Testing Association records are a more reliable index into the future value of the animal than the so-called official records.

So often has a cow with a large official record failed to live up to the reputation which the record gave her and because of the fact that her udder may be partly or wholly impaired and that she may breed irregularly or not at all, records are considered of little value in selecting dairy cattle or breeding stock.

On the other hand, cows with barn records or Cow Testing Association records are able, in the hands of their new owner, to go on and duplicate or exceed their former record when fed and cared for under economical working dairy conditions.

The certification attached to official records is worthless and unnecessary providing the cow is capable of going on and equaling her previous performance. If she is not capable of going on and equaling her previous performance, what is the value of the official certification?

The purebred dairy cattle industry has passed the stage when pedigrees and official certifications could be sold at public auction at high prices by merely offering a bovine crowbar as a premium. We are living in a new age. From now on a certificate of the performance of a dairy cow must be a guarantee of future performance rather than a certification that once-upon-a-time she was a good cow, and that is why Cow Testing Association records are becoming popular and eventually will occupy the center of the stage.

Cutting Out Trade Evils

IN the Federal Court of Pueblo, Colorado, a creamery company of Trinidad was fined \$2,800 under the Federal food and drugs act because of shipments from Colorado to points in New Mexico and Texas of short weight butter.

The enforcement of this act is entrusted to the officials of the Bureau of Chemistry of the United States Department of Agriculture. Lately they have been giving special attention to the interstate shipment of short weight butter as well as to butter which contains less butterfat than required by the legal standard. Several seizures have been effected and a number of prosecutions instituted in the Federal courts against concerns responsible for such violations of the act.

A rather amusing story is told concerning a doctor high in the association councils, who hardly ever sees his Holstein herd excepting on Sundays. One day coming through the barn, a new herdsman called his attention to a cow on long-time test, and said that she had not eaten her morning feed. The doctor told him to cut out the grain and give her a pound and a half of salts, went on and forgot all about it. The next Sunday he came to the cow and her appearance would justify one in assuming that she was in the last stages of TB. He immediately called the herdsman and demanded to know what he had done to the animal. The herdsman replied "Only just what you told me, Sir." "I cut out her grain and gave her a pound and a half of salts every day."

THE PRACTICAL DAIRYMAN

FEED MINERALS TO COWS ON PASTURE

Cows should be fed calcium and phosphorus while they are on pasture for two reasons. First, cows digest these minerals much better while they are on pasture and they are able to store these minerals in their bodies for the periods of the year when they do not digest them so well, says Don G. Magruder extension specialist in dairying at the State College of Washington.

Second, cows are usually producing heavily while on pasture and so are drawing heavily on their feeds and bodies for the minerals which they give off in their milk.

Compared to other plants, legumes contain a large amount of calcium. For instance in 1,000 pounds of feed wheat contains 0.6 lb. calcium; oats, 1.4 lbs.; wheat straw, 2.9 lbs.; timothy hay, 2.5 lbs.; red clover hay, 16 lbs. and alfalfa hay, 19.5 lbs.

This shows that cows pastured on clover should receive a large amount of calcium in their feed. Still it would pay to feed some mineral calcium in the form of air slaked lime and steamed bone meal.

Bran and middlings contain a large amount of phosphorus. In 1,000 pounds of feed, wheat contains 8.6 lbs.; wheat bran, 29.5 lbs.; wheat middlings, 21.1 lbs.; oats, 8.1 lbs.; timothy hay, 3.1 lbs.; and alfalfa hay, 5.4 lbs. Mineral phosphorus can be fed to good advantage in the form of steamed bone meal and sodium phosphate.

Cows should receive all of the sodium chloride (common salt) that they wish. A good plan is to allow cows to run to a mixture of one part salt with four parts steamed bone meal. Air slaked lime and sodium phosphate mixed in equal parts may be substituted for the bone meal.

WHY THE SILO IS NEEDED?

By A. L. HAECKER

Silage is a succulent, grass-like food, high in carbohydrates. For this reason it goes well with a dry forage that is high in protein. Of such we have a liberal supply in alfalfa, sweet clover, cowpeas, soy beans and field peas, all or any of which make a splendid balance for corn silage.

Silage should form the bulk of the ration because it is cheap and easily digested. An average cow will consume from 25 to 75 pounds of silage per day. For an example let us compile a ration for a 1000-pound cow producing 30 pounds of milk. To supply such an animal with what she requires for both maintenance and production the following ration should be used: Corn silage 40 pounds; alfalfa or clover hay 15 pounds; corn 4 pounds, bran 4 pounds. A larger animal weighing from 1,200 to 1,400 pounds or one producing more milk should be fed a larger ration of both grain and forage. As a guide to figuring the amount of silage an animal can economically use, give 4 pounds of silage per day for every 100 pounds of live weight per animal. Thus a cow weighing 800 pounds could be fed 32 pounds of silage per day, while a cow weighing 1,400 pounds should be fed 56 pounds per day.

It is difficult to definitely fix the value of silage in the ration, but sufficient experiments have been conducted to prove that it invariably cheapens the ration and increases production. Especially is this true under average farm conditions. Summing up the various tests it is safe to conclude that silage in the ration for dairy cows will save 10 cents on the cost of producing a pound of butter-fat and 40 cents on the cost of producing 100 pounds of milk.

Silage with alfalfa or clover hay makes a balanced ration, and wonderful results can be obtained by these two feeds alone. Silage should form the bulk of the ration for it is cheap, succulent and contains the food elements needed by our animals. If feed must be purchased, let it be in the concentrates such as bran, oil meal, and cotton seed meal. Many of our farmers make a mistake by trying to substitute alfalfa for corn silage. These two feeds should be fed to-

gether, for their combination makes up a balanced ration.

With the summer silo we can prevent the fearful loss which we experienced each year during the late summer when pastures are burned up and flies menacing. By preventing this shrink, we can easily increase the yearly production of our cows from 20 to 50 per cent, and we must give closer attention to this item. Silage for summer feeding is rapidly gaining in favor, as high priced land devoted to pasture is doubtful economy unless it be in the form of rotated crops such as sedan grass and sweet clover.

A silo will save much forage that is now being wasted. It insures a crop and serves as a forage bank which can be drawn upon at critical periods. The silo makes it possible to keep more stock upon the farm and to feed with greater economy and at a saving of labor. No better proof of this can be had than to note that the most successful dairymen and stock and dairy communities use the silo largely. The greatest dairy states have the most silos. The greatest counties and townships lead in silos. Its use is not compassed by geographic location. It can be used successfully in nearly every county in the United States or in the corn belt, and it is of great importance and must be put to larger use.

We cannot change the market which is influenced by production and consumption in both this country and foreign lands, but we can control the cost of producing the article and a larger use of the silo will undoubtedly lower the cost of the feeding of our animals.

The sum of the evidence from scores of feeding experiments and tests may be given as follows: Silage in the ration for the production of stock or stock products results in lowering the cost and increasing the profits of the feeder.

FEEDING THE DAIRY

In spite of a seasonal falling off in demand, dairy feed prices have turned sharply upward during the past month, says C. E. Ladd, Director of Extension Service of the New York State College of Agriculture. During this time twelve feeds have advanced on the average of \$3.40 a ton. This unexpected behavior of prices complicates somewhat the matter of deciding what to do concerning the laying in of supplies for next fall and winter. A little later the outlook may be better.

Nevertheless, it is possible at current prices to get a good mixture at a very slight increase in cost over last month. For those who buy most of their ingredients the following will be suggestive:

400 lb. white hominy	600 lb. gluten feed
200 lb. middlings	400 lb. linseed oil meal.
400 lb. bran or oats	

A ton will contain 350.4 lb. digestible crude protein, 1,517.6 lb. digestible nutrients and cost \$41.60 at current wholesale prices.

In many dairy sections, the herds are primarily stable fed, but have access to pasture, some more and some less. In keeping down the cost of grain, which is extremely essential at the flush period, the digestible protein in the above mixture has fallen below 18%. The use of pasture should adjust this. The composition of the mixture is such as to keep the milkers in good condition as well as to encourage production.

Oats are rather high to purchase, but if one has homegrown oats or barley, the following will make a good simple mixture for milking cows on pasture:

600 lb. ground oats and barley	200 lb. linseed oil meal.
	200 lb. gluten feed

It is very important to keep young stock growing. Depending entirely on pasture may not be enough. Supplement with a grain mixture as follows: 100 lb. hominy or corn, 100 lb. bran, 100 lb. oats or barley, 50 lb. oil meal. If pasture is poor, by all means give grain enough to keep the animals growing and allow them to help themselves to a mineral mixture of equal parts by weight of steam bone meal, fine limestone and salt.

CLUB ACTIVITIES

COLUMBIA COUNTY BREEDERS' FIELD DAY

The annual field day and picnic of the Columbia County Holstein Breeders' Association was held at Berwick, Pa., June 10. There were about three hundred in attendance and twenty-eight head of high class purebred Holstein cattle were on exhibition.

E. B. Dorsett, former lecturer of the State Grange, placed the cattle after they had been divided into classes. In the evening Mr. Dorsett spoke on the "Past, Present and Future of the Farmer." To succeed today it is necessary that he use his head as well as his hands. A bright future is predicted. Cooperation and organization were urged to make the most of the opportunities which the future will afford as exemplified in the work of the breeders' association which staged the Field Day.

Berwick is one of the Holstein centers of the Keystone State and this made it possible to get together a number of high class animals. They came from the herds of E. S. Walton & Son, R. R. Brader, Chas. Remensnyder, Delmar Fairman, Chas. Aten, and William Fairchild.

The officials of the county organization and County Agent Paul G. Niesley were largely responsible for the success of the event.

HOLD FIELD DAY AT MURRAY MILLER'S HOME

On June 11, the Northumberland County Accredited Holstein Association held their annual field day at the farm of their newly elected president, Murray Miller of Milton, Pa. After looking over the animals in Mr. Miller's producing herd four cows were selected and used as a judging ring, the visitors being invited to score them and place them using the dairy cattle placing card arranged for farmers' judging contests by the American Dairy Science Association. This is the card used in the farmers' judging contests at the National Dairy Expositions. There were 22 competitors, the winner being Angus Fairchild of Milton with a score of 97.3, J. Lawrie Moore of Watertown was second with a score of 86.4 and A. C. Slifer of Lewisburg third with 83.6. All three of these gentlemen were awarded a subscription to the HOLSTEIN BREEDER AND DAIRYMAN. Mr. Fairchild also won a bronze medal donated by that publication.

The visitors then gathered on the spacious porch. County

Agent J. W. Myers introduced the speakers. G. H. Truckell reported the delegates' convention of the Holstein Friesian Association of America held the previous week at Grand Rapids. R. H. Olmstead of State College, who was the official judge of the occasion talked on cow testing associations and the work they were doing for the dairymen. He commended the Northumberland County breeders for their enterprise and urged them to avail themselves of the help of State College and the county agents in solving their many problems. Club Leader B. Wright, told how to organize calf clubs and how they operated and urged the Holstein owners of Northumberland County to form one or more such clubs for their boys and girls.

Mr. Miller was called upon to say a few words. Three years ago the Northumberland County Holstein owners formed the club, the two principal requirements being that a man should own at least one purebred black and white animal and that his herd should be accredited. Members of the association had done a great deal to get the various townships signed up for area testing. The first township to sign was West Chillisquaque and this was by far the hardest, the others came much easier.

A representative of the Milton Chamber of Commerce invited those present to attend a farmers meeting in that town and said a few words on general agricultural conditions. A very handsome bull calf from the herd of A. F. Reimensnyder was then sold at public auction bringing nearly \$40. The visitors dispersed after thanking Mr. and Mrs. Miller for their hospitality.

THE NEW YORK STATE FAIR

The premium list of the New York State Fair shows that the Fair Association will offer \$2,000 for Holstein-Friesians to which 40% will be added by the Holstein-Friesian Association if the winners are registered Holstein-Friesians.

The first prize for males and for females is \$40. Fifty dollars is set aside for the first exhibitor's herd and the same amount for first prize in the Get-of-Sire class. For the four best cows over three years old, the first prize is \$40 and for the four best females from two years old or more, bred by the exhibitor, a similar amount is apportioned.

The herdsman's prizes this year are five in number ranging from \$35 down to \$5. In addition \$2,100 of which \$100 is given by the Dairymen's League, is offered for the best exhibits of dairy cattle from New York State counties. Such exhibits

must be made in the name of a County Farm Bureau, Pomona Grange, local breeders' club or other county organization. Holsteins receive the largest amounts, first place being worth \$175; second, \$155; third, \$145; and fourth, \$125. To this the Holstein-Friesian Association of America adds \$250 and the New York State Association \$150. This amount is split into eight prizes of \$50 each.

A silver cup will be given by the New York Farm Bureau Federation for the best five dairy cows in milk. These may be purebreds or grades of any one breed but the exhibitor must reside in New York State. The cup must be won three times before it becomes the property of the exhibitor.

Good prizes are given in the junior department which is divided into three classes for each breed: Junior calves, senior calves and heifers over one year or which have not yet freshened. The winners in these three classes show against one another for a \$20 prize and the breed championship and the champions show together for a grand championship prize of \$20.

The Fair Commissioners, in order to encourage exhibits of calf club dairy animals will give \$5 to each animal of merit exhibited in the junior department which does not place, will furnish free of charge hay, grain and bedding for animals exhibited in this department and will pay maintenance charges not to exceed \$2 per day of all owners exhibiting and caring for their animals. Only three animals can be exhibited in each class from any one county and these animals must be selected by some form of elimination contest.

LEAGUE MEMBERS PROMISED PROSPERITY

The immediate future for the dairy industry as well as for business generally, promises sustained, moderate prosperity, said Francis H. Sisson, well known New York City banker, speaking to the 1,500 delegates and members at the annual meeting of the Dairymen's League Coöperative Association, Inc., held in New York City, June 18.

Mr. Sisson said in part:—"At present dairying is one of the most profitable of farming operations and during the last year or two it has furnished an important outlet for agricultural activity diverted from the production of commodities less favorably situated with respect to prices. The dairy industry is dependent chiefly upon the domestic market. Only in canned and powdered milk is there any considerable export trade, but this accounts for a small fraction of the production. The market demand for dairy products will probably be well sustained so long as the industrial population is prosperous. The shift to dairying in the North and West in recent years, as a feature of the diversification movement, is reflected in the increase in the number of milk cows on farms since 1921. Storage stocks of butter, following last summer's prolonged flush production, reached record levels. But these have been greatly

reduced. Cheese stocks are not excessive. There was even talk of shortage recently in the canned milk markets. The situation is one which tends to support present price levels."

Other speakers were: G. W. Slocum, Milton, Pa., who has been president of the League since its organization on a coöperative marketing basis; Mrs. Ruby Green Smith, Ithaca, N. Y., Secretary of the New York State Federation of Home Bureaus; Chester Young, Napanoch, N. Y., Treasurer of the Association; and J. D. Miller, Susquehanna, Pa., vice president of the League and president of the National Coöperative Milk Producers Federation.

RUSSELL STARTED RIGHT

About ten years ago F. W. Russell of Tryonville, Pa., purchased a pair of young cows that had been bred to Dutchland Colantha Sir Inka. The cost of these heifers, delivered at his place, was \$528. He was fortunate in getting a pair of heifer calves and from these animals his present herd of twenty purebreds has descended. Mr. Russell has an interest in the Crawford County Holstein Bull Association and his females are mated with Sensation Lucille Hartog. The sire of this bull, Sensation, is a grandson of Ona Clothilde De Kol, over 1,100 lb. butter and 25,000 lb. milk in a year and is from Lindale Bonnie Pauline, 29.58 lb. butter in seven days, 1,250 lb.

PUREBRED HOLSTEINS IN PASTURE ON THE RUSSELL FARM

butter and over 30,000 lb. milk in a year as a four-year-old and over 1,000 lb. butter in a year as a three-year-old.

The dam of Sensation Lucille Hartog has a year record made as a senior three-year-old of 779.23 lb. butter, 17,645.9 lb. milk. She is from the same dam as Lucille Jolie Pontiac, 1,173.15 lb. butter in a year as a senior four-year-old, world's record at time of making.

Mr. Russell purchased his present farm of ninety-two acres about eleven years ago. He is a high class business farmer and you will find his farm machinery housed and everything neat and clean around the buildings. The Russell herd is run on the accredited plan and as our readers know, the cattle of Crawford County have been tested under the area plan and the last test showed that 99.2% passed clean.

WISCONSIN WOMAN MAKES SUCCESS OF DAIRYING

By J. H. LEWIS

Mrs. Adeline Tessene, owner of Lawndale Farm and a herd of Registered and grade Holstein cows took first place in the Whitewater Cow Testing Association out of a field of 26 members. Of the 411 cows on test 296 were Holsteins, 106 Guernseys, 8 Jerseys and 1 Ayrshire.

Mrs. Tessene's seven-year-old grade Holstein, Betsy, was the top cow with a production of 11,776 lb. milk testing 4.29 and a butterfat return of 505.9 lb. The Lawndale herd placed third on herd average with a production of 8,887 lb. milk and 326.3 lb. butterfat.

Betsy's records in yearly production since belonging to the association is given here.

Age	Lb. Milk	Test Lb. Fat	Value of Product	Feed Cost	Profit
5	13,548	3.63	492.1	\$229.95	\$76.57
6	10,013	4.15	416.4	235.53	81.17
7	11,776	4.29	505.9	287.27	78.77
Total	35,337	...	1,414.4	\$752.75	\$236.51

Betsy was milked twice daily and fed no grain on pasture until freshening. She consumed last year 4,590 lb. corn silage, 2,260 lb. alfalfa hay, 1,181 lb. corn fodder, and 2,235 lb. of a

BETSY OF LAWDALE

Leading cow last year in the Whitewater Cow Testing Association.

mixture of two parts each of corn and cob meal, ground oats, bran and 1 part oil meal and was on pasture 135 days. She made her record of 505.9 lb. butterfat in 335 milking days.

The Lawndale Farm herd is under federal supervision. The farm is one mile west of the city of Whitewater, in Walworth County, Wisconsin and makes a speciality of high grade Holsteins, and Rose Comb Rhode Island chickens. There are two herd sires Veeman Korndyke Nig 356153 and Lilavern General Ormsby 438256. Mrs. Tessene manages and looks after her farm and herd personally, being assisted by two young sons.

Betsy of Lawndale was sired by Katydid De Kol Colantha 2d, No. 166210. His sire was Katydid De Kol Colantha, No. 112206, his dam Bessie Astrea De Kol No. 91879.

Pet, another prize cow of Mrs. Tessene's Holstein herd took second place in the grade showing at the Milwaukee Dairy Show last fall. Pet has a record of 10,434 lb. milk and 356.5 lb. fat.

Relating her experience in Holstein dairying, Mrs. Tessene told the writer in substance the following: "I was having some hard knocks and it seemed something was always happening to my best cows. When I joined the Whitewater Cow Testing Association three years ago I made the best move that I ever made. I did not prior to then realize I had such good producing cows. They were grades. My husband died about that time. We had concluded to buy a good herd sire, but kept putting it off and finally it devolved upon me single handed to go out and make a selection. I obtained a purebred and am happy to say we have owned one since.

"When our milk went to the condensery at Whitewater, our test was not as good as it might be, and we had got into the habit of selling our best cows and raised calves from cows not as good as the ones sold, and the cows were strung along to freshen most anytime, so I concluded to raise all fall calves, as they would do better, could be bred sooner, and would freshen at two years of age. We purchased from our neigh-

bors or as we could get them. They looked well, grew rapidly and were nicely marked, but as we began to test for butterfat my boys and I began to open our eyes, and we saw that our own cows were the choice ones and that the calves we bought from other herds were only "skimmers,"—plenty of milk, but not much on test for butterfat. It was about this time that Mr. Charles H. Hocking, our official tester, came along and he gave us instruction in type of breeding, pedigrees and production so that we learned much that was new. Now we raise calves from our best cows and by having a good herd sire we have cows of good pedigree and type. The markings are no longer the main consideration. One of my boys is taking deep interest in the work and I know will make an excellent manager of the herd which will take considerable responsibility off my shoulders. It has been most gratifying to me to know that a woman can make a success of dairy farming. I busied myself with the home and the boys but after the death of my husband I knew if we must keep up the farm successfully that it was my place to shoulder the job and we are doing as well as can be expected."

There is much good natured rivalry in the Whitewater Cow Testing Association, and when Mrs. Tessene's cow Betsy took first place in the association on butterfat production there was much jolly among the men members of the association. But they are all good neighbors and good friends and Mrs. Tessene is always shown the respect and kindness due a hard working woman. The Lawndale herd was high herd of the association the first two years, and as stated before, third this year.

Lawndale Farm is well equipped. The home is a substantial two story frame building, electrically lighted with running water in the house and very comfortably furnished. The barn

PET OF LAWDALE

Second prize Holstein grade at the 1924 National Dairy show.

is an elaborate affair and up-to-date in all details with a big cement silo conveniently located, as well as a granary, machine sheds and a garage. The chicken house contains a wonderful flock of Reds. The evidence of industry and thrift is everywhere for the Tessenes are all hard workers. They like the good things of life and enjoy them. They are progressive for when others were speculating on the advantage of alfalfa crops they went ahead and now claim butterfat can be produced for less per pound where alfalfa is fed than where it is not fed.

Mrs. Tessene is now on the road to permanent success, because they have overcome the things that worked against them. They have two very good sires and about 35 excellent females. The foundation is well laid and the coming years will show the logical results of having planned sensibly and prudently, proving that after all women can succeed as well as men in this splendid industry.

MURPHY HERD REDUCTION

An average of \$215 was realized for the forty-nine purebred Holsteins offered at the Murphy Farms Reduction Sale at Fond du Lac, Wis., May 27, the total being \$10,515. The top price was \$510 for Lieu Pride Pontiac, a nine months old bull purchased jointly by Harry Allen of Allenville, and Frank Scovel, Butte des Mortes, Wis. Ormsby Black Lady was struck off to Thomas C. Conlin & Sons, of Columbus, Wis., for \$500 and W. A. Swart of Plymouth, Wis., paid the same amount for the young bull, Jerry Homestead De Kol Segis.

A. W. Laabs of Elmwood paid \$1,460 for seven head; W. A. Rogers of Glen Ellyn, Ill., paid \$1,090 for four head while the Detroit Creamery Company of Mt. Clemens, Mich., purchased five head for \$985.

Other purchasers were E. G. Heideman, Clintonville; John Zoberlin, Plymouth; Theodore A. Kuehn, Horicon; B. F. Allen, Oshkosh; M. Cahill, Fond du Lac; John Bradley, Randolph; L. F. Gross, Knapp; G. A. Erickson, Waupaca; and C. A. Meyer, Richfield, Wis.; Forsgate Farm, Jamesburg, N. J.; A. J. King, Kansas City, Mo.; William Rohling, Palatine, Ill.

GOLDTHORPE DISPERSAL

An average of \$198.50 was realized for the John Goldthorpe herd when it was sold at Janesville, Wis., June 1. Twenty-three head brought \$4,576.50.

The Goldthorpe herd was noted for its milk production and this undoubtedly accounts for the big crowd that attended. The top price was \$515 realized for Pearl Beauty Cornucopia, a six-year-old with a 32.56 lb. seven-day butter record. She was purchased by Chas. Welder, South Bend, Ind.

Other buyers were Arthur Rasche, South Bend, Ind.; Earl Morton, Jefferson; Fred J. Waldman, John Wehinger & Son, Janesville; Alfred Lassen, Clinton; Bahler Bros., Monroe; George A. Schumacher, Footville; E. P. Coon, Milton Junction, Wis.; and Leonard Hanson, Capron, Ill.

BULLS SELL WELL AT BARRON

No very high prices were realized at the consignment sale held at Barron, Wis., May 29, but there was considerable interest in bulls and most of them sold well. The top price \$300 was paid for the fifteen months old, Count Walker Segis Pontiac 22nd, consigned by A. M. Chrislow of Rice Lake. He was from Augusta Rijneta of Clover View, 1,034.96 lb. butter in 365 days. The bull was well grown and good looking. Clarence A. Cornelius and J. E. Watner of Barron were the highest bidders.

Barron Grace Pontiac, a daughter of King Pontiac Champion consigned by F. Krahenbuhl of Barron brought the highest price for a female. Her purchaser was C. M. Moore of the same address.

The only out of state buyer was H. Stuwve of Cologne, Minn., who secured five head.

HAMMOND'S "CATTLE COMFORT"

"CATTLE COMFORT"

The application of CATTLE COMFORT will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—CATTLE COMFORT may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Cow Testing Association Reports

HOW TO MAKE A DAIRY PROFIT

When we have good cows, good feed and good dairymen most of the rough spots in dairying can be eliminated says A. A. Raudabaugh of New Kingstown, Pa., in reporting the activities of the Cumberland County Cow Testing Association for the month ending June 15. Mr. Raudabaugh points out that the herds of nine different dairymen enrolled in his association averaged above 30 lb. fat and goes on to say "Strange as it may seem these herds are making a very nice column of figures at the right hand side of the ledger marked profit above feed cost but these men with two exceptions have silos and all feed part alfalfa hay."

Mr. Raudabaugh says: "The herds turned in a field of abundant pasture, plenty of shade and water with a liberal ration, strong with corn are also making a nice ledger account. One more member made the first and biggest step in starting in the dairy business. He is George L. Snyder who signed up to have his herd tested for T.B."

The herds making above 40 lb. fat are: George L. Snyder, five cows averaging 1,241 lb. milk, 43.8 lb. fat; Ivo V. Otto, twenty cows, averaging 1,297 lb. milk, 42.8 lb. fat; and Paul C. Gible, eight cows, averaging 1,240 lb. milk, 40.7 lb. fat.

Other averages above 30 lb. fat are: J. H. Lear, E. C. Ludt, W. W. Peffer, S. W. Zeigler; Paul N. and Abram Lehman.

During the month twenty-six herds containing two hundred and forty cows were tested. Of this number twenty made over 50 lb. fat, sixty-four over 40 lb. while fifty-two exceeded 1,200 lb. milk.

The individual leader, Patty, was owned by Ivo V. Otto of the Boiling Springs herd and is credited with 2,344 lb. milk,

82.7 lb. fat. A grade Holstein, owned by A. N. Lehman is second with 69.6 lb. fat, 1,854 lb. milk and another grade owned by G. R. Shaul is third with 64.3 lb. fat. J. H. Lear has a purebred in fourth position with 62.7 lb. fat from 1,457 lb. milk, her average test being 4.3%. Another grade Holstein owned by G. R. Shaul stands fifth followed by a purebred Holstein of the Otto herd with 58.1 lb. fat while in ninth place is another Otto purebred with 56.8 lb. fat.

WERTHEIMER HERD MAKES FINE SHOWING

Purebred Holsteins owned by Charles Wertheimer of Frederick, Maryland, stood first and second in the May report of the Frederick County Testing Association, Beauty being credited with 88.2 lb. fat from 2,151 lb. milk and Colantha with 87.7 lb. fat from 2,080 lb. milk. Beauty's average test is 4.1% and Colantha's 4.2%. The Wertheimer herd has six cows that each made over 40 lb. fat in the month and the fifteen members of this herd stand second for herd average with 39.2 lb. fat from 1,036 lb. milk.

The average production in this association was 869 lb. milk and exactly 30 lb. fat produced by 302 cows in milk in nineteen herds.

IN A DAIRY DISTRICT

Twenty-six herds containing 515 cows were tested in the Byron-Rochester, Minn. Testing Association during May. Twenty of these herds averaged 25 lb. or more butterfat. There were 244 animals that produced more than a pound of butterfat per day. The average production of all the cows tested was 858 lb. milk, 29.6 lb. fat.

The high producing herd was owned by Glenn Oak Farm, their twenty-five cows in milk producing an average of 1,266 lb. milk, 39.6 lb. fat. The purebred herd at Maywood Holstein Farm No. 2 containing 21 cows in milk averaged 1,370 lb. milk, 38.9 lb. butterfat, while the thirty milkers, grade and purebred Holsteins, in the St. Mary's Hospital herd averaged 1,149 lb. milk, 37.3 lb. fat.

The leader on twice a day milking was in the St. Mary's Hospital herd, she being credited with 1,736 lb. milk, 62.5 lb. fat. The high producer on more than twice a day milking is owned by Maywood Farms, with 2,077 lb. milk, 93.4 lb. fat.

IN THE DENMARK ASSOCIATION

Seven grade Holsteins, owned by Hans C. Johnson of Denmark, Wis., led the Denmark Testing Association during May, with an average production of 1,260 lb. milk, 43.3 lb. fat.

L. J. Larson, also of Denmark, owned the animal in first position for both milk and butterfat production. She was a registered Holstein, seven years old, and is credited with 2,329 lb. milk, 93.2 lb. fat. Mr. Larson's herd of seventeen black and whites averaged 1,211 lb. milk, 40 lb. fat in the month.

There were 452 cows tested during May and 105 of these exceeded the 40 lb. mark.

MAGNIFICENT HOLSTEIN BULL, six months old. \$75. Two yearling heifers for \$150. Accredited herd. MRS. I. T. SHADE, Harris Station, Ohio.

SOUTH DAKOTA TESTING

Rexall Cornucopia De Kol, a purebred Holstein owned by Guy McKibben of Webster, South Dakota led the state for the month of May by producing 2,728.1 milk and 87.30 lb. butterfat. This is the third consecutive month that this cow has headed the Day County association and the second month she has been the high cow of the entire state. During the last three months she has produced 265.75 lb. butterfat.

A grade Holstein owned by Thad Oviatt and enrolled in the Beadle County association was second with 79.16 lb. fat, 2,083 lb. milk. A purebred owned by the Deaf Mute School at Sioux Falls was third with 78.80 lb. fat.

A grade Holstein herd consisting of six animals owned by G. Hintermeister had high average with 48.74 lb. fat, 670.8 lb. milk. The Sioux Falls Penitentiary herd consists of 25 purebred Holsteins that averaged 46.48 lb. fat, 1,449.9 lb. milk.

IN LINN COUNTY, IOWA

A purebred Holstein owned by C. R. Mills led the Linn County, Iowa, Testing association No. 1 for May by producing 80.1 lb. of butterfat. She freshened April 21, was fat at the time and is being fed a liberal amount of bran and oilmeal. A grade Holstein from the herd of B. W. Heald was second with 71.6 lb. fat. The Heald herd which consists of eight purebred and grade Holsteins averaged 43.5 lb. fat, nine Holsteins owned by Smith Brothers were second with an average of 43 lb. and nine owned by Drexler and Jordan ran third with an average of 40.5 lb. fat.

AN ILLINOIS QUEEN

Queen Una Jewel, a registered Holstein owned by R. M. Skillen of Greene, Ill., led the Butler County Testing Association during May with 1,662 lb. milk, 78.1 lb. fat. Mr. Skillen's herd of sixteen

purebred Holsteins averaged 1,008 lb. milk, 35.1 lb. fat. The leading herd consisted of nine grade Holsteins owned by Clarence Skilen of Greene, their average production being 1,077 lb. milk, 39.7 lb. fat.

There were 293 cows tested and their average production was 733 lb. milk, 28.1 lb. butterfat, reports Homer Tague, tester.

In the six months period from December 1 to May 31, thirty cows produced more than 200 lb. butterfat. A nine-year-old grade Holstein owned by Will Cheney, Greene, was high with 330.40 lb. butterfat while Rattlebones, was second with 321.2 lb. fat and Kicker was third with 297.3 lb. fat. The latter two animals were grade Holsteins owned by Serenus Hansen of Bristow.

BLACK AND WHITES LEAD

Four hundred and sixteen cows in twenty-seven herds were tested in the Eyota, Minn., Testing Association during May. There were sixty-one animals that exceeded 40 lb. butterfat. The average for all the cows in the association was 821 lb. milk, 30 lb. fat.

Queen, a black and white owned by Thomas Wilson, produced 1,950 lb. milk, 68.3 lb. fat, leading for both milk and butterfat production. Mr. Wilson's sixteen cows averaged 1,066 lb. milk, 36.7 lb. fat. The leading herd was composed of eighteen black and whites and their average production was 1,120 lb. milk, 37.8 lb. fat. They were owned by McDugal & Krouse.

MARYLAND TESTING

Pauline, a purebred Holstein owned by J. D. King, of Germantown, Md., led all the cows in her state enrolled in cow testing association work during May by producing 100.1 lb. butterfat, 2,634 lb. milk. Ragapple, a registered Holstein owned by H. H. Fraley, of Berwoode is second with 82 lb. fat, 2,157 lb. milk, a grade Holstein is third with 78.3 lb. fat,

and a purebred Holstein owned by Millard Rice, is fourth with 77.7 lb. fat, 2,220 lb. milk. Charles Wertheimer, of Frederick, owns the purebreds in fifth and ninth positions with 74.5 lb. fat and 71.4 lb. fat respectively while John M. Dennis owns the cows that stands sixth and eighth, Sadie Vale having 73.4 lb. fat to her credit, Westview De Kol Walker 71.1 lb. W. R. Wittingham, of Corbett, owns the purebred standing between the Dennis cows and having 72.3 lb. fat to her credit. The Wittingham herd with 18 purebreds leads Baltimore County by averaging 918 lb. milk, 32.1 lb. fat.

MARGIE BEATS BEAUTY

The Rockwell and Katterhenry herd again furnished the leader in the Beloit-Rock County Testing Association, Margie being credited with 547.4 lb. fat, 15,704 lb. milk in the year. Margie is a half-sister to Beauty, the cow that made such a phenomenal record in a previous year and was second to Margie during the year recently ended. Margie produced 95.6 lb. butterfat the first month while on three times a day milking and was milked twice a day the rest of the year. She was exhibited at the National Dairy Show last fall but the judge sent her to the barn early in the showing.

ROYCRAFT HERD LED

There were 340 cows in the Fall Creek, Wis., Association test for nine months or more in the testing year ending May 31. Their average production was 6,926 lb. milk, 274.2 lb. butterfat reports O. B. Israel, tester.

J. J. Roycraft of Cadott, owned the high herd, his registered Holsteins averaging 11,410 lb. milk, 386.6 lb. butterfat. The cows in this herd averaged \$107.03 profit above the cost of feed. A member of this herd was high individual, she being credited with 12,326 lb. milk, 454.5 lb. fat, her average test was 3.68% fat.

BERKS ORMSBY POSCH

heads Clear Spring Herd. He is a son of the great King Tweede Spring Farm and of Hazelwood Ormsby Posch 2d, 106 lb. milk in a day, a noted show cow and championship winner.

His daughters are exceptionally promising and his offspring inherit the superb individuality of their sire.

Spring Brook Herd

is headed by

KING SADIE VALE HEN- GERVELD ORMSBY

well known sire of show animals and producers.

His dam, a daughter of Sir Vee-man Hengerveld, produced 1,085.60 lb. butter, 24,050 lb. milk in a year.

His sire is the noted King Sadie Vale Hengerveld.

Knowing of the high quality of his offspring we secured him at a long price and now offer choice cows and heifers bred to him.

C. F. GILES
Apalachin, Tioga Co., N. Y.

MIFFLIN COUNTY, PA.

During May, 272 cows in twenty-eight herds were tested in the Mifflin County Testing Association. Of this number twenty-three produced over 40 lb. fat and the same number over 1,200 lb. milk.

Five cows exceeded 50 lb. fat. The leader, a six-year-old registered Holstein, was owned by J. B. Byler, and was credited with 2,040 lb. milk, 61.2 lb. fat. A Jersey was second with 55.7 lb., a grade Shorthorn was third with 54.1 lb. and grade Holsteins were fourth and fifth, the latter cow being a member of the Byler herd.

Eight grade Holsteins, owned by P. E. Baker, led for high herd with an average of exactly 40 lb. fat and furnished the cow in fourth position with 53.8 lb. The largest herd in this association consisted of twenty grade and purebred Holsteins, owned by R. N. McCullough, their average being 995 lb. milk, 31.8 lb. fat. Twelve of these are heifers in their first or second lactation period and nine are due to freshen this fall from August until September reports tester S. Kupert Harshbarger.

The best milking cow in this association owned by A. C. Yoder reacted last month to the tuberculin test along with others of this herd. Mr. Yoder expects to replace these animals with others as good or better and other members of the association are anxious for the test so that they can own clean herds.

ALLEGHENY COUNTY HOME HAS GOOD COWS

Individual honors in the Allegheny County Testing Association for the month of May went to the purebred Holstein four year old Floretta, owned by the Allegheny County Home. She is credited with 72.04 lb. and 1,801 lb. milk testing exactly 4%. The County Home has two others, both three year olds, in the leading ten. The high herd for milk consists of seven purebred and two grade Holsteins owned by Dr. G. W. Ely, their average being 1,202 lb. Their fat average was 38.14 lb. but they were beaten for first position by the H. E. Cleland herd which consists of two registered and fourteen grade Holsteins and averaged 39.33 lb.

Tester L. M. Stark reports that during the month 384 cows in 25 herds were tested of which 80 exceeded 40 lb. fat and 24 exceeded 50 lb., while no less than 63 produced more than 1,200 lb. milk. This association has been known as the Montour Valley association but at a meeting held at Imperial, Pa., May 20 it was decided to change the name of the organization to Allegheny County Cow Testing Association, so that when the reports were published the location of the organization will be known by the name.

"Tom, go fetch the old horse."
"Why the old one, father?"
"Wear out the old ones first, that's my motto."
"Well, then, father, you fetch the horse"

WHAT THE OTHER FELLOW SAYS

Dear Mr. Mead:—

We want to thank you for the good work that you did at our public sale of Holstein-Friesian Cattle.

We do not hesitate to say you more than earned your money, and that we received the highest price possible to get. We will be glad to say a good word for you whenever possible.

With kind personal regards,
Yours very truly,
I. S. MABEE,
Williamsport, Pa.

I am ready and willing to work for you at any time and to help you obtain the "high dollar" for your stock. If you are contemplating selling your cattle at auction, why not send for my booklet on sales. It's free.

GLENN R. MEAD
East Aurora, New York

A FINE YEAR'S WORK

The Montgomery County Testing Association ended its year May 1 and the summary shows that there was an average of 332 cows in the Association during the year. May Belle, a grade Holstein, owned by O. S. Gerhard of Palm, Pa., was the high milk and butterfat producer in the association. She produced in twelve months, 15,072 lb. milk, 503.02 lb. butterfat.

The second high cow was a purebred Holstein owned by Wm. H. Landis of East Greenville. She produced 12,951 lb. milk, 483 lb. butterfat. Next to her was a purebred Holstein owned by A. K. Rothenberger of Center Point, she producing 12,530 lb. milk, 482 lb. fat.

High average for butterfat production was carried off by the Ursinus College herd at Collegeville, thirteen purebred Holsteins averaging 9,137 lb. milk, 346 lb. fat. The College herd is under the management of Superintendent C. E. McCormick. The highest average milk producing herd was composed of purebred Holsteins owned by A. K. Rothenberger, their average being 9,614 lb. milk, 340 lb. fat.

Eight members of the association are eligible for the 300 lb. Honor Roll at the National Dairy Exposition. The following members had a herd average of more than 300 lb. butterfat: Ursinus College, Collegeville; A. K. Rothenberger, Center Point; O. S. Gerard and Est. of L. G. Schultz, Palm; Wm. H. Landis, East Greenville; Harvey Murphy, Norristown; C. Wm. Haywood, Ambler; and J. L. Wood & Sons, Red Hill.

The association had thirty-six cows that produced over 10,000 lb. and one hundred and five cows that produced 300 lb. fat or more in the year.

The feed cost of producing 100 lb. milk in the twenty-six herds ranked from \$1.13 to \$2.50; the fat cost of producing one pound butterfat varied from 29 cents to 62 cents. The average feed cost of all the members in the association was \$1.55 per 100 lb. and 42 cents for producing a pound of fat. The average milk production for all the cows was 7,563 lb. and the average fat production was 281 lb.

Sixty-four unprofitable cows were disposed of during the year.

HOLSTEIN HERDS PROMINENT

The Holstein herd of A. K. Rothenberger of Center Point, Pa., led the Montgomery County Testing Association during the month of May by averaging 1,280 lb. milk, 44.3 lb. fat from eighteen cows. The Ursinus College herd at Collegeville, stands second in both respects with an average of 1,125 lb. milk, 34.9 lb. fat.

The individual leader is a purebred Holstein owned by Wm. H. Landis of East Greenville, with 98.1 lb. fat, 2,310 lb. milk to her credit.

During the month twenty-five herds containing 349 cows in milk were tested. The 50 lb. fat mark was exceeded by twenty-two cows while fifty-three produced over 40 lb. fat and thirty-four over 1,200 lb. milk.

ROSE MAUD COLANTHA

99 lb. milk in a day, 654 lb. milk, 27.46 lb. butter in seven days as a four-year-old. Raised and tested at Sylvdale. Sylvdale herd is Accredited and is headed by Sir Champion Sylvia whose 7 nearest dams average 35.43 lb. butter. We offer calves, either sex, carrying the blood of May Echo Sylvia.

PENNSYLVANIA TESTING

Cow testing association work in Pennsylvania dates from 1910 when the first association was organized in Chester County, says I. O. Sidelmann. The work has been continuous in the state since that year and on January 1, 1925, there were 42 associations in operation covering 33 counties with 14,051 cows on test.

During the calendar year 1924, twenty-nine associations completed a full year's work. There were 10,717 cows in associations during all or a part of the year, the average number of cows for the full period being 8,223.84.

The average production of milk per cow for the year was 7,309 lb. with 286.5 lb. butterfat. This is a gain of 131 lb. milk and 1.8 lb. butterfat over the average of the previous year.

A comparison with the 1920 census figures reveals the fact that the average milk production of association cows included in this summary is 85 per cent greater than that of the average cow of the state.

The Volant association which operates in part of Lawrence County, has an average of 355 lb. fat, 7,919 lb. milk. The Cumberland County association's average was 348.4 lb. fat, and 9,719 lb. milk, the highest milk record of any.

The biggest producing herd consisted of six purebred Holsteins owned by W. J. Fairchild of Berwick, their average being 13,224 lb. milk, 4/2.4 lb. fat. The H. E. Robertson herd of 14 purebred Holsteins averaged 13,309 lb. milk, 449.7 lb. fat while the T. L. McCarrel herd with an average of 24.5 cows on test monthly averaged 14,105 lb. milk, 448.3 lb. fat.

Tirania, a purebred Holstein owned by the Warren State Hospital was the highest individual producer being credited with 23,717 lb. milk, 876 lb. fat. Finnerne, a Robertson four-year-old was second with 706.3 lb. fat, 22,323 lb. milk. A State Hospital cow was third with 650 lb. fat, 20,617 lb. milk as a three-year-old. Tuts, the noted purebred Holstein owned by Mast Stoltzfus of Morgantown, was fourth with 646.6 lb. fat, 10,809 lb. milk and two McCarrell cows stand next with 642 lb. fat made as four-year-olds.

A BIG PRODUCING NEW YORK HERD

One of the big producing Holstein herds in Western New York is that owned by Burdick & Son of Otto. The herd averages between forty and fifty milkers and the average milk production is 9,000 lb., a splendid showing when it is considered that this includes young heifers as well as mature cows. Some idea of the producing ability of this herd can be formed from the records it has made in former years. In thirty days from May 15 to June 15, from forty-three cows, of which nine were two-year-olds and two were three-year-olds and of which twenty-one cows had freshened from August 2 to December 12 of the preceding year, 55,000 lb. milk was delivered at the fac-

tory after eight calves had each received fifteen pounds a day. This was done on three times a day milking.

The Burdicks call their establishment Weed-Hurst. The herd is headed by King Silver Etta Dutchland and Eagle Bay King Korndyke. King Silver Etta Dutchland is a son of Dutchland Colantha Sir Inka, that noted son of Colantha Johanna Lad and the 30 lb. four-year-old, Lady Princess Beets. The individuality of the offspring and the records made by the daughters of "Old Dutch" as he is generally termed are well known to everyone interested in Holstein official work. The dam of the "King" is Fancher Farm Silver Etta Segis Rose, a 21.84 lb. junior four-year-old daughter of King Aaggie Segis and therefore a sister to the United States Champion, Fancher Farm Maxie.

Eagle Bay King Korndyke is a son of King Sadie Vale Supreme and Queen Annie Korndyke Colantha, a 25.17 lb. daughter of Dutchland Colantha Sir Inka. King Sadie Vale Supreme is by King Korndyke Sadie Vale from K. K. S. V. Topsy, credited with producing 40.38 lb. butter in seven days as a senior three-year-old.

The pedigrees of these two herd sires show a combination of many good producing strains. The Burdicks are expecting some good milkers from daughters of the junior herdsire whose dams are daughters of the senior herdsire. They will carry a double cross of the blood of Dutchland Colantha Sir Inka being both granddaughters and great-granddaughters of that famous old sire.

WHY HE WOULDN'T JOIN

A cow testing association was organized in a district where there were a few good herds. One dairyman living at a little distance from the place of organization was not present at the meeting but was sent a very cordial letter inviting him to become a member. In reply the tester received the following:

"Dear Sir: I bin goin to rite yous fer some time to tell yous why i haint in favor of this here cow testing association what you runs or is trying to run and wants me to join. In the first place i know you will want me to feed grain and my cows aint use to it and i am afraid it would make them sick. Then to if they give more milk it makes me a lot more work to milk them and i aint got no time fer more work, you say to that you can show me which are my poor cows by keeping a account for each cow. I haint got no poor cows i want you to understand and if i have i don't want to know it or anyone else to know it.

"Right now my 8 cows fil my one can and i cant afford to buy more cans or pay the man for hauling more than one can ful so you just steer clear of my place. We know what was doin better than some guy like yous.

"Much obliged for asking me to join yer association.—Yours truly, S. O. A."

Bees have a sense of smell, but their sense of touch is more to the point.

BIG RECORDS AT BERKS FARM

Two two-year-old heifers in the herd of Abner S. Deysher of Reading, Pa., are making great records in yearly work. Berks Spring Farm Pontiac in 140 days is credited with 12,903 lb. milk, 583.75 lb. fat or 729.68 lb. butter on the 80% basis. Berks Spring Farm Alcartra, in 200 days, has made 12,972.2 lb. milk, 702.86 lb. fat, or 878.57 lb. butter.

In the list of the official year as distributed at the Grand Rapids Convention these two heifers stand first and second in their class for seven and thirty-day work. Berks Spring Farm Pontiac, in seven days, is credited with 613.6 lb. milk, 32.10 lb. butter and her thirty-day record is 2,595.7 lb. milk, 129.19 lb. butter. Berks Spring Farm Alcartra has to her credit 588 lb. milk, 31.19 lb. butter in seven days, 1,928.2 lb. milk, 132.82 lb. butter, the world's record for a senior two-year-old although, as she tested 5.15%, no rank was given her in the report. These two heifers are daughters of King Tweede Spring Farm and were bred on the Berks Farm.

The highest record made last year in the yearly division was by Sparrow Hawk Johanna, credited with 28,028.9 lb. milk, 1,388.09 lb. butter. She holds the championship of the Keystone State, beating out the famous Keystone Beauty Plum Johanna, 1,294.71 lb. butter, made as a senior four-year-old although Beauty's record is still the highest record in her class and the highest record ever made in strictly official test by any animal under full age.

AN OREGON HOLSTEIN TRANS-ACTION

Recently C. B. Swango of Wildrose Stock Farm, Eugene, Oregon, sold to T. J. Sweaney, Jr., of Creswell, Ore., a pair of well bred mature animals. The bull, Wildrose Fayne Valdessa was by Finnerne Fayne Holingen Valdessa from Wisconsin Star Nettie, a daughter of Wisconsin Star 5th and King Korndyke Veeman, one of the many good sons of King Korndyke Sadie Vale.

Finnerne Fayne Holingen Valdessa was by King Valdessa, a son of the first 40 lb. cow, Valdessa Scott 2d, and was from Finnerne Holingen Fayne, 608.1 lb. milk, 37.34 lb. butter in seven days and 1,395.06 lb. butter in a year, world's record in the junior three-year-old class.

The cow, Lady Granite Dieuwertje 3d, was from a granddaughter of Christmas De Kol Prince and was sired by Westside Ladoga Hartog Prince, he from a 21.65 lb. Ladoga cow and by Prince Beauty Pietertje Hartog.

In the pedigrees of these two animals are combined a number of strains of breeding noted for large production. Mr. Sweaney has every right to expect stock that combines both individuality and production.

Wildrose Stock Farm sells its milk at retail in the town of Eugene. The milk is delivered twice a day although the places of production and distribution are ten miles apart. The herd contains about seventy head of which half are purebred.

The first three registered cows were purchased in 1917 and the next year seven were added. In the second consignment was Wisconsin Star Nettie, the dam of Wildrose Fayne Valdessa, sire of the young stock in the Wildrose herd. One of his heifers took first in the calf club and open classes at the Lane County Fair and was fifth in her class at the Oregon State Fair, evidence enough of her individuality.

There are 270 acres in Wildrose Farm of which about 230 are cultivated. Good crops of oats, barley and corn are grown. Last year all the feed was raised on the farm excepting a little grain. There are three silos of one hundred forty ton capacity. Oats and vetch are used for silage as well as corn and prove very satisfactory.

The retail milk business has been built up without advertising. In fact there is a bigger demand than the herd can fill. Mr. Swango says that new customers are obtained by old customers telling their friends and acquaintances of the milk or else by leaving a bottle on the doorstep of a new house with a card telling where it came from. Satisfied customers always prove good advertising.

NEARLY 50 PER CENT

Fifteen of the 32 honor cows in the Spooner, Wisconsin Cow Testing Association during the month ending May 15, were Holsteins. The high cow was a purebred Holstein owned at Baker Farm and is credited with 1,975 lb. milk, 59.3 lb. butterfat. The Baker Farm herd averaged 1,175 lb. milk and 37 lb. butterfat but was beaten for first place by the purebred Holstein herd owned by Ole Soho't & Son with an average of 1,176 lb. milk, 39.2 lb. butterfat.

FINE AVERAGES

The purebred Holstein herd of E. J. Wheatley led the Eastern Allegan, Mich., County Testing Association for the past year by averaging 12,890.5 lb. milk, 444.5 lb. fat. The average test was 3.45%. A grade Holstein owned by Thomas Kelsey was high cow with 18,008 lb. milk, 584.8 lb. fat. The Kelsey herd averaged 11,206 lb. milk, 431.7 lb. fat and stood second on the list. The average for the entire association, 251 cows, was 8,127.5 lb. milk, 328 lb. fat.

IN KANSAS TOO

P. Bremer who officiates in the cow testing association of Franklin County, Kansas, reports that a purebred Holstein owned by C. E. Reed led during May by producing 2,204 lb. milk, 70.5 lb. fat while the Holstein herd of 12 cows owned by Clyde Shade of Ottawa averaged 1,172 lb. milk, 36.9 lb. fat.

JUST A PET

Pet, a registered Holstein owned by Fred C. Miller of West Salem, Wisconsin led the West Salem Cow Testing Association with a production of 1,807 lb. milk, 65.1 lb. fat during May. The Miller herd led for high average with 1,252 lb. milk, 43.7 lb. fat.

SUPPOSING

you had a bull with 21 sisters that had each made over 1,000 lb. butter in yearly test?

And that his dam produced 636.3 lb. milk, 35.14 lb. butter in seven days, and was dam of a 30 lb. cow with over 1,000 lb. butter in a year that in turn was dam of a 30 lb.—1,000 lb. four-year-old?

And your bull was by ORMSBY KORNDYKE LAD, was a fine individual and sired dandy stock?

You'd think you had a REAL herd-sire.

Let us tell you about ours.

We offer his sons and some good heifers.

CHENEY BROTHERS & JONES

Randolph Virginia

This herd is ACCREDITED.

Do You Need Holsteins?

This Herd Was Established 22 Years Ago

We are dairymen and depend upon the dairy and farm for our living—consequently we own good cows.

Come and take your pick of our Accredited Herd.

MRS. MARY F. WITTER & SON

Allegany Co., Cuba, N. Y.

All the Cattle in Crawford County, Pa.

Have been tuberculin tested TWICE under the Accredited Area Plan. In the second test 99.2% passed CLEAN.

When buying Holsteins, purebred or grade, why not come to Crawford County. The producing capacity and individuality of our cattle equal their health record.

Any of the men listed below would be pleased to supply your needs or put you in touch with responsible breeders who can.

OUR KIND

We specialize on type, and size as well as production. The milking herd consists of daughters of the 36-lb. bull

KING TOBE ALCARTRA DE KOL and they are bred to a grandson of Carnation King Sylvia.

We can spare a few good ones

O. I. MARTIN

Crawford Co. Cambridge Springs, Pa.

Just a Suggestion

Our cows and heifers are making good. In their everyday work they return a nice profit over feed cost. In A.R.O. test they have nice records, two-year-old heifers making 20 lb. of butter in a week, older cows in proportion.

Herd under Federal Supervision and T. B. Free.

Isn't this worth something to you?

Raymond D. Strickland,
Nicholson, R. D.
Susquehanna Co. :: Penna.

IN THE CUMBERLAND VALLEY

F. M. Kost of Carlisle, Pa., recently sold three good animals to Albert F. Kost of the same address. There were two six-year-old cows and a two-year-old bull.

Buttercup Fannie De Kol was giving 85 lb. milk in a day. Her sire was by Seventeenth Spring Farm King Pontiac 6th and was from a 23 lb. junior four-year-old daughter of Albina Butter Boy. Her dam is of noted strains of breeding and is a granddaughter of Dutchland Colantha Changeling Boy.

Meadow Center Pauline De Kol, the other cow, was from a daughter of Cold Brook Pet and was by Albina Pontiac De Kol, the sire of Buttercup Fannie De Kol. She is also a large producer.

King Ormsby Fayne Dutch, the two-year-old bull was from Dutch Corner Fayne Lyons, 510.6 lb. milk, 20.50 lb. butter in seven days as a junior four-year-old and over 20,000 lb. milk in a year in cow testing association work. She is from a 21 lb. two-year-old daughter of Segis Lyons and was sired by Governor Walker Lyons, he by King Lyons from Betta Walker.

The sire of this bull, King Ormsby Nell Viola, was by King Ormsby Abbekerk Helena from an A. R. O. granddaughter of Paul Calamo Korndyke and is full brother to Ormsby Nell Viola, 26.06 lb. butter, 520 lb. milk in seven days as a four-year-old. As a junior two-year-old this heifer in 301 days is credited with 635.30 lb. butter, 14,630 lb. milk. In the 1922 Brentwood Sale this heifer won first in her class and was sold for \$900.

HERD MAKES GOOD SHOWING

Eleven registered Holsteins owned by Alfred Agrimson, of Whalan, Minn., led the Rushford Testing Association during May by producing an average of 1,367 lb. milk, 51.7 lb. butterfat. Thirteen grade and registered Holsteins, owned by Oliver Haslerud were in second place with an average of 1,218 lb. milk, 47.1 lb. butterfat.

A grade Guernsey led for individual production with 79.1 lb. fat, a purebred Holstein of the Haslerud herd being second with 1,925 lb. milk, 77.0 lb. fat.

One hundred and fifty-four cows exceeded 40 lb. butterfat. Of these sixty-three went over the 50 lb. mark while seventeen exceeded 60 lb. The average of all the cows tested in the association during the month was 848 lb. milk, 38 lb. butterfat.

HOW A HERD IS BUILT

An example of a herd built up by culling, the use of good sires, and proper feeding and care is that of the Trumbull County, Ohio, Experiment Farm herd. In 1912, this herd averaged 6,308 lb. milk the three best cows averaging 7,811 lb. In 1923, the average production was 7,581 lb., the three best cows averaging 9,840 lb. Continued culling and good feed increased the herd average to 8,256 lb. in 1924 and thus far 1925 promises a 10,000 lb. average.

WE BREED HOLSTEINS

for size, type, health and economical production. If you want fresh cows, springers, heifers or young bulls, the following breeders and dairymen, located within a half hour's drive from Wyalusing, Bradford County, Pennsylvania, have them.

YONK HAS GOOD COWS

Louis Yonk and his wife are pioneers in the section of the country around Cornell, Wisconsin, their parents being successful farmers there when Chippewa County was first being cleared. Louis Yonk and his sons now own a high class, big producing Holstein herd which won high honors during December in the Cornell cow testing association reports tester Roy G. Shrock. The herd held highest average and furnished the leading cow. One of the cows reported has averaged more than 40 lb. butterfat for the past 8 months and has a credit of \$114.15 above her feed cost.

Henry was worrying about his hair. It was falling out with appalling rapidity. Finally he wrote to a famous specialist and told him about the fight he was waging, and asked him for advice. The doctor answered. "Keep up the fight. Either you or your hair will come out on top."

Northern Visitor.—"Has that cow of yours got a pedigree, Sambo?"
Sambo.—"No sah, no indeedy. Dere ain't nuffin do matter wif dat cow. She am puffedly healthy, sah."

FROM PENNSYLVANIA TO ILLINOIS

Miss Mary C. Gosch of Rochelle, Ill., recently purchased from the Maple Grove Stock Farm at Centerville, Pa., the pair of calves advertised in the May issues of the HOLSTEIN BREEDER AND DAIRYMAN. The young bull was a son of Maple Grove Ybma Glista, whose dam made a seven-day record of 641.3 lb. milk and 27 lb. butter in seven days. The dam of the bull, Maple Grove Mercedes Glorinda produced 672.6 lb. milk, 25.8 lb. butter in a week.

The heifer was by Clever Model Glista from Maple Grove Pontiac Bell, an A. R. O. daughter of King Pontiac Jupiter. This bull, formerly at the head of the Maple Grove herd, was by King of the Pontiacs from a good daughter of Hengerveld De Kol, a combination of breeding noted for producing a number of good sires and big producing cows. Clever Model Glista is sire of a number of fine young cows in the Maple Grove herd. He was by the show bull, Model King Segis Koningen, and was from Glista Coreva, 593.1 lb. milk, 34.08 lb. butter in a week as a six-year-old. This cow two different years made over 31 lb. butter in seven days and has two daughters that each made over 30 lb. butter in a week in the Cornell University herd.

The Maple Grove herd is accredited and is a working dairy establishment where the cows pay a substantial profit over the cost of feed and labor. Mr. Jones is greatly pleased at shipping this well bred, handsome pair of calves to the state of Illinois. He is confident that these animals will make good in their new home.

IOWA DAIRYMEN BUY HOLSTEINS

E. W. Dreyer and Frank Draeger of Charles City, Iowa, purchased a carload of purebred Holstein cows from around Neillsville, Wis. They took in a number of sales and traveled about 800 miles inspecting dairy herds at well known breeding establishments. At the Waukesha County Sale they purchased fifteen head, ten for Mr. Dreyer and five for Mr. Draeger, the rest were obtained at private sales.

Neillsville, seat of Clark County, possesses one of the large condenseries. This institution is taking in 90,000 lb. milk daily and shipping eight carloads of condensed milk per week. While the Floyd County party was there one carload of condensed milk was consigned to Iowa with 100 cases billed to Charles City. Besides this condensery the County has also six creameries and 135 cheese factories. The farmers figure the income from their dairy products the coming year will be \$7,000,000.

BUYS AT HOME

Mark Vetter of Marathon, Wisconsin, recently purchased from Mike J. Gau of the same town, a well bred young bull, a son of Queen Korndyke Wayne Alma. The buyer and seller of the bull are both members of the Marathon Holstein Club.

WILLOW BROOK HERD

has for junior herdsire

KING ORMSBY ENDERCAMP

a son of King of the Ormsbys and Vandercamp Segis Aggie Jewel.
The seven-day records of his dam and sire's dam average 33.80 lb. butter and the year records average 1,097.61 lb. butter and more than 23,000 lb. milk. Owing to a lack of help we will sell you your choice of our ACCREDITED HERD.

A. L. BOWELL & SON, Pa.
Thompson,

A PAIR FOR \$150

BULL born December 15, 1924.
Sire: Clever Model Glista from the 34 lb. Cornell University cow, Glista Coreva.

Dam: Maple Grove Pontiac Genevieve, 471.9 lb. milk, 20 lb. butter in 7 days, a daughter of King Pontiac Jupiter.

HEIFER, born January 8, 1925.
Sire: our 27 lb. herdsire, Maple Grove Ybma Glista.

Dam: Maple Grove Koningen Ormsby Glista, her name tells her bloodlines. This pair are nicely marked, straight and right in every way and are from our Accredited Herd.

MEECH & STODDARD, Inc., Middletown, Conn., Distributors for Eastern United States.

A PERSISTENT PRODUCER IN PENN STATE HERD

It is not always the cow that gives a big flow of milk when she is fresh that is the most profitable dairy animal. Some cows make yearly all their record in the first few months of their lactation period, others do not give a big milk flow but hold out persistently. In the State College herd there is an example of this latter kind. Jessie Colantha Pontiac Korndyke, No. 350064 is credited with two large year records. Calving as a junior three year old she produced 18,719.9 lb. milk, 711.6 lb. butterfat in the year. As a five year old cow she made a year record of 20,091.9 lb. milk, 791.9 lb. butterfat. Her highest milk production in any one day while she was on test was 58 lb. At the end of the year she was producing 40 lb. milk a day and her monthly totals show very little variation. Jessie is not a spectacular performer but just a steady worker and if there were more cows like her in the dairymen's herds there would be very little talk of a seasonal surplus and less talk of unprofitable production.

Jessie Colantha Pontiac Korndyke was bred by Stewart Brothers of Jamestown, Pa. Her sire was Sir Jessie Pontiac Korndyke, No. 132739 and her dam is Amsdale Pietertje Colantha, No. 208176, a daughter of Sir Dutchland Hengerveld Colantha, raised in the herd of Amsden Brothers of Cuba, New York. From a number of sources we are informed that this characteristic of persistent production is inherent in the numbers of the Amsdale herd and is transmitted with a reasonable degree of certainty to their descendants.

POOR FARM HAS GOOD HOLSTEIN HERD

St. Louis County, Minnesota has a poor farm on which there is a herd of purebred Holsteins. In 1921 the Poor Commission decided that the Poor Farm must either be made to pay its way or else be abolished. The idea of having the inmates do most of the work had to be abandoned as nearly all of them are too infirm to do much work of this kind. To make the farm pay it became necessary to produce foods at a less cost than they could be purchased in the public market.

The first move was to kill off 15 cows of scrub breeding and put 5 purebred Holsteins in their place. These were purchased at an average cost of \$500 from the Ramsey County Farm and a six months old bull calf was secured to head the herd. He cost \$2,500. Rather an expensive investment it would seem, \$5,000 for six head of cattle.

The bull is Mercedes Ormsby Fobes 2d, a double grandson of Sir Pietertje Ormsby Mercedes. His nearest dams have year records averaging 1,158.43 lb. butter, 24,992.9 lb. milk.

Of the five original cows, one was Sullivan Farm Alma, a cow that for 28 days averaged 75 lb. milk a day. Mercedes De Kol Korndyke Lady gave 115 lb. milk in one day and 9,000 lb. in 90 days. She was a daughter of Neetije Mercedes De Kol Homeland, owned by C. L. Spauld-

ing, a cow that made a year record of 30,565 lb. milk, 1,135 lb. butterfat.

In addition to the six original head the farm purchased five cows and 14 heifers at a cost of \$6,175. The herd is now increased to 48 head despite the fact that 17 animals, mostly bull calves, have been sold to farmers in the county. The calves sold brought in \$4,495 so that the herd investment has been reduced to \$6,680.

The Poor Farm contains 260 acres of which 150 acres are cleared and cultivated. It is producing all the dairy products, garden vegetables and eggs needed at the institution to feed its average population of 180 inmates plus its employees.

During 1924 the farm delivered to the institution 82,830 quarts of milk, 3,522 quarts of buttermilk, 3,279 quarts of cream, 3,601 pounds of butter, 6,909 dozen eggs, 5,252 pounds of meat, 1,115 bushels of potatoes and other small garden vegetables. The produce delivered to the institution was valued at \$13,189.94, and other services were charged at \$2,694.43. In addition, \$4,503 worth of produce was sold for cash to outside consumers. During 1924 the farm cost \$18,366.86 to operate and the income amounted to \$20,187.37, a net profit of \$1,820.51.

In speaking of the increase of field crops since 1921, Mr. Harding pointed out that in 1920 no small grain was raised; in 1921 the farm raised 1,117 bushels; in 1922, 1,731 bushels; in 1923, 2,404 bushels, and in 1924, 3,080 bushels.

KATY DID

"Katy" a purebred Holstein owned by Snyder & Scott, led the Linn County, Ia., Number 2 Association during May by producing 81.1 lb. butterfat from 2,356 lb. milk, the average test being 3.44% fat. Peggy a grade Holstein owned by Sargent & White was second with 71.2 lb. butterfat, 1,873 lb. milk, her average test 3.8%.

Eight purebred Jerseys carried off high herd honors with an average of 41.2 lb. fat. Sargent and White's fifteen purebred and grade Holsteins followed closely with an average of 40.7 lb. fat, 1,136 lb. milk and fourteen purebred Holsteins owned by E. J. Gilmore of Marion were third on the list with an average of 1,180 lb. milk, 40 lb. fat.

There were 322 cows in milk and 43 cows dry in the 25 herds tested says tester W. A. Fuller, their average production being 789 lb. milk, 32.3 lb. fat. Seventy-nine animals produced 40 lb. or more fat, while twenty-nine exceeded 40 lb. They are twenty-three purebred sires in the association.

MAKING BIG RECORD

First Lady of Earl Crest, owned by H. B. Ayers of Westerly, R. I., in 74 days produced 8,098.2 lb. milk, 255.74 lb. butterfat. Since she started on test she has broken Rhode Island State records for milk production for a day, a week and a month. Her daily average since starting on test is 109.45 lb. milk.

Conscience gets a lot of credit that ought to be charged up to cold feet.

YOUNG STOCK

sired by

MAPLE CORNER SUPREME

His dam produced 32.6 lb. butter in 7 days and averaged 83.6 lb. milk for 30 days.

His six nearest dams average 35.11 lb. butter and he is a choice individual.

The females in this herd are good individuals and big producers. Nearly all have creditable official records.

Chenango Co., Greene, N. Y.
Herd under State and Federal Supervision.

A REPEAT ORDER

Emery Osterstuck of Portville, N. Y. has purchased from the Amsden Brothers, Cuba, N. Y., the handsome bull calf advertised in the May issues of the HOLSTEIN BREEDER AND DAIRYMAN. This bull was a son of King Echo Sylvia Colantha Spofford and of Amsdale Hartog Colantha, one of the big producing granddaughters of Colantha Johanna Lad in the Amsdale herd. This cow is a very handsome individual and has produced 75 lb. milk in a day on ordinary care and feed, evidence enough of the producing ability of the members of the Amsdale herd.

King Echo Sylvia Colantha Spofford is from big producing strains. His dam, a very handsome cow, produced as a five-year-old 647.6 lb. milk, 29.99 lb. butter in seven days and then exactly a year later made 700 lb. milk, 30.55 lb. butter in a week. He is by Sir Champion Sylvia, a son of Champion Echo Sylvia Pontiac from a 30 lb. daughter of the twice 37 lb. cow, Belle Model Johanna 2d.

The Amsdale herd has been in existence over twenty-eight years. It has always been run from the dairy stand-

AMSDALE HARTOG COLANTHA

She has produced 75 lb. milk daily on twice a day milking. Dam of the young bull recently sold to Emery Osterstuck of Portville, New York, by Amsden Brothers of Cuba, N. Y.

point. No effort has been made to make big records but the energy of the proprietors have been devoted to building up a herd of handsome Holsteins that return a handsome profit over the cost of their feed and care. Animals from this herd have been tested at other establishments and have made remarkable records. As the Amsdale herd is accredited, and the animals sold at farmers' prices, it is very evident that this is a good establishment from which to purchase registered Holstein-Friesians. Evidently Mr. Osterstuck thinks so for after taking the young bull home he was so pleased with him that he came back and purchased two nice heifer calves to go with him. This is the second herdsire Mr. Osterstuck has obtained from Amsdale.

STARTING RIGHT

A new Holstein establishment is being built at Middlefield, Iowa, by Joe McKay. Mr. McKay has recently purchased a number of good purebred cattle and will operate his establishment from a strictly dairy standpoint.

OFFICES: EVANGELICAL BUILDING
BOX 110, HARRISBURG, PA.

AMATEUR PICTURE CONTEST

To the Breeders and Dairyman:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

MERRYALL HERD

is headed by Traverse Echo Sylvia King

His dam produced 33.27 lb. butter, 736.4 lb. milk in 7 days, averaged 102 lb. daily for 30 days, has made over 30 lb. butter in a week two different years. She has 6 tested daughters, one above 35 lb., two above 32 lb., five above 24 lb.

The dams back of this bull have made wonderful records in official work.

His 3 nearest dams average 33.03 lb.

His 7 nearest dams average 32.72 lb.

His 10 nearest dams average 33.67 lb.

His 14 nearest dams average 30.18 lb.

He is being mated with cows and heifers that combine exquisite type and symmetry with great productive powers. One member of this herd had twice produced more than 20,000 lb. milk in 10 months, once in C. T. A. work and then in long time test in which she is credited with 20,447.5 lb. milk, 858.47 lb. butter.

In addition MERRYALL HERD is ACCREDITED

No. 13

Holsteins at RO-AN Farm

Where Beauty and Utility are Profitably Combined

CLOSE to the picturesque village of Caneadea, New York, is RO-AN Farm, owned by Roy W. Chamberlain, dairy farmer and Holstein breeder. The RO-AN herd has been accredited for about three years and has the enviable reputation of never having been the home of a reactor or even a suspect.

RO-AN Farm has been the home of its present owner for about forty-two years and he came with his parents on the premises when he was three years old. After his education in the public schools, he decided upon farming as his life work and to better fit himself for his chosen vocation, he studied agriculture at Cornell University, under such great teachers as Roberts, Wing, Craig and Bailey. The knowledge he gained at that time has been of considerable assistance to him in his life business.

Perhaps it was the natural desire to work with the best of instruments or perhaps it was the result of the lessons learned at Cornell but whatever the reason, a little more than fifteen years ago, Mr. Chamberlain purchased some purebred Holsteins from another Allegany County breeder, R. B. Seberry. Most of the animals in the present herd trace to this purchase.

The first bull to head the purebred herd at RO-AN Farm was Otsego Korndyke Pietje Lad, a grandson of the noted A. R. O. sires, Pietje 22nd's Woodcrest Lad and Korndyke Queen De Kol's Prince. The dams of these two bulls, Pietje 22nd and Korndyke Queen De Kol, were two of the most noted cows of their day.

The second herdsire and the bull who has had most influence upon the RO-AN herd was Sir Korndyke Pontiac Artis Prince. This bull was by Sir Korndyke Pontiac Artis from S V H Susie Veeman, with a seven-day record of 30.34

ROY W. CHAMBERLAIN

lb. butter, 571.9 lb. milk made when just five years old. Sir Korndyke Pontiac Artis, who has a long list of good record daughters, was by Sir Korndyke Manor De Kol from Pontiac Artis, 31.71 lb. butter in seven days, 1,076.91 lb. butter in a year, the highest year record daughter of Hengerveld De Kol.

From another Allegany County breeder, W. E. Knibloe, Mr. Chamberlain purchased a few females. One of these was Josie Inka De Kol 3d. Sir Korndyke Pontiac Artis Prince nicked well with the Knibloe stock. Mated with Josie Inka De Kol 3d, he produced Inka Veeman Artis, the greatest cow in the RO-AN herd. She was such an exceptional producer that Mr. Chamberlain added official testing to his already

long list of duties and when this cow was a junior four-year-old, he put her in test in which she made a record of 613 lb. milk, 29.46 lb. butter in seven days. She freshened again just thirteen months and twelve days from the time she dropped her previous calf and again she was put in test, this time making 655.4 lb. milk, 31.82 lb. butter in the week. She went a year and eighteen days before dropping her next calf and Mr. Chamberlain decided to try her again and this time she made a seven-day record of 31.30 lb. butter, 583.9 lb. milk. There was exactly two years and two months between the dates of her freshenings as a four-year-old and as a six-year-old and at these three freshenings she made three seven-day records that average 30.86 lb. butter, 617.4 lb. milk, twice making over 31 lb. butter and twice over 600 lb. milk. Mr. Chamberlain

plans to build his future herd from this family and so gave Josie Inka De Kol 3d a chance to make a record when she was more than nine and a half years old. She has to her credit 21.65 lb.

PART OF THE RO-AN DAIRY SHOWING SEVERAL DAUGHTERS OF SIR KORNDYKE PONTIAC ARTIS PRINCE

butter, 516.2 lb. milk in the seven days, although we believe that, had she had the same opportunity as her daughter, she would have made nearly as large a record.

There are four generations of females of the Inka-Artis family in the RO-AN herd. Inka Veeman Artis, herself has at least one tested daughter as Johanna Veeman Artis Lass, calving as a yearling is credited with a seven-day record of 403.7 lb. milk, 19.61 lb. butter. Her sire was King Segis Pontiac Lad Johanna, a grandson of Colantha Johanna Lad 8th and his dam was Butter Girl Johanna 2d, 26,716.8 lb. milk, 1,114.88 lb. butter in a year, a remarkable producer that made a number of good records.

There are at least one-half dozen daughters of Sir Korndyke Pontiac Artis Prince at this establishment and all are handsome cows that carry evidence of big production. It is apparent that had this sire had the opportunity that some noted A. R. O. sires have had, he would have been a distinct force for breed and general dairy improvement.

The younger milkers in the Chamberlain herd are daughters of Monarch Beauty, a double grandson of King of the Pontiacs. His sire was a son of Segis Hengerveld Fayne Johanna, 34.33 lb. butter in seven days, 20,216.1 lb. milk, 1,129.37 lb. butter in a year. Her type and symmetry was so outstanding that at one time it was seriously contemplated, building a True Type Model with this cow as the basis. She is the most noted daughter of Segis Fayne Johanna, with four seven-day records above the 30 lb. mark and one of the two cows with at least four daughters that have each made over 1,000 lb. butter in a year.

Monarch Beauty was from a daughter of Tidy Abbekerk Princess Jewel, 607.6 lb. milk, 31.70 lb. butter in a week, one of the best daughters of the noted century sire, Tidy Abbekerk Prince. Mr. Chamberlain has tested at least two daughters of Monarch Beauty. Each made over 20 lb. butter in seven days and averaged over 60 lb. milk daily. One of these, Monarch Beauty Betsy Beryl, is credited with 421.1 lb. milk,

INKA VEEMAN ARTIS

She has three seven-day records that average 30.86 lb. butter, 617.4 lb. milk. Bred, Raised, Developed and Tested on RO-AN Farm.

21.49 lb. butter and appears in the honor list of last year's records.

About ten miles from Mr. Chamberlain's home is the Holstein dairy farm owned by J. B. Harbeck & Sons. The Harbecks and Mr. Chamberlain are members of the same cow testing association. The Harbecks owned the bull, Royal Johanna Korndyke, the work of whose daughters in the Association was so outstanding as to attract state-wide attention. Several two-year-old daughters of this bull produced over 15,000 lb. milk

in a year, handled under general farm conditions by men who worked a big farm in addition to caring for their dairy. Mr. Chamberlain believes in securing a proven sire whenever possible and so made arrangements with the Harbecks for the services of Royal Johanna Korndyke and now has a number of good daughters of this bull. Royal Johanna Korndyke is a son of the famous Colantha Johanna Lad 8th and his dam Butter Girl Johanna Korndyke, is a daughter of this same great sire. Freshening as a two-year-old, she made a seven-day record of 602.8 lb. milk, 24.33 lb. butter. She is the dam of Butter Girl Johanna Korndyke 2d, 25,066.3 lb. milk, 942.88 lb. butter in a year as a senior three-year-old. Her dam, May Butter Girl De Kol, has a seven-day record of 690.8 lb. milk, 30.92 lb. butter and is the dam of three wonderful daughters all by Colantha Johanna Lad 8th.

Royal Johanna Korndyke is a remarkably handsome individual as his picture shows. He is not only transmitting the producing capacity of his ancestors but also his own desirable type and conformation as his offspring in the Harbeck and Chamberlain herds indicate.

The Chamberlain family consists of Roy, his wife, one son and one daughter. The Chamberlains extend to visitors the whole hearted hospitality characteristic of Holstein-Friesian owners generally and you will enjoy visiting their place and looking over RO-AN herd. Both Mr. and Mrs. Chamberlain are interested in anything that goes for improvement of the dairy

RO-AN HERD ENROUTE FOR THE PASTURE

ON THE LOW LANDS OF THE RO-AN FARM

industry and Roy was one of the county leaders in tuberculosis eradication work. This work has progressed far in Allegany County which is quarantined against all cattle coming into the county unless they are from tuberculosis free herds.

Our story would be incomplete without a few words about the Chamberlain homestead. It is picturesquely situated on a good road and the house is surrounded by magnificent old trees, usually find the cattle in the RO-AN Herd in the pink oak and pine predominating. Many a millionaire

ROYAL JOHANNA KORNDYKE

A bull whose daughters are making a wonderful showing in C. T. A. work.

would pay a big sum of money to have such grand old trees growing around his mansion.

RO-AN farm consists of 167 acres bordered on one end by the Genesee River. Most of the land is level and consists of river flat, generally fertile, capable of raising wonderful crops. With such a farm, given the practical and scientific training that Mr. Chamberlain has had, it is not surprising that you

usually find the cattle in the RO-AN Herd in the pink of working dairy condition.

The Government and Western Cattle Owners

IMPORTANT concessions will be made by the government to stockmen who have cattle on the public forest lands of Arizona, and it is expected these concessions will be extended to other states. Extreme drought during the past few years has worked hardships for Western cattle owners.

A subcommittee of the United States Senate consisting of Senators Ashurst and Cameron has been investigating conditions in the cattle grazing industry in Arizona. After listening to the testimony Colonel William B. Greeley, chief forester of the United States, stated that he would favor extension of the waiver of forest grazing fees to include the year 1926 as well as 1925. Appraisal of forest ranges in Arizona indicate that reductions should and will be made in fees over one-fourth of the area and such reductions would apply immediately, where appraisals indicate that slight advances would be justified such advances will not be made until the stock industry has recovered from its present depression.

Chief Forester Greeley announced that a policy will be worked out which will give holders of grazing permits individual ranges which they can fence whenever practicable and that sheep will not be allowed to graze on the same range as cattle.

Pennsylvania's Largest Bull Association

By GEO. F. JOHNSON

THE Crawford County, Pa., Holstein Bull Association is just completing its sixth year of operation. It started with four blocks in October, 1919, and today has thirteen blocks and 108 members throughout the county, making it the largest association of its kind in Pennsylvania and one of the largest in the United States.

The association was the outgrowth of the cooperative efforts of the county farm bureau and the Crawford County Trust Company. The bank employed Mr. W. C. Stuart for a year and a half to assist County Agent Sprout and the interested farmers in getting the association under way. The bank financed the project by taking the notes of the farmers. In less than a

year, however, all the obligations were met by the members of the association.

The value of a bull association is well illustrated by the results secured in Crawford County. The increase in the production of the purebred heifers from the association bulls over their dams has been as much as 125 per cent. So far, there has been about 1,100 purebred offspring from the bulls of the association, about half of which are heifers. Over 100 of the bulls which are offspring of the association sires are now in service in the county.

One member of the association, Mr. Lewis S. Brown, tells of the value of the bull club to him. He joined the association at the start and was in the block which had the sire, Jolie Combination. The first heifer he secured from this sire gave 60 lb. as a two-year-old, while the dam gave only 35 lb. at the same age. He sold another heifer from the bull for \$148.00 when six months of age. Mr. Brown has eight heifers from the second bull on his farm. The bulls are changed from one block to another every two years.

At the first show and sale of purebred dairy cattle in Crawford County, held at Cambridge Springs, June 24 and 25, the bull association had an exhibit which attracted much attention.

Stuart to Live in California

IT is reported that E. A. Stuart, president of the Carnation Milk Products Company is about to move to Southern California where he will make his future home and live in semi-retirement. It will be remembered that at the recent delegate convention held at Grand Rapids it was announced that Mr. Stuart had resigned his position as director of the Holstein-Friesian Association of America on account of ill health. Harold Stimson of Hollywood Farms was selected to fill the vacant position. We understand that Mr. Stimson's noted string of prize winning saddle horses will be taken to California but there is no intention at present to remove the Carnation herds either from Washington or Wisconsin.

"The choice of a herdsire will likely make or break you in the dairy game. If you pick a good one, the price you pay is of little consequence; if you pick a poor one, you will pay too much even if you get him for nothing."

The Log Cabin Herd

An Accredited Aggregation of High Class Purebred Holsteins

FOR the past dozen years, the Log Cabin Herd has been established at Conneaut Lake, Crawford County, Pa. This herd is owned by Ralph C. Jackson, one of the most influential men in the county, widely known as a good business man and as a public spirited citizen. He is County Commissioner, is now serving his second four year term and is chairman of the Board of Commissioners.

Mr. Jackson started his herd by purchasing the cow, Lightfoot 3d's De Kol 2d, paying \$500 for her. She was a real foundation cow as she dropped either seven or eight heifer calves in succession in her new home. Naturally you will find that the present herd contains a large proportion of her descendants and the old cow herself, now past eighteen years old, is not the least member of the herd either in size or attractiveness. Although past eighteen years old, she is still a regular breeder. When she was past fifteen years old she was given an official test in which she made a seven-day record of 483.9 lb. milk, 18.89 lb. butter. As ninety days had elapsed between the time of commencing this record and the time she freshened, the Blue Book gives

FIVE SENIOR YEARLING HEIFERS BRED AND RAISED IN THE LOG CABIN HERD.

her age as fourteen years, nine months and nineteen days, but the fact that she had been in milk three months when she started test adds considerable to the value of her performance which is, we believe, a world's record for age, although we have not searched the books for definite information on this subject. This cow was from Lightfoot 3d and was sired by Major Aaggie De Kol, a son of De Kol 2d's Butter Boy 3d. She has two full sisters in the A. R. O. list, both above 21 lb. butter in a week and one of these was approaching twelve years old at the time she was officially tested.

A few other official records have been made in the Log Cabin Herd. Maggie Jewel Segis as a senior four-year-old is credited with 629.6 lb. milk, 26.70 lb. butter in seven days. Four of her half sisters were tested in this herd, a three-year-old produced 564.3 lb. milk in a week; one two-year-old made 436.6 lb. and another 435.1 lb.; while a yearling heifer made 409.6 lb., quite a showing for five daughters of one sire as the seven-day milk records of the five heifers averaged 535.04 lb.

During the dozen years the Log Cabin Herd has been in existence, a number of well bred bulls have stood at its head. The first, Log Cabin King, was

dropped in the herd. He was a grandson of Pietertje Hengerveld Segis and Major Aaggie De Kol, and his sire was from a daughter of Paul Beets De Kol.

The first purchased herdsire was Vinita Sir Segis Ophelia. His dam has a number of official records and is credited with producing 592.9 lb. milk, 29.84 lb. butter in a week. His sire's dam has records of 26.12 lb. butter in seven days, 822.73 lb. butter in a year from over 20,000 lb. milk. He is a double grandson of King Segis Pontiac Pietertje who was by King Segis from Pontiac Pietertje Princess. He was the sire of the five heifers that averaged 535 lb. milk during their seven day's test.

The second purchased herd was Edinboro Segis Burke. His sire was a son of Sir Veeman Hengerveld from a daughter of Sir Korndyke Pontiac Artis, a combination of blood lines that at one time was very popular. The dam of this bull had a seven-day record of 24.20 lb. butter, 436.7 lb. milk made as a seven-year-old. In this lactation period she was tested for the full year and during that time produced 827.13 lb., 18.014 lb. milk. When she was nearly ten years old she was

again put in test, this time for 305 days, during which she made a record of 14,451.2 lb. milk, 628.43 lb. butter. Her sire was a son of Pietertje Hengerveld Segis and her dam was by a grandson of Sadie Vale Concordia the first 30 lb. cow.

Mr. Jackson had obtained his first bull from Hotchkiss & Son, well known breeders of Holsteins, and the offspring of this bull had been so satisfactory that he went back to them and obtained Vinita Pietje Prince. This bull was from Vinita Clara Lyons, 638.2 lb. milk, 24.95 lb. butter in a week, a great-granddaughter of King of the Pontiacs. His sire was by Judge Segis from Brookdale Pietje Jessie, 754.3 lb. milk, 34.54 lb. butter in a week, 3,114.8 lb. milk, 139.11 lb. butter in thirty days as a senior four-year-old. The younger animals in the dairy are by this bull.

The present head of the herd is King Hengerveld Lefa Joh. His sire, King Joh, has a number of good record daughters including one that made over 40 lb. butter in seven days. He was by King Segis Pontiac Alcartra from a 33 lb. daughter of Johanna McKinley Segis. The dam of "The King" is Yankee Lefa, a daughter of Dutchland Colantha Sir Inka. She has a succession of large records. As a junior three-year-old,

she made 17.55 lb. butter in seven days and made a year record of 675.11 lb. butter, 14,938.2 lb. milk. As a four-year-old she made 23.96 lb. butter in seven days and averaged 77 lb. milk a day for 30 days. As a five-year-old, she made 513.1 lb. milk, 27.81 lb. butter in seven days and as six-year-old is credited with 32.09 lb. butter in a week, averaging better than 81 lb. milk daily.

The cattle are under the care of Superintendent W. E. Mapous, who has had charge of the farm and herd for at least half a dozen years. In the local cow testing association this herd has made a splendid showing and, as said above, some official records have been made. The herd, however, is maintained for the production of milk and Mr. Jackson has seemingly solved the way to cut out the middleman and obtain the maximum price for his farm products. At the near-by pleasure resort of Conneaut Lake, he has an eating house, built in the form of a rustic cabin and called Log Cabin Hotel. This resort is generously patronized during the summer and, of course, it is necessary to have on hand an adequate supply of high quality products. What milk and cream is not used at the Cabin is sold to cottage residents and to owners of concessions around the lake. Mr. Jackson has been operating the eating house at this place for thirty-three years. During this time his property has been burned down three times but he has built again, each time building it larger.

Last year Superintendent Mapous took ten animals to the fair at Stoneboro and brought home ten firsts, four seconds and two third prizes in addition to the female grand championship. He exhibited five senior yearlings which, on account of their uniform type and dairy promise, created quite a sensation at that event.

Ralph C. Jackson, owner of Log Cabin Herd, was raised on a farm and educated in the common schools

NOTICE THE SIZE AND TYPE OF THE LOG CABIN HERD ANIMALS.

at Meadville. He has three children, one boy and two girls, all high school graduates. He has been prominent in the movement to eradicate bovine tuberculosis in Crawford County and to have this county made a modified accredited area. Mr. Jackson went to Harrisburg, conferred with the state veterinary authorities and assured them of the coöperation of the cattle owners of Crawford County and of the Board of Commissioners. The Commissioners appropriated \$5,000 towards defraying the expenses of cleaning up the county. So effective was the coöperation of the Board and the cattle owners of Crawford County that

at the last test no less than 99.2% of the animals in the county passed clean and in Sadsbury township the veterinarians found only one reactor and she had been recently brought in from outside. Mr. Jackson's own herd has been tested once a year since it started and no reactor or even suspect has even been found therein.

A TYPY BUNCH OF BIG PRODUCERS.

Log Cabin Farm contains 175 acres and is in a good state of fertility. Mr. Jackson has owned this place for the past thirty years and it is run as a working establishment and not for show although you will find that the condition and size of the cattle therein rivals that of the inmates of many of the so-called big breeding establishments maintained by wealthy owners regardless of expense.

FAIRS AND EXPOSITIONS

- July 13-18—Grand Forks, N. D., North Dakota State Fair.
- July 20-25—Fargo, N. D., Interstate Fair.
- August 15-22—Davenport, Ia., Mississippi Valley Fair and Exposition.
- August 15-22—Sedalia, Mo., Missouri State Fair.
- August 21-29—Aurora, Ill., Central States Exposition.
- August 26-Sept. 4—Des Moines, Ia., Iowa State Fair and Exposition.
- August 30-Sept. 5—Danville, Ill., The I and I Fair.
- August 30-Sept. 5—Milwaukee, Wis., Wisconsin State Fair.
- August 31-Sept. 5—Columbus, Ohio, Ohio State Fair.
- Sept. 4-13—Detroit, Mich., Michigan State Fair.
- Sept. 5-12—Hamline, Minn., Minnesota State Fair.
- Sept. 6-11—Helena, Mont., Montana State Fair.

Soybeans were grown on 52,000 American farms last year.

NOT ABOUT COWS

The Refrigerator

WE are now at the time of the year when one of the most important pieces of furniture in the home is the refrigerator. During the winter months, it may stand, forlorn and neglected, on the back porch, but as soon as warm weather arrives it emerges from its obscurity to become the central receptacle of the family food supply. Occupying such an important place in the domestic life of the family, it is surely deserving of more consideration than it often gets.

There are three styles of refrigerators, the top-iced, the side-iced and the old-fashioned ice-box. If ice can be procured only once or twice a week, the old style ice chest has its advantages, for as long as there is a bit of ice left, the food is close enough to it to get the benefit to the last. But if ice can be obtained every day or every other day, one of the other types is preferable, being more sanitary and less messy. Experience has proved, also, that the top-iced kind is more efficient than the side-iced, especially in the smaller sizes. The side-iced depends upon the difference in the air temperature throughout the box for its circulation, and in the small refrigerator, so much ice is used up in chilling the walls and lining of the box that there is not enough left for the chilling of the interior. The convenience and good looks of the side-iced have caused this to be overlooked. If this type can be filled up every day, and the ice chamber is large enough, it will work efficiently but at a greater cost. The best results at the least cost may be had by using a good sized top-iced refrigerator.

CLEANING

Strange as it may seem there are housekeepers who do not pay as strict attention to the cleaning of the refrigerator as they should. Anything spilled in the food chamber should be wiped up with cold water and a little baking soda. Once a week everything should be removed, drain pipe as well, and given a thorough cleaning in cold water and soda, rinsing with clear cold water. To use hot water or even warm, will take pounds of ice to reduce the inside temperature to the proper degree. Use a brush for the drain pipe. If the outside is kept varnished or waxed, it will prevent warping, a thing fatal in a refrigerator. Door fasteners should be tested, for much cold air escapes through the tiny crack caused by an ill fitting door. A piece of charcoal kept in the food chamber will absorb odors.

THE ICE MAN

The next thing to do is to get the ice man to put in large enough pieces. On the farm this should be the regular job of the best available man. If only a small amount is put in, so that the supply is almost gone before his next trip, it takes so much of the new piece to lower the temperature to the proper degree, that

history repeats itself and the supply is low or gone before he comes again. It is the best economy to fill to capacity each time and to have the ice in as large pieces as possible.

Housekeepers can keep down the amount of ice used by first cooling all foods placed in the refrigerator. Also by opening the door as seldom as possible, and for as short time as possible. These may seem like small things but taken throughout the entire season, they make considerable difference in the expense of icing the refrigerator.

Eggs

JUST now if the biddies on the farm are doing their duty by their country, they ought to be turning out their maximum production of eggs. Consequently the price is lower and it is a good time to put down a supply in water glass for the winter. Even on a farm where there are some fresh eggs every day, these "canned" eggs come in very handy for cooking, keeping the fresh laid ones for the table or selling them to those who are willing to pay winter prices, usually double those of summer. The process of putting down eggs in water glass is very simple, full directions being given on the label of the can. This is also a good time to eat all the eggs one wants, and as they may be served in many styles, they may be used at any meal and enjoyed.

SOFT BOILED

A soft boiled egg seems to be one of the puzzles of cookery. Cynics maintain that there is no such thing. Have the water boiling, drop the eggs in (not too hard!), put on the cover, move back of the stove and allow to stand for ten minutes. This permits the yolks to cook. Or boil three minutes by the clock. If you lose track of the time lift the egg out of the water; if the shell begins to dry at once, do not replace as it is done.

PICNIC EGGS

Shell hard boiled eggs, remove yolk, drop the whites into vinegar in which beets have been canned or pickled; when colored a pretty pink, remove and fill with the mashed and seasoned yolks.

TO POACH EGGS

Grease the bottom of the basin to keep the eggs from sticking, putting plenty of salt in the water. Just before dropping the eggs in swirl the water rapidly—the motion keeps the egg from spreading and from settling to the bottom of the pan.

ESCALOPED EGGS

To four hard boiled eggs, use $\frac{1}{2}$ cup bread crumbs and $\frac{1}{2}$ cup rich white sauce. Cover the bottom of a well buttered baking dish with a thin layer of crumbs, then a layer of eggs sliced or diced, season with salt and pepper, and cover with the sauce. Repeat until the dish

is nearly full, cover with bread crumbs and dot with butter. Brown in moderate oven.

SHIRRED EGGS

Separate the yolks and whites of the number of eggs desired, keeping each yolk unbroken in part of its shell. Add a little salt to the whites and beat until light. Butter gem pans or nappies, put in a tablespoon of the beaten whites, drop the yolks in the center and bake until the white is lightly browned and the yolk is cooked. This means a little extra work but is an extremely attractive way to serve eggs, especially if one has unexpected company and must depend on eggs for the main dish of the meal.

DOLL 'EM UP

In serving so common an article of food as eggs, much depends on the seasoning or on the way they are cooked. An unusual addition will help to make palatable a dish that otherwise would seem commonplace. In deviling eggs, the addition of cheese to the yolks makes a welcome change, or ham or chicken may be used to ring a change on any article of diet which appears frequently on the bill of fare.

"Ma" Ferguson's Bovine Triplets

Governor MIRIAM A. FERGUSON, the woman governor of the state of Texas, is the owner of a Holstein cow that on June 12th dropped triplet calves. Mrs. Ferguson is so proud of the cow and her offspring that she plans to bring the animals from her farm near Temple to Austin and so would have a family cow at the official home of the Ferguson family. It is said that when Jim Ferguson was governor of the state of Texas he suggested that they should have a family cow at the official residence, but then his good wife was against the proposition. Now that she is governor and her pet Holstein has brought triplets into the world, she has availed herself of the female prerogative and reversed her former decision.

A Martyr to Science

IT is reported that Professor Frederick Baetjer recently submitted to his seventy-first operation made necessary by x-ray burns which he received in research work.

Professor Baetjer has lost his right eye, one thumb and seven fingers, and his body bears many scars caused by severe and painful burns received in laboratory research, yet the Professor keeps on with his experiments and will probably do so until he pays for his devotion with his life.

You hear much less about the heroes of science than you do of the heroes of the battlefield yet the former have done far more for the world than have the fighters and they do not receive the plaudits of the multitude. If it were possible to write a correct account of the world's progress many men and women whose names are almost unknown outside their immediate circles would then be famed as leaders in the world's march forward and upward.

Rather Drastic

WIVES are sometimes quite trying to the best of husbands. Occasionally extreme measures may be necessary to check some of the wifely enthusiasms, but the Los Angeles dentist who fed poison gas to the partner of his joys and sorrows and afterwards deposited the remains in the cistern under a heap of concrete went much too far. Ordinarily it is entirely possible to deal effectively and fairly with a wife without resorting to capital punishment.—*Kansas Union Farmer*.

Railroad men say it would cost \$19,000,000,000 to abolish the railroad crossings in the United States. So the crossings will probably continue to abolish careless humans.

Many of us are never sure whether it is opportunity knocking or the wolf scratching at our door.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business— Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor

M. M. LEEDOM, Advertising Manager

Contributing Editors

EUGENE B. BENNETT HELEN C. NEWMAN

J. H. LEWIS

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1), payable in advance. Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JULY 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

The Aitken Resolution at Grand Rapids

TO ALL lovers of Holstein cattle and to all breeders in the United States, the resolution offered by D. D. Aitken at the recent convention in Grand Rapids whereby a committee consisting of President Lowden, Secretary Houghton, James A. Reynolds and T. E. Elder, were appointed to consider the advisability of incorporation in some other state than New York of the present Holstein-Friesian Association of America, is very significant. The reports of the different officers of the old association show that the association has been operated at a loss during the last few years, and the proceedings of the convention also indicated that they have grave doubts about the pending actions against the association brought by George E. Stevenson and fifty-two other members of the association to regulate the procedure of the Board of Directors and to stop the extravagant misuse of the funds of the association. What does it mean? Does it mean that the old association is getting ready to disband, incorporate in some other state which is more lax in its regulations, touching the handling of funds of great corporations, or touching the political management of the old association? They might still manipulate the funds of the association in such a way as to feather their own nests without any regard whatever to the plain breeder or dairyman. Of course, no one but the present political managers of the association knows or will know for some time, the real motives underlying the resolution of Aitken for the appointment of such a committee, but, "to a man up a tree," it would look as though the present political managers were considering the advisability of removing their wrecking plans to some other state than New York. It is an interesting question. Can they remove their corporation bodily to some other state or will they have to discontinue and liquidate the old association and divide up the moneys in the treasury among the mem-

bers of the old association, or will they spend the moneys in payment of legal fees and personal expenses of the political management and tell "the plain breeders on the hillside" to whistle for their remedy? We do not believe for a moment that the courts of the State of New York will allow any wholesale plunder of the funds of the Holstein-Friesian Association of America, and we believe that the present action of George E. Stevenson and fifty-two other members of the association is sufficiently broad in its scope, intents and purposes, to quell any such proposed movement and to conserve the best interests of the association.

Business and Politics

EDITOR VAN AMBURG, of the *Silent Partner* says, "Putting Business into Politics and Politics into Business is Bad Business."

The political group took charge of the business of the Holstein-Friesian Association in 1919. The transfer fee to members previous to that time had been twenty-five cents and the association was operated at a profit of \$60,784.40 for the year ending April 30, 1919, the year before the political management came into control.

From June 1919 until December 31, 1924, the affairs of the Holstein-Friesian Association were so managed by the Political Group that it had been transformed from an Association that had been operated at a profit of \$60,784.40 on a twenty-five cent transfer fee into an organization that for the past three years was operated at a loss of over \$137,000.00 on a transfer fee of \$1.50.

The association's financial statement for the year ending April 30, 1919, shows that \$20,620 was collected from members in transfer fees. If we subtract this amount from the net profit for that year, it can readily be seen that the Association could have granted the members the privilege of transferring animals free of charge and still show a profit of \$40,164.40.

Just at the time the Association had reached the stage in its growth and development when it could render members the service of transferring animals free of charge the politicians came along and took control of the association and boosted the transfer fee to \$1.00.

We believe that in the Holstein-Friesian Association the members generally will concur with Mr. F. D. Van Amburg that, "Putting Business into Politics and Politics into Business is Bad Business."

Unwelcome in the House

THE June number of *Harper's* contains an amusing skit entitled "Gifts." One paragraph depicts Secretary of Agriculture Jardine with the True Type models, presented him some time ago by a committee representing the Holstein-Friesian Association of America. The Secretary is portrayed with a model under each arm, endeavoring to place them in the parlor of his home much to the dismay of his spouse, who declares that they will reach the parlor "over her dead body."

Cow Testing Association vs. Official Records

IF we read the signs at this time correctly, we think that we note a waning interest in the official testing for milk and butter records, particularly the long time records; and a growing belief on the part of breeders and veterinarians that forcing for these records is responsible for most of the shy breeders, and complete barrenness now so prevalent in purebred herds of dairy cattle where official testing is under way.

At the same time that we notice this failing interest in official testing we see coming into favor the cow testing association record, particularly the record where the cow is under supervision by the association's tester for a day or so each month.

Where reliance can be put on the cow testing association record, it adds materially to the value of the cow that carries it, be she a grade or purebred; and as it indicates approximately her producing ability under normal care and feeding, it serves to credit her position in the herd and adds materially to the value of her offspring.

It is just possible, that in time to come dairy cattle breed associations will give official recognition to the cow testing association record, when we shall see it supersede the official record for measuring the producing ability of the purebred, to the exclusion of the official testing. Another feature in favor of cow testing records, advanced by friends of the system, is the economy in making them as compared with the official records; and the fact that they are as applicable to the grade as to the more aristocratic purebred.—*North-West Dairyman and Farmer*.

Nearly a World Wide Condition

THE ordinary collective and Breed Club sales doubtless have their uses, but they will never provide the regular market for good cattle that is essential to the success of the breed. Good trade is most readily obtained when conditions ensure that both buyer and seller have the greatest possible chance of securing satisfaction. The time has passed when any British Friesian made a high price as a pedigree animal. To-day a black-and-white cow will make a high price if its commercial value as a profit producer on the farm is high. The issue is not confused by an occasional huge price for an animal of outstanding merit or lineage, as the cattle that will leave a good profit on the farm are always wanted, and will always sell well. It is known that such animals are not offered at collective or Breed Club sales, or if they are it is too late in the day, as buyers have all been frightened away by previous experiences.—*British Friesian Journal*.

But Cows Have Horns

IF a bill introduced in the Nebraska legislature becomes law cows will be obliged to display lights both front and rear, when driven singly or in herds, on the public highway at night. The dispatch doesn't say whether the lawmakers want to protect the cows or the motorists. What'll come next, license plates and horns?—*The Larro Dealer*.

The President's Advice to Farmers

AFTER about three years of investigation and discussion the tariff commission recommended that the President use his executive power to reduce the duty on raw sugar imported from Cuba. The commission was not enthusiastic or even unanimous about the reduction. There are six members of which one did not vote because his wife owned some stock in a sugar property; two did not favor the reduction and three did and so the majority carried the day. But President Coolidge made rather short work of the recommendation. He asked how much cane and beet sugar was produced in this country and he found that the duties on imported sugar amounted to \$135,000,000 a year. Then he rejected the recommendation and took occasion to say that, instead of trying to produce food for export it might be well for the farmers of America to try to produce more food to be consumed in this country so that less would be imported or in other words, to change from raising food to be exported and aim to raise more of the kinds of food that is now imported.

Eminent Doctors Praise Milk

BEFORE a meeting of the American Institute of Homeopathy, Dr. John P. Sutherland, former Dean of the Boston Medical University School of Medicine, questioned the use of milk for general human consumption. Three of his statements were:

Milk was intended as a food only during infancy.

Milk of one species was not intended to be used by other species except when closely related.

Milk was not intended to serve as food for the adults of the species.

Naturally these statements aroused believers in milk as a food. Among others who dispute Dr. Sutherland's beliefs are Dr. Charles E. North, Secretary of the National Commission on Milk Standards; Dr. Wm. H. Park, Director of the Research Laboratories of the New York Health Department; Dr. Walter Lester Carr, Secretary of the Milk Commission of the New York County Medical Society; Professor Graham Lusk, Professor of Food and Chemistry at the Cornell University Medical College; and Dr. S. Josephine Baker, formerly Chief of the Division of Child Hygiene of the New York Health Department.

Dr. North said: "After twenty-five years of intimate study of the milk supplies of American cities and an extensive practice in the supervision of sanitary milk production and numerous surveys of the relation of milk to public health and infant mortality, I am convinced that milk is the most important and valuable of human foods."

Dr. Park said: "The statement by Dr. Sutherland that milk is only suitable for the species that produce it and is not suitable for the human adult is against the evidence that has been accumulated. It is recognized that children who cannot receive human milk do perfectly well on cow's milk and goat's milk when these are properly prepared and it is universal experience that adult human beings do extremely well on a cow's milk diet when that is necessary."

Dr. Carr declared: "Milk is the most valuable food

we have and the increases in its consumption and especially in the consumption of certified milk which we have witnessed in New York during the last decade spells definite advances in the public health, especially in the health of infants and children."

According to Professor Lusk "No family of five should buy meat until they have bought at least three quarts of milk. Milk contains not only protein of animal origin but also a very valuable fat which has specific properties for growth."

Dr. Baker said: "From years of experience in dealing with children I can say unhesitatingly that clean cow's milk, properly modified, is the only satisfactory substitute for mother's milk when the latter is unobtainable."

Is the Present System of Tuberculosis Eradication Worth While?

THE absolute ineffectiveness of the present national system of attempting to rid the country of bovine tuberculosis is fully shown in a press bulletin of the United States Department of Agriculture issued under date of May 14.

This bulletin places the number of cattle under supervision at 10,201,492; and cattle, in herds that have successfully passed the first test, at 6,777,624; while cattle in fully accredited herds number 1,187,908 head. During the month of March, 1925, according to this report, 617,810 cattle were tested, of which number 19,841 reacted to the test—but read this line from this bulletin, and the paragraph that follows: "Modified accredited counties recognized as tuberculosis free 69." "Reports from various parts of the country show unusual interest in tuberculosis eradication on a country-wide basis. In the first three months of this year the number of 'modified accredited' counties, those having less than one-half of one per cent of the disease, increased from 53 to 69. Veterinary officials of the Bureau of Animal Industry consider that such progress is ample proof of the practicability eventually of freeing entire states from the disease. North Carolina already has 30 counties officially recognized as free from bovine tuberculosis."

Just think of it, readers, that after something like 10 years' active campaigning, yes, we may say aggressive campaigning, during which time hundreds of thousands of cattle have been condemned and slaughtered, we have in the whole United States, at the end of March of this year, but 69 counties "modified accredited"—containing less than one-half of one per cent tuberculosis free, and that 30 of these counties are located in one of the southern states, that stands only in the twenty-sixth position of dairy cow population, and thirty-sixth as to average value per cow.

To get these 69 counties "modified accredited" it has cost this country and its farmers millions and millions of dollars.

With such a record, on what ground does the Bureau of Animal Industry justify the present system—jumping here, there and yon—of continuing this work? If any real progress is to be made in this eradication work, the present system of continuing the campaign must be changed.

It has long been the contention of *Northwest Dairyman and Farmer* that progress in the eradication of bovine tuberculosis will come only when a system of zoning each state is put into practice, and what is here meant by zoning is to concentrate all effort in one or more counties in one corner of the state, and that after the work starts in that locality quarantine it against the outside world, allowing no cattle to enter unless accompanied by certificate showing a clean bill of health. We have such regulation on our state lines; why not on county lines within the states? This health certificate should not only show that the animal to enter has successfully passed the tuberculin test two or more times, but that it has also successfully passed a physical examination, and is, so far as it is humanly possible to detect, free from the disease. Unfortunately the tuberculin test has its limitations, which in many cases has proven to be very limited, so to make the work effective no opportunity should be allowed to pass to detect if possible the spreader cases. The mildly affected readily react to the test—all the generalized cases do not.

If we are sincere in our desire to rid the nation of bovine tuberculosis the present method of conducting the campaign must be changed, and testing made compulsory with some real systematic plan substituted for the very defective one now in use, which has been well proven, by the evidence, to be ineffective.

This is not written in criticism of the test, but of the method of prosecuting the work.—*Northwest Dairyman and Farmer*.

Steady Progress

CHARLES L. BURLINGHAM will become assistant business manager of *The Breeders' Gazette*, August 1st. Mr. Burlingham is well known to owners of purebred livestock. Born on a farm in Iowa, he studied agriculture and graduated from Ames in 1913, then took his Master's degree at the University of Missouri. Extension work in Nebraska engaged his attention for some time and then he was with *Hoard's Dairyman* for five years. It was a surprise to many of his Holstein acquaintances when he accepted the position of Secretary of the American Ayrshire Association. His work with that Association made him a national figure. Mr. Burlingham officially announced that the development work of a dairy association was not the announcing of records made by a phenomenal cow but rather building up the herds owned by the rank and file and increasing the herd average production. His four years in the Secretary's office made him one of the leading breed secretaries of the United States.

Mr. Burlingham was married in 1917. His wife's father was an owner of Shorthorn cattle. Perhaps, this has had its influence in inducing Mr. Burlingham to become a member of the *Gazette* staff. We are glad that so good a dairyman secured such a high position on the editorial staff of that paper and cordially wish the new assistant general manager continued success.

It is said that seven-eighths of all the money left by married men in America is life insurance money. Think that over.

THE PRACTICAL DAIRYMAN

PRODUCE HIGH CLASS MILK AND CREAM

The starting point for the production of dairy products of high quality is clean milk, which is milk of low bacteria content.

Bacteria are small minute organisms, too small to be seen with the eye that are present almost everywhere—in manure, in dirty utensils, in the soil, on dirty clothes and dirty hands, and in the dust in the air. In human food, bacteria are generally harmful. Some of them cause such diseases as typhoid fever and tuberculosis. The scouring of milk is caused by bacteria.

The activities of bacteria are governed by the temperature. At the temperature of freshly drawn milk, they are very active and multiply very fast. If milk is kept at this temperature for two hours, the bacteria will increase by ten to twenty times the original number. On the other hand, bacteria are very inactive and do not multiply near freezing, while at the temperature of boiling water, most of them are killed.

We see then that clean milk depends upon two main factors: Keeping the bacteria out of milk, and keeping it cold so that the bacteria which do get in, do not multiply. Milk as it comes from the healthy udder of the cow contains few bacteria. Thus the starting point for clean milk is the clean cow. First, this means a healthy cow, for milk from tubercular cows, or those with udder troubles, is dangerous. Next, the exterior of the cow must be clean. Probably more dirt and bacteria get into milk through manure than in all other ways put together. Keep the cows clean in the first place. Plenty of good bedding, keeping the barn clean, and a clean barnyard are the important points here. Then, by brushing the cows vigorously daily to remove loose dirt and hairs, a satisfactorily clean cow will result. An important aid in keeping dirt from the cow from getting into the milk is the use of a milk pail with a small top.

If the milk pails and other utensils are not thoroughly cleaned after use, bacteria remain in them and will multiply very rapidly as soon as the next milk is put in the utensils. Pails, strainers, milk cans and other utensils should be first cleaned with lukewarm water. If hot water is used for this purpose, it will scald the milk on the utensils forming a thin film which is very hard to remove later, and this film of milk or cream is an ideal medium for bacterial growth and will contaminate the next batch of milk or cream handled in the container. Utensils should then be thoroughly washed in hot water containing an alkali washing powder. A brush should be used rather than a rag. The latter is a filthy carrier of germs and does not scour the surface of a smooth metal utensil. A brush is much more easily kept clean and will reach all corners and sections of the utensil. Soap or soap powders should not be used. The base of all soaps is a grease, which forms a film on the milk vessel which will in turn collect dust and dirt and thus form a place for bacteria to lodge and a medium for their growth. After washing the utensils thoroughly as outlined, they should then be rinsed in clean hot water. Scald all utensils with boiling water or sterilize them with live steam, where available. Let the utensils dry by the heat acquired during sterilization, or by placing them in the sun under a screened sunning rack. The dairyman himself should be clean. He should not milk in the same clothes he has worn during the day. His hands should be clean and dry.

Of equal importance is preventing the bacteria that get in the milk from multiplying. This means cooling the milk or cream at once and keeping it cool. Effective cooling means bringing the milk or cream to 50 degrees Fahrenheit, or lower, as soon as possible. The best way to do this is to run the milk or cream over a cooler in which cold running water or ice water circulates. Once the milk or cream is cooled, it must be kept cool until consumed, for cold does not kill bacteria, and, if the milk is warmed up they will commence to multiply.

It does not require an expensive barn to produce clean milk. The most modern equipment is of little importance compared to clean cows, clean utensils and clean men. With clean milk

we have the right basis for clean cream and high score butter. Where milk is separated on the farm, it should be run through the separator immediately after milking, before cooling, as more butterfat is left in the skim milk, if the milk is run through cold. Next, the cream should be cooled immediately and kept cold. Do not add warm cream to cold cream. Be sure to wash the separator and other utensils after each skimming. Store the cream where it will not absorb odors.

The marketing of dairy products is an important problem. After milk has been properly produced, cooled, and bottled, the most important precaution is getting it to the consumer cool. Care should be taken to see that milk where retailed, is delivered promptly and as early as possible in the cool morning hours. The same applies to cream being shipped to a creamery. Do not leave the cream sitting in the sun at the depot. The warming up of milk or cream on the way to the consumer means the rapid growth of bacteria and quick souring.—*Clemson College Dairyman*.

SILAGE A SUBSTITUTE FOR HAY

By A. L. HAECKER

Reports of a short hay crop are coming from many of our states, and stock farmers may find a hay shortage at the end of the summer. Catch crops can be planted to make up a part of this shortage, but the silo should be mainly used, as it furnishes the best and cheapest feed. It is always possible to grow an abundance of corn or cane, which in the form of silage makes the best substitute for hay that has yet been found.

The future looks bright for the dairy farmer, as we have less butter in storage than we have had for some years past. Butterfat is selling at prices from 4 to 7 cents above a year ago. The consumption of dairy products is increasing more rapidly than our output, which insures a good market. With good cattle and economical feeding, the dairy farmer can expect a good profit in his business.

The matter of substituting silage for hay has been carefully tested out by our Agricultural Colleges, and, therefore, is no longer a matter of experimentation. Silage has proven not only an excellent substitute for hay, but the results from feeding it have shown greater economy and an increase in production. The amount saved by using silage to the maximum in the ration cannot be given in exact figures, because of a great variation in market prices in different communities, but it is safe to say that silage will save from 25 to 30 per cent on the feed bill.

Silage is not only a substitute for hay, but also for pasture, and its use in summer is gaining in favor with the dairy farmer, who finds it unprofitable to pasture high-priced land. In a recent article on Economic Production, Professor Eckles of Minnesota urged dairy farmers to put up silos this year for summer as well as for winter feeding.

Silage will also save grain in the feeding of stock, and we are quite likely to see high priced grains and mill feeds this coming winter. The stockkeeper without a silo would do well to ask himself this question: Are all the Agricultural Colleges and experiment stations mistaken when they advocate the silo? Are one-half million of our best stock farmers in every county in every state of the union making a mistake by using the silo? Is it not good business to borrow money to invest in an equipment which will pay from 50 to 100 per cent interest on the investment?

HOLSTEINS IN KANSAS

There are more than twice as many purebred Holsteins in the state of Kansas as the number of cattle of other dairy breeds combined. Official figures show there are 10,408. It is said that the initial introduction of purebred Holsteins into the Sunflower State was in 1882 when H. N. Holdeman of Meade, who is still an active breeder, laid the foundation for his herd which now is the largest in the southwestern section of Kansas.

CLUB ACTIVITIES

BIG PICNIC CROWD

About 400 interested in Holsteins attended the annual picnic of the Wood County Holstein Breeders Association which was held June 10, near Arpin, Wisconsin. The speaker of the day was George C. Humphrey, professor of dairy husbandry at the University of Wisconsin. The Professor is a strong advocate of local and county breed associations to keep up the general standard of dairy animals and part of his address was along this line. He urged every farmer to establish a herd ideal and to use only the best breeding stock available. John Tenpas, secretary of the county association and R. A. Peterson also spoke, the latter on tuberculin testing and alfalfa growing.

A judging demonstration was staged in which four animals from the herd of Peter Vander Ploeg, and E. E. Miner, Jr.'s herdsire were exhibited. Professor Humphrey pointed out the strong and weak points of the animals.

LOOK OUT FOR THIS TEAM

Nearly a hundred attended the annual picnic of the Holstein breeders of Buffalo County held at Gilmanton, Wis., June 4. The principal speakers were Art Collentine, dairy cattle specialist of the Wisconsin College of Agriculture, and Prof. E. L. Luther, State superintendent of farmers' institutes. A judging contest was staged, first, second and fourth places going to three boys who won the state high school judging contest last spring. They were Melvin Huth of Cochrane, first; Alvin Bade of Cochrane, second; and Roslyn Rohrer, fourth; F. B. Rohrer being third. These three boys will represent the state of Wisconsin in the judging contest at next fall's national dairy show. The animals judged were four fine Holstein cows from the herd of Bert Ayres of Gilmanton, the official placings being made by Mr. Collentine.

THE PROGRESSIVE HOLSTEIN CLUB

Emil Hermann and R. A. Ritzow of Edgar, Wis., on behalf of the Progressive Holstein Club of Edgar visited Holstein herds in the southern and eastern counties of Wisconsin. They purchased from the E. C. Wippermann Farms of Sheboygan, a Holstein bull calf, Sir Longfield Ormsby Fobes.

Sir Longfield Ormsby Fobes was sired by Admiral Ormsby Fobes who was owned by a syndicate of Sheboygan County breeders. It will be remembered that this bull broke a leg

while being shipped to the state fair last fall and had to be killed. He was a son of the noted Wisconsin Fobes 5th.

The dam of Sir Longfield Ormsby Fobes was a very promising daughter of Pearl Longfield Pontiac De Kol, whose dam, Pearl Longfield De Kol, now nineteen years old still heads the Wisconsin greatest three generation group for milk and butterfat production, regardless of age or breed.

The members of the Progressive Club expect to use Sir Longfield Ormsby Fobes on the daughters of their other herd sires, King Longfield Pontiac De Kol and Sir Ormsby Champion Segis.

HOLSTEIN BREEDERS HEAR C. T. A. TALK

Former Lieutenant Governor George F. Comings and Jerry Riordan, representing the Wisconsin Manufacturers' Association, were the speakers of the day at the annual picnic of the Eau Claire County Holstein Breeders' Association which was held on the George McClellan farm near Foster, Wis., June 16. The latter reviewed the state dairy situation and spoke of the benefit derived through cow testing associations with special reference to Holsteins. Cash prizes had been donated by firms of Eau Claire, Augusta and Foster for stock judging contests in which boys and girls, women and men participated. Each group judged cows, yearlings and calves. Myrtle McClellan of Osseo won first prize in the junior group; Margaret Russell of Augusta first prize in the woman's contest and R. L. Ray of Eau Claire first in the men's competition. The official judge was A. O. Collentine, dairy extension specialist of the University of Wisconsin.

JOINT BREEDERS PICNIC

At Green Lake, Wisconsin, a picnic was held by the Holstein and Guernsey breeders' associations and it is estimated that there were around 1,500 present. Business men's associations of Green Lake, Markesan, Princeton and Berlin cooperated to make the event a success. After the dinner addresses were given by F. H. Clausen of Horicon, president of the Wisconsin Manufacturers' Association; E. R. McIntyre, editor of the Wisconsin Farm Journal, who was a local boy, and Mrs. Nellie Kedzie Jones of Madison. Dr. Victor Kutchin presided. Music was furnished by the Green Lake County band and the Markesan Glee club. In addition there was a baseball game and a varied program of sports.

Orwell Ridge Farm

offers choice bull calves from cows of superior individuality and large producing capacity.

They are sired by
Berylwood Prince
Aggie Chicago

whose dam produced 53,760 lb. milk, 2,272 lb. butter in two years and whose sire is California's greatest show bull and show sire. You take no chances. Our herd is *Accredited*.

Maple Grove Stock Farm, F. Jones, Mgr., Centerville
O. I. Martin, Cambridge Springs
Merle W. Ongley, Centerville

MISSOURI CLUB FIELD DAY

The annual summer Field Day of the Missouri State Holstein-Friesian Association was held June 17 at the Fredmar Farms, Jefferson Barracks, owned by F. W. A. Vespers, vice president of the association. During the morning the visitors inspected the Fredmar herd and barns.

The speakers for the afternoon were John F. Case, president of the Missouri State Board of Agriculture, whose subject was, "The Holstein-Friesian Dairy Herd"; Glenn G. Davis, president of the association; Harry W. Gleim, secretary of the Iowa association; A. C. Ragsdale, of the University of Missouri, whose subject was "Care and Management of a Purebred Herd"; Dairy Commissioner E. G. Bennett, spoke on the "County Fair Demonstration Special." Manager D. Howard Doane talked on the objects and plans of the Fredmar Farms; and J. P. Eves, secretary of the Dairy Cattle Congress on "Demonstration and Judging."

PENNSYLVANIA T. B. WORK

Pennsylvania cattle owners are interesting themselves in the eradication of bovine tuberculosis from their herds and, probably due to the increased tuberculosis indemnity voted by the recent legislature, are endeavoring to have all the cattle in the area in which they live subjected to the test.

On June 15, 90 per cent or more of the herd owners in 265 townships in 36 counties had signed agreements and were awaiting a tuberculin test under the modified area plan. In addition to the 265 townships, the owners of 23,125 cattle in 2,864 herds had filed applications and were awaiting a test under the individual accredited herd plan.

SOUTH DAKOTA MILKING CONTEST

G. N. Davis Henry representing the cow testing association of Clark County won the milking contest held in connection with the third annual dairy field day and Holstein picnic at the South Dakota State College, June 18. It is estimated that there was 1,500 in attendance.

William F. Retz, representing the Codington County Cow Testing association, placed second, while Joseph L. Ockenga of Colman, representing the Moody association, won third in the contest.

Addresses were given by state and national dairy experts, there was a guessing contest on the milk producing ability of six dairy cows taken from the State College herd and also a conference of state cow testers.

STILL ROOM FOR MORE

Despite the fact that for many years Oswego County, New York, was the home of the highest record Holsteins known a recent survey taken by the Farm Bureau shows that 40% of the sires now in service in that county are not purebreds. At a recent meeting of the County Holstein-Friesian Club at Mexico it was decided to get out a questionnaire and send to the owners of grade and scrub bulls in an endeavor to assist them to head their herds with purebreds. It is also intended to get together a county herd and exhibit it at the Sandy Creek Fair and if the collection is worthy to take it on to the state fair at Syracuse. The club sent a recommendation to the Sandy Creek Fair Board asking them to inaugurate a milk and butterfat test during fair week.

DAIRY EXPORTS AND IMPORTS

Exports of butter during May 1925 totaled 412,631 lb. and cheese 387,651 lb. This is a falling off against the corresponding month of last year, during which 579,658 lb. butter and 361,259 lb. cheese were sent out of the country. The total exports for the first five months of the year, however, show a gain over the corresponding period of last year of approximately 140,000 lb. butter. The cheese trade took a tremendous jump, the figures for the first five months of last year being 1,701,724 while the total exports of this year were 6,681,216 lb.

During the month 285,926 lb. powdered milk were exported while during May a year ago 371,376 lb. were sent out of the country. The trade for the next five months of the year, however, shows a gain of approximately 60,000 lb.

An interesting feature of the manufactured milk trade was the decrease in the amount of condensed milk and the increase in the amount of evaporated milk sent out of the country. May exports of condensed were 3,518,932 lb. about one half the amount of last year while for evaporated, the amount was 10,731,977 lb. In May 1924, less than seven million pounds were sent out of the country. The total amount of condensed milk exported during the first five months of the current year is a little more than half that exported in the corresponding period of 1924, while for evaporated the amount is about two-thirds of last year's figures.

May imports of butter were 330,982 lb. against 548,748 lb. last year. The cheese imports showed a gain of approximately 350,000 lb. the total amount coming into this country during May, 1925, being 4,332,884 lb. The May imports of condensed, evaporated and powdered milk totaled 589,253 lb. about two and one-half times the amount brought into the country during the corresponding month of 1924.

A DANGER TO AGRICULTURE

Within ten years the United States will be on a food importing basis. This is especially true of wheat which is now being produced in volume not much in excess of domestic requirements. If the tariff on farm products is maintained agriculture should be prosperous. But here lies the danger.

Importation of food will certainly increase prices. With any sort of intelligence used by farmers in taking advantage of their situation producers' prices of staples will be doubled. That sounds good but it will at the same time increase the cost of food to the consumers. When that happens organized labor and industry will do exactly what industrial England did nearly a hundred years ago. They will demand the repeal of all laws that increase the price of food. Unless confronted by a united organized agriculture industrialism will destroy every lawful safeguard that now protects agriculture from disaster and will enact a modern version of the English Corn Laws. That will be the end of agriculture in America as an independent property owning respected and self respecting calling. As in England after the Corn Laws, all farmers will either be gentlemen maintaining country estates for pleasure or peasant renters or hired hands doled out a bare living wage in return for their labor.

Industrialism is ready for the coming struggle. Agriculture is not ready and will not be unless farmers open their eyes to the real significance of the social and industrial changes now in progress. Never a very great power in politics and government agriculture will have less influence in the future unless organization supplies the strength lost through diminishing numbers. Within ten years the battle will be on and when the forces are joined it will be found that the unorganized farmers will face organized odds of more than five to one.

It will be an uneven conflict but agriculture can secure justice because she makes food and can secure that justice only through class conscious, effective organization.—*Kansas Union Farmer*.

MONTROSE

PENNSYLVANIA

DAIRY PRODUCTION MAKES NEW RECORDS

According to figures released by the Department of Agriculture a new record in volume of dairy production was established in this country last year. The production of creamery butter is placed at 1,356,000,000 lb., compared with 1,252,000,000 lb. in 1923. It is interesting in this connection to learn that during 1923, there were 225,577,000 lb. oleomargarine manufactured while the 1924 production was 229,031,000 lb.

Cheese production is given as 413,940,000 pounds compared with 394,697,000 pounds the preceding year; condensed and evaporated milk as 1,700,548,000 pounds compared with 1,774,881,000 pounds, and ice cream as 285,550,000 gallons compared with 294,900,000 gallons in 1923.

The increase is attributed to good weather and pasture conditions combined with an increase in the estimated number of milk cows which is placed at 25,319,000 head compared with 24,786,000 head in 1923.

The season of production was very favorable during the spring and summer seasons. Pastures were better than usual, and, while prices were not the best, production continued heavy until the feeding season began when it dropped to practically the level of the preceding year.

Per capita consumption of creamery butter last year is placed at 17 1/4 pounds compared with 17 pounds in 1923. Notwithstanding the large increase in production, there was a net import of 11,148,194 pounds. The heavy output together with decreased consumption during the storage season caused a large quantity of butter to be placed in storage. These holdings on September 1 were 156,440,000 pounds, but all was removed by May 1, 1925.

Of the increase of 19,243,000 pounds of cheese over the 1923 production, 16,587,000 pounds is credited to production of the whole milk American Cheddar type. The output of Swiss cheese decreased 2,711,000 pounds. Per capita consumption of cheese was 4.2 pounds in 1924 compared with 3.9 pounds in 1923.

Production of condensed and evaporated milk during the year was affected by heavy stocks at the beginning of the year and in August and September. The industry, however, was able to control output and hold it low enough to prevent excessive holdings at the beginning of the year 1925.

Total exports of condensed and evaporated milk for the year are placed at 206,013,758 pounds, and imports 6,451,713 pounds. Per capita consumption of this commodity is given at 14 pounds against 13 1/4 pounds in 1923.

Production of skim milk powder is placed at 69,219,000 pounds last year compared with 62,251,000 pounds in 1923; condensed buttermilk 66,837,000 pounds compared with 54,833,000 pounds; and buttermilk powder at 18,058,000 pounds compared with 13,032,000.

Estimated consumption of milk and cream in households was 52,772,000,000 pounds compared with 50,440,000,000 pounds in 1923. Per capita consumption of milk and cream is given at 54 1/4 gallons compared with 53 gallons in 1923.

The tabulated figures for 1924 and also for the previous year are given below in thousand pounds, the extra ciphers being omitted.

	1924 Thousand pounds	1923 Thousand pounds
Creamery butter	1,356,080	1,252,214
Whey butter	1,665	1,904
American cheese, whole milk	324,695	308,108
All cheese	413,940	394,697
Condensed and evaporated milk	1,700,548	1,774,881
Condensed buttermilk	66,837	54,833
Buttermilk powder	18,058	13,032
Powdered whole milk	7,887	6,560
Powdered skim milk	69,219	62,251
Dried casein, skim milk	20,683	14,500
Ice cream, as reported	181,564 gals.	183,412
(Ice cream, total production in U. S., estimated	285,550,000 gals.)	=294,900

"Mah friends," said the colored preacher, "de Scriptural rule fo' givin' was one-tenth of what yo' had. If yo' all feel yo' cain't afford so much, jes give a sixth, or a fo' th accordin' to yo' meanness."

DAIRYMEN'S LEAGUE NEWS

Approximately 2,000 men and women were present at the annual delegate convention of the Dairymen's League Cooperative Association, Inc., which was held June 18 at the Hotel Pennsylvania in New York City. Addresses were given by the president as well as by Francis H. Sisson, a Wall Street banker; Mrs. Ruby Green Smith; Treasurer Chester Young and the vice president, John D. Miller.

In the forenoon Miss Elizabeth Thomson of Holland Patent, New York, read her essay on "How the Dairymen's League Has Benefited the Dairy Farmer," which won first prize in the League essay contest. Miss Thomson, who is recovering from an attack of infantile paralysis had to be assisted to the stage. She is a daughter of Walter Thomson and a granddaughter of F. H. Thomson of Holland Patent, who has been prominent in the League ever since it was organized.

The new board met the following day and reelected all officers. They are John D. Miller, Susquehanna, Pa., First Vice President; John D. Smith, Walton, N. Y., Second Vice President; J. A. Coulter, Belleville, N. Y., Secretary; Chester Young of Napanoch, N. Y., Treasurer. G. W. Slocum of Milton, Pa., was reelected president for his sixth term.

The new Executive Committee consists of the chairman, secretary, Paul Smith of Newark Valley, N. Y., Fred H. Sexauer of Auburn, N. Y., and the treasurer, who takes the place of W. U. Rixford.

The League's gross milk price for May is announced as being \$1.955. The net pool price for 3% milk at the base line is \$1.89, as \$0.065 is deducted for expenses. Ten cents per hundred pounds was also deducted for certificates of indebtedness. The price reported is 49c higher than the price for the same month last year and is the highest May pool price in the history of the organization. No action was taken on July prices.

The total sales for the month of April are reported as \$5,661,126.53. Of this \$5,396,569.83 is for fluid milk and \$168,214.82 for cream. Ice cream sales for the month amounted to \$38,884.10.

WILL EXHIBIT STATE OWNED HERD

A show herd from the Springfield State Hospital of Sykesville, Maryland will be seen at a few fairs this fall and under the skillful care of Superintendent Farr can be confidently expected to win a liberal share of the prizes. The hospital herd was founded by the purchase of a number of good individuals from small herds in Illinois and Wisconsin. In their Maryland home they are given the best of care and plenty of feed with the result that they have made new herd records for that state. The surplus animals have been sold at very reasonable prices to Maryland farmers and there is every reason to believe that this herd has helped to better the dairy industry in its new home and to increase the producing capacity of many other Maryland herds. One of the fairs on the itinerary is the Maryland state fair which will be staged at Timonium, September 7-12.

SAVE YOUR MONEY

A warning to farmers against paying big prices for bovine abortion cures is given by the Pennsylvania Bureau of Animal Industry which says that so far no sure cure is known for bovine infectious abortion. The report says that a Franklin County farmer recently reported the investment of \$50 in a remedy which proved to be absolutely worthless. If cattle owners would communicate with the Animal Industry Departments of their state when they had troubles of this kind or similar kinds, they would undoubtedly save much time and money, and at the same time be given good advice and often materially helped.

DAIRY CATTLE AT THE ROYAL

Dairy cattle will be added to the classes at the American Royal Livestock Show this year. The show managers will furnish facilities and accommodations and will add 20% to the premium money which has been raised by the Chamber of Commerce from Kansas City business firms, breed associations and local breeders of dairy cattle. There will be classes for five dairy cattle breeds, Ayrshires, Jerseys, Guernseys, Holsteins and Milking Shorthorns.

BADGER NORMAL SCHOOL CONDUCTS COW TESTING ASSOCIATION

By J. H. LEWIS

The first cow testing association started by the Platteville, Wis., State Normal School, was organized in the spring of the year 1919. Twenty-six members were signed up.

The plan was as follows: Students of Agriculture at the State Normal were to do the testing in groups. Each member of the testing group was taken to the first farm, where the milk was weighed and tested, and the month's record figured out. He was then taken to the next farm by the farmer for whom he had just completed the test. Each tester remained out a week at a time, and was then replaced by another student who went on as before.

During the summer vacation one of the students, who had shown a keen interest in the work, was hired to do the testing and remained in the field during the months of June, July and August.

The Normal School furnished the equipment, acid, bottles, scales, and replaced breakages. The farmers in the association were charged at the rate of sixty cents per cow for the year. Besides this unit cost per cow, they were required to board and house the testers once each month and convey them to the next farm.

The association started with 377 cows. This number was decreased during the latter part of the year, however, because when some of them fell off perceptibly in flow of milk they were taken off test by their owners. This, of course, failed to do what a cow-testing association should do, namely, to give the owner of each animal a record of a year's performance. However, it did result in a number of the boarding cows being weeded out and sold for beef.

The organizers of the plan at the Normal School found obstacles in the operation of the association. Because the work had to be done daily during the year, vacation periods, athletic games, school functions and heavy scholastic programs made it difficult to keep the regular testing schedule in effect. In other words, the association was found a little too large and unwieldy to be operated successfully.

However, it served a lesson to show the real value of a testing association in increasing the productivity of a dairy herd by weeding out unprofitable cows. Likewise, favorite animals in many herds were found not to be best producers, which taught herd owners that guessing at the best herd producer was not as wise a method of determining values as actually finding out with a milk scale and Babcock tester.

This first association continued as first organized until the month of January, 1923, when the authorities of the Department of Agriculture at the Platteville State Normal thought it would be wise to organize a small cow-testing association. The new association was limited to six herds, which would require one week's testing each month. This six member association is now functioning splendidly, and it is admitted by the students engaged in the work that not only are they receiving valuable benefits from the practice, but that the work is interesting and a rather desirable diversion from the close confinement of study and class room.

Professor Earle J. Stoneman, director of the dairy department at the Platteville High School, says there is a place for cow testing association work in every high school that has an agricultural course.

"A small cow testing association furnishes an excellent piece of project work and has a real educational value because it is directly tied up to the main enterprise of any community, namely, farming.

"Books have their place in an educational program, and it is true we could not get along without them. We can, however, drive home the book facts far better by giving boys and girls some actual practice in arithmetic, bookkeeping, and agriculture, than we can by making our courses altogether theoretical and leaving out actual practice.

"The agricultural course in the high school furnishes the best possible conditions for the success of such a project. The boys in such a school come mainly from the outlying farms and in most instances they can be put to work testing their own herd, which will considerably add to the interest they will have in the project, because they will be testing dad's cows.

"We hear much about the fact that our educational institutions are educating boys and girls away from farm life; we have an opportunity in this work to arouse in boys and girls a proper conception and appreciation of the real possibilities that exist in a practice of agriculture for the thinking, visionary man and woman. If we can succeed in doing this, we should be able to refute, at least in part, the accusation previously referred to."

PENNSYLVANIA FARM PRODUCTS SHOW

Pennsylvania's ninth annual Farm Products Show will be held at Harrisburg, next January 19-23 inclusive. The agricultural organizations of the State are largely responsible for getting out exhibits and so much interest was shown that it appears doubtful if available facilities will permit all the activities, particularly those the livestock organizations, have requested. At a recent meeting of the Show Executive Committee it was decided to hold a Boys' and Girls' Baby Beef display of approximately fifty-five head now being fed by members of junior clubs; these calves are to be sold at the close of the show. There will be a statewide horse pulling contest in which the participants are teams winning local and contests which will be held this fall at the fairs.

There will be a mutton improvement display to show the result of crossing purebred rams on grade ewes. The dairymen plan to put on an educational exhibit of cattle of at least the four great breeds. Last January, heavy falls of snow alone prevented Holsteins from being on exhibition. It is expected to make up for this next January.

As in former years, eggs, potatoes, small grains, corn, dairy products, tobacco, honey and fruit will be on exhibition. Programs for the educational meetings have as yet not been fully outlined but they can be depended upon to be fully as good as in past years.

FIGURES OF INTEREST

A record of 642 Holsteins was kept on the Newlands Irrigation project in Nevada. They were fed on alfalfa hay only and the average quantity of hay each cow ate per month was equal to the average weight of the cows or 1,024 lb. Their average lactation period was 9.7 months and the production per cow, 7,060 lb. milk, 263.4 lb. butterfat. The value of the product was \$150 per cow and the feed cost, \$61.45 per cow or 17.4 cents per pound of butterfat.

No less than 9.7% of the cows produced 400 lb. or more butterfat at a feed cost of 8 cents per pound; 11.2% produced between 350 and 400 lb. at a feed cost of 11 cents; 14.4% produced between 300 and 350 lb. fat at a feed cost of 13.5 cents per pound; 28.3% produced 250 to 300 lb. at a feed cost of 16 cents; 20.4% produced 200 to 250 lb. at a feed cost of 20 cents; and 18.8% produced less than 200 lb., their feed cost being 25 cents per pound butterfat.

REGISTERING FARM NAMES

Farm names can be retained for the exclusive use of the owners in Pennsylvania by registering the same.

The procedure is as follows: The farm owner writes to the Secretary of the Commonwealth at Harrisburg for an application blank using in registering trade marks and trade names. In this application the farmer testifies as to his ownership, the location of the place and his own residence, the products sold from the farm, and the trade mark or farm name desired and as to how the name will be used. Two copies of a letterhead showing the proposed design or some other medium carrying the farm name must be sent with the application. The registration fee is \$5.

A western speaker advises farmers to sell their automobiles and tractors and go back to raising their own teams and growing the crops to feed them. His talk won't accomplish much. He might just as well tell bankers and merchants to quit playing golf and stick to business as well as stop running autos. We venture to say that farmer owned cars are run more for business and less for pleasure than are cars owned by dwellers in the cities. It is said, on good authority too, that rural dwellers buy less cars "on time" than are sold in the towns.

SALES MANAGER—PEDIGREE DIRECTOR

Are you planning to dispose of your purebred Holsteins?

My lifetime experience may not only save you money but also enable you to obtain more for your stock. Charges Reasonable.

Nov. 13—Lake Mills, Wis., Lake Mills Breeders' Sale.
Nov. 24—Madison, Wis., Wisconsin Holstein Breeders' Sale.

DUNN COUNTY SALE

June 18 the Dunn County Holstein Breeders association sale was held at Menomonie, Wisconsin, despite rainy and disagreeable weather. P. O. Peterson paid the top price, \$200 each for two very handsome heifers consigned by F. W. Steves & Son. A heifer consigned by John Schutte, Jr. was bid off for \$175 by Harry Hansman, while Roy F. Schlough bid \$155 for a heifer from the Ole Clementson herd. The sale was under the management of D. P. Hughes, the association secretary, who said that while the average price received was a little below that of previous years the quality of the animals was on a higher level.

GOOD COUNTY SALE

On June 10, on the Ed. Cross Farm, near Gate, Wash., the Thurston County Holstein-Friesian Club held its second annual sale. Twenty head were listed, only two of which were bulls. The animals were in good working condition and with the exception of a few head that went to Grays Harbor, were purchased by local dairymen.

The average for the eighteen females was \$134.72, the total realized was 2,620, an average of \$131 for all the animals sold.

Mike Gillen of Little Rock bought six head including the top price female, Clover Leaf Sadie Vale De Kol, a four-year-old daughter of Chimacum King Korndyke Sadie Vale. She was a good straight individual with a well shaped udder and had a cow testing association record of 325 lb. butterfat, 9,989 lb. milk made in 305 days. She brought \$250.

The following were the buyers: H. E. Hulet, Aberdeen; W. H. Butterworth, Bucoda; W. A. Manke, Rainier; O. Cross, Gate; W. A. Walker, Mendota; H. A. Joy, Oakville; F. C. Baker, Chris Ibbotson, and J. L. Utterback, Olympia; Henry Mako, Elma; and W. R. Burfee, Malone.

WISCONSIN DEVELOPMENT SALES

The Wisconsin Board of Control has supervision over the state penal, charitable, and educational institutions of that state. Attached to these institutions are eighteen farms and on these are now eight hundred milking cows.

The herds had increased until some of the barns were crowded to capacity and it was found necessary to sell. As a development movement the Board decided to take the surplus into the northern part of the state and there offer the animals to settlers and dairymen at their own figures. In accordance, sales were held recently at Ladysmith and Rhinelander.

The Board seems to endeavor to emphasize the development idea. After the animals were first selected, the milk records of their dams were checked up and as a result eighteen of the first consignment were withdrawn from the sale and killed for use at the tables of the state farms. Other animals from better producing dams were substituted. A sixty-day retest privilege was offered the buyers with

HAMMOND'S "CATTLE COMFORT"**"CATTLE COMFORT"**

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to many dogs it affords relief and effects a cure. **Directions—CATTLE COMFORT** may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers
HAMMOND'S PAINT AND SLUG SHOT WORKS, Beacon, New York

the additional guarantee that every animal sold, male or female, would prove a breeder. Despite these facts prices ruled low.

At Rhinelander, the animals came from the Janesville School for the Blind, the Union Grove Colony and Training School and the State Prison at Waupun. From Waupun there were five heifers ranging in age from six months to a year old; although both their sire and their dams were purebred, they were sold as grades owing to some papers being lost. No heifer in the shipment was from a dam producing less than 8,000 lb. milk in a year on twice a day milking. Records were announced when the animals were led into the ring.

The average price realized was around \$76. F. S. Robbins of Rhinelander purchased twelve head for \$1,104. O. A. McLaughlin paid the top price at Rhinelander, \$180 for a purebred cow ready to freshen by a son of Matador Segis Walker. The two herd bulls, four and six years old brought \$100 and \$75 respectively. The animals were purchased by dairy farmers living near-by. The sale was managed by Glenn Householder, formerly agricultural agent of Rusk County, who has been supervisor of the state farms since 1919.

AFTER FIVE YEARS

June 9 and 10, the herds of the Chequamegon Holstein Association were dispersed at Ashland, Wis. Approximately 165 head were sold for an average of \$100. A few animals went to Illinois and Michigan but most of them stayed right around Ashland. The sale completed the five year association of business men and farmers who endeavored to introduce good dairy cattle into the cut over territory around Ashland. Financially the enterprise was not a success as the cattle were bought when prices were high and sold when they were much lower. The effect on the district itself is far from being finished as a majority of the animals purchased were of good producing stock, far better than pioneer cattle usually are.

The top price at this sale was \$510, realized for Colantha Changeling Piebe Frisby, a member of a producing family with a nice record of production. She was purchased by John Szumal of Ashland. The senior herdshire, Walcowis Ollie Ormsby Beets, who has been in service in the association for five years went for \$190. He was purchased by representatives of the state board of control, Madison, Wis. and will be used in one of the state herds. His offspring in the sale were good individuals and showed promise of making good producers.

The Guernsey Association sale was held a day or two previous. The story was substantially the same, the fall in prices of dairy cattle losing money for the men who financed the project but the real purpose of the association was to introduce better cattle into the community and at least this part of the project was accomplished.

UNDER NEW MANAGEMENT

On March 1st J. D. McDonald and Richard Johnson assumed charge of the Plaut Dairy Farm situated a short distance from the city of Danville, Illinois. The Plauts retain an interest in the business but the new men will make a number of changes.

The Plaut brothers are clothing merchants and operate the leading tailoring establishments of Danville and Elgin, Illinois. Their purebred Holstein herd has been established about ten years and has made a good showing in cow testing association work. Mr. McDonald came from West Salem, Wisconsin and has been in the Holstein business for a number of years. He has exhibited cattle at many fairs and has a big collection of prize ribbons won by his animals.

IN MONTANA

On March 30, W. S. Hedge, of Havre, Montana, sold to Elmer Hultin, of Alma, Montana, a yearling bull sired by Master Beets De Kol Fobes, half brother to Grace Konigen, the most noted cow of the state. The dam of the young bull was Queen De Kol Konigen Aggie. Both sire and dam were raised in the Montana State College herd.

Mr. Hultin is building a purebred Holstein herd while the Hedge herd is considered the finest Holstein aggregation in Hill County.

LARSEN TO SHOW BARKER HERD

V. E. Larsen of Dike, Iowa recently shipped ten head of high class Holstein-Friesians for R. M. Barker of Carrollton, Ky. He purchased them in his own state and eastern Illinois and will show them for Mr. Barker at a number of fairs next fall when the show ring season opens. The bull a four-year-old will weigh around 2,500 lb. and is a son of King Korndyke Pontiac Lass. One of the females is Forum Maxie Diamond. Shown as a junior calf she won first place at five state fairs, shown as a junior yearling at ten state fairs first was won at seven and junior championship at five.

Mr. Barker, who is prominent in the tobacco business, is the owner of Rich-lawn farm and breeds Duroc Jersey hogs as well as Holsteins.

JOPLIN BULL CLUB

The Joplin Missouri Chamber of Commerce is running a purebred bull club and during the past 18 months has exchanged a number of purebreds for grade and scrub bulls. A fund of \$2,000 has been provided for this purpose and the work will continue until all of the funds has been used.

"How about some nice horse-radish?" said the grocer to the bride.

"Oh, no, indeed! We keep a car."

ON THE HILLS

of Tioga County have been raised some of the best Holsteins that ever came from New York State—big healthy cows that yield large quantities of rich testing milk.

The following breeders of healthy Holsteins whose establishments are located near Owego and within easy driving distance of Elmira, Ithaca, Binghamton or Waverly can supply you with good cattle and invite inspection of their herds.

Cow Testing Association Reports

CORNUE'S COWS ARE PROFITABLE

Maywood Irene Pontiac Korndyke owned by A. D. Cornue, of Hebron, Illinois, from 1917 to 1925 made a net profit above feed cost of \$1,169. During this time she produced 71,883 lb. milk, her years' totals ranging from 5,845 to 11,268 lb. milk, her total butterfat was 2,444 lb.

Sadie Pontiac Klaver in the ten years from 1915 to 1925 produced 95,580 lb. milk and 3,147 lb. butterfat. Her net profit varied from \$100 to \$310 in a year and the total was \$1,541.

Maywood Elizabeth between 1918 and 1925 made a net profit of \$1,144, her annual returns varying from \$103 to \$250. During this time she produced 76,829 lb. milk and 2,665 lb. butterfat.

Maywood Canary Pride earned her owner \$1,175 above feed cost between 1917 and 1925. In this time she produced 79,222 lb. milk, 2,775 lb. fat. During two of these years records on this cow were kept for seven months only.

The Maywood herd of Holsteins has been entered in the local cow testing association continuously for ten years and it has been mainly from the knowledge obtained from the records made that Mr. Cornue has been able to build up his herd which is known to be one of the best producing herds in the state of Illinois.

SOUTH DAKOTA PRODUCERS

A. J. Brandriet, of Watertown, S. D., has fourteen purebred Holsteins that were second in the local cow testing association in the year recently closed by averaging 8,950 lb. milk, 331.54 lb. butterfat. The year previous by averaging 8,171.6 lb. milk, 307.22 lb. butterfat, they stood at

the top. They were beaten this year by a herd of eight grade Holsteins owned by David Little with an average of 9,234.5 lb. milk, 345.3 lb. butterfat.

Two members of the Brandriet herd were first and second for individual production. Dale 2d is credited with 12,508 lb. milk, 503.02 lb. butterfat while Rhoda 1st, gave 13,673.2 lb. milk, 480.06 lb. fat. This herd had six cows that produced between 200 and 300 lb. fat; six others produced between 300 and 400 lb. fat and one that produced more than 500 lb. fat.

Rhoda 1st last year gave 12,107.5 lb. milk, 422.79 lb. fat and stood third in the association.

IOWA TESTING

A purebred Holstein owned by J. D. Herrick, of Fredericksburg, Iowa led the Chickasaw County testing Association No. 1, for the month of May by producing 1,210 lb. of 4.3% milk or 52.03 lb. butterfat. She was only a two-year-old and freshened on the first day of 1925. The Herrick herd of twenty purebred Holsteins led the association by averaging 1,010 lb. milk, 37.1 lb. fat. A grade Holstein herd was second, a purebred Holstein herd third, and a grade Holstein herd fourth and fifth.

There were 320 cows on test and their average was 720 lb. milk, 27.9 lb. fat, six cows each produced over 50 lb. fat and 31 over 40 lb.

In association No. 2 twelve purebred Holsteins owned by Ed Gerlach, of New Hampton, led by averaging 1,242.3 lb. milk, 42.7 lb. fat, a Red Poll was the high individual with Gerlach cows second, third and fifth.

During May 293 cows were tested in the Marshall-Grundy, Iowa, testing as-

sociation and their average was 894 lb. milk, 36.9 lb. butterfat, the second highest in the state.

The leading herd consisted of eight purebred and grade Holsteins owned by A. Rowher, their average was 1,505 lb. milk, 55 lb. butterfat, a grade Holstein herd of twelve cows was second with an average of 52.3 lb. fat.

TESTING ASSOCIATION PICNIC

The second annual picnic and cattle show of the Colesburg-Two County Testing Association was held June 9 in the Will Adams Grove at Colesburg, Ia. There was a good crowd, many coming from a distance.

Professor J. N. Spencer, of Ames, judged the exhibits which consisted of Holsteins, Guernseys and Jerseys. President John A. Smith gave an address of welcome. Prof. Spencer spoke on Cow Testing Association work and Clyde Bechtelheimer, of the Iowa Dairy Council, chose as his subject "Cost of Production."

The prize of a Brownie Camera for the boy or girl displaying the best showmanship, given by supervisor George H. Crawford was awarded to Roy Smith. Choruses were sung by the C. T. A. male chorus which consists of eight everyday farmers and dairymen and another double quartet called the Clayton County Folk. Both groups are under personal supervision of George H. Crawford, supervisor of the association for the past two years.

In the first five months of the current year 23 carloads of grade and purebred Holstein cattle were shipped out of Barron County Wisconsin.

WISCONSIN TESTING

A purebred Holstein owned by Arthur Denfeld headed the Wausau Association No. 2 for the month of May with a production of 2,640 lb. milk, 111.2 lb. butterfat. The Denfeld herd averaged 36.8 lb. fat but a grade Holstein herd averaged 47.6 lb. and led the association.

The herd of grade and purebred Holsteins owned by Joe C. Hoesly led the Clinton-Rock Association in which there were 549 cows tested during the month of May. The Hoesly herd consisting of 25 cows averaged 40.6 lb. fat, 1190 lb. milk. It is interesting to note that the seven highest herds contained both purebred and grade Holsteins and are real dairy herds ranging from 18 to 36 cows in number.

In the herd of Duoss Brothers a purebred Holstein produced 2,439 lb. milk in 29 days or an average of 84.1 lb. daily on twice a day milking. The highest individual producer was a grade Holstein in the Hoesly herd with 82.3 lb. fat to her credit, her test averaging 4.2 per cent.

Fourteen purebred Holsteins in the herd of Herman Butth led the Oconomowoc-Hartland Association for May by averaging 1,238 lb. milk, 49 lb. butterfat despite the fact that the herd contained a number of two-year-olds. The H. E. Dickinson herd of 19 registered Holsteins stood second with an average of 43.4 lb. fat and one member of this herd was a second individual with 80.1 lb. fat, the leader being a grade Holstein credited with 2,527 lb. milk, and 91 lb. fat.

The herd of Mrs. Christ Bast consisting of fifteen purebred and grade Holsteins led the Rockfield Association during May by averaging 1,341 lb. milk, 47.5 lb. fat. This herd contained the five highest producers the leader, a grade, being credited with 1,547 lb. milk, 75.8 lb. fat. Twelve members of this herd each produced over 40 lb. fat. There

were 340 cows in 26 herds tested during the month.

June 1, closed the year of the Neillsville C. T. A. No. 1. Twenty herds containing 462 cows were enrolled during the full year.

The 291 cows that finished the year averaged 7,374.6 lb. milk, 276.4 lb. butterfat with an average test of 3.74 per cent.

Peersess, a purebred owned by William Naedler of Neillsville was the high cow for fat and second high for milk, her figures being 523.9 lb. fat, 14,809.8 lb. milk.

A grade Holstein owned by Fred Appleyard stood first for milk with 15,288 lb. and second for fat with 518.8 lb. The Appleyard herd averaged 383.6 lb. fat, 11,084.7 lb. milk. The high cow milked twice a day during the entire year was a purebred Holstein owned by Imig Brothers, her production being 13,669.6 lb. milk, 476.8 lb. fat. The Imig herd averaged 371.9 lb. fat, 10,751.7 lb. milk and the Naedler herd averaged 357.5 lb. fat, 9,474.7 lb. milk.

Roy Henderson of Mukwonago, Wis., owned the purebred Holstein that led the Genesee-Eagle Association for the month of May by producing 1,987 lb. milk, 70.4 lb. butterfat. On twice a day milking a registered Holstein owned by Southcott & Sons produced 1,872 lb. milk and 65.5 lb. fat, standing third on the list. There were 504 cows on test and they averaged 31.4 lb. butterfat.

For the third month in succession, the registered and grade Holstein herd of Alfred Madson of Cato, led the Madsen-Newton Association by averaging in May 48.7 lb. butterfat, 1,517 lb. milk. Seventeen registered and grade Holsteins owned by George Marlborough averaged 1,164 lb. milk, 43.1 lb. butterfat, standing second while twelve Holsteins owned by James Benishek stood third with an average of 1,200 lb. milk, 41.8 lb. fat.

Jenny, a grade Holstein of the C. M. Madson herd for the third month was high cow in the association by producing 1,455 lb. milk, 66.9 lb. butterfat.

Ten registered Holsteins in the L. A. Markham herd led the Janesville Association for May by producing 12,457 lb. milk, 41.1 lb. fat. The School for the Blind herd consisting of 19 registered Holsteins averaged 39.8 lb. fat, their milk total being 22,192 lb. A member of this herd was the highest producer with 82.6 lb. fat.

MARTIN HAD BEST COW

A registered Holstein cow owned by O. I. Martin of Cambridge Springs, Pa., was the high producer in the Eastern Cambridge C. T. A., for the year ending April 1. Tester P. A. Detmer, reports that 123 cows in twelve herds completed the entire year. The leader had over 450 lb. fat to her credit. Mr. Martin had five cows that each produced over 300 lb. A grade Holstein owned by J. H. Caldwell was the high milk producer with 12,992 lb. to her credit. Her butterfat total was 421 lb.

The average production per cow in the association was 6,385 lb. milk, 243.6 lb. butterfat with an average test of 3.8 per cent.

ANTON DOES WELL

A purebred Holstein owned by Hans Anton of Thief River Falls, Minnesota, headed the list in the Pennington County Co-operative Testing Association for May by producing 1,900 lb. milk, and 76 lb. butterfat. The Anton herd of 17 Holsteins averaged 34.3 lb. fat but was exceeded by a twelve cow Holstein dairy owned by Waldie Christiansen with 34.47 lb.

"Susie is getting past the age of making faces at boys."

"Yes, she's beginning to make eyes at them now."

Every purebred in this herd has passed
Three Clean Tuberculin Tests.

ILLINOIS COW TESTING

Purebred Holsteins owned by the Rock River Farm stand first and second in Illinois state wide cow testing association work for the month of June. The leader is credited with 3,125 lb. milk, 96.9 lb. butterfat and her stable mate with 3,012 lb. milk, 93.4 lb. fat. Two other cows owned by this establishment appear in the list of the ten highest producers, one being in seventh place with 87.2 lb. fat from 2,030 lb. milk and the other with 86.6 lb. fat and 2,625 lb. milk. No information is given as to the number of times they were milked daily. A purebred owned by C. E. Warford and Son of Virgil is third with 93 lb. fat and 2,469 lb. milk while purebreds owned by the W. T. Rawleigh Co. of Freeport stand fifth and sixth with 91.1 lb. fat and 90.3 lb. fat respectively. A purebred owned at the Green Bonnett Farm and enrolled in the McLean County association is sixth with 88.1 lb. fat from 2,319 lb. milk and another purebred owned by M. M. Baker of Peoria is ninth with 84.6 lb. fat from 2,350 lb. milk. She was milked only twice a day as was the grade Holstein in tenth place with 2,210 lb. milk and 84 lb. fat. The black and white breed thus makes a great showing as the first nine were all purebred Holsteins.

The Rawleigh herd of 23 purebreds stands in second place for the entire state with an average of 59 lb. fat, 1,792 lb. milk but is beaten for first position by eight purebred Brown Swiss cows with an average of 62.3 lb. fat. Seven purebreds owned by William Van Beuning average 53.5 lb. fat from 1,746 lb. milk. Purebred Holsteins constitute all or a part of five other herds reported in the list of the ten highest for the state.

Twenty-two associations report production, in thirteen instances the leader was a purebred Holstein cow.

A grade Holstein leads for the first five months in the state 500 Pound Butterfat Cow Club with a production of 334.6 lb. fat, 8,980 lb. milk. The black and white breed makes a splendid showing as purebreds stand in fourth, fifth and sixth places and appear prominently in the list so far reported which takes in all the cows that have made 240 lb. or more of fat.

MARYLAND TESTING

A purebred Holstein owned by L. E. Lambert of Mountain View Farm, Germantown, led the list of cows tested in the Maryland Associations for the month of May by producing 2,467 lb. milk, 98.7 lb. butterfat. Daisy, a purebred in the herd of H. H. Fraley of Derwood, was second with 90.6 lb. fat from 1,776 lb. milk. A grade Guernsey was third. Beauty, owned by Charles Wertheimer of Frederick was fourth with 88.2 lb. butterfat and Colantha of the same herd was fifth with 87.7 lb. fat. Clem, owned by Millard Rice, while enrolled in the Upper Montgomery County Association produced 80 lb. fat, 2,161 lb. milk.

The Wertheimer herd of fifteen purebreds averaged 1,036 lb. milk, 39.2 lb. fat standing second in the Frederick

County C. T. A. and is the highest producing Holstein herd mentioned in the report. A herd of twenty-five purebreds owned by C. R. Rathell of Wye Mills, averaged 1,145 lb. milk, 38.4 lb. fat, the second highest in Tolbert County. The Fraley herd consisting of eighteen purebreds, averaged 964.2 lb. milk, 37.4 lb. fat, standing second in the Lower Montgomery Association. In the Upper Montgomery County Association, the leading five herds consisted wholly or in part of Holsteins but the number of animals in each herd is not given.

ERIE PLANS DAIRY BULL TRAIN

The Erie Railroad plans to run a better dairy bull train next September over their lines in Chautauqua, Cattaraugus, Allegany, Steuben, Wyoming, Chemung and Tioga Counties. The train is to have about 100 bulls selected from high class dairy herds. The train will remain all day in town and the bulls will be offered for sale at farmers' prices.

Lectures will be given and moving pictures shown by specialists from Cornell. The State College of Agriculture and the County Agricultural Agents will cooperate to make this project a success and to stimulate better dairies. Similar trains have been held in other parts of the country with marked success.

MONTANA TESTING

A grade Holstein owned by Walter Peck of Great Falls, Montana, led the Cascade Testing Association for May with a production of 84.5 lb. butterfat. Jude Hubber of Belt had a purebred that was a close second with 84.2 lb. and she led for milk production with 3,240 lb. The Hubber herd of nineteen purebred and grade Holsteins stood second for milk and fifth for fat with an average of 1,096.8 lb. and 32.5 lb. respectively.

There are twenty members of the association and 679 cows were tested during the month.

WELL FINANCED

Through the aid of the Agricultural Credit Corporation a carload of dairy cattle were shipped from Luck, Wisconsin to Onoka, South Dakota, June 16. The stock consisted of 24 animals, four bulls and twenty cows, the bulls and one cow being purebred Holsteins and the balance high grades. J. J. Gallagher who will have some of the stock accompanied the car and Mr. Gallagher together with Andrew Jepsen of Luck and A. A. Kruschke, representing the corporation, made the selections.

The Holstein herd owned by Harry Broughton of Albany, Wis., averaged highest during May in the Orfordville-Footville Testing Association, their figures being 1,455 lb. milk, 46.1 lb. fat. This herd furnished the highest producing cow, a purebred with 1,696 lb. milk, 67.8 lb. fat.

Join the Amateur Picture Contest. If you have not mailed us photographs of some of your good animals, do so at once.

PADGETT SECURES WALDRON HERDSIRE

Attracted to Waldron Farm on account of the blood lines behind King Sylvia Pontiac Pietje, the bull that has headed that establishment for several years, Dr. H. G. Padgett of Tully, New York, bought the bull largely on account of the individuality of that animal and of his daughters in the Dwight herd.

King Sylvia Pontiac Pietje is now five years old. He is a remarkably handsome individual which desirable characteristic he is transmitting to his offspring. His pedigree shows a combination of big producing strains. His sire, Champion Echo Sylvia Pontiac, has a long list of high record daughters and was from May Echo Sylvia, 41 lb. butter in seven days, the only cow that ever produced a thousand pound milk in a week. "Champ," as he is generally termed, was by a son of K. P. Pontiac Lass, the first cow to officially make 44 lb. butter in a week.

KING SYLVIA PONTIAC PIETJE

High class herdsire purchased by Dr. H. G. Padgett of Tully from Mrs. Maud Dwight, South Otselic, N. Y.

The dam of King Sylvia Pontiac Pietje was May Echo Pontiac 2d. She is credited with producing 26.23 lb. butter, 659.8 lb. milk in seven days, 109.29 lb. butter, 2,548.8 lb. milk in thirty days as a junior four-year-old. Her sire, Woodcrest Sir Clyde, was from Alma Clyde, 33 lb. butter in seven days, 970.47 lb. butter in a year. The dam of May Echo Pontiac 2d was a daughter of King Pontiac Artis Canada and of May Echo Sylvia so that the bull purchased by Dr. Padgett traces twice to this famous producer.

King Sylvia Pontiac Pietje would attract attention in any herd. His daughters show great promise and their type and conformation indicate that this bull is a high class sire. As the Waldron herd which is owned by Mrs. Maud Dwight of South Otselic, N. Y., is accredited, we believe that Dr. Padgett has secured a herdsire that is desirable in every respect.

RAY MADE GOOD BUY

Dakota is the name of a small town on the south side of the Illinois-Wisconsin border. Near this village lives W. R. Angle, a Holstein breeder who has many friends in these two states as well as in New York where he lived a number of years ago. "Ray" is a member of the Green County Holstein Breeders' Association. At a sale in Green County some time ago Ray purchased Lindora Spring Valley Ormsby. This cow and seven others in the Angle herd last year aver-

aged 14,000 lb. milk, 450 lb. butterfat in the Stephenson County Herd Improvement Association. No grain was fed these cows during this summer.

Lindora has just completed a seven-day test and is reported as making 594.3 lb. milk, 30.8 lb. butter. One of her daughters made 22.91 lb. butter in seven days as a two-year-old. They did not have the luxury of roomy box stalls but were tied in stanchions and handled very much as the rest of the herd.

Sadie Johanna Korndyke King is the Angle herdsire. His dam has a 31-lb. seven-day butter record and is of Homestead breeding. His five nearest dams have seven-day records that average better than 30 lb. He has won a number of show ring prizes and is proving a good sire. His first daughter to freshen was enrolled in the testing association and was credited with 9,000 lb. milk and 325 lb. butterfat for a years work on twice a day milking. The tester's report said that only \$8 worth of grain was fed to her.

BUYS SIRE OF PRODUCING BLOODLINES

E. C. Herrick of Cambridge Springs, Pa., owner of a good herd of grade and purebred Holsteins, has placed at its head a fine young bull, Martin Clothilde Tobe Alcartra, which he purchased from O. I. Martin also of Cambridge Springs.

Martin Clothilde Tobe Alcartra was by King Tobe Alcartra De Kol from Clothilde May Pontiac De Kol, a big producing cow of Korndyke, Clothilde, Pontiac and Cornucopia breeding. King Tobe Alcartra De Kol was by King Segis Pontiac Alcartra from Lady Tobe De Kol, 36.59 lb. butter, 631 lb. milk in seven days, 141.24 lb. butter in thirty days, world's record in the senior three-year-old class at time of making. She was a daughter of Christmas Tobe 2d, 31.66 lb. butter in seven days as a ten-year-old and was the dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days as a four-year-old.

The daughters of King Tobe Alcartra De Kol are big producers, and Mr. Martin plans to retain all that he has in his milking dairy. A full brother of this bull in the herd of Fred Karlen of Winslow, Ill., sired a number of sensational producers and every line of the pedigree shows transmitting ability of a high order.

Cambridge Springs is in Crawford County and from a bovine health standpoint is one of the best districts in Pennsylvania in which to secure cattle. All the cattle in this county have been tuberculin tested twice under the area test and on the last occasion no less than 99.2% passed clean.

PUBLIC SPIRITED

W. R. Gillette & Son of Fostoria, Ia., will give a purebred senior heifer calf to the boy or girl enrolled in a calf club that has the heifer placed highest at the Clay County Fair. The calves may be purebred or grade, but, if grade, must be sired by a purebred bull. One of the members of the firm of Gillette & Son is L. S. Gillette, the prominent agricultural educator and dairy judge.

Waldron Herd

is now headed by

King Ona Aaggie Sunny Side

a son of King Ona and Aaggie Queen of Sunny Side, 33.94 lb. butter, 702.5 lb. milk in 7 days, 1,119.4 lb. butter, 27,498.3 lb. milk in 365 days.

He is a handsome fellow, largely white and will be bred to the daughters of King Sylvia Pontiac Pietje.

MRS. MAUD DWIGHT

South Otselic, Chenango Co., New York.

Herd Under State and Federal Supervision.

IT RUNS IN THE FAMILY

King Pietje Aaggie Pontiac, the bull at the head of the purebred Holstein herd owned by Robert I. Springer, of Factoryville, Pa., is one of the handsomest bulls in Susquehanna County and his offspring resemble him in type and conformation. This is not surprising when we learn that his sire was King Pontiac Alcartra Pietje, well-known herdsire owned jointly by A. E. Robinson, H. S. Brown & Sons and Frank F. Resseguie, whose herds have long been famous for both production and individuality in Susquehanna County. The descendants of this great sire have won many honors in show rings, not only locally but also in distant states and high class individuality and great powers of

KING PIETJE AAGGIE PONTIAC
Herdsire owned by Robert I. Springer, Factoryville, Pa.

production seem combined in this noted family.

It is hardly necessary here to give the breeding of King Pontiac Alcartra Pietje. We will content ourselves by repeating that he was by King Segis Pontiac Alcartra and his dam was Fairmont Zerma Segis Pietje, 608.4 lb. milk, 35.61 lb. butter in seven days, world's record when made in the junior four-year-old class.

Back of King Pietje Aaggie Pontiac on the maternal side is a succession of cows noted for production. His own dam, Aaggie Cornucopia Pauline Girl 2d is still a member of the Robinson herd. She has an official seven-day record of 564.2 lb. milk, 31.79 lb. butter. She is a cow of good size and conformation and im-

AAGGIE CORNUCOPIA PAULINE GIRL 2d
31.79 lb. butter in a week, averaging over 80 lb. milk daily. Dam of King Pietje Aaggie Pontiac.

mediately you look over her, you can see for yourself that she is a producer. The size and shape of her udder and her build, her long head and slender neck, her wide chest and capacious barrel are sufficient evidence.

The 31 lb. record of Aaggie Cornucopia Pauline Girl 2d was made as a seven-year-old. She made 23.22 lb. butter in seven days as a four-year-old, averaging 70 lb. milk daily. In her previous lactation period, calving less than a year before, she is credited with 19.15 lb. butter

in a week and a correspondingly large thirty-day record during which she averaged 61.4 lb. milk daily.

Her sire was a grandson of Earl Korn-dyke De Kol, one of the older sons of old Belle Korndyke. Her dam, Aaggie Cornucopia Pauline Girl, has a seven-day record of 542.7 lb. milk, 25.31 lb. butter, and was by a bull whose dam was May Hartog Pauline De Kol, a former world's record senior four-year-old, while his sire in turn was from Alta Posch, former world record yearling and senior two-year-old.

Aaggie Cornucopia Pauline Girl was from Aaggie Cornucopia Pauline 2d, 679.4 lb. milk, 31.05 lb. butter in seven days, 2,842.8 lb. milk, 128.98 lb. butter in thirty days. Her dam, the former world's champion, Aaggie Cornucopia Pauline, made 34.32 lb. butter in seven days, 659.2 lb. milk as a senior four-year-old. She was the first 34 lb. cow, the second 30 lb. cow and she also made world's records as a senior three-year-old. Her 34 lb. record as well as her thirty day record made at the same time were not only world's records over all ages and breeds at time of making but also stood at the head of her class for about eight years. Her descendants seem to have inherited her great powers of production and from her has descended one of the most noted families of the breed. Pages could be filled with

KING PONTIAC ALCARTRA PIETJE
Sire of King Pietje Aaggie Pontiac.

details of the record combinations that can be written of the performances of her descendants.

The dam and sire's dam of King Pietje Aaggie Pontiac have seven-day records that average 33.70 lb. butter, 586.3 lb. milk. His three nearest dams have records that average 30.9 lb. butter, 571.6 lb. milk or an average of 81½ lb. daily. His four direct descendant dams have seven-day records that average 30.62 lb. butter, 611.3 lb. milk, and the only one below 30 lb. is his granddam. On top of that, he is a high class show bull as well an excellent sire.

A PROFIT MAKER

Sioux Mercedes Burke, a purebred Holstein owned by the State School for the Deaf at Sioux Falls, South Dakota, led the Sioux Falls Cow Testing Association for May by producing 1,271 lb. milk, 78.8 lb. butterfat. According to Calvin E. Herein, the tester, she earned \$28.66 above the cost of her month's feed.

"Yes," mused the old timer, "When a man's single, he's free. After he's been married a year, he's usually fastened to bawl and Jane."

THE TYPE WE BREED

Straight top-lines, level udder, even markings and HORNLESS. She averaged 4.28% fat in her yearly work.

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building
Scranton, Pa.

Just a Suggestion

Our cows and heifers are making good. In their everyday work they return a nice profit over feed cost. In A.R.O. test they have nice records, two-year-old heifers making 20 lb. of butter in a week, older cows in proportion.

Herd under Federal Supervision and T. B. Free.

Isn't this worth something to you?

Raymond D. Strickland,
Nicholson, R. D.

KING PIEBE OF YORK 7th
a grand champion show bull.

We offer cows in milk, also heifers, yearlings and calves.

HUBERT S. MILLER
Myerstown, Lebanon Co., Pa.

CALIFORNIAN SHIPMENT TO CENTRAL AMERICA

On May 30, thirteen head of registered cattle and twelve head of registered hogs were shipped from San Francisco to the state of El Salvador, Central America. The animals will be placed on four experimental stations around the state and the purchase was made by Mr. Frederic W. Taylor, representative of the Department of Agriculture of El Salvador.

A two-year-old bull, Ormsby Piebe Johanna Lad, a son of King Pietertje Ormsby Piebe Jr., was taken from the herd of W. R. Elliott, of Riverside, as well as Dolly Dimple Ormsby Piebe, a twenty-months-old heifer bred to Sir Aaggie Segis Pontiac De Kol. The bull is a very handsome animal. His full brother was grand champion at the 1925 South California Fair.

King Korndyke Pontiac Acme 25th was purchased from the El Colmo Rancho, of Downey; also a twenty-one months old heifer, Anokia Alcartra Spofford Acme. From the Pottenger Sanatorium Co., of Monrovia came the twenty-one months old bull, Sir Aaggie Mechthilde Pontiac, a big rugged fellow from big producing strains. The twenty months old heifer Korndyke Maid Segis Pride 2d came from the Billwhack Stock Farm at Santa Paulo. Her sire is a grandson of Adirondac Wietske Dairy Maid and she is bred to a son of Prince Aaggie of Berylwood. Four Milking Shorthorn bulls and three heifers were also taken from leading California breeding establishments.

The hogs consisted of five boars and seven gilts of the Poland-China breed. Mr. Taylor has had experience in the Philippines in crossing Polands on hogs very similar in type to the native hogs of El Salvador. The hogs were immunized and came from herds that have never suffered from cholera while the cattle were not only tested for tuberculosis but had also passed the agglutination test for infectious abortion.

AN OFFICIAL KICK

Irish Friesian enthusiasts are respectfully asked to make themselves familiar with the rules of the British Friesian Society's Herd Book and Supplementary Register, and, having done so, to realize that such rules do apply to Ireland and have to be observed. It is discouraging to find Irishmen peeved because, after joining the Society and promising to pay a subscription, they find they cannot register in the Herd Book the entry of "a black-and-white cow that once saw a Friesian bull over a hedge, that had cock horns and one eye, called Bridget, and that was a devil for fighting."—*British Friesian Journal*.

A MICHIGAN PRODUCER

A purebred Holstein owned by Baldwin & Nolin of Bennington, Michigan, led the Shiawassee Testing Association by producing 80.4 lb. fat, 1,697.4 lb. milk during May. She has produced 154.8 lb. fat in 58 days.

GET THE SON OF Hillside Rhododendron

35.15 lb. butter, 543.8 lb. milk in 7 days, 2,759.7 lb. milk, 147.95 lb. butter in 30 days, a show cow of magnificent proportions.

He was sired by Charlevoix Rookwood Prince, son of Sir Pietertje Ormsby Mercedes 40th and Rookwood Zwellie Riblet, 728.3 lb. milk, 33.93 lb. butter in a week; 3,019.6 lb. milk, 135.83 lb. butter in 30 days. She and her dam both have good yearly records.

This bull was born April 26, 1925, is right in every way, about 7/10 black, well marked. His dam and sire's dam average 34.54 lb. butter, 636 lb. milk in 7 days; 141.89 lb. butter, 2,889.6 lb. milk for 30 days.

**HILLSIDE AND
SPRINGBROOK FARMS**
Trucksville, Pa.

Herd recently passed Another Clean Test.

AFTER AVIAN TUBERCULOSIS NOW

The farmers of Hillside County, Mich. demonstrated their practical foresight when in 1924 they decided to rid the entire county of bovine tuberculosis. It was the first county in the country to be put on this free list, the work being done in cooperation with the United States Department of Agriculture. The venture in disease eradication has increased their returns from dairy products and breeding stock.

The farmers of this county are now endeavoring to improve their poultry flocks by eradicating the same disease from feathered livestock and by culling out the poor producers. This work was started last summer in one township by a representative of the Federal Bureau of Animal Industry and a poultry expert from the State College of Agriculture, the county paying all expenses except salaries. The culling of the first forty flocks revealed that more than 40% of the fowls had tuberculosis. This is perhaps one of the reasons why 22% of the hogs shipped from the county are found to have the disease as hogs are particularly susceptible to the avian type of tuberculosis.

The conclusion has been reached as a result of these conditions, that it is advisable to keep poultry fenced away from contact with other farm livestock.

EAST AND WEST

Only two daughters of the sire, Segis Walker Matador, have as yet been officially tested as full aged cows. One of these was Bella Segis Veeman Matador, recently reported as making over 45 lb. butter in seven days and the other is First Lady of Earl Crest, owned by H. B. Ayers, Hillandale Farm, Westerly, R. I. Since Bella freshened she has produced 116 lb. milk in a day and in forty-five days is credited with 4,765.6 lb. milk. First Lady of Earl Crest has made 118.9 lb. milk in a day, 850.4 lb. milk in seven days, in ninety days is credited with the production of 9,607.1 lb. This is quite a showing for two sisters to make at the same time, one on test in a Pacific Coast establishment and the other in an Atlantic Coast herd.

HE WHO LAUGHS LAST

When Fred Pieplow of Aurora, Iowa purchased his first purebred Holsteins, his neighbors laughed at him and they also did when he put up the first silo in his township. Fred let them laugh and went right along; the result is that eight cows of the Pieplow herd have just finished a year of cow testing association work with an average of 403.7 lb. butter, 1,169.9 lb. milk with a 3.45% test. They were milked three times a day during June and twice a day the balance of the year. A number of others were started in the test but were sold in the fall to make room for heifers and these eight have all finished a year's record. One heifer, a two year old, freshened in May and is credited with 441 lb. fat, 12,571.14 lb. milk. She returned a profit over a feed cost of \$122.09.

CORT GOES TO MASSACHUSETTS

J. C. Cort, for several years manager of the Milford Meadows Stock Farm at Lake Mills, Wis., has accepted the appointment as head of the Division of Dairying and Animal Husbandry in the Massachusetts Department of Agriculture which was made vacant in the resignation of O. M. Camburn, who is now connected with the Experiment Station at the University of Vermont.

Professor Cort was at one time associate Professor of Dairy Husbandry at the University of Minnesota and has done considerable extension work in that state and also in Iowa. A number of years ago, he was for several months engaged in extension work for the Holstein-Friesian Association of America when that work was handled from the Brattleboro office. This was before Professor Rider took charge of the work.

THE PIG CROP

Despite the fact that about 20% less sows farrowed in the eleven Corn Belt States in the spring of 1925 compared with the spring of 1924, the number of pigs saved is only about 11% less this spring, says a preliminary report of the Bureau of Agricultural Economics. The weather was said to have been especially favorable for the spring pigs during March and April this year together with the greater efficiency of the caretakers, first because he had less sows to care for and second because hogs are worth more. A complete report of the survey results both for the Corn Belt and for the entire United States will be issued about July 15.

PUREBREDS PAY HIM

T. G. Garrison of the Skokomish valley, Washington, had 25 scrub cows. His average receipts in cream checks were \$50.00 a month. After ten years experience Mr. Garrison disposed of this herd and purchased ten Holsteins for an average of \$150 a head. The first month he had them there were only six milking, yet his cream check was \$125, reports County Agent H. E. Drew. This production was obtained through hay and grain alone.

A SURPLUS STOCK SALE

Fifteen purebred Holsteins were sold June 17 at public auction by the Lincoln County Home at Merrill, Wisconsin, the average realized being just over \$100. The animals consisted of five bull calves, six heifers and four cows. There was a large attendance at the auction and bidding was fairly active. Much interest was shown in the offerings and a number of farmers in this locality are planning to introduce registered blood into their herds.

"Miss Curleycue," said the office manager apologetically to his stenographer one morning, "I would prefer that you do not write letters to your young man friend during office hours. Smith and Jones report that we have sent them a shipment of love and kisses instead of the tar and axle grease they ordered."

MINNESOTA STYLE

A short distance from Hill City, Minnesota, is the T. D. Arens' farm consisting of 160 acres. The farm superintendent is Theodore H. Arens, son of the owner. Theodore is a graduate of the agricultural course at the University of Minnesota and is running the farm on scientific as well as practical methods.

The farm buildings consist of a well-equipped dairy barn with 36 stanchions, 3 maternity stalls, a bull pen and 3 calf pens, the floors and manger are concrete. The barn is electrically lighted, has individual drinking cups, is 36 by 120 feet long, with the King ventilation system. Near the barn is a combination building containing granary, machine and repair shop, and garage. Electricity derived from an electric power plant operates feed grinders, grain elevators, fanning mill, grindstone and pumps the water as well as lighting the buildings. The herd contains 18 granddaughters of Piebe Laura Ollie Homestead King. The herdsire, Sir Walker Concordia Homestead, has a good combination of breeding and also traces to this bull, while the junior herdsire is by a son of Sir Pietertje Ormsby Mercedes 37th and is from a granddaughter of Piebe Laura Ollie Homestead King.

SHOW IN CALF CLUB WORK

Near St. Cloud, Minnesota, is the 340 acre farm of E. A. Barthelmy, who is in the canning business in St. Cloud. The herd contains 110 purebred females.

J. C. Gebhardt is farm manager and his son, Emil, who took a two year course at the Minnesota College of Agriculture, is herdsman.

The Gebhardt children are active in club work. Jeanetta the 12-year-old girl won first prize with her dairy calf at the Benton County fair. This prize was a trip to the North West Dairy Exposition at Hamline. Bernice, a ten-year-old, won second prize and these two girls together with Frances their 14-year-old sister are grooming calves for this year's event.

HOLSTEIN HERDS IN CITY BOOK-LET

The Logan Chamber of Commerce is compiling a booklet advertising of Cache County, Utah, and the committee in charge believes the booklet would be incomplete without depicting some of the great dairy herds of that county. About the middle of April the committee visited the purebred Holstein herds owned by the Pond Brothers of Lewiston, Albert C. Fisher and Charles Z. Harris of Richmond. In these herds they saw some of the best cattle in the state. John W. Rawlins of Lewiston attends the Cache High School and he too has a number of good Holsteins and is expected to develop into one of the leading dairymen of the valley.

Mary: "I just love men with red hair."
Edith: "You do? Well, for a good time, give me the men with greenbacks."

MURRAY MILLER'S JUNIOR HERD BULL

Loyalsock King Jemima Mechthilde is the name of the junior sire at Sunny Lawn Farm. His sire is King Jemima Segis whose three direct descendant maternal dams have year records that average 1,215.67 lb. butter, 26,877.67 lb. milk which was for some time the highest record combination of this kind. His dam was Jemima Johanna Segis, 1,175 lb. butter in a year made as a four-year-old. Her dam, Jemima Johanna of Riverside 2d has to her credit 1,192 lb. butter in a year and she was a daughter of the former Canadian champion Jemima Johanna of Riverside, 1,280 lb. butter, 30,373 lb. milk in a year.

Loyalsock King Jemima Mechthilde is from Lady Mechthilde Segis Pontiac a daughter of King Segis Pontiac Count with a year record made as a junior two-year-old of 760.44 lb. butter, 18,117.6 lb. milk. Her dam has a year record of 830.96 lb. butter and has no less than six tested daughters.

The Sunny Lawn herd is owned by Murray A. Miller, of Milton, Pa. It is noted for the production of its animals and has been on the accredited list for some time. Sunny Lawn Farm is located on the Susquehanna Trail about midway between Milton and Lewistown, Pa., and Mr. Miller extends a cordial invitation to all interested in Holsteins to stop and look over his herd and particularly his junior sire.

A REGULAR HOLSTEIN TOWN

Malad, Idaho is a Holstein community. Dairying has proven a good investment in the Malad Valley so bankers and business men declare. The baseball team of Malad plays under the name "Holsteins" owing to the preponderance of the black and white animals in the district around that town.

May 23, there was a livestock show held at Malad but it was not all black and white. The Boys' and Girls' Beef and Dairy Calf Club made an exhibit which included a half-dozen Shorthorn calves. The rest of the animals were Holsteins.

Jesse S. Richards, Secretary of the Ogden Chamber of Commerce exhibited a roll of Ogden Stock Show films. The principal speakers were Mayor C. Ben Ross of Pocatello, Mr. Richards and John L. Brady, editor of the *Idaho State Journal*.

Hundreds of visitors from all the nearby townships attended and enjoyed the Show as well as the races which ended the day's program.

A BOUNCING BABY

London Regala Fagul Korndyke a four-year-old cow in the Toledo State Hospital Dairy recently dropped a heifer calf that weighed 143 lb. at birth reports Dr. Reuben Hilty, veterinarian in charge of the herd. The calf is unusually vigorous as well as unusually large. Her dam as a three-year-old produced 18,687½ lb. milk, 708.21 lb. butter in a year.

OUR KIND

We specialize on type, and size as well as production. The milking herd consists of daughters of the 36-lb. bull

KING TOBE ALCARTRA DE KOL and they are bred to a grandson of Carnation King Sylvia.

We can spare a few good ones

O. I. MARTIN

Crawford Co. Cambridge Springs, Pa.

A PAIR FOR \$150

BULL born December 15, 1924.
Sire: Clever Model Glista from the 34 lb. Cornell University cow, Glista Coreva.

Dam: Maple Grove Pontiac Genevieve, 471.9 lb. milk, 20 lb. butter in 7 days, a daughter of **King Pontiac Jupiter**.

HEIFER, born January 8, 1925.
Sire: our 27 lb. herdsire, Maple Grove Ybma Glista.

Dam: Maple Grove Konigen Ormsby Glista, her name tells her bloodlines. This pair are nicely marked, straight and right in every way and are from our Accredited Herd.

MAPLE GROVE STOCK FARM

Conneaut Lake, Crawford Co., Pa.

Canvasser—"Madame, will you donate something to the new hospital?"

Mrs. Clancy (who has just finished an argument)—"Well, ye might step in an' take a look at Clancy. Maybe he'd do."

NOT UNIVERSAL APPROVAL

At Redfield, South Dakota, there is a state school and home for the feeble minded. On the farm belonging to this home is a herd of purebred Holsteins and at the recent Brentwood sale representatives of the South Dakota Board of Charities and Corrections, on behalf of this herd, paid \$2,100 for a son of Carnation Segis Prospect and Bella Vee-man Segis Matador, recently reported as making over 45 lb. butter in seven days. She has a year record, made as a four-year-old, of 1,248.29 lb. butter, 32,217.6 lb. milk.

An article in the *South Dakota Citizen* recently severely criticized the action of the Board for maintaining at considerable expense, purebred Holstein herds and claimed that in endeavoring to attract public attention by the performances of the cows therein, the interests of the patients and inmates were made to take second place. About a year ago a report was published, compiled by some efficiency experts who had at public expense made a survey of the state institutions, and this report criticized the Board for attempting to make model farms at the state owned homes and claimed that they were more interested in improving the farms and herds than they were in improving the mental and physical condition of the inmates.

There is no better food for inmates of such institutions than milk and, in many cases, working around animals, especially when under trained supervision, is one of the best things possible for those mentally afflicted. Yet, it is not necessary, nor economically wise, for those in control of such institutions to pay big prices for fancy stock and it is very easy to spend the money of the taxpayers and not get adequate financial returns or even value for the expenditure.

KING FAYNE LEAVES COLLEGE HERD

King Fayne, a bull that has headed the University of Missouri Holstein herd, will now head the Falcon farm herd. King Fayne was bred in the herd of T. H. Skrei of Glyndon, Minnesota. He is a son of Sir Pietertje Ormsby Mercedes and Miss Fayne Segis Beauty, 1,057 lb. butter in a year. He was purchased as a calf by Professor C. H. Eckles and taken to Missouri where his daughters in the university herd have made a splendid showing. To date eleven of his daughters have made records averaging 15,418 lb. milk and 645 lb. butter at an age of two years and five months. This includes every daughter to freshen thus far and shows an increase of approximately 40% over the production of their dams. There are 31 more daughters of this bull yet to freshen.

Teacher—"Willy, what are you drawing?"

Willy—"I'm drawing a picture of God."

Teacher—"But, Willy, you must not do that—nobody knows how God looks."

Willy smiled, confidently—"Well," he said, "they will when I get this done."

The Best of Breeding

with individuality of a high order and producing capacity as demonstrated in everyday dairy work—that's what you find in this herd.

Cows have produced from 10,000 lb. to over 15,000 lb. in C. T. A. work.

The herd is under State and Federal Supervision—and the latest test was CLEAN.

RAY J. SABIN

WILLOW BROOK HERD

has for junior herdsire

KING ORMSBY ENDERCAMP

a son of King of the Ormsbys and Vanderscamp Segis Aaggie Jewel.
The seven-day records of his dam and sire's dam average 33.80 lb. butter and the year records average 1,097.61 lb. butter and more than 23,000 lb. milk.
Owing to a lack of help we will sell you your choice of our ACCREDITED HERD.

A. L. BOWELL & SON, Pa.
Thompson,

SUPPOSING

you had a bull with 21 sisters that had each made over 1,000 lb. butter in yearly test?

And that his dam produced 636.3 lb. milk, 35.14 lb. butter in seven days, and was dam of a 30 lb. cow with over 1,000 lb. butter in a year that in turn was dam of a 30 lb.—1,000 lb. four-year-old?

And your bull was by ORMSBY KORNDYKE LAD, was a fine individual and sired dandy stock? You'd think you had a REAL herd-sire.

Let us tell you about ours. We offer his sons and some good heifers.

CHENEY BROTHERS & JONES

Randolph Virginia

**KING RAG APPLE PLUM COPIA**

is now in service in our herds. His dam made 30.47 lb. butter in 7 days, 120.63 lb. butter in 30 days with a daily milk average of 92.3 lb. as a five-year-old, and as a six-year-old made 33.26 lb. butter in 7 days.

He will be bred to daughters of GRAND CHAMPION SEGIS 2d.

YOU know their Quality.

Our herds contain 120 head and are under State and Federal Supervision.

L. N. MACK & SON and FLOYD E. MACK
Montrose, Pennsylvania

BUILDING A NICE HERD

Edwin Blackmon, of New Haven, Michigan, thought he would prefer registered Holsteins to common cattle so purchased Evergreen Lawn Calamity Inka as a foundation animal. After a time he tested her, giving her an official record of 455.7 lb. milk, 21.81 lb. of butter. The ensuing year she was enrolled in cow testing association work and she produced 14,707 lb. of milk, 515 lb. fat, certainly a very creditable showing.

There are two daughters of Inka in the Blackmon stable. One has not yet freshened. The older one, Daisy, is credited by the Dairy Department of the Michigan Agricultural College as producing 8,930 lb. of milk, 295.4 lb. fat in a year as a two-year-old. Daisy has a young daughter in the herd, making three generations of females.

At the head of his herd Mr. Blackmon has placed Decream Co Pontiac Ormsby, purchasing him from the Detroit Creamery Farms. This bull, a yearling, is sired by Sir Hengerveld Pietertje Ormsby and his dam, Daisy Hill Pontiac Cynthia, has a 30-lb. seven-day butter record and is a granddaughter of King of the Pontiacs.

BOHNKE SELLS AGAIN

Two more sales of purebred Holsteins were reported by Charles Bohnke of Decatur, Ind. To David Emenhiser went Vera Segis Abbekerk, a daughter of Eva Abbekerk De Kol and Zeldenrust King Segis Pontiac, a well bred son of King Segis Pontiac. Eva Abbekerk De Kol was by Count Cornucopia Mooie.

To H. E. Zerkel of the same town, Mr. Bohnke sold Koko Vera Korndyke, a two-year-old daughter of Vera Segis Abbekerk. Her sire Koko Pontiac Korndyke was by Starr Pontiac Korndyke Butter Boy, from an A. R. O. daughter of Sir Urmagel Burke.

FROM WISCONSIN TO MISSOURI

The Wisconsin Livestock Association of Appleton, Wis., recently sold a yearling bull, King Lyons Hengerveld De Kol, to Ed. Williams of Blue Mound township, Chillicothe, Mo. His dam was producing 87.1 lb. milk daily and averaging 4% fat. The sire's dam, Sadie Gerben Hengerveld De Kol, has an official seven-day record of 782 lb. milk, 40.04 lb. butter.

JENKINS' HOLSTEINS MULTIPLY

John Jenkins & Son of Kalkaska, Michigan, has a herd of Holstein cows that produced three pair of twin calves during the past year. Five of the calves were heifers. The cows in the Gilt Edge herd have given their owners at least one pair of twin calves a year for the past four years. The Gilt Edge Farm specializes in dairy cattle, sweet corn, seed potatoes, and alfalfa.

The Mr. Dempsey who is now reported as touring Europe looking for a fight is the same Mr. Dempsey who was offered an important fight over seas in 1917.

**SPOT VEEMAN ARTIS**

One of 6 daughters of Sir Korndyke Pontiac Artis Prince in RO-AN Herd. She has 75% the same breeding as my great 31 lb. cow, Inka Veeman Artis.

Such cows are bred to

ROYAL JOHANNA KORNDYKE

a bull of splendid breeding and individuality whose daughters are doing splendidly both in official and C. T. A. work.

Herd Accredited. — Never a Reactor.

Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

TRAVERSE ECHO SYLVIA KING

the head of our ACCREDITED Herd, is not only a bull of splendid individuality but is also backed by Wonderful producers.

His dam, (twice over 30-lb.) has a 7-day official record of 33.27 lb. butter, 736.4 lb. milk averaging 102 lb. for 30 days. She has a 32 lb. and a 35 lb. daughter.

Five of his 7 nearest dams have one or more 30-lb. daughters. His dam and both his granddams have daughters that each averaged 5 lb. butter a day for a week's time.

His three nearest dams have 7 day records averaging 33.03 lb. butter; his seven nearest dams average 32.72 lb.; his fourteen nearest tested dams average 30.175 lb.

And he heads a herd of producers, cows that make good returns for their care and feed.

Come and look him over and you will want one or more of his offspring or else a good cow bred to him.

W. B. KENNEDY & SON,
Bradford Co., WYALUSING, PA.

The Kind We Raise

Cows of this size, type and evident producing capacity, bred and raised on this farm, are mated with

MODEL DARIUS KING SEGIS

whose dam produced 639.8 lb. milk in a week, averaged 79.8 lb. milk a day for three months and produced 2,771.2 lb. milk, 732.4 lb. butter in 10 months all as a two-year-old heifer.

This herd is Accredited.

Stock for sale at reasonable prices

FRED B. KEENEY,
Wyoming Co., Laceyville, Pa.

At Silverwood Stock Farm

We are always pleased to show our cattle and will make prices on anything you select.

In C. T. A. work our cows produce from 12,000 lb. to 17,000 lb. milk in a year.

Individuality, Breeding and Health we can fill your wants and our prices are reasonable.

PUREBRED HOLSTEINS OWNED BY O. I. MARTIN, CAMBRIDGE SPRINGS, PENNSYLVANIA

THE HOLSTEIN BREEDER AND DAIRYMAN

For Two Years and a Device to Keep the Cow's Tail out of Your Eyes and Face for Life while milking - - \$1.00

For a limited time, while the supply lasts, we are offering a CORBIN TAIL HOLDER with a two years' subscription to the HOLSTEIN BREEDER AND DAIRYMAN, new or renewal.

The accompanying illustration shows how perfectly the device works. Every dairyman has had the disagreeable and oftentimes painful experience of being switched in the face while milking.

Dairyman will realize the sanitary value of this holder. Much filth and stable litter gets into the milk by the persistent switching of the cow's tail.

Clip this ad., sign, attach to it a \$1 bill, money order or personal check, and mail it TODAY. The HOLSTEIN BREEDER AND DAIRYMAN will be mailed to you for the next 24 months and you will receive the Corbin Tail Holder FREE.

HAMPSHIRE

FOR SIX YEARS FOR SIX YEARS

in succession, 1918-1919-1920-1921-1922-1923, Hampshires have won the carload lot grand championship over all breeds at the International Livestock Show.

HAMPSHIRE are the practical farmer's practical hog, because of their meat type—grazing qualities—activity—health and vigor—highly developed mother instinct—milking qualities—early maturity and economical gains, and because they are *Recognized Market Toppers*. The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

The official breed paper is—*THE HAMPSHIRE ADVOCATE*—a monthly publication, devoted to the interest of Hampshire breeders and the Hampshire breed.

SUBSCRIBE NOW! \$1.00 per yr. or \$2.00 for 3 yrs.

FREE SERVICE DEPARTMENT—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

HARRISBURG, PA., JULY 22, 1925

No. 14

Pioneer Southern Holstein Breeder

For Fifty Years a Worker for Breed Extension

IN the fall of 1880, J. R. Beuchler of Leesburg, Va., journeyed to Syracuse, N. Y., and there purchased from Smiths & Powell of that city a number of purebred registered Holsteins. That year he joined the Holstein Breeders' Association of America and his membership certificate was numbered 15. The act incorporating the Holstein Breeders' Association of America had been passed May 27th of that year so that Mr. Beuchler was one of the earliest members with the exception of the incorporators.

J. R. BEUCHLER
Pioneer Holstein breeder.

Mr. Beuchler was the first man in Loudon County to own purebred black and white cattle and the second in Virginia to have a purebred black and white herd, the earliest one being Judge William Fullerton. Mr. Fullerton was a New York City lawyer who owned a farm at Clifton Station, about twenty-five miles from Leesburg and in 1874 brought from New York State eleven imported females and two bulls. Mr. Beuchler had obtained at least one bull from the Fullerton herd and was greatly pleased and impressed with the milking ability of the half blood heifers. He was unable to purchase any purebred females from Mr. Fullerton but decided that he would have a purebred herd of his own and made three successive trips to Smiths & Powell, buying from three to six animals each time. He inspected a number of pioneer herds in New York state and distinctly remembers looking over the famous cow Pietertje 2d, then in the herd of Dallas P. Whipple. Among other famous old time herds he inspected were those of J. B. Dutcher, B. B. Lord, and the Stevens and Yoemans herds. Mr. Beuchler sold some of the animals he bought and kept others. Two of the first animals he owned were Maid of Purmer, No. 382 and Martha Washington, No. 1304. In the Holstein herd books we find a number of animals registered by Mr. Beuchler, the progeny of these two cows. One of these was Maid of Purmer 2d bred in the Beuchler herd, born April 26, 1882 and sired by the bull, Cardinal, No. 708. Martha Washington 2d, No. 2374, was born January 12, 1882. She was sired by Uncle Tom, No. 163 and the herdbook records Smiths & Powell as her breeders. These four animals were kept as foundation stock and the books show that the

bulls, Cardinal and Duke of Leesburg, No. 960, were the herdsires in service.

Mr. Beuchler paid \$700 for Maid of Purmer. In her new home, the first year she milked from 60 to 70 lb. a day and her high day was 73 lb. She has a record of making 16 lb. butter in a week, tested by Dan Warner who at that time or some time afterward became herd manager for Mr. Dutcher and managed that herd until his death some two years ago. The Martha Washington family were very attractive and the females were good producers and

some of these went to Blacksburg, Va., forming the foundation of the present Virginia Polytechnic Institute herd. A bull purchased from Edgar Huidekoper of Meadville, Pa., was used in the Beuchler herd and was sold with these females.

One of the earliest herdsires was a son of Netherland Duke and Milla or Pietertje 3d. This animal was first named Milla but after her mother made her tremendous record this name was changed. This bull weighed 2,300 lb. His daughters were all deep milkers and on account of his size, attractiveness and the producing capacity of his daughters, he did a great deal to popularize Holsteins in that part of the country. Another bull that headed this herd was a son of Netherland Prince and Aaggie Beauty, reported as producing 13,573 lb. milk in a year, tested as a three year old heifer.

Stock from the Beuchler herd went into a number of southern states and particularly into Florida, Georgia and Tennessee. Many Virginia herds were started by this establishment, dairies around Richmond in particular taking successive herdsires. At least two well known Maryland breeders obtained their first stock from Mr. Beuchler, one of these being Wm. P. Morsell and the other, J. B. Diamond of Gaithersburg, the father of J. B. Diamond, Jr., and Douglas B. Diamond. The Morsell and Diamond herds have for many years been among the leading herds in the state of Maryland.

At one time Mr. Beuchler owned three farms around Leesburg on all of which he had cattle. He laughingly says, "pioneers seldom make much money" but he takes pride in the fact that some of his customers became the

leading Holstein breeders of their own communities.

At the present time J. R. Beuchler is eighty-six years old although he has the vigor generally associated with a man many years younger. During the summer he makes his home at Leesburg with his daughter, Ellen, who is a trained nurse. Another daughter, also a trained nurse, lives in Washington, D. C. He has four

MR. BEUCHLER AND HIS YOUNGER DAUGHTER ELLEN
When a baby her photo was published to show how Holstein milk agreed with infants.

sons, one of whom, Charles H., owns a purebred Holstein herd and is running a large dairy business at Atlanta, Ga. Two of his sons were for a time farming at Ocala, Fla., but for the past two years have been in the real estate business at Miami. E. C. Beuchler was for a time manager and part owner of the Anthony Farms at Ocala, an establishment containing 3,000 acres, breeding Aberdeen Angus cattle among which were a number of Florida State fair champions. A herd of some sixty Holsteins, a number of which were obtained from Wisconsin, were kept on this farm.

The parents of Mr. J. R. Beuchler came to this country from Germany in 1825 and 1828. J. R. was born in Washington and lived there until he was twenty-one. At that time he was working as a baker. The war was brewing between the states and many times he went and heard the questions at issue debated in the Senate and House. When war seemed inevitable he and about 200 other young men whose sympathies were with the South slipped over the Potomac River, two or three at a time. He became a cavalryman, joining the Second Virginia Regiment and serving under Colonel Mumford and General Fitzhugh Lee. His first drilling was around Fairfax Court House.

Mr. Beuchler was in a number of battles. History shows that Winchester changed owners seventy-two times during the war and twice he was among the Confederates that captured the town. He was among the troops that helped to drive General Banks out of the Shenandoah Valley in 1862. In the second battle of Manassas or Bull Run, August, 1862, while serving under Fitzhugh Lee, he was twice wounded, was captured two days later and held prisoner for several months so was not in the battles of Antietam or Gettysburg.

In the fall of 1864 Union troops were massed in force only twenty-five miles from Leesburg, Mr. Beuchler and others who came from the vicinity occasionally visited the town, traveling around the Northern troops and coming in behind them, in all a journey of 160 miles. Generally they took back with them one or more horses, endeavoring, if possible, to take horses owned by Union soldiers. Mr. Beuchler had visited

his parents and was starting back in the woods when he saw a Union soldier ride a fine horse up to a house, dismount, tie his horse and enter the house. Mr. Beuchler crept through the bushes, mounted and rode away but about five miles further on was captured by Union troops under the command of Capt. Washburn of the Illinois cavalry. The ownership of the horse was easily traced and it was found that it belonged to an officer whose body was found that same night a few miles distant. The charge was brought that Beuchler had murdered the officer in cold blood and stole his horse and saddle and it looked as though he was going to be hanged as had been two or three Confederate prisoners who had been charged with similar offenses a few days before. Captain Washburn, however, had talked with the prisoner and obtained his story and took enough interest in him to investigate. A few days afterwards he came back from Leesburg with the soldier who had lost the horse. This soldier was orderly for the slain officer who, it appeared, owned two horses and had ridden the other one on an expedition that evening. The orderly had taken advantage of his superior's absence and visited a girl with whom he was friendly. Captain Washburn was not only instrumental in clearing his prisoner of the charge of murder but presented him with a ten dollar note and one of the regrets of Mr. Beuchler today is that he never saw or heard of that officer afterwards and so was unable to return the money.

Mr. Beuchler was taken to Fort Delaware and there put with the regular prisoners of war. At the time he entered prison, he weighed 150 lb. When he was let out nine months later in July, 1865, he weighed 114 lb. and he had worked in the bakery for about six weeks previously so had had a chance to fill up. Much has been said in the North about the privations of the prisoners at Andersonville. Mr. Beuchler says that hardships were also the lot of Southern soldiers who were captured. He lays the blame not on the government, North or South, but upon the prison officials and the contractors who were paid to furnish food. While at Fort Delaware, he was for a time kept in

A SOUTHERN CATTLE FEED, NAPIER GRASS
The man holding the measuring rod is Charles H. Beuchler, Holstein breeder and dairyman, now of Atlanta, Ga.

rooms near the wharf and says that barrels of beef and sacks of flour were unloaded from boats. Then the officers in charge would allowance out as little as they possibly could and keep life in their prisoners and the rest was shipped again presumably for other stations. The belief of the prisoners was that this shipped away food was sold and the money shared by the sharks and sharpers who had charge of the prisoners.

It was common gossip at that time among the soldiers, that the prisoners were not released until the sharps, speculators and contractors had obtained every penny they could for supplies furnished for the prisoners and paid for by the government. One reason for this belief was that Lee surrendered at Appottomax, April 9, 1865 and that Mr. Beuchler and others with him were not released from the prison at Ft. Delaware until July, 1865, three months later.

It is common knowledge that the Northern and Southern soldiers often drank from the same spring. The Federals traded coffee and other provisions for tobacco of which the Southerners usually had plenty. One day while stationed near the Rapidan, on a hot day, not seeing anyone around, he went down to the stream, took off his coat and washed. Suddenly a voice said, "Pretty cold over there, Johnny?" and he saw on the other bank a Union soldier with a gun, and several other Union men looking out of the bushes. The Northern soldiers were from Ohio and after a little conversation asked if the Southerners had any tobacco

EARLY MEMBERS OF THE BEUCHLER HERD
The group includes Maid of Purmer, Maid of Purmer 2d, and Martha Washington 2d. Notice the type of these foundation animals.

they wished to trade for coffee. After a short time there were about a dozen men on the Southern side of the stream and about an equal number on the other side and they did considerable business. While some of the officers were severe on practices of this kind a good many of them overlooked them excepting when in actual battle.

A number of years later, Mr. Beuchler was in an Ohio town when the Union veterans were having a celebration. Learning from the hotel clerk that an ex-Confederate soldier from Leesburg, Va., was registered, they asked him to attend and speak. While he did not recognize any of his entertainers several of them told him of being stationed by the Rapidan at that time and of trading coffee and tobacco with Confederate soldiers.

Leesburg is a historic town. Next to the Beuchler home is an old house where Lafayette made his headquarters during the Revolution and opposite is another old house which at the same time was the headquarters of George Washington. Then both were hotels, now they are private houses. Mr. Beuchler built his present home on a lot which he purchased from owners of the Lafayette House.

Mr. Beuchler was always alert to anything that promised improvement. He was the first in his vicinity to build an ice house above ground which he did in

1876. In 1878 he built the first silo in that part of the country. At that time he owned a purebred Holstein bull and some half blood heifers which he had obtained from Judge Fullerton. He was one of the cattle inspectors for the Holstein Breeders' Association. He was among the earliest shippers of milk to Washington. Before Professor Babcock perfected the Babcock test, a Professor Beimling had a centrifugal device for milk testing. Four acids were used of which sulphuric acid was one. He sent the machine, acids and directions to Mr. Beuchler asking him to bring the device to the notice of the Association. Mr. Beuchler showed this to some of the men and also to Mr. Hoxie but reported that he was unable to get uniform readings. He was instructed to keep in touch with the Professor and his investigations and to report immediately to the officers if it appeared that a quick, easy and accurate way of ascertaining the amount of butterfat in milk had been discovered. Mr. Beuchler is not a chemist but suggested to a local druggist, a man of considerable skill and knowledge, that perhaps only sulphuric acid was necessary but was told that undoubtedly the Professor knew what he was doing. Very soon after Professor Babcock announced the discovery of the present Babcock test, which is now used all over the world to ascertain the amount of butterfat in milk.

In the days when the Dutch Friesian Association and the Holstein Association were both in existence, there were a number of disputes between the adherents and much controversy, both at meetings and in the press. There were men in both associations who regretted this and thought that, as there were only comparatively a few animals and a few breeders in the country, with such an unlimited field, that the two associations could be united into one and that all the members could work together. Mr. Beuchler attended the fair at Frederick, Md., and there met Dr. F. W. Patterson, a Maryland breeder, then president of the Dutch Friesian Association. They discussed breed problems while sitting on the grass and suggested that small committees from each association meet and go over the questions in dispute. These suggestions were carried by each man to other members in their respective associations and the plan of amalgamation as finally adopted was very close to what was talked over in a friendly way on the Frederick Fair Grounds.

Despite his years, Mr. Beuchler is erect and spry. He spends most of the year in Leesburg but the past ten years he has spent his winters in the south with his sons either at Atlanta or Miami. He still owns the building in which for sixty years he had a baking business but no longer has any financial interest in that business. He ran a dairy until after the world war broke out when help grew scarce and independent. At that time he had four or five men in the dairy and when a man quit he had to turn in and help milk. He said when it got so that the darkies would tell him they "didn't have to" he thought that the time had come when he "didn't have to" and so he sold out. Asked as to the relative quality of white and colored help he said that in northern Virginia the best colored help was better than the white help they were able to get, which was very different from the help working around the dairies in the northern states. At the time

leading Holstein breeders of their own communities.

At the present time J. R. Beuchler is eighty-six years old although he has the vigor generally associated with a man many years younger. During the summer he makes his home at Leesburg with his daughter, Ellen, who is a trained nurse. Another daughter, also a trained nurse, lives in Washington, D. C. He has four

Mr. Beuchler attended the fair at Frederick, Md., and there met Dr. F. W. Patterson, a Maryland breeder, then president of the Dutch Friesian Association. They discussed breed problems while sitting on the grass and suggested that small committees from each association meet and go over the questions in dispute. These suggestions were carried by each man to other members in their respective associations and the plan of amalgamation as finally adopted was very close to what was talked over in a friendly way on the Frederick Fair Grounds.

Despite his years, Mr. Beuchler is erect and spry. He spends most of the year in Leesburg but the past ten years he has spent his winters in the south with his sons either at Atlanta or Miami. He still owns the building in which for sixty years he had a baking business but no longer has any financial interest in that business. He ran a dairy until after the world war broke out when help grew scarce and independent. At that time he had four or five men in the dairy and when a man quit he had to turn in and help milk. He said when it got so that the darkies would tell him they "didn't have to" he thought that the time had come when he "didn't have to" and so he sold out. Asked as to the relative quality of white and colored help he said that in northern Virginia the best colored help was better than the white help they were able to get, which was very different from the help working around the dairies in the northern states. At the time

he sold out, Mr. Beuchler had fifty-six purebred Holstein-Friesians on his farm.

In a general talk, Mr. Beuchler volunteered the statement that while it seemed hard to many Southerners at the time, that it was for the best that the war between the states was decided as it was. Rather than to have two countries occupied by people of similar blood but often with diverse views with possibilities of disagreements, it was far better to have one great united country under one flag and one government.

How well this ex-soldier tackled his problems can be seen by the importance of his farming, breeding and cattle selling operations. He married a Leesburg girl and, besides managing his farms and handling the details of his cattle business, he continued in the baking business and until a few years ago, controlled the principal baking business in the town of Leesburg and, we believe, still owns the building in which his successor operates.

Mr. Beuchler has retained his interest in the breed and the breeders. He believes that a breed association should be controlled by the rank and file of the membership, who should have a direct voice and vote in determining association policies and in the election of officers and directors to manage the association. Like many others who belonged to the association in earlier days and helped to build it, he cannot see why, with proper management, it cannot attend to the business of registering and transferring animals and doing a conservative amount of extension work, and at the same time make a profit or at least break even, especially when the reserve fund, which has been depleted the last three years with a transfer fee of \$1.50 charged most of the time, was built up during the years when a fee of only 25 cents a transfer was charged the members, to transfer, on the Association records, the ownership of animals bought or sold.

Handling the Herd in Hot Weather

By George Leslie

MILKED, turned out and forgotten until next milking—this will be the life of thousands of herds of dairy cattle all over the land from June until October.

Housed in the barns during the cold weather, they are where they must be taken care of; but when the time comes for letting down the pasture bars, there is so much field work to claim every hour of the day that scant attention is paid to the herd.

Not on farms where the herd is a business proposition handled in a business-like way, do we find such conditions, because the owners know it's a losing game that way; but on farms where less modern methods keep the profits down.

There has been a lot of fun poked at Carnation Farms, one way and another, because of their slogan "Milk from Contented Cows"; but the lad who originated it had exactly the right idea as to what cows need to do their best—contentment, or as we would say instead—comfort.

We have four classes of dairy stock to consider—calves, growing young stock, dry cows and milkers—and all of them should be comfortable in the summer in order to accomplish their mission in life—what their owners keep them for—the production of a profitable income.

As the calves are the future herd by natural replacement, they should be kept comfortable so that they may make growth. It is entirely unreasonable to suppose that a calf born in the late winter will grow and thrive turned out when less than six months old to spend its energy in picking a living from the pasture in the hot sun, pestered by flies and often where there is not cool, clean water close by. These young calves will do much better if kept in the barn and exercised in a yard through the summer.

Calves dropped in the fall will do well on pasture in the early summer, but should have some grain if they are kept growing and in thrifty condition. The

supplementary grain is a real necessity for the young heifer carrying her first calf. None of this young stock should be left out continuously to be at the mercy of flies and heat and to suffer thirst. A pasture where there are trees and a brook is more comfortable than an open stretch with no shade and no water, but there are flies to be reckoned with and in the heat of the day the stock is far better off indoors.

Because the cow is dry in the summer is no reason for not keeping her comfortable and well fed. Progressive farmers know that on the care she gets while in this condition, depends largely, her production for the whole milking period. Pasture alone, with its 50% to 75% water, and protein not over 3.5%, won't keep up two bodies and leave anything worthwhile as a reserve to draw on. When the calf is dropped and the dam begins her real work as a milker, she needs at least 5 lb. of grain a day on pasture, and the pasturing should be done at night. Cows milking over 30 lb. should have one pound of a good milking ration to each five pounds milk produced. If we stop and think about it, we must see that it is a tax on a cow carrying a calf, having to wander about a field and crop every mouthful of feed she gets. When, on top of that effort, she has to fight flies and is in the blazing sun for hours at a time, she cannot, by any stretch of the imagination be considered as comfortable.

Keep dry cows, too, in the barn during the heat of the day and let them out at night.

What of the milking herd? These, above all, need summer comfort. They are the working force; they are producing the monthly milk check, and the size of that check will increase or diminish in proportion with their daily yield.

Undoubtedly the majority of them are in calf as well as in milk, but the others, the fresh cows, can be classed with them as part of what we will call the milking herd.

For them the clean, darkened barn, kept as free

from flies as is possible, with cool water at hand, clean dry bedding to lie on when they like—this is summer comfort. Not only is it for the herd, it's profit for the owner. You can prove it. Treat them this way for two weeks and the next two turn them out every day in a shadeless pasture, without water near, and let them work for their feed and see the results in the milk pails!

Barns can be kept comfortable in summer, and with surprisingly few flies, by tacking wire netting—or even black or dark green mosquito netting—on the outside of the windows; while spraying the cows is added help.

Have not most of us seen cows lying down in their stalls in August, around ten o'clock in the morning or two in the afternoon, their limbs relaxed, their jaws working slowly, gently, on their cud, a tail switching here and there,—a beautiful picture of bovine comfort.

And have we not, unfortunately, much more often seen a group of cows, no doubt just as good ones, standing bunched together under a lone tree to get away from the blaze of heat hanging over a pasture field, stamping first one foot and then another, tossing their heads, flicking their sides with their switching tails—but still being bitten by flies where they couldn't reach? How could any man expect animals in such a case to either grow or give any amount of milk?

June, the first summer month, is not so hard on the herds, and they will do well and milk well on pasture then; but June grass and June weather last only thirty days—not ninety-two. July, August and September are of a different stripe altogether; and to keep the dairy herd on grass from May to October in the belief that it saves money is to deceive yourselves to your ultimate loss.

Grass at its best is a twenty-four-hour feed. That is, it milks off about as fast as the cow digests it and does not leave her any residue of flesh. It does, by its early succulence, improve her condition so far as smoothness of coat is concerned and we often take this to mean more than it does. So as said previously, the cow producing over 30 lb. should be given at least one pound of a good ration to every five pounds of milk.

When pastures begin to dry out the milking cow with no grain no longer finds material enough to keep up both her body and her daily yield; so, according to her individual temperament, she either keeps up fairly well in flow and gets as thin as a rail or keeps a fair body condition and drops in her yield. When the latter is the case she loses money for her owner every day until she dries off. This holds good even when she is in the barn on winter feed as no cow who has once dropped off in yield under such under-feeding ever "comes back" in the same milking period.

Authorities agree that the cow which has been on what may be called the "starvation ration" of grass alone all summer will produce 16% less milk through the winter than if she had been fed a liberal grain ration of the proper nutritional value on pasture.

If you have ten cows which average 20 lb. to 30 lb. in the winter, there is, in such a percentage, a possible loss of 30 lb. to 40 lb. a day or 2,700 lb. to 4,320 lb. for the three winter months. This it is fair to

assume would, if prevented by grain on grass, mean profitable dividends on the summer supplemental ration.

Another phase of the question has to do with the added value of a calf whose dam has had a sufficient amount of feed through the summer to give it a strong constitution.

Take it from any angle you will, "grass alone" is a losing proposition.

Important Ruling on Indemnity Payment

PROPER disinfection of the premises on which animals suffering from disease of any kind have been housed is considered, by medical and veterinary authorities, one of the most important helps to prevent the spread of disease. Evidently the Federal Bureau of Animal Husbandry must hold this belief for notices have been sent to its inspectors in charge of tuberculosis eradication in all states to the effect that no federal indemnities will be paid for cattle condemned for reacting to the tuberculin test unless the inspector in charge certifies "that the premises have been properly disinfected and all lawful quarantine regulations have been complied with." Such certification must accompany each claim for payment.

Experience and scientific knowledge both point to the danger of continued tuberculous infection, even after reactors are removed from a herd, in cases where disinfection of premises has been neglected or performed in a half-hearted manner. As a consequence there is the likelihood of more reactors to pay for a few months or years later. This does not appeal to Federal officials as good business nor as the proper coöperation on the part of stock owners for whose benefit the indemnity has been provided.

The far-reaching effect of the decision may be judged from the extent of the tuberculosis-eradication campaign, which in the last seven years has become an extremely important department project. Between half a million and a million cattle are being tested monthly, with the number of reactors running close to 20,000 in recent months. In an average month's work the tuberculin test is applied to the cattle on about 50,000 premises. Consequently the new decision, which is an important step forward in livestock sanitation, will have a far-reaching effect on the livestock industry.

Another Oleo Fight Looming

CALIFORNIA oleomargarine manufacturers will, we are informed, endeavor to have the voters recall the recently re-enacted Oleomargarine Law of that state. They have a body of canvassers going around the state to secure signatures so as to have the recall placed on the ballot at the next state election. The remuneration of these canvassers is said to be 7½ cents for each name written on the petition.

The *Pacific Dairy Review* says that "Oleomargarine is going to get a lot of publicity" during the next year and a half and it may be that the manufacturers figure on getting it back in advertising, even if they lose out in the recall.

A Man With A Vision

OWEN D. YOUNG, chairman of the board of directors of the General Electric Company, is also a breeder of purebred Holsteins and a member of the Holstein-Friesian Association of America, joining in 1907. Mr. Young is commonly credited with having had the principal part in formulating the Dawes Plan which has been a subject of importance in the international financial and political worlds during the past year or so.

Mr. Young has a new hobby—adapting electrical energy to farm purposes. He is interested in the problem from the social rather than the economic standpoint.

"Those of us who left the farm," he says, "left it because of the things which the city men had and we did not have." Farming as a business occupation lost most of its fascination for Mr. Young when he was a small boy and with his father wandered one hot day into the courthouse of Herkimer County and heard some lawyers arguing a case. There and then he decided he would like to have easy work like that to do and when he learned the difference in the income of the lawyers and that of his father his first impressions were confirmed.

Electrical manufacturers have neglected the farmer because until recently there have been no power lines near the farm," Mr. Young declares. "They have confined themselves to the thickly settled communities, where they were within reach of plenty of houses to light or industries to utilize power. Now the power is there, being carried alongside the farm, and the farmer is beginning to ask 'Why can't I have some of this?' Now for the first time it is up to the manufacturer to study and develop this field for the farmer's benefit. It is up to him to satisfy the farmer's needs.

"As for the public service companies, their obligation is no less clear. The original idea of a light and power company was to do a local business under a franchise, with a power plant large enough to serve the city or village. When they first started out their idea was to supply only the large users of light and power. Their engineers applied a slide rule to see whether a prospective customer was desirable from the point of view of consuming current. They didn't want the small fry.

"Then these companies found that the privilege of serving the community meant that they must make the service available to everybody within the community; theirs was not a problem of a particular line, but of a social unit, and of service to every one within that unit. The newsboy living with his mother in a tenement had as much right to electric light as the banker in a fifty-room mansion. This was the social obligation assumed by the companies when they agreed to supply service. This was the social pressure brought to bear on them. And, although it may have happened that the large users of current had to pay more for it, in order that the small user might get it at a rate within reach of his pocketbook, nevertheless the community as a whole was better off. The companies were supplying a great service to everybody, not to a few.

"Now, I have never believed that there was any obligation on the part of these isolated utilities, serving their particular communities, to go out into the country at a loss and serve the farmers, too. But the next step in their development, a step which was economical and in the public interest, was to abolish the little, uneconomic, isolated unit, and to tie fifteen or twenty or more towns into one, served by a single large plant. Consider the economy of this merely from the point of 'spares'; each separate plant, we will say, must have a reserve unit to bring into play in case of accident or breakdown; for twenty isolated plants that meant twenty 'spares,' but for one big plant serving all these cities and towns it meant only one. Great economies of operation were effected in this and other ways.

"In establishing these large plants, serving many communities, high-power currents were carried through the countryside. The companies, having undertaken to serve a larger community, were obligated to serve all the members of that community, just as they were obligated to serve all the members of the village or city. We can't inquire whether farm electrification will pay; we have no right to push that sliding scale too far. The sliding scale can sometimes be used to defeat the ends of social justice. The companies are entitled to a fair return on their capital within the district as a whole, in order that service may be given at reasonable rates to the new people who demand it. This is the new problem; or, if you prefer, it is an extension of the old problem.

"Some political objections have been raised to the extension of electric light and power service over the larger field, but the farmers should be the last to raise such an objection. They should be its chief beneficiaries. They are in somewhat the same position today as that newsboy a quarter of a century ago. Before, nobody was obligated to serve them. Now they are potential customers.

"The authorities controlling electric light and power rates, the companies supplying that service and the manufacturers making machinery for it should coöperate on a program to supply the farmer with all its advantages, and they should coöperate in educating the farmer as to the nature of those advantages. The technical engineers of the manufacturers and of the utility companies must coöperate with the agricultural colleges in order to learn what the farmer needs and how he can best be served.

"The electric light and power companies must now have their agricultural departments, just as they have their industrial departments; and they should have in their service not only men who know the electrical business but those who know farming. It will do no good, as I have observed before, for the power companies to send a man to install a milking machine who doesn't know on which side of the stanchions it belongs. One reason farmers have not been open-minded about the use of electricity is that the electrical industry hasn't been open-minded enough to learn what the farmer really needs. Every element must coöperate

to meet this problem, and every element must coöperate to engage the sympathetic and intelligent interest of the farmer.

"Farmers are the backbone of America. Economically, socially and politically they are this country's anchorage. They are individualists, however, and electrical development means group action. Each farmer should endeavor to develop a general sentiment in his community for the advancement and improvement of his business and a general agreement to take the service when it becomes available on economical terms. He has taken advantage of the automobile and the radio, both of which are comparatively recent developments of electric light and power; and he has probably taken advantage of them because he could do it alone, because it involved individual action, whereas the purchase of light and power for the farm involves group action. He must learn to coöperate if he is to get it."

Owen Young worked on a farm until he was 21 years old, he says in the *New York Times*. The home farm of 120 acres was and is near Van Hornesville, Herkimer County, New York. The farm has been owned by the family since 1750. The present electrical magnate remembers the hard work he did when a boy and believes that much of this kind of work can be done by machinery on the farm as well as in the city. The city man can push a button or pull a lever and instantly almost unlimited power is at his command. When electric power is available for farm use and manufacturers design electrical machinery adapted to farm purposes the farmer will use such machinery if the power rates are made low enough. Farm power is needed in the daylight hours and does not conflict with the use of current for lighting purposes. In the cities the electrical companies have been seeking to create such a demand and it is one that can be filled at a very low cost per electrical unit.

"Electricity," Mr. Young summarizes, "can lighten farm labors and increase farm profits. It will check the exodus of the better type of citizens from the farm. It will make the farmhouse the most delightful home we have in the country."

Morley Goes With A. J. C. C.

PROFESSOR L. W. MORLEY, dairy extension specialist at the Pennsylvania State College, will leave that institution to head the extension and development division of the American Jersey Cattle Club.

Mr. Morley was born in Northern Pennsylvania and reared on a farm where dairying was the major activity. After completing a public school education he taught three years in rural and graded schools. He entered the Pennsylvania State College in 1913 and took a two year course in agriculture. At that time Professor C. W. Larsen, now chief of the Bureau of Dairying, was head of the department. Mr. Morley had the good fortune to take work under Professor E. L. Anthony, now head of the Dairy Department at West Virginia, Professor H. P. Davis, now head of the Dairy Department at Nebraska, and Professor J. M. Sherman, now head of the Dairy Department at Cornell University, New York.

Upon completion of his two year course, Mr. Morley

decided to continue in college work and went to the University of Missouri, attracted there by Professor C. H. Eckles with whose work most breeders are familiar. Both at Penn State and at Missouri he worked during spare time to defray expenses. A considerable amount of time was spent in Register of Merit and Advanced Registry work, in the office handling clerical work and in the field as testing supervisor. Upon completion of his undergraduate work he accepted a graduate assistant position at the University of Missouri in which one-half of his time was spent in study and the other half in teaching.

At the end of the year he enlisted in the U. S. army and received an honorable discharge after the armistice was signed.

Early in 1919 he accepted a position with the Pennsylvania Dairy Extension Department and continued advanced work for a Master's Degree by taking gradu-

L. W. MORLEY

Extension leader for the American Jersey Cattle Club.

ate studies in the summer school instead of a regular vacation. His Master of Science degree was granted in 1921.

Professor Morley has devoted considerable time to the development of better methods in the production of clean milk and farm butter and has assisted plants manufacturing butter, cheese, ice cream and other dairy productions. He has also done considerable work along the lines of practical production, feeding, weeding and breeding.

For the past five years he has been in charge of the Manufactured Dairy Products' section of the State Farm Products Show held each winter at Harrisburg. Exhibits have greatly increased in number, the exhibits in milk alone increasing from two the first year to fifty at the last show. For the past two years he has been chairman of the extension section of the American Dairy Science Association.

Professor Morley's many friends in State College and Pennsylvania will wish him success in his new field where his extensive knowledge will be of great advantage to him in the execution of his new duties.

Kentucky now leads in the "Better Sires—Better Stock" campaign, with Ohio second and Virginia third.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JULY 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Gamblers

THE Holstein-Friesian Association of America, we believe, was established to serve the breeders and dairymen by providing a means of preserving a Herd Register to record the breeding of purebred Holstein-Friesian cattle and issue registration and transfer certificates.

The Holstein-Friesian Association should be an Association of breeders, who conduct the affairs of the Association to serve their interests and promote better dairying through preserving a Herd Register. Yet, the present Association seems to have gotten into other hands.

It has a Board of sixteen Directors, fifteen of whom are not dependent on the returns from their dairy for a livelihood. Several of the Directors are not herd owners nor have they ever been herd owners in their own right. Several of the fifteen Directors who are not dependent on the returns from a dairy for a livelihood, are interested in the breeding of cattle purely as a pastime and a hobby or as a promoting enterprise.

Gambling in purebred dairy cattle is carried on extensively through the aid of forced or exaggerated records and by selling cattle with these exaggerated records and their descendants at consignment sales of a State and National character to create fictitious values which are used in fixing prices of cattle sold at private treaty.

Under the present management and, particularly during the past three years, the Holstein-Friesian Association has been encouraging and supervising the making of forced or exaggerated records to the extent that all previous World's records, with the exception of one, have been exceeded and new records established.

Further, through the Extension Department and the activities of the State-Paid-Secretaries, the Association's funds and influence has been aiding the gamblers in purebred Holstein cattle by promoting, managing and advertising consignment sales of a State and National character.

If those who are engaged in the breeding of purebred Holstein-Friesian cattle for legitimate dairy purposes wish to retain the confidence of the dairy public and enjoy the recognition and prosperity of which they are rightfully deserving, they must divorce themselves from the Gambling, Speculative element that has invaded the industry.

We are not condemning the men of wealth, who, through deception and misrepresentation, have followed false gods and have been "flim-flammed" out of large sums of money. Neither are we condemning the plain breeders and dairymen who have been deceived and swindled and through deception have been plunged into debt far beyond their ability to ever pay, but we are condemning and we shall continue to condemn the "outfit" that is perpetuating this swindle.

Reclamation for Farming Purposes

FEDERAL reclamation of arid lands is an admitted failure from the viewpoint of both the government and the settler," says the Honorable Hubert Work, Secretary of the Interior. "Congress is asking why, in view of general agricultural overproduction and depression, of the many irrigated and other farms now abandoned, of the fact that only nine percent of the sums now owing the government from the sale of irrigated lands has been paid in, more public funds should be appropriated for the development of raw areas? Since raw lands under new projects must sell at around \$100 an acre, why should the land-hungry buy these when farms already under fence and in cultivation with fair houses and essential improvements, nearer town and transportation are offered at \$60 to \$65 an acre on easy terms of payment?"

For at least twenty-five years Congress has been voting large sums of money to aid reclamation projects in arid regions. Much of this money comes from taxes paid by farmers and these taxes aid in establishing competition to the farms already in existence. "Make the desert blossom like a rose" is a popular and appealing slogan, voiced by business men living in the arid regions who naturally are anxious for anything that will increase the population of their territory and so bring in more potential customers. The stories of some of these reclaimed lands read like a romance but in these stories there is much that is overlooked and the stories of regions where the settlers have been unable to make a living are seldom mentioned in the press. Yet when only nine per cent of the sums which should be paid the government for such irrigated lands have been paid there certainly must be something wrong. Any business that had 91% bad debts could not stay in business very long nor could any business exist for long where the payment of 91% of its bills was delayed.

Dr. Work says that even of more importance is the fact that many men and women have struggled unsuccessfully for twenty years in an effort to make self-supporting homes out of these reclaimed lands only to lose everything in a period of low prices. What is just as deplorable is the fact that at the same time unscrupulous promoters have made fortunes inducing settlers from other districts to come in and purchase these lands.

Secretary of Agriculture Jardine, who is also a western man, has on numerous occasions recently expressed a very positive opinion on this subject. Recently at Ames, Iowa, in an address he said:

"In the last few years we have had forced upon us the fact that more expansion in agriculture is not necessarily good. Putting people on land where they cannot make a living and where their products not only bring them no profit but force down the prices for others does not benefit the farmer.

"We have reached the point where we cannot expand our production indefinitely and expect to find profitable markets. We must consider before expanding our agricultural areas what we are going to raise on the new land and what we are going to do with the products after we have raised them."

Congress would benefit the entire country if it refused to vote any money for any reclamation projects until the present depression had lifted in the agricultural industry.

The President's Tax Policy

THE tax program of President Coolidge is announced as follows:—"To cut surtaxes to a maximum of not more than 25%; to cut inheritance taxes to a maximum of 25% and to adopt a program for their gradual abolishment; to cut the lower bracket of income taxes to the extent of the Government surplus left after the surtax and inheritance tax cuts have been made." This is the exact language used in a special dispatch from Swampscott to one of the most reliable of the business newspapers of the United States.

A Serious Problem

THE breeders and owners of Holstein-Friesian cattle who follow dairying as a business are confronted with a very serious problem.

For the past five or six years the management of the Association that maintained a herd register to preserve the purity of the blood of the breed has been taken over by a group of men who are not dependent upon the returns from their dairies as a means of livelihood.

This group of men have brought about many radical changes in the Association. The members have been deprived of their direct voice in electing officers, making by-laws and fixing fees. After the members had been deprived of their direct voice in doing these things, the fees have been exorbitantly increased. Extravagance has prevailed in the Association's management to such an extent that its expenses have exceeded its income by over \$137,000 during the last three years and more than \$56,000 during the last year.

With this condition prevailing, it is only a question of a few years before the reserve fund will be exhausted and the fees to members will have to be further increased.

Not only are the association's expenses exceeding its income but the number of registration and transfer certificates which the association is issuing from year to year is also decreasing. At the present time barely half of the natural increase of the breed is being regis-

tered and properly transferred as estimated from the number of registry and transfer certificates issued for the ten year period from 1910 to 1920.

With the Association running behind financially each year since the political form of government has been adopted and with the tremendous falling off in the number of registration and transfer certificates issued, it is only a question of a few years when the once most prosperous breed association in the world will have been wiped out as a result of personal greed and a desire to exploit the industry and the Association's finances.

The fact that the Holstein-Friesian Association is on the way to financial ruin and destruction is not a theory, it is an actual fact. As stated above, for the past three years it has been steadily running behind, its expenditures being more than its receipts and the decrease in the number of registry and transfer certificates is proof beyond a doubt that the breeders generally are withdrawing their support from the organization. In 1919, the association issued 131,813 transfer certificates, last year it issued 87,680, a decrease of more than 44,000. Think of the thousands of animals that have changed hands during the past five years under the present management that have been sold without the papers; think of the thousands of animals that are eligible to registry and should have been registered but are not being registered because the breeders have no registry association which they can call their own and they refuse to pay tribute to the speculative element that has gobbled up the present association. Including the year ending April 30, 1919 over \$2,664,000 has been expended by the Holstein-Friesian Association. To check this unnecessary drain on the breeders' pocket books, to restore public confidence in the breed by suppressing gambling, speculation and deception, it would seem that the organization of a new association was imperative and the sentiment everywhere is crystallizing into the belief that the organization of a new registry association with sound policies based on business principles is not only a necessity but that its success will be assured and that prosperity will return to the Holstein-Friesian industry.

Beggars in Disguise

WHEN you join a fraternal organization, you are asked to pay your initiation fee and one year's dues. When you join the Grange, you are not asked for more than your initiation fee and one year's dues. But when you join the state Holstein-Friesian Clubs under the Aitken-State-Paid-Secretary-Plan, for example like the State of Illinois where Secretary Clark is in charge, you are asked to pay your first year's dues at \$1 per cow per year and sign a cut-throat agreement agreeing to pay a similar amount each year for the following two years period. Such methods usually indicate the character of the men who practice them. It would seem that all the beggars are not on the street corners shaking tin cups.

To what extent has, or is, the influence of the Holstein-Friesian Association being used to redeem the political souls of the repudiated politicians?

Factors in Clean Milk Production

WITH the object of determining more closely the relative effect of the various factors of milk contamination, a series of experiments extending over five months was conducted recently at the Central Experimental Farm, Ottawa, Canada. In the tests various sources of contamination were considered under a wide range of conditions, the numerous factors being divided for convenience into four classes—care of the stable, care of the animals, care taken by the milker and care of the utensils. By extending the test over a prolonged period, during which bacteriological tests were made of the milk of a large number of cows kept under as nearly identical conditions as possible, results were obtained which indicate different degrees to which various factors contribute to the contamination of milk.

It was found possible to produce a milk of excellent quality without resorting to elaborate and expensive methods. One of the principal sources of contamination was found to be dirt and manure dropped into the pail during milking. Another, improperly cleaned utensils. Even when considerable dirt was floating in the air, contamination was relatively less important.

The state of cleanliness of the milk pail was more important than its form. While an open-top pail was found to result in an increased germ content of 200 per cent, as compared with one with a small opening if the animals were neglected, yet when care was taken with the animals and the udder wiped before milking, very little extra contamination resulted from an uncovered pail. Of much more importance was the sanitary state of the pail. The tests brought out that this factor affected the contamination more than any other connected with the milking. A change from careful scouring and steaming of the milk pail to careless washing resulted in a greater increase in the germ content than to the neglect of any other single precaution. On the other hand, where conditions were what is generally termed unsanitary, a change to proper handling of the pails resulted in a bigger improvement than any other single operative change.

C. T. A. Records Attacked

AT the recent annual meeting of the Holstein-Friesian Association, resolutions were adopted that were apparently intended to throw "cold water" on cow testing association records, at least so far as they relate to purebred dairy cattle. As a result the association is being criticized for its action in the dairy press and by dairy authorities, and the Review believes rightly so. Cow testing associations are here to stay and we are convinced that they are the biggest factor in dairy progress in this generation. Regardless of how they may affect the interests of us as breeders they are going to play a large part in the selection of animals for breeding purpose. As Prof. O. E. Reed pointed out to the Holstein breeders at the meeting, a large percentage of the dairy cows entered in cow testing association are purebreds, and when cows of this class make creditable C. T. A. records their value in dairy cattle breeding becomes an asset that cannot be ignored. Dairy men will

buy bulls from such cows and in the long run they are in all probability as safe in securing a really prepotent sire from cows under practical working conditions as they are from forced and too frequently uneconomical records made by cows under the advanced register system.

It may be true, as the Holstein-Friesian Association resolutions point out, that cow testing is somewhat haphazard, that it is not safeguarded against fraud by proper supervision and that fraud may creep in. We question whether these objections are serious. Dairy men-breeders, who enter cow testing associations, are motivated primarily by a desire to get at the truth as to what their cows are producing and usually high producers are only discovered well on toward the ends of their test years. They do not start their cows out with a preconceived determination to break some record, regardless of what happens to the cow. They are practical dairymen, not plungers.

Anyway, Prof. Reed told the Holstein breeders that it is the aim of the Dairy Association, of which he is the president, to take up the matter of standardizing C. T. A. record work, providing uniform rules and otherwise give them a real standing as a breed asset.—*Pacific Dairy Review*.

Receipts Decrease: Expenses Increase

A RECENT report on finances by the Postmaster General indicates that expenses of the Post Office Department will exceed the revenues by about forty million dollars. This deficit is caused by the employees' pay increase and by a falling off in receipts, particularly from parcel post. Critics of the recent upward revision which took effect April 15, claim that the increased charges are unscientifically arranged. Patrons apparently resent the two cents service charge which amounts to a very large percentage on small packages and short hauls. On packages in which the charges rank from five cents to ten cents, the two cents service charge amounts to from 20 to 40 percent.

Congress, at its next session, will attempt to reduce this deficiency. It cannot very well, at this time, decrease the pay of the postmasters, post office clerks and mailmen and may attempt to raise the rates, regardless of the fact that the recent rate raise has apparently caused a decrease in business.

"Pay and Others Have the Say"

UNDER THE PRESENT DAY METHODS OF CONDUCTING THE HOLSTEIN-FRIESIAN ASSOCIATION THE BREEDERS ARE LEFT WITH NOTHING TO DO BUT PAY AND THE ASSOCIATION'S RESERVE FUND IS GRADUALLY MELTING AWAY.

The Association's expenses have exceeded its income by over \$137,000 during the past three years. To determine how long the Reserve Fund will last is merely a simple division problem.

New Mexico is planning a campaign to test all the cattle within the state borders so as to establish the whole state as a modified accredited area.

Will Hold Big Dairy Field Day

AN Inter-County Field Day will be held on the farm of Ivo V. Otto, Boiling Springs, Pa., Thursday, August 6th. Boiling Springs is a well-known pleasure resort five miles southeast of Carlisle, Cumberland County, Pennsylvania. Dairy organizations from Adams, Franklin, Cumberland, Dauphin, Perry and York Counties will be represented.

The Otto herd is noted for the production of its cows as shown in Cow Testing Association work as well as in official test. This herd consists of forty purebred Holsteins headed by a son of King of the Ormsbys. Several cows in this herd have produced between seventeen and eighteen thousand pounds milk in a year while enrolled in the Cumberland County Cow Testing Association and several have five year records that average above 15,000 lb. yearly.

An eight acre sweet and alsike clover pasture, on which 27 dairy animals, mostly cows, have been pastured continually from May 11th to date, is bound to interest dairymen of south-central Pennsylvania.

After the basket lunch, for which refreshments will be served by the Cumberland County Holstein-Friesian Breeders Association, there will be a speaking program in which short talks will be given by Dr. S. E. Brunner, who represents the Federal Government in Pennsylvania veterinary work, and whose subject is "Why Test for Tuberculosis?"; Jos. Lehman, prominent Franklin County dairyman, who will tell of his experiences with tuberculosis eradication in Franklin County; A. B. Shenk, of Dauphin County, whose address on the market milk situation will be of particular interest to dairymen selling to Hershey; E. B. Fitts and H. G. Niesley, of State College; J. A. Poorbaugh, a dairyman of York County, and Miles Horst, of the *National Stockman and Farmer*. These four will speak on various phases of the dairy industry.

In addition there will be a judging contest. In case of rain, the lunch and speaking program will be held at Boiling Springs Park where shelter is available. This is the most extensive and ambitious dairy program ever attempted in this part of Pennsylvania and is bound to be of interest and great value to all who attend.

A Demand for Cows

RECENTLY we saw eight carloads of dairy cows in one market. They were all reactors, condemned by the tuberculin test in a campaign to eradicate tuberculosis. With the campaigns now in progress thousands of cows must be discarded in the next two years. They must also be replaced if our dairies are to continue their production of milk, and they are going to continue. We can see nothing else ahead than a good market for sound purebred and high-grade dairy cows. For the campaign against bovine tuberculosis is not yet fairly under way. More and more markets are requiring milk from clean herds, and those regions which have not yet cleaned up will be compelled to do so before long.—*National Stockman and Farmer*.

He is the richest who is content with the least; for content is the wealth of nature.—*Socrates*.

League Price News

LEAGUE farmers will receive a net pool base price of \$1.80 for their June milk according to announcement made at the League offices in New York. As this is the base price for 3% milk at the 201-210 mile zone prices to individual dairymen will vary according to location and butterfat differentials. This price includes ten cents for certificates of indebtedness.

This base price for June is 48 cents higher than the average butter value of 100 pounds of 3% milk during the month. It is \$0.295 higher than the average June pool price received by members of the association from 1921 to 1924 inclusive.

Announcement is also made by the association that the selling price of Class I, or fluid milk, will be increased from \$2.33 per 100 pounds to \$2.80, effective July 20th.

Edison on Farm Life

WHAT do I consider the nearest approximation to happiness of which the present human nature is capable? Why, living on a farm which is one's own, far from the hectic, artificial conditions of the city—a farm where one gets directly from one's own soil what one needs to sustain life, with a garden in front and a healthy, normal family to contribute those small domestic joys which relieve a man from business strain.

Recently an aeroplane delivered a bottle of milk in Atlantic City, New Jersey, the contents having been drawn 48 hours before from the udder of a Californian cow. The contents of the bottle were tested and found to be as sweet, pure and cool as milk produced that same morning in the vicinity of Atlantic City.

We understand however, that the Atlantic City dairymen are not yet worrying over California competition.

Money talks, but to most people it lisps and stutters in words of one syllable.

NOT ABOUT COWS

Men and Chairs

"MEN are like chairs," writes a woman in a foreign exchange; "they vary in shape and size, but all can be sat on. Some men are like mahogany chairs; they lose their polish after a little while. Some are like Chippendale chairs; they need delicate handling. Some are like plush upholstered chairs; one cannot stand them on a hot day. Others are like parliamentary seats, they have to be won. Some married men are like deck chairs; they are always being dragged about. Some are like rocking chairs; they put you to sleep. And finally, some men are like benches; it takes more than one woman to sit on them—a wife and a mother-in-law."

Salads

"TO MAKE a perfect salad there should be a spendthrift for oil, a miser for vinegar, a wise man for salt, and a madcap to stir the ingredients and mix them well together." Spanish proverb.

In former years, the French people were noted as salad makers, but now Americans hold first place because of the great variety of fruits and vegetables obtainable the year round. If properly made, no dish is more wholesome or more appetizing than a salad, and a good luncheon may be made on a salad and bread and butter. If a supply of salad dressing is kept on hand, it is not much trouble to serve salads and often is a good way to use up odds and ends.

ITS VALUE ON THE MENU

It is said that, as a nation, we eat too many sweet salads and not enough green ones. Since the discovery of the elusive vitamin, scientific authorities on proper foods and feeding have stressed the value of uncooked green foods, of which we eat far too few. It would be wiser for many housewives to add a salad to their meals and to omit the rich dessert which is usually served.

A taste for wholesome green foods may be cultivated, and should some member of the family not care for them at all, they may be coaxed into it, by the use of a favorite fruit or vegetable at first, gradually adding others until a wider taste is established. The addition of such a dish to the family menu may prevent the eating of more indigestible food.

A FEW GENERAL RULES

Salads should be crisp and served daintily, for nothing is worse than a messy looking salad. Vegetables may be crisped by being placed in ice water, then wrapped in a damp cloth and placed in a cool place. In combining a vegetable salad, it should be stirred as little as possible, so that the freshness may be preserved until it is served.

Some salads, especially fish, are much improved by

marinating. About two hours before serving, treat with one part oil, three parts vinegar or lemon juice, salt and pepper. In making fruit salads, substitute lemon juice for vinegar as it keeps the fruits from discoloring.

To cut turkey, chicken, celery and meats of any kind, use shears instead of a knife as it is easier and the food looks better. Have all ingredients dry before mixing and serve as soon after mixing as possible. Heavy meats such as beef, pork or veal should be followed by simple vegetable or fruit salads, made with simple acid dressing. Light meats such as chicken, lamb or tongue may be followed by more elaborate vegetable and fruit combinations, with a less acid dressing.

Avoid the use, in the salad course of a vegetable used in a previous course or a fruit that may be followed in a dessert, and do not mix too many fruits.

Hard boiled eggs combine well with fowl, fish and vegetables. Cheese combines well with nuts and some fruits and vegetables but none of these should be used in a salad with heavy meats.

THE SALAD AS A MAIN DISH

If the salad is to form the main dish of the meal, or is to be served at a party as a main course, all sorts of fish salads may be served, crab, shrimp, lobster, and tuna fish being the favorites. Chicken salad is always good and nearly every one likes it. If a fruit salad is to be used as a main dish, it should contain filling fruits such as bananas, grapes, oranges and pineapples. One may make as many combinations as will appeal to the taste.

SALAD DRESSINGS

Salad dressings are variations of three types—the French dressing, made of oil, vinegar and seasonings; the cream dressing, made of oil, vinegar, egg and seasonings and cooked; and mayonnaise, made of uncooked oil, vinegar, egg and seasoning.

The first should be used in acid salads, with simple meats, fish, vegetables and fruits. The second may be used when a richer combination is desired. If sweetened, or combined with whipped cream, it is particularly suited to sweet-fruit refreshment salad. The last is for elaborate meat, fish, vegetable, or fruit combinations, particularly salads which are substantial, or refreshment salads of meat or fish.

FRENCH DRESSING

Put four tablespoons of oil in a bowl; add three tablespoons vinegar, one teaspoon salt, one quarter teaspoonful white pepper. Stir this five minutes. Use for dressing lettuce, tomatoes or cooked vegetables.

COOKED SALAD DRESSING

One cup vinegar, two whole eggs or three yolks, three teaspoons sugar, two teaspoons mustard, two teaspoons flour, one teaspoon salt, a little pepper. Mix

dry ingredients, beat the eggs until smooth, add one cup water, and pour the hot vinegar over the mixture, return to the fire and cook.

MAYONNAISE DRESSING

One-half teaspoon each of salt, mustard and sugar. One-eighth teaspoon cayenne pepper, one egg yolk, two tablespoons vinegar, one cup of olive oil. Mix the mustard, sugar, salt, and cayenne pepper with the unbeaten egg yolk. Stir until smooth. Heat the vinegar and add the oil, drop by drop, until the mixture begins to thicken. Then add the remaining oil as rapidly as it can be beaten in.

SYDNEY SMITH'S WINTER SALAD

Two large potatoes, passed through kitchen sieve, Unwonted softness to the salad give;
Of mordant mustard, add a single spoon—
Distrust the condiment which bites too soon
But deem it not, though made of herbs, a fault
To add a double quantity of salt.
Three times the spoon with oil of Lucca crown
And once with vinegar procured from town.
True flavor needs it and your poet begs
The pounded yellow of two well boiled eggs.
Let onion atoms lurk within the bowl
And, half suspected, animate the whole;
And lastly on the favored compound toss
A magic teaspoon of anchovy sauce.
Then, tho green turtle fail, tho venison's tough,
Tho ham and turkey are not boiled enough—
Serenely full, the epicure shall say
"Fate cannot harm me, I have dined to-day."

A little library, growing larger every day, is an honorable part of a man's history. It is a man's duty to have books. A library is not a luxury, but one of the necessities of life.—Henry Ward Beecher.

The love of power and the love of liberty are in eternal antagonism. Where there is least liberty the passion for power is the most ardent and unscrupulous.—John Stuart Mill.

The ability to choose wealthy parents or fall in love with an heiress or marry her anyhow, or being a successful retired politician, does not necessarily qualify a man to be a director of any kind of a business enterprise.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

CLUB ACTIVITIES

CALIFORNIA STATE ASSOCIATION PARTICIPATES IN PUBLIC SALES BUSINESS

An additional step in the process of tying the state associations to the sales business was taken by the directors of the California Holstein-Friesian Association at their meeting at Fresno, June 23, when all except four of the fifteen directors were present.

For a number of years the large advertised sales in the state of California have been managed by the California Breeders' Sales and Pedigree Company which was organized a number of years ago by a group of owners of large herds. C. L. Hughes, who had been employed by an agricultural paper, was engaged as secretary and salesman. Later on Mr. Hughes was elected secretary of the State Breeders' Association.

Although the California Holstein-Friesian Association has a balance of more than \$4,000 in the treasury it was thought advisable to find ways and means of raising more money. It was the unanimous opinion that increasing membership fees would result in a falling off of the membership, while any revenue plan based upon a charge per head on the animals owned by members was said to be impractical and to have proved a failure wherever attempted. Therefore, some other means of raising money had to be sought.

It was the opinion of those at the meeting that the best possible plan considered was one that would link up the association with the public sales of the breed. As said above, the larger sales in the state have for a number of years been managed by the California Breeders' Sales and Pedigree Company of which Mr. Hughes was secretary and sales manager. It was brought out that early in 1924 Mr. Hughes had purchased the interest of the other stockholders and had been sole owner of the company since that time.

An agreement was made between Mr. Hughes and the directors whereby the state association should officially stand back of all auction sales managed by Mr. Hughes and the association should participate in the financial returns from such sales. New contracts were drawn up and will be used by Mr. Hughes in all the sales which he personally directs and manages.

THREE CONTRASTING HOLSTEIN FARMS

Twenty-seven members of the Marinette County Holstein Breeders' Association took an auto bus trip, visiting Holstein farms in Brown and Door Counties, Wis. The trip was taken June 15 from 7:30 in the morning to 11:30 in the night and covered 248 miles.

The first stop was at the Brown County Asylum Farm near Green Bay. On this 700 acre farm, seventy-five head of

PRODUCERS AND CHOICE INDIVIDUALS

Remember that this is an Accredited Herd; that the cattle of this entire county, when recently tuberculin tested, passed 99.2% Clean, and that this herd has always been headed by high class bulls.

Can spare a few good ones raised here.

L. S. BROWN

Saegerstown, R. D. 1,

Crawford Co., Pa.

milk cows and seventy head of young stock are kept all the time.

The pride of the herd is the junior herdsire, Ambassador Della Forbes, now two years old. He is a good individual. His dam, Princess Della, has a 38 lb. seven-day butter record with 1,088 lb. in a year. The show cow of the herd is De Kol Canary Dot with a seven-day official butter record of 26 lb. and 954 lb. in a year.

After dinner the big bus started for the farm of Joe Schneider a few miles further north. Mr. Schneider's herd shows what an average farmer can do to build up a producing aggregation with plenty of alfalfa hay and a cow testing association. Four members of this herd have produced over 300 lb. butterfat in seven months of testing.

The Murphy Farms at Egg Harbor contain 1,000 acres of which 150 are in cherries and 75 in apples. The Holstein herd contains animals purchased at long prices and there are a number of very fine individuals to be seen there. The breeders were especially interested in nineteen yearling heifers sired by Pride of Sir Piets, their remarkable uniformity caused much discussion.

The officers of the Marinette County Association are W. B. Sanderson, president; H. B. Sanderson, vice-president; and R. M. Smith, secretary and treasurer. These with County Agent Drewry planned the trip and are responsible for much of its success.

HEAR GOOD SPEAKERS

A community picnic was held June 13 at Elmwood, Wis., and was well attended considering the condition of the roads.

State Highway Commissioner J. T. Donaghey explained the state road law and told how the different appropriations were divided for different systems of roads. Dean H. L. Russell of the Wisconsin College of Agriculture told of dairying in New Zealand and showed how dairymen of this country can compete with the New Zealanders if they use some of the methods used in that far distant country.

The Pierce County Holstein Breeders' Association met in the afternoon and the following officers were elected for the ensuing year: President, Chas. Federly, Elmwood; secretary, Henry Johnson, Spring Valley; treasurer, Emil Rasmussen, Spring Valley; directors, Ole Jacobson, Spring Valley, Leter Batho, Plum City, Harry Rasmussen and Lawrence Nelson, Ellsworth. A committee was selected to ascertain the advisability of sending out another county show herd this fall.

KOSSUTH COUNTY BREEDERS PICNIC

The Holstein breeders of Kossuth County held their annual picnic on the farm of A. E. Woltz near Burt, Ia., June 18. There were 110 present at the dinner for which M. P. Christensen the Algona buttermaker, furnished cottage cheese and chocolate milk free.

President R. H. Walker of Swea City, introduced the speakers of the day. State Calf Club Leader Floyd Johnston told instances of where calf club boys had been instrumental in getting their fathers started in better stock. Mr. Johnston also gave a judging demonstration. County Agent Frank Barker spoke on the merits of the dairy cow and her contribution to the prosperity of the dairy farmer. Harry Gleim of Webster City, talked on the three essential points in dairying which he said were type, production and the herdsire. He advised his hearers when they were selecting a herdsire to see the dam and be sure she was of the proper type.

Here lies the body of John McPlunk,

He died digesting the vitamin bunk.

He studied and read—his poor head abuz,

But he never could learn what a vitamin wuz.

CRAWFORD COUNTY DAIRY SHOW

The three days show staged by the dairymen of Crawford County, Pa., at Cambridge Springs, June 23 to 25 inclusive was a notable event. In all 193 head of cattle were exhibited. In the Holstein classes, Harry McCullough of Saegertown, won first with his aged bull with L. S. Brown second. The senior yearling bull owned by O. I. Martin won first in his class. First in the junior yearling class was won by Merle Ongley of Centerville, while Royden Carpenter of Townville had the first prize bull calf, Merle Ongley's animal being second. O. I. Martin had the first prize aged cow, Merle Ongley had second, R. C. Jackson of Meadville had first prize three-year old and second two-year-old, the animal owned by Leon Maryott of Guys Mills being first. G. A. Belknap of Conneautville had the best senior yearling with R. C. Jackson second. O. I. Martin had the best senior heifer calf, Frank Jones of Centerville being second, and Merle Ongley won first prize for junior heifers. The grand champion bull was owned by Harry McCullough while the grand championship for females went to the three-year-old heifer owned by R. C. Jackson. The judges were Professors Borland and Brownell of Pennsylvania State College.

About 175 attended the dairy banquet on Wednesday evening. Mayor L. G. Conroe was toastmaster while the speakers were the Honorable Frank P. Willits, State Secretary of Agriculture, who was present the entire three days of the show; J. M. McKee, Deputy Secretary of Agriculture; A. A. Borland, of State College; L. H. Dennis, head of the State Agricultural Vocational Department; E. S. Bayard, editor of the *Stockman and Farmer*; J. M. Palmer of the Erie Railroad Extension Bureau; and Senator Frank P. Miller. An address on "The Boy of Today, the Farmer of Tomorrow" was made by O. I. Oosterhuis.

Prof. Barnhart of State College announced the winner of the calf club exhibition which was staged that afternoon. Lee Martin, whose head scarcely reached the table, won the first prize in the Holstein classes, which was \$5 and a bull calf given by the Carnation Milk Company, also a medal which will be given by the Holstein-Friesian Association of America. Margaret McCullough won a prize of a pair of silk stockings for the girl showing the best Holstein calf. The merchandise prizes were given by the business men of Crawford County and the cash prizes by the National Bank of Cambridge Springs.

A consignment sale was held during the week and forty-one animals, purebred Holsteins and Guernseys, were sold. Holstein cows averaged around \$150, one cow and her calf bringing \$395. The price for Guernseys ranged lower.

COMING CHESTER COUNTY FAIR

The 21st annual Chester County Fair will be held at West Chester, Pa. September 9-12 inclusive. Entries for the cattle exhibit close August 27. All animals shown must be tuberculin tested. This fair offers liberal money prizes for an exhibition of this kind there being 16 classes and three prizes given in every class. Ribbons are donated by the Holstein-Friesian Association of America. For the grand champion Holstein-Friesian male and the grand champion female silver cups will be given by the Chester County Holstein-Friesian Breeders' Association, and the Pennsylvania Federation of Holstein-Friesian Clubs donates premium rosettes in each of these two divisions. For the championship the entrance fee is \$5.00 and the exhibitor of the prize winning animal takes this sweepstakes.

ANNUAL BLUE EARTH COUNTY PICNIC

The annual picnic of the Holstein breeders association of Blue Earth County, Minn., was held June 24, at Madison Lake. Nearly 1,000 successfully bluffed the weather man. The previous day had been rainy and it continued to rain in the morning but cleared off. The town of Madison Lake honored the breeders by the business men closing the doors at one o'clock and the entire town attending the outing headed by a band.

One of the amusing features of the parade was an imitation of an old-time ox team. The team consisted of Jerry and Dan, eight months old Holsteins hitched to a two wheeled cart. The three boys of John Fasnacht, Clement, James and Ernest,

worked all the day previous breaking the animals to the yoke and the three were on the job during the parade. After the judging contest, the two calves carried a red and a white ribbon on their neck yokes.

After dinner speeches were made by Charles F. Collisson of the *Minneapolis Tribune*; Robert Geiger and Herbert Sohre, secretary of the Association; as well as County Agent L. A. McMillan.

Hugo Schroeder of Owatonna gave a talk on judging, using the exhibited cattle as examples.

BULL RACING AS A SPORT

One of the most interesting events at the annual picnic of the Waupaca County Holstein Breeders' Association which was held on the Christenson Brothers Farm, near Royalton, Wisconsin, June 23, was a bull race. A number of bull calves about 8 to 10 months old that never before had a rope or strap on them were each given to two boys and the teams had to make their charges go from one given point to another. This created much excitement for some of the animals refused to run at all and others wanted to go all over the farm. The event had been greatly advertised and no one excepting the organizers knew its nature. The first prize was won by Ed. Hayes and John Kelley of Royalton; second prize by Fetzer Bros. of Manawa; and third prize went to Gordon Grinnud and Wilbur Larson of Waupaca.

The speaker of the day was the Hon. W. H. Hatten of New London while short talks were given by Rev. R. Richardson of Waupaca and C. B. Stanley of Clintonville. There were about 400 in attendance and they were greatly interested in looking over the Holstein herd and the model barn.

Christenson Brothers have reason to take pride in what they have accomplished for it is now about thirty years since they came from Denmark and started working by the month for farmers around Waupaca. Today they own one of the best herds and farms in the community.

WASHINGTON COUNTY DAIRY FARMERS' PICNIC

A joint picnic was held by members of the cow testing association and bull association of Washington County at the farm of W. Lee Cowden, Hickory, Pa., on June 23. Mr. Cowden is president of the cow testing association. The oratory was furnished by Professor Bucknell of the Pennsylvania State College and County Agent E. H. Fulton. About 200 dairy farmer folks had a splendid day. The good ladies furnished an old-fashioned picnic dinner of fried chicken, biscuit, pie and cake of several kinds and helpings together with ice cream, lemonade and coffee. In sending in this information that good breeder and dairyman, Jim Paxton of Houston, asks, How does that sound to a city editor?

The Paxton herd will be seen again at the fairs this fall. The grand champion cow, Daisy Dalzell Mercedes Belle 4th, is showing that she can produce as well as win premiums. She has just finished her seventh month in milk and has produced 10,900 lb. so far on two milkings a day. Her production at Pittsburgh wholesale selling prices has a total value of \$245.53 at a feed cost of \$85.93, giving the Paxtons a profit over the cost of feed, of \$155.60. Last November she dropped a very handsome bull calf which will be shown at the fairs this fall.

SWOBODA TALKS ON MARKETING

A Holstein picnic was held June 28 on the farm of Albert Johannes, Two Rivers, Wisconsin and attended by a large crowd. Elton Morgan of Cato won first prize in the dairy cow judging contest and Edward Zimmer of Cleveland first place in heifer judging.

Frank Swoboda, manager of the Plymouth Cheese Federation was the principal speaker and his subject was Marketing Farm and Dairy Products.

A large quantity of bottled Holstein milk was sold to the picnickers by Charles Aschenback of the Alverno dairy.

The prize optimist has been defined as the person who first suggested it would be necessary to amend the Constitution to keep boys and girls from working. Any parent will agree to this statement.

HEUVELTON DAIRY SHOW

The annual cattle show at Heuvelton, New York, was staged June 24. At least 1,000 people were in attendance. To put on this show the St. Lawrence County Farm Bureau, the local breeders associations and the merchants of Heuvelton and Ogdensburg coöperated while cattle were brought from Norwood, Potsdam and Madrid. The judging was staged in the main street at Heuvelton.

B. T. Steele, of Heuvelton, won the Model Dairy Company cup for champion bull and the Larrowe cup for produce of dam, the Holstein Club cup for best heifer of this breed, born since Nov. 1, 1924, and also the C. W. Blood cup for best Holstein calves from one sire but different dams. First prize in the class for yearling bulls and for four-year-old cows was won by the exhibits of R. M. Thompson, of Heuvelton. E. E. McClure, of Heuvelton, won the Dr. Mulholland cup for championship for females and also \$5 in gold offered for the best grade cow of any breed.

J. B. Armstrong won the first prize in class for three cows in milk open to all breeds, the exhibit of B. T. Steele being second. The cattle were judged by Professors Crandall and Allen, of Cornell University. B. W. Brasie, of Morristown, M. H. Streeter, of Gouverneur, and John Thompson, of Madrid.

POLK COUNTY BREEDERS PICNIC

About two and a half miles west of the Lykens creamery is the Tip Top Farm of which James Hoey of St. Croix Falls, Wisconsin, is the owner and manager. The annual picnic of the Polk County Holstein Breeders' Association was held here.

E. B. Remund was first in the stock judging contest and won a two year paid up membership in the association. Arthur Jensen was second, winning a one year membership.

Teams from three schools competed for the silver challenge cup. The possible high score was 1,200 points, St. Croix Falls was first with a score of 958.92, Frederic second with 935.82 and Milltown third with 883.81. As this is the second year the St. Croix boys have won first honors they are now entitled to permanent possession of the cup.

Talks on judging were given by Jerry Riordan, fieldman for the Wisconsin Manufacturers Association and A. O. Colentine of the State College of Agriculture.

SCHOOL JUDGING CONTEST

The St. Croix Holstein Breeders' Association held its annual picnic June 26 on the C. H. Johnston farm near Roberts, Wisconsin.

A high school judging contest was staged between three teams of three members each who competed for a silver loving cup that

becomes the permanent property of the school winning it three times. This year the Roberts boys won first place, Ellsworth second and New Richmond third. Ellsworth won first last year.

The speakers were Charles Collison, a newspaper man, and Joe Murphy, both of Minneapolis. There was a large crowd which was greatly interested in the animals owned by Mr. Johnston.

HOLSTEIN CALF CLUB ROUND-UP

A Holstein calf club round-up was held on the J. L. Wood farm at Red Hill, Pa., June 24. Oren Woodward won first place with his calf, the prize being a silver loving cup, last year's winner, Homer Bieler, was second this year, David Wood third and John Frommer fourth. The official judge was G. A. Burdick.

Former county agent A. K. Rothenberger spoke on the importance of health of farm animals and F. F. Huber of the Pennsburg Bank, on the advantages of country life as compared with city life.

SCRUB BULL FUNERAL

A scrub bull funeral was the principal entertainment at the first annual picnic of the Buchanan County Holstein Breeders' Association held June 23 on the farm of S. E. Meythaler near Oelwein, Iowa. J. N. Spencer of the State Extension Service preached the funeral oration and a ladies quartet sang a mourning hymn. Other speakers were, Floyd Johnson, field secretary of the Iowa State Dairy Association, county agent L. A. Walters and H. W. Gleim.

EXTENSION WORK

Thirteen purebred heifers were distributed to members of the Spencer County Heifer Club recently. There were six Holsteins which were secured from Waukesha County, Wisconsin. The club is financed by the First National Bank of Rockport, Ind., and is sponsored by the Spencer County Dairy Breeders' Association. It is planned to have the members exhibit their animals at the Spencer County Fair next fall.

BIG PICNIC CROWD

The fourth annual Lafayette County Holstein picnic was held on the Winn farm near Wiota, Wisconsin, June 18. There was a big attendance and the weather was ideal. The speakers were President William J. Martin, Frank Everson, Judge J. B. Simpson, Rev. Wallace Essingham, Secretary O. C. Munson and H. D. Schreiter, secretary of the White Fair.

SUPPLEMENT PASTURE WITH GRAIN

Pastures are so variable in their nutrient content during the different periods of the pasture season that some supplementary grains must be fed and should be balanced to suit these conditions. During the early pasture seasons when the grasses are fresh and tender they carry a much higher protein content than during the later months of their growing period. Therefore the grain rations recommended for feeding with high protein roughages should be used as supplements until the grasses begin to mature, which is usually in the early part of July. At this time the grain rations should be increased in protein and the combinations suitable for medium high or low protein roughages should be used, depending upon the condition of the pasture. In late summer when the pastures are short and dry because of dry hot weather, feeding practices similar to those followed during the winter are advisable. J. P. LAMASTER.

THIS LOWERING OF VALUATIONS

Any movement that can lower taxation of farmers, and people of the towns and cities as well, is to be commended. But we fail to see how lowering the assessed valuation of property, be it real estate or chattels, is going to lower the amount of taxes unless there is a lowering of the things and conditions that call for tax money. Until some of these costs of government, whether they be federal, state or municipal, are reduced any lowering of the assessed valuation of property will simply and inevitably mean raising the rate of taxation. The tax rate must always be high enough to meet the expenditures for which tax money is used.—*Sioux City Live Stock Record*.

DAIRY CATTLE CONGRESS

Club work will be made a big feature of the Sixteenth Annual Dairy Cattle Congress which will be held at Waterloo, Iowa, September 28 to October 4. The junior program is usually emphasized at the Dairy Cattle Congress. This work has grown to great proportions. In 1922, forty-seven calves were exhibited while in 1924 the number had increased to 129. In addition to the calf club show the junior program will include a judging contest and a demonstration contest. Club camps for boys will be maintained on the show grounds under the supervision of the Y. M. C. A. while the girls will be cared for in a dormitory.

A quack doctor was holding forth his medicines to a rural audience.

"Yes, gentlemen," he said, "I have sold these pills for 25 years, and never heard a word of complaint. Now, what does that prove?"

Voice in the crowd—"That dead men tell no tales."

MILK THAT KEPT

At the recent meeting of the Medical Milk Commissions and the Certified Milk Producers' Association held at Atlantic City, milk eleven days old, taken from cows on the Adohr Farms at Los Angeles, California, was served at the banquet. It had been shipped across the continent in a thermos bottle and carried by the United States Airplane Mail Service. In the competition it won first prize with samples from two score other dairies. The second prize went to milk exhibited by the International Correspondence School at Scranton, Pa.

A MATTER OF OPINION

Whether Harry Thaw is insane or ever was insane is a question about which there are different opinions. The holders of these opinions may find confirmation of the same in Mr. Thaw's actions after he was once more set at liberty. It is said that he purchased a farm near Winchester, Virginia, in the world famous Shenandoah Valley. This act might be an indication of sanity or one of lunacy. It depends a great deal upon conditions and the state of mind not only of the purchaser but also of the critic.

The Ford Motor Co. has been manufacturing Fordson tractors in England for about eight years and produced the 500,000th car on May 21. When the factory was first started only three or four tractors were produced each day. At present the output is 400 daily and it is claimed that thirty-one hours and eight minutes after iron ore has arrived at the factory it is converted into Fordson motor blocks and the blocks assembled into Fordson tractors. The first 5,000 Fordson tractors manufactured in Great Britain were purchased during the war by the British government for plowing up grass land in order to grow food crops.

Waitin foh de sunshine
When de sky is gray;
Whinin' an' a-pin'in',
For de blues to go away.
See de water trickle
Down de window pane,
Wish dat it would hurry 'long
An' nebber come again.
Wishin' foh de rain storm
When de drought comes round,
Wonder why dat sunshine keep
A-dryin' out de ground;
Better stop dis kickin',
Doesn't help a bit,
Kin' o' weather what you has
Is all you's gwinter git.

KING PIEBE OF YORK 20TH

heads our herd. His dam in 10 months produced 16,198.2 lb. milk, 648.73 lb. butter. His sire is a show bull and sire of show ring prize winners, is by Piebe Laura Ollie Homestead King from a 1,032 lb. year record daughter of King Segis Pontiac Count.

This herd is ACCREDITED. The cows are not only big producers but are also high class individuals.

You will be pleased with stock you get here.

Herd Accredited.

Cow Testing Association Reports

OUTSTANDING PRODUCTION

The purebred Holstein herd owned by C. W. Henry of Greeley, Colorado, led the Johnstown Testing Association for the recently ended testing year by averaging 11,289 lb. milk, 385.2 lb. butterfat. The 18 cows of this dairy averaged to earn \$180.60, of which \$74.23 was net profit over the feed cost. The 15 cow Holstein dairy of Van Meter and Krebill of Loveland averaged 11,088 lb. milk, 361.7 lb. butterfat. The five leading herds for milk production, for fat production and for profit over feed cost consisted of Holsteins. The 14 Holsteins owned by the Reid Brothers of Platteville averaged a profit of \$112.19. Reid Brothers herd made butterfat at a cost of 17c per pound.

A Holstein owned by Harry C. Brown of Greeley was high producer with a record of 19,534 lb. milk, 617.1 lb. butterfat. Korndyke, owned by Weigandt and Stewart of La Salle was second for fat with 571.6 lb. and Jessie, Holstein owned by Stewart and Gwinner was second for milk with 17,204 lb. The five leading cows for butterfat production and the five leading cows for milk production were all purebred Holsteins. This information was compiled from the testers' reports by the State Dairy Commissioner.

WASHINGTON COUNTY C. T. A.

Every herd in the cow testing association of Washington County, Pa., is headed by a purebred bull. The organization has 25 members owning about 400 milk cows. Fourteen herds are Holsteins, mostly purebred, three herds are purebred Jerseys, one is purebred Shorthorn and seven are of mixed blood. Twelve herds are federally accredited and three others are

tuberculin tested. During the first six months registered Holsteins held first position four months, a registered Jersey was high cow two months. No less than 100 cows have produced either 6,000 lb. milk or 200 lb. butterfat during this period.

For May purebred Holsteins held first and second position as well as fourth. McClelland Brothers owned the leader with 74.2 lb. fat from 2,182 lb. milk, J. P. White and Son owned one with 74 lb. fat and 2,000 lb. milk, R. L. Carter and Sons one with 65.3 lb. fat and 1,814 lb. milk while W. Lee Cowden had three on the honor list, one with 61.2 lb., another with 57.9 lb. and a third with 57.2 lb. The McClelland herd consisting of fourteen purebred Holsteins was first for both milk and fat with 1,290.4 and 42.76 lb. A. W. Mawhinney has six purebred Holsteins that average 1,248.8 lb. milk, 39.45 lb. fat. All members are feeding some grain with their pasture this spring and several are sowing a soiling crop to feed their cows this coming fall.

WISCONSIN TESTING

A purebred Holstein herd, owned by A. M. Chrislaw, headed the Brill-Angus Association which ended its year's work June 1. The average of this herd of thirteen cows was 11,451 lb. milk, 384.61 lb. fat. The 23 herds under test last year averaged 6,817 lb. milk, 294.23 lb. fat. Augusta of Clover View produced 12,989 lb. milk, 521.5 lb. fat, and Johanna Maid of Wickfield 12,648 lb. milk, 467.6 lb. fat. Both are members of the Chrislaw herd.

For the sixth consecutive time the registered Holstein herd owned by H. Weiner & Sons headed and went above the 40 lb.

fat average in the Portage Testing Association. Bess Burke Ormsby DeKol was the highest producer and is credited with 2,297 lb. milk, 89.6 lb. fat in the 31 days of May. She was milked twice daily.

Bess, a purebred Holstein owned by C. A. Mayer, headed the Slinger C. T. A. for May by producing 2,232 lb. milk, 82.5 lb. butterfat. The ten Mayer cows averaged 1,304 lb. milk, 48.6 lb. fat.

A registered Holstein owned by Westphal Brothers headed the La Grange C. T. A. by producing 64.8 lb. fat, 1,907 lb. milk. The Ray Thayer herd of 28 grade Holsteins averaged 37.4 lb. fat.

Sue, a registered Holstein owned by B. W. Ayres of Gilmanton, headed that association by producing 75.9 lb. fat from 1,897 lb. milk during May. Tester W. E. Acker says that twelve milking machines are being successfully used in his association.

A DAUGHTER OF K. S. P.

R. M. Skillen, of Greene, Iowa, had the highest producing cow in the Butler County Cow Testing Association during June. Queen Una Jewel, a daughter of King Segis Pontiac freshened April 28 and during June gave 2,247 lb. milk which contained 85.4 lb. butterfat. She was milked three times a day and her profit above feed cost was \$25.29.

The high herd consisted of eight high-grade Holsteins owned by John Kouken, of Plainfield. They averaged 38.4 lb. fat, 1,187 lb. milk.

There were twenty-nine herds in the Association and 302 cows were tested last month. Their average production was 27.4 lb. fat, 725 lb. milk.

MICHIGAN TESTING

A herd of twenty grade and purebred Holsteins owned by Hansen and Merner of Cedar Falls, Iowa, led the Pioneer Testing association during the past month by averaging 51.8 lb. fat, 1,448 lb. milk and returning \$3.45 for each dollar used for feed. A member of this herd, a three year old grade Holstein, was high cow with a production of 65.5 lb. fat, 1,770 lb. milk. Her profit above feed cost for the month was \$26.24.

Glenn Luther, tester in charge, says that the men who turned their cows on pasture in May without feeding grain got a big return and low production costs for that month but in June they had a big slump in milk and a raise in production cost. The men who feed grain and silage with their pasture are getting large enough returns to make up for the extra costs with a prospect of larger profits the rest of the summer.

The May report of the Ionia-Lake Odesa Testing association showed that the best herd consisted of five purebred Holsteins owned by Voight Figg with an average of 53 lb. fat, 1,402.4 lb. milk. The eleven purebred Holsteins of the Lakeside Dairy averaged 47.4 lb. fat, 1,405 lb. milk. The average for the 253 cows on test was 33.8 lb. fat, 906 lb. milk. One of the cows owned by Voight Figg produced 85.6 lb. fat, 2,139 lb. milk while a grade Holstein owned by Harry Van Dyke of Clarksville, Mich., has produced 397.4 lb. butterfat in six months.

IN ALLEGHENY COUNTY

A purebred Holstein owned by Glass Brothers, of Bulger, Pa., led the Allegheny County Testing Association for June by producing 69.3 lb. fat, 2,301 lb. milk. Grizzella, owned by W. S. Chamberlin was second for both milk and fat with a production of 68.58 lb. fat, 1,905 lb. milk. The Chamberlin herd which consists of registered Holsteins was first for average milk with 1,102

lb. and third for fat with 35.43 lb. The C. W. Scott herd, of which about half are registered Holsteins, averaged 38.88 lb. fat, while the A. N. McClinton herd of registered and grade Holsteins averaged 36.63 lb.

There were 395 cows tested in the 25 herds. Of this number 62 produced over 40 lb. and thirteen over 50 lb. while 50 exceeded 1,200 lb. milk. The association has reorganized for another year and Mr. L. M. Stark, whose work has been so satisfactory the past year, has been reëngaged.

A LARGE PRODUCER

Pauline DeKol Butter Girl, a cow in the herd owned by the Training School at Casewell, North Carolina, produced 2,639.3 lb. milk in thirty days. Joe Reinhardt, the institution's dairyman, believes this is the highest production credited to any North Carolina cow. Her milk averaged 3.1 per cent fat and her best day was 94.7 lb. Pauline is a large handsome cow and is claimed to have tipped the scales at 1,860 lb.

HOLSTEINS PROMINENT IN LAWRENCE COUNTY

The Westfield Cow Testing Association operates in part of Lawrence County, Pa., and the April and May reports were received together. The April list is headed by the purebred Holstein, Wesson Lady, owned by W. W. McMillan & Sons of Wampun. She was a four-year-old and is credited with 76.5 lb. fat, 2,050 lb. milk. Jewel, owned by H. A. Freed, Racine, is second with 61.2 lb. fat and Sue of the same herd is third with 61.1 lb. while Princess Amber Korndyke, owned by C. L. McMillan is fourth with 60.7 lb. Nine of the cows in the leading ten are Holsteins and all gave 55 lb. or more butterfat.

The May list is headed by Princess Amber Korndyke of the C. L. McMillan herd. She is credited with 70.9 lb. butterfat, 1,575 lb. milk. A three-year-old

in the herd of W. W. McMillan & Sons is second with 65.1 lb. fat from 2,100 lb. milk and Ono, owned by H. W. Boozel was third with 61.2 lb. fat from 2,112 lb. milk. During May the twenty-six herds in this association had 294 cows in milk of which fifty-five produced over 40 lb. fat and seventeen over 50 lb. reports the tester, Albert Kendall.

MATTHEWS HAD GOOD ONES

Sadie, a purebred Holstein, owned by Clarence Matthews, of South Bend, Indiana, led the St. Joseph County Testing Association for June by producing 68.6 lb. fat, 1,761 lb. milk. Jaraldine, another member of the herd produced 61.4 lb. fat, 1,183 lb. milk. Pauline, owned by St. Mary's College, made 62.1 lb. fat and 2,070 lb. milk, and Friesland, owned by Russell Mangus, produced 66.6 lb. fat, and 1,332 lb. milk. The St. Mary's College herd averaged 34.6 lb. fat, the Oliver herd also consisting of registered Holsteins averaged 34.5 lb. The Russell Mangus herd 33.5 lb. and the St. Joseph's farm herd 33.4 lb.

HILL LIKES THEM MIXED

A purebred Holstein owned by Joseph H. Hill, of Richmond, Indiana, produced 67.6 lb. fat, 1,536 lb. milk in the Wayne County Testing Association during June. The Hill herd which consists of purebred Holsteins and Guernseys averaged 36.8 lb. fat, 1,151 lb. milk, the second highest average reported. There were 333 cows on test with an average production of 27.7 lb. fat, 675 lb. milk.

Albert Snazelle, the tester of the association, reports that 92 per cent of the herds composing the association have been tuberculin tested.

Accredited.

PENNSYLVANIA TESTING

The three biggest milk producers and the three highest fat producers in the state of Pennsylvania for the month of May were registered Holsteins. The leader is owned by W. Drumheller and is credited with 104.9 lb. fat, 2,691 lb. milk. W. H. Landis, of East Greenville, has the cow that stands second for fat with 98.1 lb. to her credit while the cow in third position is owned by Ivo V. Otto, of Carlisle, and is credited with 95 lb. fat. The second position for milk production is held by a cow owned by L. A. Zimmerman, of Lehighton. She is credited with 2,666 lb. milk while another Drumheller cow stands next to her with 2,412 lb. milk. The three highest milk producers are all enrolled in the Carbon-Lehigh C. T. A.

Production was reported for 32 associations in which 12,761 cows were tested. Of this number 1,749 produced more than 40 lb. fat and 595 exceeded 50 lb. while 1,166 cows gave more than 1,200 lb. milk. During the month members of the association purchased eleven new herdsires and sold 108 cows because they were unprofitable.

TESTERS' CLUB MEETS

The annual meeting of the association of testers conducting association work in Pennsylvania was held June 17-19. The purpose of the meeting was to give the testers up-to-date information, determine their problems and perplexities and to discuss methods of improvement.

The principal speakers were Professor A. A. Borland, head of the Dairy Department, J. B. Parker, of Washington, D. C., who has charge of C. T. A. work in this state, and E. P. Pitts, head of dairy extension work. The officers of the association elected for the coming year are: President, A. A. Raudabaugh, Cumberland County Association; Vice-President, C. R. Kennedy, Juniata County; Secretary-Treasurer, C. R. Gearhart, State College, Pa.

TESTERS WANTED

An opportunity for farm boys to learn to become testers is offered by the Pennsylvania State College which periodically holds testing schools lasting for a few days, in which instruction in this important work is given. Owing to some of the present testers deciding to go to school or college next fall while new associations are being formed there will be a number of vacancies to be filled. Anyone interested should write Professor A. A. Borland at the college and they will get full information.

COUNTY OWNED HERD ACCREDITED

The purebred Holstein herd owned by the Pittston Poor District at the Ransom Home, Ransom, Pa., has just been placed on the accredited list. Last year the herd, then numbering 33 head, passed a clean test and on June 25th the present herd now increased to 41 head again passed clean.

IN MONTGOMERY COUNTY

Ten purebred Holsteins owned by Ursinus College, Collegeville, Pa., headed the Montgomery County association for June by averaging 912 lb. milk, 33.5 lb. fat. The A. K. Rothenberger herd consisting of eighteen animals was second for milk with an average of 904 lb., and the third for fat with an average of 31.5 lb. Four animals each made over 60 lb. fat, the leader, a Brown Swiss cow, having 66.8 lb. to her credit, a Holstein owned by William H. Landis, East Greenville being second with 66.6 lb., one owned by W. S. Farley third with 63.6 lb. and one in the college herd fourth with 60.4 lb.

There were 348 cows tested in 25 herds of which thirteen produced over 50 lb. fat and 29 over 1,200 lb. milk.

RECORDS BY STATE OWNED COWS

Some more official records have been made in the Springfield State Hospital herd at Sykesville, Md. The five year old Howard Star Annetta Prince, in seven days produced 32.02 lb. fat, 689.3 lb. milk; Beauty Korndyke Inka De Kol, a six year old is credited with 27.05 lb. fat, 605.1 lb. milk and the four year old Eli Prilly Ordella closed the week with 26 lb. butter, 526.4 lb. milk to her credit. Superintendent Farr is planning on doing considerable advertising for the hospital herd this fall when he will exhibit a representative string of hospital cattle at a few high class Maryland fairs.

PERSISTENT OLD COW

R. S. McGinnis of Stanley, Iowa, was induced to buy the twelve year old purebred Holstein, Teckstra Mutual Homestead. Some of his friends told him that she was too old to be a profitable cow but during May she produced 2,388 lb. milk testing 3.6% which gave her a production of 85.75 lb. butterfat. Two grade cows owned by Mr. McGinnis produced 60 lb. and 55 lb. respectively. This was the third lactation period for each of the animals.

CALIFORNIA'S C. T. A. WORK

California has thirty-two cow testing associations operating in twenty-five counties with 52,000 cows enrolled. This is 7.8% of all the cows in the state as against 1.2% of the country as a whole.

There are 30,000 dairy farmers in California, and about 800 dairy manufacturing plants. The dairy industry, on farm and in factory directly supports 130,000 men, women and children of the state's population.

GOOD GRADES

Peter L. Anderson, of Webster, Minnesota, has two grade Holsteins that have recently made nice year records in C. T. A. work. Lillie produced 10,657 lb. milk, 369.3 lb. butterfat. Pansy produced 9,680 lb. milk, 377.2 lb. fat, both cows are of good type. Mr. Anderson is a believer in cow testing association work and a student of dairy management in the care, feeding and selection of the animals in his herd.

STATE-OWNED HOLSTEIN HERDS

New York has now thirty public institution herds. The Hospital herd at Gowanda contains 153 head of which 83 are purebred Holsteins. For seventeen years the sires at the head have been purebreds. At the present time there are 97 mature cows in the herd of which 45 are registered. There are 28 purebred heifers, yearlings and two-year-olds, and about a dozen purebred heifer calves. Most of these are sired by Cornelia Ormsby Lad. The other sires in service are King Vale Veeman Dutchland and King Ormsby Beets Segis Maxie.

The Gowanda herd has an annual average of between 9,000 and 10,000 lb. milk per cow. Some members of this herd have produced as high as 14,000 lb. during the milking period. In a monthly test, held June 15, the Gowanda herd averaged 37.3 lb. milk per cow, the highest average of any of the state hospital herds. A new herdsire has been purchased recently from Carnation Farms. He is King Matador Butter Boy, a son of Matador Segis Walker and Butter Boy Pontiac De Kol, a cow with a 365-day record of 26,422 lb. milk, 1,072 lb. butter.

STILL BUYING

The Billiwhack herd is said to be one of the largest in the country. Mr. and Mrs. Ruble, with manager, J. W. Snodgrass, have been adding to the herd for the last three or four months and early in July took two carloads from Chehalis, Washington. The shipment contained 26 head ranging from heifer calves to mature cows of Chimacum blood lines and the consideration is said to be \$4,000.

A HERD OF PRODUCERS

The purebred Holstein herd owned by the state hospital at Independence, Missouri, consisting of 84 cows averaged 1,029 lb. milk and 33.9 lb. butterfat during the month of May. Twenty-three of these cows each produced over 40 lb. fat. This is a splendid record for a herd of this size.

"How did you get to know your second husband?"
"Oh, it was he who ran over my first in his motor."

FEED THE PRODUCERS

It is a mistake to withhold grain from heavy producing cows while on pasture says the Dairy Department of the Michigan State College, but it does not pay to grain feed cows giving a small amount of milk. Figures taken from Minnesota testing associations show that 1,231 cows on pasture alone produced 228 lb. fat with an average feed cost of \$41.87 yearly, while 572 cows fed grain with the pasture averaged 296 lb. fat at a cost of \$39.43, so that \$7.46 spent for grain during the pasturage season gave a return of 68 lb. butterfat worth at 40 cents a lb., \$27.50.

The Dairy Department recommends two home mixed grain rations for summer use, the first consists of 400 lb. of cornmeal or ground barley, 200 lb. of ground oats or bran and 100 lb. cotton seed meal; the second is composed of 300 lb. corn meal or ground barley, 200 lb. of ground oats or bran and 100 lb. gluten feed. For Holsteins producing 25 or more pounds of milk daily the college recommends 3 lb. of grain with 2 lb. added for each additional five pounds of milk.

GRADUALLY IMPROVING

A purebred Holstein owned by C. E. Johnson of Ironwood, Michigan, led the Gogebic County testing association for the month ending June 8th, by producing 75.8 lb. fat, 2,167 lb. milk. A herd of grades owned by Gust Abramson averaged 50.4 lb. butterfat with an average milk production of 1,284 lb., the highest reported for the Upper Peninsular. Tester Raymond Peterson says that the average monthly production per cow shows a gradual but steady increase from year to year showing that continuous testing is a means of increasing production.

BUE'S COW AGAIN FIRST

A purebred Holstein cow owned by Hagbarth Bue, of Northfield, Minnesota, was the high record cow of the Rice County testing association for May. She produced 68.6 lb. butterfat, 1,674 lb. milk on twice a day milking. A grade Holstein owned by C. W. Terry, milked three times daily, stood second with 63.7 lb. fat, 1,593 lb. milk. The average for the whole association was 31 lb. butterfat and 859 lb. milk.

HAMMOND'S "CATTLE COMFORT"

"CATTLE COMFORT"

The application of CATTLE COMFORT will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—CATTLE COMFORT may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

FEEDING DOPE

This is not an attempt to advise buyers when to purchase feeds. It is merely a statement of certain facts and probable tendencies to stimulate personal thinking on the subject. Each must assume his own responsibility.

The average price per month for a 20% total protein mixture has been calculated by Professor E. S. Savage, for the two years before the war and the last two years. The monthly variation in price of the mixture during the four years considered is judged to be a fair index of the probable variation per month to be expected now. For all four years the low prices for the commonly used feeds came in April, May, and June, while the high prices came in the late fall and early winter. Sometimes a low dip comes in October and November when the new crop hits the market.

Whether the low spot for this season has been reached or not is a question. Weather is a big factor and crops are not yet made. It is well to take into account the general price level, the probability of a poor oat crop and the uncertainty of wheat. As things look now, storing feeds so as to give an 18 per cent digestible protein ration at \$45 for next winter would seem to be safe. However, as the season advances things may take on a different appearance.

The expected mid-summer sag in feed prices may be at hand. In a comparison of prices on 13 feeds with those of a month ago, two have not changed, seven low protein feeds are down, and four high protein feeds are up. The average drop on the seven feeds is \$2.15. The average rise on the four high protein feeds is \$1.31 a ton. Even though they have declined in price, oats and barley are relatively higher than last month on the basis of total digestible nutrient cost.

The following ration is recommended: 200 lb. White hominy, 100 lb. Middlings, 200 lb. Bran, 300 lb. Gluten feed, 100 lb. Cotton seed meal, 100 lb. Linseed oil meal.—*New York News Letter.*

ANOTHER HOLSTEIN DISTRICT

Living in the Red River district, Wisconsin, is a number of dairymen who believe the Holstein cow is the greatest dairy machine yet devised. One of these is John Wery who gets his mail through the office at Luxembourg. Mr. Wery at one time was a cheese maker but now is a high class farmer. His barn is one of the attractions in this district and is equipped with water buckets, electric lights and a milking machine, with, of course, large silos. The herd is part purebred and part grade and consists of both good producers and fine individuals.

Joseph Barrette years ago built a barn 132 feet long. Five years ago he sold out and went to live in the city but last year returned and bought back the farm. He owns 110 acres and his herd consists of both purebreds and grades. The barn has whitewashed walls and sealed ceilings, is equipped with electric lights, running water, a litter carrier and a milking machine.

Joseph Boucher has a barn 140 feet long which is equipped like those of his neighbors. He farms 200 acres and is assisted by his two boys. His herd consists of 25 grade and purebred Holsteins.

The farm of John Du Chateau has been in the family for three generations. John's father Frank still makes his home with the family although he is employed on the county highways. Like his neighbors he is a Holstein man.

A short distance from the Du Chateau farm is the home of the Bero family run by John Bero and his sister. John is a former student of the Door-Kewaunee Normal School. He is keenly interested in having the area tuberculin tested and is working to secure the necessary signatures on the petitions.

Red River is a smiling contented land, a land of large farms, enormous barns, Holsteins, and contented farmers.

WILL HEAD GOVERNMENT HERD

Varsity Derby Matador, a Nebraska bred seven year old herdsire, has been purchased by the United States Bureau of Dairying and will head the Government Holstein Dairy kept at Beltsville, Md.

Varsity Derby Matador was purchased from the North Platte sub-station. He is a son of King Derby Lincoln whose dam Kitty Gerben Lincoln was a daughter of Nebraska's famous old cow Katy Gerben. A number of fine records have been made by daughters of this bull. His daughters have completed six 365 day tests with the following results:

	Age	Lb. Butter	Lb. Milk
Junior three	912.29	20,810.7
		844.37	17,885.6
		739.87	15,524.1
Average	832.14	18,073.4
Senior two	880.97	19,410.7
		737.70	15,259.6
		720.89	15,475.0
Average	779.85	16,715.1

The uniformity of type as well as the uniformity of production shown by his daughters has given Varsity Derby Matador the rare opportunity of heading the great Holstein herd owned by the Federal Government.

HOLSTEINS FOR MONTANA

Peter Hoogland of Malta, Montana, recently purchased a carload of purebred Holstein cattle around Hallock, Minnesota. Most of these came from the herd of the late Senator Sundberg, who spent twenty years in building a high producing herd. Mr. Hoogland selected 26 head in the three days. Some of these he will retain and others will go to other dairymen in Phillips County. In most cases the purchases were financed through the Agricultural Credit Corporation.

The farmers of Phillips County appear to be concentrating on the breed they favor. A preference for Milking Short-horns is shown in the non-irrigating farming sections while Holsteins are generally approved on the irrigated farms.

RO-AN FARM OFFERS YOU CHOICE YOUNG SONS OF

ROYAL JOHANNA KORNDYKE
whose daughters are making splendid records in C. T. A. work. He was by Colantha Johanna Lad 8th and from a 24-lb. two-year-old that made 602.3 lb. milk in 7 days; her dam a 30-lb. cow.

Our cows are producers and choice individuals. Our herd is Accredited and has never housed a re-actor.

DEMAND FOR MARTIN BULLS

O. I. Martin of Cambridge Springs, Pa., recently sold the very handsome young bull, Martin Pietertje Alcartra to E. L. Stump of Shoemakersville, who owns a good producing herd of grade and purebred Holsteins.

Martin Pietertje Alcartra is a son of King Tobe Alcartra De Kol and Star Farm Pietertje America, an A. R. O. daughter of Mercedes Julip's Pietertje's Paul and therefore a sister to the famous King Segis. Mercedes Julip's Pietertje's Paul was a remarkably handsome individual, a characteristic which has been transmitted to his descendants. His dam formerly held the world's championship for seven days butter production and was one of the greatest cows of her day.

King Tobe Alcartra De Kol is the sire of the younger milkers in the Martin herd and upon the daughters of this bull, Mr. Martin plans to build his future as a Holstein breeder. Their size, shape and producing ability indicate that he was a remarkable sire whose usefulness was ended all too soon. He was by King Segis Pontiac Alcartra from Lady Tobe De Kol, 36.59 lb. butter, 631 lb. milk in seven days, 141.24 lb. butter in thirty days world's record in the senior three-year-old class at time of making. She was the dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days as a four-year-old while her dam, Christmas Tobe 2d as a ten-year-old made a seven-day record of 31.66 lb.

DOES NOT PASTURE HIS HOLSTEINS

Frank Granzo of Elkhorn, Wisconsin, has a farm of 120 acres but does not let any of his fifty Holsteins feed on pasture. Every foot of land on this farm is fertile and the owner believes he can better afford to crop the land than pasture it. Corn silage and clover hay have been the main roughages but alfalfa is gradually being introduced with the aid of lime and inoculation. The most satisfactory way of seeding has been to seed in August after early potatoes but Mr. Granzo has been very successful seeding alfalfa with both late and early peas.

There are two silos thirty feet high, one 14 feet and the other 16 feet in diameter.

The manure is drawn out with a three-horse spreader. After the corn ground is plowed there is a time when the manure is piled but as soon as possible the piles are scattered on the farm and the manure from the stables drawn direct to the fields.

The dairy herd consists of high grade Holsteins and for a number of years has been headed by a purebred Holstein bull.

Johnny and Billy had been "cutting up" in school and the teacher had sent them out to an old apple tree for switches for their punishment.

"Don't you wish God hadn't let us be born?" sobbed Billy.

"Naw," said Johnny, "but I wish Adam and Eve had swallowed every one o' them blamed apple seeds."

Individuality

A cow from this herd won first prize in the recent Crawford County Dairy Show.

Production

A member of this herd led the local C. T. A. for butterfat production for the recently ended year.

Herd under State and Federal Supervision

FIRST KANSAS CONDENSERY

The first evaporated milk condensery of Kansas was built at Mulvane in 1910. It was four years before it was thoroughly established but since that time it has gradually grown until it can easily handle from 75,000 to 100,000 lb. milk daily. The heaviest run ever made in a day was 110,000 lb. It takes about two and one-half pounds of milk to make one pound of evaporated milk.

Most of the farmers around Mulvane are partial to Holstein cattle and the manager of the condensery says he prefers the milk of this breed because of its proportion of butterfat and solids.

The milk for the condensery is collected by a fleet of 21 motor trucks, four of which are owned by the management and the remainder by farmers who have their own routes and do custom hauling.

The Mulvane condensery sells its products extensively in Kansas, Oklahoma, Louisiana, Arkansas and Texas which are routed over the leading railroad lines entering these states. Each carload contains 800 cases. The Mulvane condensery in 1924 produced 264 carloads. The management paid farmers in 1924 around Mulvane \$354,234.25 for fresh milk. The management also paid out \$58,000 for freight and \$141,412 for labor.

IN OTHER LANDS

In a recent issue, the British Friesian Journal made a proposition that the British Friesian Society which periodically holds consignment sales, should exclude from all sales held under their supervision, bulls that had not passed a clean tuberculin test. In the February issue a correspondent not only endorses this suggestion but also makes the rather startling proposal that no bull should be registered unless his application for registration is accompanied by a certificate showing a clean test. This same writer says that the British Hereford Herd Book Society already has a rule that all bulls sold at sales held under the official supervision of that Society must be accompanied by a certificate of test made within six months of the date of the sale or else sold subject to be tuberculin tested immediately after the sale.

A HERD BUILDER

Queen Piebe St. Croix, a daughter of Sir Pietertje Ormsby Mercedes 37th, has produced three heifer calves, 15,000 lb. milk and 711 lb butter during the past fourteen months. Her best days milk production was 108 lb. She is owned at the St. Croix County Farm, New Richmond, Wisconsin.

ACCREDITED HOLSTEINS

He is a show bull, was Grand Champion at the 1924 Lebanon County Fair.

His sire is by Piebe Laura Ollie Homestead King from a 1,000 lb. year record daughter of King Segis Pontiac Count.

His dam is a showy granddaughter of King of the Pontiacs and has a year record of 796.9 lb. butter, 19,038.4 lb. milk.

We offer you Cows in milk, Heifers and Calves.

HUBERT S. MILLER
Myerstown, Lebanon County, Pa.

AN HISTORIC HOLSTEIN HOME

Rough and Ready Island is in the San Joaquin River, near Stockton, California. A large part of this island was owned by the Pierce Brothers and years ago the Pierce herd was the leading California Holstein herd. That famous old cow, Alcartra Polkadot was for years a member of this herd and while in it dropped one of her daughters, Alcartra Polkadot of Riverside. Another member of this herd at the time it was owned by Chas. Pierce was Belle Korndyke's Daughter, the highest record daughter of the famous foundation cow, Belle Korndyke.

This ranch will again be a Holstein establishment for it will be the home of the herd owned by a company operating under the name of Palo Alto Stock Farm which, for the last eight years, has kept its herd on property leased from Stanford University.

AN ACCREDITED HOLSTEIN ISLAND

Washington Island, sometimes called, "The Holstein Isle of America" has qualified as a modified accredited area and is the first district in the state of Wisconsin to be placed on the list. Recently nearly a thousand animals on the Island were tested. All or practically all of these were Holsteins and there were only four reactors or much less than the one-half of one per cent required to qualify. The dairymen gain from another standpoint as the packers are paying ten cents premium per 100 lb. on all hogs shipped from modified area districts.

A PRIZE WINNING BUNCH

Seven very handsomely marked, well built Holsteins owned by J. Roy Buckingham of Kalamazoo, Michigan, won the silver loving cup given the Kalamazoo Cow Testing Association by the County Farm Bureau. The seven cows averaged 12,430 lb. milk, with an average gross market value of \$315.50. The cost of a year's feed was \$126.16 so that each animal averaged their owner \$175.11 net profit. This is the second time Mr. Buckingham's registered Holsteins have won this silver cup.

FOR SALE—Ten Bred Heifers and six fine cows. Begin freshening in August. Clean Stuff. They will please you. THOMAS REESE, Montoursville, Pa.

BIG SHIPMENT TO MEXICO

The last week in June, eighty head of Holstein cattle were shipped from Wau-paca, Wisconsin, to Mexico City. They were purchased by Salvador Gongales Newton and Rodridge Rangel, who spent about two weeks traveling around Wau-paca. R. L. Pope and Vego Jensen will take care of the animals on their journey and the shipment is being handled by the local cattle dealers, Shambau and Kenyon.

To Whom It May Concern:

Early this year conditions made it necessary to dispose of the Bonnymeads Farm herd.

In deciding on the choice of auctioneers, a personal friend of mine recommended Mr. Glenn R. Mead of East Aurora, New York, as one of the best auctioneers obtainable regardless of price and his charges were not exorbitant and his expenses very reasonable.

I was more than agreeably surprised with Mr. Mead's ability as auctioneer. From the time the first animal was led into the sale ring until the last one was sold Mead did nothing but sell cows. He did not spend time making speeches or demonstrating his oratorical ability neither did he try to entertain the spectators and by-standers by relating questionable stories. His efforts were concentrated in holding the attention of the buyers and making the Sale a success.

By referring to the published accounts of our sale as compared with other sales, it would seem that it was one of the most successful sales of Holstein cattle in recent years.

We were pleased with the sale and with Mr. Mead's work.

Yours truly,

BONNYMEADS FARMS,
Hiram Billett, Supt.
July 14, 1925.

GLENN R. MEAD
East Aurora, New York

a son of King Joh from a 32 lb. daughter of Dutchland Colantha Sir Inka.

Can we do something for you?

RALPH C. JACKSON
Conneaut Lake, Crawford Co., Pennsylvania

REGISTERED HOLSTEIN BULLS.—Two months to two years. Sire over 1,000 lb. Prices and terms best ever. W. A. BEACH, Mankato, Minn.

A HERDSIRE PARTNERSHIP

Not far from Angelica, Allegany County, New York, is a farm of 230 acres owned by James A. Young, who owns 40 head of purebred Holsteins. Mr. Young and three other near-by breeders own the head of the herd, King Segis Cantrilla, in common. This bull, now five years old, is a son of King Valdessa Korndyke and Dorothy Segis Cantrilla with 31.55 lb. butter, 616.4 lb. milk in seven days. She averaged over 85 lb. of milk a day for thirty days and is a granddaughter of Pietertje Hengerveld Segis. Mr. Young's partners in the herdsire are L. J. Ives, of Almond, who has 15 head, Frank Morton, of Angelica, and Charles Morton, of Almond. Frank Morton has 30 head while the Charles Morton herd contains 40 purebreds. The lines of breeding in the young herd are well known to all eastern breeders. One of the former sires was King Pontiac Canary Arona while before him Czar Walker 3d was in service. The King was sired by King Pontiac Canary, a son of King of the Pontiacs from Canary Hartog DeKol, 26.49 lb. butter, 533.6 lb. milk in seven days. Czar was by Czar Walker and from a 21.96-lb. junior two-year-old daughter of King Quality and her dam was a 25-lb. daughter of Admiral Walker Pietertje.

When the representative of the BREEDER AND DAIRYMAN called upon Mr. Young he was digging potatoes by machinery. He had already harvested 2,000 bushels, but left six acres unharvested as he was able to obtain only 40 cents a bushel. In Harrisburg we were paying at that time prices ranging from \$1.00 to \$1.50 per bushel, with most of the sales around \$1.25. Quite a spread between the price paid by the consumer and figures received by the producer.

APT NAMING

Vosanca is the name chosen by Anthony and Carl Vosen of Lodi, Wisconsin for their Holstein farm. To make this title they combined their family name with their own given names. The place has been in the family for 17 years, but the boys have been running it for the past eight years.

On their 350 acre farm they have a herd of 45 Holsteins, twelve of which are purebreds. The milking cows receive from 30 to 35 lb. of silage daily with all the alfalfa they can eat and for every four pounds of milk they have one pound of a grain ration composed of two parts ground oats, two parts barley and one of oil meal.

"Coöperative marketing helps the farmers get a little better price for their goods some of the time, but the main thing is to first produce the right kind of products at home," says Anthony Vosen, "and that is what we are trying to do." "We also try to produce them in the right way and to us, that is doing it in the most efficient and most economical manner."

FOR SALE.—Holstein-Friesian Bull. Pedigreed. Address 401 N. Front St., Harrisburg, Pa.

SONS AND DAUGHTERS OF CHIEF TACORA KORNDYKE PIEBE

whose dam produced 13,999.9 lb. milk, 543.81 lb. butter in 349 days at just three years old.

She is full sister to a 35 lb. cow and her dam produced 654.1 lb. milk, 30.12 lb. butter in a week, 26,011.1 lb. milk, 1,060.81 lb. butter in a year.

Our cows produce from 10,000 lb. to 15,000 lb. milk in a year in C.T.A. work.

Herd under State and Federal Supervision, last test CLEAN.

RAY J. SABIN
R. D. 2, Tioga Co., Spencer, N. Y.

CREAMELLE KORNDYKE KONIGEN

our senior herdsire, is a show bull of superior excellence. Study his type and conformation.

He is from producing strains. His six nearest dams have a daily milk average of 84 lb.

His daughters—themselves choice individuals—are bred to KING ORMSBY ENDERCAMP a son of King of the Ormsbys from a 904 lb. year record daughter of Judge Segis.

Accredited Stock For Sale.

A. L. BOWELL & SON
Thompson, Susquehanna County, Pa.

The Champion of the South

O. K. L. KATIE PAUL

36.95 lb. butter in 7 days as a junior four-year-old, the Champion of the Southern States, is a sister to our herdsire.

ORMSBY KORNDYKE HOCK-STER LAD

Let us sell you a young bull by him and from a big producing dam. Can also spare a few heifers.

Montrose, Pennsylvania

JOHN IS SETTLING DOWN

Four miles west of Royal, Nebraska, is the farm of John Smyth who owns one of the good herds of Holstein-Friesian cattle in Nebraska. The herd is headed by Best Segis Fafnir, a son of Winterthur Bess Burke Best.

Mr. Smyth buys run-down farms, sows alfalfa on them and then after farming them for a while sells them at a substantial profit.

Mr. Smyth was born on a farm near Oakdale, Antelope County, Neb., in 1879. When he was 5 years old his parents returned to England where he was educated. He served with English forces in the Boer war. He won several prizes in the army for marksmanship, and in 1900 was the best swordsman in his regiment. He was one of the group of men who served as guard of honor to King Edward VII when the latter was crowned. In 1906 he set sail for his native country and for Antelope County. After six years in the mercantile business he bought a run-down farm near Anoka and planted alfalfa. He farms for the joy of it and, incidentally, makes a successful business of it.

PRICES ARE TOO LOW

Prices of good purebred cows are too low rather than too high says the veteran dairyman A. L. Haecker. When he had charge of the Nebraska College herd eighteen years ago, Katy Gerben, a member of that herd, produced 10,000 quarts of milk in a year which was sold at the college farm for 10c a quart. Professor Haecker figures the cost of feeding this cow to be \$160 and allows \$100 for her share of the farm labor. The bull calf dropped by Katy was sold for \$500 when it was ten months old so that the gross income earned by this cow during the year was \$1,500 and her net income around \$1,300. The college authorities refused \$5,000 for Katy Gerben and Professor Haecker claims they showed good business judgment. Mr. Haecker advises reducing the herd to good cows and when members are added it should be seen that they are producers. The poor cow is the expensive cow for she costs too much whether she is purchased or raised.

Alfred—"Father, the rain falls alike upon the right and the wrong doesn't it?"

Father—"Yes, yes. Don't ask silly questions."

Alfred—"And it isn't just to steal another man's umbrella, is it?"

Father—"Certainly not. If you ask any more—"

Alfred—"But, father, the rain doesn't fall upon the man that steals the umbrella, and it does on the man that had it stolen. Funny, isn't it, father?"

"Women quarrel, and they will always quarrel. It is part of their amusement in life, and you can't stop them having their amusement."—Judge Parry, in English Court.

"Why, Pa, this is roast beef!" exclaimed little Jim at dinner one evening when Mr. Brown, a guest of honor, was present.

"Why, you told Ma this morning, that you were going to bring an old mutton-head home for dinner this evening."

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

Vol. IV

HARRISBURG, PA., AUGUST 8, 1925

No. 15

The Catatonk Holstein-Friesian Herd

TWENTY years ago C. A. Fisher, of Spencer, Tioga County, New York, started in the Holstein business by purchasing some animals from the Bronson herd, then one of the leading Holstein establishments in New York State. Chief among the purchases was the well-known cow Johanna Wit De Kol, born March 25, 1921. She was bred in the herd of C. A. Schroeder, of West Bend, Wis., and Mr. Fisher paid \$400 for her. She was bred to Aaggie Cornucopia Pauline Count, a son of Aaggie Cornucopia Pauline, the then world's champion for seven and thirty day butter production. Appoline Hartog De Kol, Durkje Manor De Kol and Pietertje Lady Manor De Kol were daughters of Lord Manor De Kol and all had been bred to Mercedes Julip's Pietertje's Paul, whose dam was a former champion for seven day butter production. Baroness Idola De Kol was a daughter of America Lord De Kol and had been bred to Goudgeld Mercedes Prince, considered one of the best sires of his day. Appoline Hartog De Kol and Baroness Idola De Kol both dropped bull calves which were used in the Fisher herd. Cornucopia Sir De Kol, a son of Aaggie Cornucopia Pauline Count and Anna Battels Pietertje De Kol was, we believe, the first herdsire of the Fisher herd. Two of his sons, Sir Cornucopia Johanna De Kol and Cornucopia Baron De Kol succeeded him in service. The dam of Sir Cornucopia Johanna De Kol was Johanna Wit De Kol while the dam of Cornucopia Baron De Kol was Baroness Idola De Kol. So it can easily be seen that for a time at least the blood of the foundation animals was intensified in this herd.

A sire that had a great influence on the herd and that brought in different blood was Dutchland Colantha Sir Inka Prince. As he was by Colantha Johanna Lad from the 30-lb. cow, Lady Princess Beets, he was full brother to the noted century sire, Dutchland Colantha Sir Inka. Although he was not used as extensively as his more famous brother, he was however, a first-class sire and his descendants are producers and many of them are animals of high-class type and conformation. One of his daughters in the Fisher herd produced 95 lb. milk in a day.

MAPLE CORNER SUPREME
The head of Catatonk Herd.

King of the Pontiacs from Roxie Pauline De Kol Posch, 675.6 lb. milk, 31.18 lb. butter in seven days. His sire was by Champion Echo Sylvia Pontiac from Belle Model Johanna 2d, a cow that two different years produced over 37 lb. butter in seven-day test.

Maple Corner Supreme heads the herd at the present time. He was selected because of the type and producing ability of his offspring. Mr. Fisher had seen a number of these in the herds of C. F. Gridley, W. A. Hart and F. E. Hilbert, breeders living in the same county, who jointly owned this bull. The dam of Maple Corner Supreme was Albina Butter Girl Pontiac. Tested as a five-year-old she made official records of 32.63 lb. butter, 629.6 lb. milk in seven days, 126.59 lb. butter in thirty days with a milk average of 83 lb. daily while in 192 days she produced 572.25 lb. butter, 12,715.5 lb. milk. Her dam, Albina Butter Girl De Kol made 29.09 lb. butter, 619 lb. milk in a week as a junior four-year-old while her sire, Spring Farm King Pontiac 6th was by Spring Farm King Pontiac from Tweede De Kol Lass, 34.39 lb. butter in a week, the dam of K P Pontiac Lass, 44.18 lb. butter in seven days. Maple Corner Supreme was sired by King Sadie Vale Supreme, a son of King Korndyke Sadie Vale from K K S V Topsy, 40.38 lb. butter in seven days as a senior three-year-old. Her dam, King Segis De Kol Korndyke Topsy was a 33-lb. four-year-old, sired by King Segis De Kol Korndyke, a son of the former world's champion Pontiac Clothilde De Kol 2d. The six nearest dams of Maple Corner Supreme have seven-day records that average 35.11 lb. butter and a number of animals that have held world's records in various classes are closely related to him.

A FEW MEMBERS OF THE CATATONK HERD

Maple Corner Supreme is a very fine individual and was second in his class at the Tioga County Fair where he had lots of competition. Mr. Fisher exercised, we believe, rare good judgment in placing this proven sire at the head of his herd.

The present owner of this herd is Lewis A. Fisher, who has been on the farm since January 1, 1924. He has had a wide experience with Holstein breeding and was formerly superintendent of the well-known Loyalsock and Allendale herds. Mr. and Mrs. Fisher have one child, Frances M., now thirteen years old. In order that she may have funds to put her through college they have given Frances the heifer Catatonk Princess, a daughter of King Echo Model Posch from Princess Aaggie Inka 2d, she by Dutchland Colantha Sir Inka Prince. Catatonk Princess will be kept in the Catatonk herd and when the time comes, her descendants will be sold for the college fund Frances is accumulating.

Catatonk Creek flows close by the farm and the name "Catatonk" was selected as a farm name and as a herd prefix so you find the names of the younger members begin with this word. The Catatonk Herd is under state and federal supervision. A number of very creditable records have been made here from time to time and it is the intention of Mr. Fisher to not only place the herd on the accredited list but to build up a Holstein aggregation capable of winning at the fairs and making a good profit at the pail.

Sadie As a Profit Earner

SADIE, the champion grade cow of the South, has headed the Fairfax County Cow Testing Association for three successive years. Her production for these three years, which includes the time she was dry, total 61,056 lb. milk, 2,308.2 lb. butterfat. Sadie is owned by Ben Middleton of Herndon, Va.

In 1922, Sadie, while enrolled in the Fairfax County C. T. A. produced 18,490 lb. milk, 729.6 lb. butterfat.

SADIE, SOUTHERN GRADE CHAMPION
61,056 lb. milk, 2,308.2 lb. butter in three calendar years, while enrolled in Cow Testing Association work. Owned by Ben Middleton, Herndon, Va.

In 1923, she made her highest year's record, 21,589 lb. milk, 847.5 lb. butterfat. During 1924, she is credited with 20,877 lb. milk, 731 lb. butterfat.

Sadie has never been milked four times daily and was milked three times daily for slightly less than half of the last two years. With this exception she was

kept under ordinary dairy farm conditions, was stanchioned in a row in the stable with the other cows owned by Mr. Middleton. In addition to roughage she was fed some beet pulp and a ready mixed dairy ration.

Although Sadie's production in 1924 was not as high as the amounts credited to her the previous year, her performance was even more noteworthy. She was dry about six weeks, the longest time she was ever dry since she first freshened and she dropped very large twin bull calves. Despite this handicap, when she got straightened around, several days she milked over 100 lb. milk a day.

In 1924, Sadie was on pasture 172 days. During the winter and as supplementary feed while on pasture she consumed during the year 6,000 lb. silage, 610 lb. beet pulp, 2,433 lb. mixed clover hay and 588 lb. Larro dairy feed. The cost of her ration, including the allowance for pasturage, was figured by the cow tester as \$67.13 while the grain feed cost \$155.62, a total feed cost of \$222.75. Her milk was shipped to Washington in fluid form and the average price received was \$2.90 per 100 lb. This brought in \$606.39 so that Sadie made a profit over feed cost of \$383.64 during the year or returned \$2.72 for every dollar's worth of feed she consumed both during the time she was in milk and the time she was dry.

The *Larro Dealer*, the monthly trade organ published by the Larro Milling Company, gives the following interesting table of profitable production for this great cow, the said table being in the form of a banking account summary.

Year	Deposits (Milk)	Withdrawals (Feed)	Balance
1921	\$374.70	\$158.74	\$215.96
1922	545.21	160.92	384.29
1923	702.72	255.58	447.14
1924	606.39	222.75	383.64
Total	\$1,431.03

The Farmer and His Wages

THE farmer receives his money wages in the form of payment for his crops and live stock. These wages are not paid regularly every week or every month, except in part in the case of some dairy farmers, but at irregular intervals varying from three months to a year or more, depending upon the nature of the crop. Neither rate of wages nor hours of work are agreed upon in advance. The consuming public pays, but it makes no agreement as to the amount it will pay. The farmer is urged to produce abundantly, but the price paid him for what he produces is set after the amount of his production is known. The buyers drive the shrewdest possible bargain. The more the farmer produces, the less the buyers want to pay. Thus we have large production penalized. Very often—indeed, it is the general rule—a large crop brings the farmer fewer total dollars than a small crop.—*The late Henry C. Wallace.*

Amusements should be truly profitable and helpful, promoting good fellowship, physical development, love of clean life and knowledge of nature and man.—*Robert E. Speer.*

The Rise and Decline of the Holstein-Friesian Association

IN 1885, the Holstein-Friesian Association of America was formed by amalgamating the two Registry Associations that were then in existence, the Dutch-Friesian Association and the Holstein Breeders' Association of America.

For upwards of thirty-five years the Holstein-Friesian Association of America prospered as the breed increased in number and popularity. During this period, the Association was operated conservatively on a small transfer fee of twenty-five cents.

By conducting the Association's affairs economically, retaining the confidence and good will of the breeders and dairy public, the volume of business transacted by the Association made it possible to lay aside a handsome surplus.

From the time the Association was organized in 1885 up until 1919, it had recorded practically a steady growth in each Department.

In 1919, the Association was the most prosperous Association of its kind in existence, its total assets being over \$367,000, and the Holstein-Friesian cow was the most popular dairy animal in America.

The year 1919-1920 marks the beginning of a change and the Association has since been doing a decreased amount of business each year. Last year's report shows a tremendous falling off in the amount of business transacted by each Department. Yet, the Canadian Association, representing the Holstein-Friesian breed of cattle in the Dominion of Canada, just to the north of the United States, recorded an increased amount of business, from fifteen to forty per cent in each Department.

What is the "something" within the Holstein-Friesian Association that seems to be working to its utter destruction?

For two or three years previous to 1919 it became generally known that the Holstein-Friesian Association had accumulated a large sum of money as a Reserve Fund, and trained political minds could readily discern that a tax on registration and transfer certificates provided an excellent means of raising additional funds.

OPEN ATTEMPT TO GAIN CONTROL

In 1918 there was an open attempt launched to gain control of the Association. This campaign was led by Mr. F. F. Field, of Brockton, Mass.; Mr. Ward Stevens, of Liverpool, New York, who were Directors of the Association at that time, and Mr. O. U. Kellogg, of Cortland, New York.

The *Holstein-Friesian World*, controlled by Mr. Ward Stevens and his brother, and edited by Frank T. Price, was used as a campaign organ as was The Black and White Record of which Mr. Hastings and Mr. Maurice Prescott were the controlling influences.

The chief attack was made on Secretary Houghton. It was apparent that the Insurgents hoped to defeat him for re-election and elect one of their own group to the position of Secretary and thus take over the prin-

cipal office of the Association in their efforts to gain full control.

At the annual meeting in Milwaukee in 1918, where the fight was brought upon the floor of the Convention, the Field-Kellogg-Stevens-World-Black-and-White-Group were defeated.

The leaders on the floor of the Convention, representing the "Insurgent Group" were: Mr. J. M. Hackney a lawyer, politician, and land sale promoter of St. Paul, Minnesota, who stated on the floor of the Convention that it was the first annual Convention he had ever attended and Mr. O. U. Kellogg, of Cortland, New York; Mr. James A. Reynolds, of Cleveland, Ohio, a herdsman and a politician, and who at that time was not a member of the Association, also participated extensively in the discussion on the floor of the Convention.

DEFEAT OF "INSURGENTS"

The "Insurgents" were decisively defeated and the principles for which the Association had formerly stood were preserved. Mr. Field and Mr. Stevens lost their seats on the Board of Directors.

The controversy at Milwaukee in 1918 did not mark the end of this attempt to gain control of the Association, to take over the Reserve Fund and increase the fees. Following the Milwaukee Convention the defeated "Insurgents" held an "Indignation Meeting." It may be assumed that at this meeting definite plans were mapped out and immediate steps were taken preparatory to gaining control of the Association, if possible, at the following annual meeting which was held in Philadelphia in June 1919.

Let us review some of the happenings that took place in the ranks of the "Insurgent Group."

The *Holstein-Friesian World* and the *Black-and-White Record*, which had championed the cause of the "Insurgent Group" in the campaign previous to the Milwaukee Convention, were consolidated. Mr. Maurice Prescott was made Editor and Mr. Frank T. Price, Business Manager.

Large display advertisements of the herds belonging to members of the "Insurgent Group" or of the herds where they were employed began to appear repeatedly in this joint publication.

Editorials, News Items and Photographs continuously appeared, setting forth what wonderful men some of these "Insurgents" were and what good work they were doing to boost the Holstein cow. The whole policy of this publication seemed to be to promote the Holstein cow from an exaggerated speculative standpoint.

If we look into the records of the Association, we will find that Mr. James A. Reynolds, who was identified with the "Insurgent Group" at the Milwaukee Meeting when he was not a member, joined the Association the following December, a few months previous

to the next annual convention which was held at Philadelphia.

WHAT HAPPENED AT PHILADELPHIA

Let us see what happened at this Philadelphia Convention.

There was a By-Law amendment introduced at the Philadelphia Convention increasing the Board of Directors to sixteen and also an amendment proposed by Mr. J. M. Hackney, increasing the transfer fee from twenty-five cents to fifty cents.

When the Call of the meeting was sent out with the provision to increase the Board of Directors to sixteen, the members did not object neither did they make any effort to gather proxies or marshal their forces because of the fact that to comply with the law there would not be any Directors elected to fill these newly created positions until the next annual meeting and the breeders assumed that the Association would live within the law.

The "Insurgents" came to the Philadelphia Convention fortified with a large number of proxy votes they had gathered on the quiet by gumshoe methods, which placed them in absolute control of the Convention.

LET US SEE WHAT THEY DID

In the Call of the meeting it was proposed to increase the transfer fee from twenty-five cents to fifty cents, yet the Financial report for that year showed that the Association had been operated at a profit of over \$64,000 and there was no reason for increasing the transfer fee. In fact, the records show that the members had paid to the Association during that year \$20,620 in transfer fees. If the transfer fee to members had been dispensed with, the Association would have been operated at a profit of over \$44,000. There was no need of increasing the fee, yet the fee was boosted from twenty-five cents to \$1.00.

The By-Law amendment to increase the Board of Directors was passed. The "Insurgents," being in control of the Convention, insisted on electing Directors to fill the newly created offices, which act was in violation of the laws under which the Association was chartered. The "Insurgent Group," acting under the principle that "A bird in the hand is worth two in the bush," took chances of plunging the Association into law suits rather than miss the opportunity of controlling the Association and the Association's Reserve Fund.

The officers elected at the Philadelphia Convention were not nominated from the floor of the Convention but the old method of a Nominating Committee to place in office a hand-picked group was resorted to.

WHO WERE PLACED IN OFFICE

Who of the "Insurgent Group" were nominated and elected?

Mr. J. M. Hackney, who was a leader of the "Insurgents" at the Milwaukee Meeting in 1918 and who was not in attendance at the Philadelphia Convention, was nominated and elected Vice-President.

Mr. Fred Field, who was defeated for re-election as Director at the Milwaukee meeting, was elected as one of the Directors for a four-year-term.

Mr. James A. Reynolds, who was active at the Milwaukee Meeting in 1918 when he was not a member, and who joined the Association only a short time be-

fore, was elected a Director for a four-year-term and was afterwards made chairman of the Executive Committee.

Mr. John A. Bell, Jr., who attended the "Indignation Meeting" after the Milwaukee Convention, was elected a Director.

Ten of the Board of sixteen Directors were elected at the Philadelphia meeting and these ten comprised a group consisting of Millionaires, Dealers and Professional Politicians, and the control of the Association passed into their hands. At the present time only one of the sixteen Directors are dependent on the returns of their dairy for a living. The other fifteen, if they own any cattle, are not dependent upon the returns of their dairy for a livelihood. Only one of the sixteen can be considered a dairyman.

FIRST AND ONLY SALARIED PRESIDENT

At the first meeting of the new Board, Mr. D. D. Aitken was voted a salary of \$12,000.00 per year as President in violation of the By-Laws which state that the outgoing Board of Directors should fix the salary of the officers for the ensuing year and, further, there was no provision in the Constitution and By-Laws that permitted the paying of a salary to the President, saying nothing of a salary equal to that of a Supreme Court Judge or the Chief Executives of the leading States in the Union, nevertheless this Board voted Mr. Aitken the \$12,000.00 salary.

Mr. James A. Reynolds, a herdsman and politician from Cleveland, Ohio, who had joined the Association only a few months previous, was made Chairman of the Executive Committee. At the end of a year he was voted a salary of \$3,000.00 and has been drawing from the Association's treasury ever since. Part of the time he has drawn two salaries.

Let us review the Association's activities under the direction of the "Insurgent" Board that took over the control of the Association at the Philadelphia meeting.

WHIRLWIND CAMPAIGNS

The \$12,000.00 President with a corps of high salaried, silver tongued orators and propaganda spreaders, started out on his famous Whirl-Wind campaign to build up a Political organization in each state to maintain the "Insurgent Group" in power under the guise of a State-Paid-Secretary.

Mr. Aitken and his corps of paid organizers toured the leading Holstein States, collecting large sums of money in membership fees. Thus thousands and thousands of dollars were extracted from the breeders' pockets aside from the increase in the transfer fee.

During the Whirl-Wind campaign of the New England States, the expenses of Mr. Aitken and his corps of paid organizers were around \$5,400.00 and he collected some \$6,600.00 from the breeders or \$5,400.00 was taken out of the Association's treasury to be used in extracting \$6,600.00 from the New England breeders' pockets.

Experience has demonstrated that this Whirl-Wind campaign State-Paid-Secretary movement, has been an utter failure as far as promoting the welfare of the breed and the breeders is concerned. The State-Paid-Secretary is now looked upon in his true light, as a Political representative of the "Insurgent Group" that

came into control at the Philadelphia Convention. Any legitimate service which he might render to the breeders is being supplied by the Agricultural Colleges and Extension workers free.

INSURGENTS TRY FOR FURTHER CONTROL

The "Insurgent Group" that came into control of the Association at the Philadelphia Convention were not content but wanted to gain further control of the Association and at the following annual meeting, which was held at St. Paul, Minn., in June 1920, Mr. James A. Reynolds introduced a resolution that a Committee be appointed to select a National Home for the Association. They were not content to leave the Association in its former prosperous condition. If they could not move the Association bodily and set it in their midst, they proposed to move it piece by piece.

Therefore, pursuant to carrying out their future program of moving the offices, the Extension Department was moved from the Secretary's office, where it rightfully belongs, and was established in the City of Chicago, in the fall of 1920. Thus, under the banner of trying to centralize the Association's activities under one roof, they were spreading them farther and farther apart, causing increased expense and rendering less efficient service to the members.

As a further effort to gain control of the Association, in the call for the 1921 annual meeting which was held in Syracuse and which marked the second year of the tenure of office of the "Insurgent Group," the Committee on By-Law Revision, of which Mr. James A. Reynolds was chairman, introduced a resolution which, if passed, would have given the Board of Directors the privilege of Altering, Amending or Repealing the By-Laws from time to time as they saw fit.

MEMBERS RESENT INSURGENT'S ACTIVITIES

The introduction of this proposed amendment in the Call of the annual meeting, which could only be interpreted by the members as an attempt by the "Insurgent Group" to gain complete control of the Association, resulted in an indignant uprising among the breeders who, at the Syracuse Convention by the largest vote ever cast at an annual convention rescinded the resolution offered by Mr. James A. Reynolds at the Milwaukee Meeting to establish a National Home for the Association.

They refused to pass a resolution voicing a vote of approval for the official conduct of the officers.

They defeated the \$12,000.00 President for re-election.

They reduced the transfer fee from \$1.00 to fifty cents and did all that was in their power to check extravagance and Political Intrigue and restore the Association to its former good standing.

The members were not only displeased with the manner in which the Association had been conducted from the year 1919 to 1921 but the annual reports for the year ending April 30, 1921 that were filed by the Auditor and the Treasurer did not agree. The members were inclined to accept the statement rendered by its worthy and honorable treasurer, Mr. Wing R. Smith, in preference to the Auditor's report.

The treasurer's report for the year ending April 30, 1921, showed that the cash receipts for the year

were \$490,548.03. The cash expenditures were \$500,855.99, or the Association was operated at a loss of \$10,307.96.

The Auditor's report, and he was known to be affiliated with the "Insurgent Group," gives an entirely different set of figures. The Association's receipts were \$496,910.10. Its cash expenditures were \$461,556.01 or it was operated at a profit of \$35,354.09.

The breeders realized with this variation in reports that it was time for some radical steps to be taken.

INSURGENTS CHAGRINED BY DEFEAT

The results of the Syracuse Convention was a bitter pill for the "Insurgent Group" to swallow. During the previous two years they had had a taste of the "Sweets of Power," well flavored with the Association's funds.

They could plainly see that at the next annual convention when the majority of their number would come up for reelection, they would be defeated and forever cut off from access to the Association's funds unless by some hook or crook they could deprive the members of their direct right to vote.

Thereupon, immediately following the Syracuse Convention, steps were taken to change the Form of Government and substitute for a Business Form of Government or a direct voting system, a Political Form of Government.

The affairs of a Political Form of Government are not administered by individuals but by two or more opposing Political parties, the same as are our State and National Governments.

Therefore, by adopting a Political Form of Government and building up a Political machine or party comprised of the Extension Department, the State-Paid-Secretaries and the officers, the "Insurgents" were practically assured of controlling the next annual convention.

MEMBERS DISARMED

A Special Meeting was called at St. Paul, Minnesota, one thousand miles west of the center of the Holstein population, and the *Holstein-Friesian World*, the official organ for the "Insurgent Group," came out with the bold statement that breeders should not send their proxies to this meeting.

It was reported that the State-Paid-Secretaries were in the field soliciting proxies long before the Call for the Special Meeting was sent out and it is a matter of history that James A. Reynolds, Chairman of the Executive Committee, who had drawn thousands of dollars from the Association's treasury, sent out letters soliciting proxies when the Constitution and By-Laws state that no salaried officer or paid employee shall solicit or vote proxies and, further, the law of the State of New York, under which this Association was incorporated, as quoted by Senator Stevens on page 59 of Volume 12 of the Herd Book, reads as follows:

"The laws of 1892 of the state of New York, on page 1428, Section 613, prescribes a form of proxy to be used by all Associations organized under the laws of the state of New York, and this law makes it a penal offense for a paid employee to solicit proxies."

By calling the Special Meeting and putting forth a

concerted effort, the "Insurgent Group" were able to deprive the members of their direct voice in the Association's management and adopt a Political Form of Government.

The "Insurgent Group" contended that in order to save the Association it was necessary to adopt some other Form of Government than the Business Form of Government, which has been so successful in administering the affairs of Railroads, Banks, Business Corporations and other commercial enterprises.

Was the assertion of the "Insurgent Group" well founded or was their purpose in depriving the members of their right to vote purely to make further raids on the Association's resources and increase the fees?

Let us review what has transpired since the Political Form of Government was put into operation.

FEES INCREASED

At the first annual meeting under the Political Form of Government, which was held at Kansas City in June 1922, the transfer fee was increased from fifty cents to \$1.50, fifty cents of each transfer to be turned over to support the State-Paid Secretary, whose chief duty seems to be, as we have stated before, to look after the Political welfare of the management in the State in which he is employed.

Further, they passed a resolution depriving the members even through delegates of the right to elect a Secretary, Treasurer and Superintendent of Advanced Registry. The power to appoint these officers was given to the Board of Directors.

At the end of the first year under the Delegate Form of Government with the \$1.50 transfer fee, the Association's financial report shows that it was operated at a loss of \$39,530.56.

PROPOSED RAID ON RESERVE FUND

Previous to the annual meeting, which was held in Cleveland, Ohio, in 1923, Mr. James A. Reynolds, Chairman of the Executive Committee, proposed in a letter to the members that \$93,000.00 be taken out of the Reserve Fund. This was the first announcement of a proposed raid on the Association's Reserve Fund.

At the end of the second year under the Delegate Form of Government the Association's report shows it was operated at a loss of over \$40,000.

At the end of the third year, or last year, the report of the Finance Committee states that the Association's total assets had decreased \$56,830.63.

If we review the secretary's reports to find the number of registration and transfer certificates issued, we will find that there has been a gradual falling off in the amount of business transacted at the Secretary's office during the past several years.

In the year 1919-1920 the Association issued 114,503 registration certificates and 131,823 transfer certificates. Last year it issued 111,529 registration certificates and 87,535 transfer certificates. Barely half of the estimated natural increase of the breed is now being recorded and transferred.

For the year ending April 30, 1919, just previous to the Philadelphia Meeting, the Association's total operating expenses were \$275,206.92. The transfer fee was twenty-five cents. The Association was operated at a profit of \$64,320.04.

That year the transfer fee was increased from twenty-five cents to \$1.00 and the Association showed a profit of \$146,344.81. This was the first year that the "Insurgent Group" came into office and they had only nine months in which to get their extravagant extension program working.

The following year, or the second year under the management of the \$12,000.00 President, the Association was operated at a loss of over \$10,000.00.

The next year, for an eight months' period, it was operated at a loss of over \$20,000.00 and the loss has been increasing ever since.

If we review the Association's Financial reports, we will find that over \$2,664,000.00 has been paid out by the Association since the present management assumed control some five years ago.

Of this amount, in the neighborhood of \$1,178,000 has been expended in conducting the office of the Secretary, publishing the Herd Books and may be assumed to constitute the legitimate expenditure of a Registry Association.

WHO SHARES IN THE MONEY?

There are no itemized statements available to show for just what purpose the balance, or \$1,485,000 was expended or who received this money and for what purpose it was paid.

The records show that some \$33,000 was paid to Mr. D. D. Aitken as salary and expenses in two years.

Mr. O. U. Kellogg, the same Mr. Kellogg that was identified with the "Insurgent Group" at Milwaukee in 1918, drew from the Association's treasury in one lump sum \$15,000 for services away back in 1922. We do not know how much he had had before that time or since.

Some fifteen thousand dollars or more has been drawn from the Association's treasury by Mr. James A. Reynolds.

Director Thomas Elder was given a free trip to South America at the Association's expense.

Last year Mr. James A. Reynolds traveled abroad at the Association's expense, visiting Scotland, England and other European countries.

The Holstein-Friesian World, the official organ of the insurgent group, has drawn large sums of money from the Association's treasury for paid advertisements encouraging the breeders to drink more Holstein milk.

Indirectly this publication has drawn on the Association's funds through advertisements carried by the various State-Paid-Secretaries. Thus, directly and indirectly, the insurgent group has been able to help finance their official organ at the Association's expense.

Since the Board of Directors has been increased to sixteen, it has been noticeable that Directors' meetings are called at many of the leading fairs, shows and exhibitions. Thus by having the Board get together at these events for a little visit, they are able to saddle their expenses on the Association.

Some of the affairs of the Association has been so extravagantly conducted that the members have thought it necessary to protect their rights and interests in the Courts and the management has caused large sums of money to be drawn from the Association's treasury to pay lawyers to protect them in office.

The legal entanglement in which the Association has

become involved places the members of the Association much in the same position as the man of wealth who has taken unto himself an undesirable wife. In order to get rid of her he must employ lawyers to present his case and also provide funds for the undesirable wife so that she can employ lawyers to fight against him.

The Whirl-Wind Campaign, State-paid-Secretary movement conducted by Mr. Aitken and the band of high salaried organizers was an expense that drew heavily from the Association's resources, saying nothing of the vast amount of money that was paid over by the breeders to support these State organizations.

At the present time the State-Paid-Secretaries are drawing constantly from the Association's resources. A tax of fifty cents on each transfer fee is set aside for this purpose.

FAILURE OF THE EXTENSION DEPARTMENT

The Extension Department, established at Chicago under the supervision of Fred Koenig, has been one of the most expensive projects indulged in by the Association. Over \$204,000 has been expended by this Department in a single year and during the year that this enormous expenditure was made by the Extension Department, the number of registration and transfer certificates issued by the Association decreased. In other words their Extension work drove business away.

The Extension Department of the Association has taken on a project to advertise special Holstein milk. The term "Special" does not apply to the character of the milk but rather to the conditions under which it is produced, and more particularly the kind of milk which the Association is advertising and trying to help create a market for; the kind of milk produced at large breeding establishments with palatial stables and expensive and elaborate dairy equipment, the kind of breeding establishments which are owned by several of the Association's directors or where other directors are employed.

Space will not permit reviewing all of the ridiculous projects undertaken by the Extension Department and carried out at the enormous expenditure of the breeders' money. Suffice it to state that not one single project undertaken by this Department has proven to be sound when put to practical application. It would seem that even the management have come to this conclusion because the services of many of the Extension workers have been dispensed with.

TO HELP THE HAND OF GREED

But there is no indication that raids on the Association's Reserve Fund will be discontinued for, at the last annual Convention, which was held at Grand Rapids, Michigan, a resolution was introduced and passed, making it possible to draw money from the Reserve Fund by a two-thirds vote of the Board of Directors instead of a unanimous vote.

It is understood that two of the Directors refused to go along on the project to draw further money from the Reserve Fund. Therefore, to overcome the objection of these two Directors and make it possible to draw further sums from the Reserve Fund, we assume this resolution was introduced and passed.

Again, at this same meeting Mr. D. D. Aitken offered

a resolution that a Committee be appointed to look into the advisability of incorporating the Association under the laws of some State other than the State of New York.

The introduction and passage of this resolution has been taken by many of the members to mean that the Corporation Laws of the State of New York are too restrictive for the present management and that they would like to incorporate the Association in a State which will permit them to do more as they please with the Association's funds.

Why should the breeders and dairymen be forced to contribute hundreds of thousands of dollars for millionaires, politicians and cattle dealers to carry out their foolish, ill-conceived experiments at the breeders' expense?

Will the Equity proceeding that is now pending in the Court compel these men to restore this money to the Association's treasury?

OUR CONCLUSION

The Holstein-Friesian breed of cattle has increased in number and popularity in the hands of the plain breeders and dairymen who have managed their business economically and efficiently and thus have been able to establish a reputation for themselves and the breed. It would seem that the management, control and direction of the Association should always remain in the hands of this class of breeders.

Any successful enterprise or business always attracts a certain element that endeavor to use the reputation gained by the prosperous parent organization. The Holstein-Friesian industry is no exception.

It would appear that the influence that has been perpetuating the practice of making exaggerated records, and promoting consignment sales at which price fixing is indulged is the same influence that has been working within the Holstein-Friesian Association to the extent that, through its Advanced Registry and Extension Departments, a steady flow of propaganda has been disseminated to the breeders and dairy public, setting forth the value of these forced, exaggerated records.

The influence that has been working within the Association to perpetuate these things, who, in former years, were compelled to stage sales at their own expense to catch innocent victims, has now taken over the management and control of the Holstein-Friesian Association and are using it to encourage the making of exaggerated records, accepting such records and giving them extensive publicity by personal letters, printed bulletins and press reports.

Since the present management assumed control of the Holstein-Friesian Association, every world's record but one that was then on the Association's books have been exceeded by other records and new high records of forced production have been established.

The Association, under the present management and through the State-Paid-Secretaries, indulged for the first time in promoting, managing and advertising consignment sales. Under the supervision of a State-Paid-Secretary, new high averages at sales of such a character have been established and not only that, buying of each others cattle by consignors has been indulged in, and directors and officers have participated.

A complete and radical change must be brought about in the Association's management if the public confidence is to be restored and prosperity returned to the industry.

The clever and unscrupulous politician and the shrewd promoter will always infest to a greater or less degree any prosperous industry but allowing this element to gain the upper hand has worked to the destruction of many prosperous industries and organizations and is ready and waiting to destroy others.

HOW CAN THE EXISTING WRONGS BE CORRECTED?

If the members had not been deprived of their right to a direct vote, the destructive influences working within the Association, we believe, would have been defeated at the Kansas City Meeting in June 1922.

For the breeders to build up a Political Organization to work in opposition to the present Extension force, with the view of controlling the delegates at the next Annual Convention, would require an expenditure of many thousands of dollars. If they were successful they would be merely rescuing the Association, as it were, from a "pack of hungry wolves," greedy for money, and this enormous expense would have to be continued indefinitely.

The Equity Proceedings now pending in the Courts has every promise of affording the desired relief but the Courts of Justice move slowly and in case of a favorable decision the possibilities of appealing postpones the relief from this source so far in the future that every dollar in the Association's Reserve Fund will be wiped out if the extravagance that has prevailed during the past three years is continued, saying nothing of the vast sum of money that would be taken from the breeders' pockets in excess fees.

Therefore, the best way, the most satisfactory way, the cheapest way and the most effective way for the breeders and dairymen, who constitute 90% of the membership of the Association and own 95% of the cattle, to declare themselves as being opposed to the manner in which the Holstein-Friesian Association is being conducted, is to withdraw in a body and organize a new Association with a provision in its By-Laws that no one can serve as a Director unless he is a herd owner and follows dairying as his major business. The sole purpose of the new Association should be to maintain a Herd Register, to issue registration and transfer certificates to its members at cost, consistent with prompt and efficient service.

The management of the affairs of a Purebred Dairy Cattle Registry Association should remain in the hands of the men who milk cows and not in the hands of those who use cows to milk the public, or use their influence to milk the Association.

Breeders everywhere have become discouraged to the extent that they have failed to patronize the Association as can be seen by the great falling off in the number of registration and transfer certificates issued.

We believe there is a bright and prosperous future for the Holstein-Friesian industry as soon as the breeders organize to suppress Speculation and Exaggeration and are provided with a means of maintaining a Herd Register that will issue registration and transfer certificates to its members at cost and thus free the dairymen from paying tribute to the Speculators.

In Time of Summer Prepare Cows for Fall

By GEORGE LESLIE

COWS that will calve in the month of October should now be dry; and it will put dollars in the pockets of their owners this coming winter if these animals are kept in good condition until they calve.

To get condition on a dairy animal she must be taken good care of, both as regards comfort and feed.

Night pasture and her stall in the cool barn, with clean bedding, and water before her, will, in the heat of August, mean much to both cow and calf. She must have material to keep her own body and her calf in good thrift, and this material must be supplied by the feeder in her daily ration.

If she is well fed she will keep in good condition. "Well fed" does not mean heavily fed, but properly fed with body building nutrients in a palatable and easily digested form.

A good grain ration is, of course, necessary and no dry cow soon to freshen should have less than six pounds of grain daily. A heifer soon due to drop her first calf should have four pounds.

Succulence is important, too. Expecting dry cattle to build condition on burned out August grass is folly. They should have summer silage or roots or some green crop. This is helpful in keeping up normal bowel action.

They won't get enough roughage at this season, if pastures are dry, without some hay. Rough feed is an absolute essential for a dairy cow at all times, if she is to be healthy. She needs the dry matter and the bulk, and in hay it is supplied in a form which no other part of her ration can exactly duplicate. Dry roughage, too, is one thing a cow will never eat too much of. It is well to weigh what she will clean up, two or three times, to see what her normal capacity is, if you don't feel that you can weigh it every day.

Silage should be weighed because a "basket of silage" or a "bushel of silage" will vary in weight at least 10 to 20 lbs., according to the condition and growth of the corn when ensiled. Too much silage will be apt to bring about digestive disturbances which will interfere with the cow's making the best use of the rest of her feed.

It is wiser also to weigh any green crops fed as silage to supplement poor pasture. With some hay about 20 to 25 lb. of green feed is a fair allowance for a dry cow and 10 lb. to 15 lb. for a well grown heifer in calf.

Cattle well fed and kept comfortable through this period of preparation for fall calving, with silage or roots or beet pulp gradually taking the place of the green crops so as not to get a sudden change from succulent feed to dry hay and concentrates, will calve in fine condition. Their calves will be strong and vigorous and the dams will produce much more through their milking period.

Home-made things become a part of life. Boughten things at best are appurtenances.

A Review of the Dairy Industry

By A. M. LOOMIS

IT has been a long time since general conditions in the dairy industry were much more satisfactory than they are as the 1925 season of flush production draws to a close. A birds-eye view of the dairy industry shows that production has been satisfactory in most dairy producing sections.

A. M. LOOMIS
Secretary of the National Dairy Union.

At the same time, the market has been active and in general in the producers' interest. Everyone knows that the way the steady demand cleaned up the big storage was both a revelation and a happy surprise. The markets did not go as low as had been generally anticipated, responded as well or better than usual to the demand stimulated by the seasonal price declines of June and July, and the price is now

starting its upward climb way above last year's figures and without any visible reason either near or remote for not continuing a steady seasonal advance.

If one season can be more "normal" than another, this one is it. On August 1st the storage while just a shade larger than two years ago is about 25% less than last year while reports from the field generally indicate that no abnormal increase in storage can be apprehended this year.

Without going into details, it can safely be said that the world butter situation is entirely satisfactory to the maintenance of a satisfactory price in this country. England alone of the foreign consuming countries reports serious unemployment, and that unemployment because of the dole and government-aid system has not resulted in any marked decline in consumption. On the other hand, there is almost a 10% increase in the importations of butter into England in the five months of this

year. Germany continues to be a large importer. Unfavorable weather conditions have cut short the production of northern Europe. It is too early to forecast the season in the Southern Hemisphere, but its influence cannot be felt on the American market before the beginning of another year.

Conditions are almost equally optimistic at home. While both payrolls and employment declined sharply in July, August and September a year ago, there is no present indication that such a decline will take place this year. June employment and payroll figures show a sharp increase over last year, almost 10%, and it will take a very sharp break in the business world to bring about any conditions which will unfavorably influence the sale and consumption of good butter within the next six months.

There is one even more satisfactory condition to be pointed out than any of those mentioned, and that is, an apparent decided increase in the amount of butter scoring 90 points or better which is being received at the principal markets as compared with previous years. How big a factor this is in the increase in consumption can only be suggested but it is a subject upon which the American dairy industry is to be complimented. Both the trade and the industry will welcome additional statistical information on this subject.

Of course this whole optimistic outlook is predicated upon an outstanding fact, and that is that there has not been any boom in dairy production but a normal growth. Both the economic factors involved and the good judgment of the dairy farmers have restrained this increase in the dairy industry to a point which has just about kept pace with the normal growth and increase in consumption. Anything else would be ruinous to the industry. Therefore, while the immediate future is optimistic, the greatest danger is that conditions will be too good and lead to a development of the industry beyond the capacity of the public to absorb the product.

Three maxims for success? I would suggest thinking, working and economizing.—E. B. Butler.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

Choice Bull Calves

MAPLE GROVE UNEEDA KING GLISTA

Dam: Maple Grove Columbia Jupiter, a daughter of King Pontiac Jupiter, he by King of the Pontiacs from a daughter of Hengerveld De Kol. Calf was born Dec. 23, 1924, is nicely marked and well grown. Price, \$70.

MAPLE GROVE UNEEDA CLEVER GLISTA

Dam: Maple Grove Clever Coreva Glista 349.2 lb. milk, 15.05 lb. butter in 7 days as a two-year-old, a daughter of our 34-lb. bull, Clever Model Glista. Calf born April 3, 1925, in color is more black than white, well grown, with good top lines, an excellent calf. Price, \$85.

These calves were sired by Maple Grove Yhma Glista, whose dam produced 27 lb. butter, 641.3 lb. milk in this herd in 7 days.

Herd Accredited.

MAPLE GROVE STOCK FARM

F. JONES, MGR.,
Centerville, Pa. R. D. 4.

Log Cabin Herd

exhibited at the recent Crawford County Dairy Show.

One of our three-year-old heifers not only won first prize in her class but also carried off the Grand Championship, evidence enough of the Quality of our stock.

Log Cabin Herd is Accredited and is headed by

KING HENGERVELD LEFA JOH

a son of King Joh from a 32 lb. daughter of Dutchland Colantha Sir Inka.

Can we do something for you?

J. H. LEWIS

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance. Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

AUGUST 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

An Outrage

IF there was no other legitimate reason for organizing a new Registry Association than to free the Holstein breeders from a tax on the transfer fee, which compels them to contribute to the support of the State-Paid-Secretaries, to perpetuate the Political management in office, organize State and National consignment sales and spend the balance of their time begging, it would appear that a new registry association would be welcome.

The State-Paid-Secretary movement built up under the Aitken Whirl-Wind Campaign to promote the selling of cattle at public auction, at State and National Sales and look after the political welfare of the management, it would seem, has assumed the rôle of a public charge.

By depriving the members of the Association of their right to a direct vote at the annual meeting, the Political, Millionaire Group were able to increase the transfer fee and place a tax on each transfer certificate to go toward the support of the State-Paid-Secretaries.

The breeders in Wisconsin last year were thus forced to contribute the tidy little sum of \$8,750.50 towards maintaining the State-Paid-Secretary. New York State breeders were forced to pay \$6,469, yet the over \$8,000 in the State of Wisconsin and the over \$6,000 in the State of New York failed to supply the necessary money for the State-Paid-Secretaries.

The "ONE MAN" New York State Association, with Charlie Bigler as President, Charlie Bigler as Secretary and Charlie Bigler as Sale Manager, is reported to be in very hard financial straits. Mr. Charlie Bigler is reported as spending much of his time trying to inveigle breeders to go out and beg for him in the interests of the State Association on a salary basis.

The news clippings that come into the office of THE HOLSTEIN BREEDER AND DAIRYMAN from Wisconsin regarding the activities of the State-Paid-Secretaries, shows that nine out of every ten Club Meetings that Mr. Leslie Oldham, Secretary of the State Association, attends is for the purpose of inducing the members to

join the State Association, pay their dues and keep Mr. Oldham in spending money.

It is reported that the Illinois State Holstein Association, where Mr. Clark is serving as Secretary, is over \$6,000 in debt.

It is high time this State-Paid-Secretary outrage be discontinued and the State-Paid-Secretaries engage in some legitimate work, go to the Alms House or take out a Professional Beggars license.

Our Debt to Farm Machinery

FEW of us realize the wonderful part that machinery has played in the development of our civilization.

"In the days of our forefathers, the entire family worked on the farm. Little time was spent in going to school, in reading or in travel, yet the few farm tools were so crude and the farming so poorly done that a family raised little more than it consumed. Work as hard as they could, the family was often threatened with famine. Nearly all persons had to be farmers to live.

"In India and China we have much the same condition to-day. One family raises little more than it uses, hence a very large part of the population are farmers. So long as this condition continues, it is impossible for a high state of civilization to develop.

"When our fathers began to use machinery and better farming methods, it became possible for one family to produce enough to feed two families.

"This made it possible for half of the population to do other kinds of work. At the same time, the farmer became a purchaser of articles that formerly were unheard of luxuries.

"If civilization is to progress, this movement must continue. It allows men to engage in research and invention, to write books and magazines, to manufacture and transport the things that a higher civilization demands.

"Best of all, it allows the youth of the land more years of schooling. All progress in civilization depends on having each farmer produce more than his father produced.

"With the spread of the improved methods that are used by our better farmers, it is probable that the time may soon come when one farmer will raise enough to feed five or six families.

"When this time comes, only 15 to 20 per cent of the population will be farmers. These farmers will purchase many things not yet invented, and all civilization will have taken a long step forward."—Dr. G. F. Warren.

That the dairy cow has a marked effect on the health of Nations is shown by a recent study of twenty-four countries made at the Ohio State University. In New Zealand where there are twenty-five cows for each 100 persons the death rate is only ten per 1,000 inhabitants as against thirty-one deaths in Chile where there are about five cows to every 100 persons.

Advertising is attracting attention with a view of creating the desire to possess.

Foot and Mouth

ON July 31st Foot and Mouth Disease was diagnosed in a herd of cattle near Houston, Harris County, Texas. Warnings were promptly sent to the chief veterinarians in the different states and these in turn notified the active veterinarians in their territory.

The information available indicates that the outbreak is confined to one herd, a herd kept on land on which infected cattle were kept a year ago. Federal and Texan veterinarians were rushed to the scene of the trouble. The herd was slaughtered and buried to prevent infection going any further.

The U. S. Junior Judging Team in Holland

THE three farm boys from Franklin County, Iowa, who represent the United States in the International Junior Dairy Cattle Judging contest learned that all Europeans were not as backward as they had been taught to believe. Instead of going from England to Holland by boat, they were taken in an airplane from London to Amsterdam, making the trip in three and a half hours.

One of the boys wrote: "We flew at a height of about 3,500 to 3,900 feet and our speed was from 45 to 65 miles an hour. Cattle looked like tiny cats and people were almost invisible. Our plane was a twelve passenger machine."

The three boys, Raymond Monahan, Lester Olson and Harlan Leonard, practiced judging in a number of Holland herds and they as well as their coach, V. B. Hamilton, county agent of Franklin County and Earl Weaver, head of the dairy husbandry department of Iowa State College, were carried away with some of the cattle they saw in Holland. In one herd, according to Professor Weaver, they found five cows any one of which, in their judgment, could have defeated the champion female at the last National Dairy Show. In a small herd owned by a Dutch farmer they found a cow which, Prof. Weaver says, is superior to any of the breed he ever saw at any American show.

The Hollanders not only have cattle of wonderful type but good producers along with it. Their cattle, as a rule, are a little more beefy than Holstein cattle are in this country but the Hollanders do not particularly care for great size in cows.

Confronted by a Condition

LET us say frankly to those who are talking, writing and holding meetings to protest against the tuberculin testing of cattle that they are doing themselves and their community no good. A condition, not a theory, confronts the milk producers of the eastern part of this country. The cities wherein milk is marketed have a right to take measures which they believe will safeguard their milk supply. These cities are insisting that their milk must come from cows known to be free from tuberculosis, and the criterion by which they judge freedom from that disease is the tuberculin test. Baltimore, Cleveland and other cities

which draw their milk supply from the territory in which this paper circulates have already made such provision for their protection, though the enforcement of it has been deferred. But it is deferred only to give dairymen a fair chance to eradicate disease from their herds. Ultimate enforcement appears to be certain, not merely in those cities which have acted already but in all other cities. That is the condition confronting the milk producers in this territory, and no amount of argument about the merits of the tuberculin test or the composition of the milk or the theory of evolution is going to change it. Producers must either comply with the requirements of their markets or they must cease to sell therein. There is no other way as long as these requirements exist; and there is no indication that they are to be abandoned. The position of the cities in this matter is strengthened by at least three things—by the approval of science, by the knowledge that before long they need not be wholly dependent on near-by supplies, and by the action of dairymen who desire clean herds as much as the cities desire disease-free milk. The thermos car is going to prevent a milk famine in our cities. The dairymen of distant states are testing out tubercular cattle as fast as funds will permit, and they will furnish the milk if near-by producers fail or refuse to comply with the requirements.

Such considerations as these should give pause to any one who is inclined to hearken to the opponents of the prescribed test. Even if these opponents were right about the test itself, the condition would still confront the milk producer, the bar to his market would still remain, and his protesting friends have shown him no way over, under or around that bar. He must test if he is to market in the future, so wisdom counsels him to prepare for the inevitable rather than to resist it. Public funds should help to the limit of safety, for the losses will be sufficiently severe in any case; and the whole difficult problem should be handled with as much consideration for the cattleman as possible. But nothing should be allowed to obscure the fundamental facts about his future market.—*National Stockman and Farmer*.

True

ONE of the drawbacks to successful coöperative marketing is the attempt of many to build too rapidly and on too large a scale. If these men would take time to learn the history of a large majority of our big business institutions, they would find that they started in a small way and as they grew in size they gathered information necessary to the successful conduct of these institutions. Let us not despise small beginnings, for if there is back of them a true understanding of what can be accomplished and what ought to be done, coupled with capable business management, success will ultimately be attained.—*Hoards Dairyman*.

A judge has ruled that an engagement ring is not a gift, but a trust. On the other hand, try and get it back.

Training softens severity.

NOT ABOUT COWS

Warm Weather Helps in the Laundry

ALTHOUGH summer has always brought out the bright colors in clothes, yet this year, the variety of bright and unusual colors is larger than ever before. This makes it imperative that all possible care should be taken in the laundering of the summer gowns. Even if you have the best laundress in the world, it is wiser to do these dainty things yourself, for naturally, you can exercise greater care in washing, can use one of the milder soaps or soap flakes, and can see that the sun does not get in its deadly work while the garments are drying.

Having bought a piece of new material, it always means a great struggle to decide whether to shrink or set the color in the goods or make it up just as it is. The new cloth is never quite so pretty as before it is put in water, and one hates so to destroy all that fresh beauty. Then, too, after having once been laundered, wash clothes seem to soil so much more easily. Yet who has not had the horrible experience of having the color in a dress run or fade the first time it was washed, or had the garment shrink beyond all possibility of future wear.

That is a question each woman must decide for herself. To risk or not to risk? Should the decision be to shrink and set the color before making the dress, it can best be done by leaving the material folded, covering it with boiling water and allowing it to remain covered until the water is cold. Then it should be hung in the shade where it can drip until just dry enough to iron. Should the material be of that nature which is known to shrink badly, this operation should be repeated allowing it to get perfectly dry from the first wetting before immersing the second time, and ironing after the second. It should not be ironed too wet, as it leaves the material too stiff and is much harder to do.

SETTING COLORS

When it comes to setting colors, what to use depends upon the color of the material. For blue or green use one ounce of saltpeter to twelve quarts of boiling water. For any other color use one ounce of sugar of lead to the same amount of water. Where blue and pink both appear in the design, use one level tablespoon of baking soda to the same amount of water. For pink and green, use vinegar, being careful to have pure cider vinegar. Ordinary salt—using a heaping tablespoonful to a gallon of water—is good for any color excepting blue, which it sometimes injures. Whatever the medium used to set the color, the material should be thoroughly rinsed in several waters before being hung up to dry.

HANG IN THE SHADE

The greatest care should be taken never to hang colored clothes in the sun or even in a very strong light. It must also be remembered that a shady spot

may soon become a sunny one. It is better to dry colored clothes indoors if possible, or by rolling in a large bath towel. If dried outdoors, they should be taken in the instant they are dry, as even the wind and air work damage. The price of pretty colored gowns is eternal vigilance.

IRONING

After being hung out and dried as quickly as possible, dark linens should be ironed on the wrong side, as ironing on the right side gives them an ugly shiny look and causes the color to fade. Dotted Swiss or mull or any embroidered dresses should also be ironed on the wrong side. If lace is used as a trimming, iron that first and the dress proper afterwards. Buttons are a nuisance when a dress or blouse has to be pressed. It will help a lot if you place a folded Turkish towel under the place where the buttons are. They will then sink into the towel and the spaces between them may be smoothed easily.

WASHING SILKS

When washing white silk garments for the first time, put a dessertspoonful of borax in the water, and allow to stand for half an hour. Then wash in the usual way being careful not to twist in wringing the water out, but to squeeze it out with both hands. White silk stockings or gloves should be washed and dried at night, as light causes them to turn yellow and they should not be ironed. Silk stockings should really be washed after each wearing as it is the perspiration that causes them to wear into holes. Chamois gloves may be kept soft and pliable by being rinsed in clean soapy water, laid in the folds of a clean towel and the water pressed out as much as possible, then they may be hung in the open air to dry.

TO CLEAN HATS

To clean a white felt hat, make a paste of arrow-root and magnesia mixing it well with cold water, using equal proportions of each. Brush over the hat, allow to dry thoroughly, and brush off. Talcum powder, dusted into such a hat, allowed to stand as long as possible, overnight at least, then brushed out, will clean but not so thoroughly.

A panama hat may be cleaned by using a warm castile soap lather, to which a few drops of ammonia has been added. It should be rinsed well with tepid water and rubbed dry with a soft cloth. Or Oxalic acid (which is poison) and hot water may be used.

A black chip hat which has become dusty may be wonderfully improved by being rubbed with a very little olive oil.

Less than 10% of the farmers' problems can be remedied by legislation; the remaining 90% can best be solved or approached for solution through the business of farming.—*Secretary of Agriculture Jardine.*

THE PRACTICAL DAIRYMAN

HOW PREGNANCY AFFECTS MILK YIELD

Comparing records is a favorite indoor sport of students of breeding and of the dairy industry. It is oftentimes indulged in by cattle owners and all are very much inclined to overlook details and simply keep in mind the size of the record, estimating its value by its magnitude. Yet everyone of us know that conditions materially affect the value of a record, that the performance of a cow in a small herd, given ordinary dairyman's care and feed, may be more meritorious than the performance of her sister in a large herd where records are made regardless of cost and even of profit, if profit is construed to mean returns above cost of feed. Yet records should be compared by anyone who contemplates purchasing a herd sire or introducing new blood into a herd. Each herd owner should compare records in estimating the comparative value of animals owned by themselves.

One factor that is often overlooked in record comparison is pregnancy. That is, the stage at which the cow again becomes pregnant, which is one of the great factors governing the amount of milk which a cow yields in a lactation period. In actual practice this is allowed for, roughly, by stating not only the total lactation yield but also the number of days the animal was in milk, but as H. G. Sanders, a leading British agriculturist, writes in the *Agricultural Gazette*, this is very far from satisfactory, for some cows (usually the poor milkers) dry off a considerable time before they are again due while others milk on until pregnancy is far more advanced, and often there is some difficulty in getting some of the most persistent dry at all.

For example: Two cows might give 8,000 lb. milk in 300 days, and their performances would appear to be equal. But one might not be due to calve again for another six months, whereas the other might be due almost immediately. It is obvious that from the producers' point of view the latter animal is a much better "rent payer." Although it is a better plan to give cows a rest of six weeks or two months between lactation periods than to let them milk all the time, in judging the performance in a lactation some cognizance must be taken of when the cow's next calf was due.

This could be done by stating not the number of days the cow was in milk, but the number of days between the beginning of this particular lactation and the beginning of the next; or, perhaps better, by the interval between the beginning of the lactation and the date when the cow became pregnant again. This last has been called the service period.

Thus, if a cow calves on October 1 and is successfully served on the next Christmas Day, her service period for that lactation is the interval between October 1 and Christmas Day, or 85 days; and we can describe her lactation fairly accurately by stating that her yield was 8,000 lb. (or whatever the figure was), with a service period of 85 days.

Notice that where a service period is 85 days, the next calf is due in exactly a year's time after the previous one; since pregnancy lasts about 280 days, and 280 plus 85 makes 365. Our example means, then, that this was the yield when the cow had just a year between calvings. Now, if two animals give the same yield with the same service period, their performances may reasonably be said to be equal (other influences such as age, etc., are not considered here) and it does not matter how long they are in milk; for if one dries off much earlier than the other, she must have given a considerably higher yield to begin with, in order to reach the same total.

This conception of the service period is quite simple, and Mr. Sanders says, might easily be absorbed into practice, instead of the length of lactation idea which is now in vogue. The first and most obvious advantage is that the statement, although no more involved than the present one, would have a perfectly definite meaning. The second advantage and one of more importance is that one can allow for different lengths of service periods—one cannot allow for lengths of lactations because of their indefinite nature.

The accompanying table shows how this allowance can be made and, as it is based on over 5,000 lactation records of cows kept under ordinary conditions, it may be regarded as fairly reliable.

CORRECTIONS FOR SERVICE PERIOD
TO ESTIMATE YIELD IF SERVICE PERIOD HAD BEEN 85 DAYS

Service Period	Correction to Apply		Service Period	Correction to Apply	
	1st Calvers	Others		1st Calvers	Others
0-19 days	+28%	+34%	200-219 days	-20%	-20%
20-39 "	18	21	220-239 "	22	21
40-59 "	11	12	240-259 "	23	23
60-79 "	4	5	260-279 "	25	24
80-99 "	-1	-1	280-299 "	26	25
100-119 "	5	6	300-319 "	27	26
120-139 "	9	10	320-339 "	28	27
140-159 "	12	13	340-359 "	29	28
160-179 "	15	16	360-379 "	30	28
180-199 "	18	18			

A service period of 85 days has been taken as a standard, because this means that the cow is due again in exactly a year's time, and also because it happens to be just about the average interval of all the records included. The table gives the percentage which should be added where a cow is served very soon after calving, and the percentage to be subtracted where a cow is left unbred for a long time. This is in order to estimate what the yield would have been if, in each case, the service period had been 85 days—in other words, the two cases are standardized in this respect, and so become comparable.

An example will perhaps make the matter clearer. Suppose it is required to compare two individuals, one giving a yield of 10,000 lb. in a long lactation, not being served until she had been milking 270 days, and the other giving 7,000 lb., having been served 30 days after calving. The corrections, given in the third column of the table, are minus 24% and plus 21%; and the standardized yields are respectively:

$$10,000 - \left(\frac{24}{100} \times 10,000 \right) = 7,600 \text{ lb.}$$

$$7,000 + \left(\frac{21}{100} \times 7,000 \right) = 8,470 \text{ lb.}$$

We should know that the latter was a better yield under the circumstances and also just how much better it was.

Separate corrections are given for first-calvers, but they do not differ very much from the others. The reason for the variation is that heifers give rather a different lactation curve (on the average) than older cows—a flatter one.

Heifers do not, of course, give so much milk as older cows; but, allowing for this, their yield in the early part of the lactation does not rise so high, although it is maintained better as the lactation advances. As an older cow gives a higher proportion of her yield early in the lactation, she is more handicapped by a short service period; and so, to be accurate, we must give her a higher correction.

In the same way, the heifer's flatter curve means that if the lactation is a long one the milk obtained over and above the normal is a higher proportion of the total; and thus for long service periods a greater percentage must be taken off in the case of heifers.

Pregnancy, of course, definitely puts an upper limit to the length of the lactation, and it also lowers the yield during the later stages. With a sufficient number of records, it is possible to measure this effect week by week; and when this is done it is found that immediately after fertile service the yield drops very slightly, and that this drop increases slowly from about five to ten pounds a week for the first five months. At this point (to be exact, at the twentieth week of pregnancy) there is a sharp and sudden fall, and the cow begins definitely to dry off, a process which is complete usually by the thirty-second week of pregnancy. This sudden change to the big fall is very marked, and can easily be seen if the records of as few as forty or fifty cows served at the same time are averaged. There are, however, a few individual exceptions.

It may be that food and energy go to form the growing fetus that would otherwise go to form milk. This might be partly responsible for the lowering of the yield, but it is known that, as pregnancy advances, the milk-secreting cells of the mammary gland are, as it were, closed for repair, in preparation for the next lactation. It is probable that this renovation is chiefly responsible for the fall in milk yield during pregnancy.

SUCCESS DEPENDS UPON MANAGEMENT

As in all other enterprises, the success of dairy farming depends upon good business management. According to surveys of several thousand dairy farms, made with the idea of determining the cost of producing milk, it was found that the feeds consumed represented from 60 to 70 per cent of the total cost of milk production; labor represented from 20 to 30 per cent; and incidentals, such as interest, insurance, and depreciation, represented from 10 to 20 per cent. No system of dairy farming can prove profitable over a period of years unless at least all the roughages needed for the herd are produced at home. The cost of feeds for the dairy cow can be controlled largely by producing them on the farm where consumed. In buying grain feeds many dairymen are misled into believing that the cost price per ton is the most important. However, with our present system of guaranteed analysis, which is protected by law, we should consider the more important factor of the total digestible nutrients contained. We should use home grown roughages and grains for the basis of the ration and purchase only those grains or mill products which furnish the greatest amount of nutrients per dollar and which may be necessary to give the ration balance, bulk or variety.

J. P. LAMASTER.

FLY SPRAYS

Flies cause considerable annoyance to dairy cows during the summer and not only does the irritation caused by the flies tend to lower milk production but the restlessness of the cows is a frequent cause of inefficient milking.

A good fly spray can be made from:

- 4½ quarts coal tar dip
- 4½ quarts fish oil
- 3 quarts coal oil
- 3 quarts whale oil
- 1½ quart oil of tar

Dissolve 3 pounds laundry soap in water, add the ingredients of the spray and bring the whole up to 30 gallons with lukewarm soft water. This spray will keep off the flies and prevent the coats of the animals from becoming harsh.

The cows should be sprayed twice a day in the morning after milking and in the afternoon when in the barn for silage or green food. With a portable cart, made from a half barrel by attaching wheels and a spray pump and nozzle, two men can spray 40 cows in five minutes.

Thirty gallons of mixture will spray 40 cows twice a day for ten days at a very nominal cost.—*Illinois News Letter*.

FORMULA FOR FLY POISON

Mix one part formaldehyde in 20 parts of water. Add enough corn syrup to sweeten and sprinkle on the floors or in the mangers. If sprinkled in the mangers it should be on the leavings after the cow has eaten which should be swept out before she is fed again. Small amounts of formaldehyde will not harm a cow but she should not receive too much. Poison may be set about barn, out of reach of the dogs and cats in wide dishes with flaring rims, kept well filled so flies may get liquid readily.—*Illinois News Letter*.

REED ON CALF RAISING

Professor O. E. Reed, of the Michigan State College of Agriculture, is using the radio in talking to the farmers. The following is taken from a talk he gave recently on calf raising:

"The time to begin to raise good calves is before they are born, and poor calves are the calves that were not right when they were born. We are told that from the time the egg cell

is fertilized until the calf is born ninety-five per cent of the power of growth has been expended. This makes it plain that everything possible be done to furnish the necessary nutrients for development and growth during this period. A cow cannot produce good strong calves year after year without having proper care and feed and given a rest from producing milk each year. In some herds the cows have plenty of vacation but they are not fed properly when dry. This is too important a time in the calf's life for the mother to be so treated. The cow must be properly fed at this time and the ration should contain succulent foods if at all possible.

"A cow should have a vacation on full feed every year. Instead of being turned into the back pasture or the stalk field and forced to rustle for herself, she should receive a balanced ration including legume hays or pasture, just as she had to have to produce the maximum flow of milk when fresh."

DOES THE FEED OF THE BULL INFLUENCE SEX OF CALVES?

Feeding to govern sex of the offspring has received considerable attention by medical men and livestock breeders since the earliest times. Guy MacL. Richards, whose writings in Washington Farm papers are well known, is a strong believer that if a bull is fed a ration consisting largely of carbohydrates, the sex of the offspring will run largely to females. Mr. Richards handled two well known Holstein sires, King Korndyke Pietertje Pontiac No. 127387 and Sir Colantha Prilly No. 106062.

At the time King Korndyke Pietertje Pontiac was under the care of Mr. Richards, he was two years old. He was given plenty of exercise, was broken both to ride and drive and in addition had the use of a large paddock. During three years while he was fed a strongly carbonaceous diet, he sired 74 calves of which 48 were heifers and 26 were bulls.

Sir Colantha Prilly was five years old before Mr. Richards had the care of him and his former owner complained that he was a "notorious bull getter." During the four years while Mr. Richards cared for him he sired 36 calves of which 29 were heifers and 7 were bulls. As the herd contained a number of his daughters and it was desired to avoid inbreeding, he was not used very extensively during this period. Being five years old at the start he was fully matured, had a very ugly temper and was confined in a pen 25x75 feet. Mr. Richards says he was cross with himself and the world in large and in consequence took very little exercise.

These two bulls received no alfalfa during these years. Their hay consisted largely of mixed Italian rye grass and timothy and their grain was a mixture of two-thirds ground barley and one-third bran. Mr. Richards believes that the system of feeding adopted had much to do with influencing the sex of the offspring of these two bulls and says that, were he again handling a herd of dairy cattle, he would use the same system of feeding feeling sure that a large number of the calves dropped in the herd would be heifers.

BLIND TEATS

Atresia-blind or imperforate teats, is a defect existing from birth and is seldom, if ever, discovered until after the heifer has freshened. The owner's suspicion is first aroused when one or more quarters become abnormally large, hot, and painful while the efforts of the calf to obtain nourishment are evidently unsuccessful. Examination usually reveals the fact that the teat orifice is wanting, but there will be seen clearly a distinct ring surrounding the slight depression where the teat orifice should be.

Treatment is obviously surgical. The orifice may be artificially established by means of a large, sterile needle or a small-blade knife thrust through the sterilized skin perpendicularly at the center of the depression.

To prevent closure by healing, it is advisable to insert a milk tube, with usual precautions as to sterilization, at milking time, and to replace it between milkings with a sterile teat dilator, or even a strand of antiseptic tape, to act as a seton.

Healing may be promoted by the application of an ointment of balsam of tolu, or fluid extract of belladonna and glycerin. Should the opening become sealed during the healing process, it will become necessary to repeat the process already described.

—*Farmers' Bulletin*, 1422.

CLUB ACTIVITIES

JUNEAU COUNTY BREEDERS PICNIC

On June 30 the Holstein breeders of Juneau County, Wisconsin, held their annual picnic at the farm of Keiffer Brothers at Lindina. The speakers were County Agent Sands, Jerry P. Riordan of Mayville, and A. O. Collentine, of Madison. Dairy Extension specialist. Mr. Riordan spoke on prospects of the dairy industry and Mr. Collentine gave an interesting cattle judging demonstration using part of the farm herd as exhibits.

HEAR VARIED TALKS

The Douglas County Holstein breeders and members of the Cow Testing Association gathered July 2 at the Modena farms near Lake Nebagamon, Wisconsin, for their annual joint picnic. About 70 were present. Besides the musical program short talks were given by A. N. Young, of South Range, the retiring president; E. Bolognesi, owner of the Modena farms; Hon. R. Bruce Johnson, member of the state assembly; County Agent John M. Walz, and Tester Hilding High.

Mr. Young and Mr. Bolognesi talked on the purposes, aims and achievements of both the Holstein association and the cow testing body; Mr. Johnson explained in detail the new tuberculosis bill passed by the legislature; Mr. Walz dwelt upon the subject of diversified farming in Douglas County; Mr. High discussed cow testing activities in the county.

Officers elected for the next year by the Holstein association are: Hugh A. McArthur, Station B, president; Mary Dooher, Itasca, vice-president; E. Bolognesi, Lake Nebagamon, secretary and treasurer; Otto Schmidt, Foxboro, and Howard Seldon, Station B, directors.

MANUFACTURED MILK MARKETS

An improved condition is reported in the condensed and evaporated milk markets. Buying is fairly active and unsold stocks on July 1 were less than one-half of the volume of July 1, 1924, while it is reported that unfilled orders show a big increase. The warm weather has stimulated the demand for ice cream thus making another broad outlet.

Production ever since January has shown consistent decrease each month from the corresponding month of last year. May production was about four percent lower than that of last May while June production is almost seven percent less than that of June a year ago.

There has been a general decrease in the volume of dairy products manufactured due to the fact that in many districts fluid milk surpluses have not reached their usual proportions. Favorable prices on the butter and cheese markets made strong competition for the condenseries.

Usually in June manufacturers stocks increase but this year

PRODUCERS AND CHOICE INDIVIDUALS

Remember that this is an Accredited Herd; that the cattle of this entire county, when recently tuberculin tested, passed 99.2% Clean, and that this herd has always been headed by high class bulls.

Can spare a few good ones raised here.

L. S. BROWN

Saegerstown, R. D. 1,

Crawford Co., Pa.

a small decrease was recorded, further evidence that demand has been more favorable and production lighter than last year.

Exports were slightly heavier during June than for May, and also greater than June of 1924. Shipments to Germany of evaporated goods account for the greater part of the increase. However, the total to date since the first of the year is considerably below the same months of 1924, and the export trade is not regarded as offering a great deal of support to domestic markets. Exports of all countries during June totaled 18,213,368 lb. which makes the total from January to June 75,115,695 lb. Last year the total for June was 11,460,838 lb. and from January to June 107,848,269 lb.

Exports of powdered milk showed an increase during June of this year, 285,620 lb. being exported against 251,127 lb. the corresponding month of last year. The figures for the first six months of the year show an increase of nearly one hundred thousand pounds over the corresponding six months of 1924 for which the figures were 1,606,851 lb.

The United Kingdom, Japan, and the Netherlands were the heaviest customers during June, the United Kingdom taking 58,000 lb., Japan, 53,405 lb. while 52,500 lb. shipped to the Netherlands. Mexico and China each took over 18,000 lb., Italy a little over 15,000 and France 15,761 lb.

NOW ON COMMUNITY PLAN

The Rusk County Holstein breeders in a general meeting at Ladysmith, Wisconsin, June 30, organized their association under the community club plan. A board of directors consisting of eight members, four of whom represent the Bruce and Ladysmith clubs and the other four various sections of Rusk County were elected, several committees were appointed and a plan of work adopted to be carried out during the coming year.

In a session of the board of directors the following officers were elected: President, John A. Schmidt; Vice-President, Leo Lalan; Secretary-Treasurer, Earl Goff, and Sales Manager, Leo Lalan. These men together with E. L. Jay, Matt Meyer, Charles Dunn and A. C. Schultz form the board of directors.

Plans for individual and community show herds were agreed upon and Holsteins will be very much in evidence at the coming Rusk County Fair.

DR. JULIEN REELECTED

At a meeting of the Indiana Livestock Sanitary Board at Indianapolis, June 15th, Dr. R. C. Julien was reappointed state veterinarian for a term of four years. There were five candidates for the position but Dr. Julien received three of the five votes of the board.

Ralph Jenkins of Orleans was elected president of the Livestock Sanitary Board and Dr. C. E. Hummert of Young America, who was recently appointed a member of the Board, was chosen as vice-president for the coming year.

The *Agricultural Gazette*, one of the leading British weeklies, reports that a well known British Friesian show cow died from an unusual cause. She was due to freshen and had a tremendous udder. Apparently there was some irritation and she first licked and then bit or sucked until she had made a hole in her udder as big as the palm of a man's hand. One of the udder arteries was severed and the cow bled to death.

Tornadoes continue much trouble to make,

And autos are eager new victims to take.

Rash killers are shooting,

Bold bandits are looting,

And now the whole country's beginning to quake!

The world would sleep if things were run by men who say, "It can't be done."

ICE CREAM AND HEALTH

Ice cream, as a food, is appreciated to-day more than ever. The Chicago Department of Health recently issued a bulletin devoted to "Ice Cream and Health," compiled by Dr. Bundesen, Health Commissioner of that great city. He testified to the value of ice cream as a nutritious and even necessary food in the following words:

Although ice cream was first made in Italy in 1756, Mistress Dolly Madison, wife of the fourth president of the United States, was the pioneer in the United States in making this wonderful food product. She served it at a state dinner in the White House during her husband's administration in 1809.

For more than one hundred years we have been using ice cream as a dessert in this country. To-day nearly every civilized nation knows about ice cream as a dessert or a delicacy. This is the only nation in the world that has officially proclaimed it an essential food. It is now so recommended by prominent physicians and all leading food scientists.

We live not alone for ourselves, but for our children, and a healthy body is the greatest gift we can give them. The cream line of the nation is healthy children. If we add to other health foods plenty of ice cream, winter and summer, we are giving our children an excellent food in a most wholesome and palatable manner.

Secretary of Commerce Herbert C. Hoover, who had charge of feeding 1,200,000 children in devastated France and Belgium, makes the following significant statement regarding dairy products:

"The foundation of child health lies in proper feeding. . . . The white race cannot survive without dairy products."

Secretary Hoover, as director of the food administration during the war, realized the importance of all milk products, declared ice cream to be an essential food, and classed it as necessary with beefsteak, milk, eggs, butter and other staple articles of diet.

Dr. E. V. McCollum, of Johns Hopkins University, states: "Everyone should use daily a quart of milk or its equivalent in other dairy products."

Ice cream is a dairy product. It is concentrated milk in a delicious form.

The most recent statement by the United States Department of Agriculture on the food value of ice cream is as follows:

"Ice cream, when properly made, is a good food. It contains butterfat and the other solids of milk, including proteins and mineral matter, as well as added sugar and flavor. These constituents make it highly nutritious. Its generous fat and sugar contents insure a high caloric value. The butterfat in ice cream renders it an excellent source of vitamin A. Its milk proteins are efficient builders of muscles and other tissues, and its minerals furnish material for bones and teeth."

Ice cream is a health food because it is a milk product.

Milk contains lime, absolutely necessary for the child's teeth and bones, and is equally as good for the adult. Lime is one of the necessary articles of food in which the average human diet is most deficient. Ice cream is rich in lime and good for your children.

It contains the best proteins obtainable. Proteins build muscle and tissue in growing children and repair them for the grown-ups. Ice cream has butterfat and sugar, that gives energy and vigor to body and brain. It is rich in the vitamins. These are essential to promote the growth in children and vitalize the system of adults.

A healthy boy or girl, or an adult, is active because they're healthy. This condition is due to proper food, milk, vegetables, and fruits, with ice cream, a body builder.

Ice cream will help build in your children splendid muscles, teeth and bones.

Ice cream promotes growth and health. This has been proved by leading health authorities in different cities who have taken groups of children that were underweight for their height and age and given them a large dish of ice cream daily as a part of their midday lunch for a definite period of time. All these children showed a marked improvement not only in definite gains to normal weight, but they were much more alert and vigorous; they showed decided improvement in their studies as well as in physical activities.

In one of the camps where disabled soldiers were quartered following the war, ice cream was used as a part of the regular diet, and marked improvements in the health and physical condition of these young men were shown as a result of eating this health food.

Ice cream is an economy food. It saves the time and energy in the kitchen, so often used in the preparation of rich pastries or heavy desserts.

At children's parties, ice cream is often the most important part of the party. It assures a wonderful time that the "kiddies" will remember.

Ice cream is a refreshing health food for all out-of-door lovers. It is readily obtained and easily carried. Eat ice cream when golfing, motoring, on picnics, or fishing parties. It is a "treat" at any time, and always a health food.

Rastus: "Boy, it was so cold whar I cum fum we had to frow watah out de window an' slide daown de icicle to git out ob de house."

Mose: "Yo'll talk nuffins. Whar I lib it's so cold we gotta build fiah undah de cows to stop 'em fum givin' ice cream."

Join the Amateur Picture Contest. If you have not mailed us photographs of some of your good animals, do so at once.

BUYS FARM HERD AND SHOW COW

The Sioux Falls Holstein Farm, located three and a half miles south of Sioux Falls, S. D., was sold to Ralph J. Rogers, June 17 by the Sioux Falls Trust and Savings Bank. The purchase price was \$40,000 and the new owner will take possession March 1, 1926.

Purchased by the Sioux Falls Savings Bank in the fall of 1921, the Holstein Farm was used by the bank as its distributing point for purebred Holstein cattle in its efforts to build up the dairy industry in South Dakota. It consists of a full quarter of a section, 160 acres.

On the farm is a modern dairy barn equipped to house forty head of cows. There are two 46 by 40 ft. tile silos and a modern hog house 24 by 42 ft. built to secure maximum sunlight and sanitation.

Included in the deal is the Holstein herd with the show cow, De Kol Korndyke Ormsby 2d. She was first prize two-year-

DE KOL ORMSBY 2D

Show cow and producer purchased by Ralph J. Rogers, Sioux Falls, S. D. from the Sioux Falls Savings Bank.

old at the Minnesota State Fair in 1919, first prize three-year-old at the North Dakota State Fair in 1920 and first prize four-year-old at the 1921 Dairy Cattle Congress. She has a record of producing 1,014 lb. butter in a year as a four-year-old.

Ralph J. Rogers, purchaser of this well known establishment, for the past three years has successfully operated Lakeside Dairy, northwest of Sioux Falls City. Previous to owning this dairy he, for four years, operated another farm near by after leaving the army. During the war he was with the 21st Engineers and served nine months overseas.

Mr. Rogers plans to operate the Lakeside Dairy as well as the Holstein Farm when he obtains possession of the latter. At the present he has 75 purebred cows and plans to increase this to 125 next spring. He runs a milk business in the city of Sioux Falls and experiences an increasing demand for his farm products, handling none but those produced on his own establishments.

C. T. A. RECORDS HELP FIX SALE PRICES

Cow testing association records helped to fix prices at the Second Thurston County Holstein sale held June 10, near Gate, Washington. There were only twenty animals offered but the sale totaled \$2,620 or an average of \$131 per head.

The largest purchaser was Mike Gillen of Little Rock, who is just starting a purebred herd. He took six cows for \$1,110. The top price was \$250 obtained for the four-year-old cow, Clover Leaf Sadie Vale De Kol purchased by Mr. Gillen. He also took Better Way Snowflake Fayne, another four-year-old for \$210.

The auctioneers were Payne and Gue while the sale was managed by E. A. Donaldson of Chehalis.

A RURAL TROUBLE

Malaria is a disease called by various names—chills and fever, malarial fever, swamp fever, fever and ague, bilious fever, congestive chills, etc. This disease occurs in many parts of the United States and is entirely preventable.

Malaria is not caused by drinking bad water, eating indigestible food, getting wet, or any other thing except malaria parasites that are put into the blood stream through the bite of the female mosquito. It is indeed true that the "female is the more deadly of the species" when speaking of mosquitoes, as the male is a vegetarian and has never been known to bite. However, this is not true of Mrs. Mosquito—she hurries up, presents her bill, and the poor victim pays the cost.

If all the people could be made to understand that no mosquitoes meant no malaria then probably the malaria problem could be solved. This being true, anything that reduces the number of mosquitoes tends to reduce the prevalence of malaria.

Mosquito control in rural districts is perhaps a more difficult problem than that of urban districts. This is because of lack of cooperative effort, lack of information on eradication of mosquito breeding places, and the numerous branches, ditches, and stagnant pools of water that make ideal mosquito incubators.

There are many varieties of mosquitoes but the most common are the domestic mosquitoes, Aedes and Culex, and the semi-domestic family, Anopheles. Domestic mosquitoes are so called because they choose as breeding places water containers around houses. Of these domestic mosquitoes, Culex, the commonest and most pestiferous, is also considered the least harmless. While on the other hand, Aedes—formerly known as Stegomyia—is the carrier of dengue and yellow fever. The mosquitoes that are yellow fever carriers breed only in clear water in artificial containers, such as rain barrels, watering troughs, tubs, etc.

The Anopheles family of mosquitoes are the ones that are known as malaria carriers. The breeding places of this variety are natural bodies of water, preferable along the grassy edges of branches or stagnant pools. It is easy to learn to distinguish Anopheles from the other varieties as the Anopheles family is the largest, their wings are spotted, and when resting or biting, they give one the impression that they are standing on their heads, due to the almost perpendicular position that they assume.

The Anopheles mosquito is very shy, rarely biting in the daytime, and will not approach a moving person. This fact shows the importance and necessity for screens at farm homes as a protection against these night marauders. These screens pay big dividends to the rural resident in the prevention of financial loss caused by sickness resulting from mosquito bites.

In addition to screening your home with 16-mesh wire, it is well to take an inventory of your premises to make sure that you are not running a mosquito hatchery. At many farm homes, can be found barrels and tubs of rain water, unscreened cisterns, clogged gutters, etc., all of which are ideal mosquito breeding places. Tin cans and other containers are also often left carelessly around to become filled with water after a rain, becoming mosquito incubators. Where barrels of water are kept on the premises, each barrel should have added to it each week half a pint of kerosene, as this prevents mosquitoes from breeding. Allow no standing water on premises that is not necessary, filling in gullies and drains where possible.

Minnows have been found to be very useful in mosquito control and may be placed in stock watering ponds, underground cisterns, shallow wells, surface reservoirs, irrigation canals, and similar places where oiling or draining are impractical or impossible. These minnows feed largely upon insects and their larvae, and wherever they inhabit water in which mosquitoes breed, their principal food consists of mosquito larvae.

Two Irishmen were watching the Shriners' parade and the following conversation took place:

"Who are those fellows, Mike?"

"They're Shriners."

"And what are Shriners?"

"Why, they're Masons."

"Sure, and what the devil do they want now? They're gettin' \$18 a day."

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

Cow Testing Association Reports

WISCONSIN COW TESTING

Testers in 138 Wisconsin Associations report 3,497 herds containing 56,047 cows tested in June. G. E. Smith, whose herd is enrolled in the Allenton-Kohlsville Association had the high herd, his five grade Holsteins averaging 63.14 lb. fat.

Beauty, the champion grade Holstein owned by Rockwell and Katterhenry, Beloit, since January 1 has produced more than 500 lb. fat and is well on the way for another very large record. Last December she led all Wisconsin cows in cow testing associations with 117 lb. fat. Her great year record was 22,960 lb. milk, 872.1 lb. fat.

A herd of ten purebred and grade Holsteins owned by Herbert Steege led the Clintonville-Bear Association for June by averaging 1,558 lb. milk, 48.8 lb. fat. A grade Holstein owned by Wm. Hornberg was high cow with 1,693 lb. milk, 83.2 lb. fat.

The Holstein herd owned by L. J. Saxton led the Mindoro C. T. A. by averaging 1,067 lb. milk, 41.6 lb. fat during June. The high cow, a purebred Holstein owned by Art Larson, produced 1,290 lb. milk, 61.9 lb. fat.

The sixteen grade and purebred Holsteins owned by Mrs. Christ Bast, Sr., led the Rockfield Association by averaging 1,385 lb. milk, 47.3 lb. fat. Thirteen cows in this herd each produced over 40 lb. fat and the leader, a purebred Holstein, produced 2,018 lb. milk, 60.5 lb. fat.

Nineteen purebred Holsteins, owned by H. Weiner & Sons of Columbus, averaged

1,120 lb. milk, 41.1 lb. fat in the Columbia County Testing Association. A seven-year-old member of this herd in 212 days is credited with 14,410 lb. milk, 489.3 lb. fat. She returned a profit above the cost of feed \$212.11. One member of this herd produced 2,130 lb. milk, 78.8 lb. fat during June.

A purebred Holstein owned by George A. Schumacher of Janesville, produced 2,394 lb. milk, 79 lb. butterfat during June on twice a day milking. The Harry Broughton herd topped the association with an average of 1,031 lb. milk, 46.1 lb. fat.

Seven registered and grade Holsteins owned by J. E. Watner of Barron, averaged 13,361 lb. milk, 473.7 lb. fat leading the Beloit Association for its third year. The association average was 7,400 lb. milk, 283 lb. fat and 358 cows completed the year's work. Last year the association average was 311 lb. The decline is said to be poorer feeding brought on by lower prices of butterfat received last winter.

Brookside, a purebred Holstein owned by J. D. McDonald, of West Salem, again headed the West Salem-Bangor C. T. A. by producing 1,935 lb. milk, 61.9 lb. fat during June. The McDonald herd led by averaging 1,375 lb. milk, 45.5 lb. fat.

A registered Holstein herd owned by Southcott & Son led the Genesee-Eagle C. T. A. for June by producing 1,665 lb. milk, 71.6 lb. fat. A grade Holstein owned by Roy Henderson was second with 64.5 lb. fat, 1,746 lb. milk and a purebred owned by the same man was third with 61.8 lb. fat, 1,506 lb. milk. The Hen-

derson herd, consisting of nineteen grade and purebred Holsteins, led the association with an average of 1,198 lb. milk, 41.9 lb. fat.

The Anthes and Ouweel herd of twenty-two registered Holsteins averaged 1,063 lb. milk, 39.5 lb. fat during June in the Ft. Atkinson Association. Twelve registered Holsteins owned by O. H. Sylvester took second honors by averaging 1,026 lb. milk, 35.3 lb. butterfat.

There were 504 cows tested in this association during June of which forty-one exceeded 40 lb. fat.

Ninety-eight of the 649 cows tested in the Waukesha Association exceeded 40 lb. fat during June. First and second high cows are registered Holsteins owned by Swartz Stock Farm of Waukesha, their figures being 1,311 lb. milk, 114.1 lb. butterfat and 1,602 lb. milk, 81.3 lb. butterfat respectively.

Thirteen grade Holsteins owned by John Raht carried off high herd honors with an average of 1,217 lb. milk, 44.7 lb. fat. The Swartz Stock Farm herd of twenty-seven registered Holsteins was second with an average of 1,091 lb. milk, 44.5 lb. fat.

A grade Holstein owned by Fred Ebert led the Algoma Association with 1,950 lb. milk, 72.1 lb. fat. Twenty-two registered and grade Holsteins at the County Farm averaged 1,028 lb. milk, 45.37 lb. fat, the highest herd average reported.

FOR SALE—Ten Bred Heifers and six fine cows. Begin freshening in August. Clean Stuff. They will please you. THOMAS REESE, Montoursville, Pa.

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

FORM DAUPHIN COUNTY C. T. A.

At Hershey, Pa., on July 28, the Dauphin County Cow-Testing Association was formed by a group of dairy herd owners from various districts of Dauphin County. The new association will be one of the largest in the state as 400 dairy cows are enrolled to be tested monthly, says County Agent R. R. Burtner, who helped in the formation of the new organization.

The following officers were elected to serve one year: President, Edwin E. Bolton, Hummelstown; vice-president, Aaron Erdman, Elizabethville; secretary, Roy Shenk, Hershey; treasurer, J. Ezra Foltz, Deodate. The officers with Dr. H. M. Kirkpatrick, Harrisburg, Harvey Hershey, Jr., Hershey, and Samuel Moyer, Hershey, will comprise the board of directors.

Stanley F. Gab'e of Newport, Pa., will be the official tester and assume his duties August 1.

SOUTH DAKOTA TEST WORK

Three purebred Holsteins owned in different herds enrolled in different associations occupy the three leading places in the June report of the cow testing associations of South Dakota. Evline, owned by Frank Johnson of Hetland and enrolled in the East Kingsbury Association is credited with 82.65 lb. fat, 2,175 lb. milk. Sioux Gerben Wayne of the Penitentiary herd in the Sioux Falls Association produced 68.78 lb. butterfat, 1,965 lb. milk while a purebred owned by Thad Oviatt of Huron produced 66.76 lb. fat, 1,734 lb. milk in the Beadle County Association.

The Johnson herd of twenty-three purebred Holsteins averaged 41.32 lb. fat, 1,188.1 lb. milk and the twenty-six purebreds in the Sioux Falls Penitentiary herd averaged 41.31 lb. fat, 1,222.8 lb. milk but both were surpassed by a herd consisting of Guernseys and purebred Holsteins, owned by G. Hintermeister in the Beadle County Association. They averaged 46.20 lb. fat, 1,350.8 lb. milk.

Seven associations report production and show that 2,189 cows were tested during the month. There were 198 cows that exceeded 40 lb. fat while 311 exceeded 1,000 lb. milk. Herd averages of 25 lb. butterfat per cow were attained by ninety of the 155 herds on test.

Peter W. Johnson, who is tester of the Moody County Association says that in his organization fifteen herds have been tested for tuberculosis and then adds, "Everyone who is a member of a cow testing association should have his herd tested for T. B. as it is very foolish to build up good herds and then have to destroy a large number because they have tuberculosis. 'Test and Know' is the best policy."

PENNSYLVANIA TEST WORK

Production during May was reported by 33 Pennsylvania cow testing associations in which 11,169 cows were tested. Of this number 1,509 produced more than 40 lb. fat, 453 more than 50 lb., and 1,031 exceeded 1,200 lb. milk during the month.

The three highest milk producers and the three highest butterfat cows were purebred Holsteins and represent six different herds. William Tubach of Sullivan County has a cow credited with 2,553 lb. milk, J. H. Silvis of Greensburg, one with 2,475 lb. and Ivo V. Otto of Carlisle, one with 2,344 lb. P. C. Rutts of Lycoming County had the butterfat leader with 93.9 lb. to her credit, W. Drumheller the cow in second place with 85.1 lb. and L. A. Zimmerman of Lehigh County the cow in third place with 84.3 lb.

THIRTEEN NOT UNLUCKY

Matt Birker who lives midway between Vinton and Urbana, Iowa has 13 Holsteins that averaged 9,406 lb. milk, 368.9 lb. butterfat in the Benton cow test association which recently ended its testing year. One member of this herd produced 487.8 lb. fat, the highest record reported, while another purebred Holstein owned by Robert Thompson produced 473.7 lb.

IOWA TEST WORK

A grade Holstein cow nine years old owned by Charles Newcomer of the Grinnell-Newton C. T. A. headed the list of cows enrolled during June in the Iowa cow testing association. She is credited with a production of 2,508 lb. milk, 95.3 lb. fat.

The high herd consisted of nine grade and purebred Holsteins owned by Virgil Cook of the Thornton association. These cows averaged 529 lb. butterfat, 1,537 lb. milk. The second herd which also consisted of nine grade and purebred Holsteins was owned by A. Rowher of the Marshall-Grundy association and averaged 51 lb. butterfat, 1,477 lb. m.lk.

There are 53 active cow testing associations in the state of Iowa and the members sent 161 cows to the butcher during the month. There were more than 16,000 cows tested of which 589 produced 50 lb. or more of butterfat during the month of June.

IN A BIG TERRITORY

A herd of eight purebred Holsteins owned by J. D. Norton of Centralia, Illinois led the Franklin, Jefferson and Marion Counties C. T. A. for June by producing an average of 39.2 lb. fat, 975 lb. milk. The association average was 27.9 lb. butterfat, 734 lb. milk and there were 409 cows on test.

PEARL WAS FIRST

Pearl, a purebred Holstein owned by W. L. Hanning of Evansville, Indiana, led all the cows enrolled in the Vanderburgh-Warrick C. T. A. during June by producing 75.5 lb. fat. There were 25 cows that each produced over 50 lb. of fat.

A NICE SHOWING

Eleven purebred Holsteins owned by Leo Van Hess of South Bend, Indiana, led the St. Joseph cow test association during its recent year by averaging 10,838 lb. milk, 426.1 lb. fat.

IDEAL HERD IS HEADED BY IDEAL KING CREAMELLE

His dam is Pietje Alcartra Fayne the highest record daughter of

KING PONTIAC ALCARTRA PIETJE

for both milk and butter, 30.03 lb. butter, 707.7 lb. milk in a week, 41 days after freshening, 104 lb. milk a day.

His sire, Dutchland Konigen Creamelle Boy, is by King Segis Pontiac Konigen and his four direct dams were: Dutchland Creamelle Colantha Vale, Dutchland Colantha Vale, Creamelle Vale and De Kol Creamelle.

Evenly marked and a choice individual.

Dam: Amsdale Jennie Walker, a large producer, a perfect cow in every way—her dam a granddaughter of Colantha Johanna Lad.

Sire: King Lyons Clothilde Walker whose five nearest dams average 33 lb. butter and 690 lb. milk in 7 days.

AMSDEN BROTHERS
Cuba, Allegany Co., New York

Keep in mind that this herd is Accredited.

ILLINOIS TEST WORK

The three highest cows enrolled in Illinois cow testing work during June were purebred Holsteins. The leader owned by Nicholside Farm is credited with 87.3 lb. fat, 1,899 lb. milk; the cow in second place owned by the W. T. Rawleigh Co., of Freeport had to her credit 85.5 lb. fat, 2,085 lb. milk while a Rock River Farm cow produced 84.7 lb. fat, 2,922 lb. milk. Six of the ten highest producers were purebred Holsteins, one was a purebred Guernsey and two were grade Guernseys, while the breed of the other was not designated. Production is reported by 24 associations of which nine were headed by purebred, and five by grade Holsteins.

STORIES TOLD BY C. T. A. RECORDS

Cow testing association records tell interesting stories. First-class profitable dairy farms are usually found in groups. The center of each group is some farm, some man, some idea. At least this is the conclusion of the United States Department of Agriculture.

There are 732 cow testing associations now active in this country and they represent that number of groups of improved dairy farms.

The department has compiled Farmers' Bulletin 1446 which is entitled "Cow Testing Associations and Stories the Records Tell." This bulletin is sent free on request by writing the Department at Washington, D. C. The stories are interesting reading.

In the Newaygo County, Mich., cow-testing association the herd that one year had the highest average production of butterfat per cow consisted of 10 cows, and the herd that had the lowest average production consisted of 20 cows. The herd of 10 cows had total income over cost of feed of \$666 and the herd of 20 cows \$455. The owner of the larger herd needed 9 more cows of the kind he was keeping to get as much income over cost of feed as was produced by the smaller herd.

It is better, however, to own 10 good cows than 29 poor ones. It demands less labor and other costs. To build up a herd of 10 good cows requires much headwork. To take care of a herd of 29 poor cows requires much handwork. The man who does not use his head must work harder with his hands.

The value of association records is not limited to the improvement of the females of the herd, but may also be used to determine the true value of the herd bull or bulls in the bull association. In the vicinity of Grove City, Pa., there are two bull associations and one cow-testing association. From the latter, records are now available for the yearly production of 18 daughters of the bull-association bulls as well as for the dam of each daughter.

When all records were figured to maturity, it was found that on an average the dams produced 8,785 lb. milk in a year and the daughters 9,212 lb. The dams averaged 355 lb. butterfat a year and the daughters 394 lb. Thus the daughters produced about 5 per cent more milk and

about 11 per cent more butterfat than their dams. The figures further showed that the daughters were by six bulls, and that in no case did any daughter bring discredit to her sire. What would have happened if the 18 daughters had been sired by scrub or inferior bulls is not hard to guess.

In nearly every case a cow-testing association depends upon the activity of a few progressive farmers and centers around the idea that every dairyman should know the individual records of his cows if he is to manage and develop his herd profitably. The knowledge can be obtained through cow-testing association records.

MICHIGAN TESTING

A registered Holstein owned by W. B. Howell, Reese, Mich., stood first for butterfat and second for milk in the Tuscola Testing Association No. 2 during June. She is credited with 1,925 lb. milk, 73.2 lb. fat. The leader for milk was also a registered Holstein, owned by Fred Laux of Vassar, her production being 2,328 lb. milk, 69.8 lb. fat.

Madrigal Johanna Korndyke De Kol, a purebred Holstein owned by Stewart & Weigandt of LaSalle, led the LaSalle Association during June by producing 1,851 lb. milk, 77 lb. butterfat. A herd of purebred Holsteins owned by C. W. Henry of Greeley was high with an average of 1,193 lb. milk, 40.8 lb. fat.

FIRST AND SECOND

A registered Holstein three-year-old owned by V. W. and J. P. Thompson of Clarion, Pa., led the Clarion county C. T. A. for June by producing 1,773 lb. milk, 70.9 lb. fat. Another member of this herd was second with 1,004 lb. milk, 68.1 lb. fat.

On the evening of July 9, a group of Holstein breeders met at the Court House and organized the Clarion County Breeders' Association. J. P. C. King of Summerville was elected President and Aruthur McCauley of New Bethlehem, Secretary-Treasurer. Plans were discussed for breed promotion work in Clarion county.

PASTURES DRYING UP

Linda Clara Pasma, a purebred Holstein owned by H. Bouchard of Bucoda, Washington, led the Lewis County Testing Association for the month of June by producing 82.3 lb. butterfat, 2,574 lb. milk. There are 55 herds now enrolled in the association. The June average was 906 lb. milk, 33.8 lb. butterfat, quite a little lower than the May average. This decline is attributed to a decrease in the value of the pastures.

THREE SUCCESSIVE MONTHS

For the third consecutive month the purebred Holstein herd owned by William H. Dreier of Iowa Falls, Iowa, led the Hardin county C. T. A. by averaging 1,213 lb. milk, 40.7 lb. fat, a Jersey herd was second with Holsteins third and fourth.

BOHNKE SELLS SEVEN MORE

Charles Bohnke of Decatur, Ind., recently sold a nice bunch of purebred Holsteins to the Marsh Foundation, Van Wert, Ohio. The bunch consisted of a two-year-old heifer, five yearlings and two heifers nearly a year old. As this bunch are closely related, the breeding of one tells the blood lines back of the others. The two-year-old heifer, Pauline Koko Butter Girl, was by Koko Pontiac Korndyke from Pauline Hamlin De Kol, a daughter of Duke Korndyke Hamlin. Koko Pontiac Korndyke was by Starr Pontiac Korndyke Butter Boy and was from a daughter of Sir Urmagel Burke, who has a lot of good producing descendants particularly in Central New York where he was in service several years. Since the first of the year Mr. Bohnke has sold twenty-four head of cattle from his herd, which has been on the accredited list for several years.

The Marsh Foundation School is a six million dollar establishment comprising 1,300 acres of land with large buildings and splendid equipment and was founded by George H. Marsh.

GIVE CREDIT TO MUSIC

Johanna Echo May of the Alfagold Farm herd, McGregor, Ia., was the high cow of 16,000 enrolled during June in Iowa Cow Testing Associations. Occasionally someone suggests that music in the cow barn is an inducement for cows to give more milk and believers in this theory are telling that the new barn at Alfagold Farm has a big dance floor above it. During the summer months weekly dances are given drawing crowds of several hundred. While Johanna Echo May is seldom in the barn summer nights yet the cow pasture reaches to the barn and the cows lie and chew their cud in the cool, deep grass under the stars where, until early morning, to their ears, come the strains of saxophone and violin.

Johanna Echo May is one of twenty purebred Holstein cows owned at Alfagold farm by C. F. Limbeck, who is president of the Northern Iowa Produce Company.

KELLEY'S A WINNER

Ten purebred and grade Holsteins owned by Carl Siebels led the Anamosa, Iowa Cow Testing Association for the month of June averaging 1,300.8 lb. milk, 42.46 lb. butterfat. "Kelley" led the entire association for the third time since February with 1,890 lb. milk, 66.1 lb. fat. "Queen" a purebred Holstein owned by John Knutson was second with 1,800 lb. milk, 64.8 lb. fat.

COLLEGE COWS FIRST

A herd of sixteen purebred Holsteins owned by St. Mary's College, Winona, Minn., averaged 44.4 lb. butterfat, 1,309.3 lb. milk in the Winona county No. 1 C. T. A. A member of this herd produced 2,076 lb. milk, 66.4 lb. butterfat during June. A grade Holstein owned by Clyde Pierce and milked twice a day produced 1,740 lb. milk, 73 lb. fat.

IRISH COW PRODUCES 146 LB. MILK IN DAY

An Irish cow, Bronville Vanity 2d, owned by Mr. Thomas J. McVeigh, of Belfast, produced in the twenty-four hours of June 27th, one hundred and forty-six pounds of milk making a new high British record. She was bred and raised in Stirlingshire, Scotland and was twin with another heifer.

Her milk record of 146 lb. beats out Findlay Clara 2d 131½ lb. and this in turn surpasses Dunnald Daphne with 129¼ lb. All three of these cows were bred in Scotland but Daphne's record was made in England, Clara's in Scotland and the new champion's in Ireland.

It is interesting to note some of the differences between the Irish and American ways of handling cows on test; for instance in this country, record makers aim to have the intervals between milkings as even as possible. If a cow is milked four times a day, the favorite milking time appears to be 5 a.m., 11 a.m., 5 p.m., and 11 p.m. or as close as possible to these times. Bronville Vanity 2d was milked at 6:30 a.m., 12 noon, an interval of five and a half hours; 3:30 p.m., an interval of only three and a half hours, and 9:15 p.m., an interval of five hours and forty-five minutes while from 9:15 p.m. to 6:30 a.m. there is nine hours and fifteen minutes.

Bronville Vanity 2d's work is being supervised by the Department of Agriculture of Northern Ireland.

WARFIELD COWS ARE PRODUCERS

Senator Wade H. D. Warfield of Sykesville, Maryland, has a number of cows on long time test. Canary King Pearl De Kol freshened January 5th and in June, in the two days' official test, she produced 172.4 lb. milk, 5.94 lb. fat. Houwtje Segis Vale freshened December 7, 1924 and in her two official days made 158.6 lb. milk, 5.583 lb. fat. Bessie Bonheur Oak a junior four-year-old freshened March 1st and is credited with 123.9 lb. milk, 3.937 lb. fat in her two official test days more than three months later.

Senator Warfield has a number of other cows on year test that are producing heavily and we intend to tell more about them when they complete the year's work.

STAYERS

A purebred Holstein owned by Smith Brothers of Whittier, Iowa, was high cow for June in the Linn No. 1 Testing Association with a record of 80.8 lb. butterfat, second to her was a cow owned by C. F. Hodgkin with 75.8 lb. fat. Both cows were on good pasture.

The high herd consisted of ten grade Holsteins owned by Drexler and Jordan with an average of 44 lb. fat. The Smith Brothers herd was next with an average of 43.5, the association average was 30.62 lb. L. C. Adams, the tester, says that most of the old members stayed in the association when it was recently reorganized.

Females of Quality

Producers and choice individuals bred to

King Pontiac Alcartra Pietje

who has two daughters above 700 lb. milk in a week and is also sire of K P A P Gelsche, 687.06 lb. butter, 15,349.2 lb. milk in 10 months as a junior two-year-old, the class champion of Maine.

Come and See This Herd.

Hondo, Texas

NEWS FROM MAPLE GROVE

Choice bull calves of well-known strains of breeding are offered by the Maple Grove Stock Farm, an accredited breeding establishment located at Centerville, Crawford County, Pa. These bull calves are sired by Maple Grove Yoma Glista, whose dam in the Maple Grove herd produced 641.3 lb. milk, 27 lb. butter in seven days' test under working farm conditions. This bull was by Model Daniel Glista, whose dam Glista Dinah, as an eleven-year-old, produced 31.26 lb. butter in seven days in the Cornell University herd and is a daughter of the 34 lb. cow, Glista Coreva.

One of the bull calves offered by the Jones' breeding establishment is from Maple Grove Columbia Jupiter, a daughter of King Pontiac Jupiter, who was sired by the King of the Pontiacs from Pontiac Hesseltje Hengerveld, a daughter of Hengerveld De Kol.

Maple Grove Coreva Glista is the dam of the second bull calf offered. Tested as a two-year-old heifer, she is credited with 15.05 lb. butter in seven days, 349.2 lb. milk. She is a very promising young cow and is a daughter of Clever Model Glista, whose dam, Glista Coreva two different years made over 31 lb. butter in seven days and has an official record of 34.08 lb. butter, 593.1 lb. milk.

Maple Grove Stock Farm is a working dairy farm and the Jones', who own and work the farm, believe that purebred animals are something like modern machinery and it is necessary to have the best livestock and the best tools in order to farm profitably. Besides purebred Holstein-Friesian cattle, they breed Percheron horses and Oxford sheep.

The herd has been on the accredited list for a long time and it is well-known that Crawford County is one of the healthiest counties in the state of Pennsylvania in which to purchase dairy cattle.

CLOSELY RELATED

May Sylvia Pietje 2d, owned in the Hardy herd, is officially reported to have produced 708.5 lb. milk, 30.09 lb. butter in seven days, 2,976.7 lb. milk, 124.96 lb. butter in thirty days, an average of 99.2 lb. of milk daily. This cow has 87½% the same blood lines as King Sylvia Pontiac Pietje, the good bull that formerly headed the Waldron Herd and was lately sold by Mrs. Maud Dwight to Dr. H. G. Padgett of Tully, New York. These two animals have the same sire, Champion Echo Sylvia Pontiac. Their dams are both sired by Woodcrest Sir Clyde. In the case of the cow, the maternal granddam is May Echo Sylvia while the bull's maternal granddam is May Echo Pontiac, a daughter of May Echo Sylvia and King Pontiac Artis Canada.

"Look here, now, Harold," said father to his little son, who was naughty, "if you don't say your prayers, you won't go to heaven."

"I don't want to go to heaven," sobbed the boy. "I want to go with you and mother."

Choice Bull Calves

from big producing dams of choice individuality and breeding. They are grandsons of the noted sire and show bull, Prince Aaggie of Berylwood recently reported sold for the world's record price of \$110,000.00. That makes no difference with OUR prices—they are always low.

DEMAND FOR MARTIN STOCK

Around Cambridge Springs, Pa., there are a number of herds containing both purebred and grade Holsteins, owned by dairymen who are gradually building herds to be composed of purebreds entirely. One of these is C. W. Salen, who recently purchased from O. I. Martin of the same address, the young bull, Martin Cadillac Tobe Alcartra.

Martin Cadillac Tobe Alcartra was by King Tobe Alcartra De Kol from Nellie Rooney Cadillac, a daughter of the well-known A. R. O. sire, Traverse Cadillac Lad, whose daughters in long time and short time test have made enviable records as producers.

King Tobe Alcartra De Kol formerly headed the Martin herd and his daughters therein, although young, are big producers and show every promise of making great cows, so much so in fact that Mr. Martin is retaining his daughters and planning to build his future herd upon this foundation. This bull was by King Segis Pontiac Alcartra from Lady Tobe De Kol, 36.59 lb. butter in a week from 631 lb. milk and 141.24 lb. butter in thirty days, world's records in the senior three-year-old class at time of making. As King Segis Pontiac Alcartra was from the former world's champion three-year-old, K. P. Alcartra, and was sired by a son of the famous Pontiac Clothilde De Kol 2d, who made world's records for seven, thirty and three hundred and sixty-five days, it can readily be seen that this bull carries lots of world's championship blood in his veins.

Cambridge Springs is located in Crawford County which is one of the leading Pennsylvania counties in the campaign for eradication of bovine tuberculosis. Crawford County has been tested twice under the area plan and the latest test showed that 99.2% of the animals passed clean so that Crawford County is surely a very desirable hunting ground in which to find healthy, purebred, Holstein-Friesian cattle.

HOLSTEINS FOR WEST AFRICA

King Piebe of York 35th, a six months old bull calf, was shipped about the middle of June by H. E. Robertson of York, Pa., consigned to J. D. Curran of the Muhlenberg Mission, Liberia, West Africa.

Mr. Curran was formerly a resident of Felton and has spent the past seven years as a missionary in West Africa. While visiting friends in southern Pennsylvania, he purchased several head of livestock and some poultry to take back with him. With the Robertson bull will go a purebred Holstein heifer purchased from the Pennsylvania State College herd.

FOR SALE—Holstein-Friesian Bull.

Herd under State and Federal Supervision.

BUY DAUGHTERS OF THEIR HERDSIRE

The Grahamholm Holstein Farms at Rochester, Minn., recently purchased the bull, Grahamholm Colantha De Kol, formerly at the head of the herd owned by C. F. Schroeder & Sons of Marshfield, Wis. The middle of July they purchased two heifers and two heifer calves from the Schroeder herd paying \$750 for the bunch. Two of the animals are full sisters, daughters of Blossom Butter Girl Ormsby, a cow with a 28 lb. seven-day butter record, while the other two, also full sisters, were from Butter Girl De Kol. All four of the heifers were sired by Grahamholm Colantha De Kol.

IOWA STATE SHOW HERD

A show herd representing the cattle owned at the State Hospitals of Iowa will be seen at a number of fairs this fall. William M. Merriam will be in charge of the herd which has been selected by himself and Senator A. M. McCall, who is chairman of the State Board of Control. The exhibit numbering 23 head includes individuals taken from the hospital herds at Clarinda, Mt. Pleasant, Oakdale, Davenport, Independence and Cherokee. The show herd will start August 19 and will take in the National Dairy Show at Indianapolis next October, the animals being fitted at the Woodward hospital barns.

PICNIC AT FIRESTONE FARM

Ed. Candell of East Palestine, Ohio, was elected president of the Holstein Breeders' Association of Columbiana County at a recent annual meeting and Harry Chadwick, superintendent of the Firestone Farm was chosen secretary-treasurer. The association will have its annual outing on August 13 at the Firestone farm. A judging demonstration and contest in which all are invited to take part, will be one of the main entertainment features.

BOUGHT A FRISBY BULL

Wm. Voigt of Ladysmith, Wis., recently headed his herd with Chequamegon Ormsby Frisby, a son of Walcowis Ormsby Beets, from a cow that produced 915 lb. butter in a year. Mr. Voigt's herd consists of seven purebred Holstein cows and a number of high grades.

BUILT BIG BARN

C. Lenartz and Sons of Prairie du Sac, Wisconsin, have a barn that is 174 feet long, 70 feet wide and more than 50 feet high. It was built nine years ago by the Lenartzes, Mr. Lenartz himself drawing the plans. A large proportion of the timber was sawn on the home farm. The Lenartzes have nearly 70 head of Holsteins most of which are purebreds. The barn has stanchion room enough for 70 cows together with space on the ground floor for half a dozen calf pens and 12 horses.

The Lenartzes are strong for labor saving machinery. They have a straw blower which will carry the straw to one end of the barn floor, then they have fixed a pulley that pulls the hay fork back to the end of the track after the fork has been tripped. They also have a hay wagon with a movable front end. The front half can be slid back and loaded from a hay loader and when full, released and rolled to the front end of the rack.

ROCK COUNTY SHOW HERD

A Holstein herd representing Rock County, Wisconsin, may make a tour of the Illinois fairs. The herd will be headed by the four year old bull Sir Tritomia Mercedes, owned by Grant Rice, with a five year old cow from the herd of Arthur Tollefson of Orfordville.

The moving spirits behind this idea are John L. Fisher, Dr. G. W. Post and John A. Jones. Mr. Fisher believes that owing to the number of animals tested in Illinois that the Illinois farmers will be in the market for cattle and he believes that, by showing them choice specimens of Rock County Holsteins, many possible buyers may be induced to visit the county.

ASYLUM HERD ACCREDITED

Six years ago the Holstein herd owned by Washington County, Wisconsin, was tested for the first time and one-third of the animals reacted to the tuberculin test. For the next few years a few reactors were found at the recurring tests but three years ago the herd passed clean and about the first of July of this year the Asylum herd passed its third clean test. From a herd of one-third reactors to the accredited list shows what can be done when the owner really aims to have a disease free herd.

HAMMOND'S "CATTLE COMFORT"

"CATTLE COMFORT"

Sold by Merchants and Seed Dealers
HAMMOND'S PAINT AND SLUG SHOT WORKS, Beacon, New York

The application of CATTLE COMFORT will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henney it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—CATTLE COMFORT may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Spring Brook Herd

is headed by

King Sadie Vale Hengerveld Ormsby

noted sire of producers and show stock. He was by King Sadie Vale Hengerveld from a 1,085 lb. year record daughter of Sir Vee-man Hengerveld.

We offer good females bred to "King."

Bear in mind that the average test of this herd ranges from 3.5% to 4.2% fat.

can well afford to pay.

HARRY C. REYNOLDS
SCRANTON, PA.

Herd under the Accredited Plan

TRAVERSE ECHO SYLVIA KING

Heads our ACCREDITED Herd.

His dam, a 33-lb. cow, averaged 102 lb. milk for 30 days and has a 35-lb. and a 32-lb. daughter.

Five of his seven nearest dams have one or more 30-lb. daughters.

He is bred to cows that return a substantial profit for the cost of their feed and care.

W. B. KENNEDY & SON,
BRADFORD CO., WYALUSING, PA.

ORMSBY SENSATION 3D

Ormsby Sensation 3d, the handsome bull now heading the herd of S. T. Witmer of Union Deposit, Pa., is backed up by big producing strains in every line of his pedigree. As his name signifies, he is the son of Ormsby Sensation, the noted Minnesota herd bull formerly at the head of the Sloan herd and now in service at Beaver Dam Stock Farm. Daughters of this bull are making remarkable records. He was by Sir Pietertje Ormsby Mercedes 37th from Wisconsin Fobes 5th, 518 lb. milk, 29.68 lb. butter in seven days as a senior two-year-old and 25,617.2 lb. milk, 1,079 lb. butter in 305 days as a mature cow.

Ormsby Sensation 3d was from Golden Valley Ormsby, 486.3 lb. milk, 22.22 lb. butter in seven days as a two-year-old. She was continued on year test in which she is credited with 14,331.8 lb. milk, 628.53 lb. butter. Her dam was an A. R. O. daughter of King Pietertje Hengerveld Ormsby, a son of Sir Ormsby Hengerveld De Kol while she herself was sired by Sir Ormsby Hengerveld Segis, a son of Sir Ormsby Hengerveld De Kol and K. S. P. Belle, one of the many good daughters of King Segis Pontiac.

Enough has been said to show the combination of blood lines exemplified in the pedigree of Ormsby Sensation 3d. The records of his dam and sire's dam averaged 19,974.5 lb. milk, 853.77 lb. butter despite the fact that his dam was tested as a two-year-old heifer while the test of his sire's dam closed at the end of the 305-day period. The records of his dam and of his sire's dam and granddam averaged 21,622 lb. milk, 999.49 lb. butter. Many other interesting combinations of figures can be compiled from the records back of Ormsby Sensation 3d. We have said enough at this time to show that his pedigree combines fashionable strains of breeding while his own superb individuality and that of his offspring indicate that he is destined to exert considerable influence for good upon the Holstein population of central and southern Pennsylvania.

IOWA'S GOVERNOR BREEDS HOLSTEINS

Governor John Hamil of Iowa owns a farm near Britt and on it is building a purebred Holstein herd. Although the Governor is well-to-do he did not go out and buy a large number of costly animals but purchased a few good ones and is raising their offspring and gradually discarding his grades. The records kept show that he is clearing \$25 monthly from some of his cows.

A GRAND OLD NAME

Mercedes, a purebred Holstein cow owned by Frank Seeley of Arlington, Iowa led the Fayette County C. T. A. No. 1 for June by producing 65 lb. fat from 1,806 lb. milk. The Seeley herd of nine purebred Holsteins averaged 36 lb. fat, 1,088 lb. milk while the purebred Holstein herd owned by Fred Pieplow was second.

To Whom It May Concern:

Early this year conditions made it necessary to dispose of the Bonnymeads Farm herd.

In deciding on the choice of auctioneers, a personal friend of mine recommended Mr. Glenn R. Mead of East Aurora, New York, as one of the best auctioneers obtainable regardless of price and his charges were not exorbitant and his expenses very reasonable.

I was more than agreeably surprised with Mr. Mead's ability as auctioneer. From the time the first animal was led into the sale ring until the last one was sold Mead did nothing but sell cows. He did not spend time making speeches or demonstrating his oratorical ability neither did he try to entertain the spectators and by-standers by relating questionable stories. His efforts were concentrated in holding the attention of the buyers and making the sale a success.

By referring to the published accounts of our sale as compared with other sales, it would seem that it was one of the most successful sales of Holstein cattle in recent years.

We were pleased with the sale and with Mr. Mead's work.

Yours truly,

BONNYMEADS FARMS,
Hiram Billett, Supt.
July 14, 1925.

GLENN R. MEAD
East Aurora, New York

THE TYPE WE BREED

Straight top-lines, level udder, even markings and HORNLESS. She averaged 4.28% fat in her yearly work.

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building
Scranton, Pa.

Just a Suggestion

Our cows and heifers are making good. In their everyday work they return a nice profit over feed cost. In A.R.O. test they have nice records, two-year-old heifers making 20 lb. of butter in a week, older cows in proportion.

Herd under Federal Supervision and T. B. Free.

Isn't this worth something to you?

Raymond D. Strickland,
Nicholson, R. D.
Susquehanna Co. :: Penna.

KING RAG APPLE PLUM COPIA
is now in service in our herds. His dam made 30.47 lb. butter in 7 days, 120.63 lb. butter in 30 days with a daily milk average of 92.3 lb. as a five-year-old, and as a six-year-old made 33.26 lb. butter in 7 days.
He will be bred to daughters of GRAND CHAMPION SEGIS 2d.
YOU know their Quality.
Our herds contain 120 head and are under State and Federal Supervision.
L. N. MACK & SON and FLOYD E. MACK
Montrose, Pennsylvania

RAPID INCREASE IN POLLED CATTLE

That hornlessness is a dominating characteristic in cattle breeding has always been the claim of George E. Stevenson, the noted breeder of Polled Holsteins. So confident has Mr. Stevenson become that often in making sales, he assures or guarantees the purchaser that the animal bought will become the parent of only polled animals, no matter to what kind of animal it is bred.

That the polled characteristic is dominant is borne out by a statement appearing in a recent issue of the Rural New Yorker, really an official communication from a writer closely connected with the American Hereford Cattle Breeders' Association.

In the year 1899, the founders of the Polled Hereford Association sent inquiries to all Hereford breeders living in the United States asking if they had any polled animals in their herd. Four bulls and ten females were located. The four bulls and seven of the females were purchased and are claimed to be the foundation stock of the Polled Herefords in America.

In 1901 a Herd Book was started for Polled Hereford cattle. In 1920 there were 23,725 animals recorded and in the report of the association issued February 1925, it was claimed that there were 43,000 Polled Herefords in this country. This great increase, however, does not trace to the original eleven animals in every line of the pedigree for horned blood has been introduced in an attempt to improve the individuality and quality of the polled stock, which if purebred, are eligible for registration in the Herd Book of the American Hereford Cattle Breeders Association.

DANISH HOLSTEIN BREEDERS

Aaltje Johanna Lottie, shown by the Soenson Brothers was the grand champion female at the Devil's Lake, North Dakota Fair. The Soenson Brothers who owned last year's champion, are sons of Rasmus Soenson, a pioneer homesteader who came originally from Denmark and settled near Webster, North Dakota. His sons seem to have inherited the Danish ability to handle both cattle and hogs for besides having an outstanding Holstein herd they have Yorkshire hogs of high quality. Thirteen of these hogs were exhibited by the brothers and five firsts and two grand championships were won. Their Holstein exhibit consisting of nine animals won six first prizes and two grand championships.

IN NEBRASKA

Eight purebred Holsteins owned by Eipperle Brothers, of Omaha, Neb., averaged 1,109 lb. milk, 35.9 lb. butter-fat per cow in the Douglas County Co-operative Cow Testing Association. A grade Holstein owned by the Edgewater Dairy produced 59.7 lb. fat, 1,530 lb. milk. There are 409 cows in the association of which 378 were tested during the month. Nine produced more than 50 lb. butterfat and 48 exceeded 40 lb.

SONS AND DAUGHTERS OF CHIEF TACORA KORNDYKE PIEBE

whose dam produced 13,999.9 lb. milk, 543.81 lb. butter in 349 days at just three years old.
She is full sister to a 35 lb. cow and her dam produced 654.1 lb. milk, 30.12 lb. butter in a week, 26,011.1 lb. milk, 1,060.81 lb. butter in a year.

Our cows produce from 10,000 lb. to 15,000 lb. milk in a year in C.T.A. work.

Herd under State and Federal Supervision, last test CLEAN.

FOR SALE—Registered Holsteins. From heifer calves to fresh cows. All sired by or bred to grandson of King of the Pontiacs. OLIVER F. ELLSWORTH, Dallas, Pa.

MARTIN'S HERD WINS PRIZES

In the recent Crawford County Dairy Show, held at Cambridge Springs, Pa., the herd of O. I. Martin won its full share of prizes. Animals from this herd were entered in four classes and won four first prizes. The young herdsire, grandson of Carnation King Sylvia, won first in the class for yearling bulls. An aged cow won first in her class with nineteen in the ring and the excellence of the contestants was the cause of many flattering remarks made by representatives of the Department of Agriculture at Harrisburg and of Pennsylvania State College. A senior heifer calf won first in her class while Lee Martin, son of O. I. Martin, won first on his calf in the club work and obtain three prizes, \$5 in gold, a bull calf given by the Carnation Milk Company and a bronze medal from the Holstein-Friesian Association. The Carnation calf is from a four-year-old cow with an official seven-day record of 22.48 lb.

Crawford County is noted for the health as well as the individuality and excellence of its bovine population. All the livestock in this county have been tuberculin tested at least twice by veterinarians whose work is approved by the State Department of Agriculture at Harrisburg and the Federal Department at Washington. At the last test the report showed 99.2% of the animals tested passed clean so that it is only a matter of time before Crawford County will be made a modified accredited area.

IN MISSOURI

During May the high producing cow of the Lafayette-Saline C. T. A. was a Holstein owned by E. J. Rodekohl of Corder, Missouri. She produced 2,362.2 lb. milk, 77.9 lb. fat. Nine cows each produced over 50 lb. of butterfat during the month and seven of them were Holsteins. The high average herd consisted of Holsteins owned by John Kuddes with an average of 1,130 lb. milk, 40.2 lb. fat. The Rodekohl herd averaged 1,202.5 lb. milk, 33.3 lb. fat. There are 271 cows in the association of which 253, tested during May, averaged \$12.12 per animal.

PUREBREDS LEAD

Lucy Princess Johanna 2d, a registered Holstein owned by David Lea and Son of Stevensville, Montana, led the Bitter Root Valley Cow Testing Association for the month of June by producing 82 lb. butterfat. The Lea herd was high with an average of 44 lb. fat. There were 308 cows tested during the month. Their average was 779 lb. milk, 32.4 lb. butterfat, and 24 produced over 50 lb.

BULL SALES

S. E. Lindsey of Joplin, Missouri, sold two yearling bulls July 1st to the Missouri State Hospital No. 3 which is located at Nevada. One of the animals brought \$1,000 and the other \$250. The thousand dollar bull is from Mr. Lindsey's noted cow Fobes Homestead Rauwerd.

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

**WESTVIEW HERD
IS HEADED BY**

**MAPLE GROVE CLEVER KONINGEN
GLISTA**

His sire is a son of the great Cornell University cow, Glista Coreva, 593.5 lb. milk, 34.08 lb. butter in 7 days, dam of a 31 lb. daughter.

His dam made 20.60 lb. butter in 7 days as a heifer. In C.T.A. work she produced over 10,000 lb. milk in a year with an average test of 4.1% fat.

Our cows are producers and pay a good profit for their feed and labor. Some have A.R.O. records, all are from large producing strains.

Try this ACCREDITED Herd. You will like our stock and our prices are right.

Crawford Co., Pa.

**THE BLOOD OF WORLD CHAMPIONS
Is STRONGLY in EVIDENCE at SILVERWOOD**

KING PONTIAC ALCARTRA PIETJE

is our senior herdsire. He was from Fairmont Zerma Segis Pietje, 35.61 lb. butter in 7 days as a junior four-year-old, World's Record when made. His sire, King Segis Pontiac Alcartra, was from a heifer that made World's Records for butter production for periods of 7 days, 30 days and 365 days while he was by a son of a cow that made World's Butter Records for 7 days, 30 days and for a full year.

Sons and daughters of this great sire have won high honors at the great cattle shows and expositions. His sons are proving that they, too, are splendid sires for their offspring win prizes and also produce.

Let us price a few good ones to you.

Silverwood is under State and Federal Supervision.

Silverwood Stock Farm, H. S. Brown & Sons, Props.
Susquehanna County, THOMPSON, PA.

**BURKE COLANTHA CANARY
LADY**

85 lb. milk in a day, 23 lb. butter in 7 days. Bred, raised, developed and tested in this herd.

Note her size, individuality, apparent constitution and capacity.

Others like her in my ACCREDITED purebred herd.

Let me show them to you and tell you my low prices.

C. F. GRIDLEY,

Candor, Tioga County, New York.

**YOUNG STOCK AT HILL CREST
VIEW**

They were sired by
KING ONYX PLEDGE ORMSBY

whose three nearest dams average 977 lb. butter and over 23,000 lb. milk in long time test, despite the fact that his dam was tested as a junior four-year-old and for only 305 days.

Buy your stock from this Accredited Herd.

THE HOLSTEIN BREEDER AND DAIRYMAN

For Two Years and a Device to Keep the Cow's Tail out of Your Eyes and Face for Life while milking - - \$1.00

For a limited time, while the supply lasts, we are offering a CORBIN TAIL HOLDER with a two years' subscription to the HOLSTEIN BREEDER AND DAIRYMAN, new or renewal.

The accompanying illustration shows how perfectly the device works. Every dairyman has had the disagreeable and oftentimes painful experience of being switched in the face while milking.

Dairymen will realize the sanitary value of this holder. Much filth and stable litter gets into the milk by the persistent switching of the cow's tail.

Clip this ad., sign, attach to it a \$1 bill, money order or personal check, and mail it TODAY. The HOLSTEIN BREEDER AND DAIRYMAN will be mailed to you for the next 24 months and you will receive the Corbin Tail Holder FREE.

Holstein Breeders Declare Independence

Organize Registry Association to be Controlled by Breeders Only

FUTURE students of dairy history, when American Holsteins are under discussion, will be apt to lay special emphasis upon the date, July 31, 1925. For on that date within the impressive walls of the Senate Caucus Chamber, in the stately Capitol Building of the Commonwealth of Pennsylvania, gathered a determined body of men, every one a dairy farmer or financially interested in purebred Holsteins, bent on freeing themselves from a domination that they felt had grown to be oppressive. The thoughts of many of them, affected as they must have been by the building in which they met, may have gone back to the days of 1776 and that other little body of determined men, nearly all of them also cattle owners, who gathered in a little hall in the largest city of Pennsylvania, bent on freeing themselves from the rule of a British king, a rule that had grown oppressive to them. That meeting, so many years ago, resulted in the building of a mighty nation, free and independent. They who met that July day so many years after, were earnest enough to build a mighty organization, nation-wide, that would be enjoyed by their fellows and yes, even by their descendants, bound, if the ideas of the founders are followed, to endure as long as the Holstein-Friesian breed shall last.

As in the older days, men were present from various states. In the earlier days only a few of the founders of American Independence felt that they were founding a nation, but the men of 1925 knew that they were forming an organization of national scope. Both knew that they would be bitterly assailed, that wealth and organized power would be invoked against them, but both went on regardless, aiming for the right to manage their own affairs in the way they thought advisable, for the privilege to live and conduct their business without what both felt was unjust taxation and deprivation of liberty.

The parallel may be carried still further. Before the Revolution, the American colonies had been gradually building a self-supporting body. They felt, however, that a large proportion of the benefits of their work went to others and that they were being unjustly exploited. Those who met in Harrisburg on that July day felt that they, too, had been building a self-supporting organization and that others were taking the fruits of their efforts. In 1776, the older men laid the foundation of the United States of America. In 1925, was laid the foundation of the Holstein-Friesian Registry Association.

Frank and free discussion marked the speeches in

the Senate Chamber. Speakers outlined the necessity of an organization which would register and transfer cattle at the minimum cost to the breeders consistent with prompt and efficient service. The financial statements of the Holstein-Friesian Association for the past few years were reviewed and it was pointed out that, with the exception of the first year since the present management came into control, the association has steadily gone backward in number of registrations, in number of transfers recorded and in total cash receipts. The charge for transfers has been increased and the expenditures have grown. Other speakers reviewed the political movements within the association. The operation of the delegate system was bitterly condemned. It was apparent that a number of those present thought that "something had been put over them" both when the special meeting was called at St. Paul in October, 1921, and also when the plan for the delegate system was put into immediate effect instead of being laid before the membership so that they could vote on it at the annual meeting. In the Call for the special meeting there were suggested plans for a delegate system but the system as adopted was not either of these but a substitute sprung on those at the meeting who therefore had no opportunity to properly consider the scheme. Those in control had been, before the meeting, securing proxies in order to force through this scheme while several of their leaders as well as the breed journal which really represents them repeatedly stated that no proxies were to be gathered or voted at this special meeting.

Financial reasons justify the starting of a new association. Under the delegate system it is practically impossible to dislodge the present management. The courts have been invoked but the cases have been decided upon technicalities and even if a straight-forward judgment on the merits of the case had been given, the management could appeal the decision to various courts for they had not only the reserve fund of the association behind them but also the power to raise more funds by increasing the fees now charged for registration and transfers. They have the power to tax all the breeders and thus raise a fund to employ lawyers to defend themselves and their friends in the courts. The Association has been so managed during the past few years that while in the business year of 1919-1920, the Holstein-Friesian Association made a profit of \$146,344.81, the very next year they lost \$10,307.96, notwithstanding the fact that for all of that year the transfer fees

were four times as high as they had been in 1918 and 1919 when the association made over \$64,000 profit. Then the report of the treasurer and auditor for the year 1921 disagreed, the auditors report for that year showing a profit of over \$35,000 while the treasurer's report showed a loss of more than \$10,000 and this report was substantially borne out by the one issued by the financial committee. The figures studied by the members present are shown in another column.

Another speaker suggested more reasons for a new association. Owners of purebred Holstein-Friesians all over the country were complaining that they had to wait anywhere from six weeks to three and four months for transfer certificates. He found no fault with the Secretary but said that those at present in control of the association kept suggesting to the secretary that he cut down expenses and keep salaries as low as possible and dispense with all clerks that could possibly be spared. Yet the office of the secretary was the great earning place of the association, the funds coming from fees paid directly by owners and breeders of purebred Holsteins. These were dissipated in other enterprises not connected with the work of registering and transferring cattle. Men of business judgment question the business policy of anyone who would increase spending power and at the same time decrease earning power. An association which would confine its activities to the business of registering and transferring cattle would be able to register and transfer animals not only cheaply but also promptly.

During the lifetime of the Holstein-Friesian Association of America, large sums of money had been spent building up the present Advanced Registry system. The speaker briefly called attention to the discrepancy in the percentage of fat between the seven-day and long-time test of two of the last three animals reported by card from the office of the Advanced Registry Superintendent. When it was possible to manipulate cows that such variations in tests were possible, there was very little reason for any argument for spending the money of the association to promote and advertise tested cattle.

Speaker after speaker voiced the general dissatisfaction existing in their territory with the present state of affairs in the Holstein industry and in the Holstein-Friesian Association of America. One speaker said he had visited 127 breeders in the states of Maryland and Pennsylvania and that 116 of these had not only said that they would go along with the new association but had even signed to do so.

The name of the new organization will be The Holstein-Friesian Registry Association, Incorporated. The name is descriptive as it is to be an association of breeders, incorporated for the sole business of registering purebred Holstein-Friesian cattle, and recording transfers of ownership.

A proposed constitution and by-laws was gone over carefully article by article, section by section. It is planned that the directors of the association, the men who will be responsible for the policies of the association, shall consist of active breeders, men whose major business is dairying with purebred Holstein-Friesian cattle. Such men and no others are eligible to become directors. This is sharp contrast to the Hol-

stein-Friesian Association of America in which there are sixteen directors, only one of whom could truly be termed a bona fide dairyman, one whose main income was derived from the earnings of his farm and dairy. It is a known fact that there are many on the membership rolls of the Holstein-Friesian Association that are not at present owners of purebred Holstein cattle. It has even been said that some of the present directors never owned a purebred animal themselves and so do not do so at the present time. To obviate anything of this kind, it was aimed that there should be two classes of members in the new association, active members and inactive members. If a member did not register or transfer an animal for a period of two years, his name would be placed in the inactive member's list and inactive members do not have the privilege of voting at the meetings in person or by proxy nor can any inactive member be elected to a position on the board of directors.

There should be only six directors. Thus one of the causes of expense in the old association was obviated for, when a number of directors' meetings are called during the year, there is a heavy charge for the traveling expenses and hotel bills of a board of directors numbering sixteen. In order that a person owning cattle at present registered in other associations may have their cattle enrolled in the Holstein-Friesian Registry Association, Inc., the by-laws as adopted provided that cattle of the Holstein-Friesian breed now registered in other recognized registry associations may be registered in the new association on the payment of a 25-cent fee. The new association will issue a certificate showing such entry and this, together with the original certificate sent to the secretary, will be returned to the owner.

Membership in the Holstein-Friesian Registry Association, Inc., may be obtained by any reputable person on payment of a fee of \$10. The membership fee in the old association is \$25. The fee for registry in the herd book of the new association is \$1 for animals, male or female, under one year of age at time of entry. The charge for transfer is 50 cents or only one-third of that charged by the old association. It was pointed out that with a transfer fee of 25 cents the net worth of the Holstein-Friesian Association in June, 1919, was \$367,000. As there were 14,322 members at that time, this amount on hand represented not only the accumulated fees of \$25 each, but also a balance of \$9,000. It was pointed out that, for the year previous to the 1919 meeting, the old association had made a profit of over \$64,000 on a transfer fee of 25 cents.

The reserve fund of the Holstein-Friesian Association of America has been blamed as being the cause of a number of attempts to gain control of that association. To guard against the creation of a similar condition in the new association, the by-laws give the board of officers the power, should the financial condition of the association permit, to suspend the collection of transfer fees from members so that there may be no such cause for dissension, nor incitement to gain control.

A committee of five persons will be appointed by the president to consider the subject of birth certificates, scale of points and the recognition of milk and butter

records that will represent normal, hereditary, economical production. It is suggested that this scale of points shall not only be one on which individual animals can be judged but also that, unless an animal comes up to a certain size as shown by physical measurements, such animal shall not be eligible for registration in the herd book of the Holstein-Friesian Registry Association. This plan is expected to gradually eliminate "the purebred scrub" and promises much for the improvement of the Holstein-Friesian breed.

Those elected to serve as officers of the new Association until its next annual meeting, which will be held on the last Wednesday in January, are: Charles Weideler of South Bend, Ind., President; Howard C. Reynolds, Harrisburg, Pa., Secretary-Treasurer; Charles Wertheimer, Frederick, Md., First Vice-President; Eugene B. Bennett, Allamuchy, N. J., Second Vice-President and L. P. Rupright, Marysville, O., Third Vice-President.

The Constitution and By-Laws provide for six Directors. Two directorships were left vacant, the men to be appointed later to give certain Holstein districts an opportunity to be represented on the Board. The men elected to the Board of Directors are: Henry W. Fleischman, East Aurora, N. Y.; John McDonald, Galien, Mich.; Douglas B. Diamond, Gaithersburg, Md., and Arthur J. Miller, Clarks Summit, Pa.

Some of the Reasons for a New Registry Association

WE INVITE study of the appended table which shows the amount of business transacted by the Holstein-Friesian Association from the year 1914 to the year 1924, inclusive.

This table gives the amount of the transfer fee each year to members and non-members; the total cash receipts; the total cash disbursements and the profit or loss for each year together with the number of registration and transfer certificates issued and the number of members joining the Association during the year.

This interesting report shows the transfer fee up until 1919 as twenty-five cents to members. Each year the Association recorded a steady increase in receipts. The year before the transfer fee was increased, the Association was operated at a profit of \$64,320.04.

Year by year during the time the Association was operated on a twenty-five cents transfer fee, the table shows that the number of registrations increased yearly as did the number of transfer certificates issued and, further, the number of transfers, with the exception of the first two years, exceeded the number of registrations, showing that the Holstein business was in a healthy, prosperous condition.

In the year 1919, three months of which the transfer fee was twenty-five cents and the other nine months it was \$1.00, the good work that the Association was doing under the twenty-five cent transfer fee was reflected in increased business for this particular year in spite of the fact that the transfer fee was increased from twenty-five cents to \$1.00. The number of registration certificates for that year was 114,503, the number of transfer certificates was 131,823.

The number of transfer certificates issued has been

decreasing since the transfer fee was increased from twenty-five cents until last year the Association issued only 87,535.

In the year 1920-1921, we begin to see the effects of high fees and extravagant management. The Association's total receipts had increased because the fees have been increased. The Association's expenses had increased because of extravagant management. According to the Treasurer's report, the loss for this particular year was \$10,307.96. There was a slight increase in the number of registrations, a falling off in the number of transfers and a decrease of 1,580 in the number of members joining the Association.

The next set of figures are for an eight months' period, the fiscal year being changed to conform with the calendar year.

The following year, or 1922, under the Political management and \$1.50 transfer fee to members and \$3.00 to non-members, the Association's receipts fell off and the Association's expenditures exceeded its income by \$14,913.05. The number of registrations had decreased a little over 14,000 since the last full year, the number of transfers had decreased nearly 37,000 since the last full year's report and 638 less members joined the Association.

The second year under the Political management or 1923, the Association's receipts were \$525,916.67, the second highest in the history of the Association. The cash disbursements were \$586,736.22, the highest in the history of the Association. The difference between its cash disbursements and its cash expenditures showed a loss of \$60,819.55. They registered a few more cattle, transferred a few less and took in about the same number of members.

Last year, or 1924, under the Political management and the \$1.50 transfer fee, the Association's cash receipts had decreased to \$431,293.62. It expended \$463,011.11, or its expenses exceeded its income by \$31,717.49. It registered about 4,000 less cattle and issued 4,000 less transfer certificates and took in about 100 less members than it did in 1923.

During 1924, three different men held the office of treasurer, and each made a report covering the time that he held the office. No official summary of these three part-time reports appeared in the report of the treasurers and so the figures for cash receipts and cash expenditures are taken from the Auditor's report for that year.

In reviewing the Association's records for the year 1920-1921, it is worthy of note that the report of the treasurer, the late Wing R. Smith, whose ability and integrity are unquestioned, differed from the report of the Auditor, Mr. DeBergh, who is employed by the management of the Association. Mr. Smith's figures show that the Association was operated at a loss of \$10,307.96, while Mr. DeBergh's figures show that the Association was operated at a profit of \$35,354.09. The Finance Committee's report for that year, however, indicate the correctness of the Treasurer's figures.

The art of government consists in bringing Knowledge and power into a working partnership.—President Frank, University of Wisconsin.

The Influence of Politics On Cow Business

Comparative table of Holstein-Friesian Association showing increase in fees, losses and decreases in business under the present management.

Big Crowd Attends Dairy Field Day

AT LEAST four hundred dairymen from Adams, Franklin, Dauphin, Cumberland and Perry Counties attended the Inter-County Dairy Field Day held August 6th on the farm of Ivo V. Otto, Boiling Springs, Pa., and thoroughly enjoyed a day full of entertainment and instruction combined.

The Otto dairy, together with a few animals from the herds of W. A. Woods and W. H. Sheaffer, were tied along the fence and the excellence of the indi-

one of the features of interest and 87 competed. In the senior class Hiram Miller, Adams County, was first, Frank Hubler of Perry County, second, and L. P. Harper of Middletown, Dauphin County, third. In the junior division, Bruce Stouffer of Hantsdale, Cumberland County, stood at the head with Joseph Barkdale of Franklin County, second and Glenn Smith of Shippensburg, Cumberland County, third. Six handsome ribbons were awarded to the successful contestants.

The busiest man there was the Cumberland County cow tester, A. A. Raudabaugh. Mr. Raudabaugh was largely responsible for the planning and arrangements of the day. He was assisted by Paul Edinger and R. R. Burtner, county agents of Cumberland and Dauphin Counties respectively. Mr. Raudabaugh, who has been six years at the head of this association, knew the animals in the Otto herd and went over them, told of their breeding and from his test book gave figures of their production year after year. One cow had a record of averaging over 10,000 lb. milk a year for six years while the daughters of Lothian De Kol Korndyke attracted favorable comment not only because of their splendid showing in cow testing association work but also because of their individuality and uniform type. The visitors were unable to see this bull as he has been leased to State College. The performances of his daughters in cow testing association work and the individuality of his offspring attracted the attention of Prof. A. A. Borland head of the State College Dairy Department, who secured this bull for service in the State College herd.

The visitors, however, had an opportunity to examine the seven-year-old sire, King Ormsby Abbecker Helena, a splendid individual, a son of King of the Ormsbys from a good daughter of Korndyke Abbecker. He has a number of good daughters in the Woods and

LOTHIAN DE KOL KORNDYKE

Sire of the best young producer in the Otto herd. This bull has been leased by Pennsylvania State College.

viduals spoke volumes for the quality of Cumberland County's purebred Holsteins. The lot in which they stood consisted of an eight-acre field of sweet and alsike clover which had pastured twenty-seven head of cattle, nearly all cows, from May 11th to the day of the meeting. Mr. Otto had to answer many questions as to how he had sown the clover and handled the field preliminary to sowing and many of his hearers went home determined to experiment with a similar sowing.

Judging contests open to adults and juniors formed

Shaeffer herds and several of these were on exhibition. Mr. Otto has leased him until Lothian De Kol Korndyke returns home.

The midday meal was in the form of a basket lunch. The Cumberland County Holstein Association furnished a generous supply of chocolate milk put up by a local dealer who was announced to be one of the best cooperative workers in the dairy business. This, supplemented by ice cream and added to the provisions brought by visitors, helped everyone to feel good natured and happy.

Mr. Raudabaugh presided at the afternoon meeting and introduced the speakers. Mr. Otto briefly wel-

KING ORMSBY ABBEKERK HELENA

Now heading the Otto herd. He and several of his daughters were exhibited at the Inter-County Dairy Field Day.

comed his visitors and then gave way to Dr. S. E. Brunner of the Harrisburg Department of Agriculture, who gave a summary of tuberculosis eradication work in Cumberland County. There were approximately three thousand herds of cattle in the county, containing 22,815 head. Of this number only 474 purebred and 274 grade cattle have been tested. These were in forty-one herds. While 81 purebreds were condemned yet there are now 488 purebreds and less grades in these herds. Purebred breeders should be interested in promoting test work for reports over all of the United States showed that soon after testing there were more purebreds in a district than there were before testing was started. When the work was started in Cumberland County, eleven herds were found free and thirty herds infected but there are now eleven accredited herds and fourteen that had passed one clean test.

Twenty per cent of Pennsylvania cattle are under supervision and three counties, Mercer, Jefferson and Crawford, are now modified accredited areas. The various states this year appropriated twelve million dollars for tuberculosis eradication work which was supplemented by two millions from the federal government. He believed that three per cent of the cattle in the entire country would react to the tuberculin test.

A. B. Shenk talked on the Hershey Chocolate Company as buyers of milk. The average amount purchased by this Company was 600,000 lb. daily. The Hershey Company had an arrangement with the Dairymen's League and when they needed an extra amount, drew their supply from the League and if the League had an extraordinary demand for milk in fluid form, milk was shipped from Hershey to New York City.

He explained the Hershey system of paying for milk with differentials for test and a 10-cent sanitary test premium.

R. H. Olmstead, Dairy Extension Specialist from State College, said that Pennsylvania ranked third for number of purebred Holsteins, Guernseys and Ayrshires and fourth in the number of purebred Jerseys and Brown Swiss. Studies of cow testing association work show that the cost of feed was only fifty per cent of the cost of keeping cows and that a cow had to produce between 275 and 300 lb. fat yearly before she actually paid a profit over what should be charged for keeping her—feed, labor, interest, depreciation, etc.

G. G. DeVault of State College, spoke on agricultural economics. He said that to-day farmers could not operate a farm successfully without the cooperation of their neighbors. He read from the government report on agricultural cooperation in Denmark showing what the Danes had done to hold their own and capture foreign markets.

Miles Horst, eastern editor of the *National Stockman and Farmer*, gave a brief but witty talk on agricultural cooperation as exemplified in cow testing associations, dairy clubs, and local breeding associations, drawing his illustrations from the Cumberland County Holstein Breeders and Cow Testing Associations.

While showers threatened several times, there was never enough rain to seriously discommode the visitors. The afternoon meeting was staged in a grove in the Otto pasture, a beautiful spot for a farmer's meeting.

Some of the visitors were greatly interested in the Otto poultry plant. In nine months from November 1st to July 31st, 170 hens laid 25,937 eggs, an average of 152 per hen. The high month was March in which 4,073 eggs were produced. Mr. Otto is evidently a staunch believer in sweet clover for his henyard had been sown with this valuable legume.

Dairymen's League July Price

A GROSS pool price of \$1.915 for July milk is announced by the Dairymen's League Cooperative Association, Inc. This is the base price of three per cent milk at the 201-210-mile zone. There will be a deduction of 6½ cents per 100 lb. for expenses and 10 cents for certificates of indebtedness so that the base cash price will be \$1.75 per 100 lb.

In the same mail which brings their July milk checks League farmers will also receive their thirteenth check for the fiscal year which ended March 31, 1925. This check represents the proceeds on sales not included in previous monthly checks during the fiscal year and is the final accounting for the year.

The total amount of the thirteenth check to be mailed out to members this month is \$235,894.19, figured at the rate of 1 cent per 100 pounds of milk.

If we are too weak to take charge of our own morality, we shall not be strong enough to take charge of our liberty. If we cannot govern ourselves, if we cannot observe the law, nothing remains but to have some one else govern us, to have the law enforced against us and to step down from the honorable abiding place of freedom to the ignominious abode of servitude.—*President Coolidge.*

The Battle Creek Sanitarium Herd

By Eugene B. Bennett

IT is often said that purebred cattle cannot be profitably used for certified milk production. It is therefore a great pleasure to find at Battle Creek, Michigan, an all-purebred herd of Holstein-Friesian cattle used for producing certified, sanitary milk for the great Battle Creek Sanitarium. This herd may be said to have accomplished great things as it has three-fold accomplishments, the production of milk with a very low bacteria count, the breeding of purebred Holstein cattle, many of whom have very good A. R. O. records, and good results in the show ring.

The entire herd consists of cattle of excellent individuality with straight and broad backs, large square

ONA KING WALKER PIETERTJE
One of the herd bulls of the Battle Creek Sanitarium herd.

udders and well developed mammary systems. The cows are large and the young stock are well grown. The health of the herd is vouched for by state and federal authorities, it is free from tuberculosis and is on the accredited list. Almost all the cows in the herd have A. R. O. records, some of them very large but it is good to find that most of these records have been made when the animal was milked only three times a day.

The highest record cow in the herd is Traverse Segis Netherland credited with producing 33.6 lb. butter, 628.7 lb. milk in seven days. This was not her highest week as she is credited with 694.7 lb. milk in seven days. She also has a strictly official year record of 1,160.17 lb. butter, 25,699 lb. milk made as an eight-year-old. She is a daughter of Traverse Ryma Buckeye De Kol and King Segis De Kol Paul Netherland, a son of King Segis De Kol Korndyke, whose dam was the former world's champion cow, Pontiac Clothilde De Kol 2d.

As to the show qualities of this herd, study the picture of Flint Maple Crest Amethyst. This cow won the championship at the Michigan State Fair and has produced 104 lb. milk in a day. She is a daughter of the noted sire, Maple Crest Korndyke Hengerveld, and her dam is a granddaughter of King Segis Pontiac, another son of Pontiac Clothilde De Kol 2d.

Two half brothers are in service in this herd and the fact that they are half brothers is a great factor working towards uniformity in the stock. One of these bulls is Ona King Walker Pietertje and the other is Flint Ona Hengerveld Segis.

Ona King Walker Pietertje is from Canary Walker Pietertje, credited as a three-year-old with producing 599.4 lb. milk, 25.15 lb. butter in seven days. She is a granddaughter of Beauty Walker Pietertje Prince.

Flint Ona Hengerveld Segis is from Clover Farm Mercena Segis, 32.66 lb. butter, 577.3 lb. milk in seven days as a junior four-year-old. Four different years she made over 30 lb. butter in seven days, as a three-year-old, four-year-old, five-year-old, and six-year-old and was credited with being the youngest cow to make four 30 lb. seven-day records. She is a granddaughter of King Segis and Johan Hengerveld Lad, two famous sires whose descendants are noted as producers. As a six-year-old, Clover Farm Mercena Segis was tested for a year and is credited with a record of 21,916.5 lb. milk, 950.40 lb. butter.

Both these bulls are sons of King Ona, the most noted bull of the celebrated Ona family. His daughters are noted for individuality and production, both in official test and in general dairy work as recorded by the cow testing associations of Michigan. His sire was Maple Crest Pontiac Hartog and his dam was Ona Button De Kol, 1,345.55 lb. butter, 26,761.2 lb. milk in a year. The producing capacity of this great cow has been transmitted through her sons to her granddaughters and also through her own daughters several of which have made very large records in yearly work.

The barn in which this herd is housed is one of the most sanitary and up-to-date in the country. It has a plastered ceiling, cement floors, is fitted with King ventilators and the latest Jamesway equipment.

FLINT MAPLE CREST AMETHYST
Show cow and producer; 104 lb. milk in a day.

The dry cows and young stock have the run of a large outside yard, an ideal way of handling such members of a herd. The milking dairy at this time consists of seventy head and there are seventy-six heifers due to freshen with their first calves next fall.

The Battle Creek Sanitarium is known all over the world. It specializes on the treatment of digestive troubles which is the source of most other troubles. The treatment is based on dieting, bathing, massage, outdoor exercise, and abstinence from liquor, tobacco, coffee, tea and meat. Dr. James Harvey Kellogg, who is at the head of the institution, is a great believer in the value of milk as a food and two different years

has been one of the principal speakers at the banquet held at the time of the annual gathering of the Holstein-Friesian Association of America. At the 1925 convention he suggested that milk could be substituted for meat in the nation's diet with the expectation that, in a short time, the mortality rate would be reduced 25 to 30 per cent and that within a half century, life expectancy might be increased 50% or more.

Battle Creek itself is a city with a population, suburbs included, of 45,000. It is a very healthy city, the death rate for 1924 being only 10.6 per 1,000. There are nearly 10,000 homes in the city of which seven-tenths are occupied by their owners. It is claimed to be the largest wheat market in the state of Michigan and it is also said that 92% of its citizens are American born.

Aim to Lower Handling Charge

DURING early August five meetings were held in Frederick, Maryland, at which the new contract being considered by the members of the Maryland and Virginia Milk Producers' Association was discussed. This is to be substituted for the present contract and if the association is able to control 85% of the milk produced for the Washington market, the brokerage will be cut from three cents a gallon to one cent per gallon.

It is reported that seventeen of the eighteen distributors of milk in Washington are working in cooperation with the Maryland and Virginia Milk Producers' Association in this plan to stabilize the market on a similar basis to that existing in the Baltimore and Philadelphia milk markets. Better and better milk is being demanded by the consumer especially in the great cities. This does not mean richer milk, milk testing higher in fat, but a purer, cleaner product that shall be uniform in quality from day to day. Much of the success of the big milk distributing plants is probably due to the fact that they market a standardized product, that the milk they receive is thoroughly mixed, clarified, and often pasteurized before its distribution to the consumer.

With improved machinery it is possible for the large distributor to handle milk in this way at a far lower cost per quart when the expense of handling milk in a similar manner would be prohibitive to the producer or even the small dealer.

An Illegal Business

MANY cattle owners seem to mistake the purpose of the tuberculosis eradication campaign and the payment of indemnities. The campaign is not only an effort to eradicate bovine tuberculosis because such eradication would be of benefit to the general health of the community but is also planned to aid the dairyman to remove diseased animals from his herd not only because disease spreads from one animal to another, but also because disease is a handicap to animals in their efforts to return a profit for the cost of their feed. This is demonstrated by a study of cow testing association records.

There are cattle owners, however, who consider that the state and federal governments will indefinitely go on paying indemnities notwithstanding the fact that the funds from which such indemnities come are raised largely by taxation of the cities and come only in a less degree from farm taxation. So that, should the city make an open fight on the indemnity scheme, it would be doomed in short order, and the cattle owners would be left to struggle along as best they could with the further expectation that all city health authorities will in a very short time close their markets against milk coming from untested herds.

A number of cattle dealers living around Cortland, N. Y., hit upon what they thought was a money-making scheme. From time to time they had their herds tested. Condemned cattle were supposed to be shipped to the local abattoir and there are slaughtered and if five or six animals were condemned that number of animals was driven to the abattoir and slaughtered. But they were not the animals that reacted but consisted of inferior stock, non-breeders and culls.

Indemnities in the State of New York are higher, we believe, than they are in any state in the Union and these men took advantage of this fact and generally realized more for such cattle than they could get in any other way while they sold the cattle that had reacted to unsuspecting purchasers as clean stock, thus introducing tuberculosis to otherwise clean herds.

As far as we can ascertain the traffic was in grade or common cows only and not in purebreds. Suspicion was aroused, investigation made and a number of the offenders brought to trial and sentenced. Their books have been investigated and the herds of their customers examined and any branded animals promptly slaughtered.

Ups and Downs of Farm Prices

IF THOSE who design roller coasters and scenic railways at amusement places are in need of new suggestions for thrillers they should study the graphs made to represent the ups and downs of the purchasing power of the farmer's dollar during the last few years. The ups and downs before the war and during the first years of the war were hardly great enough to make it interesting. It moved along in a gently undulating manner, now slightly below then slightly above 100. Then about the end of 1916 there was a violent rise, up and up for two years until it touched the peak at 132 at the close of 1919. Then began the shoot downwards, one of those precipitous descents which fairly take away your breath, down, down far below the level of starting to a point registering 75 in 1921-22. From this the lowest depths the upward movement began and this has continued steadily for three years and we have now reached a point above that from which we started. At the beginning of this year the line touches 110, but owing to the unnatural prices of wheat and corn early in the year and the natural lowering of those prices during the last six months the general price level has receded a little. But it is encouraging to note that conditions indicate a continuance of the state of parity with other lines of business.—*Pennsylvania Farmer.*

Don't Be Just a Dairyman; Be a Breeder Also

A TRUE dairyman loves cows. This is indisputable. Milking time with the smell of silage and hay, creaking of mangers, the contented chewing of the cows, the sound of the milk-streams hitting the bottom of the pail and the almost noiseless sound of streams melting into the foaming liquid of the pail that is almost full—all these homely sights and sounds bring a feeling of joy and contentment to the true dairyman that is hard to describe. They are among the "country things he loves most."

And yet, one dairyman who is in love with his work and with his cows as much as is possible made the following statement: "If I could see before me only the milking of cows every day, with no hope of anything better for the future, I would quit to-day and go into something different. My ambition rather is for constant improvement—to build up a real outstanding, purebred dairy herd that will mean something."

There is no prettier or more satisfying business than dairying if you have a plan for the future and if, besides being a dairyman, you are a constructive dairy cattle breeder. The beauty of such a plan is that by constructive breeding you can leave a living monument to your efforts that will be a benefit to humanity.

But even more than this, you can leave your son a heritage and a start that it would have taken him, as it took you, a lifetime to develop. He will be allowed to "carry on" where you left off and be able to accomplish immensely more than if you had not already laid the foundation for him. What greater love or interest could a father show for his boy than this?

You will probably argue: "Purebreds cost money. I can't afford to pay such unheard-of prices as do the outstanding breeders of my favorite breed."

Of course not. There are two kinds of breeders—the big, fancy breeders and the farmer or dairyman breeder. Each is indispensable to the success of your breed. Each plays a big part in its development and growth.

The fancy breeder is breeding for an ideal. He is striving to reach perfection. In doing so he does not spare money or anything else. In his hands rest the fixing of type and gradual improvement of the breed. He takes the long-range view of his business; he looks many years ahead.

The dairyman breeder takes the results of the fancy breeder's work, puts it into his herd and uses it for a practical purpose in getting better immediate results and for supplying the human race with a higher quality of milk products at a more reasonable cost.

It is unnecessary to pay fictitious or unreal values. Bulls, cows, or heifers of good type and breeding can be purchased anywhere at an extremely reasonable figure.

Let time work for you. Have a purebred sire at the head of your herd and at least one purebred cow or heifer. Then you are a breeder. "Grow into the purebred game"—don't "buy into it." The first method is by far the best and is more credit to your own efforts. The smallest dairyman can become a breeder by this method.

It may seem slow but isn't it better to know that you

have a purebred herd in the making rather than that you have nothing better than you now own to look forward to ten, fifteen or more years from now?

The cost of a purebred bull and one or two heifers will be very small. Once you start right, you will feel better. People will have more respect for you and you will have more for yourself. You can feel proud that you are developing something permanent and worth while and are making a better chance for your boy when he faces life for himself. For the first time now the South is developing a really numerous and important class of dairy farmers. And we are anxious to see our Southern dairymen become as progressive as those anywhere on earth. Consequently we should like to make this appeal to each and every one of them (even the smallest) right now:—

Isn't it worth while to be a breeder as well as a dairyman? Isn't the possibility of getting better and better cattle until at last you have a herd of royal-looking animals with pedigrees and blood-lines and milking records that you can be proud of—isn't this reason enough to choose purebreds ahead of grades? Won't hopes for the future make you get that purebred bull and at least one purebred heifer right away so as to let "Father Time" start working for you?

The above editorial is taken from *The Progressive Farmer*, one of the greatest agricultural papers of the South. It is one that should be carefully read by every dairyman. Only on one thing do we differ with the writer and that is on his definition of the kinds of breeders—the big, fancy breeder and the farmer or dairyman breeder. The editor of *The Progressive Farmer* says that in the hands of the fancy breeder "rests the fixing of type and gradual improvement of the breed."

It is our belief that breed type is formed in the herds of the dairyman-breeder. He keeps dairy cattle for a specific purpose and unless his cattle are adapted for that purpose he as a class, will gradually go out of business. If his animals are only partially adapted to his purpose he will gradually and often unconsciously discard the animals not suited for his purpose and will raise the majority of his stock from the cattle that make him the most profit and please him by their appearance. The type of the Holstein-Friesian breed as it came to this country was not fixed or built up in the herds of the noblemen of Holland, but in the herds built up by the Dutch dairymen. The type of the Shorthorn breed and Hereford breed was not formed in the herds of the English aristocracy, but in the herds of the English farmers, the men who were in close touch with the cattle and who studied their markets. In this country the carload championship at the Chicago International Livestock Show is not won by animals developed in the herds of wealthy breeders, but has gone in the majority of cases, to cattle raised in the feed lots of middle western farmers who worked with and around their stock and made a close study of their market and market conditions.

Despite the fact that it is easy for wealthy establishments to fit their animals and to send out show herds, yet in our own breed a majority of the National Dairy Show grand champions have been raised in working dairy herds.

The writer of *The Progressive Farmer* editorial has, in this statement, echoed what is being said by many writers and teachers, yet a very brief study of the facts will show that this conclusion is erroneous and that a majority of the extra good animals come from small herds. This being so, it necessarily follows that the dairyman-breeder is really the one that is doing the most for breed improvement.

Developing a Near-by Market

CHARLES County, Maryland, is essentially a tobacco growing territory, yet at present it contains approximately 5,000 dairy animals and their owners are endeavoring to supply the dairy wants of the people within the county. Formerly practically all butter was shipped in, but when a coöperative creamery was established at Waldorf, a market was soon developed for a high-class product and with the result of keeping money at home that had previously been sent away, thereby helping to build the home community. This story, however, is of a recent development which took place in the northwest section of the county and which may point the way to producers in other sections where the local market has not been fully developed.

Indianhead is a government reservation in Charles County, Md., and is the only community within the reach of Charles County producers that can claim a real industrial population. For a long time its residents were dependent upon Washington dairymen for their milk supply. This condition has lately been remedied and Indianhead now obtains an adequate supply of good milk produced on the farms of Charles County.

The Glymont Dairy is largely responsible for this state of affairs. In addition to its own herd which consists of Holsteins and grade Guernseys, the milk from four other herds, all tuberculin tested, is handled through this dairy. Every effort is made to produce high quality milk and to handle it carefully, following recommendations of county agent G. R. Stuntz and state dairy specialist J. A. Conover.

The Glymont Dairy has modern equipment for the handling and bottling of milk, including cooling and refrigerating apparatus, pasteurizer, bottling and bottle washing machinery. An ample supply of cool spring water is available. The milk is taken from the smaller dairies to the plant where it is cooled, pasteurized and bottled. It is distributed over retail routes and at pres-

ent not only do they take care of Indianhead but also a large part of the customers of La Plata.

A quart bottle of milk was recently taken from the dairy farms at Indianhead and brought to the University of Maryland to be examined for bacteria content. The bottle was carried in an auto all day without ice, was placed that night in an icebox, and the following morning examined in the University of Maryland laboratory. The bacterial count was below 10,000, twenty-four hours after the sample was taken, indication enough of the high quality.

Plans are under way for a modern barn at Glymont Dairy which will accommodate approximately sixty dairy cows. This barn is to be 117 feet long by 36 feet wide with two wings, each 60 feet by 24 feet. One wing will be used for storing hay and the other will contain feed rooms as well as maternity, calf and bull pens. Two silos of about 80-ton capacity will be erected.

In addition to the Glymont Dairy a herd run by Miss Emily Cox supplies a route taking about forty quarts daily. Following plans suggested by Mr. Stuntz and Mr. Conover, Miss Cox converted an old tobacco barn into a very satisfactory dairy barn at comparatively slight expense. Windows were cut in the sides, concrete floors and steel stanchions were installed. The herd was tested for tuberculosis and now high grade milk is being produced by a carefully managed herd.

The dairy industry in Charles County is interesting because it shows a development of local markets which producers often neglect in favor of markets more distant and often less profitable.

Grass

"LYING in the sunshine among the buttercups and dandelions of May, scarce higher in intelligence than the minute tenants of that mimic wilderness, our earliest recollections are of grass; and when the fitful fever is over, and the foolish wrangle of the forum and the market is closed, grass heals over the scar that our descent into the earth has made, and the carpet of the infant becomes the blanket of the dead."—John J. Ingalls.

AUGUST 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Filling a Need and Demand

THE breeders of Holstein-Friesian cattle have taken a great step forward in organizing a new Registry Association which took place at a meeting held in the Senate Caucus Chamber of the Capitol Building, Harrisburg, Pennsylvania, on July 31st.

When the breed was first introduced into America, the breeders and owners were confronted with many problems which they had to solve. The Agricultural Colleges were in their infancy, so to speak. There were no available textbooks, setting forth the distinctive characteristics of different breeds of dairy cattle. The science and art of feeding and handling dairy cows was also in its infancy. The Agricultural Extension Departments and County Agents that are now doing so much to promote better dairying and the use of improved dairy cattle were not in existence. Therefore, the early breeders organized in one Association through which they maintained the purity of the blood and carried on the various promoting projects which then were deemed necessary.

In the early days when there were few cattle, the breed was not widely distributed or their economical value appreciated, the work of maintaining a Herd Register was very simple as compared with the work of extending and popularizing the breed.

Yet, in these early days the Association expended little money in carrying on so-called Extension and Promotion work. Most of the work was done by the individual breeder and owner at their own expense, who carried the work along until the breed became the most popular and widely distributed dairy breed in America and every purebred and grade Holstein cow in the working dairy contributed her share towards extending and popularizing the breed.

Agricultural Colleges and Extension workers, realizing the superior quality of purebred dairy cattle, have entered the field and are continuously helping to extend and popularize the breed in their efforts to encourage better or more profitable dairying. Therefore, it would seem that the present day breeders are relieved of much

that of necessity fell upon the shoulders of the early breeders in the way of extending and popularizing the breed, leaving the present day breeder in a position where he can devote all of his time and effort in breeding strong, healthy, vigorous animals to supply his own needs in the working dairy and fill the demand for breeding stock.

There seemingly was no legitimate need for the early breeders to expend large sums of money to establish the breed. Why then has it been necessary in recent years to expend hundreds of thousands of dollars to perpetuate it?

It seems that the machinery established years ago to promote the breed for legitimate dairy purposes, having outlived its usefulness, has been taken over by Speculators, who have been using the organization to promote the breed from an exaggerated, speculative standpoint at the expense of the breeders and dairymen who were conducting their dairy and breeding operations legitimately on sound economical principles.

For the first few years those who were promoting the breed from an exaggerated, speculative standpoint, seemingly worked up a very thriving business. First, because the Holstein cow had gained the reputation as a money maker and a mortgage lifter in the hands of the dairymen when fed and cared for under economical conditions and the dairy public had great confidence in the breed. Second, those who were promoting the breed from an exaggerated, speculative standpoint, were operating through the Registry Association, which gave their projects the appearance of being sound and legitimate.

Thousands of breeders or "would-be" breeders and dairymen scattered throughout the dairy sections of the United States, from the Atlantic to the Pacific, have lost large sums of money by investing in purebred Holstein cattle that were said to possess superior value which in reality was only exaggerated or imaginary. To such an extent has the promoting of these exaggerated values been carried under the banner of the Registry Association that a re-action has taken place and the breeders and dairy public demand that the Registry Department of the Holstein-Friesian breed of cattle be a separate and distinct project, away from any influence of exaggeration, promotion and speculation.

The plan of breed promotion advocated by the Holstein-Friesian Association through its Extension Department is unsound economically and otherwise and those who have put the plan into practical application have found it expensive, impracticable and unprofitable when measured by business standards. It has been perpetuated not upon its merits but by propaganda sent out by personal letters, printed pamphlets and press agents, which required a large expenditure of the breeders' money. Follow it down to its practical application and you will find failure every time.

For example, the Illinois Holstein-Friesian Association conducted a Test Plant at Dixon, Illinois, where upwards of thirty cows were maintained under one roof on a yearly test. These cows were selected from the best herds in the State of Illinois and we may assume that they represented the best specimens of the breed in the States. At the end of the year the average production was 22,000 lb. milk. The highest individual

production was over 28,000 lb. So it is fair to assume that they were good cows and if they had been maintained in a working dairy, fed and cared for economically, they should have produced from twelve to fifteen or more thousands pounds of milk per year and turned a handsome profit to their owner. But at this Test Plant, where they were fed and cared for in accordance with the methods advocated by the Extension Department of the Holstein-Friesian Association, after the milk had been sold and a statement of Profit and Loss prepared, it was found that each of these cows lost an average of \$441.55.

Breeders generally have found the making of official records expensive but this is a concrete example of the cost of making forced and exaggerated records. It is not how much milk and how much butter a cow can be forced to produce that determines her value or breeding qualities, it is rather the amount she will produce at a profit.

In recent years, and we believe as a direct result of the propaganda sent out setting forth the value of forced and exaggerated records which we now know is imaginary, many large so-called breeding establishments have "popped up" all over the country. The Extension Department of the Holstein-Friesian Association has had a tendency to look upon these breeding establishments as a great step forward in breed improvement and dairy development.

From practical observation it would appear that all of these so-called establishments, or at least by far the greater number, represent investments and operating costs far in excess of any amount that can legitimately be invested in dairy cattle or dairy farm equipment. The milk and the increased stock produced on these farms must sell for amounts far in excess of their real value in order to pay operating costs, saying nothing of interest on investment or depreciation.

In the State of Pennsylvania there has sprung up in recent years one of these Model Holstein establishments that seemingly has followed closely the teachings advocated by the Association in regard to making official records. Extensive publicity has been given the establishment and cattle from this farm have been consigned to the leading sales.

This farm and these methods have been held up to the breeders as an example to be followed by dairymen.

The owner in a recent bankruptcy proceeding filed among his total losses for the past five years, an item of \$1,000,000.00 lost on his dairy farm at Coraopolis, Pennsylvania.

Again we want to repeat, as we have said before, we are not condemning the innocent victims who have been deceived into following the teachings of false gods but we do condemn the System and those who are perpetuating it.

The Holstein-Friesian Registry Association, the new organization that has just been formed, will make it possible for breeders and dairymen, who own and breed purebred Holstein cattle and conduct a legitimate dairy business, to register and transfer their animals in an Association at cost where they do not have to contribute to the support of the speculative interests. The organization of the new Registry Association is a step

forward and will enable the breeders to restore public confidence in the breed and prosperity to the industry.

A Dweller in Two Worlds

THE farmer suffers from the handicap of living in two worlds. One is the world of the handicraft period, of the American frontier. In this world, he objects to limiting production because he does not like to see his neighbor hunger. He looks on his farm as a home, rather than a business. He hopes for a good living, but does not look for any great amount of wealth.

But he lives also in another world, the world of modern business. There he learns that adjusted production is only sound business; that capitalization of earning power in the form of land or stock values is the conventional thing with all great industries; that shrewd dealing on the market will make up for lack of skill in production.

Can the farmer bring modern business to his old standards, or must the farmer adopt the standards of modern business? So far, the farmer hardly knows. Neither does the business world know whether it wants the farmer modernized or not; it would, of course, hardly discuss seriously the question of itself reverting to the standards of the handicraft period.

On the whole, too, the business world seems fairly content with the farmer as he is. It insists that the farmer must not capitalize earning power into land values as other industries do; what is legitimate for a railroad or a power company is heresy for an Iowa farmer. It is suggesting now that adjustment of production is not altogether bad, but largely in order that foreign buyers may spend money for American manufactured goods rather than American farm goods. It is urging that farmers adopt business methods in marketing, but partly in order that certain efforts for favorable farm legislation may be forgotten.

We think it likely that the standards of the handicraft age, to which the farmer still clings in part, have more social value than our modern business standards. Yet in a clash between the two, can the older standards hope to survive? Perhaps they might, if farmers were willing to accept the old standards as the final goal, and to use modern tactics and mass action to force compliance of other interests with these standards. This may be possible, but certainly not until the farmer learns to see far more clearly than now the difference between the two worlds of economic thought to each of which he now pledges an impossible allegiance.—*Wallace's Farmer.*

At a recent gathering of western Holstein breeders W. B. Barney, Legislative Agent for the Holstein-Friesian Association of America, boasted that he had attended every annual meeting of the National Association for more than twenty years. He neglected to say that his expenses when attending these meetings had been defrayed from the funds of the Association and his expenses attending the meeting at which he was speaking were also paid from the same source. The question naturally arises how many of these meetings would he have attended if he had had to pay his own bills?

Send in Your Cattle Photographs

THE time for closing the BREEDER AND DAIRYMAN amateur picture contest is drawing near. A large number of pictures have been received but more would be welcomed. There are some real good cows in the herds of our readers that should be shown to the public and we think a special effort should be made to send in more good photographs. The following suggestions may be found useful:—

Stand exactly opposite to the side of the cow, otherwise an unnatural foreshortening will result, making the animal appear heavier at one end than she naturally is.

Take plenty of time to get the cow posed properly—if she's a good cow, she deserves the attention, for her picture will remain long after she is dead. Plant her feet under her to show her to the best advantage.

Get just as much cow in the picture as the print will allow without cutting off her feet or head. That is, stand as close as the range finder on the camera will permit.

A cow looks a great deal more attractive if she is clean, although slight stains show but very little. While it is hardly necessary to wash and comb the cow's tail yet such little attentions add to the attractiveness of the photograph and take very little time. Such things, however, may be overlooked in group photographs.

If the cow is being held, it is advisable to keep her head up and make her look alive. A cow grazing usually takes a good photograph and some cows pose naturally. Do not take the photograph when the cow is holding her head part way down as she will not look as well as if it is either way up or way down.

The Independence of the Farmer

MANY people are farmers because they have personal independence on the farm that they could get nowhere else. Each one of these farmers is his own boss.

Some people can't stand a boss. They have initiative of their own and want to exercise it. They want to do their own planning and thinking. And this is a great privilege for those who have this initiative. On the other hand, there are those who have need for a boss to accomplish anything. They lack initiative and can't do things without being told.

Now, it galls one who has initiative to have some one tell him when to do this, and when to do that, and how to do it, when he knows better how and when to do it himself. He chafes under this restraint and, just as soon as he can, he gets a business of his own and is much happier even if he doesn't make as much money as when working for others.

The farmer, by planning and doing a little extra work can now and then take a day off without detriment to his business and without asking the boss. Is that worth anything? To the man with initiative it is worth everything. It turns drudgery into pleasure. It makes a man feel that life is worth living. That is one of the reasons why farming is a good business. It makes independent citizens, men who can be depended upon by the community, or the nation, when needed.—*Michigan Farmer.*

Four At a Birth

AGGIE SEGIS CALAMITY, a purebred Holstein cow owned by W. E. Lawson, Hayfield, Manitoba, Canada, on July 2d, of this year gave birth to four normal living calves, three of which were heifers and the fourth a bull. When these young animals were thirteen days old, they were weighed. The bull calf weighed 72½ lb., one heifer weighed 63 lb., one, 60½ lb. and the other 59½ lb. The total weight of the four is 256½ lb.

The calves are very even in appearance and are nicely marked being a little more white than black. Their mother is a light colored cow and her photograph taken July 15th shows that the cares of a family apparently set very heavily upon her.

On March 19, 1924, Aggie gave birth to a bull calf. She was entered in long time test which was supervised by representatives of the Canadian Department of Agriculture. At the end of the 353 days when the test was terminated, she had produced 19,215 lb. milk, 666.76 lb. fat. It is not intended to test this cow in this lactation period; in fact, following parturition, she had an attack of metritis and has since been under the medical care of the local veterinarian, Dr. Harry H. Ross.

Mr. Lawson is a working farmer who about three years ago started breeding purebred Holstein dairy cattle. At the present time his herd numbers twenty-one. The product of the herd is marketed in Brandon.

Farm Boys Lead in College

A. W. GIBSON, instructor in the Farm Practice Department of the New York State College of Agriculture, has compared the records of 2,105 agricultural students in ten different classes since 1906. These records indicate that farm boys show more staying power in agricultural college work than boys coming from the city. Of students taking the four-year course and coming from the farm three-fourths stayed the four years and graduated. Of the city boys less than one-half completed the course.

The records indicate that farm boys are smarter than city boys for they not only did better work in the agricultural college but also in other departmental classes that the agricultural students have to take in order to make out a well-balanced, well-rounded, cultural course. The average grade of the boys coming from the farm is a little over 78% while for students who have no farm background whatever, the average is about 74%.

Mr. Gibson has not confined his investigations to work in the college. He found that the college graduates who, after completing their courses, went into non-agricultural work, earned in school an average mark of 74% while the boys who took up farming as a life business had an average grade of 78%.

It is not the work that kills men, it is worry. Work is healthful; you scarcely can put more upon a man than he can bear. Worry is rust upon the blade. It is not the revolution that destroys machinery, but the friction. Fear secretes acid; but love and trust are sweet juices.—*Beecher.*

Everglade Herd

EVERGLADE is the name reserved as a herd prefix by A. F. Reimensnyder whose farm is two miles northeast of Milton, Pa. The Everglade herd is on the accredited list and there has never been a re-actor in all its history.

Everglade herd was started with three heifers and a bull and this bull is now the senior herdsire. He is King Sarcastic Veeman Rob No. 332702. His sire is King Korndyke Reba Veeman and his dam, Frances Sarcastic 2d, a cow with an official seven-day record made as a nine-year-old of 663 lb. milk, 29.97 lb. butter. She is a granddaughter of Paul Beets DeKol and also of Johanna Aaggie Sarcastic Lad, both noted old-time sires.

One of the foundation heifers was Highland Sethje. Her sire, Oakland Sethje Mooie, was a grandson of Colantha Johanna Champion and a son of Sethje Mooie 32.35 lb. butter in seven days, a cow that three different years made seven-day records above 31 lb. butter. Queen Lyons Pontiac Hengerveld, the second foundation heifer was sired by Hengerveld Walker Lyons, a son of King Lyons and Isabelle Walker, a 22.85 lb. granddaughter of King Segis. King Lyons Pontiac Hengerveld was from an A. R. O. daughter of King Segis Pontiac McKinley, a son of King Segis Pontiac from a daughter of King of the Pontiacs. This cow has three daughters, full sisters, in Everglade herd. One freshening as a two-year-old will soon close her first lactation period with over 10,000 lb. milk to her credit and she has never been milked over twice a day. Another freshening when 22 months old, has milked over 4,000 lb. in four months.

The third foundation heifer was Gerster Ida Willgo. Her sire, King Lyons of Northside Farm, was a son of King Lyons from a cow that made more than 20 lb. butter and over 500 lb. milk in seven days. The dam of Gerster Ida Willgo was by Kuperus Hengerveld DeKol, whose dam, Kuperus 6th, was imported from Holland.

Gerster Ida Willgo has two daughters in Everglade herd. One freshened as a senior and the other as a junior two-year-old and both heifers will soon close their first lactation period with better than 10,000 lb. milk to the credit of each. Gerster Ida Willgo recently made 1809.6 lb. milk in 30 days on two milkings a day. Her young son, a very handsome individual, was sold at public auction at the Northumberland County Accredited Holstein-Friesian Association's Field Day, held June 10th, at Sunny Lawn Farm, of which Murray Miller, of Milton, Pa., is proprietor. Another son of this great cow heads a very good herd in this locality which speaks volumes for the remarkable type and known producing ability of this good cow.

The heifers mentioned as being in milk or closing records are all daughters of King Sarcastic Veeman Rob. This bull is a very fine individual and weighs about 2,200 lb. Approximately 85% of his progeny have been females—as Mr. Reimensnyder says, “a mighty good thing when you are building a herd.”

The daughters of this sire have been mated with King Butter Boy Highland, a son of Butter Boy Korndyke Johanna from a 20-lb. granddaughter of Colantha

Johanna Lad. Butter Boy Korndyke Johanna is a very handsome animal and a well-known show bull now owned by Judge C. R. Savidge, of Sunbury, Pa. He is by Colantha Johanna Lad 8th from May Butter Girl DeKol, 690.8 lb. milk, 30.92 lb. butter in seven days, 25,594.2 lb. milk, 1,067.53 lb. butter in a year. This bull has four full sisters, two tested as senior two-year-olds and two as junior four-year-olds and the seven-day records of the four average 565.9 lb. milk, 25.96 lb. butter.

King Butter Boy Highland who is a very nice individual is the herdsire owned by E. D. Schmure who lives about five miles from Everglade. Reimensnyder did not wish to inbreed nor to use a bull whose dam did not have an official record. There are 16 head in Everglade herd and only one is by a bull whose dam is not in the Advanced Registry.

On May 25 of this year Mr. Reimensnyder purchased from Merrill Kling, of West Milton, Union County, Pa., the bull, King Maida Bonheur, born January 22, 1922, and so now a three-year-old. He weighs 1,760 lb., is a real show bull and has some very fine daughters. He is backed by producing strains. His sire, North Star King Bonheur, is a son of Bessie Fobes Oak Homestead and North Star Gift Johanna, a 20-lb. junior three-year-old that averaged 70½ lb. milk daily. Her dam is the noted Little Gift of Spring Valley reported as producing around 160 lb. milk in a day. She has a seven-day record of 28.86 lb. butter, 796.4 lb. milk and a year record of 1,049.26 lb. butter, 26,831 lb. milk.

The dam of King Maida Bonheur is Bell Farm Maida. As a junior two-year-old she completed a year record of 710.37 lb. butter, 17,834.4 lb. milk and as a three-year-old is credited with 23.54 lb. butter, 500.8 lb. milk in a week. Her dam has three tested daughters while her sire is King Valdessa Pontiac whose daughters have made tremendous records in both short and long time test, several of them breaking Pennsylvania State records.

The product of the Everglade herd is sold wholesale to a local dairy that takes the morning milk and the cream from the evening milk. This leaves a large quantity of skim milk which the young calves and pigs at Everglade farm use to good advantage. Mr. Reimensnyder raises purebred Chester White hogs and has a litter of ten entered in the Keystone Ton Litter Club. These are very promising at the present time and their owner expects them to make a prominent mark in the club contest.

The Everglade herd is an everyday farmer's herd which must pay its keep and also furnish the keep of the family which consists of Mr. and Mrs. Reimensnyder and their four-year-old son, and they, by the way, take care of all the work done on this 76-acre farm.

The lifetime records of a low-producing cow may be likened to the daily course of the winter's sun, which rises late, remains low, lasts only a little while, then disappears. The lifetime record of a high producing cow may be likened to the daily course of the summer's sun, which rises early, climbs to a great height, remains long, descends slowly, and seems reluctant to disappear.

NOT ABOUT COWS

Words—English Words

ONCE in a while, when one's attention is suddenly struck by the peculiarity of some perfectly familiar word, one is tempted to stop and think over some of the oddities of our mother tongue, (why not father?) And we are bound to sympathize greatly with the foreigner who is trying to acquire a speaking knowledge of the English language. It must be quite confusing to discover that a horse that goes a mile in less than three minutes is a fast horse, and that one which is tied to a post and cannot move a step is also a horse that is fast. And Mrs. Foreigner must be bewildered to learn that the color in a dress is fast because it does not run and that her watch is fast because it runs too much. And what can they both think when they learn that to fast is to abstain from food as a token of penitence and grief—yet those who fast and carouse are known as fast people.

Box

And when they come to that little word "box," their first idea is of a receptacle for almost anything of a solid nature from shoes to hat. Suddenly they are confronted by the expression "a box on the ear," and having already learned that a box is a chest, it is hard to make clear why one may acquire a cold on the chest but not on the box, and that the small boy may get a box on the ear but not a chest, really a trifle confusing. And as our foreign friends progress into American life, they find a man presents his lady friend with a box of candy, at a ball game where the pitcher and batter stand in their respective boxes. And when the bases are full and no one out, the pitcher is in a terrible box. Yet he may be knocked out of the box. And next day, all four may find themselves in court, in either the jury box or the witness box. And wouldn't it bewilder anyone, not entirely familiar with the terms, to try to remember, that, at the theatre, the beautifully upholstered, exclusive seats are boxes, and so are the freight cars which convey cattle and horses from place to place. And since a box is a case, that suggests another very useful word, with seemingly endless numbers of meanings—the word—

CASE

Usually our first introduction to this is the doctor's case, which he opens up and from which he concocts the most evil tasting doses. Strangely enough, the patient is also the doctor's case, so the medicine poured out of the one case is poured into the other. In other words it is poured out of his case into his case.

Then, especially if of the masculine persuasion, the next interesting case is a watch case. Somehow watches seem to have a fascination for small boys more than for little girls, for who ever heard of a little girl craving a watch. Doubtless a psychoanalyst would discover some deep significance in this, probably the be-

ginning of man's punctuality to his meals. Sometimes, indeed, circumstances alter cases, sometimes they are gold—14 carat, and sometimes nickle.

INTERESTING CASES

Then there is the inevitable case that the lads of a certain age seem to get on the lasses of a similar age—perhaps the most interesting of all. But I will not attempt to discuss that about which I know absolutely nothing, but merely make honorable mention. And, often, by this time, the young man in the case, may have developed along such peculiar lines that he is usually designated as "a case," meaning that he has some rather outstanding qualities.

And should one's lot in life lead to the printer's trade, there is yet another case—the shallow tray, divided into compartments for the convenience of type setters. The upper case contains capitals, marked letters, fractions, etc., while the lower case holds the small letters, figures and punctuation. And the miner knows yet another meaning of the word—for a case in mining means a small fissure, which admits water to the workings. And to the carpenter, a case means a door or window casing, very useful in buildings and used in all of our best houses.

Then about our next contact with case is at school, where, in English, it enters into grammatical construction, changing the forms of the pronouns. However, in this case, the English language is not so bad as it might be, since, in it nouns do not indicate their case by their forms, as in many other languages. Of these, some are very much worse than others. In studying Greek one has to wrestle with different endings for the three genders, two numbers and six cases. Years ago, as a child, I had a mania for tackling subjects for study all by myself. In a rash moment, I attempted Greek but when I found that there were thirty-six different forms of that much used little word "The," I gave up in despair and turned my attention to something else—Pitman's system of shorthand if I remember correctly.

A BAD CASE

The Case family have one wayward son. He is to be found in faro, that well-known gambling game, and means the fourth card of any denomination of which three have already been taken from the box. The foregoing would argue a familiarity with that naughty game which is far from true. I found it in the dictionary, in fact, it is rather strange that the dictionary has not been barred from our public libraries, there is so much forbidden knowledge in them.

THE LAST CASE

To which nearly all of us come is the spectacle case, usually famous for being so easily mislaid. There is a fortune awaiting the inventor of a non-disappearing spectacle case. Where they all go to is as much of a

mystery as the unknown destination of the thousands of pins that are lost annually. And here I close the case.

A Review Before the Battle

FORTY-FIVE young members of the Jackson County Calf Club gathered August 5th at Rose Hill, near Dodson, Missouri, to look over the farm owned by A. J. King of Kansas City, Mo. The farm at Rose Hill contains 200 acres and is a branch of the King establishment at Grandview, Mo. A number of yearlings and two-year-olds, part of the show herd which will represent the King establishment at the southwestern fairs this fall, greatly interested the youngsters as the animals were to start the next day on their three months' tour.

The youngsters and their friends listened to talks by Dr. H. J. Waters, of the Kansas City Star, County Agent Ira Drymon and his assistant, Coe Pritchett, while Frank Wells, herdsman for Mr. King gave a judging demonstration using some of the show animals to illustrate the points that should be looked for.

Refreshments were served and everything done to insure that the young members should have a good time.

FAIRS AND EXPOSITIONS

August 15-22—Davenport, Ia., Mississippi Valley Fair and Exposition.

August 15-22—Sedalia, Mo., Missouri State Fair.

August 21-29—Aurora, Ill., Central States Exposition.

August 26-Sept. 4—Des Moines, Ia., Iowa State Fair and Exposition.

August 30-Sept. 5—Danville, Ill., The I and I Fair.

August 30-Sept. 5—Milwaukee, Wis., Wisconsin State Fair.

August 31-Sept. 5—Columbus, Ohio, Ohio State Fair.

Sept. 4-13—Detroit, Mich., Michigan State Fair.

Sept. 5-12—Hamline, Minn., Minnesota State Fair.

Sept. 6-11—Helena, Mont., Montana State Fair.

Sept. 7-11—Superior, Wis., Tri-State Fair.

Sept. 7-12—Indianapolis, Ind., Indiana State Fair.

Sept. 7-12—Wheeling, W. Va., West Virginia State Fair.

Sept. 7-12—Timonium, Md., Maryland State Fair.

Sept. 7-12—Hartford, Conn., Connecticut State Fair.

Sept. 14-18—Huron, S. D., South Dakota State Fair.
Sept. 14-18—Chippewa Falls, Wis., Northern Wisconsin State Fair.

Sept. 14-19—Syracuse, N. Y., New York State Fair.

Sept. 14-19—Louisville, Ky., Kentucky State Fair.

Sept. 14-19—Topeka, Kans., Kansas Free Fair.

Sept. 14-19—Jackson, Tenn., West Tennessee District Fair.

Sept. 15-19—Reading, Pa., Reading Fair.

Sept. 15-19—Douglas, Wyo., Wyoming State Fair.

Sept. 19-25—Hutchinson, Kans., Kansas State Fair.

Sept. 19-26—Springfield, Ill., Illinois State Fair.

Sept. 20-25—Sioux City, Ia., Interstate Fair.

Sept. 20-26—Springfield, Mass., Eastern States Exposition.

Sept. 21-26—Pueblo, Colo., Colorado State Fair.

Sept. 21-26—Nashville, Tenn., Tennessee State Fair.

Sept. 22-26—Allentown, Pa., Allentown Fair.

Sept. 22-26—Helena, Mont., Montana State Fair.

Sept. 26-Oct. 3—Knoxville, Tenn., East Tennessee Division Fair.

Sept. 26-Oct. 3—Memphis, Tenn., Memphis Tri-State Fair.

Sept. 26-Oct. 3—Oklahoma City, Okla., Oklahoma State Fair and Exposition.

Sept. 28-Oct. 4—Waterloo, Ia., Dairy Cattle Congress.

Sept. 28-Oct. 3—Trenton, N. J., Trenton Fair.

Sept. 28-Oct. 3—Salem, Oreg., Oregon State Fair.

Sept. 29-Oct. 3—Lancaster, Pa., Lancaster Fair.

Oct. 3-8—Wichita Falls, Tex., Texas-Oklahoma Fair.

Oct. 3-10—Muskogee, Okla., Oklahoma Free Fair.

Oct. 3-10—Chattanooga, Tenn., Chattanooga Inter-State Fair.

Oct. 5-10—Richmond, Va., Virginia State Fair.

Oct. 5-10—Birmingham, Ala., Alabama State Fair.

Oct. 6-9—York, Pa., York Fair.

Oct. 8-17—Atlanta, Ga., Southeastern Fair.

Oct. 10-17—Indianapolis, Ind., National Dairy Show.

Oct. 10-25—Dallas, Texas, State Fair of Texas.

Oct. 12-17—Little Rock Ark., Arkansas State Fair.

Oct. 12-17—Meridian, Miss., Mississippi-Alabama Fair.

Oct. 12-17—Raleigh, N. C., North Carolina State Fair.

Oct. 19-24—Columbia, S. C., South Carolina State Fair.

Oct. 19-24—Jackson, Miss., Mississippi State Fair.

Oct. 26-31—Savannah, Ga., Georgia State Fair.

Oct. 29-Nov. 8—Shreveport, La., State Fair of Louisiana.

Oct. 30-Nov. 7—Portland, Ore., Pacific International Live-stock Exposition.

Nov. 2-11—Montgomery, Ala., State Fair of Alabama.

Nov. 11-21—Beaumont, Tex., South Texas State Fair.

It is possible to hold up the milk flow by heavy grain feeding—but it is unnecessarily expensive. Succulent feed should always be on hand to supplement pastures and thus save feeding so much expensive grain.

A Co-operative Poland China Swine Journal, Owned by the Breeders: Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

Full Information Free—Write Today for Sample Copy.

This Journal keeps you posted on the care and feeding of the hog. Much valuable information, worth many times your investment.

CLUB ACTIVITIES

DAIRYMEN DESERVE NO PROFIT

No less authority than Professor F. B. Morrison of the University of Wisconsin, one of the foremost cattle-feeding experts in the country, made the startling declaration at the recent Dairymen's Conference held at Davis, California, that "The dairyman who feeds according to 1910 methods deserves no profit." Thus he illustrated the tremendous advance in feeding knowledge during the past fifteen years.

Much has been learned about proteins in the last few years, and in feeding young stock a variety of animal and vegetable proteins is necessary for satisfactory nourishment and growth. In feeding dairy cattle, however, the variety of proteins is not so essential as in feeding growing stock. One protein is about as good as another where a leguminous roughage is part of the ration. Leguminous roughage is necessary to economical and successful feeding of dairy cattle. Since one protein is about as good as another pound for pound in making up the dairy ration, the cost of the protein is the principal factor to be considered. Alfalfa or vetch and oat hay with silage fed with rolled or ground barley, wheat bran and coconut meal would make a very satisfactory ration. Such a ration is one that the practical dairyman could feed with profit.

"Only one-half enough salt is fed in the United States to dairy cattle." "Salt should be mixed in the mill-feed ration at the rate of one-half to one pound for each one hundred pounds of concentrate or grain mixture. Allow cows additional salt, where they can get it at will."

Calcium or lime is an essential part of the bones and other parts of the body. Milk is rich in it. It is the element most liable to be deficient in the ration. Phosphorus is not as liable to be missing as lime, but when lime is missing, phosphorus is also liable to be missing.

Where alfalfa hay or other legume hay is fed in the ration and the cows get a mill-feed or concentrate ration in which twenty pounds per hundred is composed of wheat bran, or mill-run, or cottonseed meal or linseed meal, the cows get sufficient minerals. If the roughage part of the ration consists of a cereal hay such as oats hay or a similar hay, then the cows need to have added to their concentrate ration three to four pounds of ground shell, steamed bone meal, bone black or ground limestone. In addition, it would be well to give the cows a mixture of one-half salt and one-half of one of these minerals in boxes in the pasture where they can get it at liberty. Cows will make best use of minerals when they get them on green feed and when they are dry. In addition, vitamin D which is in sunlight and green feeds is necessary to the most efficient assimilation of minerals.

In feeding minerals it makes no difference, according to the foremost authorities in the United States, whether those minerals are of inorganic or organic origin. All organic minerals were inorganic before becoming a part of plant or animal bodies and organic minerals when coming in contact with the digestive fluids are again turned into organic minerals.

Professor E. B. Hart of the University of Wisconsin in commenting upon this question says:

"A compound of calcium and protein, such, for example, as casein of milk, is converted into organic calcium chloride as soon as it reaches the stomach; and consequently the calcium becomes inorganic, but nevertheless is utilized. The same is true of the other elements in minerals. We have fed animals for years whose only source of mineral material has been from salt bottles—all of it in inorganic form and with complete success. Any animal, the chicken, sheep, pig or cow, will use the calcium of limestone or marl or bone meal just as well as it will use the calcium combined with casein in milk."

The feeder of dairy cattle to-day has heard a great deal about vitamins and may be more or less at sea regarding their value and necessity in the dairy ration. Some of them are important factors in properly feeding dairy cattle to-day.

Vitamin "A" is fat soluble, that is, it is found in some fats and oils. Green feeds are rich in it. It is also found in butter-

fat, whole milk and codliver oil; corn silage and other green silages undoubtedly contain it. This vitamin is especially essential in the feeding of young animals. It promotes growth. It is also indispensable in maintaining mature animals. The grains, except yellow corn, are low in vitamin "A." Yellow coloring matter in feeds generally is not associated with vitamin "A." From this you will see that vitamin "A" is especially essential in feeding young stock and is of importance in feeding older stock.

Vitamin "B," known as the water soluble vitamin, prevents a disease of human beings called beri-beri. Lack of it in the food of humans causes this disease. All roughages contain plenty of it. It is not important in feeding livestock.

Vitamin "C" is the anti-scorbutic vitamin. It prevents scurvy. It is found in most green feeds and citrus fruits. It is of no importance in feeding livestock.

Vitamin "D" is the anti-rachitic vitamin. Without it animals get rickets, a bone disease. Vitamin "D" is important in stock feeding as it is necessary to the assimilation or use by the body of minerals. Stock get it from direct sunlight and from properly cured hay which has not lost its color. Hay should be put up before it is bleached out. Hay increases in vitamin "D" for a short time after being cut, but loses this essential vitamin again when it is exposed to the sun long enough to lose its color.

Vitamin "D" is also present in codliver oil, and the oils of the livers of other fishes. Young animals need it, especially young and growing chickens.

Vitamin "X" seems to be necessary for the successful reproduction of animals. It is found in green feed, bran and to a limited extent in milk fat. It is not important in animal feeding.

In summarizing, first, see that your dairy cattle get all the salt they need. Second, if they are not getting a leguminous roughage see that they get three to four pounds of ground shell, steamed bone meal, bone black or ground limestone to each one hundred pounds of concentrates fed them, of which at least twenty pounds is composed of wheat bran, wheat middlings or cottonseed or linseed meal. Put boxes in the pasture with a mixture composed of one-half salt and one-half of one of these minerals. See that the hay you feed is a good, green color and is not bleached out. If you will do this, your stock will be well fed; otherwise, their ration will be deficient.—*Pacific Dairy Review*.

KNOX TO JUDGE

Harry Mason Knox, well-known judge and former Holstein breeder, was chosen to place the awards at the Gouverneur Fair which is scheduled to be held at Gouverneur, N. Y., August 18th-21st. This fair is probably second in the state to the New York State Fair in amount of awards and number of classes. No prizes are given unless the animals are accompanied by certificates of registration and tuberculin tested; in fact, untested cattle are not allowed on the grounds.

Mr. Knox places the awards on all the dairy animals as well as in the black and white classes. One of the attractions in the cattle department will be a show herd from the famous Walhalla Herd of Brown Swiss. There are few Brown Swiss cattle exhibited in New York State to say nothing of those of Walhalla quality.

ROBENS TALKS TO BREEDERS

A Holstein tour was organized by the Steuben County Farm Bureau for the purpose of getting the breeders of the county better acquainted with one another and bringing them together for consideration of their common problems. The herds inspected were those of D. M. White, Harry Lake and Ed. Heimaman of Bath and Murray Barnes, of Avoca, N. Y.

At the Lake farm the principal speaker was W. D. Robens of Poland, N. Y., who told how he had built up his herd which at

the present time consists of 160 animals. He started in 1898 by purchasing three young heifers for \$300. This was considered a large price at the time and many of his neighbors thought he was wasting his money and predicted his failure. He said that experience had taught him that it was economical to raise young stock to be big, strong, vigorous animals and that records of production are essential to good breeding operations. Much of his success was, he believed, due to his herdsires which had always been the best he could obtain.

Commenting on the dairy situation, Mr. Robens expressed the thought that the future looks even brighter than the present, as there are no large accumulations of butter and cheese in storage and the demand for fluid milk is constantly increasing.

KEEPING HAEGER BUSY

Bob Haeger expects to be kept busy this fall. The week of August 19th, he will judge at South Bend, Indiana, and also at the Green County Fair at Monroe, Wis. The following week he will award the ribbons at the Central States Exposition at Aurora, Ill., and the week after at the Ohio State Fair, held at Columbus and the Erie County Fair at Hamburg, N. Y., a little known fair, where for many years there have been high-class cattle exhibits. Then comes the Michigan State Fair and the Maryland State Fair, which as usual is held at Timonium. At both these events there are sure to be high-class entries and a lot of them. Then, September 15th, Mr. Haeger places the ribbons at the New York State Fair. The following week he is at Crown Point, Ind., and September 29th will place the awards at the Tri-State Fair, Memphis, Tenn., finishing with the York County Fair at York, Pa., where he has officiated for several years and where he usually is called on to judge a number of breeds.

Instead of enjoying a blissful vacation this summer, Mr. Haeger has been kept busy at home. He is chairman of the road and bridge committee of McHenry County and there are a lot of concrete roads being built around this county at the present time. Bob believes that the chairmanship of the committee is not an honorary office and it has kept him on the jump all summer to keep things moving.

IN NICOLLET COUNTY

It is estimated that nearly 2,000 attended the annual picnic of the Nicollet County Holstein Breeders' Association held near St. Peter, Minnesota, July 26th. Judging contests were staged, Henry Jahring, Jr., of Cleveland, being first in the adult competition, George Quist of LaFayette, second, and L. A. Tostenson of New Sweden, third. The junior contest was won by Soren Swanson of St. Peter. The official judge was Hugo Schroeder, well-known Holstein breeder of Owatonna and the animals came from the herd of Walter H. Schmidt, president of the Nicollet County Holstein Association.

Charles F. Collisson, agricultural editor of the *Minneapolis Tribune*, spoke on diversified farming and the business side of dairying and said that the dairy cow increased community buying power.

It was announced that the average butterfat production of the cows in the Nicollet test association during the past year was 240 lb., compared with the state average of 181 lb. The highest producer gave 515 lb. butterfat, and made a profit of \$143.04 for its owner. The average for the best herd was 412 lb.

NOTED COW TAKES TRIP

Linden Clara Pasma, purebred Holstein owned by Henry Bouchard of Bucoda, Washington, although still on test, was brought by truck from the Bouchard farm to the farm of Pete Brotherson of Centralia, Washington, so that those who took in the Lewis County Dairy tour could see her. Clara has been milked four times a day for almost a year and at the time of her journey had only forty days to go to finish the year. If she produces 72 lb. butterfat in the forty days she will make over a thousand pounds of fat in a year and her milk yield will run close to 30,000 lb.

Mr. Bouchard will exhibit Clara and two of her daughters together with other members of the herd at the Southwest Washington Fair.

Mr. Brotherson had a grade herd consisting of fourteen cows

that had averaged over 400 lb. butterfat during the year. In four years time Mr. Brotherson has only missed one milking. He keeps his cows in the stable and feeds them three times a day.

SIXTH ANNUAL JEFFERSON PICNIC

Wednesday, July 22d, the sixth annual county Holstein picnic was held at the fair grounds of Jefferson, Wisconsin. The weather was fine, the attendance large and the program good.

A. J. Glover, of Fort Atkinson, pointed out the needs and possibilities of further developing the dairy industry in Jefferson County. He urged the dairymen to secure the county area test and says that more farmers should belong to cow testing associations.

Eleven calves were exhibited by members of the Holstein Calf Club. In the senior calf class Paul Ramsey of Fort Atkinson, was first, with Lucille Ramsey first in the class for junior calves. Harry Cairns was second in the senior and Howard Cairns of Fort Atkinson, also in the junior class.

Sports of various kinds were staged and a purebred Holstein calf was given away. This had been purchased by the association from the Jefferson County Farm. Attendance tickets were given and the lucky number was held by Mrs. Charles Pelican, of Hebron.

WILL MEET IN PHILADELPHIA

Official announcement has been made by the National Co-operative Milk Producers' Federation that its Ninth Annual Meeting will be held in Philadelphia, Pa., on November 23, 24 and 25, 1925.

The Inter-State Milk Producers' Association will hold its annual meeting this year on November 23d and 24th and not on the first Monday in December. This is done so that joint meetings can be held with the National Federation.

The directors of the Inter-State Association at a meeting held recently passed a resolution that the Association would pay carefare expenses of any delegate who spent two days at the annual meeting and, in addition, allow \$2.50 for one night's lodging. This applies to one delegate from each organized local with 25 members in good standing.

The sessions of the Federation and also of the Inter-State Milk Producers' Association will be held in the Benjamin Franklin Hotel.

BREMER COUNTY BREEDERS MEET

The Holstein Breeders' Association of Bremer County held a meeting at Tripoli, Iowa, late in July and elected officers for the coming year as follows:

E. J. Wylam, Sumner, president; Carl Knethe, Waverly, vice-president; C. H. Smith, Tripoli, secretary and treasurer. Fred Schmadeke, Clarksville; W. M. George, Janesville; Howard Schroeder, Waverly; Pete Schrank, Sumner, and H. Maurer, Readlyn, directors; C. H. Smith of Tripoli, director to represent Bremer County in the state association.

IDAHO BREEDERS PICNIC

The annual picnic of the Canyon County Holstein-Friesian Association was held on the Musser farm near Nampa, Idaho, July 7th. This farm is now operated by Mr. and Mrs. J. G. Lupton. There were at least one hundred in attendance. C. S. Warren of the Boise High School presided. Harry S. Wilson spoke on club work, H. A. Matheisen on bull associations, J. R. Brown who operates two co-operative creameries on co-operation and H. C. Chriswiser another creamery man touched on the relations of producers and creamery operators.

KENTUCKY STATE CLUB

The Kentucky Holstein Breeders' Club plans to show a representative Kentucky herd at the National Dairy Show and the Waterloo Dairy Cattle Congress.

The club held its annual meeting July 22d. R. M. Barker, of Carrollton, was re-elected president, Lindley Henderson of Shelbyville, re-elected vice-president and F. C. Giltner of Eminence, was elected to succeed W. D. Ashurst of Georgetown, as secretary-treasurer. There are now 23 members in the club.

A STATE SCHOOL HERD

Purebred Holsteins, Jerseys and Ayrshires are kept in the herd owned by the State School at Delhi, N. Y. In the business year which ended June 30th, this herd did not produce as much as it did the year previous owing to the fact that the number of Holstein cows had been reduced from fourteen to ten and the number of Jerseys increased from six to eight.

The cows are fed a ration consisting of 300 lb. gluten, 300 lb. bran, 100 lb. wheat middlings, 100 lb. distiller's grains and 100 lb. oil meal, together with good mixed hay and silage. A number of cows have been tested for 305 days and the test cows had beet pulp in addition to their other feed.

The largest record was made by Nuway Lohishe Korndyke, 13,079 lb. milk, 475 lb. butterfat. Lohishe has freshened again and in 161 days has produced 10,725 lb. milk, 368 lb. fat. Queen Virginia Johanna Ormsby averaged 70 lb. milk a day for two consecutive months of this year. Snow Gale Reliance, purchased at the state consignment sale last November, was milked a month and a half before her record started, yet in 203 days she is credited with 9,464 lb. milk, 344.2 lb. fat.

The Holstein herd bull is Greatest Glista Euphony. His dam produced over 32 lb. butter in seven days in the Cornell University herd and his sire's dam is the famous Glista Ernestine. The product of the school dairy for the past four years is listed below:

Year	Lb. Milk	Average Number Cows	Milk Average Per Cow
1921-22	119,153	14.3	8,332
1922-23	128,560	15.2	8,458
1923-24	153,599	15.5	9,910
1924-25	143,571	14.6	9,901

CHAMPION HEAVY WEIGHT DAIRY SIRE

It is claimed that Monarch Korndyke Lunde, No. 350339, is the largest Holstein bull living. There are several sires that are known to tip the scales at 3,000 lb. but the Monarch is said to be 25% heavier than these big fellows. He will be shown at a number of Wisconsin Fairs this fall and is expected to weigh over 4,000 lb. when he is exhibited and will be, by a long way, the largest dairy herd bull in the world. A year ago when in very thin condition he weighed 3,650 lb. and was only five years old at that time.

Monarch Korndyke Lunde was born, May 7, 1919. His sire was The Mighty Monarch, a son of King of the Pontiacs from Segis Hengerveld Fayne Johanna, 34.33 lb. butter in a week, 1,129.37 lb. butter in a year, one of the four daughters of Segis Fayne Johanna that has produced over 1,000 lb. butter in a year. The dam of Monarch Korndyke Lunde is Sadie Lynch Lunde Korndyke. She has an official seven-day record of 650.8 lb. milk, 37.17 lb. butter and has a record, made several years later, of 14,620.8 lb. milk, 676.28 lb. butter in 243 days. Her sire was

a son of King of the Pontiacs from Lunde Korndyke, a great show cow and producer while her dam was a daughter of De Kol 2d's Butter Boy 3d.

Monarch Korndyke Lunde is owned by N. J. Losselyong, of Appleton, Wis. Mr. Losselyong says that his great herdsire is six feet tall, twelve feet long and three feet wide but does not give any information as to the girth of this bovine heavyweight. However, he promises to send us a photograph to be taken at fair time.

INDIAN LAD WINS TRIP TO FAIR

A get-together banquet of farmers, manufacturers and merchants will be held during the week of the Wisconsin State Fair. John D. Jones, Jr., State Commissioner of Agriculture, is director in chief of the fair and believes that such a meeting would be of great benefit to all concerned.

As guests of the Wisconsin Manufacturer's Association, 142 children, a boy and girl from each of the 72 counties of the state will visit the fair. They won the trip by taking first honors in essay contests conducted under the auspices of the Association to develop interest in the Wisconsin products exposition which will be held at the fair. The topic of the essay was "The Relation of the Farm to Industry." Thousands of children competed and one of the winners was Wallace Wendandy of Birch, Wis., a Chippewa-Sioux Indian lad without a drop of white blood in his veins.

Cow Testing Association Reports

SILVIS HERD MAKES GREAT SHOWING

For at least three months the herd of J. H. Silvis & Son, of Greensburg, Pa., has been the leading herd in the Westmoreland Cow Testing Association. In April this herd had the leading cow and three of the first five; had first and second in both May and June; and in June the herd furnished four of the five leaders.

Forward Korndyke Veeman headed the list three months in succession. She produced 75.9 lb. fat, 1,947 lb. milk in April; 73.4 lb. fat, 2,294 lb. milk in May; and in June 84.2 lb. fat, 2,475 lb. milk or a total of 7,716 lb. milk, 233.5 lb. fat in the three months. Her average production for the ninety days was 80.5 lb. milk, 3/4 lb. butter per day.

Since March, 1923, Forward Korndyke Veeman has given birth to three daughters. One of these daughters, Silvis Farm Jewel dropped a heifer calf this spring and in May the association records show that she produced 1,789 lb. milk, 62 lb. fat, and in June, 1,666.5 lb. milk, 63.3 lb. fat. Age considered, the daughter beat her mother.

Mr. Silvis operates a milk route and the production of his dairy is sold at sixteen cents a quart. In April he changed his grain ration to the ready mixed feed, Union Grains, and attributes much of the credit for the splendid showing his herd has made to this feed. A study of the association's records show that in the Westmoreland Association there are 125 cows that produced 40 lb. fat during the month of April and that 25 of these or 20% were in the Silvis herd. The average production of these honor roll cows was 1,111 lb. milk, 42.4 lb. fat, while the average of the twenty-five from Silvis

Farm was 1,171 lb. milk, 45.1 lb. fat, and this herd furnished four of the leading ten.

During May 155 cows made the honor roll and Silvis Farm furnished 36 of them or 23.2%. Everyone of the leading ten came from this establishment and the average of the 36 was 1,374 lb. milk, 49.1 lb. fat or 11% milk and 6.5% fat above the honor roll average. The June showing is fully as remarkable. This time Silvis Farm furnished six of the leading ten highest producers. There were 126 honor cows of which 27 or 23% came from Silvis Farm. These 27 animals averaged 1,295 lb. milk, 48.5 lb. fat or 8.3% milk and 9.7% fat above the honor roll average.

CUMBERLAND COUNTY C. T. A.

During the month ending August 12, there were 238 cows tested in the Cumberland County Association reports A. A. Raudabaugh, of New Kingston, Pa. Of this number thirty exceeded 40 lb. fat and thirty-three produced over 1,200 lb. milk.

The leader is a grade Holstein owned by S. W. Zeigler and is credited with 67.5 lb. butterfat, 1,407 lb. milk. Yankee, a purebred Holstein, owned by J. H. Lear, of Carlisle, had 58.4 lb. fat, 1,328 lb. milk to her credit. A grade Guernsey was third with 53.6 lb. milk, then came two grade Holsteins each above 50 lb. fat and then the registered Holstein, Julia, owned by Ivo V. Otto, of Carlisle, with 1,922 lb. milk and exactly 50 lb. fat to her credit. Mr. Otto also owned the cow in tenth place with 46.8 lb. fat, 1,339 lb. milk. George Wilson is the owner of Fern, a registered Holstein in seventh place with 48.4 lb. fat, 1,240 lb. milk.

The Holstein herd of S. W. Zeigler

produced 10,955 lb. milk during the month with an average test of 3.6%. The majority of the herd were fresh in the spring. Mr. Zeigler is a beginner with purebred dairy cattle. W. W. Pepper only has five cows but they averaged 1,358 lb. milk, 44 lb. fat. George L. Snyder has five cows that were all fresh last February. During the test month they averaged 1,258 lb. milk, 37.6 lb. fat.

Three more members of the association signed up to have their herds tested for tuberculosis, bringing the total to eighteen of the twenty-six members. During the test month A. E. Ryder disposed of two cows and F. B. Selles got rid of one because they were unprofitable.

MARYLAND COW TESTING

Nineteen young cows owned at Java Farm, Edgewater, Md., R. L. Forrest, proprietor, averaged 13,441.4 lb. milk, 434.55 lb. fat in Maryland test work.

Purebred Holsteins owned at the Springfield State Hospital made quite a showing in the July two-day official test work. Beauty Korndyke Inka De Kol produced 178.5 lb. milk, 5.982 lb. fat and her stablemate, Howard Star Annetta Prince made 188.4 lb. milk, 5.957 lb. fat; Manor Pontiac Josephine is credited with 164.4 lb. milk, 5.209 lb. fat; and Ouida Pontiac Carolyn made 143.3 lb. milk, 4.895 lb. fat. The senior four-year-old, Eli Prilly Ordelia had to her credit 159.8 lb. milk, 5.281 lb. fat, and Kate Segis Burke Pontiac, a junior four-year-old, is credited with 111.1 lb. milk, 4.817 lb. fat.

YEARLING HEIFERS AND HEIFER CALVES

King Reliance Lockhart Veeman heads this herd. His dam holds the world's record in the Dairyman's Division with her record of 882.10 lb. butter, 15,837.7 lb. milk made as a senior four-year-old. She is also a New York State Fair prize winner.

Herd under State and Federal Supervision—Last test clean

DAN E. ANDERSON
R. D. 3. Norwich, N. Y.

LOTTIE NOW STANDS FIRST

Lottie Bristol Ormsby, a senior two-year-old owned by Sorenson Bros., of Webster, North Dakota, recently finished a year test in which she was credited with 20,894 lb. milk, 610 lb. fat. This is the highest record ever made in the state by a heifer of that age. It displaces the showing made by Ndaol Ormsby Mercedes, an Agricultural College heifer with a record of producing 463 lb. butterfat in a year.

The Sorenson Bros. are graduates of the North Dakota Agricultural College and both studied dairying at that institution.

NOW FOUR STRAIGHT

For the fourth consecutive time the Holstein herd of J. H. and E. O. Myer, of Buckeye Lake, Ohio, headed the twenty-five herds of the Licking County Testing Association for milk and butterfat production. During July this herd averaged 1,368 lb. milk, 47.7 lb. butterfat. A member of the Myer herd was the third highest producer with 73.8 lb. fat, 1,800 lb. milk. Registered Holsteins on the Daweswood Farms stood first, fourth and fifth, the leader being credited with 105.6 lb. butterfat, 2,934 lb. milk.

IOWA TESTING

There are twenty-nine herds enrolled in the Butler County Testing Association. During July 295 cows were tested with an average production of 648 lb. milk, 25.6 lb. fat. R. H. Skillen, of Greene, Ia., has the two highest producers, Queen Una Jewel, a daughter of King Segis Pontiac, is credited with 72.5 lb. fat, 1,907 lb. milk while one of her stablemates produced 70.2 lb. fat.

In the Mason City Association 343 cows were tested during July and they averaged 798 lb. milk, 29.4 lb. fat. The list is headed by a Holstein cow owned by Ralph Dunn that produced 67.4 lb. fat, 1,249 lb. milk during the month. There

were twelve cows that each produced 50 lb. or more fat while the price paid for butterfat was 47 cents.

In the Worth County Testing Association No. 1, first three places were taken by Holstein cows owned by Ed. Dickenson, of Mason City. One produced 67.3 lb. fat, another 48.3 lb. and the third 48.2 lb.

PRODUCTION INCREASING IN ST. CLAIR

Production is increasing in the St. Clair County, Michigan, cow testing association according to the report of the official tester, W. C. Gale.

The average for the association in June, 1925, was 765.3 lb. milk, 28.2 lb. butterfat. In June, 1924, the average was 722.3 lb. milk, 25.5 lb. butterfat.

The higher herd for milk production during the year was L. G. Meharg's ten grade and purebred Holsteins which averaged 10,722.2 lb. milk, 337.9 lb. fat.

The high cow for both milk and fat was owned by H. Stableford and Sons of Yale, Michigan. She is a purebred Holstein and gave 15,432.6 lb. milk, 519.1 lb. fat. Five of the ten high fat producers and all of the ten highest milk producers were black and white cows.

According to Mr. Gale's report the average value of the production per animal was \$183.26, the average cost of feed \$80.06, the returns above cost of feed \$103.19, return for each dollar expended for feed \$2.29, feed cost per each pound of butterfat 27 cents and for each 100 lb. of milk exactly \$1.00.

NEW JERSEY TEST WORK

The average cow in New Jersey is claimed to produce 5,000 lb. of milk, 196 lb. of butterfat annually and to earn her owner an income of \$60 per year above cost of feed.

In New Jersey cow testing association work last year, 154 purebred Holsteins were tested and averaged 10,450 lb. milk with an average test of 3.37 per cent.

Their average fat production was 352 lb. and their feed cost \$122.53.

There were 126 grade Holsteins. Their average production was 9,418 lb. milk, their average test 3.51 per cent, their average fat production 306 lb. and their average feed cost \$111.12.

MARYLAND COW TESTING

Millard Rice whose herd is enrolled in the Upper Montgomery County C. T. A. had the highest cow enrolled in Maryland testing work for the month of June. His purebred Holstein, Forrest, is credited with 2,208 lb. milk, 99.4 lb. fat. A purebred Holstein owned by H. H. Fraley, of Derwood, is second with 90.8 lb. fat, 1,746 lb. milk, while another cow of the Rice herd was third with 80.2 lb. fat, 1,956 lb. milk. A purebred Holstein of the Happy Hope herd was next with 79.3 lb. fat and was followed by a grade Holstein with 79.2 lb. McKendree Walker, of Gaithersburg, had a purebred with 76.3 lb. fat, 2,244 lb. milk, the Essex Farm, of Lutherville, one with 73.3 lb. fat and another with 64.3 lb. while Millard Rice had the cow in ninth place with 65.6 lb. fat.

TESTING IN MINNESOTA

Evan Williams and Son, of Lake Crystal, Minn., had the highest producing herd enrolled in Minnesota test work during the year 1924. Their 19 cows averaged 12,741 lb. milk. Wallie Anderson, of Lake Crystal, with his grade and registered herd of Holsteins averaged 13,038 lb. milk, 452.9 lb. fat. The cows in the Blue Earth County Association No. 1 averaged 8,493 lb. milk, 339.5 lb. butterfat, the highest average for the 61 associations operating in Minnesota during 1924.

Betty: "I understand some of those movie kisses last through fifty feet of film."

Nettie: "That's nothing, I've had some that lasted over a half mile of concrete paving."

JULY WORK IN DALLAS COUNTY

In Dallas County, Iowa, 308 cows were enrolled in C. T. A. work during July and averaged 673 lb. milk, 24.1 lb. fat. The average cow had a feed bill of \$5.04 to settle before she returned her owner any profit or wages for his labor. The average returns over cost of feed was \$11.49.

Charles Ball, of Boone, Iowa, had the highest producing herd. His ten grade and purebred Holsteins averaged 883 lb. milk, 30.2 lb. fat, a Brown Swiss herd was second and a Holstein herd third.

The two highest producers were grade Holsteins owned by Fillman Brothers, of Dexter, Iowa. One of their three-year-olds produced 45.5 lb. fat, 1,897 lb. milk, while a six-year-old cow made 45.54 lb. fat, 1,336 lb. milk. The herd of 18 averaged 850 lb. milk, 28.9 lb. fat.

SOUTH DAKOTA TESTING

Owing to dry weather the production of the cows enrolled in the ten South Dakota testing associations dropped during July. The June average was 26.08 lb. fat; for July it was 24.19 lb. Yet July was a month of economical production for 2,930 of the 2,961 cows on test returned a profit over and above the cost of feed. The average price received for butterfat was 40 cents, approximately 8 cents per pound more than was paid during the corresponding period of last year.

Although first place in the state went to an Ayrshire cow with 72.65 lb. fat to her credit, black and white cows made a splendid showing occupying eight of the ten leading places. A grade Holstein was second with 71.78 lb. and another was third with 71.74 lb. while a purebred owned by Guy McKibben, of Webster, was fourth with 71.17 lb. fat, 2,372 lb. milk. The Sioux Falls Penitentiary herd and the herd owned by Frank Johnson, of Hetland, were each represented in the list of the ten leaders. The ten highest herds show a similar story, first place going to a mixed herd of only five cows

that averaged 43.55 lb. fat, yet eight of the ten leading herds consisted entirely or in part of black and white cattle. Second place was taken by ten purebred and grade Holsteins owned by G. Hintermeister with an average of 38.37 lb. fat, 1,022.7 lb. milk. The Crothers herd averaged 34.86 lb. fat, 990.3 lb. milk for fifteen cows and the twenty-six milkers of the Sioux Falls Penitentiary herd averaged 30.86 lb. fat, 893.5 lb. milk.

The Watertown Association had the highest fat average, 26.33 lb. fat for 378 cows. Their milk average, however, was only 596.7 lb. while the East Kingsbury average for 220 cows was 26.09 lb. fat with a milk average of 664.4 lb.

MINNESOTA'S CHAMPION DAIRY COUNTY

Ten grade Holstein cows owned by F. G. Siewert, of Randolph, Minn., averaged 445.6 lb. butterfat in the Dakota County Test Association and was the high grade herd in the state for the year 1924. A grade Holstein owned by Kohls Brothers, of Rosemont, produced 644.4 lb. butterfat in the twelve months, the highest record reported for Minnesota. Dakota County is the home of good cattle, for a grade and purebred herd in this association led the state for the month of June with an average of 53.2 lb. of butterfat for each of the eleven cows. A grade Holstein in this herd which is owned by W. E. Carroll and Sons was high cow in the state with 84.6 lb. butterfat.

COLLEGE HERD WAS FIRST

The highest herd for milk production and for fat production in the Montgomery County Cow Testing Association during July was the purebred Holstein herd owned by Ursinus College at Collegeville, Pa. This ten-cow purebred Holstein dairy averaged 1,354 lb. milk, 41 lb. fat. The purebred Holstein herd of Wm. H. Landis, of East Greenville, was second for fat with 34 lb. while the A. K. Rothemberger Holstein herd was third for fat

with 32.7 lb. and second for milk with 977 lb.

A Landis cow was high individual with 81.3 lb. fat, 1,848 lb. milk while a Holstein owned by W. S. Farley was second with 60.1 lb. a member of the purebred Holstein herd owned by Ursinus College was third with 58.2 lb. and a stablemate was fifth with 56.5 lb.

During July twenty-five herds containing 334 cows in milk were tested. Of this number thirty-four produced more than 40 lb. fat; twelve exceeded 50 lb. while twenty-five are credited with producing 1,200 lb. or more milk. Of the thirty-four cows exceeding 40 lb. fat twenty-five were black and whites.

QUEEN OF THE COUNTY HERD

Queen, a registered Holstein, owned by the Allegheny County Home, was the top cow for June in the Allegheny County C. T. A. She is credited with a production of 64.36 lb. butterfat, 1,609 lb. milk, her average test being exactly 4%. Glass Brothers, of Bulger, Pa., had one in the honor list. She produced 55.80 lb. fat, her milk production, 1,860 lb., was the highest reported for any cow. The six highest milk producers were all registered Holsteins.

The highest herd for milk average was owned by W. C. Chamberlin whose seven registered Holsteins averaged 1,013 lb. milk; the herd of Dr. G. W. Ely consisting of eight registered Holsteins and two grades averaged 904 lb. and stood second in the list, but was first in average income above feed cost, returning their owner \$19.18 per cow. A. N. McClinton's herd which consists of two registered and twelve grade Holsteins was second with an average of \$18.09.

There are 25 herds in the association containing 399 cows that milked during July. Of this number 154 are registered Holsteins. There were 63 that each produced over 40 lb. of fat and 16 over 50 lb., while 52 animals produced 1,200 lb. or more of milk during the month, reports tester L. M. Stark.

OLDTIME HOLSTEIN RANCH

Sleepy Hollow Ranch was, twenty years ago, one of the leading Holstein establishments of the West. It is located in Marin County, California and was owned by R. M. Hotaling, who at one time was on the official board of the Holstein-Friesian Association of America. Mr. Hotaling has been dead for a number of years and his estate has been administered by the Hotaling Estate Company. The news comes from California that the ranch has been purchased by real estate dealers who will subdivide it and endeavor to make of it a residential section. For a number of years a certified dairy operated part of this ranch. This firm, the pioneer certified concern in the San Francisco milk trade, is now looking for a new home.

JOHNSON'S COW AGAIN FIRST

A record of 82.65 lb. of butterfat was made by Evline, purebred Holstein owned by Frank Johnson, of Hetland, South Dakota. Evline is enrolled in the East Kingsbury Testing Association and during July gave 2,175 lb. milk. The value of the product was \$33.08 and the cost of her feed was figured at only \$3.77, thus leaving a net income of \$29.31. The Johnson herd of 23 purebred Holsteins averaged 31.42 lb. butterfat, the highest in the association.

A PROFIT EARNER

Rube, a Holstein cow owned by H. H. Toop headed the June report of the cow testing association operated around Chilliwack, British Columbia. Test supervisor G. G. Grimes says that the cow has not received any grain but runs on pasture with a supplementary feeding of green fodder once a day. She was milked twice daily and produced 2,120 lb. of milk during the test association month, an average of 68.4 lb.

A DOZEN GOOD ONES

Twelve purebred Holsteins owned by Ed. Gerlack, of New Hampton, Iowa, headed the Chickasaw County No. 2 Cow Testing Association for July by averaging 1,277.8 lb. milk, 37.1 lb. fat. Eight purebred Holsteins owned by Johnston Brothers averaged 926.4 lb. milk and 32 lb. fat, while the association average was 682.7 lb. milk and exactly 25 lb. fat.

THREE SUCCESSIVE MONTHS

For the third consecutive month the Holstein herd of Charles F. Brittain led the Grays Harbor, Wash., Dairymen's Association. The average for the 21 cows was 1,212 lb. milk, 42.6 lb. fat. The four-year-old Clara is credited with 60.8 lb. fat, 1,737 lb. milk and an eight-year-old produced 69 lb. fat, and 1,917 lb. milk.

"Holstein milk has done wonders for me," says a grateful Wisconsin woman. "When the doctor first prescribed it, I was so weak that I was unable to even spank the baby. For six weeks I have drank two quarts of Holstein milk daily and now I am able to lick the stuffing out of my husband." "Heaven bless the Holstein cow."

MAPLE GROVE CLEVER KONINGEN GLISTA

heads our ACCREDITED heard.

His offspring inherit his type and conformation.

His sire is by a son of Glista Coreva, 34 lb. butter in 7 days.

His dam has a dandy A. R. O. record and, as a two-year-old, produced over 10,000 lb. milk in C. T. A. work averaging 4.1% fat.

Will price anything we have.

YOU ARE OFFERED

COLONEL LYONS HARTJE SEGIS

born Dec. 8, 1923.

Study his conformation, note his straight toplines and square rump.

His sire was by Colonel Joh Lyons, his dam by the same great bull and from a daughter of King Hengerveld Hartje that produced 508 lb. butter, 11,575 lb. milk in a year of C. T. A. work.

We have been using this bull in our Accredited Herd. You know he must be good.

W. A. WITHERS
Elizabethtown, Lancaster Co., Pa.

WHO DOES THE MILKING?

When a purebred Holstein cow arrived at the Portacomia piers at Tacoma, Wash., on July 30th, she became a center of interest but some of the dock officials began to worry about who should milk her as the shipping instructions said she was to be milked and no one seemed to be in charge of her while a search among the pier employes failed to find anyone who would own up to having come from a dairy farm.

The cow was shipped from Owatonna, Minn., and was to travel on the Africa Maru en route to Japan where she will make her home on the Experimental Farm owned by the Japanese Government. Our information does not tell whether the dock authorities found a milker or not but we presume an official bovine chambermaid was located before Bossie started on her long journey to the Land of the Rising Sun.

BUILDING THE HIGHLAND HERD

A good herd of purebred Holsteins is being built at Highland Farm near Carlisle, Pa. Will H. Miller, the proprietor, says that he has nothing to sell at the present time even though he has just headed his herd with a young bull backed by producing lines of breeding. This bull is a son of Echo Sylvia King Model and Traverse Segis Johanna Hartog 2d.

Echo Sylvia King Model has now forty-eight A. R. O. daughters tested as two- and three-year-olds and fifteen of these have made records ranging from 20 lb. to 32.33 lb. butter in seven days. His sire is Champion Echo Sylvia Pontiac, whose daughters and granddaughters have made remarkable records while his dam, Belle Model Pietje, has a record made as a four-year-old of 36.13 lb. butter in a week and three different years, at three, four and five years old, has made seven-day records exceeding 33 lb. Her dam, Belle Model Johanna 2d, has twice made over 37 lb. butter in seven days while her sire, Prince Hengerveld Pietje, was from the highest record daughter of Hengerveld De Kol.

As a four-year-old, Traverse Segis Johanna Hartog 2d, produced 28.34 lb. butter in seven days. Her dam with 32.92 lb. butter in seven days, is a daughter of Traverse Inka Johanna, 33.27 lb. butter, 736.4 lb. milk in a week and she is from Traverse Princess Inka, 29.71 lb. butter in seven days, 940.8 lb. butter in a year.

Some great averages can be obtained by studying the tabulated pedigree of Mr. Miller's herdsire. The seven-day records of the seven nearest dams of this bull average 34.10 lb. butter and the average butterfat test was 4.38%. His ten nearest dams have seven-day records that average 34.64 lb. butter. The average butterfat test of his three nearest dams during the time they were making their records was 4.84%. All the dams in the pedigree with the exception of the dam of the bull who herself is young, have high record daughters showing that the capacity to produce has been transmitted from generation to generation so that Mr. Miller can confidently expect his new herd bull will sire producers.

LIME ROCK HERD

Lime Rock Herd is accredited, and consists of producers that pay their way. It is headed by

KING PIEBE OF YORK 7th

a grand champion show bull.

We offer cows in milk, also heifers, yearlings and calves.

IT WAS EASY TO GET IN DEBT

Mineral City is a community in Ohio with a census population of 1,032. State examiners recently reported to the State Auditor that this village is "in an almost helpless financial condition." The general fund is overdrawn and the village owes \$1,225 for street lights while the cost of lighting the streets amounts to more than the taxable revenue for general purposes. A bond issue totaling \$5,000 was due April 1 but there was no money to pay it.

Progress is a great thing but boosting may be overdone. It is possible to bankrupt a town. The private property of citizen tax payers can be taken to pay such debts.

Devol, Oklahoma, has a population of 800. It is in an oil district. When the oil boom was at its height, this village "capitalized its expectations" and issued bonds for school buildings, paved streets, any other improvements including parks. Now the entire taxable value of the town is \$144,000 but the debt is \$185,000. The bonds given are a mortgage on all the property in the town. The people of the town want to repudiate these bonds and have already defaulted in the interest payments. They will attempt to prove in court that taxation heavy enough to provide enough funds to pay the running town expenses, the interest and the sinking fund on the bonds would be confiscation of their property. We would not advise anyone to invest any money just now in Devol real estate.

WILL FOUND HERD IN JAPAN

A wealthy Japanese named Rioji Oda who is traveling over the United States with his wife, is visiting a number of breeding establishments, examining the cattle and trying to learn something of the details of management. Mr. Oda has a thousand-acre dairy farm near Tokio. He is president of the Hokaido Sulphur Co. of Tokio, president of the Far East Condensed Milk Co., and he is financially interested in a number of gold, silver and copper mines. He is a graduate of an American business college. He will go from this country to Australia on a leisurely tour and is not expected to return to his own home until some time next year.

Terry, riding with Tim in the latter's motor car, began to worry as they approached a grade crossing neck and neck with an express train.

"Wouldn't ye better stop and let her go by first?" he asked.

"Aw, what's the matter wid ye?" demanded Tim. "Can't ye see the sign tellin' the ingineer to look out for th' cars."

FOR SALE—Eight Registered Holsteins, two years, coming three. Bred to freshen in the fall and early winter. Eleven yearlings coming two, freshen in the spring. Federal Supervision.

HAMMOND'S "CATTLE COMFORT"

"CATTLE COMFORT"

The application of **CATTLE COMFORT** will relieve Cows, Mules, Horses, Dogs and Fowls from the noxious effects of Horn Flies, Gnats and Mosquitoes, and is healing to any sore. Applied to the perches in the henery it prevents the spread of lice; put on the heads of fowls it destroys head lice; applied to mangy dogs it affords relief and effects a cure.

Directions—CATTLE COMFORT may be diluted half and half with kerosene as a matter of economy. Rub lightly over exposed parts, as mentioned hereon, with a cloth, sponge or atomizer.

Sold by Merchants and Seed Dealers
HAMMOND'S PAINT AND SLUG SHOT WORKS, Beacon, New York

Herd under the Accredited Plan

TAKE ONE OR BOTH

Heifer: Born Jan. 15, 1923.

Dam: Maple Grove Woodcrest Lady Glista, a big producer and choice individual.

A good straight animal, in color more white than black. She was bred March 25, 1925 to our 34-lb. sire, Clever Model Glista. Price, \$125.

MAPLE GROVE UNEEDA CLEVER GLISTA

Dam: Maple Grove Clever Coreva Glista, 349.2 lb. milk 15.05 lb. butter in 7 days as a two-year-old, a daughter of our 34-lb. bull, Clever Model Glista. Calf born April 3, 1925, in color is more black than white, well grown, with good top lines, an excellent calf. Price, \$85.

These animals were sired by Maple Grove Ybma Glista, whose dam produced 27 lb. butter, 641.3 lb. milk in this herd in 7 days.

Herd Accredited.

MAPLE GROVE STOCK FARM

F. JONES, MGR.
Centerville, Pa. R. D. 4.

TREATMENT THAT PAYS

Maple Grove Stock Farm reports a good demand for well bred young bulls of the Glista strain. K. D. Henry, of Venango Borough, Pa., took a very handsome young fellow sired by Clever Model Glista and from Maple Grove Pontiac Genevieve, 471.9 lb. milk, 20 lb. butter in seven days, a daughter of King Pontiac Jupiter and the A. R. O. cow, Maple Grove Mercedes Genevieve.

A few days later George Dingle, Union City, Pa., took another son of Clever Model Glista from Maple Grove Coreva Glista. She has a creditable official record made under farmer conditions, is a daughter of Model Daniel Glista while her dam, Hillview Retta Veronica is one of the foundation cows of the Maple Grove herd and has seven sons and seven daughters. Among her descendants are some of the best producers in the Maple Grove Stock Farm herd.

Clever Model Glista, the sire of these young bulls, was from the well known Cornell University cow, Glista Coreva, 34.08 lb. butter, 563.1 lb. milk in seven days with an average test of 4.6% fat. Tested again the following year she is credited with 31.21 lb. butter, 581.8 lb. milk in a week and an average fat test of 4.29%.

Maple Grove Stock Farm is located at Centerville, Crawford County, Pa. This establishment has been on the accredited list for a number of years; in fact, Crawford County has recently been made a modified accredited area owing to the freedom from disease of its cattle.

A short time ago, the BREEDER AND DAIRYMAN mentioned that R. W. Agan, of Hoosick Falls, N. Y., had purchased a number of heifers and a young bull from Maple Grove. Upon receiving them, he wrote Frank Jones, manager of the farm, a very appreciative letter in which he says "the heifers are exceedingly well grown for their ages and show the results of good care." In regard to the bull which went in the shipment, he says:

"The bull is a dandy and I could not have chosen one that would have pleased me any better. You must have given him special feed and attention. He is admired by all my neighbors, one in particular just gave \$100 for one somewhat older, a third smaller and of about the same blood and to use his expression 'a sorry looking calf' as compared with mine."

Miss Mary C. Gosch, of Rochelle, Ill., purchased a couple of heifers from Maple Grove Farm and in a letter written a few days after the animals arrived she said:

"The calves arrived in good shape. I am well pleased with them both. They are better grown and more developed than I expected. They both were very homesick. They are getting over it now and eat good and play."

"Satisfied customers make the best advertisements" is an old business adage. It is little wonder that the Joneses experience a good demand for their surplus stock when their customers write as do Miss Gosch and Mr. Agan.

Heartily Recommended

To Whom It May Concern:

We held a dispersal sale on July 2, 1924, at which Mr. Glenn R. Mead of East Aurora, New York, officiated as auctioneer. We were well pleased with him, both as to prices received for the cattle and the price we paid for his services.

To anyone wishing to sell Holstein cattle at auction, we would heartily recommend Mr. Mead.

Yours respectfully,

*W. M. Law & Son,

FROM BONNYMEADS FARM

On March 25, of this year, the Holstein herd owned by the Bonnymead Farm was dispersed at Harrisburg, Pa. The milking dairy, heifers and even the herd bulls were sold, but a few calves, three or four months old, were not put into the sale and were not even catalogued. The death of one of the heirs of the estate was the announced reason for the sale but it was well known to residents of Harrisburg and vicinity that the part of the farm on which the barn stood had been donated for an orphan's home. This will be known as the Children's Home of Harrisburg, and work has already been started to set the grounds in order and remodel the buildings so that they will be adapted for their new purpose.

The months between the sale and the present have been occupied by the drawing up of plans, visits to lawyers and bankers and consultations with architects but the workmen are already on the grounds.

It is expected to keep from sixty to seventy orphans at the new children's home. These will not be kept in a big dormitory but in cottages, scattered around the grounds. Swatara Township's school directors have leased a corner of Bonnymead Farm and will erect a school which will not only provide for the sixty newcomers from the children's home but also relieve the present township school which is now filled to capacity. The new children's home will be under the patronage of a number of Harrisburg people prominent in society and philanthropic enterprises.

SWEDISH IMMIGRANT'S SUCCESS

In 1889 Peter Halvorson came from Sweden to this country first working in lumber camps of northern Minnesota and then as a farm hand. After a while he bought a quarter section of prairie land near Kerkhoven, Minn., paying \$10.50 an acre and later on purchased another quarter section for \$35.00 an acre. First of all he grew grain then when the yields began to lessen he raised Herefords but lost a number from tuberculosis. Six years ago he purchased a Holstein herd. Six of these animals were purebreds and he now has a herd of 30 headed by the bull Ormsby Korndyke Arby.

Peter has five children. Two boys and two girls are at home while his oldest son, Roy, has rented an adjoining farm on which he has 16 head of Holsteins. Roy graduated from the Agricultural School at Norris in 1919. He is now married and has two children, a boy and a girl. Roy won state championship in the junior corn club project in 1914. His brother, Vernon, has also been interested in corn club work and has earned three trips to the Minnesota State Fair by winning first prizes at the county fair.

There are probably just as poor fish in the sea as some married women have caught.

GET THE SCN OF Hillside Rhododendron

35.15 lb. butter, 543.8 lb. milk in 7 days, 2,759.7 lb. milk, 147.95 lb. butter in 30 days, a show cow of magnificent proportions.

He was sired by Charlevoix Rookwood Prince, son of Sir Pietertje Ormsby Mercedes 40th and Rookwood Zwellie Riblet, 728.3 lb. milk, 33.93 lb. butter in a week; 3,019.6 lb. milk, 135.83 lb. butter in 30 days. She and her dam both have good yearly records.

This bull was born April 26, 1925, is right in every way, about 7/10 black, well marked. His dam and sire's dam average 34.54 lb. butter, 636 lb. milk in 7 days; 141.89 lb. butter, 2,889.6 lb. milk for 30 days.

Never had T. B. or Abortion.

FOR SALE—Registered Holsteins. From heifer calves to fresh cows. All sired by or bred to grandson of King of the Pontiacs. OLIVER F. ELLSWORTH, Dallas, Pa.

JUDGES DISAGREE

That all judges do not think alike is the experience of Wm. H. Landis, of East Greenville, Pa. In the 1924 fair circuit, the Landis herd made an exhibit. Part of their fair herd consisted of three daughters of one bull, the first three daughters of this bull to freshen. At the Allentown Fair all three were in the prize list and the group won first prize in the "get of sire" class. At Quaker-town, they were placed second in the "get of sire" class and one of the two heifers that did not get first at Allentown was given the blue ribbon. At Doylestown the blue ribbon was given to the heifer which had not previously been given a blue ribbon and the group was placed second over all breeds for "get of sire," thus the three sisters each won a first prize under three different judges. Each of the judges commented upon the uniformity of the sisters and said it was hard to tell which one was the best.

TO REINFORCE THE LAW

Rural thieving has prevailed to such an extent around Salem, Ohio, that the farmers are organizing the Eastern Ohio Rural Protective Association and the committee in charge plan to offer a reward for the arrest and conviction of guilty parties. The Ohio state law permits the forming of organizations for rural protection and it is planned to incorporate under this law.

The thieves operate with a truck and have taken chickens from many farms, in several cases taking a hundred from a single flock; hams and lard, automobile tires and blankets have also been stolen and August 3, a Salem man was waylaid and robbed of all the money he had with him.

KEEP THIS IN MIND

On the charge of employing a boy only fifteen years old to help deliver milk Harry Burdman, of Youngstown, Ohio, was arrested August 4. Particulars are lacking but to many of us older people employing a boy fifteen years old isn't a very serious offense. There must be many others of our opinion or else there would not have been such an emphatic repudiation of the proposed constitutional amendment which, if adopted, would have made it possible for the Federal government to absolutely forbid anyone giving employment of any kind to anyone less than eighteen years old.

SHORTHORN ASSOCIATION REDUCES FEES

It is announced that the fees for registering males in the Herd Book of the American Shorthorn Breeders' Association have been reduced by the directors. Shorthorn bulls under twelve months of age may be registered for a fee of \$1.25 while the registry fee for Polled Shorthorn bulls is \$1.50.

Make hay while the sun shines. Then, if it rains pitchforks, you know what to do with them.

In C. T. A. Work

a member of this herd produced 12,321 lb. milk, 391 lb. FAT in 8 months.

22 sisters of our senior herdsire averaged in year test over 20,000 lb. milk and 900 lb. butter.

A Sister of our junior herdsire made a World's Record in the 10 months division.

The Herd is under State and Federal Supervision and passed a CLEAN TEST.

Will sell Cows, Heifers or Calves.

BOX 110, HARRISBURG, PA.

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

DE KOL KLASSJE HILLSIDE

the cow in the foreground while enrolled in C. T. A. work, produced 861 lb. butter and more than 20,000 lb. milk in ten months. Then, freshening again before the year closed, she was entered in semi-official test and in 305 days made a record of 858.47 lb. butter, 20,447.5 lb. milk.

She and her stablemates are bred to

TRAVERSE ECHO SYLVIA KING

whose dam produced 33.27 lb. butter, 736.4 lb. milk in 7 days and averaged 102 lb. daily for 30 days. Judged by her work and that of her SIX great daughters, she is one of the greatest cows of the breed.

Let me price you a good bull or a few good females from this Federally Accredited Herd.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

Maple Grove Stock Farm

A Holstein Breeding Establishment in an Accredited Area

ON November 10, 1908, Charles Jones purchased two pure-bred Holstein heifers and a young bull in order to place them on Maple Grove Stock Farm at Centerville, Crawford County, Pa., which was owned by him and managed by his brother, Frank Jones. The animals were purchased from H. L. Bronson then one of the leading breeders of New York State, and consisted of Star Farm Mercedes Elgin Cornucopia No. 54186 and the heifers Clear View Marjorie Spofford and Hillview Retta Veronica.

The bull was from Elgin Belle 8th's De Kol 3d, a cow noted for both individuality and production, and was sired by Aaggie Cornucopia Pauline Count, a son of the former world's champion, Aaggie Cornucopia Pauline, 34.32 lb. butter in seven days as a four-year-old, world's record not only in her class but over all ages and breeds at time of making. This great cow made world's records for seven and thirty days butter production both as a senior three-year-old and as a senior four-year-old and these records headed their respective classes for several years. She is the foundation animal of a family noted for production and transmitting ability and she transmitted her own good qualities both through her sons and daughters.

Hillview Retta Veronica No. 109072 was a daughter of Sir Clintonia Gorter and Fairview Retta Veronica. She was not quite two years old when she was purchased and she has dropped fourteen calves at this establishment, seven sons and seven daughters. In her prime she was a high class individual and her offspring have inherited this desirable trait, one of them winning

HILLVIEW RETTA VERONICA AND CALF
This grand old cow has dropped seven sons and seven daughters in this herd.

done at this farm was with this cow and when the test closed she was credited with an official seven-day record of 528 lb. milk, 18.70 lb. butter. Hillview Retta Veronica also made a creditable official record. Before Mr. Bronson could ship the stock, foot and mouth disease broke out in this country and it was at least six months before the quarantine was lifted and the cattle could be shipped but Mr. Jones informs us that the stock gave good satisfaction.

In the early part of 1910 Mr. Jones purchased three females from Powell Brothers of Shadeland, Pa. These were Shadeland Genevieve No. 94362, a daughter of Shadeland Bloom 4th's Boon; Shadeland Glorinda No. 94366, a daughter of Shadeland Pietertje Wayne De Kol; and Shadeland Beth of Celeste 3d's Gem, a daughter of Shadeland Boon's Czar. A number of

members of the present Maple Grove herd are descendants of these animals and Shadeland Beth of Celeste 3d's Gem at the advanced age of sixteen years, when enrolled in cow testing association work, produced 1,011 lb. milk, 50 lb. butter in thirty days.

Star Farm Mercedes Elgin Cornucopia sired a number of good daughters.

STAR FARM MERCEDES ELGIN CORNUCOPIA
The first Maple Grove herdsire.

MAPLE GROVE SPOFFORD PRINCESS
27 lb. butter, 641.3 lb. milk in seven days. Bred, developed and tested at Maple Grove Stock Farm.

ters. One of his daughters from Clear View Marjorie Spofford was named Maple Grove Spofford Princess. Tested as an eight-year-old cow she made an official record of 542.3 lb. milk, 25.04 lb. butter in seven days. One year and one day elapsed between the date of freshening preliminary to making this record and the time she freshened again. Then she was again put in official test and in seven days produced 641.3 lb. milk and exactly 27 lb. butter, the largest record ever made on this farm. One of her sons is now in service in this establishment.

King Pontiac Jupiter was the second herd bull and was purchased in 1917. He was a son of King of the Pontiacs and Pontiac Hesseltje Hengerveld, one of the many good daughters of Hengerveld De Kol. This combination of blood lines was greatly in favor at that time; a number of good sires and big producing cows had similar blood lines as King Pontiac Jupiter. One of these was K. P. Metis, 654.2 lb. milk, 31.742 lb. butter in seven days; 2,743.9 lb. milk, 130.59 lb. butter in thirty days as a junior three-year-old, world's record at time of making. Some who are well acquainted with the daughters of King of the Pontiacs believe that this was the greatest daughter of that noted sire. When she made her three-year-old record, she was tested six weeks and it is reported that every week she was in test she made better than 30 lb. butter. With a number of other good animals she broke into an orchard and her life as well as those of several of her companions were lost in consequence. Like many of his three-fourths brothers and sisters, King Pontiac Jupiter was a high class individual. He was exhibited at local fairs in Crawford County for five different years and was unbeaten. When thirteen years old, he was sold for beef as there were so many of his daughters and granddaughters in the herd that it was no longer profitable to keep him for service while other breeders did not desire to purchase so old a sire.

KING PONTIAC JUPITER
The second Maple Grove herdsire. Exhibited five years without a defeat.

He has a large number of daughters in this herd, some of which have made very creditable records. His daughters in the local cow testing association have made good records for both production and profit.

Model Daniel Glista, the third sire, although of Cornell University breeding, was obtained from the veteran New York State Holstein breeder, E. A. Powell. He was sired by Model King Segis Konigen, a prize winner at the New York State Fair and was from Glista Dinah, 556.4 lb. milk, 25.70 lb. butter in seven days as a seven-year-old; 16,138.5 lb. milk, 795.93 lb. butter in a year in the Cornell University herd. As an eleven-year-old cow, she was again put in test in which she produced 502.7 lb.

milk, 31.26 lb. butter in a week. She was a daughter of Woodcrest Pietje Ormsby and Glista Coreva, of whom we shall have more to say. The Joneses like the Glista blood so purchased the Cornell University bred bull Clever Model Glista. As he was by Model King Segis Konigen from Glista Coreva, he was very closely related to Model Daniel Glista, in fact the pedigrees of these two bulls show 75% the same blood lines. Glista Coreva was for a long time the second highest record cow in the Cornell University herd being surpassed only by her near relative Glista Ernestine. Glista Coreva was tested as a junior four-year-old and produced 25.50 lb. butter in a week. As a six-year-old she was again tested and this time made records of 593.1 lb. milk, 34.08 lb. butter in seven days, 2,488.2 lb. milk, 138.48 lb. butter in thirty days. She averaged practically 83 lb. milk a day with an average fat test of 4.6%. Tested again the following year, she is credited with 581.8 lb. milk, 31.21 lb. butter in a week, her average test being 4.29% fat. She has a ten months record of 13,310.5 lb. milk, 607.30 lb. butter.

Assisting this bull in the herd is Maple Grove Ybma Glista, only a few months younger and his near relative. He is a home product being a son of Model Daniel Glista and Maple Grove Spofford Princess. His

offspring compare very favorably with those of his stablemate.

While Maple Grove Spofford Princess made the highest official butter record of any of the cows at this establishment, she was not the largest milk producer. Her half sister, Maple Grove Mercedes Glorinda, has an official seven-day record of 672.6 lb. milk, 25.18 lb. butter and produced 100.3 lb. milk in a day while on official work.

The four older sires that have been in service at this establishment have A. R. O. daughters and the Ybma bull undoubtedly will have in the near future although, as the Joneses have to personally do much of the work necessary in their dairy and on the farm, they have very little time to spare for official testing.

The Maple Grove herd, however, has been enrolled in the Meadville Cow Testing Association. Maple Grove Spofford Princess in one year produced 17,616 lb. milk, 592.5 lb. fat. When it is considered that this record was made under farmer conditions and that she was milked twice a day nearly all the time, it can be readily seen why one of her sons was selected to be one of the herdsires. Maple Grove Mercedes Glorinda produced 14,955 lb. milk, 458.6 lb. butterfat in

HAYING TIME AT MAPLE GROVE STOCK FARM
LaVerne Jones on the load, Manager Frank Jones pitching on.

a cow testing association year. An idea of the producing ability of this herd can be gleaned from the showing made in the Meadville Cow Testing Association for the association year from April 1919 to April 1920. There were twenty-two animals of varying ages enrolled. Some were run the entire year; some for only a portion of a year; yet the entire twenty-two head produced 227,216 lb. milk, an average of 10,782 lb.

The herd has always had a splendid reputation for health as well as producing capacity, has passed several clean tests and for a long time has been on the accredited list. This establishment was one of the pioneers in tuberculosis eradication work in Crawford County, a territory which is now a modified accredited area. To become a modified accredited area less than one-half of one per cent of the cattle in the area may react to the tuberculin test or to put it the other way around 99.5% must pass a clean test as administered by representatives of the state and federal departments of agriculture.

Charles Jones, the real owner of the farm was born in Bristol, England and in 1871, when nine years old, came to the United States with his parents. There were four children in the family at that time. The

family first settled in Cleveland, Ohio and from there moved to Riceville, Pa., where Frank Jones, the manager of the farm, first saw the light of day. After about a year or more in Riceville, the Joneses bought a small tract of land, heavily timbered, close to what is now known as Maple Grove Stock Farm. The senior Mr. Jones was a cooper by trade and besides his farm work, worked at his trade in Titusville and Union City, Pa. When Charles was old enough he learned

MAPLE GROVE HOLSTEINS ARE WELL MARKED

the trade from his father and followed up that kind of work besides working on the home farm, where he gained considerable farm experience until he finally drifted away from farming and followed his trade entirely.

What followed is told in his own words:

"In 1888 I located in Chicago and took charge of a branch oil house for the Genesee Oil Company of Buffalo, N. Y., which position I gave up after a year's service with that company and started to work again in the cooperage department of the Standard Oil Company, having previously worked for this company in several cities in the East. In 1899 with two other parties we organized what is known as the Calumet Cooperage Company—dealers in second hand cooperage.

"Our business proved very successful and, like a great many others that have drifted away from country life, I thought I would like to be the owner of a good farm, well stocked and be in a position to help the farmers of the surrounding vicinity in which Maple Grove Stock Farm is located by introducing registered Holstein - Friesian cattle—as it was my intention to stock it with Holsteins.

MAPLE GROVE YBMA GLISTA
One of the herdsires now in service. His dam is the greatest butterfat producer developed in Maple Grove herd.

"While the business of breeding purebred stock has not at all times been entirely a great money-making proposition, we have the satisfaction of knowing that to-day Crawford County is forging ahead in the dairy business and a leader for registered Holsteins; also that a great many dairymen got their foundation stock at our farm and that is worth fully as much as profit.

"I attended the first dairy show held in Chicago and from that time until I bought the farm I studied the work of different dairy breeds and concluded that

the Holsteins were the most profitable as they were good feeders and of large size or capacity, which goes with heavy production. They can turn almost any kind of roughage into profitable production—both in milk and calves. They are, as a general rule, easy to handle, always contented and gentle.

"My brother Frank sold his own farm to manage Maple Grove Stock Farm and he has had his hands full—with building and bringing up the farm to its present state of production—as it was practically run-down land. I consider him to be one of the best stockmen around that part of the country and the greatest part of the credit for the success of the herd is due to him and to his family. All work in relation to registration and transferring of stock is attended to by me and I make every effort when sales are made to turn over certificates to buyers without any unnecessary delay and have yet to receive the first word of complaint in any sale made."

Frank Jones, manager of Maple Grove Stock Farm, has five daughters and one son, LaVerne, who works at home. One of his daughters is married to Merle Ongley who lives a couple of miles away and owns West View Herd which is also an accredited Holstein breeding establishment.

Maple Grove Stock Farm contains 300 acres. The Jones family have erected all the barns, buildings, etc., now on the place with the exception of the house and personally did a considerable portion of the work connected with planning the buildings. The barn itself is 122 feet long with a width of 40 feet. The large silos form part of the building, being built in. The floors in the barn and mixing room, feed room and pens are concrete; the stanchions are metal; and there are plenty of pens for bulls and young stock.

Besides Holstein cattle, the Jones' breed Percheron horses and Oxford sheep which they have exhibited with considerable degree of success at fairs in the neighborhood. They are believers in improved farm machinery of all kinds and use a manure spreader and a tractor while the cows are generally milked by milking machines.

A lot of work has been done in the way of improving the farm and the heavy hay crop being harvested when the representatives of the BREEDER AND DAIRYMAN visited the place indicate that it is in a high state of fertility. One of the pictures taken at the time shows LaVerne Jones loading a hay wagon with his father, Frank, pitching on, evidence enough that this is a working farmers' establishment.

A Grand Old Cow

ACTUAL records kept by the department of dairy husbandry at the South Dakota State College show that Leda Cornucopia, a Holstein cow bred and owned by the State College dairy department, has produced during the 17 years of her life, 174,795.7 lb. milk and 5,744.99 lb. butterfat. This is over 86 tons and is the equivalent of four freight car loads of milk.

It would take a three-ton truck to haul to market the butter which Leda has produced during her lifetime.

Leda is still in the college dairy herd and doing well for her age. At the present time she is still milking 13 quarts per day. If she continues for another milking

period, she will crowd the world's long-time production record for both milk and butterfat. Leda also has two official records that are higher than the private herd records kept by the college for the same time, hence the college records are not giving her any advantage.

Several of Leda's lactation periods have continued for more than 12 months and the eighth period was for nearly two years. Here is the actual records kept for each milking period.

	Lb. milk	Lb. butterfat
1.	14,950.1	500.59
2.	13,199.0	471.88
3.	13,105.0	432.5
4.	23,175.4	783.83
5.	16,181.2	590.27
6.	15,591.0	575.26
7.	13,521.4	465.6
8.	30,380.0	918.44
9.	14,722.7	433.75
10.	9,921.2	286.60
11.	10,048.7	287.7
	174,795.7	5,744.99

Twin Births are Seasonal

L. J. COLE and A. Rodolfo of the University of Wisconsin have been studying the American Hereford and Aberdeen-Angus herd book records and have found that there is a tendency for more twin births to occur during the months of late summer and early fall than at any other season of the year.

The largest number of twin calves are born during the month of August. From that time there is a decline in frequency of plural births until the low point is reached in the month of March after which the number again begins to increase. The average number of twin births was 4.65 per 1,000 cows. In March the number sinks down to 3.25. It raises to 6.25 for August and there is a gradual but distinct variation in the number per month from March to August and then back again.

Abstract discussions of the theory of liberty and independence did not bring on the American Revolution, but business handicaps resulting from a selfish monopolistic British colonial policy which made it hard for the American colonist to prosper. He sowed, another reaped. It was this which gave point to the eloquence of Patrick Henry and Sam Adams. Without the pinch of adverse economic circumstances to aid their call to battle, they would have earned nothing but a prison cell or worse for their denunciations of the tyranny of a British king.

So on through history. The economic factor is the mainspring of action. It was so with the slavery question. So also with the prohibition question. And so it is with the farm problem of to-day.

Secretary of Agriculture Jardine, is responsible for the statement that the business transacted by cooperative buying and selling organizations will amount to \$2,500,000,000 during 1925 or approximately one-fifth of the total agricultural business.

Don't Overfeed Protein

By George Leslie

NOW that September is here, it will be no time at all before the cows are on winter rations, and the feeding of concentrates will be of prime importance.

For several years the main question in a cow owner's mind, when he thinks of his herd's ration, has been "What's the protein content?"

Visiting dairy farms year after year, we find a most alarming tendency towards very high protein rations. This is true not only in herds where every effort is put forth to make large records, but also in herds where the milk check provides the annual income.

There is no doubt that this situation, with its attendant dangers, has been brought about through education which had no such aim.

For decades, cows did not get enough proteins in their daily feed to enable them to do their best work, because their owners gave them mostly corn, oats, barley, rye and wheat bran, middlings or shipstuff.

In those days, linseed meal, cottonseed meal, distillers dry grains, soybean meal, peanut or coconut meal were not on the market, and farm grown grains were relied on to get the cow to do her best.

During that period the standard of production was much lower. The cow had been put to running races with the United States, Canada and England as her track. Record making was indulged in by comparatively few herds in contrast to to-day's widespread efforts.

Consequently, cows in many sections did not, as a rule, get enough of the protein element and educators began to urge more protein in the daily ration. Continued emphasis on this element has resulted in its being made far too important. Cattle feeders by the tens of thousands seem to think that a profitable milk yield or a high record cannot be gotten out of a cow unless she is regularly fed a high protein mixture.

In writing and speaking we have many times said that protein does not make milk—the cow makes milk from all the feed we give her.

That brilliant and much respected investigator, the late Professor H. P. Armsby of Pennsylvania put part of this thought in other words, thus: "Protein is substantially a supply of material and not a cause of production."

The safe procedure is to remember that to keep up her body and health, to make milk and produce calves regularly a cow requires not one element of feed but many and that protein is only a part of her needs.

Few who insist on high protein grain rations seem able to give conclusive reasons for their use. The majority seem just to have a firm conviction that the higher the protein in a feed the more milk they'll get out of their cows; and this we believe is as we said above mainly the cumulative result of former widespread effort to get enough protein into rations which were overbalanced with carbohydrates.

Beyond certain limits, milk production by no means follows protein supply. In fact when we overstimulate cows with protein they do not make as much milk

in a complete lactation as they could and would with a ration which gave only what they needed. True they take part of the excess protein and use it for work carbohydrates could do. This, as feed protein is more expensive than carbohydrates, is not economical. What is left after the cow has used all she can, is wasted: it's worse than wasted, because it generally takes its toll in physical disturbances such as indigestion, garget, inflamed udders, poor condition and tendency to sterility.

Professor Haecker who is known to be an accepted authority on feeding dairy cattle has expressed the opinion that "heavy feeding of highly nitrogenous feeds has injured many * * * great cows and their progeny by abnormal stimulation and development of the digestive and mammary glands."

Well fed fresh cows not only do not need a high protein ration, but are better off without it. A 16% to 18% digestible protein mixture is all that is needed and only a small daily allowance of that, increased as they respond to it.

As they get further along in lactation more milk making, body building material is needed, because the calf is growing and the cow has taken off her back the condition put on when she was dry. If they have been properly fed a moderate or medium protein ration to start with, it is easy to gradually increase the allowance at the later period and keep a margin of safety while holding up the daily production and maintaining health.

On the contrary, if they have been overfed protein in the early milking period, we have nothing to "come and go" on and the cow's capacity for taking care of feed having been reached, her digestion having been taxed and her udder having been overstimulated, we get one of two results. Either she makes a big year's yield and is physically much the worse for it, or she does go off her feed at times and does much less in the year than she is really capable of doing. No matter which result eventuates, we lose.

The Vermont Experiment Station has published Bulletin No. 225 on "The Protein Requirements of Dairy Cows." They experimented for thirteen years and the bulletin covers the subject with great thoroughness. It's highly technical and takes study; but several readings have not enabled us to dig out of it any encouragement for feeding high protein rations to dairy cattle.

What we need to realize is that in dairy rations there are a number of things to consider besides protein—a fair proportion of light cooling feeds, ash or mineral matter, fat, starch, sugar, and bulk. The cow has several other uses for her food besides the elaboration of milk and even in milk itself has been found no more than from 3% to 3.5% protein.

There is a limit to the amount of feed a cow can eat and in that daily number of pounds the protein should bear only such proportion to the other nutrients as will allow her to make healthful and economical use of all of them.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

or 27th of each month preceding date of issue.

SEPTEMBER 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

The Certified Milk Fat Standard

CONTRARY to what most breeders of black and white cattle had been led to expect the fat requirements for certified milk were not changed at the recent annual convention of The American Association of Medical Milk Commissions and The Certified Milk Producers' Association of America. The change was advocated by men prominent in the certified milk industry but met with the opposition of representatives of the Channel Island breeds and so the proposal was voted down.

It must be confessed that the act of these organizations is somewhat of a disappointment to many Holstein-Friesian breeders, although only a small percentage of the men who raise black and white cattle produce certified milk. The requirements of at least 4% fat is arbitrary, and we believe unwarranted, for such a requirement debars the natural product of at least four-fifths of the dairy cows in the United States. No feeding experiments have ever shown that a milk testing 4% fat is superior as food for babies or invalids than is a lower testing milk, in fact the weight of evidence is all the other way.

The retaining of the 4% fat standard for certified milk is likely to be used as an argument by those who believe the National Dairy Council is unduly influenced by advocates and friends of the Channel Island breeds. It has been publicly stated at several conventions of The Holstein-Friesian Association of America that while the American Jersey Cattle Club and The Holstein-Friesian Association of America each financially support the National Dairy Council to the tune of \$6,000 annually the Guernsey Association contributes nothing whatever and yet the Guernsey breeders derive as much benefit from the work of the Council as do the Holstein breeders. There are many who believe that the National Dairy Council could, if it wished, show the true light to those who set the fat requirements for certified milk.

The action of the Medical Milk Commissions and the Certified Milk Producers' Association is bound to

be severely criticized. When all is said and done the principal difference between certified milk and ordinary market milk is not a difference in fat content but a difference in cleanliness and bacteria content. The setting up of a high butterfat standard is to be deplored for many reasons.

"Something Wrong"

IN an editorial appearing in the September 4th issue of *Hoard's Dairyman* under the title, "What is the Trouble With the Purebred Live Stock Associations?" as applied to the Holstein-Friesian Association of America the writer seems to concur largely with the views expressed in THE HOLSTEIN BREEDER AND DAIRYMAN.

The author states in part as follows: "A few years ago the Holstein-Friesian Association, the largest purebred live stock association in the country, was making great strides. . . . The minds of persons all over the country interested in dairying were directed to this breed of animals, and every man who owned Holstein-Friesian cattle was having their offspring registered, and the association was making great strides in public opinion and financially as well. Then, all of a sudden, without any apparent reason, a sort of eclipse occurred and a condition of sleep among the breeders of Holstein-Friesian cattle has been maintained since, and their must be a reason for that.

"There must be several times as many Holstein-Friesian animals to record now as there were five or six years ago, and still there aren't anywhere nearly as many being recorded. There must be several times as many animals for sale, and still not nearly as many transfers are recorded. . . .

"*Hoard's Dairyman* has wondered whether or not there wasn't some reason for this situation. We understand the reason given is that there have been hard times; that the times have changed. But why should they have changed? There is just as much difference between the production of good animals and poor animals as there was five or six or ten or twenty years ago. There is just as much reason why people should be interested in improving their herds as there was at any period in the past. Dairy husbandry is just as much in need of improved production among its animals as ever. So we cannot feel that it is a question of the times that makes this apparent slump in purebred animals. There has been no such slump in good grades. Good grade cows to-day that have demonstrated their usefulness and production are bringing just as good prices as they did five or ten years ago. They are just as much sought after by people interested in dairy husbandry, and it requires these pure blooded animals to beget and furnish these productive grades. So we are loathe to believe that it is entirely a question of the times. . . .

"It would seem to the writer that the operation of a purebred livestock association, in order to have success, must have real business management. The association must realize, as do all people successful in any industry, that good will, favorable opinion, and confidence are absolutely essential to the success of any industry or any occupation or any worth while

movement. How much business acumen is really exercised by any of the purebred live stock associations? What are they doing to promote good will for the industry?

"The sooner purebred live stock associations realize that theirs is a real business and their officers and directors realize that theirs is a real job and requires the very best minds and intelligence and effort, the sooner there will be some ray of hope and encouragement to the breeders scattered in all the states of America."

We wish to commend the author very highly for the sound principles expressed in his article with the one exception where he states, "We are coming more and more to realize that mind is the dominating force of all things—that as man thinks so it is—and this is particularly true in fixing values. There is no established value on a dairy cow. She may have been in a cow testing association and made 400 lb. fat, or she may have made an Advanced Registry record in the breed association of twice that amount of fat in a year, but the human mind fixes the value on a cow."

Human minds at the present time seem to be fixing the value of Florida real estate but we have just passed through a period when the human mind, encouraged and led on by propaganda, by bidding and price fixing at consignment sales, fixed the value at which purebred dairy cattle sold.

The value of Antiques, the value of the latest Paris Fashions and the value of the "Bootlegger's" products are fixed by the human mind but the true value of a dairy cow should be and is measured by her ability to convert grain and roughage into milk and butterfat at a profit and produce an offspring each year that will perpetuate her superior milk and butter producing qualities.

The cost of replacement is also a factor that enters into the value of a purebred dairy cow. When the human mind fixes the service fee of an outstanding sire at a sum equal to or surpassing the cost of a mature cow, fresh and ready to go into the milking herd, something is wrong. Possibly the human mind is fixing the value of the service fee but the law of supply and demand fixes the value of the offspring when it is mature.

We must cease to worship at the pedestal of purebred livestock. We must look at them from a profitable, utility standpoint.

"How We Want Beginners to Begin"

WE do not advise beginners, especially those who have had limited experience in handling stock, to invest heavily in purebred stock. It is much better to keep the grade cows that are good producers until you can grow into a herd of purebreds, eliminating the poorer grades as the purebreds come in milk.

"If a heifer calf is purchased and she and her female progeny produce a calf at two years old and every twelve months thereafter, allowing for every alternate calf to be a male, when the original calf is a cow ten years old there will have been produced eighteen males and eighteen females. Allowing for one-third loss the herd would still contain twelve females.

"We want you to start in purebreds in this manner. Be your own customer for the female increase for ten years and you will have bred and sold to yourself a herd of cattle that you could not buy of another breeder for less than \$1,000, possibly double this sum."

The foregoing words of good advice appear in a six-page booklet sent out by The Sophie Tormentor Club of Salem, Ohio, which is composed of a number of breeders interested in the Sophie Tormentor family of Jerseys.

THE HOLSTEIN BREEDER AND DAIRYMAN strongly commends The Sophie Tormentor Club for publishing this advice to beginners. It is in strong contrast to the practice of a number of paid propagandists in the employ of The Holstein-Friesian of America and the state clubs, who have advised those starting with purebred Holsteins to obtain only the very best and to discard their grades and start with purebreds, generally at inflated prices. Too often the beginner following this advice and meeting with ill luck in his breeding operations, has suffered heavy losses, and in cases where he has gone heavily into debt has lost his entire business, farm and all.

It is much better to "grow" into the business than to "buy" into it. It is much better to keep good producing grade cows until you can grow into a herd of purebreds. It is not wise to invest heavily in purebreds if you have had limited experience in handling stock and it is far wiser to go slowly, feeling your way as you go than it is to rush headlong into any business, especially the livestock industry. Base your valuation of a dairy animal upon what she will earn you at the pail and as a stock producer, not upon speculative values and you will be laying a sure foundation for future success with any breed of dairy cattle.

One Certificate for Each Animal

BY adopting a registry certificate somewhat similar to the one used by the Guernsey Breeders' Association, the Holstein-Friesian Registry Association has taken a step which will be, we believe, beneficial to the black and white breeding industry. Instead of requiring a separate transfer certificate each time the animal changes ownership, the Holstein-Friesian Registry Association will have all transfers recorded on the registry certificate so that, in place of a number of certificates, the complete ownership history will appear on the one sheet.

There are many arguments for a single certificate. In these days of accredited herds an owner wishes to know something about the establishments in which his newly purchased animal has passed her life. If she has changed hands only once or twice and has always belonged in an accredited herd the new owner may feel confident that, when introducing new blood into his herd, he has not at the same time introduced destructive diseases or contagion.

A number of years ago a single certificate was given a brief trial by the registry department of the Holstein-Friesian Association of America. Like many new things it met with some opposition and at the following annual meeting a combination of dealers who did not want their customers to know how short a time they

had owned many of the animals they sold, were successful in passing a resolution recommending that the multiple certificate plan be again followed.

It was the custom of a number of prominent dealers who always attend the annual meetings of the association and generally speak therein, to purchase females heavy with calf, feed them well then, after they freshened, to put them in official test and make short-time records with them. The test supervisor needed the registry certificate in order to identify the animal which he was testing. At that time it took the registry office of the old association about six weeks to record the change in ownership and return the certificate to the new owner. Any error or discrepancy between the application and the true facts made a further delay and it must not be forgotten that the records of the old association show that at least one in every six applications are returned to the applicant for correction.

A little thinking will show what small grounds the advocates of the multiple certificates have. Only a few bulls in proportion to the number registered change hands more than once. For the past few years the number of registrations has exceeded the number of transfers so that with a few notable or shall we say notorious exceptions, females change owners but once during their lifetime. The fact that the registry certificate has to go to the recording office for a week or two once during the animals lifetime is surely flimsy grounds for arguments against the single certificate plan.

The new association is pledged to give prompt and efficient service and this means prompt recording of changes in ownership and prompt returning of certificates to applicants. Such a course automatically cuts the ground from under any argument against the single certificate.

The advantage of requiring only the one paper for registry and transfer data is sufficient grounds for adopting the single certificate plan. The fact that it is not an untried proposition but has been tried with success in other cattle associations shows that the Holstein-Friesian Registry Association is not on new ground but is following a course which has already been successfully followed. We are confident that breeders and dairymen everywhere will approve of the course of the Holstein-Friesian Registry Association and will be in favor of a single certificate on which to record the particulars of ownership as well as the breeding data.

What Man Misses

DELIGHT in natural beauty may be one of the greatest boons life has to give. Most people underestimate its value. Certainly our civilization does as a whole, else we should not have so many ugly cities, so many squalid small towns, so many waste places in the country that are made so by the deliberate act or the carelessness of man. John Muir said all this and a good deal more in a sentence worth thinking over: "The forests of America, however slighted by man, must have been a great delight to God."—Wallace's Farmer.

How to Make the Change

THE Holstein-Friesian Registry Association is receiving many inquiries from breeders asking about cattle which they own that are registered in the old Association.

The Constitution and By-Laws of the new Association provide that breeders who join the new Association and have cattle registered in the old Association can have all such animals recorded in the Herd Book of the new Association by forwarding the Registry Certificates to the Secretary's office, Harrisburg, Pa., and paying a fee of 25 cents, when new certificates will be issued showing registration in the new Association and the old certificates together with the new ones will be returned to the breeder.

This provision makes it possible for breeders to transfer all of their business to the new Association without any interruption and a great saving in future fees and proceed to register and transfer their cattle in an Association which they manage and control.

Congratulations! Let's Go

THE announcement of the birth of the new Holstein-Friesian Registry Association is meeting with hearty response from breeders in all sections of the country. The Secretary's office reports that memberships are being received, also requests for registration and transfer blanks.

The following letters are characteristic of the sentiment expressed by those writing in regarding the new Association:

Sept. 1, 1925.

CONGRATULATIONS.

I read with great interest the message that was so welcome in the last issue of THE HOLSTEIN BREEDER AND DAIRYMAN that a new sound basic association had been formed that is and will be composed of the rank and file breeders and the fellows that were living over the hill as we have read so much about * * * but so darned far that they never got a look in the sacred circle of the so real breeders and the activities of their own association affairs.

Well, now that your off on the right foot what can a hustler do to help things along in OHIO. We got a lot of fellows that are in for this thing and past performances have proved that the time to mold the iron is when it's HOT. Send me some application blanks at once and I know some of the better breeders around the northern part of Ohio who will go along with you.

Am going to The State Fair the latter part of the week and if you have any literature that's "hot off the press" rush it to me and I could do possibly some constructive missionary work. Let's GO.

Yours very truly,

Ohio Breeder.

Sept. 1, 1925.

MR. G. H. TRUCKELL,
Harrisburg, Pa.
Dear Mr. Truckell:

As you are the only man in Harrisburg that I know personally is the reason I am asking the following favor. In the first place as you may know I sold my farm and cattle in 1917, therefore I have no stock of my own.

I keep application blanks and help beginners and those in want of stock and those who have stock to sell. If this new Registry Association is ready for business will you please ask them to send me a few application blanks and any dope they think best, for this favor I will be greatly obliged.

Very truly yours,
Former New York State Breeder.

Sept. 7, 1925.
HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION, INC.
Harrisburg, Penna.

Please send me by return mail a few of your Registration Blanks.

I have two heifers which will soon be a year old and which I wish to have registered.

I will probably send check for membership fee when I send registration papers.

Another New York Stater.

August 29, 1925.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Penna.
Gentlemen:

Enclosed find check for \$1.00 for your paper.

Will you kindly put me in touch with the secretary of the new Association so that I may make my application for membership.

Send me some blanks and I will procure other members for you. We in Iowa are disgusted and have been for some time and it is a mighty pleasant surprise to read your Declaration of Independence in the Aug. 22 number.

If I can be of any assistance to the new organization feel free to call on me.

With best wishes for success, I remain
Sincerely,

Iowa Breeder.

The new Association spells the awakening of a new prosperity for the Holstein industry and places the dairymen in a position where they can manage their own affairs, encourage more efficient and profitable dairying through the means of purebred registered cattle and save themselves hundreds of thousands of dollars in increased fees and unnecessary taxes and at the same time place their industry on sound business principles.

Monopoly in America began in 1623, declares Edward MacMahon, associate professor of history in the University of Washington. A cow was brought to a Pilgrim colony from England, Professor MacMahon said, and allotted to several families, including Captain Miles Standish, a bachelor. Captain Standish soon bought control of the cow, share by share, and he and his relatives enjoyed an abundant supply of milk while neighbors went without, related the historian.

Make Swiss Cheese of Holstein Milk

ED GRIMM of Elgin, Iowa, owns a herd of twenty high class tuberculin tested Holstein-Friesian cows. Instead of shipping his milk, he manufactures it at home into Swiss cheese which is sold through stores in Oelwein, West Union, Fayette, Maynard, Randalia, Donnan, Elgin, Clermont, Elkader, Monona and Postville. He restocks the supply at the stores every two weeks.

A writer in the *Oelwein Register* tells of a visit to this place and says that about 60 lb. cheese is made daily. "The night's milk is held until morning and both are then placed in the curdling tank where rennet is added. Then the mingled milk is heated to a temperature of 90 degrees. After about twenty-five minutes it is heated to 112 degrees and in due time the whey is drawn off and the cheese is put into molds, which hold five or six pounds. The whey is used for pig feeding. The cheese is kept in the molds until next morning and then placed in a heavy salt brine for twenty-four hours. It is then salted and cured for ten days, then dipped in paraffin and after about four weeks ageing is put on the market."

Mr. Grimm lives in a district inhabited by people of Swiss descent. The writer was impressed with the spotless cleanliness not only of the factory and storage cellar but also of the barn which he says was kept "clean as a hound's tooth."

The Darwin Theory

DARWINISM" was first taught by the British naturalists, Charles R. Darwin and A. R. Wallace, in 1858, and elaborately expounded by Darwin in his book on "The Origin of the Species" in 1859. It is based upon the theory that all existing forms of life descended from one or more low forms of life, such as the amoeba, a small organism living in water, fossil remains of which are found in chalk and limestone. Man is held to have descended from a general line of creatures resembling man which finally split into the modern apes and into mankind.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

NOT ABOUT COWS

Pleasure Plus Dinner

ONLY last week I wanted to go to a ball game, and also wanted to have some friends in to dinner immediately afterwards, and I wanted to serve chicken and waffles—and I have no maid and I have no fireless cooker. And I knew that, after three hours in the outdoors, we would be starved to death and would want to eat just as soon as we got home from the game. So I worked out a little plan, which wasn't so bad, which I will pass on for the benefit of others. If you don't care for ball games, it may be used equally well with clubs or missionary meetings, or even with something more frivolous. While washing the lunch dishes, I fried the chicken quite brown, and put it in a Pyrex casserole, covered it with water, put on the cover and placed it in the oven. I mixed my waffles, but kept the wet and dry ingredients separate—having the butter, sugar, salt, eggs and milk in one dish and the sifted flour and baking powder in the other. Then I prepared potatoes, lima beans and sweet corn. Just before leaving the house, I shook down the fire, put on coal and a couple of sticks of wood on top—that gave a quick heat at the last. I put the potatoes and beans in the oven (the beans had been cooking on top of the stove) in salted water and covered them. And I left a full tea kettle, also a good sized kettle full of water on top of the stove. Then I went to the game. I will admit an uneasy twinge every once in a while as I wondered about my experiment, and speculated on what I would find when I got back home.

Immediately upon reaching the house (three hours after leaving) I popped (!) the corn into the kettle of water which I found merrily boiling, found the chicken, potatoes and beans done to a turn. I hooked up the electric wire to the waffle iron, mixed the two sets of ingredients together, and in twenty minutes after our arrival at home, we sat down to a dinner which would at least keep one from starvation.

"Your Slip Shows"

IN this day of straight-line, narrow skirted dresses, it seems as though the slips are determined to be seen. And the vogue for extremely short sleeves has also put the brassiere straps in the lime light. Only recently a man wrote to one of the leading Philadelphia papers, bewailing the fact, that his wife, —all that could be desired in every other respect—, invariably left the house, even for church, with her petticoat showing below her dress. Repeated reminders had had such little effect that he had ceased to make them, but he wanted to know the reason why. Now, we women know that this visibility of the slip is caused by its being fuller than the dress, and being also cut on long lines, the only way to shorten it is at the bottom. In the old-fashioned ruffled petticoat—no one

but a man would call them petticoats nowadays—one could take a little tuck at the top of the ruffle, but the straight lines, of to-day forbid that. The slip must be shortened at the bottom and many of them need it badly. If, however, you discover that it shows, just as you are ready to leave for a party, and there is no time for even a hasty stitch, you may remedy the defect by tying a tape around the waist, which will hold it closer to the body and give it the required shortness. The brassiere straps may be held in restraint by little lingerie pins. Many times the daintiness or smartness of a costume has been spoiled because something shows which should not.

THE BREAD BOX

This is the time of year when bread molds very easily. The bread box should be washed out frequently, dried and thoroughly aired in the sun, keeping the lid open. The bread will then not get that musty taste. Stale pieces should not be put back in the box but dried in the warming oven and used for bread crumbs.

Points About Pickling

THIS is the time of the year when our thoughts turn to the year's supply of relishes and pickles, and the piles of bright red tomatoes and sweet peppers, of green cucumbers outside the kitchen door, and the spicy and tempting odors floating out of that domain all testify that "pickling time" has begun. What a lot of work, but what a satisfaction in the results.

In making sweet cucumber pickles, they sometimes shrivel in the jar which, of course, they shouldn't do to present a nice appearance. Cucumbers should be fresh; too much sugar should not be used. They should be blanched also. If less sugar is used, the pickles left uncanned for a day, and more sugar added, then reheated and placed in the jar, this trouble is not likely to be experienced.

CHILI SAUCE

Chili Sauce always "goes well" with cold meats and makes a welcome addition to the pickle shelf. The following is a good recipe:

12 ripe tomatoes	1 teaspoon each of cloves,
2 onions	cinnamon and ginger
2 green peppers	1 tablespoon salt
¾ cup brown sugar	½ cup vinegar

Chop the tomatoes, onions and peppers quite fine, add ingredients and cook until thick. Seal in bottles or jars.

APPLE CHUTNEY

Apple Chutney is so good that it almost takes the place on the table of a conserve.

Chop 2 dozen ripe tomatoes, 6 onions, 3 red peppers

and 1 dozen tart apples. Add 1 lb. seedless raisins, 1 quart vinegar, 3 cups white sugar, 1 cup brown sugar, 1 tablespoon each of cinnamon, cloves, ginger and salt, and 1 teaspoon pepper. Cook until quite thick and seal in jars.

MIXED PICKLE

A "Mixed Pickle" always looks pretty, and made quite sweet is delicious. The following recipe is somewhat different than the "common mixed pickles."

1 quart small silver skin-onions	1 quart small string beans
1 quart very small green tomatoes	1 pint shell beans or limas
1 head cauliflower	3 cups brown sugar
3 red peppers	1 cup salt
	4 tablespoonsful mixed whole spices

Cut all vegetables except beans in small pieces and sprinkle with salt, allow to soak over night. Cook string beans and other beans in salted water until tender. Drain. Mix vinegar, sugar and spices, bring to boiling point, add vegetables and cook for ten minutes. Pack in jars while hot.

MUSTARD PICKLE

1 pint very tiny cucumbers	1 pint cauliflower cut in small pieces
1 pint large cucumbers sliced	3 red peppers
1 pint tiny onions	1 pint green tomatoes cut in quarters
1 pint string beans cut in one-inch pieces	3 green peppers
	1 cup diced carrots

Soak all the vegetables in a very weak brine over night. Drain them well. Make a weak vinegar water and bring them to a scald in this and drain again. Make a dressing of the following ingredients

2 tablespoons corn starch	5 cups white sugar
4 tablespoons dry mustard	1 teaspoon celery salt (if liked)
½ tablespoon tumeric powder	3 pints vinegar

Mix all dry ingredients and add vinegar, stirring slowly until it thickens to a smooth paste. Pour this dressing over the vegetables and allow to cook up about ten minutes. Seal in jars while hot. If the dressing is too thick add a very little weak vinegar. The more sugar one uses the better the pickle will be. An excellent way is to put in the five cups of sugar that the recipe calls for, then "shut your eyes tight" and add as much more as your conscience will allow.

TOMATO OR "MOCK" MINCEMEAT

3 lb. green tomatoes	1 cup vinegar
3 lb. chopped apples	2 tablespoons cinnamon
4 lb. brown sugar	2 teaspoons cloves
2 lb. seedless raisins	1 nutmeg grated
1 tablespoon salt	1 cup suet (if desired)
	orange peel or citron

Chop the tomatoes and drain off the juice. Scald the chopped tomatoes in vinegar water and drain well. Then add the apples, brown sugar, raisins, salt and suet, cooking this mixture until it is done. Then add the vinegar, spices and peel. Cook until it is thick as desired.

This really makes a very good substitute for the regular mincemeat for pies and is not so hearty.

PEPPER HASH

12 red peppers	12 sweet onions
2 heads celery	1 pint vinegar
12 green peppers	2 cups brown sugar
	1 tablespoon salt

Chop the peppers, onions and celery. Cover with boiling water and let them stand five minutes. Drain off liquid. Add the sugar, vinegar and salt and boil about five minutes. Seal while hot.

This is a very good relish to serve with meats. If desired, more red peppers can be used and a very nice appropriate pickle for the Christmas table will be obtained. Do not allow the pickle to get soft or mushy while cooking.

CHOW-CHOW

Chop one peck of green tomatoes and mix with them one cup salt. Let stand over night. In the morning drain out all the juice. To the tomatoes add 12 small onions, 1 large cabbage, 6 green peppers and 1 head celery, all chopped. Place vegetables in kettle, add 4 cups brown sugar, 1½ cups of whole pickling spices (tied up in several small cheese cloth bags) and 2 quarts vinegar. Cook slowly till done, remove bags of spice and seal in jars.

How many have tried making their own pimentoes. These we buy in the small cans are very good but are expensive if used to any extent and pimentoes are delicious in salads, sandwiches or added to cheese. If one grows their own peppers, it is certainly very nice to have a few cans of them on the pickle list.

Use firm dark red peppers, remove seeds, and cook them very gently in a weak salt and vinegar water until tender, remove carefully and drain. Make a sweet syrup of vinegar and sugar, heat to boiling point, drop the peppers in and allow them to come to a boil. Pack them in pint jars, sprinkling whole spices through the can as you place them in. Cover with syrup and seal.

Almost every housewife finds plenty of green tomatoes on hand in the fall of the year. There are so many delicious ways of using them, it seems a waste to throw them away.

GREEN TOMATO PICKLE

Slice four quarts green tomatoes and cook in salt water until done, drain well. Make a syrup of one quart vinegar and 2 lb. sugar with plenty of spices to suit taste. Pour over tomatoes, let come to a brisk boil and seal in cans. This makes a very nice sweet pickle.

Frequently there comes that year when tomatoes do not ripen well, and there are not enough for canning and the table supply but still there are bushels of green ones. How many have made green tomato catsup? It's good. Take 7 lb. green tomatoes, chopped. One quart vinegar, four red peppers chopped. Boil together one and one half hours. Then add 2 lb. brown sugar, 2 teaspoons mustard, 1 tablespoon ground cloves. Cook until thick.

When having in mind to make the mixed pickles, it is wise to can a few quarts of the different vegetables needed, as their seasons bring them, such as tiny string beans, tiny cucumbers, shell and lima beans, carrots, then when ready to make mixed pickle everything needed will be on hand.

CLUB ACTIVITIES

CENTRAL MONTANA HOLSTEIN CLUB

At a meeting held August 8 at Lewistown, Montana, the Central Montana Holstein Association was formally organized and officers were elected for the ensuing year. They are J. H. Hofstetter of Lewistown, president; F. S. Smith, vice-president; Leigh Wade, secretary. The directors are E. W. Chattin, J. P. Lanham, Alex Fah and G. A. Lehman.

WON PRIZE TRIP

John T. Thorne of Harrison, Indiana, showing at the Howard County Dairy Calf Club Exposition held at Kokomo, Indiana, August 26, won the sweepstake of a \$25 trip to the national dairy show. His Holstein calf was greatly admired. The judging was done by L. H. Fairchild, Chief of the Dairy Extension Department of Purdue University. The prize ribbons were given by the Pennsylvania Railroad Company.

BOYS WIN MANY PRIZES

Twelve boys, eleven of them students in the agricultural department of the Dodgeville High School exhibited 22 calves and six sheep at the recent Iowa County Fair held at Mineral Point, Wisconsin, and brought home \$570 in cash premiums. The animals were cared for and fitted as part of their project work in connection with their agricultural classes. Most of the animals will be shown at the Junior Livestock Exhibition to be held at Madison in October and will then be sold at auction.

Some of the boys exhibited in the open classes and in every case placed in the money. Parker Treweek won first with his junior heifer calf and second with a senior bull calf while Curtis Peterson won first in the junior bull calf class.

BIG DAIRY PICNIC

A big crowd attended the annual dairy picnic held August 19 at Marinette County Asylum, Peshtigo, Wis. The event was sponsored by the Marinette County Holstein Breeders' Association and the Marinette and Menominee Milk Producers' Association. It was estimated that nearly 2,000 attended, the largest crowd known in the history of the picnic.

Among the entertainment features of the day was a milking contest. The men's contest was won by A. J. Edelbeck of Wausaukee who milked 15.3 lb. in three minutes. The winner of the women's contest beat him however, Marie Selewsky of Menominee, Michigan, milking 16.2 lb. in the same time. The Milk Producers' Association won the baseball game beating the Holstein Breeders by 13-0. The members of the Peshigo City Band rendered a fine musical program.

RHODE ISLAND BREEDERS MEET

The Annual outing of the Rhode Island Holstein Breeders' Association was held at the Soldiers' Home at Bristol, and a clam bake was furnished by the Warren and Bristol members of the association. It was prepared by Ward Mason of Warren, himself a Holstein breeder.

Professor Howland Burdick who is in charge of official test work in the state explained the Rhode Island herd test plan and the value of farmers keeping production records in their herds.

A number of dairymen signed contracts to start testing under the supervision of the college and the association commencing September 1. President Franklin Strickland outlined the advertising value of the herd test plan and said that breeders in every state were watching Rhode Island to see the effects of this plan.

The resignation of Secretary William Fletcher was accepted with regret and his brother James Fletcher was elected to fill the vacant position. Mr. William Fletcher will become associated with a livestock shipping concern located at New Orleans.

FEDERAL HAY GRADES ESTABLISHED

Official United States standards for hay have been established, effective September 1, upon order of Secretary of Agriculture Jardine. The standards include grades for timothy, clover, and grass hay; alfalfa and alfalfa mixed hay; Johnson mixed hay; prairie hay, and mixed hay.

Despite inroads of motor power on the hay business, statistics by the Department of Agriculture show that over 76,000,000 acres were devoted to the hay crop last year, production reaching 112,450,000 tons. The farm value of the crop last year is placed at \$1,467,648,000.

Mimeographed copies of the standards may be obtained from the Bureau of Agricultural Economics, United States Department of Agriculture, Washington, D. C., or from licensed Federal hay inspectors. The department will issue also within a few weeks a Hay Standards Handbook which will describe important features of the standards and of the Federal Hay Inspection Service.

A FOUR COUNTY DAIRY MEETING

Dairymen of four counties met at the city park, Monticello, Iowa, August 17. Over 150 breeders from Jones, Jackson, Delaware and Dubuque counties were present.

Carl Lee who manages a creamery at Milwaukee, Wisconsin, briefly compared dairy conditions in his state and in Iowa. Mr. Lee who managed a creamery at Monticello about 25 years ago believes that fewer and larger creameries should replace the small cross-roads concern.

Floyd Johnson of Waterloo, secretary of the state dairy association spoke on calf club work in which there are 1,370 boys and girls enrolled in the state. He also was in charge of a dairy cattle judging contest and gave a talk on the desirable features of a good cow.

Peder Pederson, Holstein breeder and farm bureau worker, urged dairy cattle breeders to enroll in cow testing associations claiming that their results were of greater benefit than official records because the cows were tested under conditions that could be duplicated on every farm. He said that the dairymen must work with his head as well as his hands, and advised his hearers to work with purebreds instead of grades. Other speakers were Harry Gleim and Thomas Shover, proprietor of the Shomont farms.

GLOVER TALKS TO BREEDERS

A. J. Glover of Fort Atkinson, Wis., editor of *Hoard's Dairyman*, was the principal speaker at the third annual roundup of the Michigan Holstein-Friesian Association which was held at Lakewood farm. He said that if all the milk produced during 1924 in the United States was placed in a belt of eight gallon milk cans placed 16 deep the belt would reach entirely around the world.

"Price-fixing is wrong fundamentally," said Mr. Glover, taking for illustration the raisin-growers association of California. With the price of raisins fixed they went on the rocks within a couple of years because clerks, businessmen and almost every one else who had a little land and a grape vine tried their hands at raisin growing.

The responsibility of improving the breed falls upon the shoulders of all dairymen. Animals must be given a chance to prove themselves before they are discarded. He urged raising the average production of the herd rather than the maintenance of one high class animal at the expense of others in the herd.

In the judging contest the young son of Maple Crest Korn-dyke Hengerveld, offered by M. W. Wentworth of the Lakewood farms, was won by the Watertown team with 185 points out of a possible 200. R. N. McLacklan, a Holstein breeder from Everett with seven children won the prize for the largest family and for the breeder coming the greatest distance. Fred McDonel of Lansing was the oldest breeder present, commencing business in 1890.

THE MISSISSIPPI VALLEY FAIR

Special Correspondence

The first of the more important midwestern fairs closed its 1925 session on August 22. This is called the Mississippi Valley Fair and Exposition with its home at Davenport, Iowa.

Scott County, of which Davenport is the capital, is one of the richest in natural agricultural resources of the entire middle west. The loyal Iowan is glad to pay tribute to a section of such outstanding productive capacity. It all emanates from a single source, the soil. Land of unprecedented quality for yielding year after year has made a community of great agricultural wealth and it was as a means of voicing this condition that the Mississippi Valley Exposition was organized. As the name implies, it is more than a local show. It serves a section on both shores of the Father of Waters, a section whose wealth is proverbial. And when the term agricultural wealth is used it stands for more than bank accounts and bonds and land holdings. It is an indefinable term whose meaning can be felt more easily than expressed. The best definition may be had by riding through these sections with open eyes and a receptive attitude. The homes, the prosperity, the citizenship, the entire atmosphere all proclaim prosperity. Of course this is co-existent with material wealth but it is more potent than that. All of which explains why this fair has grown to such flattering proportions in so short a span of years. The first event was held in 1920. Since that a permanent equipment has been built in a very substantial way. There are administration buildings, a grand stand, judging pavilion and barns all of modern type so that on the whole this is one of the important events of the country.

In any community of this type dairying is sure to be paramount and as a natural sequence the dairy exhibit at the Mississippi Valley Fair is always popular. It draws the crowds. This year, as always the Holstein barns are most liberally filled. The three largest herds represented were: Iowana Farms of Davenport, Ward and Leonard of Oklahoma City and O. B. Tolsom of the same point.

The larger part of the plums dropped into Iowana's lap. Their herd has been on the circuit for years and the plant has been doing constructive breeding during a long period without an unfortunate handicap. Mr. Tolsom is one of the pioneers of the central south and he has assembled some choice strains from the best herds in America but his classes were only partially filled. Ward and Leonard are a new firm, this being their first year in this ring. They have some remarkably fine individuals and will undoubtedly be heard from all through the southeastern circuit and still more in succeeding years.

The Iowana exhibit featured their Tritomias with remarkable success. The grand champion male was a three-year-old son of Tritomia Pietertje Ormsby. He has a length of body that is phenomenal and his handling qualities are a credit to his sire. The first three-year-old cow was a daughter of the same bull and these with two two-year-old heifers made one of the finest get of sire exhibits that one can ask for. The top lines, the tail settings and the quality are three outstanding features. Lady Johanna Aaggie, the Iowana cow came out again for added honors. She is fifteen years old and still showing with exceptionally good style and success. She was the champion female.

Prof. Fordyce Ely of the dairy department of Ames, Ia., placed the awards as follows:

Aged Bulls:—1st, Iowana Farms on Iowana Echo Star; 2d, Tolsom on Bell Farm Selector.

Bulls, three-year-old:—1st, Iowana on Tritomia Pietertje Ormsby Lad.

Bulls, two-year-old:—1st, Tolsom on Echo Silver; 2d, Iowana on Iowana Fayne Burke; 3d, Ward & Leonard on Admixton Pietertje Wayne.

Senior Yearling Bull:—1st, Ward & Leonard on Texan Colantha De Kol.

Junior Yearling Bull:—1st, Iowana on Osage Segis Keyes, 2d, Ward & Leonard on Texan De Kol Johanna Beets.

Senior Bull Calf:—Iowana first on Iowana Ona Ollie and 3d in unnamed. Ward & Leonard second on Colantha Cleveland De Kol and 4th on King Mutual Netherland Pontiac.

Aged Cows:—1st Iowana on Lady Johanna Aaggie, 3d on Midland Cornelia Snowdrop, and 4th on K. P. O. Lily Sky-

lark Hengerveld; 2d, Ward & Leonard on Corwin Ormsby Neta.

Female, three-year-old:—1st, Iowana on Tritomia Pietertje Beauty; 2d and 3d, Ward & Leonard on Lulu Bessie Homestead and Skylark Lewchester.

Female, three-year-old:—1st and 2d, Iowana on Iowana Homestead Segis and Tritomia Pietertje Lass; 3d, Tolsom on Oklahoma Echo Sylva Polly; 4th, Ward & Leonard on Favorite Canary Homestead.

Senior Yearling Female:—1st, Tolsom on Oklahoma Model Pontiac; 2d, Iowana on Fayne Mercedes Lady 4th.

Junior Yearling Female:—1st, Iowana on Iowana Fayne Star; 2d, Ward & Leonard on Texan Korndyke Johanna.

Senior Female Calf:—1st and 4th, Iowana on Burke Fryslan Waldorf and Iowana Lady Oak; 2d and 3d, Ward & Leonard on Texan Alcartra Princess and Texan Segis Johanna Senior and Grand Champion Bull:—Tritomia Pietertje Ormsby Lad.

Junior Champion Bull:—Osage Segis Keyes.

Senior and Grand Champion Female:—Lady Johanna Aaggie, Iowana Farms.

Junior Champion female:—Burke Fryslan Oak Waldorf, Iowana Farms.

Graded Herd:—1st, Iowana and 2d to Ward and Leonard. Calf Herd:—1st, Iowana; 2d and 3d to Ward & Leonard.

Get of Sire:—1st to Iowana on get of Tritomia Pietertje Ormsby; 2d, 3d and 4th to Ward & Leonard on get of Colantha De Kol Johanna.

Produce of Cow:—1st to Ward & Leonard on produce of Hazel Palladin Rag Apple; 2d to Iowana on produce of Iowana Fayne Mercedes Lady.

FAIRS AND EXPOSITIONS

Sept. 14-18—Chippewa Falls, Wis., Northern Wisconsin State Fair.

Sept. 14-19—Syracuse, N. Y., New York State Fair.

Sept. 14-19—Louisville, Ky., Kentucky State Fair.

Sept. 14-19—Topeka, Kans., Kansas Free Fair.

Sept. 14-19—Jackson, Tenn., West Tennessee District Fair.

Sept. 15-19—Reading, Pa., Reading Fair.

Sept. 15-19—Douglas, Wyo., Wyoming State Fair.

Sept. 19-25—Hutchinson, Kans., Kansas State Fair.

Sept. 19-26—Springfield, Ill., Illinois State Fair.

Sept. 20-25—Sioux City, Ia., Interstate Fair.

Sept. 20-26—Springfield, Mass., Eastern States Exposition.

Sept. 21-26—Pueblo, Colo., Colorado State Fair.

Sept. 21-26—Nashville, Tenn., Tennessee State Fair.

Sept. 22-26—Allentown, Pa., Allentown Fair.

Sept. 22-26—Helena, Mont., Montana State Fair.

Sept. 26-Oct. 3—Knoxville, Tenn., East Tennessee Division Fair.

Sept. 26-Oct. 3—Memphis, Tenn., Memphis Tri-State Fair.

Sept. 26-Oct. 3—Oklahoma City, Okla., Oklahoma State Fair and Exposition.

Sept. 28—Oct. 4—Waterloo, Ia., Dairy Cattle Congress.

Sept. 28-Oct. 3—Trenton, N. J., Trenton Fair.

Sept. 28-Oct. 3—Salem, Oreg., Oregon State Fair.

Sept. 29-Oct. 3—Lancaster, Pa., Lancaster Fair.

Oct. 3-8—Wichita Falls, Tex., Texas-Oklahoma Fair.

Oct. 3-10—Muskogee, Okla., Oklahoma Free Fair.

Oct. 3-10—Chattanooga, Tenn., Chattanooga Inter-State Fair.

Oct. 5-10—Richmond, Va., Virginia State Fair.

Oct. 5-10—Birmingham, Ala., Alabama State Fair.

Oct. 6-9—York, Pa., York Fair.

Oct. 8-17—Atlanta, Ga., Southeastern Fair.

Oct. 10-17—Indianapolis, Ind., National Dairy Show.

Oct. 10-25—Dallas, Texas, State Fair of Texas.

Oct. 12-17—Little Rock, Ark., Arkansas State Fair.

Oct. 12-17—Meridian, Miss., Mississippi-Alabama Fair.

Oct. 12-17—Raleigh, N. C., North Carolina State Fair.

Oct. 19-24—Columbia, S. C., South Carolina State Fair.

Oct. 19-24—Jackson, Miss., Mississippi State Fair.

Oct. 26-31—Savannah, Ga., Georgia State Fair.

Oct. 29-Nov. 8—Shreveport, La., State Fair of Louisiana.

Oct. 30-Nov. 7—Portland, Oreg., Pacific International Live-

stock Exposition.

Nov. 2-11—Montgomery, Ala., State Fair of Alabama.

Nov. 11-21—Beaumont, Tex., South Texas State Fair.

MISSOURI STATE FAIR

Berylwood Prince Johanna Segis, owned by A. J. King of Kansas City, Mo., was the first prize two-year-old bull at the Missouri State Fair and L. S. Gillette, the judge, also gave him the senior and grand championships. Triune Ormsby Piebe 58th, exhibited by Hargrove & Arnold, Norwalk, Ia., was the best of thirteen senior bull calves exhibited and was made junior male champion. The first prize aged bull was Castine Johanna Nig Ormsby, shown by F. E. Prince, Pittsburg, Texas. Hargrove & Arnold had the first prize yearling bull and A. J. King the first junior bull calf.

There were fifteen aged cows shown. Princess Piebe Mercedes Ormsby, exhibited in the name of the Iowa Board of Control was placed at the head and then made senior and grand champion female. The junior champion was the first

BERYLWOOD PRINCE JOHANNA SEGIS

This son of Prince Aaggie of Berylwood exhibited by A. J. King of Kansas City, Mo., was first prize two-year-old at the Missouri State Fair and also was senior and grand champion male.

prize senior heifer calf, Cherokee Piebe Lady Sarcastic 2d, also owned by the Board of Control and this same body also furnished the best two-year-old heifer, Clarinda Prilly Mercedes Ormsby. Hargrove and Arnold carried off the blue in the three-year-old class with Pietertje Papoose Piebe and in the senior yearling class with Triune Piebe Fobes while their Triune Van Betta was the leading junior heifer calf. Carnation Netherlands Segis won in the junior yearling class for the King establishment.

The Iowa Board of Control took the exhibitor's herd prize but Hargrove and Arnold carried off the rest of the groups, with strong competition from King, H. O. Larson and the Echo Farms of Long Run, Kentucky.

The Holstein show was not only large but also of high quality and called for admiring comments from Judge Gillette.

BIG SHOW AT CENTRAL STATES EXPOSITION

Exhibits from a number of establishments competed for the prize money at the Central States Exposition held at Aurora, Ill. Although this fair has only been in existence for a few years, it has become the leading show in the central west and so attracts exhibits from long distances. The well-known breeder and auctioneer, R. E. Haeger of Algonquin, Ill., was the judge and he placed the ribbons with his usual skill and judgment. He passed on the greatest collection of Black and Whites ever exhibited at this event and the quality was as noticeable as the number.

The aged bull class was won for Pinery Farms by King Pietertje Jewel Korndyke, who beat out the well-known prize winner, North Star Joe Homestead. King Mutual Fan took the blue in the two-year-old class for the Jefferson County Asylum but the senior as well as the grand championship went to the older bull. Plaut Harcourt Creator was first prize senior yearling. The junior yearling winner came from the Hetts establishment at Ft. Atkinson while the senior bull calf came from the same town and was shown by Wm. F. Trueloff & Son. Judge Haeger gave the junior championship to Plaut Harcourt Creator.

Madam Artis Wayne easily won the blue in the aged cow class and added the senior and grand championships to

her many triumphs. Pabst American Beauty, the first prize yearling was made junior champion. Pabst Holstein Farms carried off the aged herd, get of sire and produce and dam groups while Pinery Farms took breeders young herd and calf herd.

Seven Illinois counties competed for the Medill McCormick Memorial Prize. First prize of \$200 went to Stephenson County, McHenry County being second; DuPage, 3d; Lake, 4th; DeKalb, 5th; and Winnebago, 6th.

The Central States Exposition, in addition to the official classes has classes confined to Illinois herds. Plaut Harcourt Creator won in his class and was made the grand champion male of the state while Ivaloy Prilly Rose Hall, exhibited by Carl E. Rudolph of Deerfield, was grand champion female. The placings in the open classes were as follows:

Aged Bulls:—1st, King Pietertje Jewel Korndyke, Pinery Farms, Mentor, Ohio; 2d, North Star Joe Homestead, Carnation Farm and Baltz Hoesly, Monticello, Wis.; 3d, Whitehurst Colantha Artis Lad, A. F. Randolph, Canton, Ill.; 4th, Sir Johanna Pauline Ormsby, B. L. Cramton.

Bulls, two years and under three:—1st, King Mutual Fan, Jefferson County Asylum, Jefferson, Wis.; 2d, Pabst Ormsby Hengerveld, B. L. Cramton; 3d, Sir De Kol Ollie, Carl E. Rudolph, Deerfield, Ill.

Senior Yearling Bull:—1st, Plaut Harcourt Creator, Mike Plaut & Co., Danville, Ill.; 2d, Tower Hill King, C. A. McCauley, Dakota, Ill.; 3d, Bell Farm Sir Fayne, Karl Nims, Mentor, Ohio.

Junior Yearling Bull:—1st, Unnamed, George Hetts, Ft. Atkinson, Wis.; 2d, King Pietertje Jewel Aaggie, Pinery Farms; 3d, King Hengerveld Fayne Pondyke, Karl Nims.

Senior Bull Calf:—1st, Colantha Mutual Clothilde Ladd, Wm. F. Trueloff & Son, Ft. Atkinson, Wis.; 2d, Unnamed, Simissippi Farms, Oregon, Ill.

Aged Cow:—1st, Madam Artis Wayne Denver, Jefferson County Asylum; 2d, Ivaloy Prilly Rose Hall, Carl E. Rudolph; 3d, Side Hill Ormsby Segis, John R. Logan & Son, Seward, Ill.

Cows, three years and under four:—1st, Pabst Creator Queen Fay, B. L. Cramton; 2d, Logan Alcartra Segis Elizabeth, John R. Logan & Son; 3d, Tritomia Pietertje Beauty, Iowana Farms, Davenport, Ia.

Cows, two years and under three:—1st, Pabst Countess Mahomet Pontiac, Pabst Holstein Farms; 2d, Rock River Johanna Changeling Rock River Farms, Byron, Ill.; 3d, Lady Climax Minita Homestead, Carl E. Rudolph.

Senior Yearling Heifer:—1st, Forum Floa Madison, Forum Holstein Farm; 2d, Whitehurst Colantha Hengerveld, A. F. Randolph; 3d, Oklahoma Model Pontiac, O. B. Tolson, Bartlesville, Okla.

Junior Yearling Heifer:—1st, Pabst American Beauty, and 2d, Pabst Prilly Creator Acanthus, Pabst Holstein Farm; 3d, Texans Triune Ormsby Paladin, Ward & Leonard, Panhuska, Okla.

Senior Heifer Calf:—1st, Aaggie Bess Jewel, Pinery Farms; 2d, Forum Diana Masterpiece, Forum Holstein Farm; 3d, Sparrow Hawk Fayne Jewel, Pinery Farms.

Senior and Grand Champion Male:—King Pietertje Jewel Korndyke.

Junior Champion Male:—Plaut Harcourt Creator.

Senior and Grand Champion Female:—Madam Artis Wayne Denver.

Junior Champion Female:—Pabst American Beauty.

Graded Herd:—1st, Pabst Holstein Farms; 2d, Pinery Farms; 3d, Carl E. Rudolph.

Breeders' Young Herd:—1st, Pinery Farms; 2d, Forum Holstein Farm; 3d, Ward & Leonard.

Calf Herd:—1st, Pinery Farms; 2d, Iowana Farms; 3d, Ward & Leonard.

Get of Sire:—1st, Pabst Holstein Farms; 2d, Iowana Farms; 3d, A. F. Randolph.

Produce of Dam:—1st, Pabst Holstein Farms; 2d, Jefferson County Asylum.

She looked at Arthur and said: "I like your cigarette holder."

Arthur removed his cigarette from his lips. "But—I don't use one," he said.

"Don't be so dense," she replied.

GIRL BEATS THE BOYS

Evelyn Petrak of Cedar Rapids, Iowa, won first prize in the Holstein calf club class in the Marion County Fair, with a calf belonging to Frank Anderson of Mt. Vernon second. Prizes of \$5.00 each were given to each contestant and in addition \$25 was donated by the J. G. Cherry Company and the same amount by the Blue Valley Creamery Company. The prizes were arranged so that Miss Peterson took \$13.50, and Frank Anderson \$12.50, George Benda of Cedar Rapids, \$11.50 and five other contestants were given \$10.50 each in the Holstein division.

THREE GENERATIONS OF CHAMPIONS

Lady Piebe Ormsby Homestead won for Milton Truwe of Amboy, Minnesota, first place in the boys and girls dairy calf contest at Mankato, Minnesota. Lady Piebe is a daughter of one of Truwe's last year's club heifer and granddaughter of the club heifer he started with four years ago. He now has five purebreds, raised while he has been a club member and they have all won prizes for him.

In the second year Holstein class, Oscar Garason of Lake Crystal won first with Nancy Prilly Segis De Kol with Udora Cords, second, and Harry Visser, third.

T. B. WORK IN PENNSYLVANIA

On August 15th the official report from the Pennsylvania Bureau of Animal Industry showed that cattle in 234 townships had been tested for tuberculosis under the modified accredited area plan and 268 other townships were awaiting these tests. Three entire counties in the state are now modified accredited areas. These are Mercer, Jefferson and Crawford Counties. All the cattle in Lawrence and McKean Counties have also been tested. Retesting in areas previously tested has been started in a number of sections and testing on the township basis has been completed in five townships in Bradford and twenty-two in Butler Counties.

NORTH IOWA FAIR

Forum Ormsby Perfection, three-year-old bull owned in partnership by Jim Hanson, Oscar Gilley and Walter Knief, won the grand championship banner for Holstein bulls at the North Iowa Fair held at Mason City, Iowa, and in addition was first prize three-year-old and senior champion.

The first prize two-year-old was King Pietertje Ormsby Buckeye owned by Hanson, Saurbry and McLauray. B. P. Stewart of Harlan exhibited the first prize senior bull calf and the Minnesota Holstein Company had the first prize yearling bull.

Frank Seeley of Arlington, Richard Hanson of Center and P. P. Stewart carried off the majority of prizes for females. The Minnesota Holstein Company having the leading two-year-old.

GIRL EXHIBITS SHOW HERD

At the recent Vancouver Exhibition, fourteen head of high class Holsteins were shown by Miss Irene Christmas, eldest daughter of A. J. Christmas, manager of Monovale Stock Farm at Sullivan, British Columbia. Her father has been a regular exhibitor at the Vancouver Exhibition for several years but this year owing to the prevalence of forest fires in the vicinity of his farm, he remained at home and sent his daughter in his place. Miss Christmas is only eighteen years old and finished her high school course last June. She expects to enter the University of British Columbia to take an agricultural course and will specialize in animal husbandry.

The young stockwoman did not have the good fortune which usually attended the Christmas stock as several of the animals she expected to bring were taken sick and were left at home. She will take her cattle on to the exhibitions at Victoria and New Westminster and expects to have better luck there as she will be able to show some of "stay-at-homes" who will be in condition when show day again comes around.

Most of the Holstein prizes went to the Agassiz Experimental Farm and to the Colony Farm at Essondale. Tsussie Rajah, recently purchased by Agassiz Farm, added another

grand championship to his string of twelve and his stablemate Agassiz Korndyke De Kol won the junior championship. The reserve grand and the reserve senior championship went to Colony McKinley Posch, owned by the Colony Farm while the reserve junior championship went to Sir Leonora Pietje Ormsby, owned by J. M. Steves & Sons of Steveston.

Beaverland Lady Pauline, last year's winner again took the grand and senior female champion for the Colony Farm with Colony Miranda Koba, reserve grand and junior champion. The Agassiz Farm had the second reserve champion in Agassiz Pricilla Sylvia, winner of the three-year-old class and Agassiz Walula De Kol, the first prize senior calf. Colony Farm won the Holstein sweepstakes with their grand champion while Agassiz took second and third prizes.

Prizes were also won by cattle exhibits made by H. W. Brown of Colebrook, Geo. N. Smith of Sullivan, each of which exhibited for the first time. The judge was the well-known Canadian breeder Neil Sangster of Ormstown, Quebec.

EDUCATIONAL OUTINGS

William Grangrood of Chassel, Michigan, won the first prize in the junior judging contest held at Chatham, Michigan, and won a purebred Holstein heifer calf given by the State Experiment Station. For county teams Gogebic was first, Schoolcraft, second, Delta, third, Ontonagon, fourth, and Iron, fifth. These teams consisting of three members each, will be given a free trip to the state fair at Detroit.

The seventh annual roundup was held at Chatham August 15, and the judging contest was won by Edward Lumbeck of Trenary who was given a purebred Holstein bull donated by the Experiment Station.

Approximately 200 farmers gathered at the upper farm in the morning to watch a marl digging demonstration. Several said that they believed they had small beds of marl on their own farms and will send samples into the station to be tested.

HOLSTEINS AT KUTZTOWN FAIR

Holsteins were the leading breed at the Kutztown, Pa. Fair. Albert Sarig of Bowers, owner of one of the largest dairy herds in the northern part of Berks County, won the sweepstakes honors in dairy cattle taking first prize for aged bull, aged herd, junior yearling heifer and junior heifer calf as well as second for junior and aged cow class. His young bulls won second, third and fourth prizes.

Animals owned by John De Long of Bowers won second for senior yearling bull, third for aged cow and fourth for senior yearling heifer. Wm. Mertz of Lyons won first for yearling bull and bull calf, senior heifer, senior yearling heifer and aged cow, as well as a number of second, third and fourth prizes.

Harvey Merkel of Reading, Frank Bower of Fleetwood and Herbert Trexler of Bowers also won several prizes. The stock were judged by P. H. Sprenkle, county agent for Bucks County and R. J. Waltz, county agent for Montgomery County.

TEN-YEAR-OLD SHOWMAN

William Grenzow, a lad of ten, exhibited a heifer calf at the Green County Fair held at Monroe, Wisconsin, and she won first in her class and was made grand champion female in the calf club division. So William entered her in the open classes and she was again the first prize senior heifer calf and was made the junior champion female by Judge R. E. Haeger, who gave her and her young owner considerable praise.

The Dane county herd furnished the first prize three-year-old bull, the first prize two-year-old, the first prize junior yearling bull, the first senior yearling heifer and their bull also carried off senior and grand male championships. The Green county herd won 18 of the 55 ribbons including three first prizes, eight seconds and seven thirds. Animals exhibited by J. D. McDonald won first as a senior bull calf, first in age cow class and of three-year-old heifers, two-year-olds and McDonald's animals took the age herd and young herd prizes as well as get of sire and produce of cow.

Last Call For

Fourth Annual Susquehanna County Breeders' Sale to be held at Montrose, Pa., September 23.

A SALE YOU SHOULD ATTEND

An event that all cattle breeders take notice of is the Susquehanna County Holstein Breeders' Sale. This year's sale will be staged at the Susquehanna County Fair Grounds, Montrose, Pa., Wednesday, September 23, starting at 12.30 P. M. This event is of special interest to all interested in the sale business as well as to men who own purebred cattle because of the stipulation that no consignor to the sale can bid on any animal in the sale no matter who they may be owned by so that the cattle offered are absolutely put up to auction for visitors to decide their selling value. The Susquehanna breeders say there are 365 days in a year and that on 364 days they may offer to buy cattle owned by their neighbors but on Sale Day they relinquish this privilege to outsiders.

Susquehanna County is the leading Holstein county of Pennsylvania and with scarcely an exception the herds are managed by men who milk their own cows and work their own farms; consequently, the cows are producers and return a substantial profit for their feed. Yet individuality has not been lost sight of. The animals raised in the herds of Susquehanna County Breeders have competed with signal success at a number of large fairs of national calibre.

In the 1925 sale there will be forty-five head of cattle picked by an expert judge with a view to combine type, breeding and production. There will be twenty-three fresh cows, a number of animals soon due to freshen and some bred heifers. Fourteen of the cows are mature, six are four-year-olds and there are twenty-five heifers, practically all of milking age. Five good bulls will be offered, two from yearly record dams.

All animals are from herds that are federally accredited or herds that are under state and federal supervision and in addition the animals are guaranteed against a 60-day retest.

Dr. L. M. Thompson of Montrose, president of the County Breeders' Association is the sale manager and to him requests for catalogs should be sent. Don't forget the date, September 23 at the Fair Grounds, Montrose, Pa.

COMING WORTHWHILE MARYLAND SALE

Maryland is not generally considered one of the leading Holstein states yet Maryland breeders have for several years been following a practice that breeders in other states might copy to good advantage and that is, in their consignment sales they put only good, unblemished, serviceable cattle, stock that will go into the buyer's herd and make good from a profit earning standpoint. In fact, their motto has been "Holsteins sold at our sales give satisfaction."

The leading counties that have practiced this commendable way of doing business are Montgomery and Frederick. Last spring a sale was held in Frederick county and the stock sold proved so satisfactory that this fall it was decided to hold a similar event in Montgomery county. This will be held at Rockville, Maryland, on September 30. Rockville is about fifteen miles northwest of Washington, D. C.

The registered cows offered have creditable C. T. A. and A. R. O. records while there will be fifteen grade cows in the sale whose C. T. A. records aver-

age 10,000 lb. milk, 300 lb. butterfat. Most of the buyers who attend the Maryland sales want animals that will soon come into profit and practically all the cows that will be brought into the ring will be fresh or soon due to freshen. In addition there are a number of young heifers and bulls of serviceable age.

All the cattle offered in the Rockville sale will come either from accredited herds or herds under state and federal supervision. The sale is held under the auspices of the Montgomery County Holstein Breeders' Association, of which the well-known breeder J. B. Diamond, Jr., is president. W. C. Snarr the Montgomery county agent is the sale manager and to him requests for catalogues and other information should be sent. Mr. Snarr is well-known to readers of THE BREEDER AND DAIRYMAN and his work in training winning teams in the International Junior Judging Contests made him nationally and internationally famous. As he will have much to do with the selection of the animals that will be offered it can be seen that they may confidently be expected to be high class in every respect.

VELVET BEANS

Feeding experiments conducted by the Bureau of Animal Industry on a government farm at Beltsville, Md., and by the Mississippi Experiment Station at Collins and McNeill, Miss., indicate that velvet beans are a valuable feed for cattle. For fattening two pounds of velvet beans were practically equal to one pound of cottonseed meal but are not so palatable. The animals prefer whole beans dry or soaked in preference to ground beans.

SELLING FROM BARRON COUNTY

Two carloads of Holstein cattle purchased in Barron County, Wisconsin, were shipped to Naperville, Illinois, by the Miller Brothers who have purchased ten loads from this territory during the past year.

Three carloads of Holsteins were also shipped to South Dakota purchased by H. M. Stephens on behalf of the Agricultural Credit Corporation of Minneapolis, a \$10,000,000 corporation organized to finance the western grain farmers to buy dairy cows.

FOR SALE—20 Registered Holstein Cows. Tuberculin Tested. No Reactors. FRED COLONY, Columbia Cross Roads, Pa.

Called to the witness stand in court, a woman refused to talk. The matter is being investigated.

Ham—"Ah hear Mose Higgins done got kicked by a mule."

Sam—"Yeah. De mule was cross-eyd, an' Mose thought it was gwine to kick his wife, so he stood still and got it in the neck hisself."

THE IOWA STATE FAIR

by Special Correspondence

More than 400,000 people paid tribute to Iowa's major industry during the week of the Iowa State Fair. The actual attendance record was 408,220, the highest in the 71 years of the organization's history.

And the Fair was worth all it cost in effort, comfort and actual expense. In former years the majority of the visitors have been coming the latter part of the week. This year the largest attendance was Saturday, and the second largest day was Tuesday. The significance of this is encouraging. Tuesday was the dairy cattle day. The spectacular events on the speed track and in the air were later, and only about half the attendance was recorded for these that were on hand when the real work of the fair was taking place.

Another change that is noticeable is the predominance of motor traffic. The railways with their reduced rates were able to catch only a small portion of the traffic. Acres of Motors were parked on the grounds and in the neighborhood. The visitors freed themselves from the discomfort and inconvenience of street car congestion and expense of travel. The attendance was drawn from all quarters of the state and from many adjoining states.

Iowa may well claim the honor of the premier agricultural fair. Her fruitful acres, her well filled pastures, her overflowing store houses all give evidence upon which such assertions stand unquestioned. A few figures will convince the reader. In the swine classes the individual entries numbered 2,271, and the boys' pig club entries would have added 300 more. The work of the junior pig and calf clubs is receiving much attention from Iowa's leading shows. The young people are very adept at showing. They become experts at an early age and they develop into enthusiastic breeders later.

In the dairy cattle department the entries numbered 555. Of these 214 were Holsteins. The Guernseys had the next largest entry list with 147. In neither case does this include groups, simply individual entries.

The list of the Holstein men showing vouchers for the quality of the exhibit. It includes, Minnesota Holstein Co., Dr.

Christopher Graham of Minnesota, Iowa Board of Control, Iowana Farms, Hargrove and Arnold, F. E. Prince of Texas, P. P. Stewart of Iowa, and a dozen smaller Iowa and Illinois farmer breeders. The breeding of K. P. O. C. appeared in many of the winners.

The three-year-old bull Castine Sir Johanna Nig Ormsby, owned by Prince of Texas was senior and grand champion.

The senior and grand champion female was Princess Piebe Mercedes Ormsby shown by the Iowa Board of Control. She won the same places at Missouri State Fair the previous week. She was also the outstanding feature in one of the most remarkable "get of sire" groups ever shown. In that class she was shown by Hargrove and Arnold as the get of K. P. O. P. In this class it is permissible to "borrow" individuals to make groups. The Board of Control herd is being managed on a new plan this season. One assembled show herd is on the road instead of having each institution out with part of a herd often overlapping or duplicating. Mr. Axel Hansen, of Savage, Minnesota was the judge. The awards are as follows:

Aged Bulls:—1st, King Pietertje Ormsby Piebe Jewell, F. J. Audlehelm & Sons, Osecola, Iowa; 2d, K. P. O. P., Hargrove & Arnold, Norwalk, Iowa; 3d, Champion Count Piebe, Minnesota Holstein Co., Austin, Minn.

Bulls, three years:—1st, Castine Sir Johanna Nig Ormsby, F. E. Prince, Pittsburg, Texas; 2d, Tritomia Pietertje Ormsby Lad, Vial & Abbott, Downers Grove, Ill.; 3d, K. P. O. P. Hargrove & Arnold.

Bulls, two years:—1st, Forum Patriarch, Forum Holstein Farm, Dike Iowa; 2d, Piebe Walker King, Dr. Christopher Graham, Rochester, Minn.; 3d, Iowana Fayne Burke, Iowana Farms, Davenport, Iowa.

Bull, Senior Yearling:—1st, K. P. O. P., 50th, Hargrove & Arnold; 2d, Princeland De Kol Butter Boy, F. E. Prince; 3d, Forum Lord Masterpiece, Forum Holstein Farm.

Bull, Junior Yearling:—1st, King Piebe 38th, Hargrove & Arnold; 2d, King Piebe 39th, Fred Pieplow, Aurora, Iowa; 3d, Teddie Dutchland Ormsby, Dr. Christopher Graham.

Senior Bull Calf:—1st, Korndyke Ormsby, P. P. Stewart, Aurora, Iowa; 2d, Cherokee Fobes Segis Lad, Board of Control, Des Moines, Iowa; 3d, Iowana Ona Ollie, Iowana Farms.

Senior and Grand Champion Male:—Castine Sir Johanna Nig Ormsby.

Junior Champion Male:—K. P. O. P. 50th.

Aged Cow:—1st and 2d, Princess Piebe Mercedes Ormsby and Rhoda Johanna Pieterje, Iowa Board of Control; 3d, Piebe Lauda Veeman Artis, Minnesota Holstein Co.

Cow, three years:—1st, Star Segis Homestead, Minnesota Holstein Co.; 2d, Pietertje Papoose Piebe, Hargrove & Arnold; 3d, Grahamholm Intensity Colantha, Dr. Graham.

Heifer, two years:—1st, Triune Ormsby Inka Pietertje, Hargrove & Arnold; 2d, Star Homestead Segis, Minnesota Holstein Co.; 3d, Grahamholm Fabulous Colantha, Dr. Graham.

Senior Yearling Heifer:—1st, Forum Floa Madison, Forum Holstein Farm; 2d, Triune Piebe Fobes, Hargrove and Arnold; 3d, Lady May Ormsby Pietertje, Jim Hanson, Randalia, Iowa.

Junior Yearling Heifer:—1st and 2d, Grahamholm Rebecca Colantha and Grahamholm Snowball Jean Colantha, Dr. Graham; 3d, Miss Piebe Wayne Mercedes, Hargrove and Arnold.

Senior Heifer Calf:—1st, May Walker Inka Segis, Minnesota Holstein Co.; 2d, Triune Ormsby Valentine, Hargrove & Arnold; 3d, Forum Diana Masterpiece, Forum Holstein Farm.

Senior and Grand Champion Female:—Princess Piebe Mercedes Ormsby.

Junior Champion Female:—May Walker Inka Segis.

Graded Herd:—1st, Hargrove & Arnold; 2d, Dr. Graham; 3d, Minnesota Holstein Co.

Young Herd:—1st, Hargrove & Arnold; 2d, Wm. Gillette & Sons; 3d, Dr. Graham.

Breeders' Calf Herd:—1st, Hargrove & Arnold; 2d, Minnesota Holstein Co.; 3d, Iowana Farms.

Get of Sire:—1st and 5th, Hargrove & Arnold; 2d, Minnesota Holstein Co.; 3d, Dr. Graham.

Produce of Cow:—1st and 6th, Dr. Graham; 2d, Minnesota Holstein Co.; 3d, Iowana Farms.

Cow Testing Association Reports

IN CRAWFORD COUNTY

Harry Wood, official tester for the Titusville Cow Testing Association says that during July a grade Holstein, owned by Clair Childs led this association by producing 58.3 lb. fat. Her average test was 4% and she is credited with 1,457 lb. milk. A. K. Hummer of Titusville, Pa. had the cow in second position with 54.6 lb. fat, 1,517 lb. milk while Will Hasbrouck had two that each produced 51.92 lb. fat, all three of these animals being registered Holsteins as was a cow owned by the Maple Grove Stock Farm, Centerville, Pa. This "Jones" cow produced 1,447 lb. milk, testing 3.5% and so is credited with 50.6 lb. butterfat. Fifteen cows each produced more than 40 lb. butterfat and thirty exceeded 1,000 lb. milk.

LUCY WAS JUNE CHAMPION

Lucy Princess Johanna, owned by David Lea & Son of Stevensville, Mont., was the June champion of the Montana Cow Testing Associations, being credited with 81.6 lb. fat, 2,211 lb. milk. The Bitter Root Association had the place of honor in the state, the twenty-four herds containing 308 cows averaging 779 lb. milk, 32.4 lb. fat.

Among the larger herds, that is, the herds containing more than fifteen cows the David Lea aggregation stood at the top with an average milk production of 1,222 lb. with 44 lb. butterfat.

AGAIN IN FIRST PLACE

Sioux Gerben Burke, owned by Sioux Falls Penitentiary again won first place in the local cow testing association by producing 1,406.1 lb. milk, 68.62 lb. fat

during the month of July. A grade Holstein is second with 55.61 lb. fat.

The Penitentiary herd was first for average production, its twenty-six purebred Holsteins averaging 893.5 lb. milk, 30.86 lb. fat. A grade Holstein herd consisting of sixteen milkers was second with 810.2 lb. milk, 27.77 lb. fat.

There were 274 cows tested during the month and their average production was 606.7 lb. milk, 22.10 lb. fat. Of the seventeen highest cows five were owned in the Penitentiary herd and five in the Lakeside Dairy which is the second highest herd.

SANILAC ASSOCIATION PRODUCER

During July, the Sanilac C. T. A. No. 1 was headed by a purebred Holstein owned by Earl Elston of Melvin, Mich. She is credited with 67.3 lb. fat, 1,497 lb. milk. The second highest cow is also a purebred Holstein. She produced 65.8 lb. fat and is owned by George Black of Sandusky, Mich. Her milk production, 2,124 lb., is the highest reported.

In group No. 2 of the association, Harvey Sparling had the highest cow for milk, a purebred Holstein that produced 1,776 lb. with 65.7 lb. fat. A stablemate, however, is credited with 76.6 lb. fat and 1,742 lb. milk and she is surpassed by a grade Durham which took first place with 77.8 lb. fat. Mr. Sparling had the second highest record two-year-old with 46.4 lb. fat and 45.5 lb. fat but the honors of the month really went to Neil Muir, as one of his three-year-old registered Holsteins stood second for milk in the entire association with 1,773 lb. and headed her class for fat with 70.9 lb.

The Sanilac County Associations rank high in the state of Michigan. One of

the herds last year stood second and another third for herd average in the entire state. Glenn Clarkson's herd of purebred and grade Holsteins averaged 13,057 lb. milk, 521.35 lb. fat while the herd of Wm. J. Bennett also of Brown City averaged 12,132 lb. milk, 501.74 lb. fat. This is also a purebred and grade Holstein aggregation. The state honors went to Jay Bowlby of Ovid whose herd of purebred Holsteins averaged 14,538 lb. milk, 539.4 lb. fat.

MARYLAND TESTING

Forrest, a purebred Holstein owned by Millard Rice and enrolled in the Upper Montgomery County Testing association was the highest producer of all the cows tested during July in Maryland cow testing association work. Forrest is credited with 74 lb. fat, 1,804 lb. milk. Homestead, a purebred owned by McKendree Walker of Gaithersburg is credited with 68.5 lb. fat, 2,282 lb. milk. Pontiac, owned by James D. King of Germantown had to her credit 68 lb. fat and Princess in the same herd is credited with 64.4 lb. fat. Purebred Holsteins are prominent in a number of associations and make a splendid showing in the entire report.

MARTIN OWNS BIG PRODUCER

P. A. Ditmer, tester of the Eastern Cambridge C. T. A. checked the production of 234 cows during July. These were contained in eighteen herds.

Star, a registered Holstein owned by O. I. Martin of Cambridge Springs, Pa., was the highest milk producer, she being credited with 2,015 lb. milk during the month. Her fat production was 60.5 lb., the second highest reported and was only four-tenths of a pound behind the leader.

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

BIG C. T. A. RECORD

Linden Clara Pasma, nine year old Holstein owned by Henry Bouchard of Hanaford Valley, Washington, recently completed a 365 day record in the Lewis County Cow Testing association. During the year she is credited with 31,240 lb. milk, 1,017.1 lb. butterfat. She was milked four times a day by Mr. Bouchard who during the year has only been away at one or two milkings.

A year ago on twice a day milking Clara, then a eight year old produced 24,603 lb. milk, 849.4 lb. butterfat. It is planned to exhibit her at a number of fairs and exhibits this fall.

Clara is a cow of medium size, very nicely and evenly marked. Her picture shows a straight backed, handsome animal that would be a credit to any breeders' herd.

ILLINOIS TESTING

A purebred Holstein cow owned by Percy Pruine, enrolled in the Ogle County Test association produced 96.3 lb. fat, 2,294 lb. milk during July, thus leading the cows enrolled in Illinois cow testing association work for that month. The Ogle County association furnished the three leaders as cows owned by Rock River Farm tied for second place with 82.1 lb. fat each, one being credited with 2,737 lb. milk and the other with 2,415 lb. The W. T. Rawleigh Company of Freeport had a purebred Holstein in fifth position with 76.8 lb. fat, 2,133 lb. milk, F. M. Barber & Son the one in sixth place with 72.7 lb. fat, 2,021 lb. milk and Herbert Senf had a purebred in seventh place with 72 lb. fat. Thus six of the ten highest producers were registered Holsteins.

The high herd average was made by eight purebred and grand Holsteins owned by A. DeGraff. Enrolled in the Lake County Association No. 1 they averaged 48.9 lb. fat, 1,450 lb. milk. The Rawleigh herd of purebred Holsteins averaged 44.7

lb. fat, 1,334 lb. milk, a fine showing for 21 cows of all ages.

Holstein cows are making a good showing in the Illinois 500 Pound Butterfat Cow Club. Progress is recorded for the first seven months, the leader, a grade Holstein owned by John Frederickson of Will County being credited with 12,813 lb. milk, 4,625 lb. fat. Brown Swiss cows stand second, third and fourth while a purebred Holstein owned by Arthur Cornue of Hebron is fifth with 412 lb. fat, 11,239 lb. milk.

WISCONSIN C. T. A. WORK

Jane, a purebred Holstein owned by L. J. Larson led the Denmark C. T. A. with 69.5 lb. fat, 1,877 lb. milk. The grade Holstein herd owned by Edward Rasmussen averaged 44.8 lb. fat.

The J. F. Roycraft herd took first honors in the County Line C. T. A. for the month ending August 3. A member of this herd was high cow with 69 lb. fat, 2,155 lb. milk. There were 521 cows tested and they averaged 770 lb. milk, 30.3 lb. fat.

Carolyn owned by J. D. McDonald of West Salem, Wis., produced 71.3 lb. fat, 1,782 lb. milk during July in the West Salem-Bangor association. The McDonald herd averaged 1,231 lb. milk and exactly 41 lb. fat.

The registered Holstein herd of C. H. Brugger and Son of Fond du Lac, was first in the Byron association for July by averaging 35.2 lb. fat, 1,040 lb. milk. A registered Holstein owned by H. A. Kemmel was second with 67 lb. fat.

Frank E. Neff of Muscoda, Wisconsin, owns the cow, Snow Ball, which led the Muscoda-Homer association by producing 69.6 lb. fat. The report of the official tester, Oscar J. Kreul, shows that nine of the ten leading herds consisted entirely of black and white cows and that the other one also contained a number of Holsteins.

For the fifth successive month the Holstein herd owned by Alfred Madsen led the Madsen-Newton C. T. A. for July with an average of 42.7 lb. fat, 1,298 lb. milk. The Holstein herd owned by James Beneshek was second with an average of 41.5 lb. fat, 1,091 lb. milk, one of his cows was high individual with 74.5 lb. fat.

Pauline, a purebred Holstein owned by Arthur Denfeld led the Wausau association No. 2 by producing 2,250 lb. milk, 72 lb. fat, a grade Holstein was second with 71.3 lb. fat.

MICHIGAN C. T. A. WORK

Howard Russell of Otsego, Mich., made a new record in the Central Allegan C. T. A. when his herd took first position for both milk and butterfat and one of his cows stood first for both milk and fat production. His herd average was 1,015 lb. milk and 40.7 lb. fat and one member of it, Millie, is credited with 1,650 lb. milk, 64.4 lb. fat. The Russell herd consists of purebred Holsteins.

The annual dairy tour of this association was held July 24, and was a day of educational benefits as well as pleasures.

Purebred Holsteins headed every class during July in the Elsie-Ovid C. T. A. The purebred Holstein herd of J. C. Coleman averaged 1,178 lb. milk, 42.21 lb. fat. A Coleman three-year-old headed her class with 55.37 lb. fat. A purebred Holstein owned by J. F. Bowlby of Ovid gave the largest amount of milk, 1,786 lb. with 60.72 lb. fat and a cow in the same herd made 63.55 lb. fat being the leader of the association. A four-year-old of the R. C. Woodard herd produced 52.27 lb. fat and a two-year-old in the same herd was credited with 45.33 lb. The Coleman and Bowlby herds together furnished the first three animals in all the respective divisions.

Nothing like taking opportunity by the horns. A bullfighter in Mexico has just died leaving \$1,000,000.

PENNSYLVANIA TEST WORK

During July 9,742 cows were tested in 31 Pennsylvania associations. More than 40 lb. of fat was produced by 1,001 cows, 268 exceeded 50 lb. fat and 622 produced more than 1,200 lb. milk.

The three highest milk producers and the three highest butterfat producers were all registered Holsteins, but strange to say these were six different animals. The largest amount of milk 2,332 lb. was produced by a cow owned by A. Begel, a member of the Carbon-Lehigh C. T. A. L. W. Veit of Erie City had one with 2,235 lb. milk and Will Hasbrouck of Titusville, one with 2,196 lb. The butterfat leader was owned by E. R. Loy of Loysville. In the Perry County association she produced 84.4 lb., the amount credited to a purebred owned by William H. Landis of East Greenville was 81.3 lb., while third place went to a cow owned by B. W. and J. C. Thompson of Clarion with 76.6 lb. The association operating in Carbon and Lehigh counties had the high cow average, the ten best cows in this association producing 651 lb. fat. The Edinboro association's best ten produced 618 lb., while 584 lb. was the amount produced by the best ten cows in the Monroe-Pike C. T. A.

A BIG AVERAGE

The Washington State Hospital herd averaged 54.1 lb. fat, 1,564 lb. milk during July in the Pierce County Cow Testing association and carried off herd honors. There were 2,490 cows tested in the 28 herds of which 121 produced more than 50 lb. fat. The association average was 1,022 lb. milk and 38.3 lb. butterfat.

C. T. A. MEMBERS PICNIC

About 200 persons consisting of members of the Neenah Cow Testing association, their families and friends gathered for the annual association picnic on the farm of the president, J. W. Arm-

strong of Neenah, Wis., on Sunday, August 9.

After dinner Reid Murphy, secretary of the Wisconsin Live Stock Breeders' Association gave a dairy cow demonstration using one of Mr. Armstrong's animals to illustrate his discourse.

The other speakers were Mr. Armstrong and D. K. Allen, district attorney, also a farmer and Holstein dairyman, who spoke on Future Farmers and the Future of Farming. Sports, stunts and races concluded the program.

ADVERTISED THE WRONG BULL

In our August 8 issue, Maple Grove Stock Farm of Centerville, Pa. advertised a pair of young bulls while in the succeeding issue, that of August 22, the advertisement made the Jones establishment offer a two-year-old heifer and one of the young bulls. At that time, however, that particular young bull, Maple Grove Uneeda Clever Glista was sold to Perl A. Gilbom of Centerville, Pa. and the bull that should have been offered, Maple Grove Uneeda King Glista, was at home in the Jones barn. In the present issue the ad appears as it should have appeared.

Both the heifer and the young bull are of good blood lines and are certainly priced low for animals from an accredited Holstein breeding establishment. Both of them are sired by Maple Grove Ybma Glista, one of the bulls in service in the Maple Grove herd. His dam, raised and tested on the farm as a nine-year-old cow, made an official record of 27 lb. butter, 641.3 lb. milk. She was sired by a grandson of the former world's champion, Aaggie Cornucopia Pauline, and every line of her pedigree runs to noted producers and high class blood lines.

The herdsire, Maple Grove Ybma Glista, was by Model Daniel Glista, whose dam Glista Dinah as an eleven-year-old cow, produced 31.26 lb. butter in seven days in the Cornell University herd where her dam Glista Coreva made a seven-day

record of 34.08 lb. butter, 593.1 lb. milk and a 305 day record of 13,310.5 lb. milk, 607.30 lb. butter.

Maple Grove Stock Farm is a working dairy establishment and the animals from it go into other herds and have made good. Being on the accredited list, having a splendid reputation for health as well as production, animals from this establishment are in demand and the reasonable prices that Mr. Jones sets on them causes them to go quickly. Yet the herd is so large that the natural increase keeps the barns filled and for this reason Mr. Jones makes his prices low so that the surplus is kept at the lowest possible figure.

A PUREBRED DAIRY TRIP

Pennsylvania dairymen living in Chester and Lancaster counties recently visited a number of good farms and compared management details. A number of purebred Holstein farms were included in the itinerary.

The Holstein herd owned by Ursinus College at Collegeville was especially interesting. Manager C. E. McCormick showed the visitors around and told the records of the animals from the cow testing association book, in which one of the animals was credited with producing over 12,000 lb. milk in a year. This herd averaged highest in the Montgomery testing association last year.

The herd of Mast Stoltzfus at Morgantown was also visited. Several cows in this herd each produced more than 16,000 lb. milk in a year and this herd has always been prominent in the local cow testing association.

Both Guernsey and Jersey herds were visited. At the farm of Harry Shenk the dairymen gathered in the shade and listened to a short talk by Dr. G. L. Omwake, President of Ursinus College and brother to C. P. Omwake a Holstein breeder of Greencastle, Pennsylvania.

Dr. Omwake's theme was the value of such a tour in which farmers get new ideas by visiting each other.

PIETJE ALCARTRA FAYNE

30.03 lb. butter, 707.7 lb. milk in 7 days, 104 lb. milk in a day, is the dam of my herdsire

IDEAL KING CREAMELLE

His sire, Dutchland Konigen Creamelle Boy, is from a cow that produced 881.21 lb. butter, 21,701.5 lb. milk in a year. Her dam has a year record of 27,625 lb. milk, 1,082.32 lb. butter and was from Creamelle Vale, 1,155.85 lb. butter, 29,591.4 lb. milk, a daughter of De Kol Creamelle, over 26,000 lb. milk in a year.

ENCOURAGING THE YOUNGSTERS

The Columbia County Holstein Breeders' Association held its annual picnic at the county farm at Wyocena, Wisconsin, on August 15, with about 200 present.

The Junior Calf Club exhibited their animals which were judged by Professor Cramer of the University of Wisconsin. Dorothy Dalton of Dalton, won first prize with Owen Moldenhauer, Cambria, second. This girl and boy were sent to the Wisconsin State Fair to have their animals compete in the open class as in the departments for animals owned by girls and boys engaged in Calf Club Work.

"Cow testing association has solved the program of production," said the speaker of the day, J. P. Riordan, who is engaged in extension work for the Wisconsin Manufacturer's Association. He also said the purebred cattle produced from ten to twenty percent more than grades because their ancestors have been more carefully kept and selected and the poorer ones sent to the butcher. He advised his hearers not to buy a cow simply because it has a pedigree.

BALEFUL "BULL" ADVERTISING

John M. Kelley now has a new illustration of the power of advertising. Readers of this journal are familiar with sign boards exhibiting the goods of a nationally known tobacco company, but a Holstein bull owned by William Bussian of Caledonia, Wisconsin, evidently was not. The Bussian bull was being taken from Caledonia to Arlington in a truck and was going along peacefully until he apparently saw a big red animal with horns and tail erect, glaring at him from a billboard. The Holstein made ready for battle but slipped and fell on his neck. Mr. Bussian stopped his flivver but found his charge lying on the floor of the truck, with his head bowed between his forelegs and his neck broken. Thus, advertising exerted its baleful influence on an otherwise docile and well-mannered Holstein.

WORK ON NOVEL PLAN

Working on a fifty-fifty basis Nels Almen and his son Arthur of Glen Flora, Wisconsin, operate the Ray Walker Holstein farm and receive one-half of the livestock increase. This stock is placed on their own farm of 120 acres of which they have only 20 acres under plow. The Almens have been developing this farm for the past 11 years. At first everything had to be carried to the place as there was no road and now they have to travel a half mile over other land to get to their buildings. When the county develops, a new road will be built close to the west line of Almen farm.

RUTH IS THE LEADER

Ruth, a purebred Holstein owned by Jude Hubber of Belt, Mont., was the highest cow for July in the Cascade C. T. A. being credited with 2,542 lb. milk, 78.8 lb. fat. There were 668 cows tested during the month.

COLONEL LYONS HARTJE SEGIS

born Dec. 8, 1923.

Study his conformation, note his straight toplines and square rump.

His sire was by Colonel Joh Lyons, his dam by the same great bull and from a daughter of King Hengerveld Hartje that produced 508 lb. butter, 11,575 lb. milk in a year of C. T. A. work.

We have been using this bull in our Accredited Herd. You know he must be good.

W. A. WITHERS
Elizabethtown. Lancaster Co., Pa.

BOUGHT IN THE NEIGHBORHOOD

Perl A. Gilbom of Centerville, Pa., on July 25 purchased a young bull, Maple Grove Uneeda Clever Glista, No. 460558. He obtained the animal from the neighboring Holstein breeding establishment, Maple Grove Stock Farm.

Maple Grove Uneeda Clever Glista is a son of Maple Grove Ybma Glista and Maple Grove Clever Coreva Glista, 349.2 lb. milk, 15.05 lb. butter in seven days as a two-year-old heifer. She is a daughter of Clever Model Glista whose dam has twice made over 30 lb. butter in seven days and has an official record of 34.08 lb. butter, 593.1 lb. milk made in a week and a 305 day record of 13,310.5 lb. milk, 607.30 lb. butter.

Maple Grove Ybma Glista, the sire of Mr. Gilbom's young herd bull is a son of a show bull, Model King Segis Koningen and his dam was a 34 lb. cow, Glista Coreva, a half-sister to Glista Ernestine, the famous producer of the Cornell University herd.

The Maple Grove herd is on the accredited list and has been for some time; in fact, this establishment was one of the first in Crawford County to foresee the demand for accredited purebred cattle and the example of this herd has been followed in the county until in the recent county-wide test, conducted by representatives of the state and federal veterinary departments, 99.2% of the cattle in Crawford County passed free and clean of tuberculosis, while we understand that as a result of further testing in isolated herds, the percentage of reactors is now so small that Crawford County is now one of the three modified accredited county areas in Pennsylvania.

MANY CATTLE NEEDED

H. H. Clark of Calexico, California, is the manager of a ranch on the Mexican border which includes 832,000 acres of which 112,800 acres are in cotton. Cotton is rotated with alfalfa. To establish a dairy herd to utilize the alfalfa around a thousand Holstein and Guernsey heifers will be purchased this year, next year and the year following. Mr. Clark is being assisted in his efforts to secure this stock by J. D. Keever, a prominent dairyman of San Francisco.

Mr. Clark says that his ranch employs from 5,000 to 17,000 persons each year, that it has an office administration building which costs \$235,000. A condensed milk plant will be erected, a half million dollar cotton seed oil mill has been built and the largest cotton gin in the world is located on it. Six thousand acres of alfalfa were put in last spring and thirteen thousand more will be planted this fall. In the office building there is a school with accommodations for 300 students, all employees or children of employees. In addition to general subjects, agricultural courses are given.

"Hubby, do you love me?"

"Yes."

"How much do you love me?"

"How much do you need?"

COLONEL JOH LYONS

A Grand Champion Show Bull.

He was by King Joh from a 33.63 lb. daughter of King Lyons.

His eleven nearest dams average 32.15 lb. butter in A. R. O. work.

Our herds are under State and Federal Supervision and contain 120 head.

Let us sell you a son of Colonel Joh Lyons or some good females bred to him.

ONGLEY SELLS PRIZE WINNER

Merle W. Ongley of Centerville, Pa., exhibited four head at the recent Cambridge Dairy Show and took two firsts and two second prizes. His first prize junior yearling bull, Ongley Sir Glista Wetzel took the fancy of Fred Pattison of Cochran, Pa., who purchased the bull to head his own good herd of Holsteins.

Ongley Sir Glista Wetzel has been used as junior herdsire in West View herd. He is a son of Maple Grove

ONGLEY SIR GLISTA WETZEL
Prize winning young bull purchased by Fred Pattison of Cochran, Pa., from Merle W. Ongley of Centerville, Pa.

Clever Koningen Glista and Pauline Wetzel, a granddaughter of Finnerne Pride Johanna Korndyke that recently closed a C. T. A. record of 516 lb. butter made as a three-year-old. In the month of January 1925 she produced 2,068 lb. milk, 70.3 lb. butter, quite a showing for a three-year-old heifer milked under working dairy conditions.

Maple Grove Clever Koningen Glista is by a good son of Glista Coreva, 34.08 lb. butter, 593.5 lb. milk in seven days and 3,310.5 lb. milk, 607.93 lb. butter in ten months.

The dam of Maple Grove Clever Koningen Glista is a 20.6 lb. junior four-year-old that milked over 10,000 lb. in a year in C. T. A. work and averaged 4.1% butterfat. She is a double granddaughter of King Pontiac Jupiter, a son of King of the Pontiacs from a good daughter of Hengerveld De Kol.

West View herd is on the accredited list so that Mr. Pattison has secured a good young bull in every way for his individuality is apparent as a glance at his picture shows.

A PRODUCING AGGREGATION

A purebred Holstein owned by B. H. Katter of Garner, Iowa, produced 76.1 lb. butterfat from 1,690.3 lb. milk during the month of July, thus heading the Hancock Cow Testing association. The Katter herd of seven purebred Holsteins averaged 1,101.74 lb. milk, 42.1 lb. fat.

A CREDITABLE HERD YIELD

On Monday, July 27, the 45 Holstein cows at the Soldiers' Home, Quincy, Illinois, gave 175 gallons of milk. This is the highest daily amount produced during the past twelve years in this herd although at one time the herd contained 58 milkers.

MODERN CATTLE RUSTLING

Cattle rustling was a dangerous pursuit often known in earlier days in the West. It was practiced on beef or range herds before the district was settled so that dairy herds were built and the arm of the law had become so strong that extensive cattle rustling was no longer profitable so was seldom practiced.

Rustling of dairy cattle on an extensive scale however, was recently reported at Puente, Los Angeles County, California. A couple of local dairymen leased cattle from a large cattle company that had the stock in pasture. One night 55 head of purebred Holstein-Friesian cattle was taken out of the pasture and the two dairymen disappeared. It was found that cattle had been sold to dairymen in nearby districts and the mode of the "rustlers" seems to have been to sell a few cattle in different places. Some of the animals evidently went to Los Angeles, probably for slaughtering, and a truck driver who admits hauling away part of the cattle at two o'clock in the morning was found and gave information which is expected to lead to the arrest of the missing dairymen. It is said that cattle obtained under federal loans have been taken by parties who are also missing and are thought to have gone with the two dairymen. There were 105 head in the herd from which the 55 animals were taken. These 55 animals are valued at \$175 a head or approximately \$10,000.

ANOTHER MURPHY HERD

Fred Murphy, widely known newspaper man and publisher of the Minneapolis Tribune, is becoming an extensive owner of purebred Holsteins. He has just started another stock farm about four miles north of Breckenridge, Minn. A large barn is now being built and he will stock it with 50 purebred Holsteins.

Mr. Murphy is just home from a summer vacation during which he visited historic places in France, Belgium and Germany.

HOSPITAL HERD LEADS

Cows in the Pierce county C. T. A. averaged 1,022 lb. milk, 383 lb. butterfat during July. There are 28 herds enrolled and they contain 628 cows. There were 249 producing 40 lb. of butterfat or more and 121 that exceeded 50 lb. The Washington State Hospital herd averaged 1,564 lb. milk, 54.1 lb. fat, by far the highest average reported. Of course, it is composed of purebred Holsteins.

A GENEROUS GIFT

Thistle Veeman Pet is the name of a seven months' old registered Holstein heifer which Dr. Bachhuber of Mayville, Wisconsin, gave to the St. Agnes hospital at Fond du Lac. The heifer was taken to the St. Joseph's Springs farm which is owned by the sisters of St. Agnes Convent.

Thistle Veeman Pet was born January 13, 1925. Her sire was King Veeman Springvale Pet and her dam was named Lady Thistle.

Spring Brook Herd

is headed by

King Sadie Vale Hengerveld Ormsby

noted sire of producers and show stock. He was by King Sadie Vale Hengerveld from a 1,085 lb. year record daughter of Sir Veeman Hengerveld.

We offer good females bred to "King."

Bear in mind that the average test of this herd ranges from 3.5% to 4.2% fat.

MILK AND HONEY

If you are passing along one of the main highways near Tabor, Iowa, you may see a sign that reads "Cedar Heights Farm: Italian bees, Poland China hogs, Chickens, Honey." There is a blank space on the board in which is written any particular thing that may be for sale and the price. The proprietor of this farm is Clyde Edgerton.

The Edgerton farm contains ninety acres and the main business centers around the Holstein herd. Clyde handles the production end at Cedar Heights Farm. He carries the milk into Tabor where his brother, the other member of the firm, handles the marketing end.

The Edgertons have a little store at Tabor and operate a milk delivery route. They sell considerable milk over the counter and deliver 100 quarts of bottled milk on their daily route. Second to their milk trade is their honey business for this is a farm dealing in milk and honey. They have 38 stands of bees at the present time and sell the product in the comb.

Although the herd consists of good producers with Ormsby blood predominating the practice is to raise the heifers and sell the bull calves for veal purposes.

HOLSTEINS FOR ORPHANS' HOME

Six purebred Holstein cows were recently purchased by the Soldiers' Orphans' Home of Davenport, Iowa, from the herd of Ralph Branson of West Branch, Iowa. Superintendent F. L. Treat selected the animals, taking one cow that recently made the highest cow testing association record in the state, as well as another with a record nearly as large, a daughter of the second cow and three others.

Mr. Branson has a small farm and not much stable room. He preferred to sell some of his cattle instead of enlarging the barn and will concentrate his efforts to build a herd on the offspring of a few cows of one family strain. The Branson herd has headed the list of herds enrolled in Iowa testing association work and several times has furnished the high individual.

FROM NEBRASKA TO WYOMING

Sam Barton of Gering, Nebraska, recently sold three purebred Holstein heifers and a young bull to Sam Fowler of Lingle, Wyoming for \$800. Mr. Fowler already owns a good Holstein herd. His father who is connected with the packing industry in England, helped him select the animals from the Barton herd.

WANTED—20 fresh cows by October 1st, either grades or purebreds. Must be fresh during the months of October and November and from an Accredited Herd or one that has passed one Clean Test. Box X, c/o The Holstein Breeder and Dairyman, Harrisburg, Penna.

—When we begin to class as "bunk" every new idea, we are old, whether the calendar calls us 30 or 80.

What the Other Fellow Says:

Ingersoll, Ont.

Dear Mr. Mead:

We wish to thank you for your very good work at our dispersal sale held on May 6, 1925.

We don't believe that any auctioneer could have done better work, or secured higher prices for our herd of Holsteins.

We did not feel that we had been robbed when we paid you, no hinting that you would like an extra day's pay for a trip.

We will surely recommend you to our friends, and please remember that first, last and always we are for the "Live Wire Auctioneer," Mead.

With the kindest of personal regards.

Very truly yours,

W. RIVERS AND SONS,

Per W. R. Rivers.

GLENN R. MEAD

East Aurora, New York

**TRAVERSE ECHO SYLVIA KING**

Heads our ACCREDITED Herd.

His dam, a 33-lb. cow, averaged 102 lb. milk for 30 days and has a 35-lb. and a 32-lb. daughter.

Five of his seven nearest dams have one or more 30-lb. daughters.

He is bred to cows that return a substantial profit for the cost of their feed and care.

W. B. KENNEDY & SON,
BRADFORD CO., WYALUSING, PA.

In C. T. A. Work

a member of this herd produced 12,321 lb. milk, 391 lb. FAT in 8 months.

22 sisters of our senior herdsire averaged in year test over 20,000 lb. milk and 900 lb. butter.

A Sister of our junior herdsire made a World's Record in the 10 months division.

The Herd is under State and Federal Supervision and passed a CLEAN TEST.

Will sell Cows, Heifers or Calves.

Raymond D. Strickland
R. D. Nicholson, Pa.
Susquehanna Co.

**KEYSTONE PRINCESS SEGIS**

One of our foundation cows—a combination of size, type and producing capacity.

Others like her in our ACCREDITED Herd. You know the rest.

L. L. Allis,
Bradford Co. Rummerfield, Pa.

DEMAND FOR MINNESOTA HOLSTEINS

Northfield Holsteins continue to be in demand and 23 head including 16 grades and seven purebreds were shipped July 6 to G. R. Skinner of Columbia, Mo. The cattle came from the herds of E. J. Thye, Russell Grisim, Charles Messenger, Chris Peterson, A. H. Bruce, and W. P. Lee and the shipment was handled by A. J. Lashbrook, president of the Northfield Holstein Club.

The Worthington Creamery Products Company of Worthington, Minn., took a herd of 14 females and one young bull from the Carleton College herd. A model farm will be equipped near Worthington in an effort to introduce better dairy practices among the patrons of the creamery.

S. A. Smith, a local commission man recently shipped 15 purebred Holstein heifers for the farm at Roberts, Wisconsin owned by the Minneapolis Tribune. They were purchased from David Erb of Cannon City, Minn. Mr. Smith shipped ten grade Holsteins and a purebred bull to a dairyman at LeRoy, Minn.

AN IOWAN HERD PARTNERSHIP

Saurbry and Hanson of Oelwein, Iowa have a good herd of purebred Holsteins which has been built up by steady work and careful planning. Alfred Hanson owns the farm and George Saurbry and his family have been on the place for ten years. They started with red cattle using a purebred Holstein sire. The herd was enrolled in the local cow testing association and in four years a high producing grade herd was built.

Then they decided that purebreds would be better, had an auction sale and then purchased several purebreds at an average price of \$204. They found the purebreds produced more than the grades and in addition there was a demand for surplus stock. Saurbry and Hanson raise purebred Duroc Jersey swine and Rhode Island Red chickens. Mrs. Saurbry looks after the poultry and keeps from 125 to 175 hens on which she has accurate records of cost and production.

GUERNSEY DAIRY BUYS HOLSTEINS

The Adohr Certified Milk Dairy of southern California, which is said to be the largest certified Guernsey dairy in the world, recently purchased a number of purebred Holsteins in the Skagit Valley and will use them to produce milk to supply a demand started by doctors in a large Los Angeles sanitarium.

The Adohr Certified Milk Dairy herd consists of 1,500 head of purebred and grade Guernsey cattle of which more than 800 are milking. The buyer for this concern is H. K. Martin.

The largest purchase of purebred Holsteins was made from the accredited herd of Justamere Farm owned by T. J. Lockhart and Son of Mount Vernon, Wash. Other animals were purchased from the herds of W. F. Fisher, H. F. Hastings, Chester Nelson, Ed Lagerlund and Albert Egbert.

GET THE SON OF Hillside Rhododendron

35.15 lb. butter, 543.8 lb. milk in 7 days, 2,759.7 lb. milk, 147.95 lb. butter in 30 days, a show cow of magnificent proportions.

He was sired by Charlevoix Rookwood Prince, son of Sir Pietertje Ormsby Mercedes 40th and Rookwood Zwellie Riblet, 728.3 lb. milk, 33.93 lb. butter in a week; 3,019.6 lb. milk, 135.83 lb. butter in 30 days. She and her dam both have good yearly records.

This bull was born April 26, 1925, is right in every way, about 7/10 black, well marked. His dam and sire's dam average 34.54 lb. butter, 636 lb. milk in 7 days; 141.89 lb. butter, 2,889.6 lb. milk for 30 days.

HILLSIDE AND SPRINGBROOK FARMS
Trucksville, Pa.

Herd recently passed Another Clean Test.

**FRED MODEL GLISTA NETHERLAND**

heads this purebred herd which has been Tuberculin Tested and passed CLEAN THREE times.

You'll like this bull as well as the females in my herd which is run from a standpoint of combined production and individuality.

I sell good stock at reasonable prices.

H. A. STOTTLEMYER
Hagerstown, Md. R. D. 5.

Loyalsock King Jemima Mechthilde

My junior herdsire is a son of King Jemima Segis from a daughter of King Segis Pontiac Count.

His three nearest dams have year records that average 922.13 lb. butter, 20,816 lb. milk.

This herd is and always has been run from the dairyman's standpoint. You can depend upon the animals you buy from me to make a profit for you.

Accredited stock for sale.

FOR SALE—Registered Holsteins. From heifer calves to fresh cows. All sired by or bred to grandson of King of the Pontiacs. OLIVER F. ELLSWORTH, Dallas, Pa.

A REVOLVING CALF CLUB

A. H. Liebers and M. M. Lauritson, of the Nebraska Dairy Development Society and County Agent M. L. Gould have been spending two weeks in the dairy district of Wisconsin where they secured 250 calves about six months old for the calf club boys and girls of Nebraska. This calf club movement is fostered by the Union Pacific Railroad and one of the towns in each county through which this railroad passes will receive a calf.

The calves are from tested herds, the low record average of which is not less than 300 lb. butterfat. Some of the calves are from a herd with an average record of 482 lb. fat. The calves will cost laid down in Nebraska about \$40 per head.

The plan is as follows: The business people of the town subscribe an amount to pay for the calves that are to be placed at that point. A committee places the animals with boys and girls whose surroundings and conditions meet with its approval. The calf belongs to the organization but if the party taking the calf carries out certain rules regarding feed and care and turns over to the local committee the first heifer offspring, the mother becomes the property of the boy or girl who cares for it. The offspring go back to the organization and will then be given to another boy or girl in the community, thus making an endless chain. The management of the Union Pacific will run a dairy special train and leave a well bred bull at each of the points where the calves are placed. The service of this bull will be available without cost to the owner of the calf.

WHICH IS YOUR KIND?

Dairy specialists at the Michigan State College have been comparing Michigan cow testing association figures. In comparing the records of five daughters, full age basis, of the Holstein sire, King Flint, 222954, with their dam, it is revealed that the average increase of the daughters over their mothers was 2,197.4 lb. milk containing 94.4 lb. fat, an increase of 30 per cent in milk production and 34.9 per cent in butterfat production.

On the same basis it was found that the five daughters of the Holstein bull Swigartdale Korndyke Hengerveld 188567 produced on an average of 13,364 lb. milk containing 587.6 lb. butterfat, or 25.4 per cent more milk and 67.5 per cent more butterfat than their dams.

These are records of increased production, but the records of five daughters of the Holstein sire, Seek No Farther Combination 164005 reveal a different story. Their average milk production was 8,114.4 lb. milk containing 268.6 lb. butterfat or 11.9 per cent less milk and 14.8 per cent less butterfat than their dams.

"Consider the fly, how he grows;
He has no conscience, and pride is not
in him;
As a mathematician he is the world's
chief multiplier,
And India with all her millions
Is not more teeming than he."

ON THE HILLS

of Tioga County have been raised some of the best Holsteins that ever came from New York State—big healthy cows that yield large quantities of rich testing milk.

The following breeders of healthy Holsteins whose establishments are located near Owego and within easy driving distance of Elmira, Ithaca, Binghamton or Waverly can supply you with good cattle and invite inspection of their herds.

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

This contest will close October 8th. Send your cattle pictures in to-day. Don't be too late.

YOU SHOULD BUY

A Son of the Grand Young Sire

ROYAL JOHANNA KORNDYKE

who is not only siring big producers but also splendid individuals. We believe he is the best son of Colantha Johanna Lad 8th.

We offer a handsome young bull, six months old, about two-thirds white and with a splendid topline.

His dam, at 26 months old, produced in A. R. O. test, 20.45 lb. butter, 444.2 lb. milk. She is now a fine three-year-old and I am confident she will greatly increase this record a little later.

Her dam produced 19.6 lb. butter, 403.7 lb. milk in a week when only 23 months old and is from my grand old cow, Inka Veeman Artis, three times above 30 lb. butter and three times above 600 lb. milk in a week.

Price on the young bull, ONLY \$125, and he is from an Accredited Herd that has never housed a reactor.

Pennsylvania's Oldest Holstein Herd

Mapleway, Forty-Five Years Old and Getting Better Every Year

FOR forty-five years there has been a high class herd of Holstein-Friesian cattle on the Mapleway Farm, now owned by the Miller Brothers at Clark's Summit, Pa. This is not only one of the oldest Holstein herds in the United States but is, we believe, the oldest in the state of Pennsylvania. During the many years of its existence it has been operated continuously as a dairy herd and has never been dispersed at either public or private sale. We believe there is only one other herd of purebred Holsteins now existent in this country that has been established for a similar period for which such a statement can be truthfully made. Furthermore, it was founded with cattle imported from Holland and nearly all the present members of the herd are direct descendants of those early imported foundation cows.

In 1880 we find the Lackawanna Breeders' Association importing cattle from Holland and bringing them to northern Pennsylvania. The original members of the Lackawanna Breeders' Association were L. W. and John L. Stone, E. G. and G. M. Carpenter and J. W. Miller. J. L. Stone was secretary of the association when it was originated. In 1901 Mr. Stone, who was then teaching agriculture at Cornell University, his Alma Mater, rented his farm and sold his interest in the Lackawanna Breeders' Association to A. F. Siegfried, who continued to be a member of the association for several years.

John W. Miller, father of the Miller Brothers, was a brother-in-law of Edwin G. Carpenter, in fact he married Mr. Carpenter's sister and Mr. Carpenter married his sister.

Members of the Lackawanna Breeders' Association owned purebred Holsteins before they joined together to form the organization. When they became associated they were instrumental in bringing a large number

of purebred Holstein-Friesians to this country, buying the best cattle they could find in Holland from dairy owners, both men and women. Thus in Volume 2 of the Dutch Friesian Herdbook we find that they imported stock from K. N. Kuperus and Minnie S. Vee-man, both of Marssum, Friesland, also from C. K. DeGroot, St. Anna, and J. S. Stienstra, of Dronrijp, Friesland. Among the importations of 1882 were the cows DeGroot, Klassje, Teakje 2d and Dijkstra 2d. The last three of these names have been preserved in the names of animals registered to-day.

In 1884 the Lackawanna Breeders' Association

brought to this country the females Vander Lei 3d, Vander Lei 4th and Eeke 2d, the first born in 1881, the second in 1882 and the third in 1183. DeGoede, Tromp, Winkje, Iduna, Koopal and Brada were other animals imported, and with the exceptions of the last two, founded families of which members can be found in many herds in northern Pennsylvania.

ARTHUR J. MILLER AND HIS FAVORITE COW

The Miller Brothers inherit the skill and judgment as well as the farm and business of their parents. Instead of developing into dealers they wisely, we believe chose the nobler occupation of cattle breeders and thus they not only preserved the blood of the animals brought to this country but also preserved the type and producing qualities, in fact, we believe that they improved on the originals by selecting the best animals with which to perpetuate the herd.

History shows that a large number of herds in northern Pennsylvania and southern New York have been founded on animals secured from the Miller establishment and in turn other herds have been founded on these, so that the Miller herd and the blood on which it was founded has greatly influenced the Holstein-Friesian breed in America.

So many good sires have headed this herd during the near half century of its existence that we shall only take time to touch on a few of them. Nearly everyone of them, we believe, has daughters in the Advanced Registry for although the Millers have done comparatively little testing, they seem to have followed the practice of trying out the daughters of most of their herdsires. Then animals bred in the Miller herd have gone into other establishments and there made good records. Count Clothilde Beauty was in service in this herd more than thirty years ago. His sire was Clothilde 5th's Netherland and his dam was Witkop 2d's Beauty, a daughter of Prince of Monroe and Witkop 2d, two animals registered before the present Holstein-Friesian Herdbook was established.

A bull that had considerable influence on the herd was Johanna Clothilde's

Lad, a son of Sarcastic Lad and Johanna Clothilde, a daughter of Johanna 4th and therefore a granddaughter of the original Johanna cow. Johanna Clothilde's Lad had a number of good daughters one of which, tested nearly twenty years ago, is credited with producing 15,778.8 lb. milk, 657.71 lb. butter in 365 days. One of his sons was the noted show bull, Dijkstra Beauty Lad.

Earle Korndyke DeKol headed this herd for a short time. This bull was a son of the famous Belle Korndyke, and therefore an older brother of Pontiac Korndyke. He became famous as the head of the Cornell University herd and his descendants include the biggest producers at that establishment.

A number of animals in the Miller herd are descendants of Korndyke Butter Boy Count. This bull was by Korndyke Butter Boy Prince and his dam, Yanka Boon 2d's Countess, was a daughter of Lilith Pauline De-

Kol's Count that has an official seven-day record of 28.60 lb. butter, 542.7 lb. milk.

Early in 1904 a number of Holstein-Friesians were imported into this country from Holland, the only important importation since the early 'eighties.' The greatest of the cows in this bunch was Pietje 22d. A few months after she was in this country she dropped a son, Woodcrest Pietje. A son of this bull from Della Pender, a

cow of Korndyke blood, was named Pietje Pender and was bred to a number of the Mapleway cows so that many of the present members have descended from him.

Hillside Sir Lyons and Hillside Pietje Vander Lei Lyons were two bulls of related blood lines that were used in this herd. Hillside Sir Lyons was from Hillside Dodo, a cow with a seven-day record of 31.94 lb.

butter and an average of over 83 lb. milk daily. Hillside Pietje Vander Lei Lyons was from Pietje Vander Lei Superb, 26.83 lb. butter in seven days. Both of these bulls were sons of Dutchland Sir Lyons Hengerveld, a son of Colantha Johanna Lad and Blanche DeKol Hengerveld, a 33 lb. daughter of Pietertje Hengerveld's Count DeKol. These two bulls had considerable influence on the herd.

The most noted sire ever in Northern Pennsylvania is King Pontiac Alcartra Pietje. The great work of his daughters in official test and of his offspring in the show ring is familiar to our readers and he is justly regarded as one of the greatest sires ever in the Keystone State. He was a son of King Segis Pontiac Alcartra and his dam, Fairmont Zerna Segis Pietje, as a junior four-year-old made a seven-day butter record of 35.61 lb. which was the world's record in her class at time of making. The Millers bred a number of their cows to this sire and when the Dr. Hand herd was dispersed they purchased a number of calves by him, one of the very few instances of females being added to this herd.

From the Robens' herd Sir Veeman Lola Hengerveld was obtained. He was a son of Sir Veeman Hengerveld and K K S V Lola Hengerveld, who was by King Korndyke Sadie Vale from a 31.32 lb. four-year-old daughter of Sir Veeman Hengerveld. The offspring of this bull were of extra good quality so to succeed him the Millers went back to the Robens' establishment and obtained King Sadie Vale Hengerveld

Ormsby. His sire, King Sadie Vale Hengerveld, was by King Korndyke Sadie Vale from S V H Belle DeKol, 37.38 lb. butter in seven days as a three-year-old, the highest record daughter of Sir Veeman Hengerveld. The dam of the Sadie Vale bull was S V H Effie, 28.33 lb. butter, 617.3 lb. milk in a week as a junior four-year-old, 1,085.60 lb. butter,

HARRY MILLER AND KING BEAUTY SYLVIA LYONS

BELLE, HARRY MILLER'S CONSTANT COMPANION

JOHN MILLER AND HIS HORSE
John is the oldest of the fifth generation of Millers to live on Mapleway Stock Farm

24,050.5 lb. milk in a year as a five-year-old. She was by Sir Veeman Hengerveld from a 25 lb. daughter of Sadie Vale Sir Ormsby that made 789 lb. butter, 17,803 lb. milk in a year. It is worth while noting that both grandsires of S V H Effie were sons of Sadie Vale Concordia, the first cow to make an official seven-day record of over 30 lb. of butter.

Count Lenox Posch and King Beauty Sylvia Lyons are two of the bulls now in service in this herd. The King was obtained when the noted show herd of B. F. Jones and Son was dispersed and was purchased in partnership with several near-by breeders. His dam, A. Beauty Lyons, as a junior three-year-old made 26.13 lb. butter in a week averaging over 80 lb. of milk a day and he is not only a show animal but is of lines of breeding that has produced a number of great record cows. The sire of the King is King Echo Sylvia Model, a son of Champion Echo Sylvia Pontiac from Belle Model Pietje 2d, a 28 lb. cow backed by a large number of high record ancestors. King Beauty Sylvia Lyons as a calf was exhibited at the New York State Fair where, in a very large class and comparatively unfitted, he won second prize.

Count Lenox Posch was from Beulah Pontiac Posch, a cow that as a junior two-year-old produced 21.25 lb. butter, 457.7 lb. milk in seven days and averaged over 65 lb. milk a day for thirty days. She was again tested as a junior four-year-old and is credited with a record of 26.44 lb. butter, 619.6 lb. milk in a week and for thirty days averaged over 80 lb. of milk daily. She is of Canadian breeding and is sired by the well-known sire and show bull, Count Paul Posch.

Count Lenox Posch was sired by King Valdessa Lenox, who was by King Pontiac Segis Korndyke from Valdessa Ormsby DeKol, a 38 lb. daughter of Valdessa Scott 2d, the first cow to make over 40 lb. of butter in a week. Anna Lenox DeKol 2d, the dam of King Valdessa Lenox is a cow of splendid individuality and a famous record maker. As a nine-year-old she is credited with 1,341.62 lb. butter, 29,162.7 lb. milk in a year, and as a ten-year-old with 1,192 lb. butter and over 25,000 lb. milk. She has a number of great short time records including one for seven days of 35.26 lb. butter, 1,755.4 lb. milk.

Space forbids saying very much about the females of the herd so we will only mention a few, but it is only fair to say that, with scarcely an exception, every animal is deserving of special mention, they are of such high quality and so even in type as well as quality.

Winkje Pontiac Alcartra would attract your attention on account of the straightness of her back, her large, square udder and her prominent milk and udder veins. She is nicely marked with a fine, clean-cut head and is a very attractive animal. She is a direct descendant in the female line of a cow the Millers imported from Holland more than forty years ago and for seven generations her dams have Advanced Registry records. She is a daughter of King Pontiac Alcartra Pietje, is the third highest record daughter of that sire and is also a descendant of Earl Korndyke DeKol. Tested as a three-year-old, she made a seven-day official record of 26.04 lb. butter, 530.5 lb. milk.

Amleto Butter Girl 2d is a cow that you will particularly notice on account of her wide horns and wide

hips, as well as her general individuality. She is a daughter of Hillside Sir Lyons and has never been officially tested but one of her daughters, Mapleway Lyons Amleto Pietje, has made a number of large records and is credited with producing 29.10 lb. butter, 480.3 lb. milk in seven days. Mapleway Alcartra Eeke Veeman and Mapleway Korndyke Veeman Hengerveld are granddaughters of Sir Veeman Hengerveld. The first one is dark in color, the second one light, but both are splendid individuals and big producers.

A cow that particularly attracted the attention of the representative of THE BREEDER AND DAIRYMAN when she stood in the stable was Mapleway Segis Pietertje DeKol. There are about half a dozen sisters to this cow in the herd and all are good. Their sire, however, was slaughtered when he was only a two-year-old, before his value had been ascertained.

Johanna Korndyke Beauty was the only old cow in the herd at the time of our visit and was around twelve years old. She is a light-colored cow with very short horns, and the size of her udder and her milk veins indicate that the reason she is still in the herd is her value as a producer. The Mapleway cows are real dairy animals with lots of constitution and vitality.

MAPLEWAY EEKE LYONS
First prize aged cow at the 1923 and 1924 Lackawanna County Fairs.
A former member of the Mapleway herd.

They have square rumps and udders with well placed teats of good size, fine heads and wide hips and are not only producers but also high class individuals. The Millers have exhibited at the Lackawanna County Fair for many years and always carried off their share of the prizes. A former member of the herd, Mapleway Eeke Lyons, carried off the grand championship at that event in 1923 and 1924 and was afterwards sold. She was a daughter of Hillside Sir Lyons, her dam was a daughter of Pietje Pender and her maternal granddam was a daughter of Johanna Clothilde's Lad from a daughter of Count Clothilde Beauty, which indicates not only the value of the Miller lines of breeding but also that the sires they have used in this herd have been of high caliber and that breed conformation and type has been transmitted from one generation to another.

The Millers weigh the milk of their cows every day and consequently know how much each animal produces every year she is in the milking dairy. The product of the dairy is shipped to the Abington Dairy Company at Scranton, and has been for many years, in fact members of the original Lackawanna Breeders Company founded the Abington Dairy so that they could reach the consumers with the products of their herds.

So many good sires have headed this herd during the near half century of its existence that we shall only take time to touch on a few of them. Nearly everyone of them, we believe, has daughters in the Advanced Registry for although the Millers have done comparatively little testing, they seem to have followed the practice of trying out the daughters of most of their herdsires. The product of the dairy is shipped to the Abington Dairy Company at Scranton, and has been for many years, in fact members of the original Lackawanna Breeders Company founded the Abington Dairy so that they could reach the consumers with the products of their herds.

Mapleway Farm has been owned by the Miller family since 1802 when John Miller came from Connecticut and settled on it. John lived to be 82 years old. His son, Benjamin, was born on the farm March 4, 1809. He was ordained in the Baptist Church and was the first minister of that denomination in his section of the country. He was a farmer and a business man, as well as a preacher, and with his son, John W., became interested in the Scranton Dairy Company. He married Frances Carpenter and they were the parents of Harry B. and Arthur J. Miller, the present owners of this establishment.

Harry B. Miller and Arthur J. Miller are both married and live in separate houses on the farm. Harry has no children, Arthur has several. Both his boys are interested in livestock and his oldest son, John, owns a handsome riding horse with which he often brings up the cows.

Harry Miller is interested in raising German Police dogs and owns two females, Belle and Crim. Belle is dark in color; Crim is lighter colored and is a sister to Strongheart, the well-known Police dog of the movies.

The Millers are working farmers and dairymen, and any time you visit Mapleway Stock Farm, which is situated near Clarks Summit and is only a few miles from Scranton, you will be sure to find one and generally both of them at home. The Mapleway Farm contains 175 acres, and is typical of the dairy farm land of Northern Pennsylvania. Although stony, it is in a good state of fertility, owing to the fact that it has always been carefully farmed since it was first cleared, and that for many years it has been a dairy farm. The Mapleway Herd is accredited and was one of the very first herds in Lackawanna County to be placed on the accredited list.

When the founders of the Holstein-Friesian Registry Association, Inc., met at Harrisburg, July 31, 1925, they recognized the value the Miller herd had been to the purebred Holstein industry in America and elected Arthur J. Miller a director of that organization, thereby not only honoring that sterling dairyman, but also conferring an honor on their own association in which only Holstein breeders who own purebred, registered Holstein-Friesian cattle and who follow dairying as their major business are eligible to be elected to the Board of Directors.

Protest Dairy Regulations

A NUMBER of Maryland dairy farmers recently protested to Comptroller R. Walter Graham and Market Master Henry E. Holmes against enforcement of the ordinance prohibiting the sale in Baltimore of milk products made from milk that has not been pasteurized, selected or certified. At a recent meeting in Baltimore they formed a state wide organization and elected as officers the following: President, Joseph H. Volz, Stemmers Run; Treasurer, John F. Langenfelter, Philadelphia Road; Secretary, Henry Betz, Stemmers Run.

Some men are born great, some achieve greatness, and the great majority do not trouble themselves about it.

Plus Abbekerk Raymondale

PLUS ABBEKERK RAYMONDALE is the name of a young bull acquired by the Maryland Dixie Breeding Circuit. This circuit was formed by twelve of the leading Holstein breeders of Maryland who joined in the purchase of this young bull from the Raymondale Farm, Vaudreuil, Quebec.

Following is the names and addresses of these breeders with the number of animals each has in his herd:

	No. in Herd
Joseph Bradley, Rockville	50
T. A. Barnsley, Olney	10
Douglas Diamond, Gaithersburg	50
J. B. Diamond, Jr., Gaithersburg	50
H. H. Fraley, Rockville	30
Dr. J. Thomas Kelley, Germantown	115
James D. King, Germantown	40
H. H. Ladson, Olney	10
Walter Magruder, Gaithersburg	10
Wm. McCeney, Silver Spring	15
McKendree Walker, Gaithersburg	40
Mount'n View Farm, Germantown	95

Total 515

Plus Abbekerk Raymondale was sired by a son of the world's Holstein champion, De Kol Plus Segis Dixie,

PLUS ABBEKERK RAYMONDALE
Holstein sire owned by the Maryland Dixie Breeding Circuit.

1,730 lb. butter in a year. His dam is Raymondale Abbekerk with a record of producing 1,285 lb. butter in a year. Her dam, Pietertje Abbekerk De Kol, has four daughters that have each made over 30 lb. butter in a week and has a fifth daughter that made 26 lb. butter in seven days, as a two-year-old. One of her daughters, Het Loo Pietertje, was the first Canadian two-year-old to make 30 lb. butter in seven days, and made world's records for both seven- and thirty-day butter production. At the Milwaukee National Sale in 1918 she was struck off at \$12,500 to Joy Morton of Chicago and Lisle, Illinois, but it is reported that she never dropped a live calf for her new owner.

The year records of the dam and sire's dam of Plus Abbekerk Raymondale show an average of 1,507.5 lb. butter, which is said to be the highest that can be shown for any bull in the world. He is large for his age for it is reported that he weighed 1,625 lb. before he was 21 months' old.

It is not what has been said about the Extravagant, Political management in the Holstein-Friesian Association that is working to the destruction of that organization. It is rather the fact that what has been said is true.

Breeders Give New Association Hearty Welcome

IT is now more than fifty years since the first society for preserving the blood of the Holstein breed was established in this country. At that time there were so few purebreds that the Herd Register was conducted in connection with the work of promoting and creating a market and demand for the breed. Some of the men who met at Harrisburg, Pa. on July 31st have been connected with the breed almost the entire time there has been a breed record association in this country and they have lived to see the breed multiply and increase in numbers until conditions warrant the organization of a Registry Association that confines its activities strictly to maintaining a Herd Register to preserve the purity of the blood of the breed, free from any selling and promoting projects. It is not surprising then that they utilized their knowledge and experience when drafting the By-laws of the new breed Association.

The By-laws of the Holstein-Friesian Registry Association require that, before a breeder can become a Director of the Association, he not only has to own purebred Holsteins but must follow dairying as his major business. Thus 100% of the directors will be dairy farmers. This is in marked contrast to the Holstein-Friesian Association of America which has sixteen directors, only one of whom can be classed as a true dairyman, one who follows dairying as his major business. There is considerable difference between a Board of Directors of which 6.25% are dairy farmers and a Board of Directors of which 100% are dairy farmers. It has been estimated that about 90% of the men who own purebred Holsteins follow farming and dairying as their major business. This 90% will naturally ask themselves which Board of Directors is likely to best manage and guide an Association which is concerned with dairy animals and the dairy business.

The ease with which owners of purebred Holsteins may transfer their records from an Association in which they have no voice in the management and which has been conducted chiefly in recent years as a sale and promoting organization by Politicians and Dealers to an Association which they themselves manage has been made very simple, easy and inexpensive and is attracting the attention of Holstein owners all over the country, who are eager to place the purebred Holstein cattle industry on a Sound, Economical, Business basis.

All that is necessary to transfer their registered animals from the old Association to the new Association is to send in the certificates showing registration in the old Association, and in case they did not raise the animal also the Transfer Certificates, together with a remittance of 25 cents per animal if they are a member and 50 cents if they are not a member. Certificates showing registration in the new Association will be issued and the old certificates together with the new ones will be returned to them. This also applies to animals registered in the Canadian Holstein-Friesian Herd Book. After the breeder has transferred his

registered animals to the new Association he can proceed to register and transfer the offspring in the regular way through the new Association.

The fees for registering an animal, male or female, in the Herd Book of the Holstein-Friesian Registry Association is \$1.00 provided the animal is not over one year old at the time the application is filed in the office of the Secretary. In the old Association the charge is \$1.00 for females and \$2.00 for males. If a male is over one year old, members are required to pay a registration fee of \$4.00 in the old Association and non-members \$8.00. In case a non-member wishes to register a bull that is over one year old and transfer the ownership in the old Association it would cost him \$8.00 to get the animal registered and \$6.00 to transfer the ownership if the date of sale was three months previous or \$14.00 to register and transfer this one animal. These prices are absolutely prohibitive and the breeders feel that the money thus collected has been used to promote Speculation and pay the expenses of the Extravagant management.

The new Association, being a breeders organization not operated for profit or to collect increased fees to use the funds for other purposes, charges one-third the transfer fee, charged by the old Association to transfer the ownership of an animal.

The charge for transferring animals in the old Association is \$1.50 to members if the Application is filed three months from date of sale, and \$3.00 after that date. Non-members are required to pay a \$3.00 transfer fee and \$6.00 if the application is filed after three months from date of sale.

The Holstein-Friesian Registry Association charges its members 50 cents and non-members \$1.00 for recording a transfer of ownership, if the application is filed within three months from date of sale; a double fee is charged if more than three months have elapsed.

This reduction in fees is possible because the new Association has a Business Form of Government, the same as Corporations, Railroads and Banking Institutions.

It has a voting System where every member has a right to a direct voice in electing officers and fixing fees and in the Association's management.

Its offices are located under one roof in a centrally located city, easily accessible from all points.

It has a Board of six Directors, all of whom are breeders and dairymen, conservative men, who, because of their training and business experience on the farm, do not permit Speculation and Extravagance, and who apply this same business code of ethics in managing the Association.

The old Association has a Board of sixteen Directors, only one of whom can be classed as a breeder and dairyman. The other fifteen are not dependent on the returns from their dairy for a livelihood even if they owned cattle. The Board is made up chiefly of Millionaires and Politicians with a few Cattle Merchants and the Association's financial statement

shows that, notwithstanding the increase in transfer fee from 25 cents to \$1.00 and then to \$1.50, the Association has been operated at a loss of over \$137,000.00 for the last three years.

The old Association has adopted a Political Form of Government which not only disfranchises every member by depriving them of their direct voice in managing the Association but the cost of electing delegates and paying their expenses to attend the annual Convention places a financial burden upon the Association of upwards of \$20,000.00 annually. The interest from the present Reserve Fund will all be used up and more to pay the expenses of perpetuating this form of government, leaving the tremendous expense of the sixteen Directors, the State-Paid-Secretaries and the innumerable officers to come out of the pockets of the dairymen who patronize this Association.

Is it any wonder then that, after the breeders had refused to register and transfer barely half of the natural increase of their herds because of these things, they joined together and organized a new Association which they manage and which they control and the sole purpose of which is to maintain a Herd Register to preserve the purity of the blood of the breed and provide this service to its members at cost?

The necessity and demand for a new Registry Association is clearly shown in two ways.

First, the reports of the Secretary of the Holstein-Friesian Association of America, giving the number of Registration and Transfer Certificates issued, shows a great falling off in the number of certificates issued, until at the present time barely half of the natural increase of the breed is being recorded. More than 131,000 transfer certificates were issued in 1919 as compared with 87,000 issued last year. Breeders have been compelled to sell their good purebred animals at grade prices because the dairymen who bought them, and many times they themselves, refuse to deal with the old Association because of the excessive fees and because they were displeased with the manner in which it was being managed and, further, because they were deprived of their rights to a direct vote and of their right to do other things that they as members are justly entitled to do.

Second, the demand for a NEW REGISTRY ASSOCIATION is clearly set forth in the opinions voiced by the breeders in the many letters they are sending to the Secretary of the new Association with their Membership Fee and requests for Registration and Transfer Application blanks, as a few of the letters, which are quoted below, will show.

Sept. 7, 1925.

HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION,
P. O. Box 30, Harrisburg, Pa.
Gentlemen:

Received your letter inviting me to become a charter member of your Holstein-Friesian Registry Association.

I am more than pleased to hear of this move. Surely the doings of the leaders of our Holstein-Friesian Association of America are very discouraging and I might say, their way of spending and robbing us of our rights and property is simply shameful.

I would be interested to know how many members you have by this time, if your Association expects to get ahead, it should be strong from the start to beat those Millionaire Cattle Dealers.

I am yours for a new association,
Missouri Breeder.

HOLSTEIN-FRIESIAN ASSOCIATION, INC.,
Harrisburg, Penna.
Gentlemen:

Enclosed find check for ten dollars, (\$10.00) as membership fee to your association. Have read with interest the literature received from you recently, and will say that I never applied for membership in the old association, for reasons set forth in your folder.

Please send me some Registry Application Blanks, as soon as convenient, as I have three animals that should be registered soon, two of which will be one year old in October.

Wishing your new association success, and feel assured that a step is now taken in the right direction, I am

New York State Breeder.

Sept. 8, 1925.

MR. HOWARD C. REYNOLDS,
Harrisburg, Penna.
Dear Sir:

I see by the HOLSTEIN BREEDER AND DAIRYMAN that there has been a new Holstein Breeders' Association organized, as it is just what we have been talking for some time, which we think is a just cause. We have been robbed and bulldozed long enough. We have quite a number of Holstein breeders in this county. They have been at a standstill for some time, not only discouraged but disgusted with the injustice on for the last three or four years, so the time is ripe for a change. There is a milk condensary here so here is a large percentage of Holsteins.

Now if you will send me some of your printed matter and applications for membership and I will distribute them among the breeders of this vicinity.

Isabella County, Michigan.

Sept. 8, 1925.

HOLSTEIN-FRIESIAN ASSOCIATION,
Harrisburg, Penna.
Dear Sir:

I just read your letter and by-laws of your new Registry Association and I heartily approve of same. I am starting in the Holstein-Friesian breed in a small way, started with calves and I think that the Association at Brattleboro, Vermont is a robbery. I am not a member, I just sold a pure-bred young bull and I had to pay them \$7.00 for the registry and transfer papers, this is discouraging to a new breeder. I have decided to sell my calves and young stock without being registered and transferred if I have to pay \$7.00 for same.

Send to me registry and transfer blanks and other necessary blanks that I will need.

Illinois Breeder.

Sept. 8, 1925.

Dear Sir:

Received your letter and by-laws to-day and I think you are starting a real movement according to your By-laws. I have twenty head of Holstein-Friesian milk cows and that old Association is a throat cutter when it comes to registering and transferring their offspring, so if you will mail me about twenty-five transfer blanks and thirty registry blanks, I will have them registered in your Association. I may join your Association after considering it more and talking it over with some of the dairymen in this locality. I suppose in the Eastern States you have been working hard to get this started but nobody around here has known anything about it, and we are right in the heart of Wisconsin's dairy section.

Hoping to hear from you soon,
Jefferson County, Wisconsin.

Sept. 12, 1925.

MR. HOWARD C. REYNOLDS,
Harrisburg, Penna.
Dear Sir:

Received your invitation to join the new record Association, and inclose check for \$10.00 as fee. I am now and for more than twenty years past have been a member of the old Association, and for this year up to September 11th, have sent them more than \$700.00 for recording and transferring Holstein

Sept. 7, 1925.

cattle and for several years past have bred, registered and transferred probably as many if not more than any other single breeder in America, and I feel that a good portion of this expense could be avoided, if the Association's mission was one of a recording Association only.

An Old Wisconsin Breeder.

Sept. 14, 1925.

Dear Sir:

Inclosed find check for membership fee and fee for one cow which I want registered as soon as possible. I received your letter in regards to the new Association and thought I would join as I have some more to get registered soon. Please give this your prompt attention as I would like to have them at once. If check to that amount is not right let me know and I will make it right. I went by the Article of the Constitution and By-laws which was sent me. Hope you will receive this and it will be right.

Carroll County, Maryland.

Sept. 14, 1925.

HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION, INC.,
Harrisburg, Pa.
Gentlemen:

Some little time has passed since receiving an opportunity to join the new Association simply as I had not read The Boiled Down Facts. Since have and learned how I can become a member and have my herd that is registered in The Holstein Political Association to The New Holstein-Friesian Registry Association, Inc. transferred for 25 cents. Have been breeding cattle for a number of years but never became a member of the so-called Political Association.

At present I have eight head of purebred Holsteins that are past one year old that have not been registered. Also eight head that I have paid the non-member fee of \$3.00 for registering.

The other day I heard a man that has been in the Holstein business for a good many years say he was glad the new Association has been organized.

Wishing the new Association and its members success, am enclosing my check for \$10.00 and ask to become a charter member.

From Hamilton, New York.

Sept. 15, 1925.

EDITOR,
HOLSTEIN BREEDER AND DAIRYMAN:
Dear Sir:

Will you please tell me by return mail where I can get an application blank and copy of by-laws of the new Holstein Association, and when they will be ready to register cattle. I have some cattle to register and would be very much obliged to you for this information.

From Carlisle, Pa.

Sept. 5, 1925.

HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION, INC.,
Harrisburg, Pa.
Dear Sir:

I received a letter from you yesterday telling of the new Association. Now I have sold three that I have not registry papers for will I have to make out new papers as well as they do?

Will you please let me know at once and I want to get them as soon as I can.

Clearfield County, Pa.

Just nine days later the same breeder wrote:

Sept. 14, 1925.

I am sending you check for \$14.00 as membership fee and for registry and transfer as per enclosures.

Columbus, Wis.

Sept. 14, 1925.

DEAR SIR:

I would like to have you send me Transfer and Registration Papers as soon as possible, have sold two calves and must furnish papers.

I am very glad about your association and you will make a success.

Wertheimer Owns Producing Herd

SUELLA, a purebred Holstein owned by Charles Wertheimer of Frederick, Md. took first place for August in the Frederick County Cow Testing Association by producing 86.2 lb. fat, 1,835 lb. milk. Mr. Wertheimer had six cows that made 40 lb. or more fat during the month, and the Wertheimer herd consisting of 17 purebred Holsteins, led for herd average with a production of 36.2 lb. fat, 1,080 lb. milk.

Mr. Wertheimer has long been regarded as one of the leading Holstein-Friesian breeders of the state of Maryland and owns a splendid producing herd, as their work in the Frederick County Cow Testing Association shows. He has been known as a careful and conservative breeder, and is ever solicitous of the welfare of the men and herds that constitute the rank and file of the Holstein Breeding Industry.

When the organizers of the Holstein-Friesian Registry Association met in the Senate Caucus Chamber at Harrisburg, July 31st of this year, they recognized the sterling work of Mr. Wertheimer by electing him to fill the office of first vice-president of that organization.

Warning to Breed Organizations

CONDEMNATION of attempts to advertise or sell milk under breed designations such as "Golden Guernsey," "Gentle Jersey" or "Holstein White Nectar" was implied in the action taken at a recent meeting of the Executive Committee of the American Dairy Federation. After some considerable discussion a resolution was passed in this form.

Resolved, That it is the opinion of the Executive Committee of the American Dairy Federation, that attempts to sell milk under breed designations is attended by possible danger to the entire industry, and that the tendency to do this should be carefully studied by the various interests."

Another important decision of the committee was that no business meeting of the Federation would be held at Indianapolis during the National Dairy Show and that all Federation activities at that event would be concentrated on the dairy banquet to be held on the evening of October 15th. The annual meeting of the Federation will be held in Chicago on Wednesday, December 2d, as provided for in the articles of the association.

The dairy banquet at the time of the National Dairy Show will be held at the Athenaeum Club at six o'clock. Banquet tickets will be \$2.50 each. The principal speaker will be the Hon. James E. Watson, United States Senator for Indiana and the program will include dairy songs and parody radio talk.

Eradication of bovine tuberculosis is important to both the producer and the consumer because the disease is transmissible from animal to man by the consumption of infected milk and meat. Medical authorities estimate that 25% of tuberculosis in children comes from tuberculous cows. Recognizing the importance of bovine tuberculosis in relation to the control of this disease in the human family, health authorities have prescribed regulations to exclude the products of diseased animals from the public food supply.

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance. Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

SEPTEMBER 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Koenig is Out

ANNOUNCEMENT has just been received that Mr. Fred. A. Koenig, who for the past few years has been carrying the title of "Director of Extension," and drawing a salary and expenses from the Holstein-Friesian Association equal to that of its worthy Secretary, has resigned.

Aside from the REPUDIATED POLITICIANS perhaps Mr. Koenig has been the most unpopular office holder in the Holstein-Friesian Association. The history of Mr. Koenig's connection with the Holstein-Friesian Association is marked by a series of mistakes or rather the promoting of projects which have cost the breeders large sums of money and as far as any benefit to the breed or to the Association is concerned they have proven to be failures, because since Mr. Koenig assumed office the price and demand for registered Holstein-Friesian cattle have constantly decreased and the Association, we believe, has been operated at a loss each year with possibly one exception.

It has been inferred many times that Mr. Koenig was able to hold his position not because of his particular ability or possible desire to serve the members but rather because he was loyal to the Political Management, served their interests and worked in harmony with Mr. Maurice Prescott and Mr. Frank T. Price of the *Holstein-Friesian World*, who, as Editor and Business Manager of the organ that officially represents the Political Dealing Element and Extravagant Management, contributed their share towards helping to disfranchise the members and increase the fees.

Mr. Koenig's resignation or dismissal, whichever the case might be, we feel comes too late. "It is like locking the barn after the horse is stolen."

It is the things that have been done by the management since Mr. Koenig has been affiliated with the Association that have not only resulted in the present unhealthy state of affairs that exists in the purebred Holstein industry but have forced the plain breeders and dairymen, who constitute 90% of the membership of the old Association, in order to retain their self

respect and restore the industry in which they are engaged to a legitimate business standard, to withdraw and start a new organization.

Farmers as Lawmakers

PROFESSIONAL men in general, and lawyers in particular, have always assumed that they are especially qualified as law makers. The fact that lawyers are trained to express their thoughts while on foot or to use language to induce others to follow certain lines of thought has caused many organizations to select legally trained men as candidates to represent them, particularly in law-making bodies. Yet, a legally trained mind is not always a good business mind. The legal mind looks for loop holes and evasions and often quibbles over the meaning of words, while the business mind goes straight to the point.

Farming is a business that touches many things and farmers are often good business men. That a legislature dominated by farmers may give a state or county a better and more efficient government than one dominated by legally trained minds is a little foreign to the ideas of most people, yet the Hon. Martin V. Calvin, statistician for the Georgia Department of Agriculture, who has served his state as a member of both branches of the General Assembly and is a bright scholar and a brilliant writer, has this to say of Georgia farmers as legislators and financiers.

"If one wishes to find an illustration of taxes equalized, let him turn to the appropriation and the tax acts which were developed and perfected by the 'alliance legislature,' 1890-1891, composed almost wholly of farmers. That body of legislators did more for public and higher education, more for the military organizations of that period, more for all the people than any of its predecessors or successors. This is not an invidious comparison, but a statement of an authorized fact. That notable body of legislators equalized taxes, and provided a system whereby the practice inaugurated could be successfully continued."

Change in Exchange Upsets Figuring

WHEN the United States Tariff Commission resumes its active sessions which it is expected to at an early date, one of the early cases to come before the Commission will be the butter tariff. The former chief of the agricultural economics section, Louis B. Zapolon, has resigned to join the food research council of Leland Stanford University, but he filed a final report several weeks ago. Before the report is made to the president by the Tariff Commission, Mr. Zapolon's report will be discussed. A decided change in Danish exchange has wiped out the difference in cost of production that existed when the investigation was made. Under these circumstances the view that the commission will take is problematical.

Standard grades facilitate trading, create confidence, and stabilize market conditions. Standardization tends also to keep off the market inferior products which serve only to depress the market for the better grades, but which may be used to advantage on the farm.—*Secretary of Agriculture Jardine.*

One Question That Might Not Be Clear.

THERE will be no interruption or break in the pedigrees caused by breeders transferring their business from the OLD to the NEW Association. Animals recorded in the new Association will be on evidence furnished that they are direct descendants from cattle registered in other recognized Herd Books of the breed.

For example, if a breeder, who has his cattle registered in the Holstein-Friesian Association of America or the Holstein-Friesian Association of Canada desires to transfer his business to the new organization he would forward the Registry Certificates to the office of the Secretary of the new Association at Harrisburg, Pa., and if he were a member, upon the payment of 25 cents for each animal, certificates showing registration in the new Association will be issued.

These Certificates would carry the Herd Book number in the new Association as well as the Herd Book number that appeared on the register certificate issued by the other Association.

In tracing the pedigree of a descendant of any particular animal in after years, it would be followed down through the Herd Books of the new Association until the entry of the original animal that was registered in both the new and old Associations and carried a Herd Book number in the new Association as well as in the old and, if it was so desired, the pedigree could be traced in the old Association back through the Herd Books until the original importations from Holland. This importation would be recorded in the Herd Book of the old Association if the animal was registered in the Holland Association and by referring to their Herd Books the records could be traced back until the time the first animals were recorded.

Thus, it is plain that there will be no interruption in the pedigree or blood lines resulting from breeders transferring their business to the new Association.

When the Canadian breeders organized the Canadian Association the Holstein-Friesian Association of America made the mistake of refusing to recognize their records, not only the Canadian records based upon cattle brought from Holland into Canada but to show you how unjust they were they also refused to honor the Certificates issued by the Canadian Association based upon animals recorded in the Holstein-Friesian Association of America and WHAT HAPPENED?

The breeders supported the Canadian Association and it grew and prospered. After the Holstein-Friesian Association of America saw that the Canadian breeders meant business and that they could get along without any recognition from the American Association the Holstein-Friesian Association of America was glad to arrange to honor the Canadian Association records in order to have their own records honored in return.

The new Association does not anticipate that there will be any difficulty in having their records recognized by the various authorities or in arranging a mutual agreement with the Canadian Association. They do not expect, however, that at first, their records will be accepted by the Holstein-Friesian Association of America. It is only fair to believe that the old Association

will assume the same attitude towards the new Association that they did towards the Canadian Association when it was first organized, but whatever their attitude might be will little concern the breeders who join the new organization because to them the Holstein-Friesian Association of America will be a back number.

To the breeders who join the new Association it will completely replace the old Association as far as a Registry Association is concerned but, of course, the new Association will not indulge in the promoting of cattle auctions and will be managed and controlled by dairymen.

Minnesota's Junior Project Champion

MYRTLE HIMRUM of Lake Park, Becker County, Minn., won the grand championship in the junior dairy calf club contest at the Minnesota State Fair. Two hundred and four two-year-olds, yearlings and calves were entered. Myrtle had the best two-year-old purebred Holstein with which she won the champion honors in showmanship.

In making the award the judges took into consideration the placing of the animal, the personal record kept by the exhibitor, a written story, "How I Raised My

MYRTLE HIMRUM and WOODVILLE BESS
Miss Himrum and her pet won first in both the calf club and open classes.

Calf," and the scores in an oral examination on care and feeding. Myrtle passed this examination with a perfect score of 100 per cent.

Myrtle is 20 years old and has been in club work six years. She owns nine head of cattle and has charge almost entirely of the dairy herd on her home farm. She gives all the credit to club work for her success; without it, she says, she would never have thought of starting a dairy herd.

Among the prizes won by Myrtle and her heifer was a cream separator valued at \$100, a clipping machine and a free trip to the National Dairy Show at Indianapolis.

Coming Dairy-Oleo Battles

EFFECTIVE operation of the new Wisconsin law enacted at the last session of the legislature to prohibit the use of dairy products in the manufacture of oleomargarine has been interfered with by the filing of a test case in the courts of Wisconsin by the Jelke Oleomargarine Company of Chicago. A

The breeders supported the Canadian Association and it grew and prospered. After the Holstein-Friesian Association of America saw that the Canadian breeders meant business and that they could get along without any recognition from the American Association the Holstein-Friesian Association of America was glad to arrange to honor the Canadian Association records in order to have their own records honored in return.

The new Association does not anticipate that there will be any difficulty in having their records recognized by the various authorities or in arranging a mutual agreement with the Canadian Association. They do not expect, however, that at first, their records will be accepted by the Holstein-Friesian Association of America. It is only fair to believe that the old Association

will assume the same attitude towards the new Association that they did towards the Canadian Association when it was first organized, but whatever their attitude might be will little concern the breeders who join the new organization because to them the Holstein-Friesian Association of America will be a back number.

To the breeders who join the new Association it will completely replace the old Association as far as a Registry Association is concerned but, of course, the new Association will not indulge in the promoting of cattle auctions and will be managed and controlled by dairymen.

Minnesota's Junior Project Champion

MYRTLE HIMRUM of Lake Park, Becker County, Minn., won the grand championship in the junior dairy calf club contest at the Minnesota State Fair. Two hundred and four two-year-olds, yearlings and calves were entered. Myrtle had the best two-year-old purebred Holstein with which she won the champion honors in showmanship.

In making the award the judges took into consideration the placing of the animal, the personal record kept by the exhibitor, a written story, "How I Raised My

MYRTLE HIMRUM and WOODVILLE BESS
Miss Himrum and her pet won first in both the calf club and open classes.

Calf," and the scores in an oral examination on care and feeding. Myrtle passed this examination with a perfect score of 100 per cent.

Myrtle is 20 years old and has been in club work six years. She owns nine head of cattle and has charge almost entirely of the dairy herd on her home farm. She gives all the credit to club work for her success; without it, she says, she would never have thought of starting a dairy herd.

Among the prizes won by Myrtle and her heifer was a cream separator valued at \$100, a clipping machine and a free trip to the National Dairy Show at Indianapolis.

Coming Dairy-Oleo Battles

EFFECTIVE operation of the new Wisconsin law enacted at the last session of the legislature to prohibit the use of dairy products in the manufacture of oleomargarine has been interfered with by the filing of a test case in the courts of Wisconsin by the Jelke Oleomargarine Company of Chicago. A

temporary restraining order was issued and the first phases of this action will be an effort on the part of the oleo manufacturers to make the injunction permanent. Whether the Wisconsin court in which the action is brought decides for or against the oleo contention, the case is likely to be appealed to the higher courts and may finally be appealed to the Supreme Court of the United States.

The California legislature during its recent session passed a law somewhat similar to the Wisconsin statute. The fight there has taken the form of an appeal to the popular vote as California has a state referendum law. A petition is being prepared and probably will be completed and filed so that a short, sharp campaign will be waged between now and election day in an effort to secure a popular approval for the oleo law which received a large majority of votes in both houses of the California State Legislature.

Closing of the Picture Contest

OCTOBER 8th the amateur picture contest which has been running for the past few months will positively close. A large number of good pictures, both of individual animals and of groups have been received, but we would like still more. Every subscriber to the BREEDER AND DAIRYMAN is eligible to compete. Send in pictures of your best cows singly and in groups, and you may win the first prize of \$25.00. Remember there are twenty prizes.

All pictures thought worthy will be reproduced in THE HOLSTEIN BREEDER AND DAIRYMAN. That is one of the reasons why we want pictures of single animals to be marked with the name and number of the animal and group pictures to be accompanied by a letter telling something about the animals of which herd they form a part. The more information you can give us about the animals, either singly or collectively, the better story we will be able to write about them. In order to give contestants in every state an equal opportunity we will consider photographs mailed on or before October 8th eligible to compete for the prizes. The postmark on the envelop will govern the mailing date. Send your photographs along. Don't wait until it is too late, and then say "If I had competed I would have won a prize."

PARTHENA NUDINE

First prize aged cow, senior and grand champion female at the Nebraska State Fair. Owned by Modern Woodmen of America Sanitarium, Woodmen, Colorado.

Sadie, Champion Grade Cow Killed By Lightning

THE South lost its greatest grade Holstein cow and the whole dairy industry a great producer, when on September 12th an electric storm occurred at Herndon, Va., and Mr. Ben Middleton's cow Sadie was killed.

A production of 60,956 lb. milk and 2,308 lb. fat in three successive years in the Fairfax County Association made the Middleton herd famous, and all dairy

THE FAMOUS GRADE HOLSTEIN SADIE
60,956 lb. milk, 2,308 lb. fat in three successive
years of C. T. A. work.

cow owners will regret the loss of such a wonderful animal.

Fortunately Sadie left a daughter to which she has transmitted her dairy capacity. This heifer, Katherine, has made with her first two calves 23,675 lb. milk and 881.2 lb. fat and with her third has milked 70 lb. a day. Perhaps as a mature cow she may fill Sadie's vacant place as the champion grade cow of the South.

Tuberculosis Immunity a Possibility

MAKING cattle immune to tuberculosis by a vaccination called the Spahlinger serum, developed at Geneva, is the subject of a movement on the part of livestock men in Great Britain to experiment with their own cattle in the hope that immunity may become possible for their herds.

A committee has been appointed to arrange for the experiments in Great Britain and to carry out the recommendations of a group of experts who visited the Spahlinger experimental farm at Geneva.

Tests will be made at the Geneva farm on animals immunized there in 1916 to see if the animals are still immune nine years after vaccination.

Tests will then be made on 200 animals in England under normal conditions by practical men from a farming point of view, by skilled bacteriologists and veterinary surgeons. Should these tests prove successful it is probable that steps will be taken for supplying vaccine for the immunization of all young cattle in the British Empire.—*The Idaho Farmer*.

Profits will take care of themselves if you watch costs and markets carefully.

The most effective regulation is not so named.

NOT ABOUT COWS

Using Old Newspapers

MUCH might be written on the subject of the place of the newspaper in the life of to-day. Like many conveniences, we have become so accustomed to it that the only time we give it a conscious thought is when it fails to reach us. If any one doubts this, let him work in a post office and listen to the loud complaints when the favorite city daily fails to arrive, or even when the local "Astonisher" gets into the wrong box. The American people are a nation of newspaper readers, some liking their news highly spiced and seasoned, others preferring the more conservative and ladylike sheets. It is a theme that might easily lead one on to an interesting discussion.

But even after the daily paper has fulfilled its original purpose of supplying information, there are many uses in the average household to which it can be put.

UNDER CARPETS

In those almost forgotten days, when people nailed carpets to the floor and used matting in the bedrooms, the year's supply of newspapers was carefully hoarded for the spring cleaning when fresh padding was needed for underneath the carpet.

FOR PANTRY SHELVES

Where is the housekeeper who has not saved nice, clean newspapers for use on the pantry shelves or in the cupboards? When placed on the tops of cupboards so high as to be hard to clean, they may be easily lifted off and burned, leaving shelves needing little or no washing.

One dear old soul who had taken the local paper for over thirty years was asked by the ambitious editor what she liked most about it. Her reply was that when folded once it just fitted her pantry shelves!

TO PROTECT FLOORS

Near the kitchen sink, where much standing and splashing often mean a badly soiled spot in an otherwise fairly clean floor, papers may be spread, then removed and burned when the morning's work is done. This is much easier on the floor than being scrubbed. If the ice-man arrives with his big rubber boots just as the back porch has been cleaned, a few newspapers spread where he walks, then removed when he has gone will leave the floor immaculate.

TO KEEP VEGETABLES CRISP

To keep vegetables nice and crisp when one has no ice, they should be sprinkled with water, wrapped in waxed paper, then in newspaper. If kept moist they will keep crisp for several days.

FOR CLEANING

The greasy top of a stove, it should be rubbed with a wad of newspaper while the stove is still hot, then wash with soap and water. The zinc tops of tables

may be cleaned in the same manner, though kerosene oil must be used as a cleanser.

CLOTHES HANGERS

One of the most novel uses of old newspapers may be a great convenience when one is a guest at a hotel or even in a home, and lacks sufficient clothes hangers. Roll a newspaper tightly, tie in the middle with a string, making a loop by which to hang it on the closet nail, and use as an ordinary clothes hanger. By using a large enough newspaper and a strong enough string, quite heavy wraps may be cared for in this way.

There are no doubt many other useful ways in which labor may be saved by this familiar friend. Almost every housewife has her own particular way of doing her work, her own short cuts and labor-saving devices, but in many homes the daily paper fills a place or rather a number of places, that would be vastly vacant were it not delivered at the door every morning.

Keep These in Mind

TO CLEAN WHITE CANVAS SHOES

Use a good white soap and a little ordinary laundry starch just as you would the regular cleaner. You get the same results and it is a lot cheaper.

SQUASH

When baking squash, wash it first, without cutting, put into the oven and cook till tender. Cut, remove the seeds, mash and season with butter, cream, salt and pepper. All the flavor is thus left in the vegetable and it is a much easier way to prepare it.

TO COVER JAM

When making marmalade or jam, cut rounds of tissue paper the size of the jars soak each, separately, in vinegar, and lay close over the top of the preserve, and cover in the usual way. This will prevent it becoming moldy.

FLOWER BULBS

Once again the time has come to lay in a supply of bulbs that will insure beauty and fragrance next winter when the thermometer is hovering around zero. It pays to get good, named varieties. Suppose they cost a quarter apiece—that is, hyacinths; the pleasure and satisfaction of having the most beautiful bulbs in the neighborhood is well worth it. Every home should have a few.

There is only one real test of an idea and that is to submit it to the condition of use. Examine all the objections that can be brought against it. Weigh these against the advantages and thus estimate its probable value in the field in which it is to be used. Modify the idea if the test shows that it is necessary. Give it up if it fails and cannot be modified. Don't hang on to a worthless idea simply because you happen to like it or because it is your own.

From the Dairy Pasture to the Consumer's Table

The U. S. Department of Agriculture's National Dairy Show Exhibit

The distances between green pastures, dairy barns, milk depots, creameries, dairy markets, and the dinner table, have been greatly lessened through improvements in transportation during the past twenty years. But with all this advancement it is not often possible to view at one glance all the links in the chain from production to utilization of dairy products. This year's exhibit of the Department of Agriculture at the National Dairy Show, to be held at Indianapolis, October 10th to 17th, makes it possible to see all of these links from one vantage point.

The form of the exhibit is markedly different from anything shown by the department at a dairy exposition. It might be described as a cross section of the American dairy industry. A typical prosperous dairy farm, with its fields of alfalfa and corn, its house and garden, and its well-improved buildings, is the first scene in the exhibit. It reminds one of a farm where hard work and much thought have been rewarded by the formation of a real home and a productive farm and herd.

The fields and farm house are shown on the canvas. The former are so laid out as to require the least amount of time in getting the crops and livestock to and from them. The fields are not only fenced for cattle, but most of them are hog-tight as well. The large stacks of alfalfa and the many shocks of corn can be seen in the picture. These show, in a large measure, that the farm is very productive, as all good dairy farms should be.

This farmer's house is not pretentious, but its setting in a fenced yard with appropriate landscaping gives it the appearance of inviting rest and quiet. There is plenty of opportunity for sunlight to give cheeriness on wintry days, yet there are many shade trees to give protection from the heat of the summer sun.

Going from the house to the barns we pass the milk house, which is constructed in actual size to show the proper kind and arrangement of equipment for a medium-sized herd. This milk house is not directly connected with the barn, being joined to it by a covered passageway only. In the barn is the farmer himself, telling the story of how his farm was developed. He says:

"When I bought this place, ten years ago, it was in a run-down condition. The buildings were poor and inconvenient, and the fences were badly in need of repair. I made a guess at the trouble—it was poor cows. I had helped to husk the corn from these very fields before I bought the place, and the yield was only 15 or 20 bushels an acre. The neighbors told me these fields had been in corn year after year for 15 years; very few cattle had been kept, no hogs, and no sheep. The only livestock on the place was work horses and chickens; the hay and grain were in the main sold off the farm, and very little manure was returned to the fields. No wonder the yields were low.

"One of the first things I did after moving here was to get a herd of cows. I got only a few at first, because there was not enough feed on the place to keep many cows. The first year I put in some cowpeas to get legume hay; I also prepared a few acres for alfalfa and clover.

"My first cows were the best grades I could buy with the little money I had then. They were a mixed lot, and I have only two cows left now of that original bunch. You see them there in stalls 16 and 17. They were among my best cows at one time but now they are my poorest; and while I owe a lot to those old cows for the money they have made for me, still I'll have to give their places to some better producer before long. I have several of their daughters and granddaughters here, and they are all better than their dams. This is because I was fortunate in securing prepotent sires.

"I have always used a purebred bull, and have stuck to the same breed from the start. I do not believe it pays to switch from one breed to another.

"I purchased my first bull from a neighbor who had used him for four years. His two-year-old daughters were milking

better than their dams, but my neighbor did not want to continue to breed the bull back to his daughters and could not keep two bulls, so he sold him to me. It was one of the best buys I ever made. Some farmers are afraid to keep old bulls, but we built an inexpensive stall and lot for him that made it unnecessary for us ever to handle him and yet made it possible for him to get plenty of exercise and fresh air. He was as safe as any bull, the way we handled him. When we could no longer use him because of the number of his daughters in our herd, we sold him to a breeder of purebreds who had heard of the records of our cows through reports of the cow-testing association.

"We could not find a proved bull to suit us after we sold the old bull, so we visited several purebred herds and finally selected this bull we have. His sire was very prepotent in getting high-producing daughters. His dam was a fine cow, with a nice udder and a good record, and furthermore, her sire had a long list of high-producing daughters. With so many proved breeding animals close up in his pedigree it is probable that he will be prepotent in transmitting high production to his daughters.

"I increased my herd gradually as I was able to raise more feed. I bought a few, but mainly I kept the most promising heifers from my best cows. I also kept a close record of the herd, especially since my oldest boy learned at school how to run the Babcock test and keep records. That was six years ago. Now I am a member of a cow-testing association which employs a trained tester to keep records of every cow in the 26 herds in the association.

"Long ago I learned that even when I milked the cows myself I could not tell what each cow would produce for the year without keeping records. Here is a good example. Take cows 16 and 12—both look like good money makers. But records tell me that No. 16 returns in a year only \$45 above feed cost, while No. 12 returns \$85. As soon as I get a better cow to take her place, No. 16 will have to go to the butcher. By studying the records of my cows I have been able each year to weed out the least profitable ones, and have built up my herd until now my 20 cows average over 400 lb. butterfat a year.

"While the better bulls and better cows are largely the cause of this higher production, it is certain that better food is also a factor. I always aim to have some good legume hay and silage available all winter; and in the summer and fall, too, if the pasture is short.

"Of course I count on pasture to furnish a large part of the food in spring and summer. I practice a rotation of crops that helps to maintain good pasture. Then by top-dressing every fall and mowing twice each season to keep down weeds I have been able to keep the pasture good even in dry season. At first I made the mistake of not putting enough cows on the pasture. The grass would grow so tough in places that the cows would not eat it. Now I have learned that by fairly close pasturing there is no waste and I can get more feed from the same acreage. Even when on pasture I give my cows some grain and the mixture is much the same as they are getting now. With a good grain mixture and plenty of alfalfa and other legume hay I do not find it necessary to feed any minerals, except salt, of course, which I keep before them all the time.

"I take pride in keeping my herd healthy, and in comfortable, healthful surroundings. I have found that this pays not only in larger production, but also in clean, wholesome milk. Clean milk means smaller losses in sour milk and rejected milk; and it also gives me the satisfaction of knowing that my family and customers have a pure, health-giving food. There has not been a tuberculin test reactor for five years, and my herd has now been on the accredited list for three years. In fact, every herd in this county will soon be on the accredited list.

"Plenty of water is available, not only for the cows to drink, but also to wash the floors of the stable, and to wash the udders and flanks of the cows before milking.

"Every day the cows are cleaned with a curry-comb and

brush. This keeps them in good condition, and aids in producing clean milk. I clip my cows around the flanks, bellies, and udders. Grooming and feeding are done far enough in advance of milking so that the dust has settled in the stables by milking time. The milkers with clean, dry hands, milk quickly into sterilized, small-top pails. They wear clean, washable outer clothing, which is worn for milking only.

"After each cow is milked, the milk is taken immediately to this milk house, where it is quickly cooled and placed in a storage tank with ice and water around it. When I first began dairying, I strained the milk in the barn, and had no proper place to keep it, but I soon learned that it was necessary for me to have a separate place to handle it if I were to produce the highest-quality milk. Now all the milk is handled in the milk house, and we find it just as easy as the old method. The milk house is near enough to the barn to make us little extra work in carrying the milk directly to it, but you will notice that there is no direct connection between the barn and the milk house, and it was carefully placed so that there are no contaminating surroundings.

"All the utensils are thoroughly washed with lukewarm water, scrubbed with hot water and a good washing powder and then rinsed again in clear water. The final step in their treatment is to sterilize them thoroughly by steaming or boiling for five minutes. They are then immediately inverted to drain and dry.

"The milk is kept in ice water until it is time to send it to the station. It is then placed in a covered truck or covered with canvas to protect the cans from heat and dust."

As the farmer tells his story the visitor will see the cows in their stanchions and read their records of production and the feed charts. The side of the barn, which is actual size, has been removed to permit easy observation of the entire herd and also the construction of the stalls, gutter, and ventilation system. Not all dairy barns are so easy to keep clean as this one, though they may cost considerably more.

At one end of the dairy barn is a silo and a feed barn. All the hay as well as grain is stored in the feed barn, which is connected to the dairy barn by a cement driveway. This arrangement keeps all feed odors away from the milk and still makes it very convenient for feeding not only the milking herd but also the young stock and dry cows, which are found on the other side of the feed barn.

The bull barn and manure shed are still farther to the right and in the exhibit are painted on the canvas.

A continuation of the exhibit shows graphically the marketing of dairy products, from the time they leave the farm until they reach the consumer's table. A creamery office is shown in which the creamery manager is receiving market reports by radio, posting the prices paid for various grades of cream, and the prices received for butter of various qualities. On wall charts the relation between receipts at market, production, and prices is shown. Other charts present the difference between feed prices and butter prices, and still others illustrate the operation of the inspection service and how the inspection certificate is now used by coöperative creameries as a guarantee to the consumer as to the quality of the product that he buys.

One display shows a wholesale dairy market, an office scene with charts and moving slides, where the influences that bring about changes in price are illustrated. The growth and trend of the dairy industry are depicted in the series of changing slides and legends.

A retail dairy market, with a counter and dairy products on display just as the consumer finds it as he goes to buy dairy products, is shown. In this booth the relation of quality to cost, and how the consumer may be assured of good quality in dairy products, are shown. Extensive investigations made by the department in the merchandising of dairy products have been drawn upon to illustrate good retail marketing. The purpose of the display is to show creamery managers, and wholesale and retail dealers in dairy products, how to utilize various Government services in the form of market news, inspection, special reports, etc., in operating their businesses.

The climax of the exhibit comes in the last booth which shows the value of an abundant supply of clean, fresh whole milk to the health of the Nation. For science has shown that milk and its products occupy a unique place in the diet of grown-ups as well as children. Every member of the husky looking family gathering around the dinner table in this exhibit has a good

word to say for milk. "Milk builds good teeth and makes us grow," shouts the ten-year-old boy, as he spies the glassful at his place, and his glistening white molars and straight well-developed body show that he's had his quart a day since babyhood. The dinner menu illustrates some of the ways of serving milk in a well-balanced meal that appeal to the appetite of every member of the family. Potatoes scalloped with plenty of milk are to be served with roast beef and greens; rich, whole milk for all to drink, of course; and ice cream, the favorite of all desserts, to top off. A glimpse through the open kitchen door of the refrigerator with milk stored in the coldest part suggests the proper care of milk in the home. The consumer needs to coöperate with the producer in keeping milk clean, cool, and covered up until the very minute it is used. Incidentally, the pass cupboard between dining room and kitchen suggested in the background is an ideal step-saving arrangement especially for the homemaker who does her own work.

DAIRYMEN'S LEAGUE AUGUST PRICE

For August milk farmers selling to the Dairymen's League Coöperative Association, Inc., will receive a net pool base price of \$2.10 per hundred, the highest they have received for August milk since 1921. The base gross pool price is \$2.165 for 100 lb. of 3% milk at the 201-210 mile zone. The expenses are six and one-half cents per hundred while 10 cents is deducted for certificates of indebtedness.

The August price is 25 cents above the price for July and 46½ cents higher than the August net pool price of a year ago according to the official statement. The increase is due not only to a higher selling price for August milk but also to the fact that the fluid markets took a higher percentage of the milk that passed through the League's own plants. Of the milk going through the League plants, 81.8% was sold in the Class I market in fluid form. The amount in July was 64.7%, while in August a year ago 69% was sold in fluid markets.

Based on market quotations the average butter value of 100 lb. of 3% milk during the month of August was \$1.34 and the average cheese value was \$1.875.

DISPERSAL SALE!

Registered Holstein-Friesians

Herd under State and Federal Supervision

OCTOBER 1, 1925

SALE COMMENCES AT 12 O'CLOCK NOON.

At LINDEN SHADE STOCK FARM, CREAMERY, Montgomery Co., PENNA.

Two miles from Rahn Station; 2½ miles from East Collegeville, on the State Highway from Collegeville to Skippack, Pa.

Owing to my barn and contents having been destroyed by fire I have to sell my entire herd consisting of two males and 22 females, large producers, fine individuals, no old, "has beens" in the lot.

Included in this sale are six four-year-old daughters of the noted sires Finderne Valdessa, Rag Apple Korndyke 20th, Sir Inka Prilly Segis, nine two-year and yearling daughters of the well bred sires, Mutual Finderne Valdessa, Segis Pride of the Ormsbys and the 36 lb. Rancocas Stock Farm Sire, Ormsby Segis Lad, two yearling daughters of the latter, one from a 31 lb. dam and one from a 27 lb. dam.

Come to the sale and buy them at your own price as every animal has to be sold to the highest bidder. Sales Manager: W. M. Benninger, Benningers, Pa. Auctioneer: Wm. (Sheidy) Fritzing.

A. S. HECKLER, Prop., CREAMERY, PENNA.

JARDINE DISMISSES PACKER MERGER COMPLAINT

Secretary of Agriculture, W. M. Jardine, on September 14th, dismissed the complaint against the Armour-Morris packer merger, which has been pending since February, 1923. On December 30, 1922, J. Ogden Armour, acting for himself and in behalf of Armour and Company of Illinois, entered into a written contract with Morris and Company to acquire all the physical assets, business and good-will of that concern. On February 17, 1923, Secretary of Agriculture, Wallace, caused to be served upon Armour and Company of Illinois, Armour and Company of Delaware, J. Ogden Armour and Morris and Company a complaint charging that the merging of the concerns had the tendency to restrain interstate commerce and created a monopoly in many sections of the United States in the purchase of livestock and the shipment and sale of meat.

In his opinion, Secretary Jardine holds that the acquisition by Armour and Company of the physical properties, business, and good-will of Morris and Company does not in itself constitute a violation of the law, which provides against manipulating or controlling prices, creating a monopoly or restraining commerce. He points out that while Congress in the Clayton Act specifically forbade the acquisition of a competitor's stock, it refrained in the Packers and Stockyards Act from any such provision with reference to the acquisition of a competitor's business.

Neither the purpose nor the affect of the merger, the Secretary rules, was price fixing, monopoly or unreasonable restraint of commerce. On the contrary, the evidence shows that the transaction was consummated in order to reduce overhead expense and to increase the sales of the finished products. As to the actual effect of the transaction, the opinion cites evidence that Armour and Company since the merger has controlled less than 25 per cent of the Federal-inspected slaughter of animals, which is a lower proportion than that controlled by the competing firm of Swift & Company.

FEED CALVES GENEROUSLY

Scanty feeding during the early period of her life is the usual cause of an undersized cow says H. M. Jones, South Dakota dairy extension specialist. The future of the dairy herd depends a great deal upon the care given the heifer calves. Feeding is of prime importance. On well managed dairy farms regularity in feeding is the rule and the pails used for feeding calves are as clean as those into which the milk is drawn for human use. The best insurance for the health of the calf is cleanliness in quarters and the feeding pails.

Mr. Jones says that raising the calf on whole milk is not economical but it is necessary that whole milk be fed for at least the first two or three weeks of the life of the calf. Then he suggests gradually replacing the whole milk with skim milk and giving the young animal a grain ration composed of ground oats and corn.

AT SKAGIT COUNTY FAIR

The senior and grand champion bull at the Skagit County Fair held at Burlington, Washington, was Skagit Wayne Sadie Vale, owned by Lee Brothers of Mt. Vernon. This is the third year the bull has won these honors.

The purple ribbon in the female classes went to Norruim Inka Vale Wayne, a three-year-old heifer shown by the Northern State Hospital. Two years ago as a yearling she won the highest honors.

R. E. Waugh, of Burlington, won the Carnation cup for the best senior herd and the sweepstakes for the greatest number of prizes. There were more Holsteins than any other breed of cattle exhibited with Guernseys a close second. The Skagit County boys and girls club showed six Holsteins and six Jerseys all of which had been raised by the members.

AN EVEN BUNCH

At the Southwest Missouri Fair held at Carthage, Mo., the Bourbon county Holstein show herd won \$123 in prizes despite the fact that the only first prize was obtained in the senior bull calf class where a handsome fellow owned by R. H. Dawson was awarded the blue ribbon.

FEED DOPE

During the past month there has been slight change in the prices of dairy feeds. In response to crop prospects all wheat feeds have advanced in price and practically all corn feeds have declined. Oats and barley are lower but the oil meals are essentially the same.

On the whole, prices are sagging, but this may be only temporary. The *New York State News Letter* issued from Ithaca, under date of August 25th, suggests as a grain ration 300 lb. wheat bran, 300 lb. hominy, corn or barley, 200 lb. gluten feed and 200 lb. cotton-seed meal. This ration contains 17.2 per cent digestible crude protein and should prove valuable where cows have become too thin on pasture.

BILLIWACK CLEANS UP

The Billiwack herd of Holsteins took 25 prizes at the San Joaquin County fair held at Stockton, California. In eleven appearances in the ring members of the herd won first ten times and five times took first and second prizes. They took all six championships, first and second in the aged cow class, first for get of sire, and first and second for production of dam. The junior champion was Berylwood Prince De Kol Retha, a son of Prince Aaggie of Berylwood and this youngster was made junior champion. The senior and grand champion bull was Sir Abna Perfection.

BOY'S HEIFER WINS

Pet Mechilde Korndyke, a senior yearling heifer owned and exhibited by Iver Johnson, fourteen-year-old son of J. J. Johnson, of Cresco, Iowa, won the grand championship at the Howard County Fair. Iver also received a silver cup for his animal showing the greatest increase in weight during the year, the calf having gained an average of 100 lb. a month. She now weighs 1,150 lb. at the age of one year and eight months.

Iver is a member of the Howard County Dairy Calf Club and will exhibit his heifer at the Dairy Cattle Congress at Waterloo, Iowa.

MUST SELL---RIGHTAWAY 25 TWENTY-FIVE COWS 25

All big, nice and typy and bound to please. Some are now fresh, the others will freshen during September and October by

TRAVERSE ECHO SYLVIA KING

whose dam produced 33.27 lb. butter, 736.4 lb. milk in 7 days and averaged 102 lb. milk daily for 30 days. His 14 nearest dams average 30.18 lb. butter, A. R. O.

Wyalusing, Bradford Co., Pa.

Our farms join and BOTH our herds are ACCREDITED

THE BALTIMORE SUN ON THE COW

"The cow is a female quadruped with an alto voice and a countenance in which there is no guile. She collaborates with the pump in the production of a liquid called milk, provides the filler for hash, and at last is skinned by those she has benefited, as mortals commonly are.

"The young cow is called a calf, and is used in the manufacture of chicken salad.

"The cow's tail is mounted aft and has a universal joint. It is used to disturb marauding flies, and the tassel on the end has unique educational value. Persons who milk cows and come often in contact with the tassel have vocabularies of peculiar and impressive force.

"The cow has two stomachs. The one on the ground floor is used as a warehouse and has no other function. When this one is filled, the cow retires to a quiet place where her ill manners will occasion no comment and devotes herself to belching. The raw material thus conveyed for the second time to the interior of her face is pulverized and delivered to the auxiliary stomach, where it is converted into cow.

"The cow has no upper plate. All of her teeth are parked in the lower part of her face. This arrangement was perfected by an efficiency expert to keep her from gumming things up. As a result, she bites up and gums down.

"The male cow is called a bull and is lassoed along the Colorado, fought south of the Rio Grande, and shot in the vicinity of the Potomac.

"A slice of cow is worth eight cents in the cow, 14 cents in the hands of packers, and \$2.40 in a restaurant that specializes in atmosphere."

INKA VEEMAN ARTIS SCORES AGAIN

Inka Veeman Artis, the great cow owned by Roy W. Chamberlain of Canadea, New York, recently made another 30 lb. record, this being the third time she has produced over 30 lb. butter in seven days and the third time she has exceeded 600 lb. milk in an official test week. Her latest performance is 30.07 lb. butter, 629.8 lb. milk. As a six-year-old she is credited with 31.30 lb. butter, 583.9 lb. milk. The year previous she produced 31.82 lb. butter, 655.4 lb. milk in a week as a five-year-old while as a junior four-year-old she is credited with the production of 29.46 lb. butter, 613 lb. milk in seven days. Her four records made in four successive lactation periods average

INKA VEEMAN ARTIS, No. 425410

Three times above 30 lb. butter and three times above 600 lb. milk in seven days. Bred, raised and developed by Roy W. Chamberlain, Canadea, N. Y.

620.5 lb. milk, 30.66 lb. butter. She has given 99 lb. milk in a day.

Inka Veeman Artis, as her picture shows, is a very handsome individual. She is a daughter of Sir Korndyke Pontiac Artis Prince from Josie Inka De Kol 3d, a grand old cow that in the RO-AN herd made a seven-day record of 21.65 lb. butter, 516.2 lb. milk. Sir Korndyke Pontiac Artis Prince was a son of Sir Korndyke Pontiac Artis from a 30 lb. daughter of Sir Veeman Hengerveld, a combination of blood lines that has produced a number of good sires and big producing cows.

Mr. Chamberlain has the right to feel greatly pleased over the work of his great cow for she was bred, raised and de-

veloped in the RO-AN herd and with her dam, her sisters, her daughters and her granddaughters make up a great part of that herd at the present time.

The RO-AN herd has never been the home of a reactor and is one of the accredited herds of Allegany County. This herd is headed by Royal Johanna Korndyke a bull of high-class individuality and breeding whose daughters are making a splendid showing in the local cow testing association, as well as in the general dairy and in official work. This bull is a son of Colantha Johanna Lad 8th, while his dam, Butter Girl Johanna Korndyke, as a two-year-old heifer produced 24.23 lb. butter, 602.8 lb. milk in seven days. Her dam has a seven-day record of 690.8 lb. milk, 30.92 lb. butter and a year record of 25,594.2 lb. milk, 1,067.53 lb. butter. She has three good record daughters while Butter Girl Johanna Korndyke herself is the dam of a three-year-old heifer that produced 25,066.3 lb. milk, 942.88 lb. butter in a year.

BIG SHOW AT MILWAUKEE

No less than 526 Holsteins were exhibited at the Wisconsin State Fair. The calf club members alone had 117. Even more remarkable is the fact that every exhibitor gave a Wisconsin address, also some of the animals shown by J. D. McDonald were shown at Aurora as the property of Mike Plaut & Co., of Danville, Ill. We understand that Mr. McDonald and the Plauts have a partnership arrangement and that Mr. McDonald is in charge of the cattle at the Plaut farm.

The judges were Ward Stevens and Owen Mullen, and one class there were 71 animals paraded before them.

Johanna Rag Apple Pabst, shown by Joseph E. Piek of Hartford again beat North Star Joe Homestead in the aged bull class. As at Aurora the junior male champion was Plaut Harcourt Creator. The grand championship went to the older bull.

Sir Aaltje Dowager Segis, of the McDonald exhibit was the first prize three-year-old bull. King Mutual Fan carried off the blue ribbon in the two-year-old class for the Jefferson County Asylum. The senior yearling prize winner was Plaut Harcourt Creator, while Duke Fanny's Ace De Kol won first in the junior yearling class for George Hetts of Ft. Atkinson. There were 48 senior bull calves shown and the judges placed Colantha Mutual Clothilde Lad, the entry of W. F. Trieloff & Sons of Ft. Atkinson at the head, while the first prize junior bull calf was exhibited by Ernest Palmer, a calf club member. This award was heartily applauded.

Wisconsin's greatest cow, Madam Artis Wayne Denver, was sick with shipping fever, so Clothilde Pieve Langfield of the Milwaukee County Farm at Wauwatosa was given the blue ribbon with Lady Boerinhurst Pontiac of the Pabst Holstein Farm second and Skylark Lucilia Idlewild third. There were 46 animals in this class, although not all were good ones.

Empress Creamelle Susie won first in the four-year-old class for the Jefferson County Asylum; the Pabst Holstein Farm won the three-year-old class with Pabst Creator Queen Fay, Bessie Pontiac Rose 2d, taking the red ribbon for J. D. McDonald.

Johanna Wayne Rue 2d was not in the money at Aurora but here she was placed at the head of 34 two-year-olds with the Aurora winner, Pabst Countess Mahomet Pontiac second. The Jefferson County Asylum two-year-old heifer was made the senior female champion.

The Jefferson County Asylum also scored in the senior yearling class with Calamo Waldorf De Kol. Pabst was first and second in the class for junior yearlings and the winner, Pabst American Beauty, a very choice animal, was made junior and grand champion female.

Diemere Nettie Pontiac Segis took the blue ribbon in the senior heifer calf class for H. E. Dickinson of Oconomowoc, with a Piek entry second. This was the largest class of the day, 71 animals facing the judges. There were 33 junior yearlings, Pride Pietertje Prince winning for J. W. Burback of Waukesha with Ollie Liela Ormsby 2d winning the red for George Pope of Darien.

There were ten aged herds shown, Jefferson County Asylum being first, Pabst second, McDonald third. Pabst won the blue ribbons for young herds, produce of cow, dairy herd, and in the get of sire class with offspring of Creator, Jefferson County being second with a nice quartette by Dutchland Creamelle Denver Prince. The calf herd class was won by the exhibit of Philip Linker of Hartford.

NATIONAL DAIRY UNION

The annual meeting of the National Dairy Union will be held at the Lincoln Hotel, Parlor A, Indianapolis, Ind., Thursday, October 15, 1925, at 1:30 P. M., for the purpose of electing five directors and transacting such other business as may properly come before the meeting.

Members of the National Dairy Union are required to contribute 50 cents or more annually for the purpose of defraying the expenses of the Union. Every creamery company or corporation contributing as a company is considered a member of the National Dairy Union and the authorized representative is entitled to one vote the same as the individual members. A. M. Loomis, of Washington, D. C., is the secretary of the National Dairy Union and all dues should be paid to him.

A FARMERS' YEAR BOOK

How will the British government grant of \$5,000,000 to foster the trade in agricultural produce between Great Britain and her overseas dominions affect farmers in this country? British farmers are themselves not altogether united in their feeling. Many think that they are to be taxed to help farmers overseas to compete in their own market. On the other hand, over 30,000 breeders are interested in the pedigree stock business which depends largely on export trade, and as the Government scheme includes a measure of help in their direction, they are not disposed to criticize it.

Many aspects of the case are considered, and a great deal of valuable information on livestock will be found in "The Farmer and Stockbreeder Year Book" for 1926, an annual issued by our British contemporary which we hope to review in due course. As it generally sells out directly after publication however, American readers would do well to order it early. It can be obtained postage paid, in stiff covers with cloth back for one dollar from the publishers, Macdonald & Martin, Ltd., Lennox House, Norfolk Street, Strand, London, W. C. 2, England.

SYSTEM IN DAIRYING

Because of the present high cost of feed and labor, dairymen now need to figure out items of expense down fine more than ever before.

Weigh every cow's milk, night and morning, test it to learn the butterfat content, keep a record of it so as to be able to eliminate the "boarders." When I was dairying I found it a very important item.

In the matter of feeding and pasturing, I turned the cows to pasture during the night. I had them brought up in the morning in time to be milked and turned back to pasture by six o'clock; by 10 a. m. they would have eaten their fill and want to lie down to rest; instead of leaving them out in the hot sun to fight the flies I had them brought in and put in a cool, dark stable away from the flies. In the afternoon I gave them

a feed of silage or green alfalfa. I gave them a small feed of cornmeal and bran at milking time. Had them milked in time to turn to pasture by 6 p. m.

I found that this plan gave me a larger yield of milk, kept the cows in good flesh and stretched the pasture; also saved a lot of valuable fertilizer, all at the small expense of a little extra labor. If I were to go into dairying again I would follow the same plan.

Mr. George E. Brown, author of the above, was one of the earliest importers of Holsteins and, although now far beyond the age for active work, still retains a keen interest in dairying and the purebred Holstein-Friesian breeding industry.

MARYLAND STATE FAIR

Essex Farms sprang a surprise at the Maryland State Fair when they carried off first prize in the aged bull class, as well as the senior and grand championships with Sir Jamolso Pontiac Segis, a four-year-old son of Grahamholm Pontiac Segis Lad and DeKol Butter Prince Maida. Sir Jamolso is an evenly colored fellow, well grown with good shoulders and broad hips. He might be criticized as to barrel but this defect time will remedy. He defeated in the aged bull class the noted prize winner, King Pietertje Jewel Korndyke, and for the senior championship beat Trebmial King Colantha Calamo, the winner of the two-year-old class, exhibited by Mountain View Farm.

As was expected the first prize aged cow was Westview DeKol Walker and she easily won the senior and grand female championships for the Dennis establishment. Dennis took first and third for best four cows in milk as well as second, third and fourth for two-year-old heifers. Westview, of course, was the first prize A. R. O. cow and the Dennis establishment won \$551 of the prize money offered.

Pinery Farms of Mentor, Ohio, furnished both junior champions, the male being their senior yearling, and the female, Aaggie Bess Jewel, a senior heifer calf sired by King Pietertje Jewel Korndyke. There was quite a showing of Ohio cattle as the Pinery Farm, the Ona Company and Karl Nims went together and furnished a big carload of good type animals. The Springfield State Hospital, Sykesville, Md., and Harold Robertson, of York, Pa. also had animals that won prizes.

BUTTERMILK AS COLT FEED

Dried buttermilk as a food for young colts is advocated by Iowa manufacturers of that product who quote P. T. Chinn, famous horse breeder of Lexington, Kentucky. Mr. Chinn uses as a ration after weaning 1 quart cracked corn, 1 quart wheat bran, 2 quarts crushed oats and 1 quart dry buttermilk, this being fed twice a day and the amount doubled in eight months. Colts so raised showed as yearlings heavier weight, no fat and better muscular development than any other ration produced.

THE YANKTON STATE HOSPITAL AND ITS HERD

Owing to the reporting of a number of large records made by purebred Holsteins in the herd owned by the Yankton State Hospital at Yankton, South Dakota, considerable interest is being taken in that faraway institution and as little is known of it by our eastern readers, a little information about it is bound to be read with attention.

Previous to 1879 the insane of the Dakota territory were cared for by Minnesota and Nebraska institutions. That year the authorities of these two states served notice on Governor William A. Howard that they could no longer care for the Dakota insane. It therefore became necessary for the territory to provide for its own mentally afflicted. On an old school section Governor Howard set up a wooden building 150 feet long and 23 feet wide with a small wing attached. It is said that in the erecting of this building Governor Howard spent over \$2,000 of his own money. The hospital was first opened for patients on April 11, 1879. The original structure burned to the ground in 1881, five of the patients losing their lives and all the contents of the hospital being destroyed.

A second fire in February, 1899, was even more disastrous. The blaze broke out in the lower portion of a building constructed for use as a laundry. The legislature had ignored pleas for additional buildings and 45 patients and twelve attendants, all women, were housed in the upper stories of the laundry building. The fire broke out shortly after midnight and of the 57 women, 17 died in the flames and only one person, an attendant, escaped with anything more than night apparel. The legislature was sitting at the time and a committee had visited the hospital the same week that the fire occurred. Since that time no legislature has adjourned without granting requested appropriations. The Yankton State Hospital is the only state institution for the insane in South Dakota, but in 1899, at Canton, S. D., the United States Government established a separate hospital for Indian insane.

At present there are 18 three and four story stone structures at the hospital. Some of these are built of cement blocks faced with granite chips, an idea developed by Dr. L. C. Mead who was superintendent of the hospital from 1901 until his death in January, 1920.

The recent census shows 1,291 inmates of which 753 are men and 538 women besides more than 200 employees. The hospital grounds contain 1,720 acres including 120 acres of pasture and a 25-acre recreation park on the James River. Buildings cover 160 acres and about 1,400 acres are under cultivation. Last year there were 450 acres in corn, 250 in alfalfa, 400 in small grain and 70 in potatoes of which 11,137 bushels were harvested. The value of the farm products for the fiscal year 1923-24 was \$37,212.68.

The work of the patients helps reduce the expense of main-

taining the institution which is close to a quarter of a million dollars yearly.

Work shops including a printery have been erected. The latest medical ideas in caring for the mentally afflicted are practiced at this institution. Many of the patients show artistic skill and talent and the hospital has an interesting collection of their work.

There are now 185 purebred Holsteins in the herd, the milking dairy averages 65 cows and the daily production is reported as 3,500 lb. milk and 75 lb. butter, all of which is consumed on the premises.

The main dairy barn has 100 stanchions and eight pens while the test barn contains 33 stanchions, 7 box stalls and 12 calf pens. A newly erected young stock barn will accommodate nearly 100 animals. There are 37 stanchions for heifers and nine pens that each will hold six animals. Each barn is equipped with milk machines and modern dairy equipment. S. E. Jones is the herdsman in charge with Harry Sparby as farm manager. About a thousand pigs all purebred Poland Chinas, are raised annually. The present superintendent is Dr. G. S. Adams who succeeded Dr. Mead under whom he was assistant superintendent for nearly 17 years. A number of the cows have been run on long time test. The largest record was made by Redfield Colantha Alewin credited with producing 30,657.3 lb. milk, 1,283.55 lb. butter in a year. She is a daughter of Sir College Colantha and Redfield Edith Alewin and was bred, raised and developed in the hospital herd.

Cured meat and lard in your own smoke house beats buying it.

PRODUCERS AND CHOICE INDIVIDUALS

Remember that this is an Accredited Herd; that the cattle of this entire county, when recently tuberculin tested, passed 99.2% Clean, and that this herd has always been headed by high class bulls.

Can spare a few good ones raised here.

LAST CALL FOR

Fourth Annual Susquehanna County Breeders' Sale to be held at Montrose, Pa., September 23.

Montgomery County Holstein Association's Annual Sale to be held at Rockville, Maryland, September 30.

Dispersal Sale of A. S. Heckler's herd, to be held at Linden Shade Stock Farm, Creamery, Montgomery Co., Pa., October 1.

DISPERSAL OF THE A. S. HECKLER HERD

Under the management of the veteran Holstein breeder W. M. Benninger, the high-class herd of A. S. Heckler will be dispersed the first day of October at the Linden Shade Stock Farm at Creamery, Pa. The Linden Shade Stock Farm is two miles from Rahn Station on the Reading Railroad, and is two and one-half miles from East Collegeville on the state highway from Collegeville to Skippack, Montgomery County.

The reason for selling is that Mr. Heckler's barn with its contents has been destroyed by fire and this necessitates him selling his entire herd which is under State and Federal supervision.

The Heckler herd represents blood lines found in many of the best known Holstein herds in the country including May Echo Sylvia, Pontiac, and Wintherthur strains. Then, too, the animals are young and are therefore, good things to buy, likely to quickly repay the purchaser for the money he invests in them. There are daughters of FINDERNE VALDESSA, Rag Apple Korndyke 20th and the well-known A. R. O. sire, Sir Inka Prilly Segis. There are two-year-old daughters and yearling daughters of Mutual FINDERNE VALDESSA and Segis Pride of the Ormsbys, as well as daughters of Ormsby Segis Lad, the 36 lb. sire in service at the Rancocas Stock Farm. The herdsire, King Segis Emir Lad, is a son of Winterthur King Segis Emir and Johanna Korndyke Veeman 2d, a daughter of Edith Prescott Pontiac Lad. Some of the greatest record cows and transmitting sires of the breed are represented in his pedigree while a number of the females in the sale are bred to him.

The sale will commence at noon on October 1st at the Linden Shade Stock Farm at Creamery, Montgomery County, Pa.

MONTGOMERY COUNTY BREEDERS' SALE

On the fair grounds at Rockville, Md., September 30th, will be held the annual sale of the Montgomery County Holstein Association. Rockville is located fifteen miles northwest of Washington, D. C. All cattle at the sale are from herds that are under state and federal supervision.

The Holstein breeders of Montgomery and Frederick counties have a working arrangement whereby a sale is held in Frederick county in the spring and Montgomery county in the fall. Breeders from both counties contribute to these sales. To meet the demand for cows that are fresh or soon due to freshen, practically all the older females in the sale will be close springers or fresh. There are both registered and grade cows in the sale. The thirty registered cows are backed by good records, both C. T. A. and A. R. O., while the fifteen grade cows that will be offered have cow testing association records that average better than 10,000 lb. of milk and 300 lb. of butterfat. There will also be offered five bulls of serviceable age, backed by good records, and a number of young purebred heifers that are suitable for club members, for in junior work Maryland is preeminent.

IOWA HOLSTEINS ARE PROMINENT

The Winneshiek Cow Testing association was organized in Winneshiek county, Iowa, July 28, 1924 and the testing year began the first of August. There were several changes in membership during the year so that while there were 553 cows tested during the year, there were only 212 that milked nine months. Of this number there were only four purebred Holsteins, yet the second highest record, 429.1 lb. fat, was made by the registered Holstein, Rag Apple Forbes Piebe, owned by G. W. Heuser. She was only 4.8 lb. fat behind the leader. Jesse Netherland of Mt. Pleasant, another purebred Holstein owned by Mr. Heuser produced 398.7 lb. fat, standing fifth on the list, yet these two cows were only on test eight months of the official year.

FIRST AND SECOND IN CUMBERLAND COUNTY

Registered Holsteins stood first and second in the report of A. A. Raudabaugh of New Kingston, Pa., compiled of the work in the Cumberland County Cow Testing Association for the month ending September 9th. The leader was Phoebe owned by J. W. Raudabaugh. Her fat production was 56.9 lb. and her milk 1,539 lb. Violet, owned by Ivo V. Otto, of Carlisle, was second with 55.3 lb. fat, 2,049 lb. milk. The ten leading cows included two registered Holsteins, six grade Holsteins and two grade Guernseys and averaged 1,357 lb. milk and exactly 51 lb. fat. The highest herd average was made by six purebred and grade Holsteins owned by W. W. Pfeffer who had the highest herd for the previous month. The Pfeffer average was 1,220 lb. milk, 41.3 lb. fat.

During the month 237 cows were tested in 26 herds, of this number 35 exceeded 40 lb. fat and 28 made more than 1,200 lb. milk.

Tester Raudabaugh remarks that a

number of the members of the association are now buying feed for future delivery. All members having silos have been advised to begin feeding silage as soon as filling is completed in order to supplement the pastures which are very poor owing to the dry season. When silage is fed, most of the dairymen will make a change in the green ration now being fed to their animals.

LEADER OF HER STATE

Fishkill Aaggie Inka, a five-year-old Holstein owned by Henry Morgenthau, Jr., publisher of *The American Agriculturist*, who owns a herd at Hopewell Junction, N. Y., led all the cows enrolled in the Dairy Improvement Associations of New York State during July, by producing 83 lb. fat, 2,443 lb. milk. There were 477 cows tested in the Dutchess County Dairy Improvement Association, of which A. F. Finger is supervisor. Sixty-eight of these animals or one-seventh exceeded 40 lb. fat during the month. There were 8,388 cows tested in all the associations and of this number 869 exceeded 40 lb. fat.

EVANS OWNS THE LEADERS

A herd of six purebred Holsteins owned by Chris Evans of Sandusky, Mich., averaged 1,248 lb. milk, 41.95 lb. butterfat in the local cow testing association for the month of August. One of the cows was only in milk 24 days of the month. Despite this handicap, she is not only the high cow of the herd, but also of the entire association and is credited with producing 2,014 lb. milk, 72.5 lb. butterfat. There were 30 that produced between 1,000 and 1,250 lb. milk and 13 that exceeded that figure while seven cows each produced more than 50 lb. butterfat and 20 others made over 40 lb.

The difference between a baby and an auto is that a baby has to be used several years before it amounts to much.

SOUTH DAKOTA TESTING

Pet, a grade Holstein owned by C. C. Harriss of Watertown led all cows enrolled in the South Dakota testing associations during the month of August by producing 65.89 lb. butterfat. Her only feed was good pasture. The herd at the Day County Farm consisting of Holsteins and Shorthorns had the highest average herd production of 898.7 lb. milk, 35.89 lb. butterfat. In addition to pasture this herd received some oats and oil meal. The Penitentiary herd of 24 purebred Holsteins were second with an average of 42.56 lb. fat, 991.4 lb. milk.

Short pastures and flies cut the association average production which for August was 554.7 lb. milk, 20.97 lb. fat. In spite of these facts only 36 of the 2,411 cows tested failed to return a profit over and above the cost of maintenance.

TRIXY TRINTJE PLACES FIRST

Trixy Trintje, a registered Holstein owned and bred by T. C. Kryder of Mill Hall, Pa., produced 13,191 lb. milk, 438.5 lb. butterfat in the Centre County Cow Testing Association which finished its second year of operation August 1st. There were 319 cows enrolled in association work during all or part of the year. A cow named Cherry was second with 404.5 lb. fat beating out Louise, a registered Holstein owned by James A. Markle, that produced 11,590 lb. milk, 404.1 lb. fat during the year. No less than 54 cows each produced over 300 lb. butterfat, reports tester Willard Straw.

The registered Holstein herd of Peck Brothers of Nittany averaged 334.9 lb. fat, 9,624 lb. milk. The Kryder herd averaged 325.8 lb. fat, 10,290 lb. milk. A herd of registered and grade Holsteins owned by Peters Brothers of Port Matilda, averaged 323.5 lb. fat, 8,428 lb. milk and the grade Holstein herd of B. A. Sampsel of Bellefonte, Pa., averaged 302.5 lb. fat, 7,707 lb. milk.

The average production of milk per

THE POLAND CHINA ADVERTISER, : : : Bluffton, Ohio

cow for the association year was 7,280 lb. milk and 265.3 lb. butterfat. This, so the report says, is a gain of 1,023 lb. milk, 20.7 lb. butterfat over the averages for the previous year.

LEADS NEW YORK STATE

Butterboy Jewel Wayne, owned by Aldredge and Bowerman of Victor, N. Y., led the cows enrolled during June in the New York State Dairy Improvement Associations by producing 86.9 lb. butterfat during the month. A grade Holstein, also from Madison county, was second with 75.4 lb. fat, while Elhora, owned by the Chemung County Farm at Breesport, was third with 74.9 lb. fat. A Jersey was fourth with 73.8 lb. and Cora, a purebred Holstein owned by George True of Adams Basin was fifth with 70.2 lb. fat. Cora produced 2,265 lb. milk, the largest amount credited to any of the five leaders.

AROUND ROCHESTER

The purebred Holstein herd owned by the Grahamholm Farms, Rochester, Minn., led the Byron-Rochester Cow Testing Association for August by averaging 1,152 lb. milk, 38.4 lb. fat. There were 14 cows in this herd that made over 40 lb. fat. The Glen Oak Farm Holstein herd was second with an average of 900 lb. milk, 31.9 lb. fat. The high cow on twice a day milking was Miss Hartford, owned by Harold Caulfield, of Byron. She is credited with 64 lb. fat, 1,562 lb. milk. In the division for cows milked more than twice a day a purebred Holstein owned by Dr. Graham produced 2,232 lb. milk, 71.5 lb. fat.

The association average was 720 lb. milk, 26.2 lb. fat. There were 25 herds enrolled containing 514 cows, 16 herds averaged 25 lb. butterfat or more and 70 cows each produced more than 40 lb. fat.

This association ends its testing year September 30th. Almost all the old members will join again to start the new year October 1st.

A REAL COW

Jane Genesta Pledge is a purebred Holstein owned by John J. Sheldon of Susquehanna, Pa. She was born November 18, 1912, and so is now past twelve years old. Despite her advanced age during the three months of April, May and June, 1925, she produced 5,810.5 lb. milk or nearly three tons. Her April production was 2,017.8 lb. for May the figures were 2,021.8 lb. and for June, 1,770.9 lb. During April and May she was milked three times daily but during June she was milked only twice a day. When Jane Genesta Pledge was a seven-year-old she produced more than 3,000 lb. milk in a month, that is over one and one-half tons.

A GOOD DAIRY COW

The high cow in the Spring Valley C. T. A. is Acornvale Walker Julrose, an eight-year-old registered Holstein owned by Ole Madson and Sons of Spring Valley, Wis. Her record for the year is 18,517 lb. milk, 608.5 lb. butterfat. She was milked three times a day for the first two months and during the summer received some extra feed while on pasture. The cost of her roughage was \$40.43, the cost of grain, \$54.65, making a total feed cost of \$95.08. The value of her product was \$207.66 above the cost of feed, which consisted of the following: Alfalfa hay, 2,608 lb.; oats, 1,450 lb.; barley, 791 lb.; bran, 743 lb.; oil meal, 388 lb.; Pillsbury's feed, 60 lb.; shorts, 105 lb.; corn, 96 lb.

HOLSTEIN EXPORTS

Two hundred yearling Holstein heifers were shipped from Fond du Lac, Wisconsin, August 28th, by J. J. Hagerty of Waldo, Wisconsin. They were consigned to Ramon Madrigal, Jr., of San Jose, Costa Rica.

The same week a carload of Holsteins were shipped to Mexico, the purchasing agent being D. F. Pipes of California. The prices averaged around \$125 and the animals bought were nearly all young stock.

HOLSTEINS LEAD HERE

The registered Holstein herd owned by Jay F. Harlan of Somerset, Ohio, led the 20 herds enrolled in the Licking County Cow Testing Association for milk and butterfat production during July. This herd averaged 1,441 lb. milk, 47.6 lb. butterfat.

Second honors for the month were taken by the purebred Holstein herd on the Daweswood farm managed by Mr. E. Jones. This herd averaged 1,770 lb. milk and 43 lb. butterfat.

For four months the Holstein herd owned by J. H. and E. O. Myer led the association but in July fell to third place.

The two highest producers were members of the Daweswood herd. One is credited with 1,576 lb. milk, 97.9 lb. butterfat and the other with 2,359 lb. milk, 75.5 lb. fat.

MONTANA HOLSTEINS DO WELL

The twenty-three purebred Holstein cows owned by Ford and Hollister of Darby, Montana, averaged 370.8 lb. butterfat during the past year in the Bitter Root Valley Cow Testing Association. Sixteen purebred Holsteins owned by David Lea and Sons of Stevensville were second with 336.6 lb., a grade Holstein herd of 26 cows was third with an average of 332 lb. and the 25 purebred Holsteins owned by C. I. Hartson and Sons of Hamilton were fourth with 306.3 lb.

There were 320 cows tested during the year. The average value of their production was \$113.24 and their average net profit above feed cost was \$71.10.

Ford and Hollister furnished the second highest producer, their cow Ravalli Billy Ann Korndyke being credited with 19,125.8 lb. milk, 651.8 lb. butterfat.

Every day is an especially good day to remember that at every railroad crossing the train not only always has the right of way, but is in a position and has the bulk to enforce its rights.

BIG COUNTY AGENT

The largest county agent in the world is said to be Arlie Mucks, of Barron County, Wis. He is 6 ft. 5 in. tall and weighs 265 lb. He is a noted athlete, was one of the leading members of the University of Wisconsin foot ball team in 1914-1917, was a member of the American team participating in the Olympic games at Stockholm, Sweden. He is the world's champion discus thrower and his record is 155 ft. 8 in.

WILL STICK TO ONE FAMILY

Having acquired the four-year-old herdsire, Ormsby Sensation 3d, together with a number of his daughters, S. T. Witmer of Union Deposit, Pa., has decided to concentrate on the Ormsby-Sensation blood and is therefore disposing of his other animals.

The Witmer herd has long been noted for the individuality as well as the producing ability of its animals. For years it was headed by King Artis Waconda, a bull of royal breeding and choice individuality. His dam, Waconda Clothilde Artis, made a number of large records. As a junior three-year-old, she produced in 365 days 792.05 lb. butter, 18,795.5 lb. milk, world's record in the junior three-year-old class at time of making. She was by the well known sire, De Kol Clothilde Artis, one of the very best sons of De Kol 2d's Butter Boy 3d while her dam was from the cow, Waconda, imported from North Holland, June 22, 1883, when she was only two months and twelve days old.

King Artis Waconda was sired by King Korndyke Sadie Vale Jr. a good son of the noted King Korndyke Sadie Vale and Aaggie Cornucopia Paul, a daughter of the celebrated show bull, Aaggie Cornucopia Johanna Lad, Jr. Aaggie Cornucopia Paul as a ten-year-old cow, made a seven day record of 31.03 lb. butter, 624 lb. milk. She had a number of good daughters, one of which, Aaggie Cornu-

copia Paul 2d, is the only cow in the world to have five daughters that have each produced over 1,000 lb. butter in long time work. These are the famous Aaggies of Sunny Side.

The Witmer herd is under state and federal supervision and at a test conducted about the middle of July, every female in the herd passed clean.

LITTLE BUT GOOD

Peter M. Derra of Dane, Wisconsin, beneves in a small farm and a small herd, and then making these the best possible. On 85 acres he keeps 27 Holsteins, including eight purebred cows. He intends to make his entire herd purebred as soon as possible.

Mr. Derra really started in business for himself in 1911 when he purchased the farm he now runs, before then he worked for his father.

Mr. Derra owns about 35 head of purebred Poland China hogs. Green feed, oil meal and wheat middlings is the ration red these, together with whey from the cheese factory.

This dairyman says there is nothing like legumes to build up the soil and nothing like alfalfa and silage for cow feed. This year he has seven acres of alfalfa, six acres of peas and has soy beans planted with his silage corn.

"Jimmy," said a mother to her quick-tempered small boy, "you must not grow angry and say naughty things. You should always give a soft answer."

When his little brother provoked him an hour afterward, Jimmy clenched his little fist and said "Mush."

"Why so glum?"

"The doctor has just prescribed rest and change for me."

"Well?"

"He advised me where to get the rest, but he didn't tell me where to get the change."

AS THE CHINESE SEE US

The following letter was written by a Chinaman to a friend of his back in China, after the writer had observed America customs for a short time:

"You cannot civilize these foreign devils. They are beyond redemption. They will live for weeks and months without touching a mouthful of rice, but they eat the flesh of bullocks and sheep in enormous quantities. That is why they smell so badly. Every day they take a bath to rid themselves of their disagreeable odors, but they do not succeed. Nor do they eat their meat cooked in small pieces. It is carried into the room in large chunks, often raw, and they cut and slash and tear it apart like savages. They eat with knives and prongs. It makes a civilized person very nervous. One fancies himself in the presence of sword-swallowers. They even sit down at the table with women, and the latter are served first—reversing the order of nature—yet the women are to be pitied, too, for on festive occasions they are dragged around the room by the men to the accompaniment of the most awful music."

A negro cut off one of his toes while cutting wood. He went to a doctor's office to have the wound dressed and as the doctor looked at it he asked:

"Sam, did you cut it off clean that way at one blow?"

"Well, now, doctor," replied Sam, "do you think I'd take a second lick at it?"

"It says here that widows make the best wives," remarked Mrs. Scragginton, in the midst of her reading.

"That may be true," replied Mr. Scragginton, "but I'll be everlastingly john-brown if I intend to die just to make a good wife of you!"

ALBERT BABLER

Albert Babler, veteran Holstein breeder and life-long resident of Green County died at his home, Monroe, Wisconsin, August 30th.

Mr. Babler was born June 20, 1865, in New Glarus township. His wife was a sister of John Legler, formerly a prominent Holstein-Friesian breeder. Mr. Babler was one of the first men in Green County to raise purebred Holsteins and became a member of The Holstein-Friesian Association of America in 1901. He was widely known as a good dairyman and his fellow citizens honored him by electing him to a number of offices. Several months ago his doctors announced that he had valvular disease of the heart which was the cause of his death. He is survived by his widow and four children.

HENRY RENAUD

The senior Holstein-Friesian breeder of Arizona, Henry Renaud of Phoenix died at Los Angeles, California, August 26th. Mr. Renaud was the proprietor of the Alhambra Holstein Dairy and was on a brief vacation when he was taken ill. He was 65 years old at the time of his death.

Mr. Renaud was born near Montreal, Canada and was of French-Canadian descent. He left Canada for California when he was 21 years old and three years later came to Arizona and settled in the Salt River Valley. In 1890 he located on his Alhambra farm and was the first dairyman in that section of the country to breed purebred Holstein-Friesian cattle. He joined the Holstein-Friesian Association of America in 1904. He was known as a high-class dairyman and was very successful in his business. He is survived by a widow and one daughter as well as a step-daughter and five step-sons.

THE TREND OF TRADE

It was not many years ago that practically all the traffic in Holsteins was west bound with only occasionally an animal noted for a big record or for individual quality coming east. Very few grades ever traveled on the railroad toward the rising sun, but to-day shipments eastward are quite common. Late in July two carloads of grade Holsteins, 40 head in all, were shipped from Marathon County, Wisconsin, consigned to W. R. Mailer, of the Eden Farms, one of the biggest dairy establishments in New York State. Mr. Mailer has now taken four carloads from Marathon County and said that he would be back next February for more. The two carloads taken in July cost him \$4,054 at the shipping point, an average of around \$101 each. Charles Symons, of Edgar, Wisconsin, went with the shipment. Although no purebred Holsteins were included, officers of local Holstein clubs in Marathon County assisted the buyer in locating his stock. Milk from the Eden Farms is sold in West Point and at a number of fashionable centers along the Hudson.

BETSY DE KOL PONTIAC AMBROSIA

A granddaughter of King of the Pontiacs, bred and raised in this herd, which also contains several of her sisters. Cows like this are bred to

King Madaline Butter Boy

a show bull backed by big producers. This herd is Accredited and we can spare a few good producers.

HOW ONE IOWA HERD WAS BUILT

Fred Pieplow of Aurora, Iowa is now a well-known breeder of purebred Holsteins but all he has has been earned by he and his wife. Back in 1904 the Pieplows married and went to keeping house. When they rented their first farm in 1905 their belongings consisted of a horse, a buggy and a colt, also a dog. In those days it was necessary for a young man to own a horse and buggy if he expected to get married just as nowadays a young fellow has to have a Ford. They started raising oats and corn and feeding steers.

In 1906 they bought the farm on which they now reside, just a bare pasture, no buildings of any kind not even a fence. Fred became interested in dairying, made a trip to Arlington and talked matters over with W. C. Gleim, one of the pioneer Holstein breeders of Iowa. Mr. Gleim sold him a grade Holstein cow for \$52. Fred milked her, weighed the milk, milked his red cows and weighed their milk, took test samples to the creamery and decided that the Holstein had it all over the red cows for profit earning ability. Then he bought a purebred Holstein sire from L. G. Gleim, a K. P. O. P. bull from a dam that had made 800 lb. butter in a year.

The elder Mr. Gleim became very much interested in the Pieplows. He had an old cow, Elgin Aaggie Netherland, that he considered past her best years. Whenever possible purchasers came to the barn they always noticed the old cow and said so much about her that he decided to get rid of her and said that Fred Pieplow could take her if he would give in return the first heifer calf she dropped by the King Pietertje Ormsby Piebe bull. The first calf she dropped after she got in her new home was a heifer which was returned Mr. Gleim in full payment for the old cow. Then Elgin Aaggie Netherland dropped three more heifer calves which formed the foundation of the present Pieplow herd.

Animals from this herd have been exhibited at the Iowa State Fair and have won blue ribbons, also one championship at the Kansas State Fair and many prizes at local fairs. The present herdsire King Piebe 36th is well bred and a prize winner.

Mr. Pieplow is a believer in cow testing association work and his herd has enrolled in the testing association every year with one exception since it was started in that part of the country. Last year the Pieplow herd averaged 403.7 lb. fat, 11,699 lb. milk and led the Fayette Cow Testing Association No. 1.

WANTED—20 fresh cows by October 1st, either grades or purebreds. Must be fresh during the months of October and November and from an Accredited Herd or one that has passed one Clean Test. Box X, c/o The Holstein Breeder and Dairyman, Harrisburg, Penna.

MINERAL CONTENT OF COMMON FEEDS

The mineral content of our common feeds plays a greater part in the nutrition of farm animals than most of us realize. A recent report of researches now in progress in the laboratories of the Kentucky agricultural experiment station at Lexington brings out some interesting facts.

"The conclusion has been reached," said Dr. J. M. McHargue, in charge of the investigation, "that copper, iron, manganese and zinc perform more important functions in agriculture than is generally recognized."

Experiments thus far have been made on Kentucky blue grass, red clover, alfalfa and yellow corn, wheat, rice polishings and polished rice, showing that iron predominates, with zinc second, manganese third and copper fourth.

"The germ of wheat," says the report, "is a rich factor. The association of relatively large amounts of copper, manganese and zinc with this substance, rich in vitamins, is a coincidence of striking interest."

"It was found that when rice is polished nearly all the copper, iron, manganese and zinc are removed in the polishings. Consequently when pigeons were confined to a diet of polished rice they soon developed polyneuritis whereas pigeons fed on unpolished rice maintained a normal condition. Apparently the compounds of copper, iron, manganese and zinc contained in the pericarp and germs of cereals are important factors in nutrition."

"Fertile soils, it is shown, contain small amounts of the elements, copper, manganese and zinc. Plants grown in the soil absorb small amounts of these elements, which are stored in the leaves and in the pericarps and germs of the seeds."

"When the cereals, corn, wheat, and rice are highly milled the resulting degermed corn meal, patent flour and polished rice are deprived of the greater part of the compounds of copper, iron,

manganese and zinc, which appear to be factors in animal nutrition.

"In practical agriculture, depleted soils may require the addition of available compounds of copper, manganese and zinc in order to restore and maintain productivity and to produce a food supply containing the vital factors in normal proportion."

A research problem of fundamental importance in agriculture to-day, the report declared, is to ascertain which of the elements that occur are necessary and what are their functions.

A NEW YORK PRODUCER

Segis Valley Hengerveld Fayne is the name of a purebred Holstein owned by R. C. Van Keuren of Dunraven, New York. In the Andes Dairy Improvement Association she produced in a C. T. A. year, 15,172.4 lb. milk, 509.6 lb. fat which was the highest milk record at that time reported for a cow enrolled in this association. Her highest month was January in which she is credited with 67.6 lb. fat, 2,021.2 lb. milk but in March she produced 2,139 lb. milk with a fat total of 64.1 lb. During her association year she milked 285 days for she was dry during August and September and for twenty days of October.

Segis Valley Hengerveld Fayne has an official seven-day record made as a senior two-year-old of 363.8 lb. milk, 13.52 lb. butter. Her sire, Segis Fayne Hengerveld 2d, was from King Segis Celestie De Kol, a daughter of King Segis with a seven-day record of 20.19 lb. butter, 405.5 lb. milk made as a junior two-year old. Her dam has official records of 598.7 lb. milk, 24.36 lb. butter made in seven days, 2,473.5 lb. milk, 99.42 lb. butter in thirty days.

A new-born calf was startled at the sight of water issuing from a motor-driven pump. "What's that, mother?" it bawled.

"That, my dear, is a pump. It has been collaborating with me for years."

THE CAUSE AND THE RESULTS

For thirteen years John Orth of Middleton, Wis., has had purebred Holstein bulls at the head of his herd. These bulls have helped to build up his herd until his cows are an excellent lot of big, deep bodied, long barreled, deep chested, straight, smooth, healthy cows.

Prof. George C. Humphrey, head of the Wisconsin animal husbandry department says that the Orth herd is one of the best he has seen in the state.

The Orth herd was highest in the Middleton cow testing association for the past year. The records show that twenty-one cows averaged 380 lb. fat. They produced 219,133 lb. milk and \$4,472.62 worth of butterfat. Their feed bill totaled \$1,733.54 leaving a profit above feed cost of \$2,739. Milkmaid, the high cow, produced 558 lb. butterfat and made a profit of \$206. She ate more feed and produced more milk than any other cow in the herd.

Mr. Orth was awarded a diploma at the National Dairy Show in Milwaukee last October as owner of one of the few 300-lb. grade herds in the country.

John Orth was born on the farm where he now lives, in 1874. His father was known as a good farmer. Mrs. Orth also grew up on a farm near Middleton. She has played a large part in the success of the farm and has encouraged the children in their club work with farm animals. Vroman, the thirteen-year-old son, showed the champion calf club calf at the Dane County fair last fall and won other honors at the National Dairy Show. His purebred heifer calf which he purchased from the Otto Toeffer herd is doing well and growing into a fine heifer. Mildred, the eight-year-old daughter, is anxiously waiting her arrival at ten, when she can officially get into the club work.

Orth feeds his cows the year around giving each one her grain according to production. He feeds about 3.5 lb. of the following ration for each 100 lb. milk:— 300 lb. oats, 300 lb. bran, 100 lb. of a commercial dairy feed, 100 lb. oil meal and 100 lb. ground corn. He feeds about 40 lb. corn silage a day per cow and gives them all the mixed clover hay that they want.

Orth is also known as a good calf feeder. He feeds the calves from the time they are able to eat until they leave his herd as milk cows, consequently his heifers are large and healthy.

At the head of the Orth herd is Sir Bess Ormsby Fobes 18th. This bull is owned jointly with Emil Schuman, who lives just across the road. The bull is getting a nice bunch of heifer calves in both the Orth and the Schuman herds.

"And never let me see you back here again," said the judge sternly.

The prisoner looked about, at the jury, at the judge, at the lawyers, at the court clerks, and replied: "I won't come back, sir. I'll keep out o' bad company."

Join the Amateur Picture Contest. If you have not mailed us photographs of some of your good animals, do so at once.

What the Other Fellow Says:

Ingersoll, Ont.

Dear Mr. Mead:

We wish to thank you for your very good work at our dispersal sale held on May 6, 1925.

We don't believe that any auctioneer could have done better work, or secured higher prices for our herd of Holsteins.

We did not feel that we had been robbed when we paid you, no hinting that you would like an extra day's pay for a trip.

We will surely recommend you to our friends, and please remember that first, last and always we are for the "Live Wire Auctioneer," Mead.

With the kindest of personal regards.

Very truly yours,

W. RIVERS AND SONS,

Per W. R. Rivers.

GLENN R. MEAD

East Aurora, New York

GET THE SON OF Hillside Rhododendron

35.15 lb. butter, 543.8 lb. milk in 7 days, 2,759.7 lb. milk, 147.95 lb. butter in 30 days, a show cow of magnificent proportions.

He was sired by Charlevoix Rookwood Prince, son of Sir Pieterje Ormsby Mercedes 40th and Rookwood Zwele Riblet, 728.3 lb. milk, 33.93 lb. butter in a week; 3,019.6 lb. milk, 135.83 lb. butter in 30 days. She and her dam both have good yearly records.

This bull was born April 26, 1925, is right in every way, about 7/10 black, well marked. His dam and sire's dam average 34.54 lb. butter, 636 lb. milk in 7 days; 141.89 lb. butter, 2,889.6 lb. milk for 30 days.

HILLSIDE AND SPRINGBROOK FARMS Trucksville, Pa.

Herd recently passed Another Clean Test.

FRED MODEL GLISTA NETHERLAND
heads this purebred herd which has been Tuberculin Tested and passed CLEAN THREE times.

You'll like this bull as well as the females in my herd which is run from a standpoint of combined production and individuality.

I sell good stock at reasonable prices.

THE TESTER AND THE DAIRY FARMER

As I was traveling along the highway the other evening I got a friendly nod and a wave of the hand which meant a flag from old John Stolfultz. Now John has been making love to cows for a good many years so that we have much in common and I was glad to draw up to the barn yard gate for a little friendly chat I opened the conversation with: "And what's worrying you now John?"

"Worries" John replied, "It isn't a worry. It's just what you might call it, an annoyance. One of these big city editors has quite a piece in his editorial for his paper in which he thinks we farmers are all boobs for not keeping these high producing cows. He tells of some college which had two cows. One of them made 27,000 lb. milk in a year and the other one that had just the same care and ate just as much feed made only 4,000 lb. Now Mr. Cow-tester do you believe that?"

I replied that that was making it pretty strong and thus encouraged John continued: "When I was a little fellow, Pop gave me my first calf and when doing so he said: 'Now take good care of Speckel, Johnny! If you do not put something in a cupboard you cannot get something out.' Which was all very good advice but Johnny soon found out on his own hook that if you put too much into a cupboard it got full. Now this 27,000 lb. cow is what you might call it, one walking feed bin, and she must be to produce so much milk. If the low producer would try to eat so much she would do one of two things; she would raise her production or she would fail to eat the feed; or in other words the cupboard would get full."

"Well, why don't you tell the editor that John?"

"Mc. Why should I? I have my good cows and I am trying to breed them better. I give them good care and am satisfied to take what it gives. Why should I chase after rainbows? That college man did not say how many cows he raised to get one to produce so high and if none but such were to be kept none of us would get butter and the babies would all starve to death for want of milk" and with this remark John's irritation seemed to have passed and he went on to tell about some feeding experiments he was making.

Friend John is Amish and has whiskers but he is clean and contented and so are his cows, and as we closed our remarks I sized the thing up this way. Here is a man who is taking the best that he has and trying to make it better and with such is happy and content and as I tramped on the gas and old Henry rolled off down the pike I could not but help thinking that not all of the fools were on the farm.

Will ice cream burn? This question might have been asked at Washingtonville, Ohio, recently when the Andalusia ice cream truck caught fire and was nearly destroyed before the flames could be extinguished.

Absolutely Impartial

Sam, impaneled for jury service at a murder trial, had seemed a little too anxious to serve.

"Do you know the accused," he was asked.

"Yessuh—dat is, nossuh," he replied, realizing that if he made an affirmative answer he would be disbarred from serving."

"Have you made up your mind as to his guilt or innocence?"

"Oh, nossuh."

"You think, then, that you could give his case a fair hearing?"

"Yassuh," replied Sam. "Leastways, ez fair ez de old scamp deserves."

A draft of Missouri mules had just arrived at the corral, and one new buck private made the common but sad mistake of approaching too near the business end of one of them. His comrades caught him on the rebound, placed him on a stretcher and started him for the hospital.

On the way the invalid regained consciousness, gazed at the blue sky overhead, experienced the swaying motion as he was being carried along, and shakily lowered his hands over the sides, only to feel space.

"My gosh!" he groaned. "I ain't even hit the ground yet!"

It was the day of the school concert, and the audience consisted mainly of mothers, proud or envious, according to the parts that their children were playing.

One small boy came on to the platform. Striking a bold attitude, he began:

"Friends, Romans, countrymen, lend me your ears!"

Whereupon one of the mothers turned to her companion.

"There, that's the Jones' boy," she said tartly. "He wouldn't be his mother's son if he weren't trying to borrow something."

WHY DO I LIKE POLANDS BETTER?

BY BERT STAFFORD

It has been shown that they will feed out quicker, as has been demonstrated in the Ton Litter contests in the past three years, and at the National Swine Shows of 1922, 23 and 24 at Peoria, Ill. The Polanders outweighed all other breeds of the same age and in every class.

In the 1924 show, it was shown by official weight in the under 6 months class, the Poland China pig was 90 pounds heavier than one in another breed, and of the mature animals of the same in boars, the Poland China showed a weight of 300 pounds more. One of the oldest breeders of Poland Chinas (and necessarily a successful one) makes the statement that, in the many years he has bred hogs, there were but few times when he did not make money on hogs, but that the periods of time they have paid have been much longer than the periods of time they lost.

These are very important reasons why you should consider very strongly the taking up of this great industry. If you want a quick maturing hog, you have it in the Poland Chinas, or if you want to feed a little longer to catch a higher market, they will feed at a profit.

The Ton Litter of Texas set a new world mark when 14 pigs in one litter weighed 4291 pounds at 180 days, an average of 306.5 pounds. The total feed bill including bedding for sow and oil for the pigs, was \$202.44 or 4.72 cents per pound, netting the owners \$225 on the litter.

The manager and one hired man looked after the sow and 200 others, making the cost of labor very small.

This not only demonstrates the good feeding qualities of the Polanders, but it shows that they will have and raise large litters, a very important matter these days. The best way to find out the feeding value of Polanders, is to buy you a bred sow this winter and grow the litter out, take care of the sow properly before and after farrowing, grow the pigs as they should be grown and I am sure you will not be disappointed.

A certain young lady known as Jessie around her home on the farm went away to a boarding school. The third letter she wrote home was signed "Jessica." Her brother Tom replied: "Dear Jessica: Dadica and Momica have gone to visit Aunt Lizzica. Uncle Samica is talking of buying a new machinica, but don't know whether to buy a Fordica or a Chevica. The old cowica had a caffica. I was going to call it Nellica, but didn't because it was a bullica.

Two colored gentlemen were talking about automobiles owned by their respective employers.

"An' den he bought dis new 'coop.'"
"You don't call dem 'coops'; dey is pronounced 'coop-pay.' A 'coop' is what you put chickens in."

"Yes, sah, dat's what he does with dis one."

ERA BUTTER BOY PONTIAC

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of producing females will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

This contest will close October 8th. Send your cattle pictures in to-day. Don't be too late.

INTENTIONAL SECOND EXPOSURE

Right In Every Way!

COLONEL LYONS HARTJE SEGIS

We offer for sale this handsome young bull. We think so much of him that we have been using him in our Accredited Herd. He is handsomely marked, has a straight topline, square rump and a pleasing conformation.

His sire is a son of Colonel Joh Lyons from a 26.74 lb. daughter of King Hengerveld Hartje.

His dam is a big producer and is making a fine showing in C. T. A. work. Her dam in C. T. A. work produced 508 lb. butter, 11,575 lb. milk in a year, and is by the noted sire King Hengerveld Hartje.

The bull is a fine individual, as is his sire and dam, and all his grandparents. He is bred to sire good individuals as well as big producers.

Colonel Lyons Hartje Segis was born December 8, 1923. He is active and vigorous and ready for any amount of service.

The Price is reasonable. He is right in every way. Come and see him and his dam.

YOU SHOULD BUY

A Son of the Grand Young Sire

ROYAL JOHANNA KORNDYKE

who is not only siring big producers but also splendid individuals. We believe he is the best son of Colantha Johanna Lad 8th.

We offer a handsome young bull, six months old, about two-thirds white and with a splendid topline.

His dam, at 26 months old, produced in A. R. O. test, 20.45 lb. butter, 444.2 lb. milk. She is now a fine three-year-old and I am confident she will greatly increase this record a little later.

Her dam produced 19.6 lb. butter, 403.7 lb. milk in a week when only 23 months old and is from my grand old cow, Inka Veeman Artis, three times above 30 lb. butter and three times above 600 lb. milk in a week.

Price on the young bull, ONLY \$125, and he is from an Accredited Herd that has never housed a reactor.

Glenn German's Accredited Herd

CLOSE to Cuba, New York, is the Holstein breeding establishment owned and operated by Glenn C. German. Cuba is in Allegany County, a district which for many years has been noted for the quality of its Holsteins. Quality in this case means not only producing ability but also individuality and health. Allegany County is one of the leading counties of New York State in the campaign for tuberculosis eradication. All the cattle in Allegany County have been tuberculin tested under the Area plan and the showing was so

DAUGHTERS OF KING MADALINE BUTTER BOY

good that the veterinary authorities of New York State have closed the county against possible reinfection by prohibiting the importation of animals into Allegany County unless they came from tested herds.

Glenn German has been breeding purebred Holsteins for more than a dozen years. When he started he purchased the farm from an uncle and this uncle had three purebred Holstein-Friesians, two-year-old heifers and one yearling. These animals were obtained with the farm and the present German herd have descended from them.

A large proportion of the younger members of the herd are daughters of King Madaline Butter Boy, a very handsome fellow whose offspring inherit his type and conformation. Several years ago this bull was exhibited at the Erie County Fair held at Hamburg, N. Y., and we do not know of any county fair held in New York State where one would be likely to see better animals or experience stiffer competition. King Madaline Butter Boy not only won the first prize in his class but was also awarded the junior championship. He is a son of King Pontiac Fayne Butter Boy and Riddle Meadows Madaline Pontiac. As a heifer this cow made a creditable official record and her pedigree certainly combines big producing strains. Her dam has an official record of 646.3 lb. milk, 31.23 lb. butter and was by Prince Ybma Spofford 17th. Madaline was sired by King Pontiac Johanna, a son of King of the Pontiacs from one of the handsomest daughters of Hengerveld De Kol.

King Pontiac Fayne Butter Boy was a grandson of King of the Pontiacs, his sire being King Pontiac

Hengerveld Fayne, whose dam, Segis Hengerveld Fayne Johanna, has a seven-day official butter record of 34.33 lb. and a year record of 1,129.37 lb. This cow was noted for individuality as well as production and was the handsomest daughter of Segis Fayne Johanna, a cow with four official seven-day records above 30 lb. butter and one of the two cows with four daughters that have each made over a thousand pounds of butter in yearly work. At one time the directors of the Holstein-Friesian Association of America seriously considered using pictures and models of Segis Hengerveld Fayne Johanna as a True Type Holstein. The dam of King Pontiac Fayne Butter Boy was Briar Pontiac Daisy, 30.12 lb. butter in a week whose sire was by De Kol 2d's Butter Boy 3d from Pontiac Jewel, a 30-lb. daughter of Hengerveld De Kol. Both the granddams of King Madaline Butter Boy have official seven-day records of over 30 lb. butter and despite the fact that his own dam was tested as a junior two-year-old his four nearest dams have records that average 27.42 lb. butter in a week.

The junior herdsire in the German herd is Oakta Pontiac Ormsby, a bull raised in the Alfred University herd. His sire, Allamuchy Ormsby Paul, was by King of the Ormsby from a good record daughter of King of the Sadie Vales. His dam, Oakta Pontiac Korndyke was by Pontiac De Kol Korndyke, one of the many good sons of the great Pontiac Korndyke and, tested as a junior four-year-old she made a seven-day record of 526.4 lb. milk, 30.79 lb. butter. Most of the calves in

SOME OF GLENN GERMAN'S MILKERS

the German herd are by Oakta Pontiac Ormsby and they are certainly very promising.

One of the best producers as well as best individuals in this herd is Princess Victoria Fayne De Kol, a large handsomely marked, light colored cow. She is a granddaughter of Sir Fayne Clintonia Burke De Kol and her dam combines the Mercedés and De Kol strains.

Queen Francine Pieterje is by the same sire as Princess and is from a record daughter of Sir Colantha Pontiac. Queen is nearly all white with small black spots on her neck. Tested as a four-year-old she made

an official seven-day record of 535.5 lb. milk, 23.05 butter.

Mr. German has officially tested some of his cattle when he wasn't too busy with his general farm work. One of the cows tested about the same time as Queen was Dorothy Francine Johanna Lad, a half-sister of Queen, being from the same dam. Dorothy as a three-year-old made a seven-day record of 476.4 lb. milk, 20.36 lb. butter. She and Princess were probably Mr. German's two favorite cows and it was somewhat of a surprise to a number of people when he consigned Dorothy to the New York State Breeders' Sale. There are several granddaughters of Sir Colantha Pontiac in the herd besides Dorothy and Queen, one of these is Betsy De Kol Pontiac Ambrosia, also a granddaughter of King Pontiac Ambrosia, a son of King of the Pontiacs from a daughter of Hengerveld De Kol. Betsy is a very nicely marked cow with a square udder, just

GLENN C. GERMAN AND DOROTHY FRANCINE JOHANNA LAD

the kind of cow any breeder would like to own. She is from the same dam as Pauline Velora Johanna Lad, another cow of great capacity, but her sire Donald Johanna Lad who is also the sire of Dorothy was a grandson of King Korndyke Sadie Vale and Colantha Johanna Lad 8th.

We have said enough about the breeding of the females in this herd to show that they are from bloodlines noted for both individuality and production. They are producers themselves and representative of the high-class, purebred Holsteins found in the herds of many men who are dairymen by profession as well as breeders of purebred Holstein-Friesian cattle.

The barn on the German farm is roomy and substantial although not fancy. It has a cement floor and swinging wooden stanchions. The calves are kept in a big box stall and there is also a roomy maternity stall. We were much interested to see that this good dairyman has scales for weighing milk hung in the barn, and keeps record sheets. He also has framed pedigrees of his herdsires on the barn walls.

The German herd is accredited and has been for a number of years. The milk produced goes to a cheese factory. The farm consists of rolling land, a typical western New York dairy farm with good pasture. Growing in the pasture is plenty of maple and beech affording shade for the cattle as well as timber and wood for the use of the owner. The house is pleasantly located and stands on a little eminence so that slightly views can be enjoyed.

Not far from the German establishment is the farm

and home of the Witters. They own an interest in King Madaline Butter Boy and these two good Holstein breeders have worked well together, to their mutual advantage. Both herds are accredited and both consist solely of registered Holsteins run from an economic standpoint, the only true standpoint for a purebred dairy herd for, if purebred dairy cattle are not more profitable than grades or common cows, if they do not produce more and at a lower cost, there is little if any reason for their existence.

Mr. German who is comparatively a young man is a real, progressive, working dairyman and Holstein breeder. He is a good farmer as the condition of his fences, fields and buildings testify. He is a member of the Farm Bureau and the herd for a number of years was enrolled in the Allegany County Dairy Improvement Association, a sure indication that the owner expects his animals to make a profit as well as produce.

Filipinos Protest California Dairy Law

WHEN the National Foreign Trade Council recently met at Seattle, the group of delegates from the Philippine Islands lodged a protest against California's new dairy substitute law, which places a two cent tax on nut-margarine. The claim is made that the California law violates the Payne-Adrich bill of 1909, which provided for free trade between the United States and the Philippine Islands. The argument is advanced that as nut-margarine is composed of 76% coconut oil, the California law is virtually a tariff on the Philippine product.

The advocates of the California law claim that the tax imposed is similar to an internal revenue tax and has nothing to do with the tariff between the United States and her foreign possessions. The law was passed to protect the California dairy industry against substitute competition and as such is applicable to the products of the other states, and would also apply to the products of countries and territories not within the Union.

It would seem to us that the California nut-margarine tax is very much similar to the gasoline tax, which is collected in a majority of the states. It is paid by the consumer and not by the manufacturer or producer. The argument that an internal revenue tax discriminates against the Philippines or any other territory because one of the ingredients entering into the taxed material is produced partly or wholly in that territory, is, in our judgment, rather far fetched.

How Much Milk?

IF all the milk in the United States last year was put into one gigantic can a thousand feet in diameter it would reach half a mile into the clouds, being more than four times the height of the Washington Monument at the national capitol, according to the Blue Valley Creamery Institute. The can would tower 2,009 feet in height, while the Washington Monument is only 500 feet high and fifty-five feet square.

Into this gigantic milk can would go annually 11,925,252,441 gallons valued at \$2,566,000,000, the daily milkings of 24,675,000 cows.

Muscle Shoals and Fertilizer

IN its issue of September 19, *The Progressive Farmer* which circulates throughout the southern states and is one of the really great agricultural papers of this country, there is an interesting article by Eugene Butler on Muscle Shoals and the Fertilizer Business. This is one of a series of three articles by the same author and Mr. Butler has given his first one a lot of hard work and careful thought. The conclusion of his first article is, that the manufacture of cheap nitrogenous fertilizer at Muscle Shoals is greatly to be desired, but there are difficulties in the way of its successful consummation. There are two plants at Muscle Shoals, one is very small and the other uses a process that is obsolete, as a much cheaper process, the Hebar method, has since been discovered. In Germany fixed nitrogen, that is nitrogen taken from the atmosphere, is being profitably made but as yet no one in this country, Mr. Butler says, has been able to make it at a cost that will permit its sale for less than the cost of nitrate of soda and sulphate of ammonia, the two fertilizer ingredients carrying nitrogen most used in this country.

Another Test

THE New York State Board of Health is using the so-called "turbidity test" to determine whether or not butter is adulterated. This turbidity test is said to show accurately not only whether or not any foreign fat has been added to the butterfat in or after the process of manufacture, but also to show whether or not the animals by which the butterfat is produced had been freely fed on cottonseed meal. If the test operates, the ruling of the Board of Health apparently is that the butter is adulterated.

A number of legal as well as physiological questions are raised by this action of the Board, one to which special attention should be directed being the fact that butter practically alone of all the foodstuffs is defined by federal legislative enactment, and this federal legislative definition would seem to be exclusive and controlling as to butter in interstate commerce. The lawyers as well as the chemists and physiologists are taking much interest in the situation which has developed in New York and the effort of the New York Board of Health to enforce its recent ruling will be watched with great interest.

Consult Experts at National Dairy Show

READERS of the *BREEDER AND DAIRYMAN* who visit the National Dairy Exposition staged at Indianapolis, October 10-17, should be sure to examine the Government exhibit which was described in our issue of September 22, page 574. Too late for inclusion in that story came the news of an added feature. This will consist of a special conference room where investigators, farmers, and dairymen will have an opportunity to discuss with specialists of the Department of Agriculture new developments and special problems relating to the industry.

R. R. Graves, who is one of the leading specialists in this country on dairy cattle breeding will be pleased

to give out information on recent developments concerning this great business. Among the projects under the supervision of Dr. Graves is the great Government farm at Beltsville, Maryland, where important questions that trouble dairy cattle owners are being investigated. Besides Dr. Graves, his associates, M. H. Fohrman and W. W. Swett, will be present.

Dr. E. B. Meigs will tell what has been recently accomplished in dairy cow nutrition, while Dr. L. A. Rogers and Dr. R. W. Bell will discuss the profitable

DR. R. R. GRAVES
Government expert on Cattle-Breeding, whom
Dairymen may consult at the National
Dairy Show.

disposal of cheese factory and creamery by-products. Special problems in butter making, cheese making and ice-cream making, as well as market milk problems may be discussed with specialists who will be present. Miss Jessie M. Hoover, specialist in milk utilization, can be consulted on the subject of milk-for-health campaigns.

The latest developments in dairy-cattle feeding, bull-association work, and cow-testing association work will be handled by J. H. McClain, in charge of dairy introduction. He will be assisted by J. E. Dorman, J. R. Dawson, J. C. McDowell, J. B. Parker, and W. E. Wintermeyer.

The conference room will be located in the center portion of the department's exhibit, in the south end of the cattle barn. A schedule of hours each specialist will be available will be posted at the information booth in the department's exhibit.

Order Asks for Cows

THE Home of the Junior Order of United American Mechanics is located at Tiffin, northwestern Ohio. To supply milk and other dairy products for the inmates it is planned to establish the largest dairy herd in that section of the country, and the various councils in the United States have been appealed to donate cows. The first cow was contributed by the Tiffin council. A dairy barn estimated to cost \$20,000 will be built this year.

A Successful Calf Club Boy

FOUR years ago last April when he was a trifle less than 9 years old, Ralph Fairbanks of Kanabec County, Minnesota, borrowed nearly \$200 from a local banker and bought a purebred Holstein calf to make good his membership in the county's first dairy calf club organized by the farm bureau and the agricultural extension service of the University of Minnesota.

Today he is the owner of five head of Holstein—Dorothy, his original purchase, her three heifer calves, and a bull calf born to her first daughter.

At 10 months, when she weighed 720 pounds, having gained at the rate of more than two pounds a day under Ralph's good care, Dorothy took sixth place in the calf club contest at the Kanabec county fair. There was no prize for Ralph, who was too young under the rules to take part in the contest. At the fair in 1922, Dorothy, then 22 months of age, was placed first in the open class. At 25 months of age she presented the boy with a fine heifer calf which was registered as Margaret. In February, 1924, she gave birth to her second heifer calf, and on January 1, 1925, to her third. Under semi-official test in 1924 she had a record of 397.7 lb. fat. For the first seven months of 1924 she produced nearly 300 lb. butterfat.

Margaret, dam of the grandson, has been milked since last March and is making a better record than did her mother at the corresponding age.

This club work in less than four and a half years has helped Ralph, now only 13, to become owner of a dairy herd of four females and one male.

Dairymen's League President Buys Holsteins

GEORGE W. SLOCUM, who has been president of the Dairymen's League Coöperative Association for several years, owns a number of farms around Milton, Penna., and on one of his establishments he recently placed thirty head of registered Holsteins which he purchased from J. W. Flint of Scio, N. Y., owner of the Sunny Slope Farms. Mr.

HOLSTEINS G. W. SLOCUM BOUGHT FROM J. W. FLINT

Flint's herd is perhaps better known as the "J. W." herd and is under state and federal supervision.

Mr. Flint has kindly sent us a couple of photographs of the cattle Mr. Slocum purchased and these are herewith reproduced. Some of these animals were bred to King Spring Farm Valentine and at least half of the number are daughters of this sire, who was a son of Spring Farm King 26th and Colantha Methilde Valentine. The seven nearest dams of this bull have seven-day records that average 31.70 lb. butter.

Mighty Monarch Veeman Hengerveld, the junior sire of the "J. W." herd was also purchased by Mr.

Slocum. This bull was by Monarch Beauty, a son of The Mighty Monarch from K. P. Tidy Jewel, a daughter of King of the Pontiacs from a 31-lb. daughter of Tidy Abbekerk Prince. The Mighty Monarch was also by King of the Pontiacs and his dam was Segis Hengerveld Fayne Johanna, 20,216.1 lb. milk, 1,129.37 lb. butter in a year.

The dam of Mighty Monarch Veeman Hengerveld was Inka Veeman Artis, the great cow owned by Roy W. Chamberlain of Canadea, N. Y. Calving as a junior four-year-old she made an official seven-day record of 29.47 lb. butter, 613 lb. milk. A year later

PART OF THE SLOCUM PURCHASE

she raised this record to 31.82 lb. butter, 655.4 lb. milk. Then as a six-year-old she was again tested and in seven days made 31.33 lb. butter, 583 lb. milk. Last March Mr. Chamberlain again put this cow in official test and she made a record not yet officially reported of 30.07 lb. butter, 629.8 lb. milk. In four consecutive years she has made three seven-day butter records above 30 lb. and four that average 30.67 lb., three seven-day milk records above 600 lb. and four that average 629.8 lb.

In cow testing association work she produced 14,402 lb. milk, 587.6 lb. fat in the testing association year and two months of this time she was dry. She was a daughter of Sir Korndyke Pontiac Artis Prince and her dam was a daughter of Woodcrest Pietje Korndyke.

Farm Children As Scholars

REPORTS from Iowa indicate that children raised on the farm are better scholars than those raised in the towns and cities. Figures obtained from 316 Iowa High School seniors who rated as distinguished pupils show that 172 were children of farmers. This is 54% of the total number. The National Bureau of Education reports that the farm population of Iowa is only one-fourth of the total population of the state so it is evident that from children raised on the farm come a larger number of senior scholars rated as distinguished pupils than their number would lead one to expect.

Donald Won the Bull

DONALD CREMIN, of Rollins, Illinois, is a Sophomore in the agricultural department of the Antioch Township High School. At a judging contest at Diamond Lake at the time of the Farm Bureau picnic, August 26, Donald won first place. He made a perfect score in judging and his oral reasons for his selection were regarded as excellent. As a prize he will receive a purebred Holstein bull calf donated by the Lake County Holstein Breeders' Association.

Factors Influencing the Contamination of Milk

By A. G. LOCHHEAD, Ph.D., Dominion Agricultural Bacteriologist

WITH the object of determining more fully the relative extent to which the various sanitary factors concerned in milk production contribute to contamination, an investigation was carried out at the Central Experimental Farm, Ottawa, Canada, extending over five months. The tests were conducted as far as possible under commercial conditions to note the good or adverse effect on the bacterial content of the milk of different methods of procedure applicable to the average farm. Among producers there is a fairly general understanding of the different sources of contamination upon which the germ content of the milk as it leaves the stable depends. What is perhaps lacking is a proper recognition of the relative importance of these sources, and the chief sanitary measures to be taken to insure the minimum contamination.

The tests in question were conducted in a barn housing 24 animals kept under as nearly identical conditions as possible. The milk of alternate cows was taken daily for bacteriological examination, while any particular set of conditions studied was maintained for several days. In this way, a large number of repeated tests were made from which average figures could be obtained and upon which conclusions could be based. The factors studied included what might be called "favorable" and "unfavorable" conditions of operation in connection with the care of the stable, care of the animals, care of the milking pails and care taken by the milker himself.

Tests were made to note the unfavorable effect of a single unsanitary operation when other methods were "favorable;" and on the other hand, the favorable effect of various improvements in method, etc., when general unsanitary methods prevailed. In addition, various combinations were tested out to note the effects of various factors in relation to one another. Hand-milking was used throughout.

It was found that when careful methods of handling were employed—, methods which involved the exercise of ordinary sanitary precautions without resort to expensive, impracticable means—, the germ content of the milk as it left the stable was less than 1% of that obtained under careless, unsanitary conditions. Of the various factors contributing to contamination, however, certain ones were found to be of much more importance than others as sources of bacterial infection. Two sources were found to stand out preëminently over all others, namely, imperfectly cleaned pails and the animal itself. In the first instance contamination is the result of infection by bacteria developing in traces of milk left in uncleaned or improperly cleaned pails, especially if not thoroughly dried after cleaning, while in the latter case it is due to small or large particles of manure falling directly from the animal into the pail during milking. It is therefore of extreme importance to insure that the pails are thoroughly clean, and to reduce to a minimum the possibility of even small particles of manure or dirt falling into the pail. Preven-

tive measures then, should concentrate on these two points if a producer is desirous of cleaning up a milk supply.

It was found that, under otherwise clean conditions, a change to a careless method of cleaning the pails or a change to carelessness in keeping the animals clean of dirt resulted in much greater increases in the germ content of the milk than the introduction of any other "unfavorable" method. On the other hand, when generally unsanitary methods prevailed, a change to a proper treatment of the pails resulted in a bigger improvement than any other favorable change of operation. Of almost equal importance was a change to a careful method in preventing access of dirt to the animal.

The form of the pail is of less importance than its state of cleanliness. However, even when reasonable care is taken, there is an ever present danger of accidental contamination from the animal, and the covered, or small-opening pail should therefore be considered an important factor in clean milk production. A covered pail, however, should not be considered as a substitute for a clean animal.

Even when pails were apparently clean they were found to be the source of much contamination unless the cleaning was thoroughly done and finished with steam treatment. Only then could they be called bacteriologically clean.

While other sources of contamination contribute to the general infection, yet they are relatively of lesser importance than those we have emphasized.

The stable air was not found to be responsible for a high proportion of the germs. Handling of hay or straw, sweeping up, etc., naturally increase the germ content of the air, but even when considerable dust was afloat the actual contamination of the milk obtained under such conditions was found to be relatively unimportant. In like manner, other factors studied such as the effect of wet milking instead of dry, neglect to wipe hands, contamination from foremilk, neglect to wipe udder before milking, using water or a disinfectant, were found to be of less importance as far as the results could be noted in the bacterial content of the milk.

While these minor sources of contamination should not be neglected, yet care with regard to them is of little or no avail unless at the same time attention is paid to the chief sources, which we consider to be unclean pails and manure or dirt from the animal.

The improvement of the sanitary quality of milk supply appears to be largely a matter of methods and very little a matter of equipment, so that the big factor is really the producer himself. Even though his buildings and equipment are of the simplest, yet he can assure himself of a clean supply if he once understands the sources from which the chief contamination arises and insures that he has a clean, and if possible a covered pail, and that the contamination from the cow is reduced to a minimum.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

OCTOBER 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

The World Awakened

APPARENTLY awakening like Rip Van Winkle from a prolonged sleep the Editors of the *World* have at length ascertained that real Holstein-Friesian breeders have formed the Holstein-Friesian Registry Association, Inc., and are recording their cattle with that Association.

It must have been a prolonged slumber that the editors of the *World* were taking because, despite the fact that the new association was organized July 31st and incorporated August 1st, it was not until their issue of September 26th that they apparently learned of the fact and even then, according to their editorial, some of their readers called their attention to it.

We are glad that Editors Price and Prescott in their endeavors to "Boom" the Holstein breed from an Exaggerated and Speculative standpoint have awakened to the realization that only a very small percentage of the total number of breeders are being deceived by the *World*. The dairymen, who breed Holstein-Friesian cattle for dairy and economic purposes, have organized a Registry Association that is being welcomed by the breeders everywhere and promises in the very near future to be the leading Association of its kind in America.

The *World* says they are sorry that such a movement has started because anything which disturbs the harmony of the industry tends to lessen confidence in its stability and reflects in lower values. If the Editors will point out one single instance where HE, SHE, IT or THEY made any move towards harmony or to merit public confidence we would like to have them point it out. Surely the advocating of the making forced records and the promoting of consignment sales where record cattle are struck off to different bidders at inflated prices under the pretense that they are bona fide sales will not strengthen public confidence or restore prosperity to the industry. Such deceptive practices should be suppressed and at no time, under no conditions, should the management of any Registry Association participate to any degree or to any extent in doing these things.

We believe that it is these things that have lessened public confidence in the breed and it is to promote these things that the fees have been increased and moneys have been taken from the Association's treasury and it is because the fees have been increased and funds have been so extravagantly and wastefully expended that the breeders and dairymen at first refused to have their animals properly recorded and now have banded themselves together and have organized a Registry Association, managed and controlled by REAL BREEDERS, to be conducted on sound business principles.

The *World* says that the present rank and file of our members know too little about their Association. Without fear of truthful contradiction we say, that they know far more about their association than they did four years ago and more than they would have ever known had it not been for THE HOLSTEIN BREEDER AND DAIRYMAN.

The Holstein-Friesian Association has published volumes of the Herd Book and reports of its Secretary and Superintendent of Advanced Registry in pamphlet form have been distributed to the members. Further, *The Holstein-Friesian World* and the *Holstein-Friesian Register* have been carrying page advertisements, paid for out of the Association's treasury and yet the Editors of the *World* come out in a statement and say that the breeders know too little about their Association.

After thousands and thousands of dollars have been drawn from the Association's treasury, does the Editor mean to infer that all of this money has been uselessly expended?

The *World* in their editorial of September 28th promised in the near future to give their readers the story of the Association in detail and in their issue of October 3d the Editor, Mr. M. S. Prescott, whom Judge Peasley, now a director of the Association, "dubbed" as "a man incapable of telling the truth" or words to that effect, has attempted to give the readers of his paper a history of the Holstein-Friesian Association as he sees it or rather as he would like to have his readers see it.

He reviews the early history of the breed in America, all of which can be found in the volumes of the Dutch-Friesian, Holstein and Holstein-Friesian Herd Books but Mr. Prescott cites only that which he wants his readers to know.

In this editorial he brings out the fact that the Western breeders withdrew from the original Association in 1892 and organized a Western Holstein-Friesian Association and this in part is the way he states it:

"The parallel between the situation back in the early nineties and the present situation in the Holstein-Friesian Association of America is striking in many ways. At that time, the Association had gone through a period of the greatest prosperity in its history, the industry was expanding rapidly, a substantial cash surplus was piling up and the management of the Association largely increased its effort to extend the popularity of the breed through the offering of prizes at fairs for public competition with other breeds, etc., and for Holstein products. This period of prosperity was followed by a time of severe business depression, culminating in the worst financial panic in the history of the country. A factional dispute in the Association came to a head and breeders were stirred up to a point where a number of

them withdrew from the Holstein-Friesian Association of America and formed a separate Association."

Does the Editor mean to infer that at the present time the American people are passing through a financial panic or that times are depressing or that there is any reason for a "Slump" in the Holstein-Friesian industry other than that caused by mismanagement of the Association?

Right in one of the most prosperous times of the history of the country, when wages are high and money is free and farm products are bringing a good price, the Holstein-Friesian Association is experiencing a great falling off in business and a depression in the industry while just north of the United States the Canadian Association shows an increase of from fifteen to forty per cent in each department.

The Western Holstein-Friesian Association is not to be compared with the Holstein-Friesian Registry Association, Inc., which has been launched and which is receiving the support and coöperation of breeders everywhere.

The Editor tells us that in 1892 the Western Association had a membership of upwards of two hundred which was nearly one-half the size of the Holstein-Friesian Association of America. The new Association that was organized on July 31, 1925, is scarcely two months old and now has a paid membership more than equal to both of the Associations away back in 1895 and further than that there is in the neighborhood of 40,000 active breeders all of whom we believe are prospective members for the new Association and will eventually join it.

There is no comparison with conditions that existed in 1892 with conditions as they exist to-day. At that time there were few breeders and few cattle. At the present time there is room for an association to promote the breed from a dairy standpoint, and if the new Association does not become efficient and render prompt and efficient service to take care of the natural increase of the breed there will have to be a third association in order to keep up with the black-and-white cow.

IN UNION THERE IS STRENGTH

Under the heading, "In Union there is Strength," the Editor cites the fact that "after the two Associations joined in promoting the breed that the Association and the industry enjoyed continuous prosperity, the greatest growth starting in about 1909 or 1910 and extending without a 'break' until 1920. During the years immediately preceding the close of this period two factions had grown up in the Association over the question of management policy and a change of administration took place in 1919 and that year and the next witnessed the peak of post-war boom of prices."

Right here we would call our readers' attention to the fact that it took just two years under the new management that gained control at the Philadelphia meeting, to put a "crimp" in the continued prosperity and, further, that since that date the Association has continuously drifted backwards, fees have drifted upwards, profits have been changed into deficits, the members have been deprived of their just rights and have ceased to patronize the Association to the extent that the total number of Transfer Certificates issued dropped from 131,000 in 1919 to 87,000 in 1925, nearly

44,000. These 44,000 animals and their owners would make the nucleus of a prosperous Registry Association, saying nothing of the thousands of animals that have gone unregistered and untransferred between the years 1919 and 1925.

Therefore, to stop this loss and further drain upon their pocketbooks in increased fees, the breeders have united in forming a Registry Association to place their industry on a Sound, Business Basis and take it out of the category of Speculation and out of the hands of those who are promoting the breed from a speculative standpoint. We do not believe the average breeder is going to be further misled or deceived by "loose statements" published in the *World* or by propaganda sent out by the political management.

The Editor, (if the work which Mr. Prescott is doing would place him under that title), tells his readers that the promoters of the new Association have "seized upon the matter of high fees and extravagant policies within the Association as issues that might be popular during the period of economic depression through which our breed in common with all agricultural interest, was passing." In this he admits the whole truth and the necessity for a change and an immediate change. If we are passing through a period of depression surely high fees and extravagance should not prevail.

Comparative Record Accuracy

TO determine the accuracy of the milk and butterfat production records as determined in cow testing associations by weighing and testing one day's production each month, the United States Department of Agriculture made a study of the actual yearly production records of 70 cows kept at the Minnesota Experiment Station. These Minnesota records gave the production of milk and butterfat for each milking throughout the year.

By systematically picking out the weights and tests for one day each month as they would have been obtained by cow testing association methods and then calculating the yearly production it was found that the association method was accurate within 2% on milk production and within 3% on production of butterfat.

A tabulation was also made of 100 yearly individual cow records from the department farm at Beltsville, Md. These records gave only the milk production night and morning for each day in the year. A yearly total, calculated from one day's record each month, when compared with the actual milk production showed an accuracy within 1.99%.

Butter via Panama Canal

WESTERN butter makers are favoring the Panama route through which to export their surplus butter to European markets. So great is the demand for steamer space that bookings have been made for three or four months ahead. The transportation charges over the canal route are said to be much lower than the charges for shipping over the railroads to the Eastern Coast and from there to Europe by steamer.

Alimony is the interest on the bonds of matrimony.

Politicians on the Anxious Seat

WE are hearing rumors that the Political, Dealing Element are rallying and plan to make a concerted effort to undermine the new Association and thus keep the breeders of Holstein cattle in subjection.

If this rumor is true it only goes to prove that the Political Management realize the strength and magnitude of the movement with which the REAL BREEDERS launched when they organized the Holstein-Friesian Registry Association, Inc., and if the Political, Dealing Element are so disturbed because of the Sound Business Policies that are incorporated in the Constitution and By-Laws of the new Association, the breeders who have joined and those who contemplate joining need not worry about its future success and there is no indication that they are worrying for the Secretary reports that last week Memberships were received at the rate of over 8,000 per year.

We do not believe the breeders will be deceived with any propaganda which they might receive. If the Association, under the present Political Management and high fees ran behind over \$137,000.00 in the past three years, how can it hope to exist under this same management with a lesser fee unless it takes additional sums from the Reserve and after the Reserve Fund is exhausted, how can it hope to exist unless the fees are further increased from what they have been in the past?

The expense of the multiplicity of offices, the increased expense of the Delegate System, the continuous drain on the Association's treasury to support the Advanced Registry Department, which last year cost the breeders over \$65,000.00, and the expensive Extension Department will throw the Association into bankruptcy if they are continued and fees are decreased.

The new Association is built on SOUND BUSINESS PRINCIPLES and can administer its affairs and render prompt and efficient service at much less expense than can the old Association. Any contest between the two organizations surely will result in favor of the new Association because it represents the breeders who own 90% of the cattle.

No act on the part of the old Association to promise reform by way of "DEATH-BED REPENTANCE" should recommend itself to the REAL BREEDERS, who are about to be relieved of the burdens which have been inflicted upon them.

An Old Trick

I HAVE often heard my older brothers relate an experience that they had with a "TOWN CHARACTER" which reminds me very much of an instance which I heard recently being practiced in promoting cattle sales.

My brothers love to relate their boyhood experiences and often refer to an instance when the "TOWN CHARACTER" told each of them that he had given the other one a brand new jack-knife which they could have if they were physically able to extract it from their brother's pocket and after he had passed this word along to the boys he "parked" himself in a convenient place to see the "tussle" and witness the fray. When the brothers met each, of course, was eager to

see the new knife which the other brother was supposed to possess and after each one denied that he had a knife a "battle" ensued. After the "tussle" each was surprised to learn that he had been duped.

Recently a prominent breeder from the Central West stated that he had corresponded with one of the so-called large breeding establishments with reference to a bull of a certain breeding and in reply they described the animal and then invited him to their Field Day (Annual Sale) when this particular young bull calf was to be placed in the auction ring and sold to the highest bidder and they inferred that they thought he would be struck off at a price of about \$150.00.

After the sale (or Field Day) in talking with other breeders it developed that several had attended this event under the same assumption that when the bull came up for sale they would be able to buy him for a figure around \$150.00, but when the calf was led into the ring there was active competition in the bidding and although \$150.00 would have been a fair price for the animal it sold for much more.

Is there any wonder that breeders who attend these affairs, after they confer with one another and realize that they have been duped, lose confidence in the management and the system.

A Cheese Film

THE Cheshire Cheese Federation Council is an organization interested in the manufacture of cheese in the old English county of Cheshire. This organization recently had moving pictures taken showing different processes in the manufacture of Cheshire cheese and these will be made into a film, which will be exhibited with the idea of increasing the demand for Cheshire cheese.

Mrs. Brookline—I understand the Eskimos are very keen domino players, and sometimes bet heavily, even putting up their wives and losing them.

Mr. Brookline—Well, I'll bet there are a lot of good losers among the Eskimos.

Contentment goes out of the door as prodigality comes in.

CASTINE SIR JOHANNA NIG ORMSBY
First Prize three-year-old bull, senior and grand champion at the Nebraska State Fair and Kansas Free Fair. Owned by F. E. Prince, Pittsburg, Texas.

William Allen Matteson

ON September 20th, W. A. Matteson, for more than thirty years one of the leading Holstein breeders of New York State, died at his home in Utica, New York.

It is generally acknowledged that Mr. Matteson was the greatest orator ever affiliated with the Holstein-Friesian Association. He was a prominent figure at every meeting and, being a ready thinker, could talk on any subject discussed on the floor. When the breeders gathered for social times Mr. Matteson was always in request as one of the leading speakers and his words never failed to charm the listeners.

Mr. Matteson was elected president of the Holstein-Friesian Association of America in 1898 and served three successive terms. When a successor was elected Mr. Matteson was chosen for vice-president and held this office for many years, combining it with the chairmanship of the executive committee. His legal knowledge was of great assistance to the committee and the directors in their deliberations, and he was the legal counsel of the association for several years although his salary for his services was paid to him as chairman of the executive committee.

Mr. Matteson was a careful, conservative thinker. When at Philadelphia in June 1919 the management of the association was seized by the group that still hold control they dropped Mr. Matteson from his position as chairman of the executive committee and rejected his advice, which would have saved the association thousands of dollars in litigation. It was upon Mr. Matteson's advice gathered from his great knowledge of New York State corporation law that the other New York directors holding office at that time did not attend any further meetings of the Board of Directors, claiming that the new Board was illegally elected. It is widely believed that it was because of this opinion that he was dropped from his office of responsibility by the directors and an untried man placed in his stead. When his term of office as director expired the following June he was not a candidate for reelection.

It is no secret that Mr. Matteson was deeply hurt by some of the speeches made about him and by editorials appearing in the *Holstein-Friesian World* fighting against the conservative element in the association.

He had the interest of the breed, the Association and the Holstein breeders at heart, and it grieved him to think that men who should have known better could even intimate that he was swayed by any other motives.

Mr. Matteson as a Holstein breeder maintained a high-class herd which was widely noted because of its individuality as well as production. Descendants of the cattle he owned have won high honors in the show ring and made tremendous records in other hands. Future students of Holstein history however, will attribute to Mr. Matteson's fame, that it was largely his hand and mind that guided the Holstein-Friesian Association of America from 1898 to 1919, the years of its greatest growth and prosperity.

A Master of Words

IN order that those of our readers who never had the privilege of hearing the late W. A. Matteson may get some idea of his range of thought and flow of language, we are herewith printing two short extracts from speeches made by him to the assembled members gathered at annual meetings. It is impossible to read these extracts without getting some idea of the eloquence of the orator, but it is impossible for us to portray the charm of the speaker, his mellow voice and pleasing appearance. It was the universal opinion of those who heard him in his prime that he was the most gifted speaker that ever addressed an annual meeting of the membership and we believe our readers will agree with this opinion when they read the two following excerpts.

THE MONTH OF JUNE

This magnificent season of the year inspires the thought that we can all get more enjoyment, more of poetry out of life than we do. No other vocation or profession affords such opportunities for seeing, feeling and enjoying the beautiful as the profession of agriculture. We are close to nature, working with nature, and all that is beautiful and lovely and grand in nature is before us if we will but see it.

Wherever we may be, we can see the beautiful hills and valleys; breathe in the fresh pure air that is wafted over them, pungent with the perfume of flowers; watch the cattle feeding upon the green grass and lowing affectionately to their masters; observe the heads of golden grain nodding their invitation to us to gather from them nourishment and strength; hear the singing of the birds, and the rippling, ringing music of the brooks as they speed onward to the rivers and the sea. There is beauty and harmony and music and poetry in it all, and for us all, if we will only open the very doors of our beings and receive them. If we will, clouds will disappear and life will be as bright as the sun that warms us, and her measure of happiness for us will be filled to the brim, pressed down and running over.

THE INFLUENCE OF A HOLSTEIN COW

If we light up the pathway and lighten the burdens in any degree of the dairymen—the farmers of the land—we are doing a great work, so many of them are there who lead lives of toil with little recompense, and look upon their calling as one drudgery, where brawn and muscle only are in demand. With such a one, his heart is not in his work, his brain is little used, and his soul is dead to the great treasure-house of enjoyment and beauty around him. Sell him a Holstein-Friesian cow, a good one. Seeing with his own eyes her magnificent yield, drawn by his own hands from her capacious udder, will kindle in him a desire to know more of the breed, and he will get more of them. He will be led to feed better and give better care, and that will lead to inquiry and study into better methods of tilling the soil and crop raising. Soon the mysteries and beauties of science are inquired into and discovered, and unconsciously, step by step, he will emerge from the sphere of a common toiler into the realm of successful scientific farming. Mere drudgery will be transformed into the scientific profession of agriculture. His

brain, his heart, his soul will then be in his work, and what was once irksome will be a pleasure and a charm, and the association or the breeder who first drew his attention to the Holstein cow will his benefactor.

Maryland's Boy Judges

THE three boys that will represent Maryland in the junior judging contest at the National Dairy Show come from three counties, Montgomery, Harford and Kent. They are Ralph Walker, Gaithersburg, Arthur P. Dunnigan, Pylesville, and Stanley B. Sutton, Chestertown. These three boys won the right to represent their state by their work at the recent Maryland State Fair held at Timonium.

Harford county won the silver cup for the highest scoring team with a total of 3,040 points, Montgomery was second with 2,920 points and Kent county third, with 2,895 points. Classes of Holsteins, Jerseys, Guernseys and Ayrshires were judged. Stanley E. Sutton was the best judge of Holsteins with Ralph Walker, second, Arthur Ahalt of Frederick county was third and Burton Kephart of Carroll county fourth.

Fashion in Breeding

WHY is it that owners and breeders of pedigree stock seem so prone to pay exaggerated attention to details that would scarcely be considered by these same farmers if they were handling non-pedigree commercial stock? Readers will note that a distinction has, in these few lines, unconsciously been made between pedigree and commercial animals. The admission was unintentional, but if the possibility of such distinction exists in the mind of a pedigree enthusiast, small wonder that owners of non-pedigree animals are accustomed to regard pedigree cattle as possessing less utility value than cows such as are bought and sold at weekly cattle markets.

Happily in the British Friesian breed there is no ground for the accusation that an animal with a pedigree is of less value to a working farmer than the ordinary dairy cow that can be purchased everywhere. Centuries of careful breeding for milk production have made the Friesian the most profitable cow it is possible

K. C. P. LAVERA

First prize aged cow, senior and grand champion at the Kansas Free Fair, Topeka, Kansas, owned by J. M. Barnell, Denison, Kansas.

for the milk-selling farmer to possess, and the object of these notes is to express the hope that breeders, in developing herds, will continue to observe all those features that make a cow valuable and desirable without a pedigree, and will not be side-tracked into following any fad, fashion or fancy, that if pursued will impair utility or profit-production.

When all British farmers realize what Friesian enthusiasts know, namely, that the black-and-white is the most profitable cow on the farm, apart altogether from any consideration of pedigree, then there will happen what has taken place all over the world, and the Friesian will become the dairy cow of the country.

The above appeared in the *British Friesian Journal*. We agree with our British contemporary that the black and white cow is the most profitable dairy animal on the farm, apart from any consideration of pedigree. Centuries of careful breeding for milk production have made her so. It is only when the unwary buyer is led to pay unreasonable prices for stock because the ancestors have made inflated records that such buyer is disappointed. When purchased at their true value, Holstein-Friesian cattle make money for their purchasers.

Good for Jimmy

JAMES McTAVISH of Cass City, Michigan, is a member of the Tuscola County Calf Club. Last year he exhibited a yearling heifer at the Michigan State Fair which won first in its class and then was made grand champion of the Holstein calf club classes. This year he brought the heifer again to the state fair where she was made the first prize two-year-old in the calf club classes, was grand champion of the calf club Holstein division and then entering her in the open classes and competing with breeders from Michigan and other states, young Mr. McTavish got third prize on his heifer. Norman Carpenter also of Cass City had the first prize senior yearling Holstein heifer and this animal was placed fifth in the open class, a pretty good showing for the calf club boys.

Trains, being about 1,650 times heavier and 70 or more times stronger than average automobiles, inevitably win collision contests at crossings. It is not the mere existence of crossings that make them dangerous—it is the reckless way in which people use them. No one would drive into the mouth of a loaded cannon which might at any moment discharge a death-dealing shell, but many a sane and sober man drives carelessly into an equally dangerous path at a railroad crossing.

Farm drainage dates back over 200 years when tile drains were discovered in the "magic gardens" of a monastery in France. There is no record as to how long they had been used. England and Holland have practiced drainage for more than 150 years, and tile drainage was first practiced in this country in New York State in 1835.

Integrity without knowledge is weak and useless; and knowledge without integrity is dangerous and dreadful.—Dr. Samuel Johnson in *Rasselas*.

NOT ABOUT COWS

Care of the Furnace—Do It Now

AS the weather becomes cooler, people's minds turn to thoughts of the furnace, and the pleasure of such contemplation, this fall, at least, is not enhanced by the coal strike. By the time these words are in print, it may be that the coal strike has been amicably settled, with little damage to any of the parties concerned. But should there be any damage, it will be to us—the public. But, strike or no strike, the old furnace has to be fired again this year as usual, and that before long.

Of course, as a good housekeeper, the man of the house gave the furnace the proper care last spring when the fires went out for the last time. No? Well, it is not too late for him to do it now, before the weather becomes such that a steady fire is needed. Really though, the spring is the best time for that job, as the soot in the pipes and flues tends to draw dampness. The cleaning needed depends upon the type of heat used—steam, hot water or hot air, but whatever the kind, a thorough overhauling should be given as soon as possible, in order that any small repairs needed may be noted and ordered, before the really cold weather sets in. Very often, one has had to endure discomfort by being kept waiting for some small piece, when an order goes astray or the furnace men are too busy with big jobs to take time for our small one.

CLEANING

If no repairs are needed, the soot should be cleaned from the smoke pipe and from the firepot, and the ashes and clinkers removed from the grate. When steam or hot water is the system used, a thorough cleaning of pipes and boiler is necessary, that no sediment may remain to retard the efficiency of the system. The water gauge glass and the valves should be properly tested, which is best done by an expert unless the man of the house is entirely familiar with such work. And in the interests of harmony in the home, it may be advisable for the lady of the house to go to see her mother on the day that this annual cleaning is undertaken.

COLD AIR BOXES

When a hot air furnace is used, a better circulation of heat is provided by having the cold air boxes in the rooms that are being heated. The old idea used to be to have the cold air taken from out doors or from some unused, unheated room. This is all wrong. The idea is not to feed cold air to the furnace, but to take the cold air from the rooms being heated, and to replace it with warm air, thus providing a continual circulation. Many a furnace has been condemned as no good when the trouble has been that there were not enough air boxes, or else they were not large enough, and above all they were not in the proper place. They are no more unsightly than the usual register, and can be tucked away behind the piano or under the davenport. For

ventilation nothing can beat opening the doors every night for a few minutes just before retiring. Dead air is hard to heat and if fresh air is admitted at night the rooms will be nice and warm in the morning, and no need to lose that heat by opening the doors to ventilate.

FUEL

And when the old coal eater is all cleaned up and in good shape, there comes the interesting question of fuel. For the past few years, the price of coal has been such as to give pause to those who are responsible for feeding the apparently insatiable monster below stairs. To cut down the cost of heating the house, many people have been trying to use the size of coal known as buckwheat, since the price is very much lower than that of even the next size—pea coal. But one trouble with buckwheat coal is its tendency to accumulate gas, with consequent explosions. In a brand new furnace last winter, such an explosion blew the pipe clear out of the chimney flue. This trouble can be avoided by preparing the fire when putting on any quantity of coal. First put on several shovelfuls of coal at one side slanting towards the middle of the fire box. Then, when this has burned through put on the rest of the coal on the other side, leaving just a little bright fire on the first side, so that as the gas accumulates, it burns itself off without any explosion. Or if one has not time to fix the fire that way, but must put all the coal on at one time, put a small stick of wood down the center. Then as it burns off, it will leave a small opening for the proper escape or combustion of the gas. Many a furnace man's bill can be avoided by these means to say nothing of the terrible smell of the gas.

USING COKE

Another help in cutting down coal bills is the use of coke. If it can be obtained, a load should be bought with every load of coal, and when making a fire it should be used half and half, putting the coke on top. Since it costs much less than coal, this makes a much cheaper fire, and it lasts much longer. Should there be an odor of sulphur in the coke, pour cold water over it.

WOOD

Many of us have access to a good sized wood pile and this helps out considerably with the winter's coal bills. But wood makes a fine ash which packs solidly, so that greater care should be taken to keep the furnace well shaken when much wood is used, or there will be no draft.

Some one has invented a thingumajig to light electric bulbs by radio. One might hope for an invention to take the heat from the air by radio, but at the time we need it most, there seems to be none in the air! Anything that would do away with the annual shoveling in of coal and shoveling out of ashes, with the consequent dust above stairs, would certainly make this life a heavenly thing. Can it be possible that the future holds such domestic bliss in store? Who can tell.

CLUB ACTIVITIES

HOLSTEIN COWS PARADE

A parade of purebred Holstein cows three blocks long was one of the features of the Mini-Cassia Holstein association's annual picnic at Rupert, Idaho, August 26. There were 75 Holsteins on exhibition. Mayor Behmer of Rupert made the speech of welcome and President Davis of Weiser gave an address on the dairy situation both in Idaho and the nation.

There were three judging contests, Mr. Davis being the official judge. In the boys' contest Lester Gibson of Declo was first; J. B. Redford of Rupert was first in the farmer's class and J. F. Montgomery first in the class for business men. The high score was made by Mr. Redford with Lester Gibson second, but the boys with an average of 377½ did the best judging, the farmers averaging 365, and the business men 337½. The highest possible score was 600.

PICNIC ON WASHINGTON ISLAND

Judge Henry Graass was the principal speaker at the annual picnic of the Washington Island Holstein Breeders' Association. He stressed the raising of thoroughbred American boys and girls in real American homes and said that America was more in need of people that would live for their country than it was for them to die for their country. Other addresses were made by the Chief County Agent of Wisconsin and a representative of Hoard's Dairyman. Both spoke of the benefits of organized cooperation in farm production and marketing, the advantages of raising purebred stock and farming systematically and intelligently.

The weather was favorable and there was a big crowd. Financially, as well, the event was a big success, the evening session being especially well attended.

VISIT LIVINGSTON COUNTY HERDS

Members of the Livingston County Holstein Association toured part of Livingston County, Mich., August 25, and visited a number of Holstein herds. The main objective was the inspection of the results of the bull association, formed two years ago. A central sire and several block sires closely related were purchased. The block sires, one in each block are kept six months in a place, and then are all moved each six months.

A pot luck dinner was had at the county Sanatorium after

the herd had been inspected. Some of the young stock had just returned from the Ionia Fair where they had won a number of prizes.

After lunch President C. P. Reed called the meeting to order and introduced Dr. Huntley, superintendent of the Sanatorium. The following is an extract from his speech:

"The State of Michigan now maintains dairy herds at thirteen of the institutions. Six of these are strictly purebred including Traverse City, Pontiac and Newberry, Michigan Farm Colony at Wahjamega, the Michigan Reformatory and the School for the Deaf at Flint. The remaining seven including the Kalamazoo State Hospital, Ionia Hospital, Michigan Home and Training School at Lapeer, the State Prison at Jackson, the Industrial School at Lansing, the State Sanatorium at Howell and the Branch Prison at Marquette have herds partly made up of purebreds and the balance grades. The surplus females from the purebred herds are being transferred to the other herds and all are being placed on a strictly purebred basis as rapidly as possible. The thirteen herds include upwards of 1,600 females of all ages of which more than 1,100 are purebred registered Holsteins and the balance are grades.

The herds inspected were those owned by Gail Clements, C. P. Reed, Sanatorium, Britten Gilkes, Burr Hoover, and the Crouse farm at Hartland.

RHODE ISLAND STATE FAIR

At the Rhode Island State Fair staged at Providence, representatives of the Graceland farm owned by Franklin Strickland, won a majority of the prizes. Graceland Walker De Kol was the best bull, while the champion female was Wallum Inka Vale. The first prize two-year-old heifer, the first prize senior heifer calf and the second prize junior heifer calf came from the Strickland herd. Manchester Brothers of Warren owned Ideal Mercedes Johanna Inka, the first prize aged cow, and also had the third prize animal in the same class, as well as the first prize three-year-old heifer. Representatives of the Manchester herd won a number of lesser prizes.

Hundreds who visited the fair also visited the United States destroyer, Putnam, which was anchored about half a mile out in the bay. They were taken to see every part of the vessel and the captain and other officers had a busy day showing the visitors around.

WEST VIRGINIA STATE FAIR

By G. MALCOLM TROUT

West Virginia celebrated her 45th fair anniversary by staging one of the greatest dairy shows ever held in the state. Although an industrial state by nature, West Virginia has reason to be proud of the splendid showing of dairy cattle which filled the barns and two large tents located on the Island at Wheeling.

The premiums offered by the state fair board were such as to attract the showing of herds from five states covering a territory from Oklahoma to Pennsylvania. The Holstein show of last year was made up of five herds totaling 46 black and whites. Compared to the seven or eight herds of 86 animals which were exhibited this year that show looked small indeed.

The animals in all the classes were of very high quality as far as type is concerned. Some of the animals would have made strong competition for the purple at the larger shows.

The closest competition, judging from the number of ribbons which each secured, was between the herds of James M. Paxton and Sons, of Houston, Pennsylvania, and A. F. Randolph from Canton, Illinois. Ward and Leonard of Pawhuska, Oklahoma with a herd of 19 Holsteins shown for the first time this year were the largest exhibitors.

King Echo Sylvia Alcartra Lad, aged bull shown by James M. Paxton and Son was the outstanding Holstein male. He was of medium size and carried a typical Holstein conformation throughout. The three-year-old bull, Whitehurst Colantha

KING ECHO SYLVIA ALCARTRA LAD,

First prize aged bull, Senior and Grand Champion at the West Virginia State Fair. Owned by James M. Paxton & Son, Houston, Pa. "Jim" Paxton holding his herd sire.

Artis Lad, belonging to A. F. Randolph had wonderful quality and fitting but was criticized by the judge as being too fleshy.

The closest competition was in the aged cow class. Mamsell Maple Grove Jewel, owned by A. F. Randolph is a showy animal of great size, wonderful constitution and an almost ideal udder. She was criticized for being slightly faulty in her topline, but at that she defeated Dasie Dalzell Mercedes Belle 4th, the wonderful show cow belonging to James M. Paxton and Son which had won five out of six grand championships at eastern fairs. The Paxton cow showed excellent Holstein conformation but due to transportation she showed rather poorly.

In the aged classes the struggle was about evenly divided between Paxton of Pennsylvania and Randolph of Illinois, while in the younger classes Ward and Leonard of Oklahoma, showing for the first time this year made strong bids for honors. In the groups the money was about equally divided between the two former and the Oklahoma herd.

Professor E. L. Anthony, Head of Dairying, West Virginia University, Morgantown, W. Va., judged the Holsteins.

Exhibitors: James M. Paxton and Son, Houston, Pennsylvania; Ward and Leonard, Pawhuska, Oklahoma; A. F. Randolph, Canton, Illinois; Boyd Hawthorne, Cadiz, Ohio; H. D. Firestone, Akron, Ohio; O. B. Tolson, Bartlesville, Oklahoma; E. E. Brindige, Marysville, Ohio.

Bull, 4 years old and over: King Echo Sylvia Alcartra Lad, Randolph; 2d, Bell Farm Protector, Tolson; 3d, Twin Knoll Farm Ormsby Korndyke, Boyd Hawthorne.

Bull, 2 years old: 1st, King Ona Highland Hartog, Fire-

stone; 2d, Whitehurst Hengerveld Ormsby, Randolph; 3d, Admiration Peg Wayne Columbine, Ward and Leonard; 4th, Oklahoma Echo King Sylvia Warrior, Tolson.

Yearling Bull: 1st, King Alcartra Lyons Abbeckerk, Paxton; 2d, Texans Colantha De Kol Frindilla, Ward and Leonard; 3d, Ward and Leonard.

Senior Bull calf: 1st, Whitehurst Hengerveld Artis, Randolph; 2d, Colantha Ormsby Johanna De Kol, Ward and Leonard; 3d, Sir Ormsby Hengerveld Artis, Randolph; 4th, King Jewel Pietertje Segis, Randolph.

Cow, 4 years old or over: 1st, Mamsell Maple Grove Jewel, Randolph; 2d, Dasie Dalzell Mercedes Belle 4th, Paxton; 3d, Lorna Adene De Kol, E. E. Brindige; 4th, Cassie Inka De Kol, Paxton.

Cow, 3 years old: 1st, Lady Abbeckerk Bride Fayne, Firestone; 2d, De Kol Hamlin Kallentje, Paxton; 3d, Colantha

MAMSELL MAPLE GROVE JEWEL

Senior and Grand Champion female at the West Virginia State Fair. Owned by A. F. Randolph, Canton, Ill.

Ormsby Artis Lass, Randolph; 4th, Whitehurst Pauline De Kol, Randolph.

Cow, 2 years old: 1st, Dasie Echo Albino, Paxton; 2d, Chole Segis, Randolph; 3d, Oklahoma Echo Sylvia Polly, Tolson; 4th, Favorite Canary Homestead, Ward and Leonard.

Senior yearling heifer: 1st, Whitehurst Colantha Hengerveld, Randolph; 2d, Daisy Hill Hengerveld, Firestone; 3d, Poplar Carrie Alcartra, Paxton; 4th, Oklahoma Model Pontiac, Tolson.

Junior yearling heifer: 1st, Texans Triune Ormsby Paladin, Ward and Leonard; 2d, Whitehurst Double Dot, Randolph; 3d, Bell Farm Joy, Firestone; 4th, Whitehurst Colantha Ormsby, Randolph.

Senior heifer calf: 1st, Hazel Colantha Rag Apple De Kol, Ward and Leonard; 2d, Colantha Lena Homestead, Ward and Leonard; 3d, Burnsdales Segis Pontiac, Brindige; 4th, Colantha Peg Johanna Fayne, Ward and Leonard.

Exhibitor's herd: 1st, Paxton; 2d, Randolph; 3d, Ward and Leonard.

Yearling herd: 1st, Ward and Leonard; 2d, Paxton; 3d, Brindige.

Calf herd: 1st and 2d, Ward and Leonard; 3d, Paxton.

Get of sire: 1st, Randolph; 2d and 3d, Ward and Leonard.

Produce of cow: 1st, Paxton; 2d, Randolph; 3d, Ward and Leonard.

Senior and grand champion bull: King Echo Sylvia Alcartra Lad, Paxton.

Junior champion bull: King Alcartra Lyon Abbeckerk, Paxton.

Senior and grand champion female; Mamsell Maple Grove Jewel, Randolph.

Junior champion female: Hazel Colantha Rag Apple De Kol, Ward and Leonard.

Mrs. Peppercorn (reading)—"One of the idols most revered by the Japanese is that represented by the figure of a woman, seated, resting her chin in her hand."

Mr. Peppercorn—"Very interesting, my dear. Proves that the Japanese are among the wisest people of the earth."

Mrs. P.—"How so?"

Mr. P. (impressively)—"Because they deify woman who gives her chin a rest."

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

OUTSTANDING HOLSTEIN COW PARTICIPATES IN "MILK FOR HEALTH IN WEST VIRGINIA"

By G. MALCOLM TROUT

Dasie Dalzell Mercedes Belle 4th, famous Holstein cow of the James M. Paxton and Son herd of Houston, Pennsylvania, had the honor of participating in the winning demonstration "Milk for Health in West Virginia" staged at the West Virginia State fair at Wheeling.

That is only one-half of the story. The Cabell County team composed of Eva Holley and Leona Ward, coached by County Agent F. N. Darling, were fortunate in securing such a typy animal to help them with their winning demonstration.

With the stage setting perfect in every detail, and with two attractive young ladies dressed in white preparing dairy dishes and demonstrating the value of milk as a food and its vital relation to health, Eva Holley and Leona Ward would have been able to arrest the attention of the crowd and compel their interest with most any type of Holstein cow. But their county agent was not doing things by halves. Nothing but the best could do for him. Accordingly he selected the famous cow of Mr. Paxton's—a cow which had won grand championship at a number of the eastern fairs—for demonstration.

No sooner had she made her appearance on the stage than cameras began to click and the fair crowd began to gather to witness the demonstration.

"Miss Holley and I are here for a special purpose today," began Miss Leona Ward. "We want to tell you about the

THESE THREE WON FOR CABELL COUNTY

Leona Ward, Eva Holley and Dasie Dalzell Mercedes Belle 4th, took first prize in the Milk for Health demonstration at the West Virginia State Fair.

value of milk as a food and to discuss some of the sanitary methods of producing the same. We select this demonstration because we are both members of the Holstein Calf Club in our county and we believe that a great deal of progress can be made in producing a cleaner milk and in building up healthy bodies by the constant use of this good food."

At this point Miss Holley took the platform and continued, "One of the principles of the 4-H club work is good health. It has been very wisely said that a sound mind can be found only in a sound body, so we try, as good club members, to build up our own bodies in order that we may have a maximum of good health and happiness and ability to render service to others."

"Mother Nature makes very few errors and she made no error in producing the proper food for her offspring. That food is milk."

The young ladies showed the proper method of milking, clean udder, dry hands, closed top milk pail, and a modern and approved milk strainer.

What Miss Ward had to say concerning the utensils is peculiarly fitting. "Milk can be very easily contaminated through the utensils used. Now granting that this cow is healthy and kept in clean quarters, granted also that the milker is clean in his methods, it is very easy to produce inferior milk by the use of inferior and unsanitary containers."

"We have seen some dairymen and farmers milking in old, battered up, open pails like my team mate is showing you. This pail has not been washed and offers a splendid example of contamination. It is also an open pail and a great deal of the surface is thus exposed to the air allowing dust and dirt

to fall in. Now the better pail is the one my team mate is showing you. This is a properly cleansed pail with smooth surface both inside and out. No dirt has been allowed to collect in the seams or in other places. It has been properly scalded. You will also notice that this pail is partly closed and serves as a protection to the milk before it is strained."

Throughout their entire demonstration the better practices of dairying were advocated. The value of milk with its allied products as a food was discussed very thoroughly. While one of the ladies was talking the other was kept busy preparing a dairy dish. At the close of the demonstration the crowd was invited to taste the hot chocolate which they had prepared.

By virtue of their winning in the dairy demonstration contest, the girls will receive a trip to the National Dairy Show at Indianapolis, Indiana, where they will repeat the demonstration to those in attendance.

To their concluding remarks, "We did not just happen to select a dairy cow, we picked a Holstein cow for two reasons, we are members of Holstein Calf Clubs and we believe the Holstein is the best Dairy Cow there is," the crowd gave wholehearted applause.

SOUTH DAKOTA STATE FAIR

By A. J. DEXTER

When the curtain rang down at the conclusion of Friday evening's program at the South Dakota State Fair, all records for attendance had been broken. Wednesday's crowd ran well over 50,000 and at least two-thirds of this number were farmers and their families. South Dakota had a great fair. The exhibits filled the buildings to overflowing. Livestock exhibitors made heavy sales, concessionaries made money, the Midway was thronged, the crowds got their money's worth, and everybody including State Fair officials were happy.

The Dairy Cattle show occupied the two largest barns on the grounds. Every stall was filled. Six breeds were represented: Holsteins, Guernseys, Ayrshires, Jerseys, Brown Swiss and Milking Shorthorns. As at last year's show, the Holsteins were represented by more animals than all the other breeds added together, partly due to the greater interest in Holsteins in South Dakota and partly due to the fact that the State institutions maintain Holstein herds and four of them showed this year.

South Dakota State Agricultural College duplicated its feat of last year in carrying off premier honors in the Holstein show by again capturing the grand championship in the bull class on Sir Aaggie Colantha Korndyke 260390. Iowana Farms of Davenport, Iowa, also repeated last year's triumph by taking grand champion cow on Lady Johanna Aaggie Fayne 187166. The latter had a hard battle, for seventeen other matrons disputed the way in the aged cow class. So close were the placings that Judge Kildee felt it necessary to explain his reasons to the spectators.

The feature event of the Holstein show was the senior heifer class when fifty-nine entries were paraded before the judge. The State School and Home for Feeble Minded at Redfield, South Dakota, finally won out in this class on Redfield Pauline Bess 974168.

Exhibitors: State School and Home for Feeble Minded, Redfield; South Dakota State College, Brookings; S. D. Penitentiary, Sioux Falls; Yankton State Hospital, Yankton, Durand Jacobson, Volin; Brookens Bros., Parker; E. T. Ramsey, Clark; Marty Mission Farm, Marty; R. D. Dexheimer, Yankton; Thad Oviatt, Huron; Chris. Jensen, Viborg; Wm. Berg & B. S. Ranch, Yankton, South Dakota; Iowana Farms, Davenport; Hansen, Gilley & Knief, Randalia; Wm. R. Gillette & Sons, Fostoria; Hansen & Saubry, Oelwein; Fred Pieplow, Aurora; P. P. Stewart, Maynard; F. W. Seeley, Arlington; A. R. McLaurey, Oelwein; Richard Hanson, Randalia; Arby Schroeder, Clermont, Iowa; Vial & Abbott, Downers Grove, Ill.

Aged bull—1st, State College on Sir Aaggie Colantha Korndyke; 2d, State School & Home on Sir Pietertje Laura Piebe; 3d, Iowana Farms on Iowana Echo Star.

Three-year-old bull: 1st, Vial & Abbott on Tritomia Pietertje Ormsby Lad; 2d, Jim Hanson on Forum Ormsby Perfection; 3d, Gillette on Colantha Pietertje Ormsby Lad.

Two-year-old bull: 1st, Hansen & Saubry on Tritomia Pie-

tertje Ormsby Buckeye; 2d, Iowana on Iowana Fayne Burke; 3d, S. D. Penitentiary on Duke Segis Matador Daisy.

Senior yearling bull: 1st, Yankton State Hospital on Burton Echo Pietje; 2d, State School on Redfield King Pauline Burke; 3d, Gillette on Iowa Ormsby Duke Segis.

Junior yearling bull: Fred Pieplow on King Piebe 39th; 2d, Stewart on Tritomia Winona Butter Boy.

Senior bull calf: 1st, P. P. Stewart; 2d, Gillette on King Tatty Piebe; 3d, Iowana on Iowana Ona Ollie.

Aged cow: 1st, Iowana on Lady Johanna Aaggie Fayne; 2d, Seeley on Maplemoor Pontiac Jet; 3d, State College on Alba Mead Fannie.

Three-year-old heifers: State College on Happy House Daisy Johanna; 2d, Iowana on Tritomia Pietertje Beauty; 3d, Stewart on Korndyke Ormsby Lady De Kol.

Junior champion male: P. P. Stewart entry.

Senior and grand champion female: Lady Johanna Aaggie Fayne.

Junior champion female: Fayne Mercedes Lady 4th.

Aged herd: 1st, State School & Home; 2d, Iowana Farms; 3d, S. D. State College.

Yearling herd: State School & Home; 2d, Stewart; 3d, Gillette.

Calf herd: 1st, Iowana; 2d, Gillette; 3d, Stewart; 4th, State School.

Get of sire: 1st, Stewart; 2d, Iowana; 3d, State School; 4th, Gillette.

Produce of cow: 1st, Stewart; 2d, Hansen & Saubry; 3d, State School & Home.

HOLSTEIN CALF WINS SWEEPSTAKES

Schlosser Brothers who operate a number of large butter factories in the Central Western states, donated \$25.00 to pay the expenses of the junior calf club member exhibiting the best calf at the Howard County Fair held at Kokomo, Indiana. This was won by John Thomas Thorne who exhibited a Holstein. Mr. Thorne also won a prize of \$10.00 for expenses to Indiana State Fair. This was given for winning in the Holstein class. Second, third, fourth and fifth prizes were also awarded for Holsteins as well as Jerseys and Guernseys, while the Agricultural Department of the Pennsylvania railroad furnished ribbons for each class.

Following the show, representatives of the Indiana Condensed Milk Company announced that this concern would pay the expenses of the calves to the State Fair which took first and second in the Holstein class and first in the Jersey and Guernsey classes. M. L. Hall of the Purdue University animal husbandry department awarded the prizes.

WHAT SHOULD HAVE BEEN DONE

The Sheboygan County Calf Club won second place at the Wisconsin State Fair but in a recent issue of the Sheboygan Press, County Agent S. S. Mathisen tells why the Sheboygan exhibit did not take first place. Some of the calves of the calf club members which placed high at the county fair and which were entitled to be sent to the State fair had not been transferred to the club members and at least one of the animals had never been registered at all. These two requirements have to be met before the calves can be exhibited at the State fair. Had the Sheboygan county club members been able to take the calves just as they were placed at the county fair, Mr. Mathisen is of the opinion that they would have easily won first prize.

SIR AAGGIE COLANTHA KORNDYKE, Senior and Grand Champion at the 1924 and 1925 South Dakota State Fair, and the 1925 Dairy Cattle Congress. Owned by South Dakota State College, Brookings, S. D.

Two-year-old heifers: State College on Colantha Nephele Korndyke; 2d, State School on Redfield Bess Burke Belle; 3d, Iowana on Iowana Homestead Segis.

Senior yearling heifer: Iowana on Fayne Mercedes Lady 4th; 2d, Gillette on Iowa Duchess Yuma; 3d, Hanson on Lady May Ormsby Pietertje.

Junior yearling heifer: 1st and 2d, to State School & Home; 3d to Stewart.

Senior heifer calf: 1st, State School & Home; 2d, Schroeeder; 3d, Jacobson.

Senior and grand champion male: Sir Aaggie Colantha Korndyke.

Nov. 11-12—Hornell, N. Y., Allegany-Steuben Holstein Breeders' Club Sale.

LOW PRICES

On the William A. Smith farm in the town of Oakfield, Wisconsin, the first accredited Holstein herd to be sold at public auction in Fond du Lac county was dispersed September 8th. The herd was put under state and federal supervision early in 1923.

A good sized crowd attended despite a drizzling rain but prices were not high. Two cows each brought \$150 and the eleven milkers averaged \$122.50 per head. There were five calves and their average price was \$48.

Mr. Smith sold the farm several weeks ago, and will give possession October 1st. The machinery, poultry, tools and household furniture brought fair prices. A team of horses was sold for \$130.

SALE AT WAUKESHA

Late in August a sale of 87 head of Holstein cattle was held in the pavilion at Waukesha, Wisconsin. Low prices prevailed although it was reported that some of the animals sold would go to the National Dairy Show. The top price of \$172.50 was obtained for a cow consigned by Blott Brothers of Mukwonago and was purchased by Hans Paulson of Kenosha, Wisconsin.

J. H. Mathias of Indianapolis bought a number of animals in the sale and also purchased privately a number of animals from herds that were enrolled in cow testing association work. The Waukesha County Asylum bought Princess Pabst Ambassador from the Pabst herd. The sale average was \$110.00 for animals of all ages.

COMING CENTRAL PENNSYLVANIA SALE

Ranking high among the breeders' clubs of the Keystone State the Central Pennsylvania Holstein Breeders' Association is regarded as an organization formed for both social and business purposes by a bunch of progressive owners of Holsteins living in the territory around Williamsport, Pa. For a number of years this association has annually conducted a consignment sale in which the offerings are restricted to members' herds. The seventh annual sale will be held on the fair grounds at Hughesville, Pa., on Friday, October 16, and all the animals offered will come from herds that have been federally tested for tuberculosis. Among the animals that will be offered to breeders is a bull calf that will be just a year old on the day of sale. His dam as a four-year-old made an official seven-day butter record of 21 lb. and has given 14,000 lb. of milk in a year.

John Michael consigns a fresh cow that is sure to take the eye of the visitors as she is both big and nice.

S. L. Nicholson consigns a three-year-old that will be fresh at sale time. She is a beauty and last year was the junior female champion at the Hughesville fair. A young bull from the Nicholson herd is also a very desirable animal.

From the herd of H. R. Paulhamus comes a nine-months-old bull calf from a 28-lb. cow. Any one thinking of a new herd header had better look over this bull.

J. Harry Rakestraw sends a daughter of his 32-lb. cow, Dutch Corner Fayne Walker, also a heifer calf from her sired by a son of Ormsby Korndyke Lad. Two fine young bulls both nine months old, one from a 26-lb. cow and one from a 24.75-lb. cow should find good homes. Both of these are also grandsons of Ormsby Korndyke Lad.

Thomas Reese sends nine heifers just about two years old, some will be just fresh and some just ready to freshen. These heifers are of splendid quality. They are from good cows and three are by the son of Spring Farm King 26th. Spring Farm King 26th is a son of the noted Jones' herdsire, Spring Farm King, full brother to K. P. Pontiac Lass. Spring Farm King 26th is a brother to King Tweede Spring Farm, now at the head of the Deysher establishment where his daughters are making tremendous records in both short time and long time work.

Remember the date, Friday, October 16, at the Hughesville fair grounds. The sale is slated to start at 1.00 P. M. Write for catalogue to T. L. J. Reese of Montoursville, Pa., and plan to attend.

THE 16TH DAIRY CATTLE CONGRESS

Special Correspondence

For sixteen years there has been growing up in the corn belt a show devoted to the dairy industry of the middle west. At first a tent housed the infant undertaking. Then the first meagre wooden buildings were provided, next barns of a permanent nature. The judging arena and the other buildings incident to a complete extensive dairy exposition were erected on the grounds that had been purchased by the Dairy Cattle Congress. Just three weeks before the opening date of the 1925 show a severe wind storm wrecked five of the wooden stables, but on the 28th of September when the gates were opened for the 16th Cattle Congress, permanent fireproof barns had been completed and all the debris of the building operations removed leaving a splendid site for the best event in the history of the show.

The renown of the Cattle Congress has spread far beyond the boundary of its native state. Visitors from other states attend each year and the cattle entries come from all quarters. This year there were 997 individual entries from eleven states. Wisconsin furnished the largest list, Iowa, next and after that Minnesota, Illinois, Ohio, Michigan, Kansas, North and South Dakota, Montana and Louisiana. The largest number of entries were in the Holstein classes. Seventy-three individuals or firms entered 542 head, of these 266 were calf club prospects. This show is famous for its attention to the juniors. No other organization does as much to foster the interest of the young people in dairying. The day of the junior show is always one of the most popular of the week.

The Holsteins were judged by John L. Smith, of Spokane, Wash., one of the pioneer breeders of the West. His ideal for the breed is the large strong cow with capacity and every indication of production. He does not sacrifice dairy type, nor favor coarseness or beefiness at all but he does like size. Several of the entries that were proclaimed outstanding at the ring side did not meet Mr. Smith's favor, and were consequently placed down the line. But when the work was all done, there was as uniform a lot of winners as one will find in any show. And what is more remarkable, there was a general air of satisfaction all through the barns. Naturally there were some sore spots. Such is inevitable, but on the whole the sentiment was thoroughly favorable.

The aged bull class was the most exciting one of the day for it brought together Sir Aaggie Colantha Korndyke, champion for the past two years at the South Dakota State Fair, Johanna Rag Apple Pabst, the Wisconsin and Illinois grand champion and the noted show bull, North Star Joe Homestead. The judge placed the bulls in the order named and later on made the winner senior and grand champion. Sir Aaggie Colantha Korndyke is a son of King Rag Apple Aaggie Colantha and Harriet of Greg Fields. He is owned and was shown by the

South Dakota State College of Agriculture. He is low down, with exceptional length of body, fine straight back, almost perfect on the tail setting, a real masculine type, but at the same time preëminently a dairy bull. His handling quality was superb and while he had competition he was justly the winner.

The junior champion was shown by J. W. McDonald of Wisconsin. He is a son of Pabst Creator and Wilsendale Jane Harcourt. He is a remarkably fine youngster but his quality has yet to be demonstrated while that of the older bull is really before one. The young bull was easily the best in his class which might be higher praise. As a whole the class was not exceptional.

A rather interesting incident occurred in the class of heifers under one year bred by the exhibitor. One of the entries was a daughter of May Walker Ollie Homestead, the cow that at one time held the world's record for butterfat. She and her daughter, were exhibited by the Minnesota Holstein Company. May Walker is a show cow but not outstanding. Her calf is a beauty and for a time the judge put her at the head of the class. Next to her stood a daughter of Dutchland Creamelle Colantha Lad and Hazel Purmer Prilly Clothilde owned by Dr. Christopher Graham of Minnesota. The Grahamholm calf was the better of the two at the tail head, she was more level, wider through the hips and longer to the pin horns, but that is no disparagement of the May Walker heifer. The judge worked back and forth on these, finally putting the Grahamholm entry at the head. For a time it looked as if it were going to be possible in one instance to realize the breeder's true ideal, type and production to a superlative degree in the same animal.

When the junior champion honors were passed out the heifer under eighteen months shown by the Pabst Holstein Farm was the favored one.

The aged cow class brought out some beautiful individuals to the number of twenty-seven. The honors finally went to Lady Johanna Aaggie Fayne, a fourteen year old, with all the quality and beauty imaginable. From her head with its refined beauty to the straight level tail setting she was quality in the extreme. She has been a consistent winner throughout her lifetime. She was bred and is owned by Iowana Farms. She was justly made senior and grand champion.

The groups were as impressive as anything ever led into a western show ring. They gave the judge work enough to keep him busy all the afternoon. It is seldom that one finds such a large showing with such uniform quality throughout. Usually there are good and indifferent ones but in the case of this show all were good. It was only a matter of finding the most worthy.

On Thursday night, October first the annual love feast of the Iowa Holstein breeders was held. This event was more popular than ever before and that is some encomium. O. E. Hatch, president of the association was in the chair of au-

Choice Bull Calves

from big producing dams of choice individuality and breeding. They are grandsons of the noted sire and show bull, Prince Aaggie of Berylwood recently reported sold for the world's record price of \$110,000.00. That makes no difference with OUR prices—they are always low.

Hondo, Texas

thority. Guests from without the state were numerous. Prominent among those in places of honor were Dr. Christopher Graham of Minnesota, John L. Smith of Washington and Keitaro Mukai from Japan, who is in the United States for the purpose of purchasing a shipment of good black and white cattle for his own land. The chief address of the evening was made by Prof. Earl Weaver of Iowa State College of Agriculture, who told in an interesting way of his visit to the dairy countries of Europe the past summer.

The show was replete with features of an educational nature. The Colleges of Agriculture, the Iowa Department of Agriculture, and the Federal Department were all represented by convincing exhibits showing the way to greater prosperity through better dairying and farming. The cow test associations, the breed associations and individual concerns were all there for the purpose of showing the better way, and the farmer breeders came in great numbers to look and learn.

The weather was not propitious at the first of the week. Motor traffic predominates throughout the cornbelt for such occasions. The habit is to put the whole family in the car and "step on it." But man has a way of liking good roads and up to Thursday, the first Holstein day the record attendance of last year, which was 29,264 had not been broken. Thursday of this year showed 30,327 and on the whole the management is more than pleased with the event.

Aged bull: 1st, Sir Aaggie Colantha Korndyke, South Dakota State College, Brookings, S. D.; 2d, Johanna Rag Apple Pabst, J. E. Piek, Hartford, Wis.; 3d, North Star Joe Homestead, Carnation Stock Farms and Baltz Hosley, Monticello, Wis.; 4th, Parthena Sir Beets, L. V. Garvens, Waukesha, Wis.

Three-year-old bull: 1st, Forum Ormsby Perfection, Hanson, Gilley & Knief, Maynard, Iowa; 2d, Tritomia Pietertje Ormsby Lad, Vial & Abbott, Downers Grove, Ill.; 3d, Sir Aaltje Dowager Segis, J. D. McDonald, West Salem, Wis.; 4th, Grahamholm Bracer Colantha, Grahamholm Farm, Rochester, Minn.

Two-year-old bull: 1st, Sir Fobes Ormsby Hengerveld, H. W. & L. J. Hallbach, Waterford, Wis.; 2d, Forum Patriarch, Forum Holstein Farm, Dike, Iowa; 3d, Tritomia Pietertje Ormsby Buckeye, Hanson, McLaury, Sauerbry, Stewart & Oelwein, Iowa; 4th, Matador Hartog Hengerveld, Connell Brothers, Colgate, Wis.

Senior yearling bull: 1st, Plaut Harcourt Creator, J. D. McDonald; 2d, Forum Lord Masterpiece, Forum Holstein Farm; 3d, Pabst Prilly Creator Mechthilde, M. Weber & Sons, Merton, Wis.; 4th, King Mercedes of Cold Spring, H. A. Brace, Lone Rock, Wis.

Junior yearling bull: 1st, Grahamholm Colantha Longfield, Minnesota Holstein Farm, Austin, H. W. Schroeder, Owatonna & Dr. C. Graham, Rochester, Minn.; 2d, General Homestead Mercedes, John Zoberlin, Plymouth, Wis.; 3d, Duke Fanny Ace De Kol, Geo. Hetts, Ft. Atkinson, Wis.; 4th, Sir Ollie Korndyke Netherland, Fred Gurr, Lake Mills, Wis.

Bull calf: 1st, Sir Parthena Inka Segis, Minnesota Holstein Co.; 2d, Pabst Perfection, Pabst Holstein Farm, Oconomowoc, Wis.; 3d, Entry, Mrs. P. O. Johnson, Dike, Iowa; 4th, Pabst Prilly Arrowhead, Pabst Holstein Farm.

Females, aged cows: 1st, Lady Johanna Aaggie Fayne, Iowana Farms, Davenport, Iowa; 2d, Lynn River Sylvia Dutchess, Carnation Farms; 3d, Forum Pontiac Queen, Forum Holstein Farm; 4th, Alba Mead Fannie, South Dakota State College.

Four-year olds: 1st, Maudlene Ollie Homestead, Minnesota Holstein Co.; 2d, Goodlands Vickery Vale Lina, J. D. McDonald; 4th, East Troy Ollie Maud, South Dakota State College.

Three-year-olds: 1st, Star Segis Homestead, Minnesota Holstein Co.; 2d, Grahamholm Intensity Colantha, Grahamholm Farm; 3d, Pabst Creator Queen Fay, Pabst Holstein Farms; 4th, Tritomia Pietertje Beauty, Iowana Farms.

Two-year-olds: 1st, Oakwood Piebe Allie, R. V. Rasmussen, Deerfield, Ill.; 2d, Star Homestead Segis, Minnesota Holstein Co.; 3d, Canary Fobes Mutual Phoebe, Carnation Farms; 4th, Pabst Countess Mahomet Pontiac, Pabst Holstein Farms.

Senior yearling heifer: 1st, Forum Floa Madison, Forum Holstein Farm, Dike, Iowa; 2d, Johanna Pietertje Artis Creamelle, Jefferson County Asylum, Jefferson, Wis.; 3d, Grahamholm Nancy Colantha, Grahamholm Farms; 4th, Burton Avon Queen, Carnation Farms.

Junior yearling heifer: 1st, Pabst American Beauty, Pabst Holstein Farms; 2d, Pabst Prilly Creator Acanthus, Pabst Holstein Farms; 3d, Pabst Prilly Pontiac Johanna, Pabst Holstein Farms; 4th, Grahamholm Snowball Jean Colantha, Grahamholm Farm.

Heifer calf: 1st, Grahamholm Hazel Colantha, Grahamholm Farm; 2d, May Walker Inka Segis, Minnesota Holstein Co.; 3d, Pabst Creator Clyde Mechthilde 2d, Pabst Holstein Farms; 4th, Burton Matador Daisy, Carnation Farms.

Senior advanced registry cow: 1st, Lady Johanna Aaggie Fayne, Iowana Farms; 2d and 3d, May Walker Ollie Homestead and Piebe Laura Veeman Artis, Minnesota Holstein Co.; 4th, Pearl Barbetta De Kol 2d, Carnation Farms.

Junior advanced registry cow: 1st, Lady Boerinhurst Pontiac, Pabst Holstein Farms; 2d, Maudlene Ollie Homestead, Minnesota Holstein Co.

Exhibitor's herd: 1st, Pabst Holstein Farms; 2d, Carnation Farms; 3d, Minnesota Holstein Co.; 4th, Grahamholm Farms.

Breeders young herd: 1st, Grahamholm Farms; 2d, Pabst Holstein Farm; 3d, Minnesota Holstein Co.; 4th, Carnation Farms.

Calf herd: 1st, Pabst Holstein Farm; 2d, Minnesota Holstein Co.; 3d, Forum Holstein Farm; 4th, Grahamholm Farm.

Get of sire: 1st, Grahamholm Farm on Get of Dutchland Creamelle Colantha Lad; 2d, Philip Linker of Hartford, Wis. on get of Walcowis Sir Ollie; 3d, Pabst Holstein Farms on get of Creator; 4th, Minnesota Holstein Co. on get of Sir Inka Superior Segis.

Produce of cow: 1st, Pabst on produce of Lisle Colanthus Gladi Korndyke; 2d, Grahamholm on produce of Pelham Butter Girl Artis De Kol; 3d, Forum Holstein Farm on produce of Forum Maud Masterpiece; 4th, P. P. Steward on produce of Sadie Hengerveld Pontiac Aaggie.

Senior and Grand Champion Male: Sir Aaggie Colantha Korndyke.

Junior Champion Male: Plaut Harcourt Creator.
Senior and Grand Champion Female: Lady Johanna Aaggie Fayne.

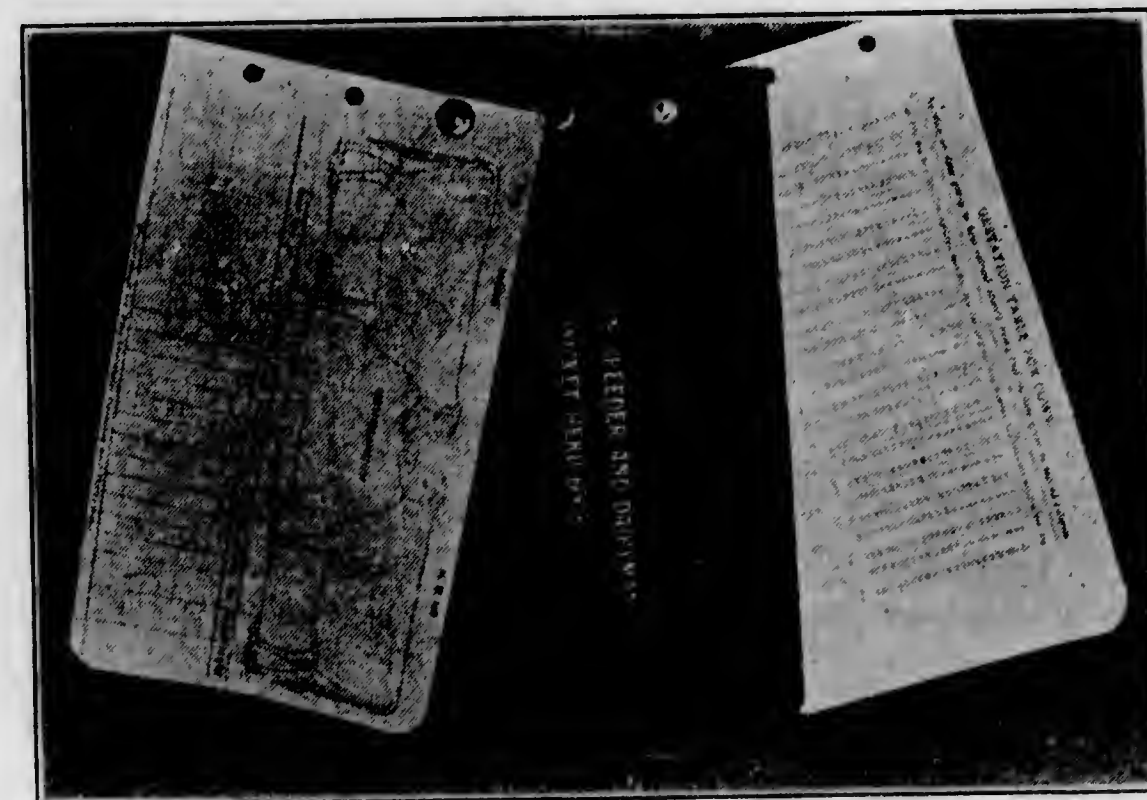

Junior Champion Female: Pabst American Beauty.

May (indignantly)—I don't care; I think Harry Easterleigh is downright mean.

Marie—Why, May?

May—Well, he wrote me from Egypt saying he had shot a crocodile seven feet long and when he shoots another he will have a pair of slippers made for me. I'll never speak to him again.

Prompt and proper aeration of the milk will remove slight off flavors and odors and will lessen the intensity of strong flavors and odors.

This is the most convenient, practicable, up-to-date Pocket Herd Book on the market. If you are not satisfied with the Book, return it and we will refund your money.

RINGLING HAS GOOD BULLS

The herd of Richard T. Ringling of White Sulphur Springs exhibited at the Montana State Fair and furnished the senior and grand champion bull in King Canary Dakota DeKol Fobes. King Konigen Fobes, owned by J. H. Hoffstetter of Lewistown was second in the aged bull class. G. A. Norris of Helena had the first prize three-year-old in Valentine Pieterje Ormsby; Hoffstetter the first prize two-year-old in Host Colantha Pauline Lad. Ringling had the first prize bull calf and the first prize yearling. This yearling, Rose Glen Ondine Homestead, was made junior champion by the judge, J. O. Tretsen, dairy specialist of the Montana State College.

JUNIOR CONTEST AT LEBANON FAIR

Isaac Royer of Prescott, Pa., won a gold medal as being the best judge in the boys' and girls' livestock judging contest held at the Lebanon County Fair. His score was 172.9 out of a possible 200. Twenty-nine boys and girls took part in the contest, judging a ring of Holstein dairy cows and a ring of Poland China gilts. Half of the contestants scored 90% or more in judging the cows, but most of them fell down judging hogs.

Henry Royer of Prescott won a silver medal as second prize with a score of 148.5 and Elvin Spitzer of Jonestown, with a score of 141.5 was third, winning a bronze medal.

CALIFORNIA STATE FAIR

With two sons of their cow Ida De Kol Pearl Lyons, the boys of the California Junior Republic won first and second in the aged bull class at the California State Fair, and then won the senior and grand championship with the older bull, Republic Spofford Ida Lyons, defeating for the senior championship the first prize two-year-old, Sir Edna Perfection of the Billiwhack farm, who many expected to carry off the honors. The junior champion bull, De Kol Pontiac Acme Mead, came from the El Colmo Ranch at Norwalk, California, and also the first prize junior yearling. The El Colmo Ranch furnished the first prize senior yearling, the Republic the first prize senior bull calf, while the leading junior bull calf came from Billiwhack.

Fair Oaks De Vries Nellie of the Billiwhack herd was the first prize aged cow with a stable mate second and she was made senior and grand champion. The junior champion, Toteco Lulu, was the best senior heifer calf and was owned by J. M. Longan of Tulare. Billiwhack had the best three-year-old, senior yearling and junior heifer calf; El Colmo Ranch, the first prize two-year-old and their junior yearling won the blue. Model Segis Prilly Gelsche of the Billiwhack herd won the blue ribbon for cows having official records, Winnie Walker, owned by Logan was second and the Junior Republic's grand

old cow, Ida De Kol Pearl Lyons, was third. Her sons easily won the blue ribbon for produce of dam. Billiwhack had the five best cows in milk with Longan second and the Republic third, and Billiwhack took the herd prize with Republic second. El Colmo Ranch was first in breeder's young herd and get of sire. Longan won first for calf herd with El Colmo Ranch second and the Republic third. There were nine exhibitors and they showed just one hundred head, being surpassed in number only by the Jerseys of which there were 125 exhibited by ten owners. Professor J. B. Fitch, of the Kansas Agricultural College, judged all the dairy breeds.

WILL REPRESENT THEIR COUNTY

Farmer's dairy cattle judging contests were staged at the Indiana county fair on September 10, at Indiana, Pa. The object was to afford opportunity for training and to select teams of three to represent the County Breeders Associations at a National judging contest to be held in connection with the National Dairy Exposition at Indianapolis in October. Separate contests were held in the Guernsey, Holstein, and Jersey breeds. Plans are completed for the winning teams to go as a party by automobile to Indianapolis. Indiana county banks are interested in the project and The Indiana Deposit Bank, The First National Bank and the Citizens National Bank each have contributed \$45.00 toward the expenses of the trip. J. W. Warner, county agent, supervised the contest and E. B. Fitts of State College was official judge. The men winning a place on each team are:

Guernsey: W. F. Barclay, Livermore; J. J. Camp, Cherrytree; G. H. Coleman, W. Lebanon.

Holsteins: H. O. Kimmel, Sheloceta; H. M. Brown, Indiana, R. 5; J. M. Keeley, Saltsburg.

Jersey: J. M. Rising, Homer City; Clyde Houck, Clymer, R. 1; C. J. Glasser, Marion Center.

A BRILLIANT DEBUT

E. G. Whale of Oakland, Nebraska, exhibited Holsteins for the first year at the Burt County, Neb., Fair. His exhibit furnished the senior and grand champion aged bull, also senior and grand champion cow. Otto Uehling of Oakland furnished the junior champion bull and his cattle won a number of prizes, first and otherwise. Mr. Uehling and his son also exhibited and had the grand champion and junior champion male and the junior champion female. They also exhibited horses with which they won a number of ribbons. The report received says that there was great interest shown in the purebred Holstein exhibit.

Don't judge a man by his failures in life, for many a man fails who is too honest to succeed.

PRINCE AAGGIE OF BERYLWOOD

Reported sold for \$110,000. California's grand champion show bull and sire of show stock. Behind him is the highest yearly backing known, his seven nearest dams average in yearly work 1,181.81 lb. butter.

He is the sire of our herd bull BERYLWOOD PRINCE AAGGIE CHICAGO who is siring splendid animals.

Our herd is ACCREDITED and we can supply your need of good cattle.

Norwich, N. Y.
R. D. 3

BIG HOLSTEIN SHOW AT NEW YORK STATE FAIR

Holsteins dominated the dairy cattle show at the New York State Fair this year, nearly 280 showing in the individual classes, while it is figured that, adding calf club and county show herd classes there were about 340 head from 58 herds. R. E. Haeger was again judge, in fact the authorities kept him busy all the week, for in addition to Holsteins he passed on the Students' Teams, Brown Swiss and Devons, besides designating to whom a number of special prizes should be given.

The aged bull class was real good, Sir Jamolso Pontiac Segis repeated his Maryland performances again defeating King Pieterje Jewel Korndyke. "Sir Jam" went on to senior and grand championship. Count Paul Echo Posch did not pose well in the ring but carried off third prize for Yates Farm.

WESTVIEW DE KOL WALKER

First prize aged cow, senior and grand champion female at the Maryland and New York State Fairs; the Eastern States Exposition and the Trenton Fair.

K. P. O. P. 36th was the best of three good three-year-old bulls, with King Sweet 4th of the Overbrook Dairy, Cedar Grove, N. J. second.

There was a good class of two-year-olds with King Ona Jolie Fayne winning the blue for the Ona Company, with Summit Sir Aaggie of the Summit Lumber Co., Davidson, Maine, second, and Triune Ormsby Piebe 27th, last year's noted yearling prize winner, in third place.

Hargrove & Arnold's good yearling K. P. O. P. 50th was the best of 17 of his class. Count Paul Canary Overbrook, owned by the Erie County Farm of Millgrove, N. Y., was second with another Hargrove & Arnold bull third. Judge Haeger said this was a hot class.

Hargrove & Arnold took the blue in the senior calf class with King Rose Ormsby, with King Pieterje Jewel Bess of the Pinery Farms second, and a Lakefield Farm bull third. This class was both big and good.

There were 44 matrons led out before the judge in the aged cow class. Although Westview De Kol Walker was not in the condition she was last year, she was again made the first prize cow and was afterwards made senior and grand champion.

It is interesting to note that the Dennis string under the care of Frank White and Russell Howard had only two first prize winners, but both of these animals were undefeated and took the senior and grand championships. Pledge Segis Lennox of the Yates Farm was the best of twenty three-year-olds with Faforit Pontiac Echo of the same stable second and Ona Edna Concordia owned by Karn Nims third.

There were nearly thirty two-year-olds and in quality this was probably the best class of the day. Yates Farm again won with Echo Sylvia Pontiac Tweede with Overhill Shepard De Kol, owned by John Tuck of Auburn, Mass., second and a Nims heifer third. The winner was dry, nearly all the rest of the class were fresh and the judge said that some of the heifers below tenth place were equal to the first prize winners of other years.

The senior yearling class numbered nearly as many and the majority were real good ones. Hargrove & Arnold were first with Triune Piebe Fobes, with Highlawn Margaret owned by F. P. Knowles second and Lady Overbrook Abbecker third.

Netherland Maude Ladoga of Yates Farm was the best junior yearling. This was a very fair class but not as good as the seniors. Erie Johanna Posch of the Erie County Farm was second and another Yates heifer third.

There were at least fifty heifer calves and many of them were of high quality. Bess Aaggie Jewel won another blue ribbon for Pinery Farms, with Sparrow Hawk Fayne Jewel of the same establishment second, and a heifer owned by Mc-Laury Bros. of Portlandville, New York, third. The first two were daughters of the second prize aged bull. This was one of the very best classes of the day. Sir Jamolso Pontiac Segis was made senior and grand champion with K. P. O. P. 50th, junior champion. Westview De Kol Walker was the senior and grand champion with Bess Aaggie Jewel, Pinery Farms' best heifer calf, junior champion.

The groups were very interesting and hotly contested. Yates Farm was given the blue for Exhibitors Herd, with Hargrove & Arnold, second, Dennis third, and Pinery Farms fourth.

Hargrove & Arnold won first for yearling herd, with Pinery Farms second, The Summit Lumber Co. third, and Yates Farm fourth.

In the class for a pair of calves, one bull and one heifer, bred and owned by exhibitor there were 17 pairs led before

the judge. Pinery Farms was first, Hargrove & Arnold second and fourth and Karl Nims third.

The get of sire award went to Hargrove & Arnold on offspring of K. P. O. P., Yates Farm was second, Hargrove & Arnold third, on get of Triune Ormsby Piebe and Pinery Farms fourth.

In produce of cow Hargrove & Arnold took first and second with offspring of Sunny Lady winning the blue, Pinery Farms was third and Yates Farm fourth.

Twenty-four cows were led into the ring in the class for four dairy cows over three-years old, Yates was first, Hargrove & Arnold second, Dennis third, and the Overbrook Dairy fourth.

Hargrove & Arnold took the ribbon for the largest and best exhibit which for several years was won by E. A. Powell and the same firm won first prize for four females at least two years old bred by exhibitor. In this class Yates was second, Summit Lumber Co. third, and W. D. Robens fourth.

For New York State advanced registered cow Yates Farm was first, with a cow that had been fourth in the open class. Erie county won first prize for county herd, with Washington county second, Onondaga third and Chemung fourth. There were eight groups of ten each and they made a very impressive showing.

PAXTON HERD WINS PRIZES

James M. Paxton & Son of Houston, Pa., exhibited at the Washington County Fair and won a majority of the first prizes including the male and female grand championships. King Echo Sylvia Alcartra Lad was first in the aged bull class and was the male champion. The Paxtons took first for yearling bull, first and second for senior bull calf and first for junior bull calf. Dasie Dalzell Mercedes Belle 4th, winner of many prizes last year was the first prize aged cow and the female grand champion. The first prize three-year-old, first and third prize two-year-old, second prize yearling, first and second prize senior heifer calf and the first prize junior heifer calf came from the Paxton herd. E. E. Brundige of Marysville, Ohio, had the first prize two-year-old bull, second prize three-year-old and four-year-old, first prize yearling heifer and the second prize junior heifer calf and won first in the get of sire class where Paxton took second and third. The Brundige herd won a number of other prizes. Thomas M. Paxton of Sherwood had the second prize junior bull calf, James R. Smart of Ostrander won a number of second and third prizes, while Edward Walker of Waynesburg, also took several ribbons.

George G. and J. C. Paxton exhibited Delaine Merinos and had the champion ram and the champion ewe, as well as a number of other prize winners.

WIN IN COMPETITIONS FOR JUNIORS

A calf shown by Duard Johnson of Volin, S. D., won the championship in the Holstein classes in boys' and girls' club work at the South Dakota State Fair at Huron, S. D., recently and is awarded the \$30 special prize offered by the South Dakota Holstein-Friesian Association to help to defray the expenses of taking this calf to the National Dairy Exposition at Indianapolis.

Interest in boys' and girls' club dairy work at the South Dakota fair this year was unusually good and if this is an indication, dairying is "looking up" in South Dakota. Other blue ribbon winners in the dairy show were the calves shown by Elmer Abels, and Eddie Lyle of Britton, Morlin Erickson of Brookings, and Martin Deutche of Eden.

In the dairy judging contest for boys' and girls' clubs the judging team from Brookings, composed of Robert Spurling, Stephen Hotchkiss and Merlin Erickson, were first while Ralph Hedrick, Fruitdale, Jack Faulkner, Nisland and Kenneth Moorhead, Vale, representing Butte county, were second. The winners in dairy judging receive a trip to the National Dairy Show.

SALARIES TOO HIGH

The Maine Potato Growers' Exchange has been in a bad way. Last year salaries amounting to \$70,800 were paid to ten officials to sell 3,396,725 barrels of potatoes, which netted the growers \$2,413,854 or a fraction over seventy-one cents per barrel.

Somehow or other the growers allowed themselves to harbor the feeling that the salaries were too high for officers who were able to secure for their good crop but seventy-one cents per barrel. So, recently the representatives of these growers met and reduced the salaries for the ten men from \$70,800 to \$46,400. The sales manager was cut from \$18,000 to \$12,000.

The peculiar thing is that the officers seem to think the same way on the subject for, rather than go out to find other employment, they all accepted the reduction. And, having gone that far in equalizing the returns between members, we have a hazy idea that these men will take the hint and work even harder to secure favorable returns from the crop they are called upon to market this year.—Michigan Farmer.

In less than fifty years the number of departments of the federal government has grown from seven to ten. The bureaus that were less than forty have become 145 in number, and there are besides thirty-five independent commissions and offices only two of which existed before 1890. In the seventies of the last century, the government had about 50,000 employees. Now it has ten times that many.

Three Clean Tests

Our herd is under the Accredited Plan and has already Passed Three Clean Tests. It contains a number of daughters and granddaughters of

King Pontiac Alcartra Pietie

the best known herdsire of Northern Penna.

Herd under State and Federal Supervision; last test CLEAN.

Crawford County

is one of the three counties in Pennsylvania that are MODIFIED ACCREDITED AREAS, consequently are good districts in which to buy Holsteins.

Log Cabin Herd has long been on the Accredited list. It is headed by KING HENGVELD LEFA JOH, a son of the great King Joh from a 32 lb. daughter of Dutchland Colantha Sir Inka.

Cows, Heifers or bull calves, can we do something for you?

RALPH C. JACKSON

Conneaut Lake, Crawford Co., Pa.

Cow Testing Association Reports

MICHIGAN C. T. A. WORK

John Henning of DeWitt, Mich., owns a herd of purebred Holsteins that produced 1,023 lb. milk, 38 lb. fat in the Clinton-Ionia C. T. A. for the month ending September 5th. A grade Holstein owned by Joseph Kirken produced 65.1 lb. fat, 1,860 lb. milk. A purebred two-year-old heifer owned by Rowland Hicks headed her class with exactly 40 lb. fat from 1,249 lb. milk.

MIFFLIN COUNTY'S FIRST YEAR

August 1 the cow testing association operating in Mifflin County, Pa., finished its first year with 28 members, of which three had been enrolled for ten months only. During the year 37 profitable, and 40 unprofitable cows were sold. Nine cows reacted in tuberculin test and ten cows died during the year. There were 390 cows in the association during all or part of the year the average number of cows for the full period being 280.65. The average production of milk per cow for the year was 7,564 lb. and of butterfat 280.0 lb.

Ten herds each averaged 300 lb. or more of butterfat, first position being taken by the registered and grade Holstein herd owned by J. B. Byler of Allensville. This herd averaged 1,249 lb. milk, 385.9 lb. fat. The herd owned by A. C. Yoder also of Allensville, averaged 11,392 lb. milk, 365.5 lb. fat. Mr. Yoder had the two highest producers, both registered Holsteins. The leader is credited with 18,126 lb. milk, 542 lb. butterfat, and her stable mate, a eleven-year-old cow produced 19,245 lb. milk, 525 lb. fat. A Holstein owned by B. R. Byler was third with 13,306 lb. milk, 519 lb. fat. Nineteen cows each produced 400 lb. or more butterfat and the report of tester S.

Rupert Harshbarger, shows that thirteen of them were Holsteins.

J. C. Fleming produced milk at the lowest cost, his average feed cost being 90c per hundred pounds. He used a home mixed balanced ration. He has registered and grade Holsteins and their average production was 9,585 lb. milk, 326.8 lb. fat. The association started again with 24 members. Their herds include 221 cows in milk and 36 that were dry during August. In the first month of the new C. T. A. year 33 cows exceeded 40 lb. fat and five, all purebred Holsteins, made over 50 lb. Rufus H. King of Belleville had the two highest producers. Beets is credited with 63.9 lb. fat and 1,196 lb. milk and Edith with 63.6 lb. fat and 1,817 lb. milk. A. C. Yoder owned a cow that produced 57.2 lb. fat from 1,683 lb. milk, while R. J. Yoder had one with 55.1 lb. fat, 1,531 lb. milk. Mr. King owned the cow in fourth place with 56.4 lb. fat, 1,658 lb. milk and his herd was high with an average of 44.3 lb. fat.

The Alfagold herd consisting of purebred Holsteins led the McGregor Cow Testing Association by averaging 34.82 lb. butterfat during the month of August. Pitie, a purebred Holstein owned by Alfagold farm was the high producer with 74.8 lb. fat, with her stable mate, Johanna, second with 55.5 lb. Forest Edge, another member of this herd was fifth with 74.1 lb., reports the tester, Irvin Dahleen.

IOWA C. T. A. WORK

Barbetto of the Wylamina herd was high cow in the Bremer County No. 3 Cow Testing Association for the month of August, being credited with 47.7 lb. fat from 1,705 lb. milk. The Wylamina herd consists of purebred Holsteins and

is owned by E. J. Wylam & Son of Plainfield, Iowa. They averaged 840 lb. milk, 28.1 lb. butterfat. In the Bremer County No. 1, C. T. A., Johanna owned by Woodring & Son, produced 47.4 lb. fat, 1,482 lb. milk. While another member of the herd stood second with 45.6 lb. fat, 1,522 lb. milk. The Woodring herd averaged 1,031 lb. milk, 33.5 lb. fat.

There were 334 cows tested in the Tama County C. T. A. during August. The association average was 660 lb. milk, 26.1 lb. fat. The highest herd average was made by nine purebred Holsteins owned by Lloyd Brown and their average production was 1,303 lb. milk, 38.4 lb. fat. A grade Holstein headed the association with 63.6 lb. fat. Mr. Brown had two cows that each produced over 50 lb. fat.

Four purebred Holsteins owned by W. H. Owens of Cresco, Iowa, averaged 40.1 lb. butterfat per year during the past two years in the cow testing association of Howard County. Mr. Owens had the misfortune to lose his previous herd, so obtained a new herd of 28 purebred Holsteins from Wisconsin, a little over two years ago. He now has a herd of 61 and has sold several.

The Owens cattle are good individuals as well as producers, and exhibited at the Howard County Fair this season, they won their share of premiums.

Many a man who has suffered from tongue-lashings at home will be moved to sympathy for the victim described as follows in a country paper: "Alice Jardine, a married woman, was charged with unlawfully wounding her husband, Charles Jardine, by striking him with a pair of tongues."—*London Tid-Bits.*

RUTH AGAIN FIRST

"Ruth" a Holstein cow owned by Jude Hubber of Great Falls, Mont., again leads the Cascade County C. T. A. for August according to the official report of William English, tester for the association. Ruth's records are 2,154 lb. milk, 73.2 lb. butterfat, a grade Holstein is second with 68.4 lb. fat.

Ruth was first for both milk and fat production. Two Holstein cows each produced 1,798 lb. and tied for second position. One was owned by Layman and Haight and the other by Mr. Hubber, whose twelve cows averaged 32.6 lb. fat, 957 lb. milk.

The average milk production for cows in the five leading herds for August was 861 lb. while the July average showed 781.9 lb., a gain of 80 lb. during August. Butterfat production increased from 32.4 lb. to 32.5 lb.

IN VERMONT TOO

Empress De Kol Rag Apple owned by Wallace Robinson of South Hero, Vt., led the Grand Isle C. T. A. for August with a production of 48.7 lb. fat, 1,281 lb. milk. Helen De Kol Posch Pontiac of the same herd is credited with 38.8 lb. fat from 1,251 lb. milk and Empress De Kol Posch Pontiac, another of Mr. Robinson's cows made 33.5 lb. fat from 1,046 lb. milk. Mable De Kol Echo, owned by W. A. Landon also of South Hero, produced 31.3 lb. fat, 1,010 lb. milk.

The Elsie-Ovid C. T. A. ended its month August 19. During this time 129 cows were tested, of which 20 produced over 1,250 lb. milk, 27 between 40 and 50 lb. butterfat and three over 50 lb. A grade Holstein owned by H. Miner was high with 53.2 lb. with a stable mate next with 51.9 lb. and a purebred Holstein owned by E. E. Knight of Elsie third with 50.43 lb. fat from 1,441 lb. milk.

BUYS HERDHEADER

F. V. Swanson of Brownington, Vt., recently purchased a young Holstein bull from the herd owned by Dr. H. C. Tinkham of Burlington. The sire of this bull is a grandson of Bess Johanna Ormsby and of King of the Ormsbys, and is also a descendant of Pontiac Korndyke. His dam is a granddaughter of Sir Pieterje Ormsby Mercedes.

EXPERIENCED FARM MANAGER, herdsman, exceptional ability, open for position as farm superintendent. Married, highly recommended, Agricultural education, practical, scientific, results guaranteed highly profitable. Many years experience with dairy, sheep, poultry, fruit, general farming. inherit the producing blood that flows in his veins.

His sire was from a 30 lb. Glista cow that averaged 92 lb. milk a day.

His dam, Clara Clothilde Lyons, as a two-year-old, averaged 91 lb. milk a day during the week of her official test, and in 305 days produced 20,771.2 lb. milk, 723.40 lb. butter. She was from a 30 lb. daughter of a 32 lb. dam.

We'd like to sell you something that would please you from our Accredited Herd.

FRED B. KEENEY

Laceyville, Wyoming Co., Pa.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

WISCONSIN C. T. A. WORK

"Rosa," a purebred Holstein cow owned by J. D. McDonald of West Salem, Wisconsin, was high cow in her cow testing association for the month of August, producing 1,293 lb. milk, 56.9 lb. butterfat. The McDonald herd stood at the top with an average of 36.5 lb. fat, 1,015 lb. milk. Mr. McDonald has nine cows that each produced above 40 lb. fat.

"Jane" was again the high cow in the Denmark association. During August she produced 1,522 lb. milk, 56.3 lb. fat. Jane is a registered Holstein cow owned by L. J. Larsen of Denmark. The Holstein herd of Edward Rasmussen consisting of 15 cows averaged 1,181 lb. milk, 39.4 lb. fat.

"Piebe Colantha Mercedes" was the high cow in the Bonduel-Frazer association for the month ending August 16. Her production is 2,495 lb. milk containing 74.9 lb. fat. Her stable mate, Canary Longfield Pontiac Lass, was second with 2,232 lb. milk, 62.5 lb. fat. Both of these cows are owned by Otto Wagner of Bonduel, Wisconsin, who also owns the high herd which averaged 1,254 lb. milk, 39.2 lb. fat.

S. H. Bird of South Byron owns a purebred Holstein cow that led the Byron C. T. A. for the month of August by producing 49.7 lb. fat, 1,533 lb. milk.

The registered Holstein herd of C. H. Brugger & Son of Fond du Lac had high average, 30.5 lb. fat, 890 lb. milk. However, H. A. Kenmel had nine Holstein heifers that averaged 36.6 lb. fat, 1,169 lb. milk, but these were not all the members of his herd.

In the Sherman and Scott C. T. A. the August leader was a registered Holstein owned by Albert Moths, and produced 1,779 lb. milk, 62.2 lb. butterfat. A registered Holstein owned by William Neuman was second with 55.8 lb. fat, 1,860 lb. milk. The Holstein herd of Albert Moths led by averaging 1,083 lb. milk, 37.4 lb. butterfat for the nineteen cows. Tester Leo J. Flasch reports that 441 cows were tested during the month of which 46 exceeded 40 lb. fat.

"Bird" a registered Holstein owned by the Makida Farms at Jeffries, Wisconsin was the high cow in the Tomahawk association which ended its year the last day of May. She was credited with producing 768.2 lb. fat, 19,349 lb. milk with an average test of 3.97%. According to reports from Madison she made the highest record in C. T. A. work last year.

Bird was bred and developed by the Lincoln County Home and Hospital where her sire, King Yankee Mabel Segis, is now owned. Twenty daughters of this bull finished the year in the Tomahawk association with an average production of 488.6 lb. fat, at an average age of three years and ten months. This was Bird's second lactation period which she started as a four-year-old.

Ten grade and purebred Holsteins owned by Gus Marks & Son averaged 1,099 lb. milk, 37 lb. fat during August

in the Alma-Cochrane C. T. A. The two highest producer were both purebred Holsteins. The leader owned by John Accola & Sons is credited with 1,751 lb. milk, 61.3 lb. fat, while the second cow, owned by Kaste Brothers of Alma, produced 494 lb. milk, 53.7 lb. fat.

The high cow in the LaGrange C. T. A. for August is owned by Edward Calkins and she produced 1,448 lb. milk, 53.5 lb. butterfat.

Mrs. Christ Bast again owned the high herd in the Rockfield association, her 19 grade and purebred Holsteins averaging 1,295 lb. milk, 41.4 lb. fat. She had nine cows that each produced over 40 lb. fat during the month.

Carl F. Pankow's herd of purebred Holsteins led the Withee C. T. A. for August by averaging 35.5 lb. fat, 1,142 lb. milk, heading both divisions. There were 378 cows tested during the month in the 26 herds of the Withee association.

Frank E. Neff of Muscoda owned the purebred Holstein that again led the Muscoda-Homer C. T. A. for the month of August. She produced 75.1 lb. fat. The high two-year-old owned by Clarence Grimm was credited with 34.8 lb. Of the 548 cows tested 62 reached the 40 lb. class.

Michael Kieffer of Fredonia, Wis., owned the August leader of the Belgium-Fredonia C. T. A. She is a purebred Holstein and produced 1,835 lb. milk, 55 lb. butterfat. There were 402 cows tested in the association during the month, of which twelve produced above 40 lb. fat. Two of these belong to the Kieffer herd, while five were purebred and grade Holsteins owned by John M. Hubing.

For the third successive month Alcartra Segis Sylvia, owned by Phil Augustine of Pound, Wis., headed the Marinette C. T. A. During August she produced 2,526 lb. milk and exactly 80 lb. fat. The second cow, also a registered Holstein, is owned by the Marinette County Asylum at Peshtigo, and is credited with 61.3 lb. fat, 1,705 lb. milk. The Asylum consisting of 44 Holsteins led for herd production by averaging 1,113 lb. milk, 33.8 lb. fat.

Robert Steege of Larrabee, Wis., has a herd of ten cows, part purebred and part grade Holsteins. That they are of high quality is shown by the fact that in the Clintonville-Bear Creek Cow Testing Association the Steege aggregation has held the high herd record for the past six months and for four months has averaged 48.4 lb. butterfat. Mr. Steege believes in keeping a small herd of high quality and caring for them properly. A print received at this office shows a very handsome group of cows that by their conformation show their capacity to produce.

FREE—One goat, will eat anything, is fond of children. Apply to J. L. Davis at new Fair Ground store. Phone 561-J.—Advertisement in Henderson (N. C.) Daily Dispatch.

BUYING HOLSTEINS

H. M. Frusher of Ness City, Kansas, traveled all the way to Freeborn County, Minnesota, early in September and purchased a registered Holstein bull and 28 head of high grade Holstein heifers, which he shipped to his Kansas farm.

A WINNING BUNCH

Roy Derry, manager of the Home Farm herd at Lamonia, Iowa, took some of the cattle in his charge to eight different fairs. He exhibited at Clarinda, Bedford, Hamburg and Shenandoah, Iowa, the state fair at Sedalia, Mo., and at three Missouri district fairs. His animals won 71 first prizes, 22 seconds, 12 thirds and 15 championships.

BUILDING A DAIRY SECTION

Nat Bovee, agricultural instructor in the high school at Circle, Montana, and A. W. Eynon, president of the First National Bank of Circle, were instrumental in bringing 53 head of young dairy cows and young bulls from Wisconsin to Circle and distributing them among farmers interested in dairying. There were both Holsteins and Guernseys in the load.

AGAINST STRONG COMPETITION

Holsteins from the herd of David Jones, Jr., of Emmet, Wisconsin, have been doing well at the fairs this fall.

At the Watertown Inter-County fair Mr. Jones entered seventeen head and was awarded sixteen ribbons. At the Jefferson fair he entered sixteen head and won fifteen prizes competing against the Jefferson county herd which is rated one of the strongest show herds in the whole county.

A GOOD OLD NAME

Pontiac, owned by W. R. Elliott of Riverside, Cal., headed the local cow testing association by producing 70.6 lb. fat, 2,279 lb. milk. The Elliott herd of fifteen purebred Holsteins averaged 1,420 lb. milk, 46.3 lb. fat, and eleven of the cows exceeded 40 lb.

There were 47 herds tested containing 696 cows of this number 554 made 40 lb. of fat. The average production was 907 lb. milk, 35.6 lb. fat and 53 were culled from the herds during the month.

B. & O. TO STAGE BULL TRAIN

A special train composed of about ten cars will visit every county in Illinois through which the Baltimore & Ohio railroad runs, during the second and third week in November, making a half-day stop at a number of points. This special train will be known as the "Better Dairy Sire Special." The Flora Commercial Club has agreed to pay \$10.00 on the purchase price of each bull sold in Clay County while the train stops therein and will furnish a grade heifer which will be given away as a prize.

The train will be made up of a lecture car, exhibit car, a car for demonstration animals, a flat car for demonstration pur-

poses, three carloads of animals and a feed car. The speakers will be Professor C. S. Rhode of the University of Illinois, Mr. Quivey of the B. & O. railroad and another man widely known in the dairy industry. This third person has not yet been selected. The various breed associations of the state, the University of Illinois and the Farm Bureaus of the different counties are co-operating with the Flora Commercial Club and the B. & O. railroad.

WARNING TO AUTOISTS

Last spring the Pennsylvania legislature passed a law which makes it larceny to steal farm property and subjects the offender to a fine not to exceed \$500 and imprisonment for a term not exceeding three years.

Secretary Willits just issued a warning to autoists and other rural travelers that this law will be enforced and the farmers have just as much right to receive the protection of the law as any other class of citizens. The secretary says it is just as illegal to take apples or peaches from the trees or melons from the farmer's melon patch as to steal a loaf of bread from a bakery or a sack of flour from a grocery. The secretary further points out that the law does not only apply to fruit and vegetables, but to any kind of property growing or being on the land.

CROSS-BREDS NOT SATISFACTORY

The government experiments to develop a breed suited to the climate of Alaska by crossing purebred Holsteins and Galloways are not meeting with any great degree of success. Dr. C. C. Georgeson who is in charge reports that the heifers proved to be poor milkers. The herd will be moved from the Kodiak station to Matanuska where it is possible to keep better records on the eleven animals now being tested.

The cross-breds are all black, hornless and long-haired like the Galloways and have hardy constitutions.

HOLSTEINS FOR C. T. A. SHOW

Henry Hatesohl of Greenleaf, Kan., breeder of purebred Holsteins has been selected by the Agricultural college to exhibit his herd at the Topeka Free Fair in a cow testing demonstration exhibit. This is not only a tribute to Mr. Hatesohl's ability as a dairyman, but also indicates that his Holsteins are profitable producers.

HOLSTEIN LEADS KANSAS

Frank Stigge of Barnes, Kansas, who is a member of the Washington County C. T. A. had the high cow in all the Kansas Cow Testing associations during the month of July. She is a registered Holstein, and produced 63.8 lb. butterfat. Mr. Stigge's herd averaged the highest in the 26 herds of the county association.

A writer advises keeping family scrap books. We say forget 'em.

Why Not

Get a "Go-Getter"
to Officiate as
Auctioneer at Your
Sale?

You want results and not promises from your auctioneer. My record at sales in the past speaks for itself.

Among a large number of satisfied customers that I have served is Mr. Henry Carpenter of Wayne, Mich. Read what he has to say:—

Dear Mr. Mead:—

I think that you are a capable auctioneer. If I were to have a dozen sales my choice would be Mead.

You did good work from beginning till end at my sale, and the results were more than satisfactory.

I would recommend you to any one who is considering having a sale.

Very truly yours,

HENRY J. CARPENTER.

GLENN R. MEAD

East Aurora, New York

UNCLAIMED PRIZES

When the fair closed at New Richmond, Wisconsin, Sept. 18, two Fords and a purebred Holstein cow remained unclaimed. These prizes were given by the Kiwanis club. Numbers were drawn on Tuesday for one of the cars, on Wednesday for the cow and on Thursday for the other Ford. Several numbers were drawn for each prize. The holders of the first numbers were allowed a week to send in their claims, if they did not then the holders of the second numbers had the right to claim the prizes and so on.

The fair was very successful and the fair association was not only able to pay premiums promptly but also had a small balance to carry to next year's account.

HONORS DIVIDED

The herds of Gerald Doddridge and Roy Smelker took the bulk of the prizes at the Wayne County Fair held at Richmond, Indiana, but they were given competition from the herds of Charles Goodson, F. H. Sexton and Edward Flatley. Doddridge had the champion female with Smelker second. Smelker had the champion male, with Flatley second. The herd prize was won by Smelker, with Sexton second. Smelker had the first prize two-year-old and first prize yearling heifer. Sexton had first prize yearling bull, first and second prize age cow. Flatley had the first prize yearling bull and Goodson the first prize two-year-old heifer.

HEALTHY HERDS

During the month of August there were 618 cows tested for tuberculosis in Garrett County, Maryland. All the animals were in herds previously tested. There were only three reactors and two of them were small calves that were kept in a barn in which a reacting herd had been housed and which it is believed had not been properly disinfected.

SPRINGFIELD HOSPITAL HAS GOOD HERD

The exhibit of the Springfield Hospital, Sykesville, Md., won the most money at the recent Maryland State Fair of any Holstein exhibit and so retained for another year the handsome silver trophy given by the Hon. John M. Dennis. There were exhibits from nine herds, five from Maryland, one from Pennsylvania and three from Ohio.

Superintendent Farr is very much gratified at the showing made by the animals under his supervision. The Dairy Department at the Springfield State Hospital was established for two reasons; first, to supply the 1,800 patients at the hospital with plenty of pure raw Holstein milk of a grade equal to certified milk, such milk is recognized by medical authorities the world over as nature's most perfect food; second, to supply Maryland farmers with foundation seed stock from animals that in the hospital herd have demonstrated their capacity to produce and to make a profit over their feed cost.

The hospital dairy barn was completed in November 1922. It is a handsome commodious structure and nearly all the lumber and materials used in the erection were obtained from the hospital farm, while the work was all done by the regular employees and patients. On the 25th of November the new herd was installed in the new barn and from that time to the present has been producing from 200 to 275 gallons of milk daily. That it contains cows that are fine individuals as well as good producers is shown by the fact that, at the Maryland State Fair, the Springfield herd won the blue ribbon in the class for four cows in milk.

BULLETIN ON SWINE SHOWING

A Farmers' Bulletin that every farmer who keeps hogs should have is No. 1455 entitled "Feeding, Showing and Judging Hogs." It is compiled by E. Z. Russell

of the Bureau of Animal Industry. It covers a wide range of subjects, gives the definitions of ages and classes as established at the big swine shows and state fairs, and is full of information regarding fitting and showing hogs. A table that will interest men, who think of showing hogs gives the average weights of premium-winning swine of the various classes and breeds at the National Swine Show for the past five years. The instructions on how to score show animals and the descriptions of points of the various breeds will make this bulletin a welcome addition to any swine growers library.

BEAT OUT THE JERSEYS

L. R. Craven of Clarksville, Mo., owns a Holstein herd that averaged 1,150 lb. milk and 38 lb. butterfat in the Clarksville C. T. A. A Jersey herd was one-tenth of a pound of fat below. The highest producer is credited with 1,132 lb. milk, 54.3 lb. fat and is owned by Welch and Woods of Annada, Mo.

There were 301 cows on test during August and their average was 601 lb. milk and 25.1 lb. butterfat. The members of the association held a picnic and basket dinner during the month with over 300 present. Of the 35 members 21 put in an appearance.

STUBBE SHOWING AGAIN

Henry Stubbe exhibited some of his good Holsteins at the Merrick County Fair held at Central City, Nebraska, the middle of September. Mr. Stubbe will be remembered as being superintendent for a number of years for Dr. B. B. Davis of Omaha. The Stubbe cattle took all the championships as well as the group prizes. Cattle shown by L. L. Hensley was first for junior bull calf, junior yearling heifer and junior heifer calf. Strange to say there were no beef cattle exhibited this year at this fair.

GET THE SON OF Hillside Rhododendron

35.15 lb. butter, 543.8 lb. milk in 7 days, 2,759.7 lb. milk, 147.95 lb. butter in 30 days, a show cow of magnificent proportions.

He was sired by Charlevoix Rookwood Prince, son of Sir Pietertje Ormsby Mercedes 40th and Rookwood Zuelle Riblet, 728.3 lb. milk, 33.93 lb. butter in a week; 3,019.6 lb. milk, 135.83 lb. butter in 30 days. She and her dam both have good yearly records.

This bull was born April 26, 1925, is right in every way, about 7/10 black, well marked. His dam and sire's dam average 34.54 lb. butter, 636 lb. milk in 7 days; 141.89 lb. butter, 2,889.6 lb. milk for 30 days.

NEW EXTENSION MAN FOR PENN STATE

George A. Taylor, a graduate of the University of Minnesota dairy course, has been appointed extension specialist in dairy manufacturing at the Pennsylvania State College. He succeeds L. W. Morley who resigned to become director of extension and register of merit for the American Jersey Cattle Club.

The new specialist comes to his work in Pennsylvania well prepared by several years of practical work in both the manufacturing and educational phases. For the first two years following graduation he was employed by the Evansville Pure Milk Company in Indiana, where he was in charge of the milk department and making up of ice cream mix. He was also engaged in quality production work with the farmers.

In the spring of 1924 Taylor went with the Almito Dairy Company, Omaha, Nebraska, as plant superintendent. There 40,000 pounds of milk were handled daily for the retail and wholesale trade, butter, condensed milk, and cottage cheese were also manufactured. On January 1, 1925, he went with the Twin City Milk Producers' Association. He was placed in charge of the sanitation department which included work in sanitation on the farms and in the plants and had to do with the condition of the milk as it arrived at the distributors for bottling.

From this position he comes to Pennsylvania where his services are now available in educational work in dairy manufacturing.

THE LEAGUE AND MILK PRICES

After a careful consideration of production and market conditions the directors of the Dairymen's League Coöperative Association have recommended no changes for the present for Class 1 or fluid milk price for October. The officials of the organization claim that non-pool milk in large quantities is being sold in New York at prices below those established by the League. Some of this milk comes from non-pool dealers and some, it is claimed, from local coöperative marketing associations. Milk production is considerably heavier than it was a year ago the records of the League indicate.

An increase of 30c per 100 pounds was recommended for milk sold in Class 2 which includes milk sold as sweet cream, ice cream and soft cheeses. An increase of 10c per 100 pounds was recommended for Class 3 milk, which is that sold as evaporated and condensed milk, milk powder and hard cheeses. The complete schedule of prices recommended for October is as follows:

Class 1, \$2.80; Class 2-A (sweet cream and ice cream) \$2.10; Class 2-B (condensed milk) \$2.35; Class 2-C (soft cheeses) \$2.30; Class 3-A (evaporated milk) \$2.10; Class 3-B (milk powder) \$2.10; Class 3-C (hard cheeses) \$2.10; Class 4-A and 4-B (butter and cheese) based on market conditions.

ORMSBY SENSATION 3D

my herdsire, is backed by remarkable producers. Despite the fact that his dam was tested as a two-year-old and his sire's dam for only 305 days, their long time records average 19,974.5 lb. milk, 853.77 lb. butter.

Come and see Ormsby Sensation 3d and his daughters in my herd. Possibly you will want one of his sons or some good females bred to him.

FARMERS SUCCESSFULLY CO-OPERATE

Last year the Fairbault Coöperative Dairy Association sold \$218,402 worth of butter and \$29,495 worth of milk, cream and buttermilk. It paid its farmer patrons \$211,368 for butterfat and \$17,384 for milk and cream.

P. H. Donkers, the manager, is a Holstein breeder and a farmer, the president of the company, G. L. Craven is a farmer and Holstein breeder and the creamery is strictly a farmers' organization. It is second in Rice county in volume of production only to the Northfield plant of the Twin City Milk Producers' association, and at the creamery they manufacture the "Land o' Lakes" brand of butter for the Minnesota Coöperative Creameries' Association. Each stockholder is limited to ten shares of \$50 par value. The authorized capital is \$50,000, of which \$26,850 has been subscribed. The patrons agreed to furnish enough cream to insure the economical operation of a modern and well equipped plant and also the necessary financial backing.

The contract provided for the delivery by the dairymen of all surplus milk to be sold except for local consumption. Instead of putting up the money the dairyman-stockholder gave his note for his stock which is paid by the deduction of five per cent from the amount of every cream check received.

The banks loaned 85% of the face value of these notes to establish the plant. An older creamery building was taken over, enlarged and equipped with modern machinery and a first-class product is being made. The present plant is valued at \$37,000 and the total assets of the association are \$51,000, which has been built up in less than three years. The creamery building is on one of the principal streets of Fairbault, Minnesota.

THE BREED IN BRITAIN

Black and white cows win honors in other countries as well as this as shown by the British Yearbook which tells of the records made in milk recording societies which are very similar to our cow testing associations. The leading herd consisting of British-Friesian cows averaged 14,023 lb. milk and is awarded a score of 2,457.07 points. This herd is owned by a lady, Mrs. J. Putnam. The second herd also British-Friesians averaged 12,247 lb. milk and scored 2,243.81 points.

The highest producer is a British-Friesian cow, Chaddesley Glen Stately, with 27,880.75 lb. milk. She too is owned by a lady, Mrs. S. Johnson. This was in the official year of the society, but the owner reports that in the full 365 days this cow produced 30,963.75 lb. milk. There were 23 cows that produced over 20,000 lb. of milk in a year and of these five were Shorthorns and the remainder British-Friesians, while there were 204 cows that exceeded 15,000 lb. milk and of this number 152 were British-Friesians and 38 were Shorthorns, the breed kept by most British farmers who sell their herd product as fluid milk.

SEVENTH ANNUAL CONSIGNMENT SALE

AT HUGHESVILLE FAIR GROUNDS, FRIDAY, OCTOBER 16
AT 1 P. M.

15—YOUNG COWS—15
FRESH OR NEAR BY FROM FEDERALLY TESTED HERDS

A yearling show bull sired by a son of Cornucopia Ormsby Lad, dam a daughter of Dutchland Creamelle Denver Lad.

Two 9-month-old grandsons of Ormsby Korndyke Lad and dams with seven-day A. R. O. records of 26 lb. and 24.75 lb.

A daughter of an almost 32-lb. cow and her heifer calf sired by a son of Ormsby Korndyke Lad.

Nine two-year-old heifers just fresh or near by sired by a son of Spring Farm King 26th, he being from the same sire as the A. S. Deysher herdsire.

A son of a 28-lb. cow about ready for service, sired by a 30-lb. bull.

For catalogue address T. L. J. Reese, Montoursville, Pa.

DOCTORS BUY HOLSTEINS

Dr. G. Buford & Sons who reside in Chicago but operate a dairy farm in connection with their summer home near Elizabeth, Wisconsin, recently purchased fifteen head of big producing purebred Holsteins from Leo Kuhl & Sons of Hazel Green, Wisconsin. A short time later they took fifteen more good ones from George Kuhl & Sons, also of Hazel Green, Wis., and added them to their herd on Flint Hill Farm.

CAMPBELL WON HIS SHARE

A. G. Campbell of Barneveld, Wis., has a good herd of Holsteins and selected a few to show at the fairs at Monroe, Darlington, Platteville and Lodi. There were thirteen exhibitors at Monroe, six at Darlington, three at Platteville and six at Lodi. At these events the Campbell herd was shown against eight different herds that showed at the Wisconsin State Fair, however, they were able to win nine first prizes, twenty-two second prizes, two third prizes and at one fair had the reserve grand champion female.

A HEALTHY OLD MILKMAN

S. S. Jenness of Pittsfield, N. H., is conducting a sizable milk route and is so busy that he could not get to the recent fair held at Pittsfield, until late in the day. Mr. Jenness may be excused on the grounds of youth because he was only 87

on his last birthday. Mr. Jenness with two of his neighbors, one 86 years old and the other 85, was photographed in a group on the last Fourth of July and the picture was given the place of honor at an elaborate display made at the Pittsfield Fair by the Upper City Neighborhood Club. Mr. Jenness, as well as one of his friends, was born and brought up in the Upper City, but the other was born in Barrington, Mass., and did not come to his present home until he was past school age. Another picture shown was the old schoolhouse built in 1775, which is now replaced by a more up-to-date edifice. Under the schoolhouse picture appeared this legend: "Here was laid the foundation of that mental and physical vigor that makes Samuel Jenness and Woodbury Norris, two of Pittsfield's most esteemed citizens, 87 and 86 years young."

There was a good display of cattle. In the Holstein division Frank True of Loudon carried off a number of prizes as did C. Lindberg of Gilmonton, Guy C. Nichols of Pittsfield and Frank Foss of Barnstead.

Cows that produce less than 9,000 lb. milk and 325 lb. butterfat in a year are hardly worth keeping, Ohio cow testing association records indicate.

Ad in Neosho (Mo.) Democrat: For Sale: One registered Jersey cow with bull calf giving four gallons of milk.

BURKE COLANTHA CANARY LADY

She is typical of the good cows in my *Accredited Herd*.

Here she was bred, raised and developed. I thought I would try my hand at official record making so put her in test, fed and milked her and she produced 85 lb. milk in a day, 23.08 lb. butter in seven days, not so bad for an amateur of 76 and his pet cow!

Let me show my Accredited Herd to you and tell you about the low prices I am asking.

REGISTERED HOLSTEIN-FRIESIAN CATTLE—Fully Accredited Herd—60-day retest

Farm, having been plotted for building lots, every animal in my famous producing herd must be sold under the hammer without reserve. Sale will be held at my farm near Lehman, Pa., located 30 minutes ride from Wilkes-Barre, on a good road.

JUST LOOK AT THIS WONDERFUL OFFERING

Satie Colantha Pietertje, a 35-lb. cow with 810-lb. milk, 1200-lb. butter in a year; twice world's record 305-day cow-daughter of Colantha Johanna Lad 8th; together with her two sons by the great show bull and producer, RADIUM, will be sold—this famous trio will be a sensation of the sale.

THIS LIST OF HIGH RECORD COWS ALL GO AT YOUR PRICE

a 35.29-lb. cow with 810-lb. milk
a 30.43-lb. cow with 662-lb. milk
a 30.28-lb. cow with 715-lb. milk
a 29.52-lb. 4 yr. old with 534-lb. milk

a 29.42-lb. cow with 560-lb. milk
a 28.29-lb. cow with 521-lb. milk
a 27.60-lb. cow with 656-lb. milk
a 27.25-lb. cow with 555-lb. milk

Note the large milk records in each case.

These, together with many other high record cows, including a 1,200-lb. cow with 28,000-lb. milk; a 1,044-lb. cow with 25,000-lb. at 11½ years of age—also sons and daughters of these many high record cows by such famous sires as Sir Pontiac Waldorf Pietje; Cornucopia Ormsby Lad (5); Carnation King Sylvia; Colantha Denver Champion; Oakland Sethje Mooie; Friend Pontiac Korndyke; King Korndyke Veeman Hengerveld, and Radium.

RADIUM WILL BE SOLD

Think of a chance to buy this famous maternal brother to May Echo Sylvia; this bull was Grand Champion at the New York State Fair. With him will be sold 12 of his daughters, all from high record dams.

Auctioneer: Col. Geo. W. Baxter, Elmira, N. Y. S. T. Wood, Liverpool, N. Y. in the box.

Write at once for a catalogue of this sale to the owner.

A Few Facts for Your Consideration

By Howard C. Reynolds

PREVIOUS to and immediately following the annual Convention of the Holstein-Friesian Association of America, held at Syracuse, N. Y., in June 1921, the *Holstein-Friesian World*, the recognized publicity organ of the Millionaire,—Political-Dealing Group that were trying to gain further control of the Association's affairs at the Syracuse meeting, published editorials charging Mr. Frederick M. Peasley, Mr. Albert L. Brockway, Mr. Charles W. Newman, Mr. Jacob S. Brill, Mr. Fred S. Parmelee and others with prostituting the proxies which had been entrusted to them by some 9,000 members of the Association and using these votes to control the Convention for Ulterior Motives.

Recently Mr. M. S. Prescott, editor of the *World*, has repeated these charges and assertions and I feel that the members of the Holstein-Friesian Association and the breeders of Holstein-Friesian cattle should know the facts and be able to judge the truth or falsity of Mr. Prescott's statements and assign him to his proper classification in society.

FIRST:—Let us review the Call of the 1921 Annual Meeting as mailed to the members by the Secretary and see what business was to come before the Convention to be considered as set forth in the Call.

SECOND:—Let us review the facts as set forth in the campaign letters sent out by Mr. Peasley, Mr. Brockway, Mr. Newman, Mr. Brill, Mr. Parmelee and others and see just what statements were made in these letters and what these gentlemen pledged the members as to how they would use the proxies that were to be entrusted to them to be voted at the Annual Meeting.

THIRD:—Let us review the report of the Annual Meeting and see just HOW Mr. Peasley, Mr. Brockway, Mr. Newman, Mr. Brill and Mr. Parmelee voted on the various resolutions and amendments and see just where and to what extent the proxies entrusted to them were prostituted as charged by Editor Prescott of the *World*.

FOURTH:—After we have reviewed these facts, let us go into the correspondence that was exchanged between members of the proxy group and Mr. F. L. Houghton and others, previous to and after the Syracuse Convention and see if there are any traces of Ulterior Motives which these men had in mind that were to be carried out at the Annual Convention that constituted a prostitution of the members' confidence.

FIFTH:—After we have reviewed all these things, let us switch our investigation to the Millionaire—

Political-Dealing—Worldly Element which the *World* represents and see if the *World*, Mr. D. D. Aitken, James A. Reynolds and the State-Paid Secretaries were trying to "put over" anything on the members. Let us see if THEY had any Ulterior Motives in mind which the members generally did not know about and which THEY proposed or hoped to put into effect at the Syracuse Convention.

If we review the Call of the Annual Meeting sent out by Secretary Houghton, we will find that there were various resolutions offered. Among these resolutions were some of vital importance to the future of the Association and the welfare of the members and breeders.

TO PROTECT MEMBERS' RIGHTS AND REDUCE FEES

FIRST:—Mr. Peasley caused to be inserted in the Call of the Meeting a resolution rescinding the resolution introduced the previous year at St. Paul by James A. Reynolds appointing a Committee to buy a Home and move the Association's offices to the Central West.

SECOND:—Mr. A. L. Brockway introduced a resolution reducing the transfer fee from \$1.00 to 50 cents.

RESOLUTION DISFRANCHISING THE MEMBERS

THIRD:—Mr. James A. Reynolds, as Chairman of a Committee on By-Law Revision, caused to be introduced into the Call of the Meeting a resolution conferring on the Board of Directors the power to Alter, Amend or Repeal the By-Laws from time to time as they saw fit.

FOURTH:—This same Committee, of which Mr. James A. Reynolds was Chairman, also offered a resolution to the effect that the President should become Chief Executive Officer of the Association.

MEMBERS' RIGHTS THREATENED

There were two distinct issues at the Syracuse Convention as set forth in the Call of the Meeting.

Mr. Peasley and Mr. Brockway offered resolutions to preserve the Association, stop extravagance and protect the members' rights.

The resolution offered by Mr. James A. Reynolds, Chairman of the Executive Committee, aimed to rob the breeders of their just rights by placing the power of Altering, Amending or Repealing the By-Laws in the hands of the Directors which, if passed, would have enabled the Board of Directors to increase the fees and take from the Association's Reserve Fund without consulting the members.

The resolution to make the President the Chief Executive Officer would have placed all the Association's funds in the hands of the then \$12,000.00 President to be disposed of as he and the Board of Directors saw fit.

WARNING TO THE MEMBERS

With these conditions confronting the members at their Annual Convention, was it any wonder that such men as Mr. Frederick M. Peasley, who was a Judge of the Court; Mr. Brockway, Mr. Newman, Mr. Brill, Mr. Parmelee and Secretary Houghton should rise up in indignation at the bold attempt being made to gain further control of the Association and to disfranchise the members all of which were embodied in the resolution placing the power of Altering, Amending and Repealing the By-Laws in the hands of the Directors.

FACTS SENT FORTH IN LETTERS

Now, if we review the letters sent out by Judge Frederick M. Peasley, Mr. A. L. Brockway, Mr. C. W. Newman, Mr. J. S. Brill and Mr. F. S. Parmelee, we will find that each and every one of these letters made it VERY plain to the members that if they were entrusted with the breeders' proxies, that their votes would be used to rescind the James A. Reynolds proposal, to buy a Home and move the offices to the Central West; to pass the resolution offered by Mr. Brockway to reduce the transfer fee from \$1.00 to 50 cents; and to defeat the resolution offered by Mr. James A. Reynolds, as Chairman of the Committee on By-Law Revision, that had for its purpose giving the Board of Directors the right to Alter, Amend or Repeal the By-Laws from time to time as they saw fit; and further, that the proxies would be used to defeat the resolution making the President the Chief Executive officer.

AGAINST \$12,000.00 PRESIDENT

Each and every one of these letters from the first paragraph to the last paragraph was unalterably opposed to the extravagant management that had prevailed during the previous two years and any member who sent his proxy to these men must have been confident that it would be used to defeat the \$12,000.00 President and stop extravagance.

NO MISREPRESENTATION

If there was any misrepresentation in these letters, we would ask the Editor of the *World* to point it out. If he will read ONE of these letters, or ALL of them, and point out a SINGLE instance where the writer did not give the facts and figures and the WHOLE truth, free from any misrepresentation, we would ask him to come forward with his published statement.

HOW PROXIES WERE VOTED

Let us review the happenings at the Annual Convention held at Syracuse in June 1921 and learn just how Judge Peasley, Mr. A. L. Brockway, Mr. C. W. Newman, Mr. J. S. Brill and Mr. F. S. Parmelee and others voted the upwards of 9,000 proxies entrusted to them by the members.

FIRST:—The Millionaire-Political-Dealing-Worldly Element, who had been in the "saddle" during the

past two years and who were charged with extravagance and mismanagement, tried to stampede the Convention and by resorting to ridicule and abuse, hoped to disrupt the little band of honest, stalwart men who held the votes of the plain breeders and dairymen, and thus defeat the purpose for which the members had intended their votes to be used.

One of the first things that happened at the Convention was the introducing of a resolution by Mr. J. M. Hackney, asking the Convention to endorse the conduct of the Board of Officers. This resolution was defeated by the votes of the plain breeders and rightly so because the extravagance and mismanagement that had prevailed should be condemned rather than commended by the breeders.

Under a bedlam of abuse and ridicule the proxy group retained their dignity and good judgment and fought the battle through to a finish, voting the breeders' proxies just as they had promised.

The transfer fee was reduced from \$1.00 to fifty cents.

The motion to remove the offices was rescinded.

The resolution offered by James A. Reynolds, as Chairman of a Committee on By-Law Revisions, that asked to have the Directors given the power to Alter, Amend or Repeal the By-Laws from time to time as they saw fit, failed to pass as did the other Reynolds amendment making the President the Chief Executive Officer.

I will leave it to the fair and honest judgment of readers to determine whether the proxies held by Mr. Peasley, Mr. Brockway, Mr. Newman, Mr. Brill and Mr. Parmelee were prostituted as has been charged by Mr. Prescott, Editor of the *Holstein-Friesian World*.

WHERE HOUGHTON STOOD

Now, let us review some of the correspondence interchanged between those who were working to defeat the efforts of the Millionaire-Political-Dealing-Worldly Element to gain further control of the Association and see if there are any traces of Ulterior Motives.

I have in my files complete correspondence from Mr. F. L. Houghton which, owing to its volume and to lack of space in the paper, will be impracticable to print. However, I will publish excerpts from some of these letters which I believe will show Mr. Houghton's position relative to the campaign previous to, at and after the Syracuse Convention. While I am not printing these letters in full my files are open to those who wish to further investigate the matter.

First is a letter from F. L. Houghton, addressed to Dr. Howard C. Reynolds, under date of April 28, 1921, which reads as follows:

Dear Dr. Reynolds:

I am enclosing to you copies of letters which I have sent to Judge Peasley, and to Mr. Carrigan, also to R. N. Thompson for your information.

I also enclose a letter prepared by Mr. Parmelee, Secretary of the Vermont Club, in pursuance of instructions given him at a very recent meeting.

I feel that it is very important that you should confer with Syracuse friends and see that the floor organization is fully arranged in advance, also ascertain exactly what they are doing there, and if any letters have gone out from Stuart, or Bishop or Stimson, or other individuals, let me know about them, and let me know what is being done generally. A list is to be

sent you of people in various localities upon whom you may find it convenient to call, and ascertain their feeling and establish such relationship as may be desirable.

Mr. Duntley has suggested making up a circular to be used in connection with general canvasses, copy of which I enclose and would like your views upon it. The question in my mind is whether it is conservative enough or whether it would tend to alienate the solid substantial supporters even though it does arouse a far greater number of "little breeders on the hillside."

Please let me have your views on this as early as possible.

Faithfully,

FREDERICK L. HOUGHTON.

FLH-MFS
Encs.

The enclosure to Judge Peasley referred to in the above letter from Mr. Houghton follows:

HON. F. M. PEASLEY,
Cheshire, Connecticut.

Dear Mr. Peasley:

This is to acknowledge your very interesting contribution to the Register which will go into the issue of May 15, it being too late for the current issue. I think this is a very proper and dignified comment on the attitude of the *World*, and very properly appears in the Register. I cannot conceive of a majority of the readers of the *World* feeling that the attitude of its editor as expressed in the recent article on which you comment is a sensible one. It must be that many people more or less thoughtful, who read the *World* are disgusted with its attitude.

Referring to the subject of my letter of April 25, and our telephone conversation last evening, I am more than ever inclined to think that the letter for the national canvass to be sent out by you, particularly on the rescinding of the resolution relating to the location of a national home, should be prepared by yourself in order that your own personality may appear in it. It is quite probable that my communications being so common and general with the membership have in the course of years grown "earmarked" which enable close students to say that "they are written by Houghton."

Again you have a point of view, unembarrassed by perhaps too close association with the details of this matter of the Association, or by the knowledge of the personal expressions both for and against of many persons and you can give to it a flavor which would be impossible for me to do and a laying out of the subject better than anyone with whom I am acquainted, and I hope that you will proceed to do this at the earliest possible moment, and send it to me so that I may go over it, and perhaps meet you for a discussion on it.

A suggestion has been made that the national canvass, (and it is expected that there will be several of them on the different points of the call), should be accompanied by a pamphlet, reviewing the general situation. In discussing just what it should contain, I find there are different views, one favoring considerable detail, and another a brief, striking arraignment such as you see indicated in the enclosure. This enclosure is in the popular newspaper style of the day, and with its side heads, and typographical arrangement in accord therewith, would no doubt awaken strong reaction against those who are less prone to read pamphlets.

I find difficulty in deciding between these views and if I were to criticize the enclosure, I should say that there was a possibility of its offending and driving support away, from the conservative, thoughtful people, but these, as usual, are in a great minority, and thus the argument favors the use of material which will cause action by the average member in the way of proxy votes; therefore, I would like very much to have your views upon this matter.

Dr. Reynolds of Pennsylvania, and Messrs. Bigler, Zimmer, and Brockway and others in various sections, are making up as rapidly as possible, an administration committee to handle the situation with respect to the various local and national canvasses, the collecting of funds, and also to arrange a program for floor management, and I expect that they will bring you into conferences sooner or later. They seem to feel that the support of New York, Pennsylvania, and New England, will be as solid as can be in opposition to the present régime, and to amendments looking towards concentration of power in

the hands of the President and the Board of Directors. Time will tell whether this is true or not, but there are upwards of 7,000 members within this territory, and it is believed that a national canvass will develop very considerable support, conceding that states like Minnesota and Wisconsin will have 85% of their proxies in the hands of their club delegates or persons supporting the present régime.

Efforts are now under way to ascertain friendly supporters in all sections from East to the Middle West by personal visit and this may result in a large amount of interest not now apparent. It is stated that in Illinois, under the leadership of J. T. Williams of Sterling, Gov. Lowden's manager also, that there will be a vigorous effort made in opposition to President Aitken. This situation will be looked into and ascertained in detail.

I am really very desirous of personally conferring with you at Brattleboro, and I find it almost impossible to think of leaving because of the duties attending the arrangement of the annual meeting, and especially the various reports which are not yet in manuscript. I have, however, undertaken to attend the sale at Lexington on May 4. The principal object of this other than meeting our friends, is for a conference with Barney Kelley, who is very desirous of such a meeting, and who is to be at the Quincy House in Boston, the evening previous to the sale.

In case you should telephone to me, please give your name to the operator, saying "Mr. Peasley calling Mr. Houghton personally." We are greatly troubled by telephone calls from various canvassers, and from individuals desiring to go over registration matters, and waste a great deal of time in trying to for instance, get the registration matter directly before the head of the department handling it, who can be intelligent with the inquiry; hence if the office knows who is asking for the connection, it can be handled directly, and at a saving of time, etc.

Also kindly see that your letters are marked "personal" and that all these communications between us are personal and confidential.

Yours very truly,

FREDERICK L. HOUGHTON.

FLH-MFS
Encs.

For lack of space I am omitting the letters of Mr. Houghton to M. J. Carrigan of Concord, Mass., and R. N. Thompson of Cowden, Ill., but am printing in full the information referred to, which was designed to be used in a circular or pamphlet in the proxy campaign.

DANGEROUS DAYS

HIGH HANDED MOVEMENT TO DESTROY MEMBERSHIP RIGHTS

Holstein-Friesian Association Members Will Resent Efforts of a Faction to Invest Directors with Power to Amend By-Laws at Will, and to Centralize all Power in the President

Continuance of High Transfer Fees—Removal of Executive Offices from Brattleboro to the Middle West—President's \$12,000 Salary and Extravagant Extension Department Expense—Should be Voted Down

This plain statement of facts is of vital interest to every member who has the welfare of the Holstein-Friesian Association at heart.

The Holstein-Friesian Association of America, for over a third of a century has functioned, primarily as a record association of the breed.

It has grown to considerable proportions, by reason of the superiority of Black and White cattle and the individual efforts and loyalty of the breeders.

It always has been a popular institution as to gov-

ernment, and its members have felt an interest and responsibility in its affairs.

Every member has been privileged to exercise his voting prerogative, and by his ballot to have a voice in the disposition of any organization questions which have been under consideration.

TAKING AWAY YOUR RIGHTS

A certain faction, determined on taking the power from the hands of the membership, has injected into the official call for the Annual Meeting, June 1, an amendment which provides that any changes in the By-Laws may be made at any time by the Board of Directors, and without regard to the will of the members at large.

Such unjust and most intensive centralization of power is contrary to the principles of popular government, and its malicious possibility is more apparent when you reflect that a board of directors so selected and constituted as to be subservient to an unscrupulous president or Chief Executive, (should the president be of the character) could exploit the Association's resources at will. It is further proposed to constitute the President as the Chief Executive Officer,—a high and mighty potentate, and a fitting capstone to the whole selfish structure.

TRANSFER FEES MULTIPLIED FOUR TIMES

Every member is aware of the fact that transfer fees have been four times as large as they were previous to the Annual Meeting at Philadelphia in 1919, but do all members realize that the increase in transfer fees was made at the instigation of the same leading spirit who now seeks to place the right of By-Law amendments exclusively in the hands of the directors and to centralize all power in the president?

The Association receipts for all transfer fees during the fiscal year ending April 30 were over \$175,000. Bear in mind that the great reason for placing this "four times too big" tax on the breeder was that the money was needed to defray expenses of the Extension Department.

WHERE SOME OF YOUR MONEY WENT

Contemplate if you will, that some of the principal items of that Extension Service were: President's salary, \$12,000; one of traveling assistants, \$6,500; another \$4,000. To that total add at least \$8,000 for junketing and speech making from Maine to California and \$5,000 for unnecessary printing and you have \$35,000. Then reflect: Did any of that \$35,000 speech making and propaganda increase the size of your milk check, reduce the cost of feed or raise the price of your cattle?

(Let any member ask for an itemized account of thousands of dollars worth of extension work, traveling and speech making and he will find it camouflaged or hidden, by most ingenious book-keeping methods.)

This high handed and most preposterous attempt to make a member's vote of little use,—to centralize all

power in the hands of the president and directorate, all the while extracting the big transfer fee from the breeder to grease the wheels of the chariot and provide extravagant salaries for the Orators, is further supplemented by an expressed desire to move the offices of the Association from Brattleboro to the central West.

Of course that is perfectly feasible to these ambitious gentlemen for the farmers and breeders would pay the bills.

The lease on the specially built association building in Brattleboro has six years to run at \$8,000 per year. It can be conservatively estimated that the removal of the office files, education of 50 new employees and incidentals would cost another \$100,000, to say nothing of the fact that the work of their registration and transfer department would fall a year or more behind during the process.

THEY WOULD EVEN MOVE THE OFFICE

Is it worth \$148,000 to have a new geographical location? Two cents will bring a letter to Brattleboro as well as to any city in the Middle West, and when you consider that the office force at Brattleboro during the fiscal year ending April 30, 1921, handled over \$385,000 worth or over 225,000 certificates of registration, transfer and duplicates, isn't it fairly good evidence that there was no serious delay of any sort occasioned by the location of the office in Brattleboro, where it has been for over a quarter of a century?

As well argue that it would be wise to remove the National Capitol from Washington to Oshkosh or Kalamazoo.

Mr. Member: You have one consolation. You know that prior to the possible centralization of all power in the president and directors, your vote is as big and powerful as it ever was.

If you want to stop these things:

- 1.—The Directors given power to amend your By-Laws at will.
- 2.—The President regaling himself with a \$12,000 salary and unlimited traveling expenses.
- 3.—The Extension Service wasting each year, 30 to 40 thousand dollars on useless speechmaking and traveling expenses.
- 4.—The transfer fees four times what they were prior to 1919.
- 5.—The removal of the Executive Offices to the Middle West.

THEN SEE THAT YOUR PROXY IS IN THE HANDS OF THE RIGHT PARTY.

To remove any question of doubt in the minds of the readers as to who was back of the campaign previous to the Syracuse Convention, financially and otherwise, I will print below excerpts from a letter received from Mr. F. L. Houghton, dated at Brattleboro, Vermont, May 10, 1921, addressed to Dr. Howard C. Reynolds, Dalton, Pa.

Dear Dr. Reynolds:

There are funds to a certain extent now available for expenditures in connection with the work which you are doing,

and you have only to forward to Mr. H. Seaverns, a memorandum of your account from time to time when a check will be returned to you.

The Vermont letter of the state club has yielded so far something over 100 proxies and a follow-up may be necessary in this case and in several others.

A telegram from Mr. Bell has just been received as follows: "Please forward to me immediately Oliver Bldg., Pittsburgh, Pa., 1,600 blank proxies also complete list of members with their addresses in Pennsylvania as I wish to send out a letter soliciting proxies from our members in Pennsylvania to be used for the best interest of the Association."

I will be glad to know from you whether there is any change in Mr. Bell's attitude. Do not let him know that you were advised of his request for blank proxies. If you receive a letter from Mr. Bell, I should be glad to have a copy.

Yours very truly,

FREDERICK L. HOUGHTON.

FLH-S

And another letter written on the stationery of the Holstein-Friesian Association of America:

May 6, 1921.

Dear Dr. Reynolds:

I understand that there is to be another smaller convention in Syracuse at the time of ours and that the hotels will be crowded. I have, therefore, taken the liberty of reserving a room for you at the Onondaga. Possibly you have already attended to this. If you will let the Onondaga hotel know when you expect to arrive they will appreciate it as I was unable to tell them the time of your arrival.

If you hold any Proxies they should be in the hands of the Proxy Committee five days before the Annual Meeting. The By-Laws require this. Therefore, I am reminding those who have asked for blank Proxies to see that they are delivered or sent by Registered Mail to W. W. Walker, Chairman of the Committee on Proxies, Onondaga Hotel, Syracuse, New York, so as to reach there by Thursday, May 26.

Proxies should be accompanied by a list alphabetically arranged showing the names and addresses of the Proxies held and a duplicate of this list should be retained by the sender.

Yours very truly,

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA,
F. L. Houghton, Sec'y.

HS:LAW 2C

And still further, a letter from Mr. Houghton, dated at Brattleboro, Vt., July 6, 1921, addressed to Dr. Howard C. Reynolds, which reads as follows:

Dear Dr. Reynolds:

I note your recent letters, and I also found your letter of June 14 at hand when I returned from Chicago.

I note your request for list of expenditures of the Extension Service covering the last two years. The best I can do for you is to send you Rider's own report and copies of the Treasurer's report and that of the Finance Committee. No report of the Extension Service was prepared or published this year.

I concur with you that it is exceedingly important to Brockway, Peasley and Newman to set the membership right in regard to all matters which have occurred, in the form of a pamphlet accompanied by a letter of thanks, etc. I trust there will be no delay in getting this out in order that it may counteract the effect of the unpleasant publicity in the *World*.

Yesterday, we received after much urging the final report of the stenographer's notes of the members' meeting and in accord with your wishes and that of others, copy will be furnished to you within a few days I think. I am also having a list of the proxy vote compiled and this will go forward to you also. This latter information I received from the Auditor yesterday and thus you see much delay has occurred which has been unavoidable.

Yours very truly,

FREDERICK L. HOUGHTON.

H-S

The above letters, we believe, are sufficient to prove that there were no ulterior motives back of the Proxy Campaign indulged in by Mr. Peasley, Mr. Brockway, Mr. Newman, Mr. Brill, Mr. Parmelee, Mr. Houghton, myself and others, previous to the Syracuse Convention and that the upwards of nine thousand breeders, who entrusted their votes to these men, have not been misled or deceived by the propaganda and misrepresentation published in *The Holstein-Friesian World* and circulated through the Agricultural Press by Editor Maurice Prescott and Mr. Fred Koenig, then publicity expert for the Holstein-Friesian Association of America.

WHO HAD ULTERIOR MOTIVES?

Before we leave the subject let us see what ulterior motives, if any, were back of the campaign to gather proxies to be voted in the interests of the Millionaire — Political, — Dealing, — Aitken, — State-Paid-Secretaries, — Worldly "OUT-FIT."

Mr. Bertram B. Scott, State-Paid-Secretary of Minnesota, and Mr. L. L. Oldham of Wisconsin, in fact, many if not all of the State-Paid Secretaries had been soliciting proxies long, long before the call of the Annual Meeting came out.

It was very evident that these gentlemen were getting these proxies to be voted at the Annual Convention to pass the resolutions introduced by James A. Reynolds, Chairman of the Committee on By-Law Revision, to deprive the members of their right to Alter, Amend or Repeal the By-Laws from time to time as they saw fit and place this right in the hands of the Board of Directors and, further, to pass the resolution making the President (Mr. D. D. Aitken) Chief Executive Officer.

AITKEN MACHINE WORKING AT ASSOCIATION'S EXPENSE

We find that Mr. Aitken had invited the State-Paid Secretaries to attend the annual Convention at the Association's expense, presumably to vote proxies in favor of the resolution offered by James A. Reynolds, as Chairman of the Committee on By-Law Revision, placing the right to Alter, Amend, or Repeal the By-Laws from time to time in the hands of the Directors and to make the then president (Mr. D. D. Aitken) Chief Executive Officer.

In a copy of a letter addressed to Mr. Noyes, Chairman of the Finance Committee and signed by Mr. Houghton, we find the following paragraph:

"We had an external expense which was not anticipated resulting from President Aitken's invitation to the Field Secretaries of State Clubs to attend the Annual Meeting at the expense of this Association."

Bills from the following Field Secretaries have already been received and paid, amounting to \$502.18.

C. M. Long	Illinois	\$165.32
E. J. Alexander	Missouri	164.42
L. L. Oldham	Wisconsin	122.08
J. W. Bartlett	New Jersey	48.36
		\$502.18

[We note the above figures are not mathematically correct but they are just as they appear in the letter. —EDITOR.]

ernment, and its members have felt an interest and responsibility in its affairs.

Every member has been privileged to exercise his voting prerogative, and by his ballot to have a voice in the disposition of any organization questions which have been under consideration.

TAKING AWAY YOUR RIGHTS

A certain faction, determined on taking the power from the hands of the membership, has injected into the official call for the Annual Meeting, June 1, an amendment which provides that any changes in the By-Laws may be made at any time by the Board of Directors, and without regard to the will of the members at large.

Such unjust and most intensive centralization of power is contrary to the principles of popular government, and its malicious possibility is more apparent when you reflect that a board of directors so selected and constituted as to be subservient to an unscrupulous president or Chief Executive, (should the president be of the character) could exploit the Association's resources at will. It is further proposed to constitute the President as the Chief Executive Officer,—a high and mighty potentate, and a fitting capstone to the whole selfish structure.

TRANSFER FEES MULTIPLIED FOUR TIMES

Every member is aware of the fact that transfer fees have been four times as large as they were previous to the Annual Meeting at Philadelphia in 1919, but do all members realize that the increase in transfer fees was made at the instigation of the same leading spirit who now seeks to place the right of By-Law amendments exclusively in the hands of the directors and to centralize all power in the president?

The Association receipts for all transfer fees during the fiscal year ending April 30 were over \$175,000. Bear in mind that the great reason for placing this "four times too big" tax on the breeder was that the money was needed to defray expenses of the Extension Department.

WHERE SOME OF YOUR MONEY WENT

The above letters, we believe, are sufficient to prove that there were no ulterior motives back of the Proxy Campaign indulged in by Mr. Peasley, Mr. Brockway, Mr. Newman, Mr. Brill, Mr. Parmelee, Mr. Houghton, myself and others, previous to the Syracuse Convention and that the upwards of nine thousand breeders, who entrusted their votes to these men, have not been misled or deceived by the propaganda and misrepresentation published in *The Holstein-Friesian World* and circulated through the Agricultural Press by Editor Maurice Prescott and Mr. Fred Koenig, then publicity expert for the Holstein-Friesian Association of America.

WHO HAD ULTERIOR MOTIVES?

Before we leave the subject let us see what ulterior motives, if any, were back of the campaign to gather proxies to be voted in the interests of the Millionaire — Political, — Dealing, — Aitken, — State-Paid-Secretaries, — Worldly "OUT-FIT."

Mr. Bertram B. Scott, State-Paid-Secretary of Minnesota, and Mr. L. L. Oldham of Wisconsin, in fact, many if not all of the State-Paid Secretaries had been soliciting proxies long, long before the call of the Annual Meeting came out.

It was very evident that these gentlemen were getting these proxies to be voted at the Annual Convention to pass the resolutions introduced by James A. Reynolds, Chairman of the Committee on By-Law Revision, to deprive the members of their right to Alter, Amend or Repeal the By-Laws from time to time as they saw fit and place this right in the hands of the Board of Directors and, further, to pass the resolution making the President (Mr. D. D. Aitken) Chief Executive Officer.

AITKEN MACHINE WORKING AT ASSOCIATION'S EXPENSE

We find that Mr. Aitken had invited the State-Paid Secretaries to attend the annual Convention at the Association's expense, presumably to vote proxies in favor of the resolution offered by James A. Reynolds, as Chairman of the Committee on By-Law Revision, placing the right to Alter, Amend, or Repeal the By-Laws from time to time in the hands of the Directors and to make the then president (Mr. D. D. Aitken) Chief Executive Officer.

In a copy of a letter addressed to Mr. Noyes, Chairman of the Finance Committee and signed by Mr. Houghton, we find the following paragraph:

"We had an external expense which was not anticipated resulting from President Aitken's invitation to the Field Secretaries of State Clubs to attend the Annual Meeting at the expense of this Association." Bills from the following Field Secretaries have already been received and paid, amounting to \$502.18.

C. M. Long	Illinois	\$165.32
E. J. Alexander	Missouri	164.42
L. L. Oldham	Wisconsin	122.08
J. W. Bartlett	New Jersey	48.36
		<hr/>
		\$502.18

[We note the above figures are not mathematically correct but they are just as they appear in the letter. —EDITOR.]

Now W. H. Mott, Secretary of the Holstein-Friesian Association of Kansas at Herrington, Kansas, has just written me that he thinks his expenses should be paid. The following is quoted from his letter:

"It is my opinion that if the Association takes care of the expenses of one paid Secretary, it should do so for all."

The facts disclosed in the above paragraph can only be interpreted that the Millionaire — Political-Dealing — Aitken — Paid-State-Secretary — Worldly Outfit had planned to swoop down on the Syracuse Convention and take over the whole works and leave the breeders and members with nothing to do but pay the bills and keep still. Even Mr. Aitken had invited these State-Paid-Secretaries to come to the Convention at the Association's expense to vote the proxies which they had gathered, by gumshoe methods, to help elect him Chief Executive Officer and pass the resolution giving the Board of Directors the power to Alter, Amend, or Repeal the By-Laws from time to time as they saw fit.

IF THERE WAS ANY PROSTITUTION OF PROXIES AT THE SYRACUSE CONVENTION, WHO WERE THE GUILTY PARTIES? AND TO WHAT EXTENT WAS THE *WORLD* AND EDITOR PRESCOTT GUILTY?

Association Directors, State-Paid-Secretaries, their friends and employees were gathering proxies under the blank assertion and pretense that such proxies were to be voted to the best interests of the members and the welfare of the Association when in reality they proposed to use these proxies to sneak through a resolution at the Convention to make their Captain, Mr. D. D. Aitken, Chief Executive Officer of the Association and to deprive the very members, who had entrusted them with their proxies, of the right to manage their own affairs by giving the Board of Directors the right to Alter, Amend, or Repeal the By-Laws from time to time as they saw fit.

Again we would ask if any proxies were prostituted at the Syracuse Convention and who were the guilty parties? And to what extent was the *World* and its editors guilty?

We need give no further proof of what these gentlemen were trying to do at the Syracuse Convention than to review what they afterwards accomplished at the Special Meeting at St. Paul, Minn., on October 11, 1921, where the breeders were disfranchised; and at the annual meeting following, held at Kansas City June, 1922, where the transfer fee was boosted from 50 cents to \$1.50 and the State-Paid-Secretaries put on the Association's payroll.

Had the resolutions been passed at the Syracuse Convention, giving the Board of Directors the power to Alter, Amend, or Repeal the By-Laws from time to time as they saw fit and making the President the Chief Executive Officer, there would have been no need of a Special Meeting to disfranchise the members in order to increase the fees and put the State-Paid-Secretaries on the Association's payroll. The Board of Directors would have been empowered to fix the transfer fee, make it \$5.00 or even more if they needed

it to keep themselves in spending money and they could have paid the President fifteen, twenty-five or even fifty thousand dollars a year.

I believe that, if there has been any doubt in the minds of the plain breeders and dairymen as to the sincerity of the motives behind the 1921 proxy campaign and the efforts to defeat the Millionaire—Political-Dealing — Aitken-Paid-State-Secretary — Worldly Outfit at the Syracuse Convention that the above information should set them right.

Houghton Favored New Association

By HOWARD C. REYNOLDS

FOR several years there has been a growing demand among the REAL breeders of Holstein cattle for a Registry Association that confines its activities to maintaining a Herd Register to preserve the purity of the blood of the breed, issue Registration and Transfer Certificates to its members at cost, managed and controlled by REAL breeders.

Members of such an Association would be in a position to work with the Agricultural Colleges and Dairy Extension workers to promote the breed and would not be compelled to pay an unjust and unnecessary tax on their Registry and Transfer Certificates to carry on breed promotion work of an exaggerated, Speculative and Questionable character.

Many suggestions were received during the proxy campaign previous to the Syracuse Convention and on several occasions during the summer of 1921 and in October after the Special Meeting at St. Paul, where the members had been deprived of their direct vote and a Political Form of Government adopted, Mr. F. L. Houghton discussed with me the advantages to be derived by starting a new Registry Association.

I remember very vividly on one of my visits at his farm in Putney, Vermont, in October 1921, as we sat on the veranda overlooking the Connecticut Valley and the New Hampshire hills, this question was discussed at some length and it was suggested that I take up certain matters with Mr. Houghton Seaverns, Assistant Secretary at the Association's offices in Brattleboro, the following morning, it being thought that some of the records of the Association would have to be copied to be available in starting a New Association. I found on conferring with Mr. Seaverns that copying the records was unnecessary, that the printed Herd Books and the Registry Certificates would furnish the desired information and to copy the records would be useless and unnecessary expense.

I believe that Mr. Houghton's interest in organizing a new Association, as we talked at that time, was for the purpose of preserving the principles for which he had so long stood, protect the rights and interests of the plain breeders and relieve them of the unjust and unnecessary tax that had been inflicted upon them at the instance of the Political management and, further, that the REAL breeders and dairymen would be relieved of any unfavorable reflection that might be cast upon the Holstein industry through the activities of the Dealing, Speculative Element.

With this information I am printing below a letter from Mr. Houghton over Mr. Duntley's signature.

A Semi-Monthly Journal Devoted to the Interests of
Holstein-Friesian Cattle

FREDERICK L. HOUGHTON, Editor
BRATTLEBORO, VERMONT

July 17, 1922.

DR. HOWARD C. REYNOLDS,
Box 61,
Harrisburg, Pa.

Dear Dr. Reynolds:

In considering our recent conversation with you relative to a broad reconstruction plan, and after several conversations with Mr. Houghton, it is the opinion of Mr. Pearson and myself that he would sanction such a movement as was suggested, provided we could arrange that several representative men endorsed the program prior to its being submitted.

Such men's names suggest themselves: Stevenson and Reynolds of Pennsylvania, Metcalfe of Massachusetts, Peasley of Connecticut, Bishop of Washington. Who would you suggest from New York, Maryland, New Jersey?

Now as to plan: the following is merely suggested as a tentative method and is submitted to you merely as a basis to begin work on. Incorporate Holstein-Friesian Register Association with Register as official organ. Include Sales Company as a part of the Assets and a working department. Provide for a \$10.00 worth of transfers or registrations, also subscription to paper. Have 50c transfers. A. R. O. as you talked.

Now if 5,000 members could be secured there would be provided \$50,000 capital. All that would be necessary would be a loan of \$25,000 perhaps for use until the business provided sufficient capital. Salaries for Secretary and others could be arranged and the whole matter gotten under way in short order.

Now Mr. Pearson and I are willing to work but want to have your idea of a plan. Perhaps the thing will crystallize and work. Mr. Houghton we feel sure will be an enthusiastic worker when we get the initial steps taken.

Hoping to hear from you, I am

With kindest regards,

W. L. DUNTLEY.

It is interesting to note that this letter was not written until July 17, 1922, after the Kansas City Meeting, when the resolution had been passed, making the office of Secretary appointive, threatening Mr. Houghton's position as Secretary, Brattleboro interests and the Principles for which Mr. Houghton had so long stood.

My only interest in the whole matter at that time and since has been to protect the rights and interests of the plain breeders and dairymen. I was not interested primarily in protecting Brattleboro's interests or in helping Mr. Houghton sell his Register or salvage the Brattleboro Sales Company, as outlined in his letter and I told him so in my answer, but I was interested in carrying out the broad constructive plan referred to in Mr. Houghton's letter that would protect the breeders' interests and place the industry on a Sound, Business Basis and with Breeders, including Mr. H. C. Reynolds and Mr. Geo. E. Stevenson, referred to in Mr. Houghton's letter to me, I have assisted in putting the broad constructive plan referred to into operation and have been elected Secretary and Treasurer of the Holstein-Friesian Registry Association, Inc. that now has upwards of 700 members and that is now issuing Registration and Transfer Certificates and which has been welcomed by the breeders more cordially and enthusiastically than had ever been

anticipated by myself and I believe Mr. Houghton and it promises to be the leading Association of its kind in America in the very near future.

HOUGHTON DESERTS THE CAUSE OF THE PLAIN BREEDERS AND DAIRYMEN

It would seem from developments since Mr. Houghton's letter to me under date of July 17, 1922, that he has deserted the cause of the plain breeders and dairymen and under date of March 22, 1923 he allowed his name to go on a letter with James A. Reynolds, threatening the breeders with a proposed \$93,000.00 raid on the Association's Reserve Fund, and, further, he has allowed his name to go on record indorsing the conduct in office of the gentlemen, who at Syracuse he was unalterably opposed to and the principles for which they stood, as expressed in his letters and personal conferences.

Now that the REAL breeders have organized a new Registry Association, just as Mr. Houghton proposed to do in his letter to me under date of July 17, 1922, and I have been elected Secretary and Treasurer, Mr. Houghton has preferred charges against me, which charges with the answers will be printed in full in the next issue of *THE HOLSTEIN BREEDER AND DAIRYMAN*.

And, further, he has caused to be mailed out a printed circular, "A WARNING TO BREEDERS OF HOLSTEIN CATTLE," in which he cites mere assertions without facts or figures. All of these charges will be answered in detail and if there are any breeders who have been deceived by this propaganda they will be set right as to the false and misleading assertions therein contained.

Penn State Wins Judging Contest

STUDENTS, professors, and all connected with the Pennsylvania State College as well as all Pennsylvania cattlemen are pleased and gratified at the success of the College Judging Team which won first place at the Dairy Cattle Judging Contest at the 1925

PENNSYLVANIA'S WINNING JUDGING TEAM
Winners of the Dairy Cattle Judging Contest at the Eastern States Exposition.

Eastern States Exposition held at Springfield, Massachusetts.

The winning team was coached by A. L. Beam and consisted of J. S. Bryan, A. W. Fox, and M. M. Ferguson, with A. M. Bready as alternate.

Now W. H. Mott, Secretary of the Holstein-Friesian Association of Kansas at Herrington, Kansas, has just written me that he thinks his expenses should be paid. The following is quoted from his letter:

"It is my opinion that if the Association takes care of the expenses of one paid Secretary, it should do so for all."

The facts disclosed in the above paragraph can only be interpreted that the Millionaire — Political-Dealing — Aitken — Paid-State-Secretary — Worldly Outfit had planned to swoop down on the Syracuse Convention and take over the whole works and leave the breeders and members with nothing to do but pay the bills and keep still. Even Mr. Aitken had invited these State-Paid-Secretaries to come to the Convention at the Association's expense to vote the proxies which they had gathered, by gumshoe methods, to help elect him Chief Executive Officer and pass the resolution giving the Board of Directors the power to Alter, Amend, or Repeal the By-Laws from time to time as they saw fit.

IF THERE WAS ANY PROSTITUTION OF PROXIES AT THE SYRACUSE CONVENTION, WHO WERE THE GUILTY PARTIES? AND TO WHAT EXTENT WAS THE *WORLD* AND EDITOR PRESCOTT GUILTY?

Association Directors, State-Paid-Secretaries, their friends and employees were gathering proxies under the blank assertion and pretense that such proxies were to be voted to the best interests of the members and the welfare of the Association when in reality they proposed to use these proxies to sneak through a resolution at the Convention to make their Captain, Mr. D. D. Aitken, Chief Executive Officer of the Association and to deprive the very members, who had entrusted them with their proxies, of the right to manage their own affairs by giving the Board of Directors the right to Alter, Amend, or Repeal the By-Laws from time to time as they saw fit.

Again we would ask if any proxies were prostituted at the Syracuse Convention and who were the guilty parties? And to what extent was the *World* and its editors guilty?

We need give no further proof of what these gentlemen were trying to do at the Syracuse Convention than to review what they afterwards accomplished at the Special Meeting at St. Paul, Minn., on October 11, 1921, where the breeders were disfranchised; and at the annual meeting following, held at Kansas City June, 1922, where the transfer fee was boosted from 50 cents to \$1.50 and the State-Paid-Secretaries put on the Association's payroll.

Had the resolutions been passed at the Syracuse Convention, giving the Board of Directors the power to Alter, Amend, or Repeal the By-Laws from time to time as they saw fit and making the President the Chief Executive Officer, there would have been no need of a Special Meeting to disfranchise the members in order to increase the fees and put the State-Paid-Secretaries on the Association's payroll. The Board of Directors would have been empowered to fix the transfer fee, make it \$5.00 or even more if they needed

it to keep themselves in spending money and they could have paid the President fifteen, twenty-five or even fifty thousand dollars a year.

I believe that, if there has been any doubt in the minds of the plain breeders and dairymen as to the sincerity of the motives behind the 1921 proxy campaign and the efforts to defeat the Millionaire — Political-Dealing — Aitken-Paid-State-Secretary — Worldly Outfit at the Syracuse Convention that the above information should set them right.

Houghton Favored New Association

BY HOWARD C. REYNOLDS

FOR several years there has been a growing demand among the REAL breeders of Holstein cattle for a Registry Association that confines its activities to maintaining a Herd Register to preserve the purity of the blood of the breed, issue Registration and Transfer Certificates to its members at cost, managed and controlled by REAL breeders.

Members of such an Association would be in a position to work with the Agricultural Colleges and Dairy Extension workers to promote the breed and would not be compelled to pay an unjust and unnecessary tax on their Registry and Transfer Certificates to carry on breed promotion work of an Exaggerated, Speculative and Questionable character.

Many suggestions were received during the proxy campaign previous to the Syracuse Convention and on several occasions during the summer of 1921 and in October after the Special Meeting at St. Paul, where the members had been deprived of their direct vote and a Political Form of Government adopted, Mr. F. L. Houghton discussed with me the advantages to be derived by starting a new Registry Association.

I remember very vividly on one of my visits at his farm in Putney, Vermont, in October 1921, as we sat on the veranda overlooking the Connecticut Valley and the New Hampshire hills, this question was discussed at some length and it was suggested that I take up certain matters with Mr. Houghton Seaverns, Assistant Secretary at the Association's offices in Brattleboro, the following morning, it being thought that some of the records of the Association would have to be copied to be available in starting a New Association. I found on conferring with Mr. Seaverns that copying the records was unnecessary, that the printed Herd Books and the Registry Certificates would furnish the desired information and to copy the records would be useless and unnecessary expense.

I believe that Mr. Houghton's interest in organizing a new Association, as we talked at that time, was for the purpose of preserving the principles for which he had so long stood, protect the rights and interests of the plain breeders and relieve them of the unjust and unnecessary tax that had been inflicted upon them at the instance of the Political management and, further, that the REAL breeders and dairymen would be relieved of any unfavorable reflection that might be cast upon the Holstein industry through the activities of the Dealing, Speculative Element.

With this information I am printing below a letter from Mr. Houghton over Mr. Duntley's signature.

ESTABLISHED 1886

THE HOLSTEIN-FRIESIAN REGISTER

A Semi-Monthly Journal Devoted to the Interests of Holstein-Friesian Cattle

FREDERICK L. HOUGHTON, Editor
BRATTLEBORO, VERMONT

July 17, 1922.

DR. HOWARD C. REYNOLDS,
Box 61,
Harrisburg, Pa.

Dear Dr. Reynolds:

In considering our recent conversation with you relative to a broad reconstruction plan, and after several conversations with Mr. Houghton, it is the opinion of Mr. Pearson and myself that he would sanction such a movement as was suggested, provided we could arrange that several representative men endorsed the program prior to its being submitted.

Such men's names suggest themselves: Stevenson and Reynolds of Pennsylvania, Metcalfe of Massachusetts, Peasley of Connecticut, Bishop of Washington. Who would you suggest from New York, Maryland, New Jersey?

Now as to plan: the following is merely suggested as a tentative method and is submitted to you merely as a basis to begin work on. Incorporate Holstein-Friesian Register Association with Register as official organ. Include Sales Company as a part of the Assets and a working department. Provide for a \$10.00 worth of transfers or registrations, also subscription to paper. Have 50c transfers. A. R. O. as you talked.

Now if 5,000 members could be secured there would be provided \$50,000 capital. All that would be necessary would be a loan of \$25,000 perhaps for use until the business provided sufficient capital. Salaries for Secretary and others could be arranged and the whole matter gotten under way in short order.

Now Mr. Pearson and I are willing to work but want to have your idea of a plan. Perhaps the thing will crystallize and work. Mr. Houghton we feel sure will be an enthusiastic worker when we get the initial steps taken.

Hoping to hear from you, I am

With kindest regards,

W. L. DUNTLEY.

It is interesting to note that this letter was not written until July 17, 1922, after the Kansas City Meeting, when the resolution had been passed, making the office of Secretary appointive, threatening Mr. Houghton's position as Secretary, Brattleboro interests and the Principles for which Mr. Houghton had so long stood.

My only interest in the whole matter at that time and since has been to protect the rights and interests of the plain breeders and dairymen. I was not interested primarily in protecting Brattleboro's interests or in helping Mr. Houghton sell his Register or salvage the Brattleboro Sales Company, as outlined in his letter and I told him so in my answer, but I was interested in carrying out the broad constructive plan referred to in Mr. Houghton's letter that would protect the breeders' interests and place the industry on a Sound, Business Basis and with Breeders, including Mr. H. C. Reynolds and Mr. Geo. E. Stevenson, referred to in Mr. Houghton's letter to me. I have assisted in putting the broad constructive plan referred to into operation and have been elected Secretary and Treasurer of the Holstein-Friesian Registry Association, Inc. that now has upwards of 700 members and that is now issuing Registration and Transfer Certificates and which has been welcomed by the breeders more cordially and enthusiastically than had ever been

anticipated by myself and I believe Mr. Houghton and it promises to be the leading Association of its kind in America in the very near future.

HOUGHTON DESERTS THE CAUSE OF THE PLAIN BREEDERS AND DAIRYMEN

It would seem from developments since Mr. Houghton's letter to me under date of July 17, 1922, that he has deserted the cause of the plain breeders and dairymen and under date of March 22, 1923 he allowed his name to go on a letter with James A. Reynolds, threatening the breeders with a proposed \$93,000.00 raid on the Association's Reserve Fund, and, further, he has allowed his name to go on record indorsing the conduct in office of the gentlemen, who at Syracuse he was unalterably opposed to and the principles for which they stood, as expressed in his letters and personal conferences.

Now that the REAL breeders have organized a new Registry Association, just as Mr. Houghton proposed to do in his letter to me under date of July 17, 1922, and I have been elected Secretary and Treasurer, Mr. Houghton has preferred charges against me, which charges with the answers will be printed in full in the next issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

And, further, he has caused to be mailed out a printed circular, "A WARNING TO BREEDERS OF HOLSTEIN CATTLE," in which he cites mere assertions without facts or figures. All of these charges will be answered in detail and if there are any breeders who have been deceived by this propaganda they will be set right as to the false and misleading assertions therein contained.

Penn State Wins Judging Contest

STUDENTS, professors, and all connected with the Pennsylvania State College as well as all Pennsylvania cattlemen are pleased and gratified at the success of the College Judging Team which won first place at the Dairy Cattle Judging Contest at the 1925

PENNSYLVANIA'S WINNING JUDGING TEAM
Winners of the Dairy Cattle Judging Contest at the Eastern States Exposition.

Eastern States Exposition held at Springfield, Massachusetts.

The winning team was coached by A. L. Beam and consisted of J. S. Bryan, A. W. Fox, and M. M. Ferguson, with A. M. Bready as alternate.

The Holstein Breeder and Dairyman

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

OCTOBER 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Secretary Houghton vs. Secretary Reynolds

WE ARE publishing elsewhere in this issue under the heading, "A Few Facts for Your Consideration," by Howard C. Reynolds.

Mr. Reynolds was Secretary of the Holstein-Friesian Association of Pennsylvania from 1918 to 1922. In June, 1919, he took a leading part in the entertainment of the National Association at Philadelphia where the Field-Aitken-Political-Worldly Element took over the management of the Association by resorting to methods that have since been questioned in the Court.

In going about his duties as Secretary of the State Association in connection with the entertainment of the National Association, Mr. Reynolds became acquainted with Mr. Houghton, Mr. Matteson, Mr. Brockway and others who had been so long identified with the Association's affairs during its prosperous years leading up until 1919 during which time the transfer fee had been 25 cents and the Association had accumulated a large Reserve Fund and was recognized as the leading Association of its kind in the world.

Mr. Houghton kept in close touch with Mr. Reynolds on Association matters after the Philadelphia Meeting because in Mr. Reynolds we believe Mr. Houghton had found a man who concurred with him in his views as to how the Association's affairs should be conducted and, further, he had strength of character and determination of will power to carry out his convictions, a character which seems to be terribly lacking in Mr. Houghton's personal "make-up."

Letters were frequently exchanged between them and Mr. Reynolds was invited to Brattleboro to confer with Mr. Houghton on several occasions. As a result of all this, Mr. Houghton selected Mr. Reynolds to assist him in the campaign that was waged at the Syracuse Convention, as excerpts from letters published in this issue will show, and their relations continued until after the Kansas City Meeting in June, 1922, where the resolution was passed making the

office of Secretary appointive, and Mr. Houghton was compelled to desert the cause of the real breeder and swear allegiance to the Political Dealing Element in order to hold his position as Secretary.

It appears from correspondence, which we are printing in part, that passed between Mr. Houghton and Mr. Reynolds that Mr. Houghton had anticipated that the activities of the Political Dealing Element would lead to a division within the Association and the preparations and details for organizing a new Registry Association on a Sound, Business Basis with a broad constructive policy, had been worked out by Mr. Houghton, talked over with Mr. Reynolds and Mr. Reynolds was a man in whom Mr. Houghton had placed his chief reliance in putting his plan for a new association into operation.

This little narrative we believe will be interesting to our readers in that it shows that the proposal to organize a New Registry Association originated with Mr. Houghton and, further, that he selected Mr. Reynolds as his Lieutenant to put the project into operation. Is it any wonder then that the REAL breeders, when the new Association was launched, should select Mr. Reynolds as their Secretary?

How It Works

DURING the meeting at Syracuse, June, 1921, the well-known Holstein breeder John Arfmann, who was one of the men who held and voted a large number of proxies at the Milwaukee meeting three years previous, spoke on gathering proxies and in his speech pointed out how little the general rank and file of the breeders esteemed the judgment and sincerity of the editors of the *Holstein-Friesian World*. His words as given in the official report of the Syracuse meeting and published in volume 46 of the herdbook are, in part as follows:

"If the proxies don't come in fast enough just go and ask Mr. Price of the *Holstein-Friesian World* to write an editorial against the proxies and the proxies will come. I want to say to you men that I have had experience in that line, and I know what I am talking about. I believe that today you can ask these men who have these large numbers of proxies, that their proxies came in far faster after Mr. Price sent out his editorial in the *Holstein-Friesian World*. That is what brings them in; and let me show you why. It is because Mr. Price gets his salary and his money out of the success of the Holstein-Friesian advertisers. And who are the men who are supporting this *Holstein-Friesian World* by advertising? It is the great big men in this organization who own the great big herds, who have invested thousands and thousands of dollars in them and spend thousands of dollars in advertising. That makes the little breeder on the hillside feel that the Holstein game is getting to be a millionaire's proposition."

The official stenographer present at the meeting did not take down an amusing interchange of comments between several of the members present, one of whom asked Mr. Arfmann if he was sincere in all his statements. He said he was and asked Mr. Peasley if he had not had a similar experience, and if the proxies

Proper Designs Make Homes More Inviting

By M. E. BOTTOMLEY

Assistant Professor of Landscape Architecture, Ames, Iowa

DESIGNS of country homes are chiefly centered in making the surroundings of the house more beautiful and more inviting. More attention has been paid to the arrangement of the business group of the homestead—the grouping of the barns and yards for convenience—than to the arrangement of the house. The necessity for saving space is not nearly so great in the case of the country home as compared to the design of the city home. However, the same care should be exercised in planning for convenience.

As you pass along the country road, those places that have a real and inviting appeal are not the large, showy "city houses" bleakly indicating their owners' prosperity, but the more modest house with a suitable setting. The house itself in the country is used for recreation even less than the residence in the city and the outside proportionately more. The development of these pleasure areas in the country is even more necessary than in the city backyard and especially because so little need be done to develop them.

SIMPLICITY FOR COUNTRY

Breadth, informality and simplicity are characteristic of country scenery. These combined with neatness will be characteristic of the country home. The breadth and simplicity necessary in the rural atmosphere will be obtained by wide, unbroken lawns, large masses of shade which will also frame the farm house and cause it to fit into its surroundings and a simplicity in design of those areas which will show their design. Trees, then, and lawns are the most usable and most inviting elements of the country home. This does not mean that the lawns shall be so large that keeping them will be a burden to the owner, although in all probability they must be larger to be in scale with their surroundings than in the city or suburb.

LAWN NOT TOO BIG

When the house is one hundred feet or thereabouts from the road, a continuous lawn to the highway is too large. In this case only a reasonable amount next the house need be well kept; the remainder can be pastured or mowed occasionally. Because most houses in the country are too high and appear to rise too abruptly from the ground, a low grass terrace about the front and even the sides of the house will form a broad foundation for the buildings—a gradation into the lawn. A low hedge like one of barberry on the top of this terrace would partially enclose it and cause it to function as a great veranda.

The front lawn in the country, like the front lawn in town, is the foreground to the house picture and as such should be kept open, bordered near the house corners by groups of trees. The pleasure area, which we find in the backyard in town, will more often be at the side of the house in rural districts, because the rear must be in direct connection with the farm yard for convenience. The other side of the house will in most cases be an entrance because the driveway is there.

TO BE CONCLUDED.

Certificates Not Refused By Government

IT HAS been inferred by the representatives of the Political-Dealing Element that the State and Federal Governments might not recognize the Registry Certificates issued by the Holstein-Friesian Registry Association, Inc., in the matter of paying indemnity.

Thus far, to our knowledge, the Government has not refused to recognize or honor Certificates issued by the new Association and we are not anticipating any trouble arising from this source because the records of the purity of the blood of the animals registered in the new Association are just as accurate and reliable as those registered in the old Association because the purity of the blood is based upon animals whose ancestors have been registered in the old Association. Therefore, if the Government would refuse to recognize these Certificates it would have to be on the grounds that the records of the old Association were not accurate and reliable.

Breeders generally will not be influenced by propaganda sent out by *The Holstein-Friesian World* and representatives of the Dealing Political Element because they know that all propaganda emanating from these sources is being used merely to frighten them into subjection, keep them from joining the new Association and force them to continue to pay high fees and submit to unjust taxation or go out of business.

The new Association is going forward stronger and stronger each day and it is morally and financially sound and as it represents the REAL breeders and dairymen, who constitute 90% of the breeders and owners of Holstein cattle, it is destined to become the leading Association of its kind in America.

Life is a cross word puzzle. And some folks make a bad guess in their very first word. The word is *veracity*, and they think it is *capacity*, and they work out half the puzzle that way. And it seemeth to give satisfactory results for a time, but it will not work the puzzle. And they think they find a solution to life's mysteries in *meanness*, whereas the key word is *kindness*, and they write in the word *doubt* where *faith* ought to be.—From "Parables of Safed, the Sage."

Habit means to-day as well as to-morrow.

Holstein Owners Should Join a Cow Testing Association

BY GEORGE LESLIE

IN THE July 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN there was an editorial on the criticism occasioned through resolutions, appearing to reflect on the value of Cow Testing Associations, adopted at the recent delegate convention of the Holstein-Friesian Association of America held at Grand Rapids; and as we agree most heartily with Professor O. E. Reed of Michigan that standardization of C. T. A. record work, with uniform rules will be a real asset to the dairy industry, we are presenting some pertinent facts for the consideration of readers of this breed publication.

It is significant that in Denmark, where Cow Testing Associations originated thirty years ago, there is, and has been for many years, a greater average milk production than we get from our cows in these United States.

The first Cow Testing Association in this country was started in Michigan nineteen years ago, and the movement has grown slowly but surely until now we have in various States about one thousand. Our average production per cow has increased but it is still a thousand pounds per cow behind Denmark's yearly figure. Denmark has 5,666 lb. per cow while we have been gradually gaining over the 1917 figure of 3,716 lb., with 3,944 lb. in 1921 and 4,260 lb. in 1923.

Although for the past 25 years the gospel of weighing the daily milk and feed has been spread by bulletins, magazines, short courses, fair exhibits, farmers' institutes; later years including moving pictures and the radio, still the proportion of cow owners who do weigh is so small as to be practically negligible. This we have learned, not from hearsay, but from personal observation in travelling over a large section of the country visiting dairy farms for the past thirty years.

Cow testing Associations have been, we believe, more successful in getting dairymen to do this obviously valuable work in their barns than all the other agencies which have tried. Here is one instance to prove this. In Michigan in 1922 there were 76 members of Cow Testing Associations who weighed their milk; in 1923 there were 248; in 1924 there were 423. Perhaps this is because, as Gladstone said "One demonstration is worth a thousand arguments."

Cow Testing Association work has demonstrated the real value of knowing what the cows are returning for their feed and the individual farmer's experience has proved to him the truth of what he would not believe when presented in the form of argument or advice.

It has pointed out to him his best cows and his poorest producers; has shown him the waste of feed on cows which did not pay for their daily rations; has helped him to allow an adequate supply of food to those cows which returned a generous yield; has lightened his work by getting rid of cows which robbed him every day they had to be cleaned and fed and watered and milked; has enabled him to get better prices for stock sold out of his herd because he could show actual

records of production; has made him known in his own county and beyond its borders as well, as a man who uses modern methods to insure success.

There is no doubt in the world that the two and three and four thousand pound cow is the real cause of our low national average and of the unprofitable dairy farms, of which there are thousands upon thousands. There is also no doubt that one of the chief reasons we have both low producing cows and unprofitable farms is the failure of the men behind the cows to know what they are getting from their herds, and what it costs to get it.

The value of C. T. A. work hangs on the hook of the milk scale. Weighing feed is important, but weighing and recording the daily milk yield of each cow is the one thing without which the man who milks cows is entirely helpless so far as finding out where he stands financially. He feeds his cows to produce milk; but unless he can see how much milk they return for a known amount of feed how can he figure whether they are worth feeding and milking?

It is this lack of knowledge as to what his cows are actually doing day by day that keeps the dairy farmer from getting a better price for his product.

The men who buy his milk or cream or butter don't guess at what it costs them to carry on their business. They know; and because of that knowledge they figure what profit they intend to take over costs and pay the farmer accordingly.

He, not knowing what it costs him, even in feed alone, to make a hundred pounds of milk or fifty pounds of butterfat or a gallon of cream, is in no position to insist on a price which would give him a fair profit. He has to content himself with growling and grumbling; or he sells his herd and quits.

The remedy is in his own hands but he does not see it. Benjamin Franklin, many years ago said "Being ignorant is not so much a shame as being unwilling to learn."

While the situation as to keeping daily milk and feed records is far in advance of what it was even ten years ago, improvement has only just started; and we have dairymen tell us, men with large herds as well as those with ten or a dozen cows, that they "haven't got time" to weigh; that "it takes too much time." They are among those who are "unwilling to learn" and it's a costly decision for them.

The only path to knowledge of costs of production and value of individual animals as producers is by way of the scale; and in the light of past experiences, the only fairly successful way to convince doubting cow owners that *weighing milk and feed is profitable* is to get them to join a Cow Testing Association.

Years of confidence constitute a priceless asset in the breeding business. It's something that can't be bought. It has to be earned by merit.

NOT ABOUT COWS

Furs

IN view of the great vogue for fur on the coats and dresses to be worn this winter, it may not be amiss to give a little consideration to the subject of furs, since they are something about which the average person knows very little, notwithstanding the fact that there is so much that might be known. Even those who make it the study of a lifetime are continually learning something new.

THE FANCY NAMES

One thing that bothers the shopper of today is the great number of furs sold under fancy names, none of which can be recognized as ever having run around on four legs. Who ever saw a marmink? Good old Noah—of either ark or dictionary fame—never knew one. Yet lots of marmink fur has been sold. It is really the skin of a species of prairie dog, cut into strips and dyed to resemble mink. Hudson seal has been sold under that name so long that no doubt many a woman has been under the impression that she really had a seal skin coat. Yet Hudson seal is really only dyed muskrat. And natural muskrat is only that and not "river mink" as it has been called. Naturally, everyone dislikes the idea of wearing skunk as such, so there may be a little excuse for the dealer who offers it as black marten or Alaska sable. Though "a rose by any other name would smell as sweet," this is a different case entirely! But one should know that the real marten is grey or brown and is found in Europe and Asia.

The reason for the use of so many fancy names for commonplace skins is the growing scarcity of really fine furs. Now it is all right for women to buy these cheaper furs, no matter what the name, but they should know what they are getting and should pay accordingly. Among reputable dealers, there is a growing tendency to call furs by their right names, and so one often reads the advertisement of coats and neck pieces under their fancy or trade name, but followed by the real one.

KNOWLEDGE NECESSARY

In nothing else as in the purchase of furs does one get value for money paid. If one buys them cheap it is because they are cheap. Of course, there are the legitimate reductions made in August and January sales, but not every woman wants to take a chance on changing styles and buy at such times. If one pays a good price, it behooves one to know just what one is buying. It is always wisest to go to a reputable firm, as an unscrupulous dealer might take advantage of the ignorance of the ordinary person, and foist upon them some cheap fur under some very fancy name. A good firm has honest experts, whose advice can be safely followed.

THE DURABILITY OF FUR

Furs may be divided into three classes so far as durability is concerned, but the price paid has nothing

whatever to do with that feature, as some of the cheaper ones will outwear many of the more expensive. There are the most durable, the less durable and the very delicate. While it would take up unnecessary space to mention all the kinds in each class a few of each are well known. In the first class come bear, skunk, marten, otter, beaver, mink, sables and muskrat, while in the second there are ermine, pony, astrakhan, Persian lamb, kolinsky and others. Among the delicate furs are fox, squirrel, broadtail, mole and chinchilla. Those who have worn any of these, know by experience how much better some wear than others. A dealer in furs once made an experiment to test the wearing qualities of various furs. He used a buffer, driven by electricity, and making 150 strokes a minute on furs of various sorts. After a two hour test, otter showed no signs of wear at all, while the chinchilla was entirely worn off. Hudson seal also stood the test well, so that it would seem that the soft furs stand the constant rub of wear very well.

CARE

While being constantly worn, furs should be kept clean. The durable sorts may be beaten with smooth, flexible sticks, and the delicate ones should be cleaned with a vacuum cleaner. When not in use they should be stored in a furrier's vault. If that is out of the question, they should be cleaned thoroughly, and hung in moth proof bags or in a box, well wrapped in paper and hung in a cool dry place. When cleaning, they should not be left hanging out doors, as very often the moth eggs are deposited in the furs at that time, and once that occurs all subsequent precautions are useless.

THE FARMER

It is no Fun to be a Farmer
Who, when to woo his Feline Charmer
The Early Morning Cat me-ows,
Must brave the Dark to milk the Cows.
While Sparrows chirp their Obligatos
He gathers Beans and props Tomatoes.
About the Time the Sun is up
He gets his Breakfast Coffee Cup.
He spends his Leisure Plowing, Sowing,
Manuring, Pulling Turnips, Mowing,
And Praying, as he views his Grain,
For Lots of Sun or Lots of Rain.
When Anxious Farmers get together
They Wish for Varied Kinds of Weather;
And when the Weather comes along,
No matter what it is, it's Wrong.
Good Cause the Farmer has to grumble!
If Crops are good, the Prices tumble.
He never even thinks he's through;
There's always Something Else to do.
And when for Rest he's Fairly Craving,
They Stretch his Day with Daylight Saving!

—Arthur Guiterman.

CLUB ACTIVITIES

CHAUTAUQUA BREEDERS HONOR PHELAN

The Chautauqua Holstein Breeders' annual picnic and field day was held August 28 on the farm of George W. Brown at Cherry Creek, New York, and was favored with perfect weather conditions.

Hon. Leigh Kirkland, senator for the district, gave a résumé of agricultural legislature and agricultural affairs as they appeared to the legislators at Albany. Senator Kirkland, who is chairman of the Agricultural committee paid a tribute to the veteran Holstein breeder, James Phelan, saying that he was the man who had done the most for the Holstein industry in western New York. Other speakers were Assistant Farm Bureau Manager, Foster and Dr. L. M. Thompson of Montrose, Pa.

A judging contest was staged, teams of three boys each competing from five different agricultural schools. Forestville won first place, and Cassadaga, second. The prizes were large framed engravings which will go to the schools the boys represented. Leonard Dawley of the Forestville team placed the animals correctly and so made a score of 100, naturally he received many congratulations and commendations.

SHOW HERD PLANNED

Members of the Clayton County Holstein Breeders Association held their annual business meeting September 24th at Elkader, Iowa.

It was decided that the association should fit and show a representative herd at the 1926 county fairs and a committee was appointed to have charge of this. It was also decided to hold a county sale this fall and to put on a county Calf Club next year. Officers were elected for the ensuing year as follows: President, J. L. Cords, Elkader; vice-president, G. C. Ruegnitz, Elkport; secretary and treasurer, G. H. Meyers, Littleport; directors, Geo. Tieden, Elkader; C. F. Limbeck, McGregor; Wm. Halstead, Strawberry Point.

ADVERTISING THEIR COUNTY

The herd of the Brown County Asylum, Green Bay, Wis., was exhibited at the Winnebago County Fair recently and took eleven first prizes, four seconds and three thirds, besides the two grand championships. At the Dodge County Fair the Asylum herd won seven first prizes, one grand championship and a number of lesser prizes.

A GROWING DAIRYMEN'S SALES COMPANY

At the advisory council meeting of the Dairymen's Co-operative Sales Company, held at Youngstown, Ohio, September 4th, reports showed that the organization now has 14,106 stockholders in 127 locals. The financial reports show a great improvement over the previous two quarters as only \$11,466.87 had been paid out while \$15,042.98 had been taken in.

The official report of the election of directors last June showed the following elected: P. S. Brenneman with 1,472 votes; E. F. Noble, with 1,405; W. W. Bullard, with 1,394; W. S. Wise, with 1,180, and John L. Wise, with 1,006.

President Brenneman gave an extensive report on the invasion of the Cleveland market by the company. He showed that much of the territory of the company belonged in the Cleveland district and this made it necessary for the Dairymen's Co-operative Sales Company to make Cleveland connections which enabled them to market part of their milk in that city instead of demoralizing the Pittsburgh market.

E. R. Quackenbush, secretary of the Pittsburgh District Dairy Council, announced that milk is graded A. B. and C. in accordance with the number of bacteria per cubic centimeter, and the council has now discarded the sediment test. Another essay contest open to children will be held by the council, winners of last year's contest are not eligible to compete.

The essays are to take the form of letters from a country cousin to a city cousin, in which the writers are to tell how their fathers care for the milk, from the time it leaves the cow until it is delivered at the country plant or at the railroad station, in order to keep the bacterial count low. Twenty-nine of the best writers will be given free trips to Pittsburgh. For the best letter submitted, a \$150 scholarship will be awarded, either for Ohio State University, the University of West Virginia or Pennsylvania State College. The writer of the best report covering the trip to Pittsburgh will have the choice of a gold watch or a \$100 scholarship in the above schools, for a dairy course.

It was unanimously recommended that the salary of the president be continued at \$4,000 a year and the directors' compensation be \$8.00 a day and expenses.

President Brenneman announced that a letter would be sent to the members stating that there will be no reimbursement to any member on account of dealers defaulting, unless he has fully paid his company's membership dues.

MANY CONTESTS AT THE WEST VIRGINIA STATE FAIR

Whatever may be said about West Virginia in general it cannot be denied but that the state is looking into the future of its boys and girls. Through the 4-H Clubs they are being developed into the type of farmer and homemaker of which any community might well be proud.

At the West Virginia State Fair approximately 75 youngsters from different sections of the state attended the 4-H Club Camp. With them were their calves, pigs, sheep and chickens which they had so carefully cared for during their year or so of club work.

The 4-H Camp was one of the features of the fair. Little did the authorities think that it would cause so much interest among the fairgoers until the throngs began to pass up and

WILL REPRESENT WEST VIRGINIA AT THE NATIONAL. Winners of the Junior Judging Contest at the W. Va. State Fair. Reading from left to right they are: French Miles, coach and county agent; Guy Locke, Francis Bills, Leroy Kohler, high man of contest.

down the aisle of the tent in which the calves were kept. As the crowds entered the grounds they began to "take in" the fair by first viewing the 4-H club camp. Before the week was past many cameras clicked the scenes before them. During one of the dairy demonstrations movies were taken and shown at the local theatre.

Some of the attractions of the 4-H Camp during the week were judging contests, dairy demonstrations, showman's contests and calf shows. The Pleasant County team coached by French Miles and composed of Leroy Kohler, Guy Locke and Francis Bills, won the judging contest and will represent West Virginia at the National Dairy Show where they will compete

for the honor of representing the United States at the International Contest to be held in England next summer.

Leroy Kohler of Pleasants County was high man in the judging contest and was awarded a gold medal, Francis Bills won the third prize, a bronze medal, and the second prize, a silver medal, went to Lloyd Dorsey of Marshall County.

Miss Orvilla Hill of Moundsville, Marshall County, was presented with a handsome white gold watch for winning first place in the showman's contest.

In state project work Claude Locke of Pleasants County won the first prize for first year work, Carl Wagner of the same county was first in second year work and Orvilla Hill first for third year work. Garland Bolin of Cabell County won the sweepstakes prize for Holsteins as well as his own county prize.

Although the Pleasants County boys' team had the first and third man they only beat the Marshall County team by three points. Leroy Kohler scored 903 out of a possible 1200, while Lloyd Dorsey scored 889. Professor E. L. Anthony was the official judge and together with Professor H. O. Henderson of the West Virginia College of Agriculture took the oral reasons given by the boys.

The crowd took so much interest in the judging that they interfered with the work and several times had to be asked to step back and give the contestants more room. The animals were taken from the stock entered in the regular cattle show.

Eighteen men from six counties, Ohio, Marshall, Brook, Pleasants, Tyler and Cabell entered the Farmers Judging Contest. William Reinwald scored 380 of a possible 400 points and was a great factor in helping to win for Ohio County the silver loving cup given by the Fair Association. Cabell County was second and Pleasants County third.

D. W. Coffield, one of the members of the winning team, is an officer of the West Virginia Dairymen's Association and the State Farm Federation. J. L. Carl, the third Ohio County representative, was formerly a cow testing supervisor and is now with the Waddington Farm. There were two lady contestants, Miss Grace Locke and Mrs. C. B. Williamson, and both did creditable work.

Nobody seemed to take much notice of Mr. Green. He tried to get in a word now and then, but somebody with a stronger voice always took command of the conversation.

At last the talk turned on the subject of dogs, and Green felt sure that his chance would come, for he owned a dog of which he was proud.

"There are some dogs," remarked Robinson, "that have more intelligence than their masters."

"That's quite right," said Green. "I've got one like that."

CLUB ACTIVITIES

CHAUTAUQUA BREEDERS HONOR PHELAN

The Chautauqua Holstein Breeders' annual picnic and field day was held August 28 on the farm of George W. Brown at Cherry Creek, New York, and was favored with perfect weather conditions.

Hon. Leigh Kirkland, senator for the district, gave a résumé of agricultural legislature and agricultural affairs as they appeared to the legislators at Albany. Senator Kirkland, who is chairman of the Agricultural committee paid a tribute to the veteran Holstein breeder, James Phelan, saying that he was the man who had done the most for the Holstein industry in western New York. Other speakers were Assistant Farm Bureau Manager, Foster and Dr. L. M. Thompson of Montrose, Pa.

A judging contest was staged, teams of three boys each competing from five different agricultural schools. Forestville won first place, and Cassadaga, second. The prizes were large framed engravings which will go to the schools the boys represented. Leonard Dawley of the Forestville team placed the animals correctly and so made a score of 100, naturally he received many congratulations and commendations.

SHOW HERD PLANNED

Members of the Clayton County Holstein Breeders Association held their annual business meeting September 24th at Elkader, Iowa.

It was decided that the association should fit and show a representative herd at the 1926 county fairs and a committee was appointed to have charge of this. It was also decided to hold a county sale this fall and to put on a county Calf Club next year. Officers were elected for the ensuing year as follows: President, J. L. Cords, Elkader; vice-president, G. C. Ruegnitz, Elkport; secretary and treasurer, G. H. Meyers, Littleport; directors, Geo. Tieden, Elkader; C. F. Limbeck, McGregor; Wm. Halstead, Strawberry Point.

ADVERTISING THEIR COUNTY

The herd of the Brown County Asylum, Green Bay, Wis., was exhibited at the Winnebago County Fair recently and took eleven first prizes, four seconds and three thirds, besides the two grand championships. At the Dodge County Fair the Asylum herd won seven first prizes, one grand championship and a number of lesser prizes.

A GROWING DAIRYMEN'S SALES COMPANY

At the advisory council meeting of the Dairymen's Co-operative Sales Company, held at Youngstown, Ohio, September 4th, reports showed that the organization now has 14,106 stockholders in 127 locals. The financial reports show a great improvement over the previous two quarters as only \$11,466.87 had been paid out while \$15,042.98 had been taken in.

The official report of the election of directors last June showed the following elected: P. S. Brenneman with 1,472 votes; E. F. Noble, with 1,405; W. W. Bullard, with 1,394; W. S. Wise, with 1,180, and John L. Wise, with 1,006.

President Brenneman gave an extensive report on the invasion of the Cleveland market by the company. He showed that much of the territory of the company belonged in the Cleveland district and this made it necessary for the Dairymen's Co-operative Sales Company to make Cleveland connections which enabled them to market part of their milk in that city instead of demoralizing the Pittsburgh market.

E. R. Quackenbush, secretary of the Pittsburgh District Dairy Council, announced that milk is graded A. B. and C. in accordance with the number of bacteria per cubic centimeter, and the council has now discarded the sediment test. Another essay contest open to children will be held by the council, winners of last year's contest are not eligible to compete.

The essays are to take the form of letters from a country cousin to a city cousin, in which the writers are to tell how their fathers care for the milk, from the time it leaves the cow until it is delivered at the country plant or at the railroad station, in order to keep the bacterial count low. Twenty-nine of the best writers will be given free trips to Pittsburgh. For the best letter submitted, a \$150 scholarship will be awarded, either for Ohio State University, the University of West Virginia or Pennsylvania State College. The writer of the best report covering the trip to Pittsburgh will have the choice of a gold watch or a \$100 scholarship in the above schools, for a dairy course.

It was unanimously recommended that the salary of the president be continued at \$4,000 a year and the directors' compensation be \$8.00 a day and expenses.

President Brenneman announced that a letter would be sent to the members stating that there will be no reimbursement to any member on account of dealers defaulting, unless he has fully paid his company's membership dues.

MANY CONTESTS AT THE WEST VIRGINIA STATE FAIR

Whatever may be said about West Virginia in general it cannot be denied but that the state is looking into the future of its boys and girls. Through the 4-H Clubs they are being developed into the type of farmer and homemaker of which any community might well be proud.

At the West Virginia State Fair approximately 75 youngsters from different sections of the state attended the 4-H Club Camp. With them were their calves, pigs, sheep and chickens which they had so carefully cared for during their year or so of club work.

FAIRS AND EXPOSITIONS

Oct. 19-24—Columbia, S. C., South Carolina State Fair.
 Oct. 19-24—Jackson, Miss., Mississippi State Fair.
 Oct. 26-31—Savannah, Ga., Georgia State Fair.
 Oct. 29-Nov. 8—Shreveport, La., State Fair of Louisiana.
 Oct. 30-Nov. 7—Portland, Ore., Pacific International Live-stock Exposition.
 Nov. 2-11—Montgomery, Ala., State Fair of Alabama.
 Nov. 11-21—Beaumont, Tex., South Texas State Fair.

BOY'S HEIFER WINS

A club boy, Roscoe Lawrence, of Marlboro, with a 22-months-old Holstein heifer won the junior championship in the open class at the fair held at Bridgeton, N. J. Besides taking prizes amounting to \$25.00 he won the special prize of \$10.00 given by the Holstein-Friesian Association of America.

A CRACKERJACK

Pixley and Son of West Salem, Ill., showed eleven head at the King City Fair and took twelve first prizes and seven seconds as well as both male and female championships. In the class for highest scoring individual female of any breed Pixley showed a yearling heifer which has been unbeaten in nine weeks showing and she took the prize. A nice string of Holsteins was shown by Harrison and White and they won a number of first and second prizes.

WESTERN MONTANA FAIR

All the championships at the Western Montana fair were taken by the herd of J. H. Hofstetter, of Lewistown. But the Hofstetter herd did not have things all its own way in the classes, meeting with stiff competition from the herds of Henry F. Cyr, of Missoula, David Lea and son of Stevensville and Lloyd McAllister, of Polson. Cyr took first in the bull calf class, David Lea was first for yearling heifer, McAllister second for heifer calf with Lea third.

BIG CROWD AT YORK FAIR

As usual there was a fine exhibit of Holsteins at the York County Fair held at York, Penna. Cattle were shown by Harold Robertson and C. E. Ettner, of York; Carl Nims, of Mentor, Ohio, and Norman E. Rishel, of York. Nims won both junior championships, taking the male with King Hengerveld Fayne Pondyke a son of King Pontiac Hengerveld Pondyke and Forest City Highlawn Segis Fayne. The female junior champion was a heifer calf sired by King Pietertje Jewel Korndyke.

The senior male champion was King Piebe of York 20th and Judge R. E. Haeger who placed the ribbons made him grand champion. Mildred Waconda, owned by Norman E. Rishel was first prize aged cow, senior and grand champion, and is a very handsome animal. Nims had first prize two-year-old bull and first prize yearling, Robertson first prize bull calf, Rishel had first prize three-year-old, as well as first prize aged cow, Robertson had the leading two-year-old, while Nims took first in yearling heifers and heifer calves. The group prizes were well divided between the Robertson and Nims herds, Robertson winning the herd prize, Nims was first for young herd and for produce of cow, while Robertson took first for get of sire and took the blue for both senior and junior advanced registry cows.

The York County farmers turned out in great forces to patronize their county fair and the papers reported an attendance of 138,000 on Thursday, the biggest day of the week. When it was considered that this attendance for one day exceeds the whole week's attendance at the National Dairy Shows of recent years it can be understood how great an appeal this fair has to those interested in agriculture in York county.

HAGERSTOWN FAIR

An unusually large number of Holsteins were exhibited this year at the fair held at Hagerstown. Besides two local herds there was one from Pennsylvania and one from Ohio. Pennsylvania was represented by the H. E. Robertson herd, Ohio by the Nims-Pinery Farm show exhibit. The local cattle suffered from the handicap of being in everyday working condition and so the blue ribbons and championships went to the out of state men. King Piebe of York 13th was senior and grand champion and another member of the family was junior champion. Robertson had the champion cow, Nims the champion heifer. J. Fred Roulette, of Sharpsburg, had 23 animals on exhibit and H. A. Stottlemeyer, of Hagerstown, had 16, each won a number of prizes.

In the junior department Leonard Stottlemeyer and Evelyn Stottlemeyer each won first with their respective animals, while Pauline Stottlemeyer was second with her pet heifer calf, a reversal of the judging at the Shepherdstown fair where Pauline's heifer was placed first with her brother's second.

Baseball fans will be interested to learn that Clyde Barnhart a member of the Pittsburgh team is a fancier of Rhode Island Reds. His home is in Hagerstown and he was represented at the fair by a choice pen of his favorite variety.

Eighteen golf balls are reported to have been found in the stomach of an animal which had been grazing near some golf links in England.

FEED DOPE

The September news letter of the New York State College of Agriculture says that there has been a substantial decline in feed prices since September 1st ranging from \$5.75 a ton on cottonseed meal to \$7.90 on cornmeal. All feeds except oats are lower and corn feeds have declined sharply. The present may be the low point on feeds, the coming of frosts will determine the corn crop and the approach of general stable feeding will sharpen demand. Unless crop prospects are larger than reported the author does not look for any further decline.

For a grain ration a mixture composed of 200 lb. hominy or barley or corn, 100 lb. middlings, 300 lb. bran, 200 lb. cottonseed meal and 200 lb. gluten feed is recommended. This will contain 18.2 per cent digestible crude protein and should cost at Utica rates \$36.94 wholesale or \$45.10 retail. The spread between wholesale and retail prices seems to be greater than usual. This indicates that retail prices are being held up and it is therefore a good time to buy on the wholesale basis, even if the money has to be borrowed. The writer recommends the dairyman to guard against rats and provide insurance against loss.

Cows and heifers soon to freshen should be looked after closely. At this period, cold nights, short pasture, and lack of attention will add greatly to the cost of any milk they produce later. They should be brought to the barn and put into condition on legume hay, some silage, and a suitable grain mixture. Cows handled in this way will make cheaper milk later.

NEW BARN BULLETIN

Considering his barn as an investment, the wise farmer these days aims to build it as carefully as a manufacturer plans his factory.

"A well planned and well built barn saves labor, makes work more pleasant, decreases the loss of young animals, prevents waste of feed, and increases milk production," says Special Bulletin No. 98 entitled, "Barns." H. B. White and M. G. Jacobson, agricultural engineers of the University of Minnesota, are the authors.

This is a 24-page bulletin illustrated with many exterior views of modern type barns and drawings for barns from the costlier buildings down to the straw stable and cow stall. Sections of the bulletin deal with such questions as location, factors affecting the size of barns, essentials in arrangement, lighting, ventilation, and appearance. The general purpose of the barn is featured. Copies of the bulletin can be obtained without cost by addressing the Office of Publications, University Farm, St. Paul.

MADE A BIG SHOW

Two herds in good show condition came together at the Macon County Fair held at Decatur, Illinois. The Waukesha County Holstein-Friesian Association sent a show herd from Wisconsin but they ran against an exhibit from the Rock River Farms and so met hot competition. The Rock River Farms took five blue ribbons, the same number of seconds and two third prizes, while the county herd received eight first prizes, six seconds and two thirds.

The Maxwell Farms of Urbana, Ill., sent some good cattle which won two first prizes, two second prizes and two thirds, one of the first prizes being for produce of dam. A number of prizes were won by the exhibit of Conrad Schaefer of Normal, Ill.

ELECT CLUB OFFICERS

At Monticello, Iowa, the Jones County Holstein Breeders met September 21, and elected officers as follows: President, Tom Shover, Monticello; vice president, Harold Wilcox, Monticello; secretary-treasurer, Owen Howie, Monticello; state director, J. R. McNeilly, Center Junction; county directors, D. L. Wherry, J. E. Johnson, Forest Descher, William Hoffman and Paul Hanken. This organization will take up calf club and cow testing projects.

During the past year Jones county has increased its shipping business practically 25 per cent. There were 138 carloads shipped from the local coöperative shipping associations.

Right In Every Way!

COLONEL LYONS HARTJE SEGIS

We offer for sale this handsome young bull. We think so much of him that we have been using him in our Accredited Herd. He is handsomely marked, has a straight topline, square rump and a pleasing conformation.

His sire is a son of Colonel Joh Lyons from a 26.74 lb. daughter of King Hengerveld Hartje.

His dam is a big producer and is making a fine showing in C. T. A. work. Her dam in C. T. A. work produced 508 lb. butter, 11,575 lb. milk in a year, and is by the noted sire King Hengerveld Hartje.

The bull is a fine individual, as is his sire and dam, and all his grandparents. He is bred to sire good individuals as well as big producers.

Colonel Lyons Hartje Segis was born December 8, 1923. He is active and vigorous and ready for any amount of service.

The Price is reasonable. He is right in every way. Come and see him and his dam.

PRISON CATTLE WIN PRIZES

There was a good show of cattle at the Windsor County Fair held at Woodstock, Vermont. In the neighborhood there are a number of dairy herds built up by men of wealth and the so-called "dirt farmers" have hesitated to show against these herds. This year it was agreed that no animals from the fancy herds should compete for prizes with the result that a large exhibition was contributed by real dairymen. The herd from the Vermont State Prison Farm did compete however, and won a number of prizes including first for two-year-old bull, yearling bull and bull calf; first, second and third for milking cow and first for milking two-year-old. A. L. Clark had first prize three-year-old and first prize dry two-year-old, while the Prison Farm took first for senior yearling and junior yearling and heifer calf.

DAIRY PRODUCTS IN COLD STORAGE

The monthly report of the Bureau of Agricultural Economics, United States Department of Agriculture, shows the following cold storage holdings of dairy products October 1, 1925:

Creamery Butter 114,167,000 pounds compared with 153,494,000 pounds October 1, 1924, and a five-year average of 109,958,000 pounds.

American Cheese 78,602,000 pounds compared with 73,153,000 pounds October 1, 1924, and a five-year average of 57,036,000 pounds.

Swiss Including Block Cheese 8,685,000 pounds compared with 8,095,000 pounds October 1, 1924, and a five-year average of 5,629,000 pounds.

Brick and Munster Cheese 1,994,000 pounds compared with 1,539,000 pounds October 1, 1924, and a five-year average of 1,803,000 pounds.

Limburger Cheese 1,469,000 pounds compared with 1,119,000 pounds October 1, 1924, and a five-year average of 1,147,000 pounds.

All Other Varieties of Cheese 7,049,000 pounds compared with 7,376,000 pounds October 1, 1924, and a five-year average of 8,355,000 pounds.

THOMAS COOPER,
Chief of Bureau.

POPULAR LADY FARMER

Miss Lydia Bale who conducts a farm at Mattison, N. J., won a purebred Holstein bull offered by the Sussex and Merchants Bank at Newton for the most popular farmer. She obtained 4,995 of the 6,228 votes cast at the recent Sussex County Fair.

J. S. Ketzenstein, of Franklin, exhibited an aged bull that won first in his class and was afterwards made grand champion, while one of Mr. Ketzenstein's cows was made female champion. Other exhibitors winning first prizes were Charles Drake, of Greendell, the Belle Ellen Stock Farms, of Beemerville, and George A. Simmons, of Hamburg.

STUDY FARM EQUIPMENT

The United States Department of Agriculture is surveying the field of research relating to farm operating equipment. J. B. Davidson, head of the Department of Agricultural Engineering at Iowa State College, has been selected to supervise the project. The advisory council appointed by Secretary Jardine is composed of eight representatives of the National Association of Farm Equipment Manufacturers, eight members of the American Society of Agricultural Engineers and three representatives of the Department of Agriculture. The immediate object is to outline a program that will serve as a guide to the colleges, the farm implement industries and other agencies concerned in the fundamental agricultural engineering problems.

A zealous but untrained reformer had secured permission to speak at the Northampton County jail.

"Brothers," he pleaded with them, "lose no time in turning to the pathway of righteousness. Remember, we are here today and gone to-morrow."

"Don't kid yourself," came a gloomy voice from the rear. "I got eight years here yet."

"Ah, good mornin', Mrs. Hennessey. An' how is everythin'?"

"Sure, an' I'm having one grand time of it betwixt me husband an' the furnace. If I keep me eye on the one, the other is sure to go out."

Cow Testing Association Reports

AN OBSERVING TESTER

Eleven of the lady members of the Sac City Testing Association have bobbed hair reports the tester, Earl N. Schultz, and he also says that more are contemplating such a move. Mr. Schultz apparently gained his knowledge at the meeting held September 17th at the Sac City Creamery at which nearly all the members were present. Jay Irwin gave a talk on silage and H. C. Jackson from the State Dairy Association outlined the work of a dairy calf club and spent a day in the county assisting with calf club work.

In his report tester Schultz says that fourteen purebred Holsteins owned by Miller and Hussey averaged 889.1 lb. milk, 26.54 lb. fat. A herd of nine cows purebred Holsteins and grade Shorthorns owned by H. L. Offerle averaged 909 lb. milk, 31.42 lb. fat. There were 363 cows enrolled in the association of which 296 were in milk. Thirteen cows each produced over 40 lb. fat and one exceeded 50 lb.

SOME BABE

Babe, a purebred Holstein member of the Webb Farm herd at Clinton Corners, Dutchess County, New York, led all the cows enrolled in the Dairy Improvement Associations of New York State by producing 78.4 lb. fat from 1,479 lb. milk. Star, owned by George True of Adams Basin, New York, was second with 70.8 lb. fat, and 1,967 lb. milk, while last month's leader, Fishkill Aaggie Inka, owned by Henry Morgenthau Jr. of Hopewell Junction was third with 68.8 lb. fat, 2,024 lb. milk. During the month production was reported for 8,355 cows of which 571 made over 40 lb. fat.

ILLINOIS TESTING

Frank Lewis, a member of the Will County Cow Testing Association, is the owner of a grade Holstein that on two milkings a day produced 76 lb. fat, 1,950 lb. milk and by so doing headed the list of cows enrolled in Illinois cow testing association work for the month of September. Of the ten highest producers, four are purebred Holsteins, three grade Holsteins, one an Ayrshire, one a Brown Swiss and one a Jersey, all purebreds. Thus seven of the ten leaders are purebreds also seven of the leading ten are black and white.

A herd of eight cows owned by A. DeGraff showed the highest average, their figures being 44.4 lb. fat, 1,322 lb. milk. They are purebred and grade Holsteins, some were milked twice and some three times daily. The Rawleigh herd averaged 43.7 lb. fat, 1,293 lb. milk, a very fair showing for twenty animals of which some were milked twice, some three times and some four times daily.

Grade Holsteins make a splendid showing in the various associations of which twenty-two reported progress. No less than eleven of the leaders were grade Holsteins, while six other associations were headed by purebred Holsteins.

The Illinois 500 Pound Butterfat Cow Club has now been in existence nine months. The grade Holstein cow owned by Fredrickson and Nystrom Brothers of the Will County association is still in the lead and is credited with 15,428 lb. milk, 554.3 lb. fat. A Brown Swiss is second with 532.3 lb. fat, while in third place comes a purebred Holstein owned by Arthur D. Cornue of Hebron, Ill., with 14,620 lb. milk, 529.1 lb. fat.

CLARION COUNTY'S THIRD YEAR

August 1 the Clarion County, Pa., C. T. A. finished its third year. There were 297 cows tested during all or part of the year.

The average production of milk per cow was 6,762 lb. and of butterfat 287.9 lb. This is a gain of 421 lb. milk and 20.4 lb. butterfat over the average of the previous year.

Eleven herds averaged more than 300 lb. of butterfat per cow. The herd owned by Walter Neely of Emlenton, averaged 11,248 lb. milk, 397.3 lb. fat. This herd consisted of registered Holsteins and grade Guernseys.

There were 19 cows that each made 400 lb. or more of fat. The leader owned by Arthur McCauley of New Bethlehem, is credited with 12,909 lb. milk, 484.7 lb. fat. Mollie, owned by Walter Neely had 14,448 lb. milk, 477.6 lb. fat to her credit according to the report submitted by the tester, Harold Ayers.

DAWESWOOD AGAIN FIRST

The Daweswood herd of Holsteins owned by B. G. Dawes of Newark, Ohio, during the month of August averaged 1,170 lb. milk per cow, the highest in the 25 herds enrolled in the Licking County Testing Association. The Holstein herd of J. F. Harlan of Somerset tied for second place with 1,166 lb. milk, and was first with an average of 43.4 lb. fat.

Registered Holsteins at Daweswood Farm stood first and second for individual production, the leader having 91.1 lb. fat, 2,461 lb. milk to her credit, while her stable mate had 63.3 lb. fat, 2,221 lb. milk. A member of the Harlan herd was third with 65.8 lb. fat, 1,566 lb. milk.

YOUNG STOCK

sired by

MAPLE CORNER SUPREME

His dam produced 32.6 lb. butter in 7 days and averaged 83.6 lb. milk for 30 days.

His six nearest dams average 35.11 lb. butter and he is a choice individual.

The females in this herd are good individuals and big producers. Nearly all have creditable official records.

SOUTH DAKOTA TESTING

College Bess, a purebred Holstein owned by Rohde & Rogness of Lake County, is the highest producer for September in the South Dakota Cow Testing associations. She is credited with 73.56 lb. butterfat, 1,710.8 lb. milk. Clothilde, owned by Frank Johnson of Hetland is second with 65.04 lb. fat, 1,626 lb. milk. The Sioux Falls Penitentiary and Guy McKibben are each represented in the list of the ten highest producers by purebred Holsteins.

The Holstein herd of Gus Hintermeister of Beadle County has the distinction of having the highest average herd this month. His eight cows averaged 1,051.8 lb. milk, 36.89 lb. butterfat. Mr. Hintermeister's herd has had the highest average in his association for nine consecutive months, and during that period has four times been the highest herd of the state.

The average price over the state received for butterfat is 44c per pound or 10c per pound more than for September of last year. There was a slight decrease in production but this is offset many times by the price increase.

During the month 2,233 cows in 205 herds were tested. The average production was 463.5 lb. milk, 18.41 lb. butter, the East Kingsbury association being highest with an average of 531.2 lb. milk, 21.46 lb. butter.

Owing to two of the three best cattle judges as demonstrated in the Farmers Judging Contest held recently at Huron, not being able to attend the National Dairy Show, South Dakota will not be represented by a farmers judging team this year. The placings at Huron were: Edward Eckstrom, Redfield, first; Frank Johnson, Hetland, second; and J. M. Seehser, Sioux Falls, third.

IOWA C. T. A. WORK

Iowa farmers who were members of 57 testing associations sold 108 cows to the butcher in August, this number being culled from over 16,000 head. During the month 279 cows exceeded 50 lb. butterfat and 932 produced more than 40 lb. The Marshall-Grundy association led the state for average production with 31.8 lb. butterfat, 769 lb. milk with 277 head. The highest producing cow in the state was a grade Holstein owned by Brockmier and Schaub of the Colesburg association. She is credited with 76.9 lb. butterfat, 1,603 lb. milk.

CHINA BUYING HOLSTEINS

Thirty head of registered Holstein cows were shipped from Vancouver, B. C. the last week in September, consigned to Shanghai, China. In the past the dairy companies of Shanghai purchased their milking cattle from New Zealand, but the reputation of British Columbia herds is growing in the Orient. Last year a herd of Holstein milkers were shipped to Hongkong and gave satisfaction and reports of their production has spread through a great deal of Southern China.

BANK DONATES HOLSTEIN BULL

The Security State Bank of Madison, Wisconsin, donated a purebred Holstein bull to be awarded at the East Side Fall Festival to the individual who is adjudged to have the best collection of farm products on exhibition at that event. Security 2d is a two-year-old, a son of Colantha Denver Piebe Zweeman. He was raised at the Monona Dairy Farm, which is owned by Paul Kayser of Madison, Wisconsin. Last year the State Bank gave away a young bull at the Fall Festival which was awarded to E. M. Parkinson of Madison. The project met with such favorable comment that the bank decided to repeat the gift this year as the management is deeply interested in agricultural activities and feels that it can benefit the farmers in no better way than in helping build up the dairy industry.

DONATED A CHAMPION

C. H. Smith of Tripoli, Iowa, donated a purebred bull calf, Nirvana Supreme, to the Lee County Farm Bureau when it visited his farm in Bremer county last year. This year Nirvana Supreme was exhibited at two fairs in Lee county and at each place won first prize and the junior championship. The members of the Lee County Farm Bureau made proper recognition of Mr. Smith's generosity by displaying a large banner which told about the trip to Bremer county and the gift the Bureau received.

BOY OWNS SHOW HEIFER

Bert Edmonds is a member of the Barron County Calf Club. His junior heifer calf, Patrinka Pietje of West View, was exhibited at six fairs this year and won five first prizes and one second prize. The only time she was defeated for first place was at the Chippewa Falls Fair and then it took a member of J. D. McDonald's show herd to beat her.

MAKE GOOD SHOWING

A herd of Holsteins owned by Owen Dix of Sweet, Idaho, averaged 29.3 lb. fat in the local cow testing association but were beaten by a Jersey herd with 32.8 lb. A Holstein cow owned by J. E. Knowlton of Sweet led the association with 57.3 lb. butterfat, then came another Holstein owned by Harve Douglass with 54.5 lb.

A REPEAT SALE

The Pacific Mills Ltd. of Ocean Falls, B. C. has purchased two successive herds from the Colony farm herd at Essondale. At the recent Provincial Exhibition they obtained from Superintendent P. H. Moore a nine months old son of Colony Koba McKinley from Thorndale Elsie Wayne with a record as a heifer of over 16,000 lb. milk, and 800 lb. butter.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

KRUSE WINS RIBBONS

Roseland Stock Farm near Loganville, Wisconsin, is owned by F. C. Kruse and his son, Edwin Kruse. They exhibited seven head of Holsteins at the recent Baraboo fair and won five first prizes, four seconds and one third. All the winners were sired by a 32 pound Homestead bull which formerly headed the herd.

A new herdsire King Aaggie Colantha Ona, has recently been placed at the head of the Roseland herd and he won in his class at the fair. His sire is King Aaggie Ona and his dam Aaggie Belle of Sunnyside, has a butter record of 1,048.87 lb. in a year as a three-year-old.

The Kruses have been breeding Holsteins 17 years and now have 50 head. This herd led the cow testing association with an average of 50 lb. butterfat made by 17 cows including several two-year-olds. The herd is federally accredited.

WERTHEIMER COW LEADS STATE

Suella, a purebred Holstein owned by Charles Wertheimer of Frederick, Md. led all the cows enrolled in association work in the state of Maryland during August by producing 86.2 lb. butterfat, 1,835 lb. milk. The Wertheimer herd of 17 cows averaged 36.2 lb. fat, 1,080 lb. milk, the highest reported for the Frederick County association and we understand the highest average in the state.

The three highest cows in the Upper Montgomery C. T. A. were all purebred Holsteins. Maude produced 68.3 lb. fat, 1,665 lb. milk; Juliana, 67.6 lb. fat, 2,182 lb. milk, while Snowball, owned by J. B. Diamond of Gaithersburg is credited with 67.4 lb. fat, 1,727 lb. milk.

DERRY WON PRIZES

Roy Derry of Lamoni, Iowa, took a number of cattle to fairs in Iowa and Missouri. He exhibited at Clarinda, Bedford, Hamburg and Shenandoah, Iowa, Hamilton, Brookfield and Bethany, Missouri, and the State Fair at Sedalia, Missouri. The Home Farm cattle won 71 first prizes, 25 seconds, 12 thirds and 15 championships and grand championships.

Queen Aaggie De Kol-Gen won the milk contest at Brookfield competing against a class of ten Holsteins and Jerseys. Mr. Derry reports an increased interest in the dairy divisions of the shows he attended.

JAMES WINS PRIZE CALF

James Baker of the Snohomish high school won the Holstein calf donated by the Carnation farms, as a prize for the school boy making the best record in the judging contest at the Snohomish County Fair held at Granite Falls, Washington. E. Jacobson of Lakewood at the Arlington high school was second.

London proposes underground parking for automobiles. Former pedestrians have been parked that way for some time.

INTERCONTINENTAL TRADE

"The Romance of Food Exchange" might be the title of an interesting story of the commerce which has sprung up between California and Peru, of the South American continent.

Peru gave the Americas—and the world for that matter—some of the most important foods in the American diet today—among them being potatoes, tomatoes, and Indian corn. A fourth article, important in commerce which cannot be called a food is tobacco. All of these important commodities originated in the high Andes of Peru.

Having supplied these to the world, Peru, now growing rapidly, is calling upon California for the fundamental foods—dairy products and eggs.

For many years one of the largest milk products company in the state has been exporting quantities of butter and cheese to Peru, and during the past few months has shipped several thousand cases of eggs. The Central California Poultry Producers' Association has also shipped several thousand cases of eggs to Peru and other South American countries.

CALDWELL WAS LUCKY

Anton Erhart of Lyons, Wisconsin, went to Barron County and purchased 25 fine Holsteins. William Meisegeier helped him find the animals.

The cattle were shipped in charge of John Caldwell. Just after the car containing the cattle had been removed from the siding a cyclone overturned the rest of the cars left on the siding. Two barns were destroyed and horses and cattle killed within a mile of the place.

Mr. Erhart has a fine farm with a modern barn 36 by 100 ft. He plans to add more purebreds to those he has already purchased.

PRODUCING STATE HERD

The herd of 32 Holstein cows owned by the Washington State Training School at Chehalis, Washington, led the Chehalis C. T. A. by averaging 1,079 lb. milk, 33.2 lb. butterfat. A member of this herd was high cow with 2,340 lb. milk, 74.9 lb. fat, while Linda Clara Pasma owned by Henry Bouchard was second with 2,058 lb. milk, 67.8 lb. fat.

"Tommy," said a young woman visitor at his home, "why not come to our Sunday school? Several of your little friends have joined us lately."

Tommy hesitated a moment. Then suddenly: "Does a red-headed kid by the name of Jimmy Brown go to your school?"

"Yes, indeed," replied the new teacher.

"Well, then," replied Tommy, with an air of interest, "I'll be there next Sunday, you bet. I've been looking for that kid for three weeks and never knew where to find him."

Why not induce your neighbor to subscribe for the HOLSTEIN BREEDER AND DAIRYMAN? He will enjoy reading it as much as you do.

A. S. HECKLER DISPERSAL

On October 1st on the Linden Shade Stock Farm the A. S. Heckler herd was dispersed at Creamery, Montgomery County, Pa. The sale was fairly well attended. It was under the management of the veteran Holstein-Friesian breeder and sales manager, William Benninger, of Benningers, Pa., with Arthur A. Benninger as pedigree expert, and William Sheidy Fritzinger as auctioneer. A fine lunch which was highly appreciated by all present was served by the Ladies' Aid Society of Skippak, Pa. Some twenty head in all were sold, a number being yearlings and calves. The average price for the entire bunch, calves included, was \$108. One cow not yet registered but eligible to registry was sold for \$150.

The following list gives the names of some of the animals sold, their purchasers and the prices paid:

Heckler Segis Vale De Kol..H. F. Kuntz, Lehigh Co., Pa.,	\$200.00
Gavin Alberta Pontiac.....H. F. Kuntz, Lehigh Co., Pa.,	198.50

Creamery Segis Korndyke...A. P. Kriebel	79.00

DISPERSAL OF BROWNWOOD HERD

Breeders of purebred Holstein-Friesians will regret that the noted Brownwood Herd is to be absolutely dispersed. This is occasioned by milk market demands which make it necessary for the management to dispose of the Holstein herd. Brownwood is located at North Bloomfield, Trumbull County, Ohio, about 16 miles north of Warren, and the Brownwood Herd has an enviable reputation for production and individuality, a reputation which extends not only throughout northeastern Ohio but also through surrounding states.

In 1811 Ephraim Brown, great-grandfather of the present owner came from New Hampshire and purchased the entire township of Bloomfield, a tract five miles square. Some of his friends followed him and purchased land from him until to-day the farm includes 350 acres which has always been owned by the family, and an additional tract of 277 acres, which after being owned a few years by other parties, was repurchased by the present owner, Alexander C. Brown, president of the Brown-Hoist Machinery Company.

The purebred Holstein herd has descended from three high class sires, Forest City Sir Fayne, Utilitor and King Valdessa Pontiac Gem. Forest City Sir Fayne was by Maplecrest Highlawn Cleveland from Segis Fayne Princess, 24.16 lb. butter, 607 lb. milk in a week, 1,055.03 lb. butter, 27,656.9 lb. milk in a year. She is from

CLEAN CATTLE FROM CLEAN PREMISES; S. T. WITMER, UNION DEPOSIT, PA.

a daughter of King Segis Pontiac and her sire was Sir Fayne Concordia, full brother to the former world's champion, Grace Fayne 2d's Homestead. Maplecrest Highlawn Cleveland is by Friend Hengerveld De Kol Butterboy from the first Ohio cow to make a 30 lb. official seven day butter record.

Utilitor is a son of Meadow Holm Peep Hartog and Caddy Mutual De Kol, 31.16 lb. butter, 620.9 lb. milk in seven days, 24,564.8 lb. milk, 1,127.61 lb. butter in a year. Meadow Holm Peep Hartog was by Maplecrest Pontiac Hartog and from Early Dawn Peep 2d, 33.52 lb. butter, 634.1 lb. milk in a week, 1,287.72 lb. butter, 26,204 lb. milk in a year. The dam and sire's dam of Utilitor have year records that average 1,207.66 lb. butter and seven day records that average 32.24 lb.

King Valdessa Pontiac Gem is a son of King Valdessa Pontiac and Pabst Cynthia, 38.31 lb. butter in seven days, 16,188.2 lb. milk, 764.03 lb. butter in ten months. She was by King Pontiac Champion and from Pabst Colanthus Terzool, 672.7 lb. milk, 29.61 lb. butter in seven days, 20,558.8 lb. milk, 818.83 lb. butter in a year. The work of the daughters of King Valdessa Pontiac is too well known to need mention at this time and, as everyone knows, he was by King Valdessa from the 40-lb. heifer and show cow Mabel Segis Korndyke.

The present herd contains besides the young stock 25 heavy producing cows milking or coming fresh soon. Their pedigrees are derived from some of the greatest producing strains of the breed, but better still, they are themselves capable of returning a substantial profit over feed cost. The high class herdsire, King Valdessa Pontiac Gem, will also be sold as this is an absolute dispersal. The herd has been producing certified milk for several years and consequently has a clean bill of health not only from tuberculosis but also from other bovine troubles.

Catalogues can be obtained from Superintendent Fred M. Mack at Brownwood Farms, North Bloomfield, Ohio.

NOTED MARETOR HERD TO BE DISPERSED

The Maredor herd, one of the leading fully accredited herds of Luzerne county, Pa., will be absolutely dispersed Thursday, October 29th, as the Hogg farm which is located at Lehman about thirty minutes' ride from Wilkes-Barre, has been platted for building lots. This necessitates Dr. Hogg disposing of all his animals.

The Maredor herd contains a number of large record animals, whose records are not only large from the butterfat angle but are also accompanied by copious amounts of milk. One of the cows, Satie Colantha Pietertje, has produced over 35 lb. of butter in seven days and 810 lb. of milk. She has a year record of better than 1,200 lb. milk, but she is even more famous on account of her performances in the 305-day division of which she was formerly the champion. This cow and two of her sons are in the sale, both sired by the celebrated Radium, a maternal brother to May Echo Sylvia and a former champion show bull at the New York State Fair.

Included in the sale are daughters of Sir Pontiac Waldorf Pietje, Cornucopia Ormsby Lad, Carnation King Sylvia, Colantha Denver Champion and King Korndyke Veeman Hengerveld as well as a number of other sires nearly as noted.

Together with twelve of his daughters the well-known sire and show bull, Radium, will be sold. This bull was from May Echo Verbelle, a cow that many believe to be the best transmitting animal of the May Echo family.

As said before the herd is fully accredited and the animals will be sold subject to a sixty day retest guarantee under the usual conditions. The farm is only a thirty-minute drive from Wilkes-Barre and this sale should be attended by anyone in northern Pennsylvania or southern New York interested in record cattle and by anyone in Pennsylvania, New York and surrounding states interested in purebred Holsteins. You can get catalogues from the owner, Dr. E. Hogg of 20 Darling Street, Wilkes-Barre, Pa., but as the time is short it would be better to plan to attend as there will be plenty of catalogues on hand at the ringside.

A pessimist is a man who has been listening to a mechanic explain what his car needs. Now that science has branded the bee a loafer, word is expected momentarily that the snail is a broad jumper.

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

heads Lime Rock Herd, which contains 30 head of

ACCREDITED HOLSTEINS

He is a show bull, was Grand Champion at the 1924 Lebanon County Fair. His sire is by Piebe Laura Ollie Homestead King from a 1,000 lb. year record daughter of King Segis Pontiac Count. His dam is a showy granddaughter of King of the Pontiacs and has a year record of 796.9 lb. butter, 19,038.4 lb. milk. We offer you Cows in milk, Heifers and Calves.

HUBERT S. MILLER
Myerstown, Lebanon County, Pa.

COLONEL JOH LYONS

A Grand Champion Show Bull.

He was by King Joh from a 33.63 lb. daughter of King Lyons.

His eleven nearest dams average 32.15 lb. butter in A. R. O. work.

Our herds are under State and Federal Supervision and contain 120 head.

Let us sell you a son of Colonel Joh Lyons or some good females bred to him.

L. N. MACK & SON—FLOYD MACK,
Montrose, Pennsylvania

FIRST AND SECOND

A purebred Holstein owned by J. S. Pattie of Rose Hill, Ind., made the highest production during August in the Spencer-Perry C. T. A., reports Tester Lowell Janeway. Mr. Pattie's cow produced 62.8 lb. fat, while a stable mate made 59.6 lb. There were 280 cows tested of which 22 each produced over 40 lb. of fat during the month.

BULL FINDS NEW HOME

Christenson Brothers of Royalton, Wisconsin, September 22 sold to Frank Kieffer of Oconto Falls, a well bred Holstein bull calf for a herdsire. It is reported that the seven-day official records of eleven nearest dams of the animal averaged 31½ lb. butter.

Why not induce your neighbor to subscribe for the HOLSTEIN BREEDER AND DAIRYMAN? He will enjoy reading it as much as you do.

A GROWING DAIRY DISTRICT

A. C. Torgeson, president of the bank of Berthold, N. D. says that his bank cashed an average of \$187.90 worth of cream checks every day during the month of August. Ward county is growing more and more into dairying. During the month the Agricultural Credit Corporation took applications for 81 head of dairy stock of which eleven were purebred sires and the other milk cows. Forty of these were Holsteins and the rest Guernseys. There were 26 applicants living in every direction from town. Mr. Torgeson says that he believes this move will result in more good to the community than any other that has been made since Ward county was settled.

COLLEGE HERD IN FRONT

The purebred Holstein herd owned by Ursinus College at Collegeville, Pa., led the Montgomery County C. T. A. for the month of September with an average of 1,037 lb. milk, 34 lb. butterfat for thirteen cows. The A. K. Rothenberger herd of 15 animals were second for both milk and fat showing an average of 827 lb. milk, 28.5 lb. fat for 15 cows. Another Holstein herd, that of William H. Landis stood third in both divisions with an average of 677 lb. milk, 25.9 lb. fat.

During the month of September, 24 herds containing 344 cows in milk were tested. Six cows produced over 50 lb. fat, 29 over 40 lb., while 13 exceeded 1,200 lb. milk during the testing period.

PICKED A GOOD ONE

J. W. Darrow of Dutch Flates, Neb. induced Professor D. A. Propps to pick a heifer for him to buy at a sale held at Lincoln, Neb. Mr. Darrow paid \$197.50 for the heifer chosen. Last year he exhibited her at the county fair where she was a winner, and he showed her again this year together with her two calves. These are the prizes she and her offspring won: first prize two-year-old, first prize junior heifer calf, first prize junior yearling first for produce of dam, junior and grand champion female. He took \$50.50 in prize money.

KATY HEADS THE LIST

Katy, a purebred Holstein owned by M. C. Hampton of Galien, Michigan, took first place in the South Berrien County C. T. A. for September by producing 51.41 lb. fat in 22 days milking. Clempo, also a purebred Holstein representing the Plym Farm at Niles, was second with 48.42 lb. She was high for milk production with 614 lb. The herd of Adolph Knott that headed the association for August repeats for September with an average of 35.90 lb. butterfat per cow.

LOST THEIR CHAMPION

The Ferguson Farm suffered a severe loss at the recent Tennessee State Fair when their crack two-year-old, Milkmore Miss Flora, died when freshening. She was the champion yearling last year and was expected to head her class this year.

WISCONSIN C. T. A. WORK

A registered Holstein owned by S. H. Bird of South Byron, Wisconsin, headed the Byron C. T. A. for September, with a production of 58.6 lb. fat, 1,800 lb. milk. The registered Holstein herd of Robert McClain of Byron, averaged 28.2 lb. butterfat, 836 lb. milk.

There were 432 cows tested during September in the Racine County C. T. A. and their average production was 25.5 lb. fat. E. H. Skewes owned the high cow that produced 1,424 lb. milk, 66 lb. fat. Sylvia Prilly Pontiac owned by Ralph Nelson was second with 1,809 lb. milk, 57.9 lb. fat.

A purebred Holstein cow owned by Mike Kieffer of Fredonia, led the Belgium-Fredonia association by producing 1,375 lb. milk, 48.1 lb. fat. The Kieffer herd averaged 824 lb. milk, 29.4 lb. fat.

A purebred Holstein owned by George Kohlwey led the Cedarburg-Grafton association by producing 57.8 lb. fat, 1,410 lb. milk. There were 22 cows that each produced over 40 lb. fat among the 260 animals tested. This association now has nine accredited herds.

Louis Pamperin of West Bend, owned the highest producer in the Allenton-Kohlsville association, she being credited with 68.7 lb. fat, 1,908 lb. milk. The Pamperin herd averaged 45.73 lb. fat. Charles Roecker has a two-year-old heifer that produced 40.8 lb. fat, the ninth time she has made over 40.8 lb. fat in a month since she was fresh December 26th. A registered Holstein two-year-old owned by Friedmann Brothers produced 42.8 lb. fat, 1,242 lb. milk, and the Roecker herd averaged 48.82 lb.

A herd of twelve purebred and grade Holsteins owned by Thomas Delemater led the Cicero-Black Creek association by averaging 1,020 lb. milk, 31.2 lb. fat during September. Delemater cows were fourth, fifth and sixth for fat, one making 40.8 lb. and the other two 40.5 lb. each.

Ed. Rasmussen owns fifteen grade and registered Holsteins that led the Denmark C. T. A. during September by averaging 1,028 lb. milk, 35.7 lb. fat. A grade Holstein with 58.6 lb. fat, 1,623 lb. milk led the entire association.

Red Pepper, a purebred Holstein owned by Schurz Brothers of Bridgeport headed the Prairie du Chien association with 1,841 lb. milk, 71.8 lb. fat. She is a daughter of Lady Pieter Netherland a cow that has quite a local reputation for production. The Schurz herd of 21 animals averaged 849 lb. milk, 28.28 lb. fat. A grade Holstein herd of 21 animals owned by the Crawford County Farm Co. averaged 793 lb. milk, 28.87 lb. fat, but the herd leaders were owned by J. E. Campbell whose eleven grade and purebred Holsteins averaged 36.36 lb. fat, 983 lb. milk.

VUT OWNS A BIG PRODUCER

The highest production reported in the cow testing associations of Pennsylvania during the month of August is credited to a purebred Holstein owned by T. W. Vut of the Edinboro association. This cow with 2,294 lb. milk and 73.4 lb. fat heads the list for both milk and butterfat. The cow that took second place for milk played a joke on her owner who belongs to the Central Pennsylvania Guernsey Breeders' Association. The cow however, is a registered Holstein. She is credited with 2,176 lb. milk, and the report places her ahead of another purebred Holstein owned by L. A. Zimmerman of Lehigh, credited with producing exactly the same amount.

During the month 11,689 cows were tested of which 961 produced more than 40 lb. of fat, and 213 more than 50 lb. while 626 cows each gave more than 1,200 lb. milk. During the month 81 cows were sold because they did not pay for their keep.

In the Eastern Juniata association there are 27 members enrolled. Sixteen of the herds have been tuberculin tested, twelve of them are accredited and the remaining eleven herds are signed up to be tested under the Area plan.

BROWN COUNTY CHAMPIONS

A herd of 17 purebred Holsteins owned by Erwin and Peterson of Groton, S. D., was high producing herd in the Brown County C. T. A. during the past testing year. They averaged 10,289 lb. milk, 361.75 lb. butterfat. The feed cost for the year including the pasture was figured at \$1,521.81, so that the net profit was \$978.52. The majority of this herd are young cows, seven of them being two-year-olds with eleven daughters of the herdsire, Westkota Hester Cornucopia. Bess Taconic De Kol, an eight-year-old cow in this herd was the high cow in the county, being credited with 15,312.3 lb. milk, 600.26 lb. butterfat in ten months. This cow was exhibited at a number of mid-summer and fall dairy shows and in October 1924, produced 602.7 lb. milk, 84.4 lb. fat. She has since been sold to W. C. Hagerty of Aberdeen, S. D.

ILLINOIS C. T. A. WORK

The highest individual producer and the highest averaging herd enrolled in the Illinois Cow Testing Association during the month of August were purebred Holsteins. The highest producer was owned by the Rock River Farms at Byron, and is credited with 2,957 lb. milk, 88.7 lb. fat. A grade Holstein was second with 2,065 lb. milk, 78.5 lb. fat, while a purebred owned by W. T. Rawleigh of Freeport was third with 78 lb. fat, 1,857 lb. milk. A Rock River cow was next followed by another Rawleigh cow.

The Rawleigh herd consisting of 17 purebreds averaged 1,511 lb. milk, 52.2 lb. fat. Some of them were milked twice, some three times and some four times a day during the month.

The first seven months of progress in the 500 Pound Butterfat Cow Club shows

that first place is taken by John Fredrickson's grade Holstein with 14,180 lb. milk, 513.1 lb. fat. A purebred Holstein owned by A. D. Cornue of Hebron stands next to her with 13,741 lb. milk, 493.1 lb. fat.

MARYLAND OFFICIAL TESTING

Howard Star Annette Prince owned by the Springfield State Hospital at Sykesville, Maryland, produced 5,770 lb. fat, 153.7 lb. milk in the two day official test conducted by the Dairy Husbandry Department of the University of Maryland. The next highest day fat production was 5,074 lb. credited to a purebred Guernsey cow. Then came Glendover Juliana Segis, owned by Dr. J. Thomas Kelley of Germantown, with 4,521 lb. fat, 146 lb. milk. Fourth place is taken by Beauty Korndyke Inka De Kol of the State Hospital herd with 4,474 lb. fat, 131.1 lb. milk. A Jersey is fifth and Jennie Vale Pontiac De Kol, also of the Hospital herd is sixth with 4,310 from 127.5 lb. milk.

IN ONEIDA COUNTY

Coonrod Lily Segis, a purebred Holstein owned by P. Schneible & Sons of Rome, N. Y., produced 2,005.7 lb. milk during August, while enrolled in the First Oneida Dairy Improvement Association. Winnie De Kol Korndyke 2d, owned by O. D. Rose & Son of West Winfield, beat her for fat production, as she is credited with 63.1 lb. butterfat and 1,537.6 lb. milk. The purebred Holstein herd of O. D. Rose & Son led in milk production by averaging 1,148.2 lb. and stood first in the number of cows producing 1,200 lb. milk or 40 lb. butterfat.

During the month there were 559 cows in milk, of which 56 qualified for the honor roll by producing either 1,200 lb. milk or 40 lb. butterfat.

C. T. A. WORK IN IOWA

King Una Jewel, a five-year-old daughter of King Segis Pontiac, freshened April 28, the property of R. M. Skillen of Greene, Iowa. She is enrolled in the Butler C. T. A. and has headed that association for the past two or three months. During August, she produced 1,497 lb. milk testing 4.6% fat or 68.9 lb. butterfat. The Skillen herd which consists of 15 purebred Holsteins averaged 931 lb. milk, 33.1 lb. fat. This herd took second place, being beaten for first position by a grade Holstein herd which averaged 1,233 lb. milk, 37.4 lb. fat. The association average is 566 lb. milk, 22.6 lb. fat. There were 251 cows enrolled in the 28 herds.

TALENTED HELP

Wanted Dairymaid: Knowledge Grade A milk; North Wales; read music, sing soprano in Church of England choir; take charge of poultry, help milk; good wage. Advertisement in the British Farmer and Stock Breeder.

Probably there are women who can keep a secret, but what most of them do is to keep it in circulation.

IDYLLWILDE KORNDYKE

DIONAGEN

my junior herdsire, is from a 31.36 lb. junior four-year-old, whose dam made 31.3 lb. butter in 7 days and was from a 30.5 lb. cow. There's Production Plus Transmission for you. His individuality is the best, so are his sons and daughters. Prices Right.

A. E. ROBINSON

Susquehanna Co. Montrose, Pa.

All the Cattle in Crawford County, Pa.

Have been tuberculin tested TWICE under the Accredited Area Plan. In the second test 99.2% passed CLEAN.

When buying Holsteins, purebred or grade, why not come to Crawford County. The producing capacity and individuality of our cattle equal their health record.

Any of the men listed below would be pleased to supply your needs or put you in touch with responsible breeders who can.

FORTY-THREE YEARS

We have furnished foundation stock and new blood for many good herds. We will be pleased to serve YOU.

MILLER BROTHERS

Clarks Summit
Lackawanna County, Penna.

NEWS FROM WALDRON HERD

Wallace B. Lusk of Marathon, New York, who has been a Holstein breeder for nearly twenty years recently purchased a splendid bull calf from Waldron Herd owned by Mrs. Maud Dwight of South Otselic, N. Y., an indication of the reputation achieved by Mrs. Dwight's herd of purebred Holsteins.

The dam of Mr. Lusk's new herdsire is a granddaughter of Avon Pontiac Echo, that well-known sire of May Echo Sylvia, the only cow ever credited with producing over a thousand pounds milk in seven days. The fame of May Echo Sylvia is world-wide. She was not only a great cow and from a big producing family, but her sons have sired big producers and some of the largest records made in official work were made by descendants of this noted cow. The dam of Mr. Lusk's bull is a very large two-year-old heifer. She weighs nearly 1,100 lb. On two milkings a day she produced over 40 lb. milk daily which tested 3.7 per cent butterfat.

The sire of the young bull Mr. Lusk purchased is King Dixie Keyes. As a two-year-old, his dam, put in official test six weeks after freshening, produced 19.02 lb. butter, 389.5 lb. milk in seven days, thus averaging better than 55 lb. milk daily. Her dam, a 26-lb. cow, has four tested daughters and is a maternal sister to Sir Segis Dixie, the sire of the noted De Kol Plus Segis Dixie, the Holstein world's champion for yearly butter production.

The sire of King Dixie Keyes is from Sylvania Tensen Echo, a daughter of Champion Echo Sylvia Pontiac from a 29-lb. cow. The sire's sire was from the great Canadian producer and show cow, Lulu Keyes, 36.05 lb. butter, 785.4 lb. milk in seven days. It is interesting to note that this great cow is granddam of the sire as well as of the dam of King Dixie Keyes whose ten nearest dams have official records that average over 30 lb. butter.

Mrs. Dwight has other young bulls of

similar lines of breeding that she wishes to sell. The Waldron Herd is accredited and has been for some time so that intending purchasers need have no hesitation in obtaining stock from this establishment.

The rapid increase of a purebred herd necessitates constant sales. J. R. Frost of Munnsville, N. Y. who has been in the Holstein business for many years is another breeder who obtains stock from the Dwight establishment and recently purchased four cows, purebred Holsteins of course, as that is the only kind of cattle kept by Mrs. Dwight.

Mrs. Dwight says that she has three heifers, due to drop their first calves in early spring, that she wishes to sell so that she will not have to milk them in addition to her present large dairy. These three heifers she offers for \$450 and as an extra inducement will at that price donate a splendid bull calf to the purchaser.

CHICAGO DISTRICT MILK PRICE

Dairy farmers of the Chicago district, which includes Kane, McHenry, DuPage, DeKalb and other Illinois counties and portions of Wisconsin and Indiana will receive \$2.55 a hundred pounds for their milk during October. This price was agreed upon at a recent meeting of representatives of Chicago milk dealers and a committee from the Milk Producers' association and is the same price as that in effect during August and September.

A COMING STOCKMAN

Earl Crowell of Marshfield, Wisconsin, is building a reputation for himself as a cattleman. In the fall of 1921 he started in the agricultural course at the Marshfield high school. He planned to take a course in agriculture at Madison this fall but in order to gain more experience and have a little more money he secured a position on the farm of the Larson Canning Co. near Green Bay. He first was given a job of milking cows in the

regular herd then was put milking test cows, then Manager Fox gave him a trial at helping show the Fern Dell herd at Aurora. So successful was Earl in this capacity that he obtained a steady position through the show season and will make a trip to the Pacific Coast with the Fern Dell herd.

Earl became a member of the Marshfield high school stock judging team in 1922, which was the champion livestock judging team of the state that year. Earl won high honors on judging horses at Madison, similar honors on dairy cattle at the Wisconsin State Fair and was high man on sheep at Chicago, his team competing against 23 other state teams.

Besides this Earl bought, raised and exhibited a purebred Holstein heifer calf that was placed first at the Marshfield, Stevens Point and Wausau fairs and was fourth at Milwaukee in a class of 60. As a showman Earl won two prizes offered by the Wisconsin Livestock Breeders Association.

SHOWY COLLEGE COW

Alba Mead Fannie, a member of the South Dakota State College herd won fourth prize in the aged cow class at the Waterloo Dairy Cattle Congress. She won third place at the South Dakota State Fair and first and grand championship at the Interstate Fair at Sioux City. The college herdsire, Sir Aaggie Colantha Korndyke was first prize aged bull senior and grand champion at all three of these events.

SOLD WINNERS TO JUNIORS

S. E. Olson of Ada, Minnesota, sold a number of calves to boys and girls that were members of the Norman County Junior Club. Two heifers that he sold won second and fourth prizes at the Minnesota State Fair and a bull calf won first prize.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

BUILDS HERD FROM ONE COW

G. C. Duvall of Sedro-Woolley, Washington, a number of years ago was manager of the farm owned by the Clear Lake Lumber Company and he purchased a purebred Holstein for a family cow. Then he went into business for himself and now has a herd of nine registered Holsteins, all descendants of the original cow. His herdsire is Skagit Cascade Chimacum, whose dam produced 808 lb. butterfat in a year and whose sire, Cascade Piebe Sir Ka-Mi-Akin, heads the well known herd of Lee Brothers of Mt. Vernon. Mr. Duvall has just enrolled his herd in the local cow testing association.

SENSATIONAL BACKING

D. P. Honeywell, superintendent of the Hillside and Springbrook farms located at Trucksville, Pa., within a short distance of Wilkes-Barre, calls attention to the big production back of the son of Hillside Rhododendron now being advertised in the HOLSTEIN BREEDER AND DAIRYMAN. This cow is both a big milker and a high tester. She averaged 92 lb. milk a day for 30 days with an average test of 4.29 per cent butterfat. Mr. Honeywell says she is the only cow Pennsylvania has yet produced to average 92 lb. milk a day for thirty days with an average test of 4 per cent or better. Her seven-day butter record is 35.14 lb. and her 30-day record is 147.95 lb.

The calf advertised by Hillside and Springbrook farms is a son of Charlevoi Rookwood Prince. He was by Sir Pietertje Ormsby Mercedes 40th and his dam has a large number of official records, averaged over 100 lb. milk a day for 30 days, and has a seven-day butter record of 33.93 lb. The dam and sire's dam of the bull calf advertised have records that average 96.3 lb. milk for thirty days with an average fat test of 3.93%, so that his ancestry combines both big milkers and high testers.

The Hillside herd is one of the oldest in the State of Pennsylvania. The milk from it is sold in the City of Wilkes-Barre and brings a good price on account of the cleanliness, purity and quality of the product. The herd is periodically examined by representatives of the Wilkes-Barre Board of Health, who also keep close tab on the milk produced and on the health not only of the cows but also of their attendants. The herd has passed a number of clean tuberculin tests and again passed a clean test recently.

ANOTHER CLEAN TEST FOR MILLER

Sunny Lawn Herd owned by Murray A. Miller of Milton, Pa., which has been on the accredited list for some time has again passed another clean test. Passing clean tests has apparently become a habit with the Sunny Lawn Herd as there has never been a reactor found therein at any time. This herd is the oldest purebred Holstein herd in Northumberland county. In sixteen years Mr. Miller has only purchased four females so that the animals are of his own raising and breeding. In addition the herd is enrolled in the local cow testing association and Mr. Miller, who is a business farmer, has kept track of the production of his herd, milking by milking for a number of years. The authorities at the Pennsylvania State College think so much of this herd and of Mr. Miller's methods of business that a number of semi-social and semi-educational events have been staged at Sunny Lawn Stock Farm which is located on the Susquehanna Trail, about midway between Lewisburg and Milton, Pa. The Miller establishment is readily accessible. On the big silo facing the road and the Susquehanna river Mr. Miller has had painted a Holstein sign showing a bull, a cow and a calf. This sign meets the gaze of thousands daily and helps attract attention not only to the business of the owner, but also to the type and producing ability of purebred Holsteins.

JAPAN WANTS HOLSTEINS

Japan is intending to increase her dairy herds. A number of Japanese have been in this country during the past year picking up stock and the majority of them want purebred Holsteins. Keitara Mukai of Osaka, Japan, is now in Southern California and says that he will purchase fifty purebred Holstein cows as well as a number of dogs, Collies, Police dogs, Deer Hounds, and Fox Terriers.

In Japan, Mr. Mukai explained, there are but few milk cows, milk never having been much in demand. Gradually, however, the people are being educated to the necessity of milk as a part of their food, and the increasing demand for it has led to the necessity for establishment of the dairy industry.

It was the day before the race and an inquisitive fan who had been looking over a few of the entries came upon a likely looking little roan being groomed by an old ducky.

"Good horse," commented the fan.

"There ain't none better, suh," said the ducky.

"Who was he sired by?"

"Well, suh," replied the ducky, aware that the pedigree of his little horse was somewhat shady, "nobody knows that. This colt is so fast he run away from home befoah evah he'd heard his papa's name!"

Mandy, weary of matrimony, had brought suit for divorce on grounds of cruelty.

"You say," asked the judge, "that your husband threatened you, a defenseless woman, with a wooden rolling pin?"

"Yassuh. Dats what he up an' done."

"Can you produce the rolling pin?"

"Nossuh. Ah's 'fraid not, suh. Yo' see, Ah jus' tuk it away f'um him at de time, an' busted it ovah his haid."

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

Cows in this Herd have produced more than 12,000 lb. milk in a year in C. T. A. work and make a good profit above feed cost.

We can show you a whole lot of first prize and championship ribbons won at local fairs.

This Herd is Accredited—has never housed a reactor.

Will price anything in the herd.

A. R. BUSH
Montrose, Pennsylvania.

LEARN FARMING BY RADIO

Learning farming by radio is the latest. Radio classes in poultry, dairying, swine-raising, beekeeping, gardening, and flower-growing are being arranged for this fall and winter by the agricultural extension division, University of Minnesota. The lessons will be broadcast by Station WCCO, Minneapolis and each course will consist of six lectures.

Students for these courses will be regularly enrolled through the distribution of enrolment blanks by county agents, the agricultural extension division, University Farm, St. Paul, and WCCO, Nicollet Hotel, Minneapolis. Enrolled members will have the privilege of asking questions by mail, the answers to be made by radio. At the end of each course members of the class will receive a pamphlet containing questions and answers and a general summary of the points covered in the course.

HONORS ABOUT EVEN

The show herd of H. A. Brace and Son of Lone Rock, Wis., and the herd representing the Dane County Breeders' Association met at the recent Grant County Fair with the result that the county herd took three first prizes, six seconds, and two thirds, while the Brace herd won three firsts, four seconds and four thirds. Professor George C. Humphrey of the University of Wisconsin was the official judge and he said that these herds were so evenly matched that it was just a toss-up between them.

GIRL IS BEST JUDGE

Adeline Gropp of Park Falls, Wisconsin, with a score of 97½ took first prize in the boys and girls cattle judging contest at the Rice County Fair, John Reedal was second with 92½. There were nineteen contestants, and they judged groups of Guernsey and Holstein cows.

A wife is a great comfort during all those troubles which a bachelor never has.

A PLEASANT BUSINESS

A recent advertisement in the classified page was sent in by Mrs. Ethel Maddox of Montpelier, Indiana, who offered canaries for sale. Mrs. Maddox is a bird lover who raises quite a variety of feathered pets. In addition to canaries, English and German, she has other European birds such as Linnets, Goldfinches, Strawberry finches and Australian Paraquets, commonly known as Love Birds. Mrs. Maddox gives personal care and attention to all her charges and has built up quite a business in birds and bird supplies. She has shipped to a number of different states and certainly has a very pleasant occupation.

SENATOR JOYCE BUYS HILLSIDE FARM BULL

Senator P. F. Joyce of Pittston, Pa. has recently purchased from the Hillside Farms at Trucksville, Pa. the young herdsire, Hillside Pietje Ormsby born May 26, 1923. He is a son of King Pontiac Maple Knoll Ormsby and Hillside Lady Saxon. As a junior two-year-old, Hillside Lady Saxon made official records of 23.73 lb. butter, 495.8 lb. milk in seven days, 96.83 lb. butter, 1,843.1 lb. milk in thirty days. At that time she held the Pennsylvania State records for both seven and thirty day butter production. As a junior four-year-old she raised her official record to 28.9 lb. butter, 548.7 lb. milk in seven days. She is a daughter of Hillside Saxon, a cow that as a seven-year-old produced 32.29 lb. butter, 628.7 lb. milk in seven days and then as an eight-year-old made a seven day official record of 30.17 lb. butter, 663.8 lb. milk. Hillside Saxon was a daughter of Hillside Annette, 30.29 lb. butter in a week and was sired by Woodcrest Pietje, a son of the famous 31.62 lb. imported cow, Pietje 22d.

King Pontiac Maple Knoll Ormsby is proving himself to be a high-class sire of producers for his daughters are making large records in a number of different

herds. He is a son of King of the Pontiacs from Maple Knoll Helen, a 33 lb. daughter of King Korndyke Hengerveld Ormsby and therefore a sister to the noted sire, Ormsby Korndyke Lad.

Hillside Pietje Ormsby has been used as a junior sire in the Hillside herd. He is a very handsome individual. The records of his three nearest dams average 31.45 lb. butter in week and the daily milk average is 80.4 lb. Senator Joyce has every right to expect that his new herd bull will sire both big producers and fine individuals.

HOME RAISED SHOW HERD

Fifteen head of purebred Holsteins most of them from Edgemar farms, will be exhibited by the Santa Monica Dairy Company of Santa Monica, California at a number of southern California fairs. Herman Michel is the owner of the farms which are located close to Venice, Calif.

The show herd will be headed by Edgemar King Ormsby Segis, a yearling bull of which much is expected. The animals will be in charge of foreman Charles E. Wilson with Clarence Michel and Pat Donohue. The Edgemar herd is noted for production. In the association year ending August 31 last, its 230 milking animals averaged 401 lb. butterfat, the highest rating in the Los Angeles Cow Testing Association.

FALCONER HERD CLEAN

David Falconer of Scottville, Mich., is exhibiting some of his purebred Holsteins at a few of the fairs in his vicinity. On September 4 the entire herd of 42 were tuberculin tested and every one passed clean. This is said to be the largest herd ever tuberculin tested at one time in Mason county.

Why not induce your neighbor to subscribe for the HOLSTEIN BREEDER AND DAIRYMAN? He will enjoy reading it as much as you do.

Fred Model Glista Netherland

is a real show bull and sires show stock. His dam is a great cow, his sire a bull of the highest breeding.

The herd he heads is of 4% breeding, is making a good profit over cost of feed, are free from T. B., and as individuals they will surely please you. I have more than I need and will price them to you very reasonably.

H. A. STOTTLEMYER
Hagerstown, Md. R. D. 5

A Breeder's Herd

In fifteen years I have bought just four females. The result is that while my herd consists of real producers their uniformity and type will please you.

SUNNY LAWN HERD
is on the
ACCREDITED LIST

You pass our farm when you travel the Susquehanna Trail. Stop and look us over.

Murray A. Miller
R. D. 3 Milton, Pa.
The oldest herd in Northumberland County.

Big Milkers and High Testers Combined

Bull born April 26, 1925. Right in every way, 7/10 black, well marked.

His dam, Hillside Rhododendron produced 35.15 lb. butter in seven days. She averaged 92 b. milk a day for 30 days, average fat, 4.29%.

His sire is from a cow that produced 3,019.6 lb. milk, 135.83 lb. butter in 30 days.

The dam and sire's dam averaged 96.3 lb. milk a day for 30 days, with an average test of 3.93%. Persistence — Production — High Testing.

HILLSIDE AND SPRING-BROOK FARMS

BOUGHT FROM THE WITHERS HERD

Realizing that the best place to buy a herdsire was where he could see the dam and other members of the family, Ruben N. Good of Elizabethtown, Pa., went over to the Sunshine Dairy and there purchased from W. A. Withers a very fine young son of Belle Lyons Keystone.

Belle Lyons Keystone freshened as a junior three-year-old. Enrolled in the local cow testing association she produced in the official C. T. A. year 10,121 lb. milk, 346.9 lb. butterfat equivalent to 433.63 lb. butter on the 80 per cent basis. She was actually in test however only 275 days. Her net profit over cost of feed was \$324.64.

Belle Lyons Keystone is a handsome daughter of Colonel Joh Lyons and Key-

BELLE LYONS KEYSTONE

10,121 lb. milk, 433.63 lb. butter in 275 days of C.T.A. work as a junior three-year-old. Dam of young bull sold Ruben N. Good by W. A. Withers, Elizabethtown, Pa.

stone Belle Mechtilde 2d. Keystone Belle Mechtilde 2d is a daughter of the noted sire King Hengerveld Hartje, whose daughters in general dairy work and also in official test have made large records in a number of different states.

Colonel Joh Lyons, sire of Belle Lyons Keystone, is a son of King Joh from the 33 lb. cow Gypsy Lyons. Colonel Joh Lyons was exhibited by his owners, the Mack Brothers, at the 1924 Susquehanna County Fair, where he not only won first prize in his class but was also awarded the senior and grand championships.

Mr. Good's young herdbull was sired by King Piebe of York 20th, a bull that has won a number of prizes in the show ring this season. Exhibited at the York County Fair held at York, Pa., the first week in October, he was not only made the blue ribbon winner of his class, but was also made the senior and grand champion by the well-known judge, R. E. Haeger of Algonquin, Ill. His dam, Netherland Segis De Kol, has an official record made in ten months of 648.73 lb. butter, 16,198.2 lb. milk, while his sire, King Piebe of York, is from strains of breeding noted not only for big records but also for individuality of a high order.

The young bull Mr. Good purchased is a very nice individual, handsomely marked and well built. He is from a good producer and sired by a show bull and is from an accredited herd. We believe Mr. Good acted wisely in heading his herd with this handsome young fellow.

Handsome Heifer Calves

Sired by

KING PIETJE AAGGIE PONTIAC

whose dam and sire's dam average 33.70 lb. butter in 7 days and 83 3/4 lb. milk daily. They are from big producing cows, show promise of developing into big producers and are right in every way.

C. F. Giles.....Apalachin

ORMSBY SENSATION 3D

my herdsire, is backed by remarkable producers. Despite the fact that his dam was tested as a two-year-old and his sire's dam for only 305 days, their long time records average 19,974.5 lb. milk, 853.77 lb. butter.

Come and see Ormsby Sensation 3d and his daughters in my herd. Possibly you will want one of his sons or some good females bred to him.

S. T. WITMER

Union Deposit Dauphin Co., Pa.
This herd is Accredited

SEXTON AS A FARMER

Although he was born in the city, F. H. Sexton of Olive Hill, Ind., has made a success of farming since he took charge of the Sexton farm, which contains 428 acres. He has 62 Holstein cattle that are on the accredited list. At present he has 36 cows in milk and his herd has averaged 4th place during the year in the local cow testing association, with each of the three higher herds containing fewer cattle.

Mr. Sexton tells a joke on himself about the time he first started farming. He had a field of 40 acres to put into oats, and figured out how many bushels of oats he would need for seed and the amount of fertilizers required, together with the necessary tools. He took along a hired man who knew as little as he did about farming, and the two figured they could sow the field in a day. They had not gone far before the mules stalled.

Instead of unloading a part of their load, they hitched on an extra team and reached the field. That night they took back a part of their load and had some left the next day, and then had to unload the wagon for other work before the field was finished. He had not figured how fast a pair of Missouri mules would travel over soft ground.

RICHARD M. SMITH

Richard M. Smith, superintendent of the Marinette County Asylum, Peshtigo, Wis., passed away unexpectedly on the morning of September 4. He had been operated upon for gall stones, and was thought to be rallying nicely. Friends visited him the previous evening and his death was unexpected. It was due to cerebral hemorrhage.

Last year Mr. Smith was one of the five men honored by the University of Wisconsin for distinguished service to agriculture. It was said for him that he took over the asylum farm when it was merely a sandy lot and turned it into productive fields. He built up a splendid herd of Holsteins and an equally good lot of Poland China hogs. He was prominent in agricultural and fraternal circles. He is survived by Mrs. Smith and four children.

IOWA BULL TO CALIFORNIA

The Alfagold farms of McGregor, Iowa, have sold their noted sire and show bull, Pabst Korndyke Star to the Los Angeles County Farm at Hondo, Calif. The County Farm had one of the biggest producing large purebred Holstein herds in the United States, but had the misfortune to have them slaughtered when foot and mouth disease was ravaging that part of the country. They are rapidly building another large, high-class purebred Holstein herd.

Spartanburg, (S. C.) Sun: Water is said to be so scarce in Asheville that the dairymen are selling pure milk.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

WILL WORK TOGETHER

By a unanimous vote of its board of directors the Twin City Milk Producers' Association will market its cheese through the Wisconsin Cheese Producers' Federation, beginning October 1.

The principal business of the Twin City organization is the supplying of milk for St. Paul and Minneapolis trade but each year it produces about two million pounds of Cheddar or American cheese. Last year the federation handled a few cars for it with results that were satisfactory to both parties.

Statement of the ownership, management, etc., required by the Act of Congress of August 24, 1912, of THE HOLSTEIN BREEDER AND DAIRYMAN, published semi-monthly, 8th and 22d, at Harrisburg, Pennsylvania, October 1, 1925.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared G. H. TRUCKELL, who, having been duly sworn according to law, deposes and says that he is the Editor of THE HOLSTEIN BREEDER AND DAIRYMAN, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, (and if a daily paper, the circulation) etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, THE BENN-CHESTER PUBLISHING COMPANY, P. O. Box 110, Harrisburg, Pa.

Editor: G. H. TRUCKELL, Harrisburg, Pa.

Managing Editor, not any.

Business Manager, E. M. SNYDER, Lemoyne, Pa.

2. That the owners are: (Give names and addresses of individual owners; or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock).

OWNER: THE BENN-CHESTER PUBLISHING COMPANY.

STOCKHOLDERS OF THE BENN-CHESTER PUBLISHING COMPANY are:

EUGENE B. BENNETT, New Haven, Connecticut.

G. H. Truckell, Harrisburg, Pa.

HOWARD C. REYNOLDS, Harrisburg, Pa.

J. H. Campbell, Harrisburg, Pa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) There are no bonds, mortgages, or other securities outstanding against THE BENN-CHESTER PUBLISHING COMPANY.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is. (This information is required from daily publications only.)

SWORN TO AND SUBSCRIBED BEFORE ME,

this 30th day of September, 1925.

G. H. TRUCKELL,

Editor.

World-ly Statements vs. The Truth

By Howard C. Reynolds

THE HOLSTEIN-FRIESIAN WORLD in its issue of September 26th, expresses regret that a new association has been incorporated and remarks: "To any breeders who may be dissatisfied with existing conditions and policies within the Holstein-Friesian Association of America we would say, your remedy lies with yourselves and within your present organization rather than in joining an outlaw movement of this nature." Does the *World* mean what it says? Let us analyze a little.

The real breeders expressed their wishes in 1921 by sending their proxies to men whom they knew would vote these proxies for the best interest of the real breeders in general. The *World* has repeatedly attacked the conduct of that meeting, has called it a "disgraceful affair," "a prostitution of proxies," and repeatedly charged that its sponsors had ulterior motives in view.

WHAT ARE THE REAL FACTS?

1st—Let us see what the real facts are. In the call sent out by the Secretary previous to the meeting, Judge Peasley, an eminent jurist from Connecticut and one of the fighters for proxies caused to be inserted into the call for the meeting a resolution to rescind a former resolution introduced at the annual meeting at St. Paul the previous year by James A. Reynolds, which directed that a Committee be appointed to investigate and report in the matter of expending the Association's reserve for a new home. The holders of these proxies claimed that a new home was not needed and they carried the resolution rescinding this attempt.

Was there anything "disgraceful" in that? Was it not a credit to that eminent gentleman, Judge Peasley? Was it not in the best interests of the real breeders? Was it not in line with what the *World* now advocates, "remedying from within your organization?" Answer these questions, Messrs. Price and Prescott—don't beat around the bush, or try to befuddle the issue. Answer the questions fairly and honestly, if you can and if you dare.

2d—Mr. A. L. Brockway, another fighter for those proxies, introduced a resolution into the call for the meeting reducing the transfer fee from \$1.00 to 50c. Was there anything "disgraceful" in that? When the association prospered and laid up a large reserve under a 25c transfer fee, was it not perfectly honorable and just for Mr. Brockway to attempt to correct a wrong "within the organization" and yet according to the *World* the whole proceeding of that meeting was a

"disgraceful affair" and "a prostitution of proxies." Let the *World* speak out and meet the issue if it can. Answer these questions.

3d—These proxies were voted solely in favor of Judge Peasley's resolution, which for the time being, put a quietus on the building of a home which was not then, and is not now needed. Was there anything "disgraceful" in that? Were these proxies "prostituted" as the *World* has repeatedly charged? Were not these proxies voted for the best interests of the rank and file of the breeders? Was this not strictly in accord with the present attitude of the *World* when it advocates "remedying from within the organization?" Answer these questions honestly and squarely if you can, Messrs. Price and Prescott.

4th—When the time arrived to elect a President, and having in mind the \$12,000 salary which has been paid to the President for two years without authority under the constitution and by-laws, what was done? The handful of stalwart men who held the proxies which they had been intrusted with by over 9,000 real breeders, desiring to rebuke the illegal \$12,000 salary, cast around for a new candidate for the Presidency of the Association. Did they select a nonentity? Did they select a grafter? Whom did they elect? They elected Mr. Frank O. Lowden, former governor of the great state of Illinois and one of the most prominent candidates for the nomination as President of the United States. Was there anything "disgraceful" about that? Were these proxies "prostituted" as the *World* has repeatedly charged? Answer these questions Messrs. Price and Prescott, if you can.

As to Governor Lowden's fitness for the position of President of the Holstein-Friesian Association of America, we call attention to the fact that the millionaire politicians, having since regained control of the Association, have reelected President Lowden four times in succession. What was there "disgraceful" in the first election of so eminent a man to the Presidency of the Holstein-Friesian Association?

WHAT DID THE OTHER SIDE DO?

Meanwhile, what did the other side do? Let us analyze a bit farther.

First—Mr. James A. Reynolds, Chairman of the Executive Committee and Chairman of a Committee on by-law revision, and strongly connected with the "other side," introduced into the call of the meeting a resolution conferring on the Board of Directors, the

power to "alter, amend, or repeal the by-laws from time to time, *AS THEY SAW FIT*."

Had this resolution been passed, it would have thrown the door wide open to all kinds of abuses, and forever taken from the rank and file of the membership a chance to have anything whatever to say regarding the handling of the Association's funds, or preventing further increases in fees, or preventing the boosting of salaries, or checking the impairment of the reserve fund, or participating in any manner whatever in the management of their own affairs.

Now let's see just what was done with that resolution. The 9,000 or thereabout proxies held by the few gentlemen headed by Judge Peasley threw that resolution into the scrap-heap. They voted it down so overwhelmingly that although the millionaire politicians have since regained control, they have never dared to introduce the resolution again.

Was this proceeding to correct abuses from "within the organization" a "disgraceful affair?" Was this proceeding headed by Judge Peasley, still a member of the Board of Directors of the Association, "prostituting" proxies? Answer these questions Messrs. Price and Prescott, squarely and honestly, if you can, and if you dare.

Second—Secretary Houghton has always been considered "the chief executive officer of the Association." His office has done the large part of the business of the Association; he has been in closest touch with the breeders, he has attended to their registrations, transfers and all of the vast amount of business incident to his office for more than thirty years and yet Mr. James A. Reynolds introduced a resolution making the President the "chief executive officer" for the rank and file of the breeders?

Answer! That resolution was thrown into the scrap-heap as it should have been but it would have passed readily had not the great contest for proxies been waged by these heroic men who were fighting for the rights of the rank and file of the membership. Was any of this inconsistent with the "remedying from within the organization?" Was there anything "disgraceful" in that? Were these 9,000 proxies in any manner whatsoever "prostituted"? Is it not a fact that the "prostitution" came from the other side? Answer these questions Messrs. Price and Prescott honestly and squarely, if you can and if you dare.

DISFRANCHISING THE MEMBERSHIP

Third—When the millionaire politicians obtained control of the Association through proxies, at the Philadelphia meeting, there was then nothing wrong with the proxy system, was there? Oh, no, the proxy system under which the association had operated since its inception was ALL RIGHT, but when the rank and file of the breeders led by Judge Peasley and Secretary Houghton rose up in their might and got over 9,000 proxies and voted them honestly and squarely, and fought that Convention to a standstill for the interest of the real breeders and against the millionaire politicians who wanted absolute control, then the proxy system was ALL WRONG.

In this connection do our readers realize that every dairy breed association in the country has the proxy

system and none of them have the delegate system, except the Holstein-Friesian Association of America? Do you realize that every railroad corporation, every bank and all other great commercial and financial institutions have the proxy system without exception? Tell us Messrs. Price and Prescott, has the Jersey Association the delegate system? Has the Guernsey Association the delegate system? Has the Ayrshire Association the delegate system? Have any of the associations the delegate system? We say, absolutely not—not a single one of them. Is it not a fact Messrs. Price and Prescott, that the Holstein-Friesian Association of America is the only one with the delegate system and that as such it may well be considered a *freak*?

Then tell us, Messrs. Price and Prescott, if you can honestly do so and dare, why was the expensive, extravagant delegate system forced upon the membership after the millionaire politicians regained control?

This very resolution adopting the delegate system is an absolute disfranchisement of the membership and yet, the *World* has the effrontery to tell its readers that they can "remedy evils from within." How can that be possible when the millionaire politicians now in the saddle, pass such resolutions? It does not need a wizard to figure out the impossibility of a few breeders getting together and carrying on a campaign for the election of delegates to this convention from all over the country. The average breeder and dairyman is too busy milking his own cows to do that; besides only the millionaire could afford it, as it would cost tens of thousands of dollars, and in all probability would be unsuccessful.

Tell us, Messrs. Price and Prescott, was there one single misrepresentation made in the letters sent out by Judge Peasley, Mr. Brockway, Mr. Newman and the others in the 1921 proxy campaign. Was not every statement in those letters absolutely the truth, the whole truth and nothing but the truth? Have not all of the predictions made in those letters since been realized, or attempted by "the other side?" We make the unqualified statement that every pledge was religiously and faithfully kept. There was not one single deviation on the part of the men who fought for the rank and file of the breeders in that convention. Was there anything wrong about these men trying to "remedy the evils which existed from within?" Was there anything "disgraceful" in the proceeding? Answer these questions honestly, if you can and if you dare.

Fifth—Tell us Messrs. Price and Prescott, tell your readers, if you can and if you dare, did the millionaire political element do the fair thing by those men in the Syracuse Convention of 1921? Is it not an absolute fact that they tried to stampede the convention by resorting to every trick they could possibly think of, resorting to ridicule and abuse and did they not attempt in every way to disrupt the little band of stalwart men who held the proxies of the plain breeders and dairymen? Is this the method which the *World* advocates, to give the rank and file of breeders an opportunity of "remedying evils from within"?

Sixth—One of the first things that happened at the Convention was the introduction of a resolution by Mr. J. M. Hackney, a member of "the other side," asking the Convention to endorse the conduct of the Board

of Officers. Under the charge of extravagance and mismanagement this resolution was defeated by the votes of the plain breeders through their proxies and rightly so; if the *World* wanted to be fair it would have commended those men for what they did instead of charging them with a "prostitution of proxies."

Seventh—When the millionaire politicians regained control of the Association at the special meeting in St. Paul, what did they do? At the very next Annual meeting they increased the transfer fee from 50 cents where it had been placed by the proxies of the rank and file of the breeders at the Syracuse meeting, to \$1.50—or six times the original sum of 25 cents under which system the association had accumulated a large reserve fund and been extremely prosperous.

Mr. Houghton has said in one of his letters that the \$12,000 salary paid to President Aitken for two years was in the financial report but it would be found "buried in a maze of bookkeeping figures," clearly indicating that the officials of the association were camouflaging and were ashamed to give prominence to the item.

Is it not a fact Messrs. Price and Prescott, that the first year the \$12,000 salary was paid to President Aitken it was paid to him strictly as President of the Association? Is it not true that at the next meeting it was discovered by some of the directors that this was a violation of the by-laws which provided that "the President shall serve without compensation" and in order to get around this by-law they passed a resolution to pay him the \$12,000 salary as "head of the Extension Department." Again we ask, is this not true?

Is it not a fact, Messrs. Price and Prescott, that at no time until recently when as a result of the "smoking out" which you received you awoke from your Rip Van Winkle sleep, have you ever mentioned this \$12,000 item? Is it not a fact that you have kept entirely away from it and never alluded to it at all?

If the *Holstein-Friesian World* honestly believes in "remedying evils from within the organization," as it professes, if it was not ashamed of publishing the fact that \$12,000 annually had been paid President Aitken for two years, why did it not discuss the question in its columns long ago or at least when the discussion was in progress.

Judging the future by their past performances we make the prediction that if it ever happened that the rank and file of Holstein breeders again secure control by getting a majority of the delegates to a Convention, and that is now almost an impossibility, some new plan or device would be discovered by the Millionaire Politicians to thwart the will of the people and that the *Holstein-Friesian World* would defend any action the millionaire politicians might take.

Think of this base insincerity on the part of the *World* now advocating "remedying evils from within" when it has repeatedly asserted that the Syracuse Convention was a "disgraceful affair" and that the acts of Judge Peasley and others in voting those proxies to remedy evils from within was a "prostitution of proxies."

"DON'T BE DECEIVED"

One of the saddest things in the world is in seeing

an honest man deceiving himself. The next most pathetic thing is to let someone repeatedly fool you. Let us not make the same mistake twice. When the *Holstein-Friesian World* tells you that you can "remedy evils within the organization" it probably has a broad smile safely tucked up its sleeve because sleepy though they are, they know perfectly well that with the delegate system it simply CAN'T BE DONE, and that is the reason the delegate system was adopted.

Make no mistake! There is one sure way to right these things and to have your rights respected and your money protected and that is by becoming a member of the Holstein-Friesian Registry Association, Inc., and to get every breeder you know to do the same thing.

The *World* tells you that two associations will be confusing. Again we say, make no mistake about that. First, with only half the purebreds raised being registered, there is ample room for a real association and, secondly, we believe it will be only a matter of time when there will be one association and that one will surely be The Holstein-Friesian Registry Association, Inc.

A Nation of Wage Earners

WAGES and salaries in the United States in 1919 amounted to \$34,800,000,000, against \$15,000,000,000 in 1909. The year 1920 was one of the great industrial activity and the payroll increased to \$41,600,000,000. But later the total dropped to around the 1919 figure, which to-day is fairly representative. Wages and salaries now make up about 58 per cent of the national income.

The figures are on the authority of the National Bureau of Economic Research, whose investigation of this subject brought out some interesting facts. Manufacturing pays the largest share of the total. In 1919 that branch of our industry paid \$13,600,000,000 in wages and salaries, or 39 per cent of the total. Agriculture, on the other hand, paid only 4 per cent. But this is not to be taken to mean that agriculture does but 4 per cent of the nation's work. The greater share of the work of agriculture is done by the farm family, and therefore is not included in the national payroll.

The figures for this great national payroll are cited to call attention to the great change that is coming over this country. We are still a great agricultural nation, but we are also becoming a great manufacturing nation. A country in which the wages of manufacturing make up 39 per cent of the total income cannot be anything else than deeply interested in manufacturing. Invention is constantly releasing men from agriculture for manufacturing and increasing the divisions thereof. The making of this great wage income is a constant piling up of purchasing power that prevents congestion of production and calls for increasing output, making for a higher standard of living and leading to a better citizenship.—*Wall Street Journal*.

Expenditure of money and the incurring of debt for excesses and superfluities is not wise or justifiable either in private business or in public life. Nor, we would add, in breed registry associations.

Muchy, a Holstein of Prolific Tendencies

By J. H. LEWIS

RECORDS of high production are frequently made in the Fennimore-Boscobel Cow Testing Association for it has always carried 500 or more cows on test so that the animal that can, by individual effort, rise to a point of eminence among so numerous a field of competitors is without question a really remarkable cow.

Such a cow is Muchy, a descendant of the great King of the Pontiacs. She started work in the Fennimore-Boscobel Cow Testing Association as a four-year-old. In her first year she produced 14,191 lb. milk, 449 lb. butterfat. The next year, at five years of age, her record of production was 16,742 lb. milk, 601.8 lb. fat and in 1924, at six years of age, her production was 14,093 lb. milk, 523.2 lb. butterfat, giving a total in three successive years of 45,026 lb. milk, 1,574 lb. butterfat besides adding three fine heifer calves to the herd. In 365 consecutive days she produced 20,600 lb.

MUCHY

In three successive years of cow testing association work she produced 45,026 lb. milk, 1,574 lb. butterfat. Owned by Lou Doeringsfeld and Sons, Fennimore, Wis.

milk, 936 lb. butter, milking three times daily for the first six months and twice a day for the last months.

Muchy's son, by a 27-lb. son of Sir Pietertje Ormsby Mercedes 40th, is one of the herdsires on the farm of Lou Doeringsfeld and Sons, conveniently located about a mile north of Fennimore, Grant County, Wis., where Muchy is still an active and consistent producer.

The Doeringsfeld herd contains a number of excellent producers. Houwtjestiena Canary De Kol, the first purebred Holstein to find a place on this farm, has a yearly record of 16,588 lb. milk, 569.7 lb. butterfat, on two milkings a day. Four of her daughters have freshened. The first died leaving a heifer calf, the second was the highest three-year-old in the Fennimore-Boscobel Association in 1924 with 15,708 lb. milk, 541.7 lb. butterfat; the third was the highest two-year-old in 1924 with 11,391 lb. milk, 419.9 lb. butterfat; the fourth freshened last winter and is now a strong producer. The granddaughter produced 1,350 lb. milk, 51.3 lb. butterfat in thirty days as a two-year-old.

The Doeringsfeld herd in its first year in cow testing association work made an average of 309 lb. butterfat on seventeen cows; in the second year, 369.5 lb. butterfat with eighteen cows on test; and in 1924, the eighteen head made the highest average production in the association, 405.1 lb. butterfat.

Corn, grain, hogs, sheep, cattle and poultry are the principal products of the Doeringsfeld farm. The reorganization of the district into newer associations has left the Doeringsfelds without association advantages, but they place so much faith in the value of cow testing that it is conducted by a son of the founder of the farm. One year, however, without association advantages has been enough for the farmers of this section and after the harvest is over, the men who made up the circuit last year will meet to reorganize, taking in many of the fine herds that ran on test last year.

Valuable Prizes for Writing a Letter

BOYS and girls whose parents are members of the Dairymen's Coöperative Sales Company are entitled to compete for a number of valuable prizes in a contest conducted by the Pittsburgh District Dairy Council. All they have to do is to write a letter containing from 200 to 500 words answering another letter written by a "city cousin" who asks the "country cousin" how his or her father cares for milk from the time it leaves the cow to the time it is placed at the country receiving station or the loading platform. In other words "how to keep the bacteria count as low as possible until the milk is delivered."

Twenty-nine boys and girls who write the best answer to the "city cousin's letter will be entitled to a two-day trip to Pittsburgh with all expenses paid. The most valuable prize is a scholarship of \$150 to be applied towards a collegiate dairy course, while another will have the choice of a solid gold watch or a \$100 scholarship. Last year a sixteen year old girl, Alice Kirkbride of Deerfield, Ohio, won the sweepstakes prize and Mary Lee, a seventeen year old girl from Dorset, Ohio, won the \$100 scholarship. Mary is now a student at the Ohio State University and Alice will enter that institution next fall, meanwhile her prize money is being held in trust for her.

The final awards will be made in December and the trip to Pittsburgh will take place in January. A very distinguished array of judges has been procured for this year's contest.

The Dairymen's Coöperative Sales Company is the farmers' milk marketing association that operates in the tri-state area, Ohio, Pennsylvania and West Virginia, and the Pittsburgh District Dairy Council is the educational organization that works in that territory to improve the quality of milk and to increase the consumption of dairy products.

An old time negro preacher was reading and commenting upon a chapter in the Bible which dealt with genealogy. When he came to the passage, "And seven sons did Milca bear," he paused and explained as follows:

"Now, bredren and sisters, dis jes' means dat dey run out o' milk at that house—de cows had went dry, or didn't come up or somethin', and de boys went out and catch a bar an' milked her. Dem boys could milk anythin'!"

There is more in adaptation than in adoption among men.

Houghton Peeved

WE ARE printing below the charges preferred by F. L. Houghton, Secretary of the Holstein-Friesian Association of America, against Howard C. Reynolds, Secretary of the Holstein-Friesian Registry Association, Inc.

In this connection, before we publish the charges, we will print a letter from Mr. Houghton to Mr. Reynolds, written under date of July 17, 1922, over Mr. Duntley's signature, which makes it very clear that Mr. Houghton realized the necessity of organizing a new Registry Association, had the plan thoroughly worked out, and was depending upon this same Howard C. Reynolds as his chief lieutenant to put the plan into operation. The letter reads as follows:

Editorial Staff
FREDERICK L. HOUGHTON
W. L. DUNTLEY

ESTABLISHED 1886

THE HOLSTEIN-FRIESIAN REGISTER

A Semi-Monthly Journal Devoted to the Interests of
Holstein-Friesian Cattle

FREDERICK L. HOUGHTON, Editor
BRATTLEBORO, VERMONT

July 17, 1922.

DR. HOWARD C. REYNOLDS,
Box 61,
Harrisburg, Pa.

Dear Dr. Reynolds:

In considering our recent conversation with you relative to a broad reconstruction plan, and after several conversations with Mr. Houghton, it is the opinion of Mr. Pearson and myself that he would sanction such a movement as was suggested, provided we could arrange that several representative men endorsed the program prior to its being submitted.

Such men's names suggest themselves: Stevenson and Reynolds of Pennsylvania, Metcalfe of Massachusetts, Peasley of Connecticut, Bishop of Washington. Who would you suggest from New York, Maryland, New Jersey?

Now as to plan: the following is merely suggested as a tentative method and is submitted to you merely as a basis to begin work on. Incorporate Holstein-Friesian Register Association with Register as official organ. Include Sales Company as a part of the Assets and a working department. Provide for a \$10.00 worth of transfers or registrations, also subscription to paper. Have 50c transfers. A. R. O. as you talked.

Now if 5,000 members could be secured there would be provided \$50,000 capital. All that would be necessary would be a loan of \$25,000 perhaps for use until the business provided sufficient capital. Salaries for Secretary and others could be arranged and the whole matter gotten under way in short order.

Now Mr. Pearson and I are willing to work but want to have your idea of a plan. Perhaps the thing will crystallize and work. Mr. Houghton we feel sure will be an enthusiastic worker when we get the initial steps taken.

Hoping to hear from you, I am

With kindest regards,

W. L. DUNTLEY.

Mr. Houghton makes it perfectly plain in his letter to Mr. Reynolds that he had four objects in view for wanting to organize a new Registry Association.

First—He wanted to sell the Brattleboro Sales Company.

Second—He wanted to sell his paper, the *Holstein-Friesian Register*.

Third—He wanted to protect Brattleboro's interests and his interests at Brattleboro.

Fourth—He wanted the REAL BREEDERS to preserve their equity in the breed and the industry.

Mr. Reynolds was interested in Mr. Houghton's efforts to organize a new Registry Association only from the standpoint of protecting the rights and interests of the "REAL BREEDERS," and this Mr. Reynolds stated in his answer to Mr. Houghton.

Every breeder is familiar with the fact that the new Association is organized on the broad constructive plan referred to in Mr. Houghton's letter to Mr. Reynolds, and further, that Mr. Stevenson and Mr. Harry C. Reynolds of Pennsylvania, in whom Mr. Houghton placed so much confidence, are also identified with the new Association.

It would appear that Mr. Houghton in preferring charges against Mr. Howard C. Reynolds has brought these charges at the demand of the Executive Committee or because he was personally PEEVED in that the new Association was organized and he was not identified with the new organization.

THE CHARGES

I, F. L. Houghton, of Brattleboro, in the State of Vermont, respectfully represent that Howard C. Reynolds, of Harrisburg, in the State of Pennsylvania, is a member of The Holstein-Friesian Association of America. That F. L. Houghton is the Secretary of said Association.

That information involving the conduct of the said Howard C. Reynolds as a member of said Association has come to the knowledge and attention of F. L. Houghton as Secretary of said Association. That he has investigated and caused the conduct and actions of said Reynolds to be investigated, and that he deems said conduct and actions and information relating thereto to be of such a character that the Board of Directors of said Association should take cognizance thereof.

Therefore, said F. L. Houghton, as such Secretary, upon information and belief, makes the following charges against said Howard C. Reynolds, to wit:

That the said Reynolds has recently been and now is engaged in forming a corporation for the registration of Holstein-Friesian cattle under the name and title of the "Holstein-Friesian Registry Association, Inc.," and for the purpose and with the intent of injuring said Association and diverting the business of The Holstein-Friesian Association of America to said Holstein-Friesian Registry Association, Inc., and for that purpose has been elected and has accepted the office of Secretary of said Holstein-Friesian Registry Association, Inc., and as such is endeavoring to prejudice breeders and owners of Holstein-Friesian cattle to withhold the registration and transfer of their cattle from said Holstein-Friesian Association of America and endeavoring to persuade them to register and transfer their cattle with said Holstein-Friesian Registry Association, Inc., instead of with said Holstein-Friesian Association of America, and for that purpose has sent out and caused to be sent out and mailed to all the members of The Holstein-Friesian Association of America and to the breeders and owners of Holstein-Friesian cattle a false and untrue statement signed by him as Secretary of said Holstein-Friesian Registry Association, Inc., a copy of which is hereto annexed.

Wherefore, I, F. L. Houghton, as Secretary of said Association, present said charges against said Howard C. Reynolds, and request that you investigate the same or cause the same to be investigated, and that you take cognizance thereof, and that you cause a copy of the charges with a notice of the time and place of the hearing thereof to be served on Howard C. Reynolds in order that such action may be taken as right and justice shall require.

F. L. HOUGHTON, Secretary.

Howard C. Reynold's Answer

To The Executive Committee of The Holstein-Friesian Association of America.

GENTLEMEN:

1. Answering the last paragraph on the first page of the said Charges. I admit that I have with others formed a Corporation for the registering and transferring of Holstein-Friesian cattle under the name and title of the HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION, Inc.

2. I deny that the object and purpose of the organization of said Association was with the intent of injuring and diverting the business of the Holstein-Friesian Association of America to the said Holstein-Friesian Registry Association, Inc.

If the organization of the last-named corporation results in deprivation of any business in the Holstein-Friesian Association of America it must arise by reason of the superior advantages offered by the said Holstein-Friesian Registry Association, Inc., in economy of administration, in promptness and accuracy of service and in giving to the members thereof the right to control the future destiny of the Corporation by the direct vote or by constituting any person chosen by the member by proxy to cast his vote.

3. I further aver that I have been elected Secretary of the new Association and have accepted the office for the purpose of improving the conditions of the REAL breeders of Holstein-Friesian cattle of America who have long sustained in an economic sense the Holstein-Friesian Association of America without receiving adequate returns either in Promptness of Service or in results of the conduct of the affairs of the said Holstein-Friesian Association of America.

4. I deny that I have endeavored to prejudice breeders and owners of Holstein cattle to withhold the registering and transferring of their cattle from the said Holstein-Friesian Association of America but I admit that the Holstein-Friesian Registry Association, Inc., has presented to the REAL breeders of America a plan by which the cost of registering and transferring their cattle in the present prostrate condition of the industry will save them many thousands of dollars per annum and will furnish more prompt service than the Holstein-Friesian Association of America has apparently been able to do.

5. I admit that the Holstein-Friesian Registry Association in its formative period and since its organization has sent communications to thousands of breeders who are not and, as I believe, will not become members of the Holstein-Friesian Association of America by reason of the exorbitant charges for Membership and other unreasonable charges which would be imposed upon them and I deny that any representations have been made which are false and untrue and signed by me as Secretary of the said Association.

6. I admit that I have sent communications to various persons with reference to the organization of the new Association for the purpose of furnishing, as hereinabove stated, an economical administration of the registering and transferring of animals, confining the activities of the Association to these objects and placing the future of the Association in the hands of its members instead of the Delegate System, which to many of the members of the Holstein-Friesian Association of America, has not been accepted as satisfactory to them.

7. Answering by paragraphs the Exhibit attached to the Charges and beginning with the first paragraph thereof on the first page.

"There is a strong demand among real Holstein breeders of this country for a Registry Association which will administer the business of registering purebred Holstein cattle in a Thorough, Sane and Economical manner."

The statement there made has been accepted by large numbers of breeders, who have already become members of the new Association, as furnishing to them a Thorough, Sane and Economical method of carrying out their will and purpose.

8. "The Holstein-Friesian Association of America is not primarily a Registry Association but is rather a promoting Organization that collects money from owners of Holstein cattle in Membership, Registration and Transfer Fees and expends the money in paying high salaries and rendering free service to a preferred class of breeders."

Answering the second paragraph of the said Exhibit as hereinabove quoted.

No less an authority as to the Association being a Promoting Organization than the former \$12,000.00 salaried President in a speech before the delegates at the annual Assembly, which was held at Richmond, Virginia, on June 4, 1924, as recorded in Volume 53 of the Herd Book on page 66, referred to the Holstein-Friesian Association of America as being a Promoting organization in the following term, "I THINK WE ARE FORGETTING THE REAL PROBLEM OF WHAT THIS ASSOCIATION IS ORGANIZED FOR. IT IS PURELY A PROMOTING INSTITUTION."

Further, in Article I of the Constitution in referring to the purpose of the Association the following language is used: "AND, GENERALLY FOR PROMOTING AND SECURING THE BEST INTERESTS OF THE IMPORTERS, BREEDERS AND OWNERS OF SAID CATTLE."

The Holstein-Friesian Association of America as stated in the second paragraph of the Exhibit, has promoted various issues costing large sums of money which have been the subject of constant conflict between many of the members and the Association. The payment of salaries and the general cost of administering the affairs of the Association has caused large losses and the free service to the preferred class mentioned in said paragraph consists in part of administering the affairs of the Advanced Registry Department to those who seek such service free of charge, who represent barely 10% of the total membership, thus imposing upon the remaining members a large expense which they do not care to maintain and is a burden imposed upon them.

Further, the Association is rendering FREE SERVICE to a preferred class, as mentioned in the said paragraph, in promoting, advertising and managing sales in which the entries are restricted to the kind of cattle owned by certain members and officers.

9. "For many years this Association was managed by breeders conservatively on a small transfer fee of 25 cents and, notwithstanding the fact that it was a Promoting Organization, the Promoting, Dealing, Speculative influence was suppressed and the Breeders' influence dominated. Its net worth April 30, 1919, was over \$367,000.00."

Answering the third paragraph of the said Exhibit as hereinabove quoted.

The averments in the said paragraph are as I am informed, believe and therefore aver, true and correct. For many years previous and up until 1919 the transfer fee was 25 cents. Since that time the said fee has been advanced to \$1.50.

Notwithstanding that the majority of the members of the Association voted to reduce the fee at the Syracuse Convention from \$1.00 to 50 cents, the net worth (\$367,251.26) on April 30, 1919, as shown in Volume 41 of the Herd Book, on page 280, was correctly stated.

10. "About the year 1919 the Dealing, Promoting element gained the upper hand, increased the transfer fee from 25 cents to \$1.00, paid the President a \$12,000.00 salary and expenses and held 'Full Swing' for the next two years."

Answering the fourth paragraph of the said Exhibit as hereinabove quoted.

The statements therein contained are true and from the time the salary of the President was fixed at \$12,000.00 the organization continued to pay said salary until after the annual convention in June, 1921, as I am informed, believe and therefore aver without cessation.

The Treasurer's report for the year ending April 30, 1920, appearing in Volume 43 of the Herd Book, page 287, contains an item, "Salary, President....\$9,866.67."

In the Treasurer's report for the year ending April 30, 1921, in Volume 46 of the Herd Book, page 283, is an item, "Salary, President....\$1,166.66."

The balance of the President's salary, as the cancelled vouchers will show, was paid to him as Director of Extension. Although the Treasurer's report for the year ending April 30, 1921, lists the salary of the Treasurer, Secretary, Superintendent of Advanced Registry and Auditor, the salary paid to the President is not listed but buried, as has been publicly stated in the item of \$140,285.83 as total publicity expenses,

found in the Treasurer's report in Volume 46 of the Herd Book, page 280.

11. "Then the breeders became indignant and by means of their vote reduced the transfer fee, denounced the payment of the \$12,000.00 salary to the President and did all they could to restore the Association to its former Sane and Conservative Policy and then what happened."

Answering the fifth paragraph of the said Exhibit as hereinabove quoted.

At the Syracuse Convention, by a majority vote, the transfer fee was reduced from \$1.00 to 50 cents, as above stated, and the payment of the \$12,000.00 salary to the President, above mentioned, ceased and has not since, so far as respondent is advised, ever been paid or any part of it to the successor of the former President.

The act of the reduction in transfer fee, from \$1.00 to 50 cents, and the cessation of the payment of a \$12,000.00 salary to the President can be found in the stenographic report of the Annual Convention as it appears in Volume 46 of the Herd Book.

12. "A Special Meeting was called at St. Paul, Minn., on October 11, 1921. At this meeting the members were disfranchised by being deprived of their direct vote and since that meeting the breeders have been entirely at the mercy of the Promoting, Dealing, Speculative element."

Answering the sixth paragraph of the said Exhibit as hereinabove quoted.

As therein averred, on October 11, 1921, the right of members to vote by themselves or by proxy was taken from them. Since June, 1922, a tax of 50 cents has been levied on each transfer fee to promote the work of the State-Paid-Secretaries who devote their time largely to the promotion of the selling of cattle at public auction and sales of a State and National character where cattle have been sold at Speculative values.

Further, the Association's funds have been devoted to advertising in dairy papers those sales in which only a few members have been in any manner interested or benefited and have been thus required to pay these expenses.

13. "Fees have been increased, extravagance has prevailed to such an extent that notwithstanding the enormous increase in transfer fee, which was raised from 25 cents to \$1.00 and then to \$1.50, the Association has run behind in its operating expenses, the loss increasing each year, a total loss of over \$137,000.00 for the past three years. It is only a question of time, under these prevailing conditions, when the fees will again have to be increased or the Association go bankrupt."

Answering the seventh paragraph of the said Exhibit as hereinabove quoted.

As before stated, the amount of transfer charges are therein correctly stated and it is also true that the Association has run behind in its finances, the loss increasing each year, making a total loss of over \$137,000.00 for the last three years.

Report of Finance Committee printed on page 297 of Volume 51 shows between April 30, 1921, to December 31, 1922, a period of twenty months, "a decrease in net worth of the Association of about \$40,000.00."

The actual figures as shown by the statements of net worth are:

April 30, 1921	\$499,280.10
December 31, 1922	459,749.54
or a loss of	\$39,530.56

Report of Finance Committee for 1923 as printed on page 179, Volume 53, "a decrease in net worth of the Association of \$40,896.15."

Report of Finance Committee for 1924 as presented in pamphlet at the annual convention June 1, 1925, states "a reduction in the net worth of the Association of \$56,830.63."

Surely it follows that inevitably the organization must increase their charges or meet the result stated in the said paragraph.

14. "The total operating expenses of the Holstein-Friesian Association of America since April 30, 1919, were over \$2,664,000.00 All of this money belonged to the breeders. Less than half, or about \$1,178,000.00 has been expended in administering the affairs of the Secretary's office, where the Herd Register is preserved, certificates issued and Herd Books edited. The balance, or nearly one and one-half million dollars (over \$1,485,-

000.00) was paid out in unnecessary salaries and for other things which the breeders and the industry would be better off without, saying nothing of this enormous unnecessary tax of \$1,485,000.00."

Answering the eighth paragraph of the said Exhibit as hereinabove quoted.

The figures therein stated are the sum total of the reports filed by the Association for the five years beginning May 1, 1919.

Total cash disbursements for the year ending April 30, 1920, as shown in Volume 43 of the Herd Book, page 288	\$ 404,602.79
Total cash disbursements for the year ending April 30, 1921, as shown in Volume 46 of the Herd Book, page 283	500,855.99
Total cash disbursements for the eight months' period, May 1 to December 31, 1921, as shown in Volume 48 of the Herd Book, page 231	266,872.99
Total cash disbursements for the year ending December 31, 1922, as shown in Volume 51 of the Herd Book, page 226	442,646.51
Total cash disbursements for the year ending December 31, 1923, as shown in the Treasurer's report presented at the Annual Convention in June, 1924	586,736.22
Total cash disbursements for the year ending December 31, 1924, as shown in the Auditor's report presented at the Annual Convention in June, 1925	463,011.11
	<u>\$2,664,725.61</u>

The expense of conducting the Secretary's office for the year beginning May 1, 1919, until the year ending December 31, 1924, is found in the printed Volumes of the Herd Book as follows.

Total cash disbursements of the Secretary's office for the year ending April 30, 1920, as shown in Volume 43 of the Herd Book, page 322	\$ 181,342.82
Total cash disbursements of the Secretary's office for the year ending April 30, 1921, as shown in Volume 46 of the Herd Book, page 299	212,167.28
Total cash disbursements of the Secretary's office for the eight months' period, May 1 to December 31, 1922, as shown in Volume 48 of the Herd Book, page 247	120,362.27
Total cash disbursements of the Secretary's office for the year ending December 31, 1922, as shown in Volume 51 of the Herd Book, page 244	177,233.40
Total cash disbursements of the Secretary's office for the year ending December 31, 1923, as shown in the Secretary's report presented at the Annual Convention in June, 1924	179,774.13
Total cash disbursements of the Secretary's office for the year ending December 31, 1924, as shown in the Secretary's report presented at the Annual Convention in June, 1925	175,523.88

15. "During the same five or six years that the Promoting, Dealing Element had the upper hand, the Association had been issuing a Decreased number of Certificates. Last year a little more than one-half of the estimated natural increase of the breed was recorded. Thus the Association is rapidly approaching that state when it will cease to function. And further."

Answering the ninth paragraph of the said Exhibit hereinabove quoted.

The records of the Association show that the statements made in said paragraph are true. Below appears the number of registration and transfer certificates issued by the Holstein-Friesian Association for the year 1914-1915 to the year ending December 31, 1924, inclusive.

	TRANSFERS	REGISTRATIONS
1914-1915	66,776	67,680
1915-1916	68,766	72,665
1916-1917	75,884	73,847
1917-1918	91,528	88,279
1918-1919	97,392	90,887

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance. Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

NOVEMBER 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Paid State Secretaries Fail to Retain Confidence of the Public or the Breeders

WE have always thought, believed and talked that the breeders of Holstein-Friesian cattle were men capable of managing their own business better than the traveling Delegates of the Political Management.

Just recently each of the three leading Paid-State-Secretary sale promoters have tried to stage a state sale. Two of these events have been utter failures, and the third one has been called off.

Mr. Charles Bigler of New York who has been living off the breeders by a tax of 50 cents on every transfer fee, held a state sale at Syracuse on October 12th. Mr. Bigler tried to secure consignments to this sale from breeders living in all parts of the state and the dairy public had been informed that these sales were conducted on very high standards in every respect, also that the cattle would be healthy and of the best quality. But if this is true there must be something wrong somewhere because the average price at which cattle sold at this sale was \$130 and it would be difficult to go on the open market and buy good grade Holsteins that were fresh for this figure.

The Paid-State-Secretary sale manager of Ohio, Mr. I. D. Hadley, held a sale on September 8th at North Randall. One hundred fifty-three animals were sold at an average price of \$146 before the commission and sale expenses were deducted.

The Paid-State-Secretary and sale promoter of Wisconsin, Mr. L. L. Oldham, evidently has seen the handwriting on the wall and so called off his sale which was to be held on November 24th.

It surely must be very disappointing to the breeders of Holstein-Friesian cattle who patronize the Holstein-Friesian Association of America to think that every time they have an animal transferred they must contribute 50 cents towards the support of these disgraceful Paid-State-Secretary performances.

Chapin Resigns

IT IS reported that Mr. R. E. Chapin, of Batavia, New York, a former Director of the Holstein-Friesian Association of America, has resigned, and Mr. Harry Yates, a "Hotel Proprietor" of Buffalo, New York, was appointed to fill his place at a meeting of the Directors held at Indianapolis, Indiana, October 14th.

The reason given for Mr. Chapin's resignation as a Director was that he had leased or sold his farm or otherwise disposed of his interest in purebred Holstein cattle.

We have long felt that Mr. Chapin, being a conservative and conscientious sort of a man with a high respect for business integrity would not fit in very congenially with the element that is in control of the Holstein-Friesian Association of America.

The excuse offered by Mr. Chapin for resigning does not seem to be a sufficient excuse to cause other Directors to resign or withdraw.

In a petition in bankruptcy, filed by Mr. Bell, it was disclosed that he had lost \$1,000,000 in the last five years on his farm at Carapopolis, Pa.

Director T. E. Elder, Director H. V. Noyes, and Director James A. Reynolds to the best of our knowledge are not herd owners.

It is quite possible that Mr. Chapin has established a precedent which others might gracefully follow.

When a Poor Man's Business Becomes a Rich Man's Plaything

IT has been inferred by the management and friends of the management of the Holstein-Friesian Association of America that its Board of Directors was composed of prominent, capable and efficient men.

If we were to judge the officers of the Holstein-Friesian Association by ability to choose wealthy parents or marry fortunes and if to be able to choose wealthy parents and to marry a fortune qualified one to manage breed organizations, then surely the Holstein-Friesian Association of America should be well managed.

On the other hand, if we do not judge the Board of Officers' ability to manage a breed association from the fact that they were able to select wealthy parents or marry fortunes but judged them entirely by their conduct in office as Officers and Directors of the Holstein-Friesian Association of America, surely it would appear that they were most incapable.

When they came into control of the Association's affairs in June 1919, every department in the Association was doing an increasing amount of business from year to year. Notwithstanding that the fees charged to members for a transfer certificate was 25 cents, the Association had accumulated a large reserve fund and was known as the wealthiest, largest and most prosperous Association of its kind in the world.

Under the present controlling influence which took over the management of the Association's affairs at Philadelphia, June 1919, the transfer fees have been increased—first from 25 cents to \$1.00 and then to

\$1.50. The Association, over a period of years has continued to transact a decreased amount of business. Notwithstanding the increase in fees, which brought in additional revenue by placing an additional tax upon the breeders, the Association has been operated at a loss and this loss has increased each year during the past three years, while the amount of business transacted has decreased.

With conditions that prevail under the present management, the Association is headed for bankruptcy and will cease to function and will go out of business unless the fees charged the breeders are further increased. Therefore, we would have to conclude that a Board of Directors and Officers, composed of men who were fortunate in choosing wealthy parents or marrying fortunes, are not necessarily qualified to conduct the affairs of a purebred Registry Association in an efficient, up-to-date business-like manner.

F. L. Houghton's Warning to the Breeders of Holstein-Friesian Cattle

MR. F. L. HOUGHTON, of Brattleboro, Vermont, who has long been identified with The Holstein-Friesian Association of America, but whose attitude towards the REAL breeders' interests was disclosed when he allowed his name to go on a letter with Mr. James A. Reynolds requesting that \$93,000.00 of the breeders' money be taken from the Reserve Fund and used to promote Speculation and Politics, now sends out a letter of "WARNING" to the breeders of Holstein cattle urging them not to support their own organization which they have recently organized but to continue to pay tribute to the MILLIONAIRE-POLITICAL-DEALING Element, which has gained control of The Holstein-Friesian Association of America, and which in this instance he represents.

In his letter, Mr. Houghton makes many loose statements and assertions, none of which he attempts to prove.

He tells the breeders that they have not been disfranchised, that the wasteful extension policies, public sale promotion and the Paid-State-Secretary movement meets with his hearty endorsement and that the Association has a representative Board of Directors, when you and everyone else who is familiar with Association affairs knows that only one of the sixteen Directors is a REAL breeder and dairyman. The other fifteen are not dependent on the returns from their dairies for a livelihood. Some are Professional Politicians, others are mere Dealers and Cattle Merchants. Yet, in Mr. Houghton's statement, he says that it is a Representative Board, and he may be right at that, as it represents most everything but the REAL breeders' interests.

Further along, Mr. Houghton infers that the affairs of The Holstein-Friesian Association of America are being administered on a Sound, Business Basis, and makes particular reference to the fact that it has a Reserve Fund of some \$325,000.00 Let us visualize this one statement and see to what extent Mr. Hough-

ton is justified in stating that the management of The Holstein-Friesian Association of America is pursuing a sound, business policy.

It is true that the Association has a Reserve Fund of upwards of \$325,000.00 It is equally true that a young man might inherit a fortune of \$325,000.00, and after he had inherited the fortune immediately pursue a career of riotous living, expending all of his income from the inherited \$325,000.00 and eating into the principal each year to the extent of \$39,000.00 the first year, \$40,000.00 the second year, and \$56,000.00 the third year, and at the same time while he was expending his substance he was debauching his character and ruining his health; would we be justified in saying that this particular young man was following a career that was based upon Sound, Business Principles? On the contrary, wouldn't you and everyone else predict that he was headed for disaster?

As we have said before, it is true that The Holstein-Friesian Association of America has a Reserve Fund of \$325,000.00 or thereabouts. The DEALING POLITICAL ELEMENT that gained control of the Association fell heir to this vast reserve fund, which, of course, has been at their disposal. Let us see what has happened.

In the year 1922 the Association's operating expenses exceeded its income by \$39,000.00. The next year in 1923, the Association's expenses exceeded its income by over \$40,000.00, and the next year or last year, the Association's total assets decreased \$56,000. During this same period the transfer fee had been increased to \$1.50, which placed an unnecessary, unjust and unwarranted tax upon the breeders, and, further, during this same period every major department in the Association has recorded a decreased amount of business.

In the face of all of these facts, Mr. Houghton in his letter of "WARNING" contends that the Association is on a Sound, Business footing, and pursuing a Sound, Business Policy.

Conditions that have prevailed in the management of The Holstein-Friesian Association of America have reflected on the industry to the extent that barely one-half of the natural increase of the breed is being recorded. Realizing the true condition and trying to avert further disaster, the REAL breeders, to protect their interests and record the vast number of animals that are now going unregistered, have organized a new Registry Association based on Sound, Business Principles. This new Association has risen up to fill "A LONG FELT NEED OF THE REAL BREEDERS" and to replace the old Association in its declining days.

The REAL breeders naturally expected the DEALING-POLITICAL-SPECULATIVE ELEMENT to come out and at least make one feeble attempt of striking a "death blow" at the new organization, and Mr. F. L. Houghton has been chosen as their "Goliath," but the REAL breeders will give little heed to any "death bed promises" that might be made. They know that in the new Association their industry will be placed on a Sound, Business Basis, their pocketbooks protected and public confidence in the breed restored.

Mr. Houghton in his "WARNING" made many loose statements, apparently with the view of discrediting the new Association in the eyes of the breeders. One of these loose statements is to the effect that the Certificates of the new Association may not be recognized by the State and Federal Governments in the matter of paying indemnity. He is very careful not to make the statement that they WILL not be; merely infers that they MAY not be. He knows full well that the State and Federal Governments would have no just reason for refusing to honor the Certificates of the new Registry Association.

Again, Mr. Houghton makes the statement that the records of the new Association are not reliable. Every precaution has been taken to perfect an organization that will supervise the work of maintaining a Herd Register, issue Registration and Transfer Certificates that are reliable, dependable and trustworthy, so that the Association will not have to apologize to its patrons by printing on the face of its Certificates, as does The Holstein-Friesian Association of America, "IN NO EVENT IS IT TO BE DEEMED A GUARANTEE BY THE ASSOCIATION OF THE BREEDING OF THE ANIMAL."

Mr. Houghton's "WARNING" will be answered paragraph by paragraph in detail in the next issue of our magazine. Meanwhile, accept "THIS WARNING" as our best greetings, "BE YE NOT DECEIVED BY FALSE PROPHETS."

If you and other REAL breeders are not capable of managing your own affairs and have to entrust your business to Politicians and, as one breeder has expressed it, "BELLWETHERS," you had better go out of business.

A Dairy Marketing Project of World-Wide Importance

BEGINNING with the current seasonal year in New Zealand, a far-reaching plan for the control of shipments to overseas markets of the entire surplus of butter and cheese has been put into effect by the New Zealand Dairy Produce Control Board. From the point of view of the competitors of New Zealand dairy interests in world markets, one of the most important functions of the recently established Control Board will be that of stabilizing the shipment of produce. The aim of the New Zealand producers is to establish a steady and sustained demand by spreading the supplies more evenly throughout the year.

Tentative arrangements for the shipment each month of certain percentages of the coming season's production are now made public by the Board, with the explanation that the Board "considers its dissemination to be in the interests of the dairy industry."

During the months of August, September, October and November all butter and cheese is to be shipped as promptly and regularly as possible. December and January 5% of the estimated season's production is to be withheld, with the addition of 2% in February and 1% in March. Then in April 1% is to be added to the amount of butter produced for shipment, in May

2%; in June 3% and in July 4½%. Five per cent of the estimated seasonal production of cheese is to be withheld from the market for the months of December and January, and an amount varying according to circumstances, from 1½ to 2% for the months of February and March. The accumulation is to be marketed during the months of June and July, 5% in the former months and from 6 to 6½% during July. The monthly production of each commodity has been figured out for the year. We notice that the Board of Control experts say that more than 42% of the butter New Zealand produces is manufactured during the three months of November to January, and 45.6% of the cheese, while only 1.86% of the butter is produced during the two months of June and July and only .58% of the cheese during the two months of July and August.

In its official announcement the Board says, "It will be seen that during the six months, October to March, inclusive, 76.40 per cent of our season's butter is manufactured and 77.27 per cent of our cheese. Ample evidence is available that if supplies were spread more evenly throughout the year a steady and sustained demand could be established. To assist in this, the board has tentatively decided during the forthcoming season to arrange for shipments on the basis outlined above. This course can be taken safely without risking the quality of the produce."

This ambitious New Zealand marketing project will be attentively watched by the entire dairy industry and by all coöperative organizations selling agricultural products. The project is national, being backed by the Government and controlling the entire dairy output of the two islands. The quality of the exported product is maintained by rigid inspection. But it remains to be seen how the Board of Control will allow for variation of dairy production caused by weather vagaries, as a favorable season will increase the amount produced and an unfavorable season diminish the quantity to be exported.

Worth While Having

PRODUCED for circulation among dairymen shipping to Pittsburgh, a booklet entitled "Clean Milk, How to Produce It," is worth reading by every man who ships the product of his herd in the form of fluid milk.

"Milk and its products are human foods. It is worth while for the milk producer to be clean in his methods, both for the sake of his conscience and for the sake of his bank account. Dairy farmers profit most by producing clean milk. Almost half the milk produced in the United States is used as fluid milk. As long as the consuming public can be assured of getting good, clean, wholesome milk they will continue using more of it.

"Clean milk is not milk with the dirt strained out of it. Clean milk has never had dirt in it."

The booklet gives information on the control of bacteria and gives valuable advice as to care of premises, animals, products and utensils. It should prove a valuable addition to any dairyman's library and is distributed by the Pittsburgh District Dairy Council.

Pioneer Breeder Favors New Association

PRACTICALLY all the men who belonged to the Holstein-Friesian Association of America in its earlier days or to the two associations which were merged together to make that one, believe in the present Holstein-Friesian Registry Association, Inc. The secretary of the new association recently received a letter from the veteran breeder, J. R. Beuchler of Leesburg, Va., who purchased his first purebred Holstein females in the fall of 1880. He had had at least one purebred bull before that time. He became a member of the old Holstein Breeders' Association of America and his membership certificate was numbered 15. The act incorporating that association had been passed May

J. R. BEUCHLER,
of Leesburg, Va. The oldest living Holstein-Friesian breeder of the South.

27th of that year so that with the exception of the incorporators Mr. Beuchler was one of the earliest members.

Mr. Beuchler was the second man in Virginia to have a purebred black and white herd. When selecting his animals he visited most of the leading herds of that earlier day and saw many of the animals which we now term the originators of famous families.

Cattle from the Beuchler herd founded many herds in the southern states. Probably no establishment was responsible for a wider distribution of black and white cattle in that territory. Mr. Beuchler was an active Holstein breeder until a few years ago and one of his sons now owns a large Holstein dairy at Atlanta, Georgia. In our July 22d issue we touched on the interesting career of this old Confederate soldier, sterling dairyman and pioneer Holstein breeder.

In his letter to Secretary Reynolds this grand old dairyman, now 86 years old, says, "I am glad to see by late reports in the HOLSTEIN BREEDER AND DAIRYMAN that your efforts are meeting with success. Though I am sorry to see that our old association seems doomed—something had to be done—therefore I wish you success."

President Coolidge says: "Mere intellectual power and scientific achievement without uprightness of character may be more harmful than ignorance. Highly trained intelligence continued with disregard of fundamental virtues, is a menace."

Maryland Boys Win National Judging Contest

MARYLAND has the right to be proud of her boys' judging teams. Twice teams representing Maryland have defeated all contestants for the national championship and have journeyed to England and won the *Daily Mail* Gold Challenge Cup. This year Maryland boys again defeated all competitors at Indianapolis. The team was made up of the boys standing highest in a contest held the first day of the Maryland State Fair. These were Stanley Sutton of Kent County; Ralph Walker of Montgomery County; Arthur Dunnigan from Harford County, and James Almony from Baltimore County as alternate. It was possible to score 4,000 points and the Maryland team was credited with 3,767 points. Teams from 23 states competed in the contest. Arthur Dunnigan was high boy with a score of 1,294 points.

The team traveled to Indianapolis in an automobile and were in charge of their trainer, W. C. Snarr, county agent for Montgomery county, who also trained the two previous teams that captured the highest honors for Maryland.

Violation of Filled Cheese Law

THE Internal Revenue Bureau through the good work of special agents operating in Jersey City has uncovered what seems to be a flagrant violation of the Filled Cheese Law, almost the first case of the kind brought since the law was enacted more than thirty years ago. The case is against the firm of Silberman Bros., charged with manufacturing a substance made from powdered milk, water and coconut oil, which they sold as cream cheese without taking out a license or paying an internal revenue tax. Great care was taken by the Internal Revenue Bureau in acting on this case to secure the evidence and to make the seizure of the plant in operation, so that there seems to be no question as to either the facts or the guilt of the parties. All the personal property of the firm was libelled for confiscation, the plant was padlocked, and it is expected that criminal action for conspiracy to defraud the Government out of the tax will be brought against the proprietors. The procedure in this case is identical with the procedure which is required under the Oleomargarine Law when there is a violation of that law. Further action in the Silberman Bros. case is in the hands of the Department of Justice, represented by the Federal District Attorney.—*National Dairy Union*.

A Mere Suggestion

THE HOLSTEIN-FRIESIAN WORLD and the Paid-State-Secretaries have been so well schooled in selling the breed promotion idea from a speculative standpoint that the Holstein field has been pretty thoroughly "overworked." We would suggest that this "outfit" before they contemplate going out of business, get in touch with the Silver Fox promoters and see if they cannot sell their services.

NOT ABOUT COWS

Taking the "Work" Out of Housework

WHETHER women like it or not the fact remains that many more of them are doing their own housework than ever before. In both city and country the same conditions prevail—domestic help simply cannot be obtained. The apparently more attractive lines of labor have allured working women from the more commonplace jobs. And even though so many women are now engaged in this sort of work they are by no means reconciled to it, having a distaste for it that creates a discontent with their lot in life. They look at women engaged in other kinds of labor, and knowing nothing of the objectionable features of such work they sigh and envy. If, instead, they would give themselves and their work a little fair treatment it might mean more contented minds and better-kept homes.

FALSE SYMPATHY

One has so often heard that "man's work is from sun to sun, but woman's work is never done" until we really believe it. Is it true? Isn't it a fact that men take up each morning the work that was laid aside unfinished the night before? All the haying on the farm is not done in one day, nor is every business proposition closed the day it is begun. Isn't it also a fact that too much unnecessary sympathy has been lavished on woman's lot in life and not enough on man's? This has engendered a certain atmosphere of self-pity in some women and has taken much of the joy out of the work and pleasure of their lives. Before any fair comparison can be drawn between the working hours of men and women, the latter should try putting in the same number of hours that a man does and with the same concentration. Then they should stop and leave the rest until the next day. It will keep and there are other days coming. There is not the least intention to belittle the work that falls to the women of the country, but merely an effort to look the matter squarely in the face, and to get rid, if possible, of that self-commiseration which seems to be the misfortune of many women compelled to assume the many duties of housekeeper and homemaker. Women often forget the time spent in social converse, even in the morning, when some neighbor drops in for a chat, or where an errand takes them from home and they linger instead of returning promptly to their work. Why should a woman be pitied for having to bake cookies at five o'clock in the afternoon when she spent the morning hours in social chat with neighbors and passersby? Yet just such cases have been known. Why should a housewife feel injured because, on the very day that she happens to have an unusually hot and busy day in the kitchen, her husband happens to be able to take a day off and go hunting or fishing. Then is when she should recall the afternoons she has spent pleasantly while he has been at his daily grind.

PSYCHOLOGY IN HOUSEWORK

All this is by way of emphasizing the first way to take the work out of housework. Approach it in the right frame of mind. Get rid of any lingering idea that one who does it is a subject for pity. And remember that the other member of the firm is working hard every day too. This driven-to-death feeling doesn't help one bit with the actual work, but it does spoil much enjoyment of it. Very, very often it is not the actual physical labor that distresses the worker but the rebellious distaste for the work.

THE DIGNITY OF HOUSEWORK

There is a dignity about labor well done. People are getting entirely away from that old idea that to work with the hands is a disgrace. The only disgrace is when work is poorly done. The glory of the American woman of to-day is the fact that she can do the most menial tasks for her loved ones in her own home and yet can take her place among the social and intellectual leaders of her own circle, many of whom probably have been similarly engaged. There is no necessary antagonism between brains and housework. If there is such, it has been created falsely by those who should know better. In no work that falls to the lot of women is there greater need for brains than in the running of her household. To many, housework has appeared as a thing to be endured, to be gotten through as soon and as easily as possible, that their attention may be turned to something else. It should have all the dignity of regular employment and should be regarded as seriously as the man of the house regards his position of trust, whatever that may be. The average man and certainly the successful one takes his business seriously. His part is to make the money that keeps the household going. Woman's part, and just as important, is to run that household so that it has a maximum of comfort on a minimum of expense. What more dignified occupation can women desire? Taking orders from no one, responsible to no one but themselves, their own estimate of their work marks its standing among the occupations of women.

MONOTONY OF HOUSEWORK

No housewife will deny the monotony of housework, and few of them but have had days when everything went wrong and their one desire was to get as far away from the scene of trouble as they possibly could. The daily grind has gotten on their nerves so that it seems impossible to endure another day of it. They think of the school teachers, the stenographers or the clerks in the store with a feeling of envy for the easy work they have to do, never realizing that all these working women have been driven to that same rebellious feeling by the monotony of their work. Of course, it is just human nature when things go wrong to feel that we have a monopoly of trouble.

(Concluded in our next issue.)

THE PRACTICAL DAIRYMAN

VENTILATION IMPORTANT IN BARN CONSTRUCTION

By R. L. PATTY

Department of Agricultural Engineering, South Dakota State College

Careful installation of the ventilating system in farm buildings should have the consideration of every farmer who is contemplating construction of new barns this fall. For satisfactory results a ventilating system must include aerators or cupolas on top of the building and flues for bringing in fresh air and discharging foul air.

Fresh air flues should open from the outside, near the foundation, carry up on the inside, and open out into the stock barn high enough to avoid drafts on the livestock. They should be provided with check dampers to regulate the inflowing air.

The foul air flues should begin two or three feet above the floor of the barn and carry up to the cupolas with as few turns as possible. They should be made as smooth inside as it is possible to construct them and where they pass through a cold hay loft they must be insulated from the cold. If the flues are to carry up along the outside wall, they should be built separately and installed on ties inside the studding and rafters so that they will not touch the cold outside wall at any point.

In barns equipped with good ventilating systems, the herdsman can shut the building up tight on cold nights, adjust the ventilating system and be assured that there will be a quiet circulation of fresh air throughout the building without a direct draft on the livestock. The temperature of the building can also be kept more nearly uniform throughout the 24 hours. This is especially true of well constructed buildings.

Frost and moisture which collects in non-ventilated buildings can be controlled to a large extent by the use of ventilators. The excess moisture in a ventilated building is carried out through the cupolas before it is allowed to condense. No ventilating system without rather elaborate insulation will absolutely prevent the deposit of moisture and frost in the stock barn.

DAIRYMEN NEED COOLING TANK

By A. L. HAECKER

Every farmer who milks a few cows should have a cooling tank of some kind. It makes little difference whether he patronizes a creamery, cheese factory, sells milk or keeps it for his own use; a cooling tank is a necessity.

Why not capitalize the great storehouse of cold which lies in the ground? This can be done by simply passing the water designed for livestock through a tank which will serve as a refrigerator for all products which need chilling. Well or spring water in most of the dairy states has a temperature varying from 55 to 65 degrees, F. This is about as cold as the average domestic refrigerator. By utilizing this cold water to chill down the milk, cream or other products we are getting refrigeration at the lowest possible cost.

Millions of dollars are lost annually to the cow-keepers of this country purely on account of the neglect of milk and cream while it is held at the farm. Butter and cheese would be greatly improved if every patron used a cooling tank. As a matter of convenience it is worth while for every farmer to be thus equipped, for it is necessary to have a place to keep the milk and cream, and where a refrigerator can be put into use the housewife will find it very efficient and convenient.

A cooling tank is needed in both winter and summer; in winter to prevent freezing and to retain the cream or milk at a uniform and favorable temperature, while certainly in summer it is needed to prevent extreme souring and the development of undesirable flavors. Cold is a wonderful preservative. We are told that the prehistoric mammoth has been preserved in the ices of the polar region for fifty thousand years. When dairy products or perishable foods are kept at a low temperature,

decomposition is retarded, and with dairy products this means much in the way of better quality and price. A can of cream kept in a good cooling tank is worth a dollar more than the same can kept outside and exposed to the heat of average summer weather. The producer is more interested in this dollar than anyone else. He may not feel he is losing the dollar simply because he gets the same price for his product, but this is only a temporary condition; the industry is losing the dollar and he is the most important and biggest part of the industry. As a matter of satisfaction it should be worth while to turn out a good product when it is nearly as easy to do so.

The grading of cream and paying a differential for quality is rapidly coming into general use. In a little while the cream producers will either have to get cooling tanks or suffer a big loss due to producing second grade cream. The cooling tank is sound, sensible, economical, and demanded by decent and progressive farming methods, and we should all be for anything that has so much merit.

FITTING FOR FRESHENING

By R. H. OLMSTEAD

All good dairymen agree that successful feeding of dairy cows does not begin after a cow freshens. If a cow is to do her best and is to respond to good feeding she must be put in a good condition before freshening. Then, too, cows that have the ability to give large amounts of milk often produce this milk at the expense of certain materials in their bodies. If a cow is to come up to her normal production during her next milking period these materials must be stored back in her body. The time to do this is during the dry period which should last from six to ten weeks. If a cow freshens in a thin condition or is given no rest period she will not produce her normal amount of milk. A cow that is fitted to a good working condition soon pays for the feed fed to her while dry and also pays a larger profit on the feed consumed while milking than the cow that freshens in a thin condition.

The fitting ration should vary somewhat from the regular feeding mixture. With alfalfa or clover hay and silage 200 pounds ground corn, 200 pounds ground oats, 100 pounds wheat bran, and 100 pounds linseed oil meal will make a good ration. If a poor grade of hay is being fed then equal parts of corn, oats, bran, and oil meal should be used. If the ration proves a little laxative, some of the oil meal may be omitted.

The amount of these grain mixtures to be fed will vary from five pounds per day or more depending on the appetite of the cow and her condition.

The day previous to freshening this ration should be taken from the cow and she should be given a good bran mash. This will clean out her digestive tract and cool her system preparatory to freshening.

A GENTLE REMINDER OF WINTER

By JOHN A. CONOVER, Maryland Dairy Specialist

The first frost of the year is here, and brings a gentle reminder that winter will soon be upon us. Here in this climate we will have many sunny days and along with them many cold rainy ones before winter actually sets in. This is one of the worst seasons of the year for the dairy cow. She is not yet fully prepared for winter in the matter of coat, and many times has not been receiving adequate feed for such extreme changes in temperature.

Dairy cows exposed to cold rains will materially shrink in milk, so it behooves every dairyman to see to it that his cows are not exposed to such inclement weather as we can expect to have from now on.

Many of the cows in Maryland will freshen during the next two months, and these should receive special feed and attention so that they will be in good flesh when the time comes. Nothing is better than alfalfa and clover hay with corn silage and a mixture of corn, oats, bran and linseed oil meal. A few days before freshening cut out the corn.

AN OPPORTUNITY TO OBTAIN BIG PRODUCING DAIRY COWS

On November 14th at the well-known breeding establishment, Merryall Farms near Wyalusing, Pa., will be held a sale of purebred Holstein-Friesian cattle. This sale will be entitled the Eastern Bradford Quality Sale because of the character of the cattle in the sale and the fact that they come from accredited herds. Thirty-five of the animals are big producing dairy cows, fresh or near-by springers. They are a young bunch only two or three being more than six years old, so that the purchaser can expect to have many years of usefulness and profit from them. About half a dozen are daughters of King Onyx Pledge Ormsby, a son of the famous Ormsby Lilith Clothilde from Onyx Pledge Segis, 27.83 lb. butter, 626.9 lb. milk in seven days as a junior four-year-old. Continued on long time test she produced 19,851.8 lb. milk, 789.3 lb. butter in ten months. She is one of a number of great daughters of Onyx Pledge Dawning, a cow that made a seven day butter

TRAVERSE ECHO SYLVIA KING

His dam made 33.27 lb. butter in 7 days and averaged 102 lb. milk a day for 30 days. Owned by A. L. Burlington & E. P. Kennedy & Son, Wyalusing, Pa.

record of 32.24 lb. and a year record of over 1,100 lb. butter from 26,927.5 lb. milk. This record was made in strictly official test. Onyx Pledge Dawning, her five daughters and one of her sons were sold at public auction and were struck off for a total price of \$10,680.

Ormsby Lilith Clothilde is a brother to Ormsby Korndyke Lad and King Segis Pontiac Count. His dam, K. P. Lilith Clothilde, produced 1,043.27 lb. butter in a year, 22,229.8 lb. milk, world's record at the time of making.

These daughters of King Onyx Pledge Ormsby are bred to King Ormsby Crijntje, a son of King of the Ormsbys and Lady Pietertje Trijntje Segis, 30.40 lb. butter in seven days; 971.86 lb. butter, 21,627.5 lb. milk in a year.

In the sale there will also be a few young bulls. One of

these is sired by Berylwood Prince Aaggie Chicago, son of the great California sire, Prince Aaggie of Berylwood and of Hartwood Nederland Segis, 1,146.95 lb. butter, 27,018 lb. milk in a year and 2,273.85 lb. butter, 53,669 lb. milk in two successive year tests.

There are two or three of the young bulls by Traverse Echo Sylvia King who now heads the herds of A. L. Burlington and E. P. Kennedy & Sons. These Holstein farms join and both establishments are on the accredited list. It would be impossible to take time or space to give all the records behind Traverse Echo Sylvia King. We need only say that his dam made over 30 lb. of butter in seven day tests two different years, that she has produced 33.27 lb. butter, 736.4 lb. milk in seven days and averaged 102 lb. daily for thirty days. She has six tested daughters, one of which has made 35 lb. of butter in a week and another above 32 lb. Her dam is the famous Traverse Princess Inka, considered to be one of the greatest transmitting cows ever in the state of Michigan.

Traverse Echo Sylvia King was sired by Echo Sylvia King Model, a son of Champion Echo Sylvia Pontiac and Belle Model Pietje, 36.13 lb. butter in a week, three times over 33 lb. butter in seven days while her dam two different years made over 37 lb. butter in seven day test.

The three nearest dams of Traverse Echo Sylvia King have records that average 33.03 lb. butter. His seven nearest dams average 32.72 lb., his ten nearest 33.67 lb. and his fourteen nearest 30.175 lb. In addition he is a very handsome animal and sires splendid stock.

Merryall Farms is owned by A. L. Burlington and is situated on an improved road running from Wyalusing to Camptown, Pa. Everything will be done to insure the comfort of the visitors on sale day and anyone in search of good cows or of a fine young bull should attend the Eastern Bradford Quality Sale on November 14th. Wyalusing is on the Lehigh Valley Railroad and is readily accessible from all directions.

HOW WOULD YOU LIKE IT?

How would you like to be compelled to do hard labor; how would you like to be compelled to pitch hay all day—on a diet of lettuce? Pitching hay is hard work for a human. Making milk is just as hard for a cow. A cow producing 4.6 gallons of milk a day works harder than a team of horses doing farm work. A team works ten hours a day for five or six days a week. That requires energy. A dairy cow works twenty-four hours a day seven days a week. That, too, takes energy—energy to convert food into milk. We don't expect a man to pitch hay on a diet of lettuce, nor do we expect a team to work hard on a diet of straw; then why should we expect a cow to make milk on a diet of poor grass?

Moral: Feed cows grain when they are on pasture. It pays. The full milk bucket proves it.—Blue Valley Bulletin.

A Ton and a Half of Pork from One Litter in 180 Days Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

DAIRYMEN'S LEAGUE NET POOL PRICE

The net pool base price for milk delivered during the month of September announced by the Dairymen's League Cooperative Association is \$2.215. This is the basic price for 100 pounds of 3% milk at the base zone 200-210 miles from New York City.

With the exception of September, 1921, when the prices received for fluid milk and also all the lower classes were somewhat higher, this is the highest September pool price since the League was formed. The present price is 11½ cents above August and 37½ cents higher than the September price a year ago.

This improvement in the League farmer's milk returns through his Association is due, according to the official statement, principally to an increasing percentage of fluid milk sales, especially in the Association's own plants and a general improvement in the efficiency of its plant operations.

The sales statement for August issued at this time shows that the total sales of fluid milk through the League's own plants amounted to \$1,927,562.83 or about 91% of the total sales of all milk products including fluid milk from League plants during the month of August. The total amount of fluid milk sales through the League's own plants in August 1921, the first year of the pool, was only \$174,791.87.

During the month of September the Association marketed as fluid milk and as by-products, a total of 170,230,408 pounds of milk of which 52,152,024 pounds were marketed through the League's own plants. According to the League statement there was a considerable surplus above fluid demands due largely to late favorable pasture conditions and good after feeding. This surplus was disposed of readily in various by-product forms depending on the market needs.

The condensed general balance sheet for the month of August shows total assets of \$18,550,535.84. The total amounts of certificates of indebtedness issued up to April 1, 1925, including deductions since that date up to and including August for which certificates will be issued next April, is \$12,381,173.62.

COMING ANNUAL MEETING OF NATIONAL GRANGE

The 59th annual meeting of the National Grange will be opened November 11th in the hall of the House of Representatives in the State Capitol at Sacramento, Cal. The deliberations of this meeting will continue in unbroken sequence the work and influence of this great national organization of farmers for the benefit of the nation and the improvement of its agricultural life and business. National Master Louis J. Taber will preside. Hon. C. M. Freeman of Tippecanoe City, Ohio, will act as Secretary for his 23d consecutive session. Every Grange state will be represented by the State Master

and his wife, which group makes up the voting membership of the National Grange, and by such Fourth Degree members as may wish to attend. The deliberations of the body will last ten days and will cover many phases of agricultural economics and statesmanship.

The report of the Washington Representative, which will be considered at either the second or third day's session, will graphically picture the farmer's views of the activities of Congress and the administrative departments of the Government during the past year. It is expected that state reports will show that the Grange maintained its membership during the year and made a steady and normal growth. The voting delegates who make up the official body are really representatives of and speaking for nearly a million farmer members.

Matters of internal interest in the Grange to be passed on at this meeting include election of officers, the possibility of increasing the income of the Grange, possible expansion of Grange publications and increased activity in Grange extension.

RAILROADS AND THEIR RATES

The railroads are continuing their campaign for increased returns by petitioning the Interstate Commerce Commission for an increase in rates for carrying United States mail.

The general freight rate case will be again before the Commission in Chicago on October 26th with continued hearings at Denver, Colo., San Francisco, Cal., Minneapolis, Minn., Dallas, Texas and Kansas City, Mo., at intervals up to January 4th. Details relative to these hearings can be secured from the Secretary of the Interstate Commerce Commission, Washington, D. C.

Careful tests which recently have been made at the Government Experiment Farm, Beltsville, Md., show that neither the size or shape of an egg, the size of the yolk nor the water content bear any relation to the sex of the chick hatched. The average hatching test shows that whatever the shape of the eggs used, the result will be about 50 per cent of each sex.

A farmer had an Irish lad in his employ and hearing that the previous day he had been attacked by a bull, the farmer went to find him. "Hello, Pat," he said. "I heard you had an encounter with a bull yesterday. Who came off best?"

Pat scratched his head and grinned. "Sure, your honor," he said, "it was a toss up."

The convicted man had just received sentence and was being led out. "You poor man!" said a sympathetic woman near the door. "Is there anything I can do for you?"

"No, mum," replied the prisoner, "unless yer'd like to do this three years."

LAST CALL FOR

BROWNWOOD HERD Dispersal to be held at Brownwood Farms, North Bloomfield, Ohio, November 12th.

Eastern Bradford Quality Sale to be held on the A. L. Burlington Farm, Wyalusing, Pa., November 14th.

RECENT WISCONSIN HOLSTEIN SALES

A crowd of over 150 attended the annual fall sale of purebred Holstein cattle and Poland China swine held at the Columbia County Farm, Wyocena, Wisconsin. Superintendent S. C. Cushman, manager of the farm, acted as auctioneer and sold six yearling bulls, three cows, four heifers, twenty-two boars and seven gilts. The young bulls averaged \$133.66, the lowest price being \$100, the highest priced one bringing \$175 and going to Will Wagner of Madison. The highest price cow only brought \$125 and went to A. E. Wolfgram of Poynette. The heifers sold well compared to the cows.

Mr. Wolfgram purchased a brood sow with eight pigs about a week old for \$110. The gilts averaged \$39 and the 22 boars averaged \$43.66.

At the consignment sale of the Richland County Holstein Breeders, October 21st, at Viola, Wis., fifty-seven head of purebred Holsteins including calves and young stock averaged \$110.50. A cow from the Lawton herd brought \$200 and a young bull from the A. A. Thomson herd brought \$125. The report says that a large crowd attended the sale and that bidding was quite spirited.

JEROLD-JEAN HERD DISPERSAL

A lady buyer, Mrs. Florence L. Heberding of Canfield, Ohio, paid the highest price, \$365, at the Jerold-Jean dispersal, held October 17th, at the Canfield fairgrounds. She obtained Greendale Viola, a six-year-old that had taken second prize two different years at the Ohio State Fair, and has a record of 787 lb. butter, 18,381 lb. milk made in a year.

Kittle Brothers, of Holland, paid \$300 for King Aaggie Hengerveld Daisy, a four months old son of King Aaggie Concordia. He was a very typy animal and the bidding on him was spirited.

The former world's champion and show animal, Jennie Grant Aaggie, brought \$250. She had been badly burned in the fire. B. Antonuci of Youngstown, bought her with four other animals.

The sale average was just under \$133 as 37 animals, which included a number of youngsters, brought \$4,917.50. The buyers included: C. A. Baer, of Canfield; C. L. Briggard, R1, Warren; W. L. Bretz, R1, Youngstown; John Koleszar, R2,

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

BROWNWOOD SALE—IMPORTANT

In the advertisement appearing on the cover page of our October 22d issue, the address of the Brownwood Farms was given as North Trumbull, Ohio, when it should have been North Bloomfield, Trumbull County, Ohio. The correct address was given in the second and third lines of the advertisement and also in the article mentioning the sale which appeared on the sale page. As many readers of the BREEDER AND DAIRYMAN will wish to attend the Brownwood Herd Dispersal we are making this correction in order that there will be no mistake in the address.

The Brownwood Herd has been producing certified Holstein milk for some time, but a shift in market conditions compels the dispersal of that Holstein herd. To produce certified milk a herd has to be healthy, not only free from tuberculosis but also from all other bovine diseases. Therefore, those who purchase cattle at the Brownwood Sale can depend upon getting healthy animals.

The Brownwood Herd has been built up by the selection of good foundation animals, the use of good sires and the culling of all animals that did not reach the high standard set by the owner, Alex C. Brown, and Superintendent Fred M. Mack.

The present herdsire, King Valdessa Pontiac Gem, is a son of King Valdessa Pontiac and Pabst Cynthia with a record of 38.31 lb. butter in seven days and 764 lb. butter in ten months from more than 16,000 lb. of milk. Pabst Cynthia was by King Pontiac Champion and from a cow that made 29.61 lb. butter in seven days averaging 96 lb. milk daily and that produced in a year over 800 lb. of butter and more than 20,000 lb. of milk.

Animals bought from the Brownwood Herd have made good in the hands of ordinary dairymen who sell market milk, the strongest recommendation that anyone can give. Remember that the sale date is November 12th, the day after Armistice Day, that the sale will start at 1:00 p. m. and that the address is Brownwood Farms, North Bloomfield, Ohio.

EASTERN BRADFORD QUALITY SALE

A sale of choice dairy Holsteins will be held on the A. L. Burlington Farm near Wyalusing, Bradford County, Pa., on November 14th. The Burlington or Merryall Farm was formerly the establishment of C. W. Newman now postmaster at Wyalusing. When Mr. Newman obtained his present position he sold his farm to Mr. Burlington who also purchased part of the herd.

The advertising columns tell something about the bloodlines behind the stock that will be offered. The ad, however, does not say enough about the quality of the cattle. They must be seen to be appreciated. The place to see them is at the farm on sale day. Men who know cattle and who have been Holstein breeders for many years have seen the animals that will be offered at public sale on November 14th and recommend them very highly. Therefore we have no hesitation in passing this recommendation along to our readers.

DR. HOGG'S DEATH POSTPONES MARETOR SALE

A letter coming to the desk of the editor informs us that the Maretor Herd Dispersal was not held on October 29th. We regret to report that Dr. E. Hogg, the owner of the herd, died suddenly on the evening of October 28th and consequently the sale was called off for the time being.

Dr. Hogg was well known in Northern Pennsylvania as he practiced veterinary medicine in Wilkes-Barre for many years. He was prominent in a number of veterinary societies and so had a wide circle of acquaintances which mourn his loss. He has been interested in the dairy business and purebred Holsteins for many years and came into special prominence when he purchased the well advertised bull, Radium, a maternal brother to May Echo Sylvia, and a New York State Fair grand champion show bull.

Why Not Get a "Go-Getter" to Officiate as Auctioneer at Your Sale?

You want results and not promises from your auctioneer. My record at sales in the past speaks for itself.

Among a large number of satisfied customers that I have served is Mr. Henry Carpenter of Wayne, Mich. Read what he has to say:—

Dear Mr. Mead:—

I think that you are a capable auctioneer. If I were to have a dozen sales my choice would be Mead.

You did good work from beginning till end at my sale, and the results were more than satisfactory.

I would recommend you to any one who is considering having a sale.

Very truly yours,
HENRY J. CARPENTER.

GLENN R. MEAD

(Continued from Page 665.)

	TRANSFERS	REGISTRATIONS
1919-1920	131,823	114,503
1920-1921	128,615	127,850
1921 (Eight months)	60,364	65,808
1922	91,830	113,772
1923	91,666	115,132
1924	87,680	110,910

These figures can be verified by referring to the report of Secretary F. L. Houghton as it appears in Volume 53 of the Herd Book and in Secretary Houghton's printed pamphlet report presented at the Annual Convention in June, 1925.

Secretary Houghton's report for the number of transfer and registration applications received since the close of the fiscal year, December 31, 1924, as they appear in The Holstein-Friesian Register, edited and published by Secretary F. L. Houghton, shows a further decrease for the first six months of the current year in the numbers of Applications for registry and transfer, as the figures taken from the July 15th issue of that magazine will show.

APPLICATIONS RECEIVED

Months	Registrations		Transfers	
	1925	1924	1925	1924
Jan.	10,766	12,473	8,366	9,327
Feb.	11,104	11,961	7,256	8,450
March	11,647	12,287	8,167	8,520
April	8,091	9,255	6,963	7,522
May	7,921	7,737	7,083	7,612
June	7,687	7,037	7,782	7,005

The statement, "Last year a little more than one-half of the estimated natural increase of the breed was recorded," is based upon the average increase of the breed for a five years' period, from 1915 to 1920.

The average yearly increase in number of registrations for the years 1915 to 1920 was 11,037. By taking this as a basis on which to estimate the average yearly increase in registrations it is possible to estimate the number of registration certificates that the Association should have issued during the years 1921, 1922, 1923 and 1924 and by using these estimate figures we can determine approximately to what extent the Association is failing to perform the service for which it was originally intended, namely to register and transfer Holstein-Friesian cattle to maintain the purity of the blood.

If we study the number of transfer certificates issued by the Secretary each year for the twenty-four year period, from 1900 to 1924, we find there has been an increase in the number of certificates issued each year with the exception of the single year, 1911-1912. Since 1920 and including the past year, 1924, there has been a decrease in the number of transfer certificates issued each full year.

16. "If it is profitable to expend over \$2,664,000.00 in five years to register and maintain the purity of the blood of barely more than half of the natural increase of the breed, the balance going unrecorded, surely it is a great calamity to allow one-half of the purebred Holstein cattle raised in this country to be lost to the breed by failing to have them properly registered and transferred."

Answering the tenth paragraph of the said Exhibit hereinabove quoted.

This paragraph arises from the fact that thousands who are not members of any Association cannot afford to pay the present charges of the Holstein-Friesian Association of America and are seeking and have sought to become a member of an organization which will confine its operations to the registering and transferring of cattle; who are not interested in the various expensive and extravagant projects now absorbing the larger part of the Association's finances.

In addition to this there are hundreds of breeders who are members of the Holstein-Friesian Association of America who are seeking relief from the enormous expense of registering and transferring cattle, the prostrate condition of the business, compelling the utmost economy by the REAL breeders of the country in the transaction of their business and hence many cattle have not been registered and transferred in such manner as to entitle their progeny to registration. This is a dis-

ting loss to these breeders as well as to the breed itself and to dairymen generally.

17. "The breeders of Holstein cattle have arrived at a time in the history of the industry when they must replace their Registry machinery with New, Modern, Up-To-Date, Efficient equipment. They must save the enormous loss which they are sustaining each year from the fact that practically half of the natural increase of the breed is going unrecorded and, further, they must save the unnecessary expense that has amounted to nearly one and one-half million dollars in the past five years.

Further, if the members and present owners of purebred Holstein cattle are refusing to patronize the present Association to the extent that only a little more than half of the natural increase of the breed is now being recorded, can they ever hope for prosperity to return to the industry until this objectionable feature has been removed?"

Answering the eleventh paragraph of the said Exhibit hereinabove quoted:

The discontent of the large part of the membership of the Holstein-Friesian Association of America with the machinery for the registering of cattle and the delays instant thereto seem to be convinced that resort must be had to efficient conduct of the registering and transferring of cattle and the expense therein alluded to as amounting to nearly one and one-half million dollars in the past five years is the total as shown by the records of the Association.

18. "The purebred cattle industry is of sufficient importance that the breeders and dairymen cannot allow their business to be jeopardized by leaving such an important matter as maintaining the purity of the blood of the breed in the hands of "OUTSIDERS"—Promoters or Cattle Merchants, who, having no equity in the cattle, may raise fees at will or conduct the Registry Association in such a manner that it reflects unfavorably upon the industry."

I am informed, believe and therefore state that there are some of the Directors who are not the owners of purebred Holstein-Friesian cattle, who with others have had and still have in their power to raise the fees in such manner as to reflect unfavorably upon the industry by reason of the excessive character of the charges for registering and transferring cattle.

These Directors have no personal and direct loss to sustain in the administration of the Association's affairs and the Holstein-Friesian Registry Association, Inc., aims to place the affairs of the Association in the hands of the REAL breeders who must maintain the expenses of the organization and the conduct of their business.

20. "What the breeders and dairymen demand is a Registry Association operated on Business Principles, with a Business Form of Government, where every member has a right to a direct vote in making By-Laws, fixing fees and otherwise formulating the policies of the Association, an Association that confines its activities to maintaining a Herd Register, that issues registration and transfer certificates and leaves the breeders free to cooperate with the Agricultural Colleges and Dairy Extension Departments in carrying out breed promotion work."

Answering the thirteenth paragraph of the said Exhibit hereinabove quoted.

The Constitution of the Holstein-Friesian Registry Association, Inc., provides as follows:

"The essential purpose hereby expressed is to preserve forever hereafter the right of the active members of this organization of the first and second classes to control it by voting in person or by proxy and this form of Government shall not be changed, excepting by the unanimous vote of the active members and at no time hereafter shall this right be limited or abridged."

No part of the work of the new organization met with more enthusiastic approval than that hereinabove recited which restores a Democratic Form of Association Government and places in the hands of REAL and active breeders the future of this organization.

Those interested in the launching of the new enterprise realize that its Constitution and By-Laws must be of a character to appeal to those willing to become members. The Constitution and By-Laws of the new organization will be found attached hereto, made a part hereof and marked "Exhibit A."

I believe that the object and purpose of the new Association will commend itself to the rank and file of those who have sustained in the past the old organization and must in the future sustain the new if they wish to promote and preserve the breed from a dairy standpoint.

21. "It is high time, therefore, that the breeders join in organizing a New Registry Association and place all phases of the purebred Holstein industry in which they are engaged in their own hands. The HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION, Inc., was created to fulfill this need and demand.

First—The Holstein-Friesian Registry Association, Inc., will save the breeders thousands and thousands of dollars in increased fees."

Answering the fourteenth paragraph of the said Exhibit hereinabove quoted.

The truth of this statement is so apparent that I need not further answer.

22. "Second—The Holstein-Friesian Registry Association, Inc., will place the breeders and dairymen in full control of all phases of the industry in which they are engaged and on which they are financially dependent."

Answering the fifteenth paragraph of the said Exhibit hereinabove quoted.

The Constitution and By-Laws attached as "Exhibit A" hereto fully answers the statement of the fifteenth paragraph.

23. "Third—The Holstein-Friesian Registry Association, Inc., will confine its activities to maintaining a Herd Register, will render prompt and efficient service at cost and overcome the delay of from three to six months in securing registration and transfer certificates."

Answering the sixteenth paragraph of the said Exhibit hereinabove quoted.

The new organization proposes by prompt and efficient service at cost, as stated in the said paragraph, to enlist the interests of breeders in the welfare of the new organization. If in the past the Holstein-Friesian Association of America failed to respond to the reasonable requirement of the REAL breeders I submit that it is not the fault of those who are endeavoring to secure prompt and efficient service.

24. "Fourth—The Holstein-Friesian Registry Association, Inc., will restore public confidence and stimulate an interest in the breed by recognizing profitable and economical dairying as the true standard whereby to judge the value of the breed, and by the declaration of Honest Principles and Fair Dealing that are so clearly set forth in its Constitution and By-Laws."

Answering the seventeenth paragraph of the said Exhibit hereinabove quoted.

We believe that the interest excited in the new organization is of sufficient character to justify fully the conclusion of this paragraph.

25. All of the remaining portion of said Exhibit I do not

regard as necessary to answer as they are explanatory in character and as further answer thereto I have to say that in fairness to myself and the Holstein-Friesian Registry Association, Inc., I shall cause to be published the answers which embody the charges so that every breeder and member of the Holstein-Friesian Association of America may have an opportunity of judging the justification for the issuance of the appeal which is made the basis of the charges against me.

If the charges are made at the instance of the Executive Committee, as I believe they are, then the Committee will act upon the indictment and will sit as Judge and jury upon all the matters involved in this controversy. Therefore, it would seem useless for me to appear in person to answer the unjust and untrue charges made.

The complainant himself, Mr. F. L. Houghton, of Brattleboro, Vermont, has long felt that the Holstein-Friesian Association of America has not been justified in many of the actions taken by it since 1919 and has so expressed himself to me on many occasions, both in person and in writing. In this he has not been alone. Large numbers of influential breeders, who are the owners of their own herds and must sustain themselves by the results obtained therefrom, have revolted against the actions imposed upon them by the existing organization.

In seeking relief therefrom they have taken the only course which seemed possible for the reason that no reforms have been inaugurated and the large losses shown in the reports hereinabove recited, unless these extravagances can be stopped, will result in the ruin of the Holstein-Friesian Association of America and the loss of the surplus accumulated through the years from the contributions of the great mass of breeders who may be said to be the REAL BREEDERS of America.

The publication of correspondence of members and even those who are close to the management together with the instant support of a large and growing number of breeders, who have become members of the new organization, shows the necessity for relief which will be found therein all of which is respectfully submitted.

I suggest that the complainant publish the charges and the answers thereto in his journal and in connection therewith that he publish his letter to me written under date of July 17, 1922. The publication of such letter with other correspondence would tend to answer the unjust charges which he has preferred against me all of which is respectfully submitted.

HOWARD C. REYNOLDS.

Aside from the fact that milk testing eliminates the unprofitable cow from the herd, it is also of great value in selecting only the very best animals for breeding stock. By raising the calves of the highest producing cows, the average production of the herd may be greatly increased from generation to generation.

Down in Virginia

the cattle are healthy. For a long time this state led in a number of Accredited Herds. Our own herd of 86 animals passed another Clean Test, June 18th.

Our Accredited Herd is headed by a handsome son of

Ormsby Korndyke Lad

from a 35-lb. cow that averaged 91 lb. milk daily during her official test. Her daughters and grand-daughters are also making wonderful records.

We have a couple of his sons and a few good heifers for sale.

CHENEY BROTHERS & JONES

Randolph, Virginia.

ORMSBY SENSATION 3D

my herdsire, is backed by remarkable producers. Despite the fact that his dam was tested as a two-year-old and his sire's dam for only 305 days, their long time records average 19,974.5 lb. milk, 853.77 lb. butter.

Come and see Ormsby Sensation 3d and his daughters in my herd. Possibly you will want one of his sons or some good females bred to him.

Cow Testing Association Reports

CLAIMED TO BE THE CHAMPIONS

A herd of 23 purebred Holsteins owned by J. L. Sebastian of Wasco, California, is claimed to be the best producing herd enrolled in any cow testing association in this country. Last year the herd's average production in the Kern county C. T. A. was 587.8 lb. butterfat and for two years this herd has won the sweepstakes award in Kern county.

The Sebastian herd has been built up in the last seven years. At that time Mr. Sebastian, his wife and his son Carl, who had recently graduated from the agricultural college at the University of California, moved from Berkeley, Cal., to their present ranch of 160 acres which they had owned for a number of years but had never developed. From the original stock they have grown a herd of 50 individuals.

The herd is headed by Sir Aaggie De Kol Mead 5th and the junior sire is King Japonette Regis of Dairy Dale. At the recent Kern County Fair, staged at Bakersfield, the Sebastian herd furnished the grand champion female also first and second in the aged cow class.

C. T. A. WORK IN PENNSYLVANIA

There were thirty-four Pennsylvania cow associations that reported production during September. In these 11,761 cows were tested, 730 cows giving more than 40 lb. fat, and 145 exceeding 50 lb. while 419 each gave more than 1,200 lb. milk. During the month 61 cows were sold because they were unprofitable.

The three highest milk producers are all registered Holsteins. C. A. Zimmerman of Lehighton had the leader with 2,145 lb. milk; A. B. Craig of Sewickley

had the cow in second place with 2,064 lb., while the cow in third place with 2,049 lb. was owned by Ivo V. Otto of Carlisle. The highest fat producer had 91.8 lb. to her credit and is a purebred Holstein owned by H. R. Paulhamus of Hepburnville.

The Carbon-Lehigh C. T. A. had the highest ten-cow average, 58.3 lb. fat, with Mercer second with 56.2 lb. and Westmoreland third with 54.8.

Writing on the feed situation R. H. Olmstead says that cotton-seed meal has dropped about \$10 a ton since the middle of August and seems like a good buy at the present time. Linseed oil meal is on the down grade having dropped about \$6 per ton in the last six weeks. It may come down to a lower level. Gluten feed has been fairly steady at a level about \$8 higher than it was in April. It has dropped \$2 a ton lately but it is hard to say what it will do in the near future. Cotton-seed meal and linseed oil meal are cheaper sources of protein at the present time. Bran is slightly on the down grade and may go a little lower. Hominy feed has dropped \$20 per ton in the last eight months and reached a new low level recently. Instead of purchasing corn meal Mr. Olmstead recommends buying hominy in its stead.

LOUISE WINS PRODUCTION TEST

Louise, owned by Harry Snook of Winfield, Kansas, won first prize at the Cowley fair with Queen owned by Neil Dulaney and Jarvis second. The winner produced 117.7 lb. milk, 3.88 lb. butterfat in the two-day-test. Queen who led until the last two milkings gave 115.6 lb. milk, 3.63 lb. fat. Sarah, a member of the Snook herd was third with 106.6 lb. fat, 3.32 lb. fat.

MARYLAND COW TESTING

Eighteen purebred Holsteins owned by Charles Wertheimer of Frederick, Maryland, have the highest average in the Frederick County C. T. A., 33 lb. fat and 1,032 lb. milk. Ormsby, a member of the Wertheimer herd was high cow in the entire state, producing 85.8 lb. fat from 1,950 lb. milk. Suella, last month's leader, was second with 82.3 lb. fat, 2,223 lb. milk. Kate, a purebred Holstein owned by Clyde W. Smith, was third in the entire state with 76.7 lb. fat, 2,019 lb. milk, so that the Frederick County C. T. A. had the three highest producers. Corona, owned by the Java Farm was fourth with 75.6 lb. fat, 1,718 lb. milk, and Dr. Forrest also owns another purebred with 70.2 lb. fat, one with 62.6 lb. and a fourth with 61.3 lb. His herd of thirteen purebred Holsteins averaged 40.1 lb. fat, 1,131 lb. milk, the highest average reported for the entire state.

Holsteins make a good showing in the Upper Montgomery County C. T. A., two cows, one owned by McKendree Walker and the other by Millard Rice each exceeding 60 lb. fat. J. B. Diamond has three in the list of ten leaders, Daisilinda being third with 58.8 lb. fat from 1,680 lb. milk. The ten leaders in this association are all black and white, eight of which are purebred Holsteins.

An even better showing is made over the state as only one cow, the one in fifth position, is not a purebred Holstein. Mr. Wertheimer is represented by two cows standing first and second, Java Farm by four, Mr. Walker by one and Millard Rice by one.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

YOUNG STOCK

sired by

MAPLE CORNER SUPREME

His dam produced 32.6 lb. butter in 7 days and averaged 83.6 lb. milk for 30 days.

His six nearest dams average 35.11 lb. butter and he is a choice individual.

The females in this herd are good individuals and big producers. Nearly all have creditable official records. Buy from this Accredited Herd.

C. F. GRIDLEY,

Tioga County, Candor, N. Y.

Big Milkers and High Testers Combined

Bull born April 26, 1925.

Right in every way, 7/10 black, well marked.

His dam, Hillside Rhododendron produced 35.15 lb. butter in seven days. She averaged 92 lb. milk a day for 30 days, average fat, 4.29%.

His sire is from a cow that produced 3,019.6 lb. milk, 135.83 lb. butter in 30 days.

The dam and sire's dam averaged 96.3 lb. milk a day for 30 days, with an average test of 3.93%. Persistency — Production — High Testing.

HILLSIDE AND SPRING-BROOK FARMS
Trucksville, Penna.

Herd recently passed Another Clean Test.

OUR KIND

This heifer was bred in our herd as was her dam and granddam.

Such heifers grow into producing cows that make good wherever they go.

L. N. MACK & SON and

FLOYD E. MACK

Montrose, Pennsylvania

Herd under State and Federal Supervision. We have 120 head to select from.

THE PRODUCTION OF THE SUNSHINE DAIRY

The herd of W. A. Withers of Elizabethtown, Pa., has recently closed a year of cow testing association work. We say a year, but one month, June, 1925, there was no tester for the association and so the totals for that month have been omitted from the tabulation of the year's work. The figures given therefore, are for a period of eleven months, from October, 1924, to the end of September, 1925, with the month of June omitted. The average number of animals milking in Sunshine Dairy during these eleven months was 18. The average monthly production was 16,747 lb. milk, 621.27 lb. butterfat. The average monthly value of the product was \$772.40 and the average value of the product above cost of feed was \$523.36. The average production of the cows of all ages in the dairy during the eleven C. T. A. months was 10,234.5 lb. milk, 379.45 lb. fat or considerably better than 1 lb. butterfat per day.

There were 15 purebred Holsteins and five purebred Guernseys on test for more than three months. All the Guernseys were under full age. The Holsteins consisted of three mature cows, five four-year-olds, two three-year-olds and five two-year-olds. The average number of days the Holsteins were in test was 285.8 or approximately nine and a half months. Their average production was 10,051 lb. milk and the average amount of butter they produced, figured on the 80% basis, was 445.66 lb. The total value of the product from the Holstein herd was, according to the testers' figures, \$6,864.23 and the average net profit above feed cost was \$328.48.

Two cows each produced over 13,000 lb. milk and seven exceeded 10,000 lb. Four different animals produced above 500 lb. butter. The highest butter producer was Q-Dale Ruby Veeman Korndyke with 582.5 lb. She made the biggest profit, \$486.95 and her product was worth \$623.37. Dijkstra Segis Creamelle, also calving as a four-year-old, however gave her stiff competition. Dijkstra was in test 321 days, seventeen more than her stablemate. She produced 13,670 lb. milk against Ruby's 13,423 lb. Her butter totalled 581.38 lb. and her profit above feed cost, as figured by the test supervisor, was \$476.71.

The milk is sold in Elizabethtown and brings at retail, fifteen cents a quart. Every precaution is taken to produce and sell a product of high quality, the bacteria count is kept down to rock bottom and the demand keeps ahead of the supply. Some of the product is sold as chocolate milk, especially in the Withers shoe factory where the workers consume a large quantity with their lunches. Mr. Withers is fortunate in having such a quality market right close to his farm and is developing that market so that he never has any surplus, in fact, the great trouble of the farm manager has been to produce all that the consumers called for.

The following table shows the production of the animals in detail and should be studied by everyone who is interested in Holstein production:

Purebred Holsteins	Days				
	Age in Test	Lb. Milk	Lb. Fat	Lb. Butter	
Q-Dale Belva Lyons Sylvia	3	305	10,053	313.5	391.88
Q-Dale Bernice Hengerveld	3	305	9,940	363.7	454.63

Ruth Sadie Vale De Francie	2½	336	7,949	319.5	399.38
Queen Hartje Lyons	2½	275	8,728	313.4	391.75
Totals: 15 Animals			150,764	5,348.0	66,850.50
Average		285.8	10,051	356.53	445.66

The father of the wild youth received a letter from the president of the college the young man was attending. It read: "Your son is making his subjects here 'wine, women and song.'"

"Any post-graduates accepted?" wired back the old man, who was something of a "live" one himself.

"Yassir, I sho does believe in Bible names for chillun," said an old Virginia dandy. "I've got four boys and they's all named for 'postles and 'ciples from de Holy Book."

"What are their names?" asked a listener.

"Weij," said the old man, "they's Heze-

kiah, Nehemiah, Obadiah, an' Chesapeake-an'-Ohiah—but this last one I calls 'C & O.' for short."

"Does your ma put up any jam, little boy?"

"Yes, sir; ma puts it up and I put it down."

About all that is free in Ireland seems to be fights, and they always have been that way.

A scientist says kissing is bad for the health; but folks don't kiss for their health.

R. D. 3

WHERE HOLSTEINS ARE IN DEMAND

In contrast with reports of little demand for purebred Holsteins coming from distant parts of the country, is the encouraging reports that come from Franklin County, Pa. S. R. Miller, who is the veteran Holstein breeder of this territory, knows all the herd owners and also knows a lot about the cattle in their herds. His own establishment is named Thornwood Stock Farm and from his herd and other accredited herds in Franklin County he has sold thirty head of fine, big, registered Holstein cows and heifers during the past two months. They will go to found new herds or to replenish old ones in Lebanon and Cumberland Counties in Pennsylvania or in the state of Maryland.

The Philadelphia territory has been considered one of the strongholds of the Channel Island breeds. Throughout the entire nation the word has gone forth that "Philadelphia demands 'yellow milk,'" while the same has been reported of the Baltimore district. The repeated drafts from the Accredited herds of this region show that the situation has been exaggerated and that good Holsteins are in greater demand than ever before for dairy purposes.

RUTH FIRST AGAIN

Ruth, a purebred Holstein cow owned by Jude Hubber of Belt, Montana, was again the high cow for both milk and butterfat in the Cascade Cow Testing Association. During September she produced 2,400 lb. milk, 91.2 lb. butterfat. Another member of the Hubber herd was in third place with 1,590 lb. milk, 76.3 lb. fat. The Hubber herd was high with thirteen cows averaging 1,182 lb. milk, 39.6 lb. fat.

GIRL OWNS PRIZE WINNER

Edna Earl of Grand Forks, North Dakota, is a member of the Johnny Mack Calf club and she is now the owner of a Holstein calf which came from the herd of J. D. Bacon.

Miss Earl is the only girl member of a calf club in Grand Forks county. Her animal won the junior championship at the Northwest fair held at Minot and was first in the open classes at both Minot and Fargo.

FINE OLD COW

Princess Oneida Mercedes, an eighteen-year-old cow had spent all her life at the Starr Farm, Richfield Springs, N. Y., until she was selected to appear at the recent National Dairy Show on account of her having given birth to eighteen calves. Wallace Starr who raised this cow was in charge of her at the exhibition where she attracted a lot of attention.

HOLSTEINS FOR SALE.—Several carloads grades and purebred springers. C. T. A. records and T. B. tested. Al. Motl, Secy., Marshfield Holstein Club, Marshfield, Wis.

WISCONSIN COW TESTING

Red Pepper, owned by Schurz Brothers of Bridgeport, again leads the Prairie Du Chien association by producing 53.9 lb. butterfat, 1,683 lb. milk during September. The Schurz herd of 22 purebred Holsteins averaged 633 lb. milk, 21.85 lb. fat. First place in the association however, goes to a herd of nine purebred and grade Holsteins, owned by J. E. Campbell, that averaged 977 lb. milk, 33.63 lb. butterfat.

Frank Johnson of Beloit, owns a herd of Holsteins and Jerseys that average 38.7 lb. fat in the Beloit association. Margie, a grade Holstein owned by Rock and Katterhenry is still high individual with 2,187 lb. milk, 78.7 lb. fat.

In the Merton-Lisbon association the high cow for September is a registered Holstein belonging to Henry Schlicher. She produced 1,502 lb. milk, 60.1 lb. fat. A grade Holstein is second and another Schlicher cow third with 53.6 lb. fat. A herd of thirteen registered and grade Holsteins owned by M. Weber and Sons averaged 1,088 lb. milk, 35 lb. fat.

John Accola and Peter Haase were close competitors for high herd honors in the Alma-Cochrane association. The Accola herd of fourteen purebred Holsteins averaged 1,034 lb. milk, 34.6 lb. fat and the Haase herd of nine animals averaged 876 lb. milk, 34.5 lb. fat. An Accola purebred produced 1,544 lb. milk, 55.3 lb. fat and a member of the registered Holstein herd owned by Kaste Brothers also of Alma, produced 49.3 lb. fat.

John Chapman, Jr., of River Falls, owns a registered Holstein herd that averaged 11,453 lb. milk, 426.1 lb. fat in the River Falls Cow Testing Association.

Detjen Brothers purebred Holstein herd averaged 746.2 lb. milk, 23.9 lb. butterfat, thus heading the North Menominee Cow Testing Association for the month of September.

Ten registered Holsteins owned by Robert Tnack of Newburg, produced 1,054 lb. milk, 34.1 lb. fat in the West Bend C. T. A. The high cow, a registered Holstein, owned by the Washington County Asylum produced 51.3 lb. fat, 1,047 lb. milk.

Princess, owned by Duoss Brothers led the Clinton-Rock County C. T. A. by producing 48.4 lb. fat, 1,383 lb. milk. The ten leading cows are all black and whites. A herd of 26 grade Holsteins owned by Joe C. Hoesly averaged 28.2 lb. fat, 875 lb. milk.

CLOTHILDE IS PROFITABLE

Clothilde, owned by Frank Johnson of Hetland, South Dakota, produced 65.04 lb. butterfat during the month of September and led the East Kingsbury Cow Testing Association. Her product was figured to be worth \$27.95.

BIG SOUTH DAKOTA HERD

One of the best Holstein herds in the state of South Dakota is that owned by St. Paul's Mission, which operates a 500 acre farm southwest of Wagner, S. D. At the present time the milking herd consists of 68 head. About \$125 worth of milk and cream is consumed monthly at the St. Paul's Mission school, while the rest of the output is sold in the open market.

Members of this Holstein herd have won a number of prizes and grand championships at recent county fairs, and first place in the class for two-year-old heifers at the recent South Dakota State fair went to a representative of the St. Paul's herd.

In conjunction with the dairy business there is a herd of 350 head of Hampshire spring pigs and a flock of about 1,600 White Leghorns.

The buildings are valued at \$25,000, are entirely of tile and concrete construction and are models of convenience and service.

The head of the Mission is Father Sylvester Eisenmann. The farm manager is Jacob Heida, a graduate of a Holland agricultural college.

SOLD TO THE SHERIFF

A short time ago A. T. Cuno of Grygla, Minnesota, sold to Sheriff H. C. Hanson of Warren, Minn., the handsome young bull, Snow King Ormsby Homestead. This bull was sired by Canary Homestead Ormsby Lad, a grandson of Sir Pietertje Ormsby Mercedes from Canary Homestead Nellie, 605.1 lb. milk, 35.37 lb. butter in seven days; 21,098.2 lb. milk, 918.80 lb. butter in a year.

The dam of the sheriff's young herd-sire is Dora Kappijne, a granddaughter of Sir Piebe Beets and King Pietertje Mercedes Ormsby, thus Snow King Ormsby Homestead gets a double cross of the Pietertje Ormsby Mercedes blood as it appears on both sides of his pedigree.

PIELTJE ALCARTRA FAYNE

30.03 lb. butter, 707.7 lb. milk in 7 days, 104 lb. milk in a day, is the dam of my herd-sire

IDEAL KING CREAMELLE

His sire, Dutchland Konigen Creamelle Boy, is from a cow that produced 881.21 lb. butter, 21,701.5 lb. milk in a year. Her dam has a year record of 27,625 lb. milk, 1,082.32 lb. butter and was from Creamelle Vale, 1,155.85 lb. butter, 29,591.4 lb. milk, a daughter of De Kol Creamelle, over 26,000 lb. milk in a year.

CECIL L. A. RESSEGUE

Ideal Farm Kingsley, Pa.

Four clean tests without a reactor.

The Cuno establishment is named Valley Farm and is noted for the quality of the stock, especially the milking dairy. It was probably this reason why the Sheriff, who naturally would be expected to know something about the herds of the county, selected Snow King Ormsby Hengerveld to head his herd.

A CREDIT TO WESTMORELAND COUNTY

The herd of J. H. Silvis and Sons of Greensburg, Pa. made a splendid showing in the Westmoreland Cow Testing Association during the recently ended year. The average of this herd was 8,911 lb. milk, 343.1 lb. butterfat, a splendid showing when it is considered that the average monthly number of cows on test was 63.25. This herd contains besides registered Holsteins a few grade Holsteins and some Jerseys. One Jersey member of this herd stands in third place for the entire association with a production of 10,357 lb. milk, 528.3 lb. fat.

Cornucopia Pontiac De Kol Salina, a member of the Silvis herd, as a four-year-old heifer produced 13,806 lb. milk, 480.1 fat in a year, standing in sixth place for the entire association. Another member of the herd, Forward Korndyke Veeman, produced 13,800 lb. milk, 454.1 lb. fat. Ormsby Johanna Beauty Hengerveld, a six-year-old, is credited with 8,998 lb. milk, 447.4 lb. fat. Elizabeth Adaletta Pontiac, an eight-year-old, produced 12,487 lb. milk, 422.9 lb. fat. Another member of the herd as a four-year-old made 12,921 lb. milk, 418.5 lb. fat and yet another as a seven-year-old is credited with 11,697 lb. milk, 412.9 lb. fat.

The Westmoreland C. T. A. finished its first year September 1st with 26 members. There were 563 cows in the association during all or part of the year and the average number of cows for the full period was 297. The average production of milk per cow was 8,581 lb. and of butterfat, 326.5 lb.

The Silvis herd had 22 representatives

in the highest 90 animals for the month of August. In the first 36 animals there were twelve members of the Silvis herd, and the 36th one is credited with 1,246 lb. milk, 42.4 lb. fat, a showing that speaks volumes for the quality of the Silvis stock. Representatives of this herd were second, fifth, tenth, fourteenth and fifteenth. When it is considered that there were 23 herds containing 326 cows tested in August it can be seen that the herd of J. H. Silvis and Sons is a credit to Westmoreland county.

FRANKLIN COUNTY CLEANING UP

On November 30th, eight townships of Franklin County, Pa., will start tuberculin testing on the accredited area plan. The veterinary authorities and the breeders and dairymen of the county hope by September 1926 to have all the herds in the county tested. As individual tests in the county have shown that a majority of the herds are healthy, they even hope to have their county declared a modified accredited area in the near future.

PRODUCERS

Richard Scott of Tony, Wisconsin, has 49 head of cattle on his farm. He has been breeding Holsteins for sixteen years and the foundation animals were purchased as calves. His milking dairy of thirty cows produced \$400.00 worth of milk last summer in one month.

Marie: "And at the place where I stayed this summer a green young hired hand tried to kiss me. He told me he'd never kissed a girl in his life, and—"

Gwendy: "And what did you tell him?"

Marie: "I told him that I was no agricultural experiment station."

The only real obstacle to everlasting peace is the fact that there are more dogs than bones.

STILL CLEAN

My entire herd has just passed another Clean Tuberculin Test. There has never been any T. B. or Abortion in it.

Our animals are now winning at the fairs. In an early issue I'll tell you more about them.

Meanwhile, my prices are still low, especially on young bulls backed by wonderful producing strains. Will be pleased to give you full particulars. Drop a card to

DAVID FALCONER

Scottville, Michigan.

SIR CHAMPION SYLVIA HEADS SYLVALE HERD

He was sired by Champion Echo Sylvia Pontiac, that famous son of May Echo Sylvia.

His dam is a 30 lb. daughter of a cow that two different years produced over 37 lb. butter in a week.

The seven nearest dams of Sir Champion Sylvia average 35.43 lb. butter in 7 day official work.

Our cattle produce and win prizes at the fairs. Get our prices. They will both surprise and please you.

GLENN L. WARNER

R. D. No. 5 Cuba, N. Y.
Sylva Herd is Accredited.

SUCCESS WITH TWO BREEDS

Homer Dunham, who for several years successfully had charge of the John Dennis herd at Essex Farms and the Mountain View Farm at Germantown, Md., is now with the Virginia Polytechnic Institute at Blacksburg, Va. Mr. Dunham has purebred Guernseys as well as purebred Holsteins under his care. At the present time he has a thirteen-year-old Guernsey cow on test that has produced 728 lb. butterfat in eight months and 25 days therefore if she keeps up her present gait she will be the champion cow of the Guernsey breed in Class A. An eight-year-old Holstein cow in Mr. Dunham's charge produced 99.2 lb. milk on October 20th although she had been in test more than one hundred days. During the month of October she gave over 95 lb. milk a day, an indication that she is not only a great cow but also that she had the best of feed and care. There are some men who claim to be specialists in dairy feeding but are only successful with animals of one breed. An all-around dairyman is one who studies his animals, their appetites and capacities. Such a man is successful with animals of any dairy breed.

HOLSTEINS SHINE IN ERIE COUNTY

The Edinboro C. T. A. finished its third year September 1st with 26 members of which three were in the association only part of the year. The average number of cows for the entire year was 359.51 although there were 498 cows enrolled part of the time. The average production of milk was 8,144 lb. and of butterfat 300 lb.

The registered Holstein herd of L. W. Veit of Erie, Pa., R. D. 3, made the highest average for both milk and fat, the figures being 10,906 lb. milk, 392.5 lb. fat for a monthly average of 15.92. Veit cows were second and third on the list, Bulabrook Hengerveld Pontiac being credited with 13,830 lb. milk, 494.6 lb. fat

and Forest City Peep Margaret producing 10,546 lb. milk, 492.4 lb. fat. A registered Holstein owned by Hotchkiss Brothers of Edinboro stood next with 13,411 lb. milk, 484 lb. fat and another purebred owned by Mrs. Rose H. Curtze of Erie being credited with 14,629 lb. milk, 480.8 lb. fat. Seven of the eight highest producers were registered Holsteins but the leader was a grade Holstein owned by Smith Henry and Son, that made the remarkable record of 17,863 lb. milk, 624.1 lb. fat. Twenty-two of the leading 25 producers were black and white cows.

SHOW HEIFER KILLED

J. H. Hofstetter of Lewistown, Montana, suffered a severe loss when one of his young heifers was killed the evening of October 13th by a freight train. She was a show heifer that took second prize at the Montana state Fair this fall. Her sire was a son of Grace Koningen, the great ten-year-old cow that made a record of 1,314 lb. butter in a year. Her full sister as a junior two-year-old made a seven day record of 23.8 lb. butter and she is said to be fully as promising as her sister.

TOOK THE HONORS

Three purebred Holsteins stood first, second and third in the September production report of the Yakima County Cow Testing Association. All three produced over 59 lb. fat; one owned by William Poyner of Yakima, Washington, being third with 59.2 lb. fat, 1,557 lb. milk. The cow in first place is credited with 59.9 lb. fat, 1,536 lb. milk and the second cow with 59.6 lb. fat, 1,806 lb. milk. Both are owned at the Painted Rocks Ranch, which also owns the leading four-year-old with 56.2 lb. fat.

750-ACRE FARM on State Road, 5,000 cords wood, 300,000 timber, \$12,500. Cash required, \$5,000. W. F. HERR, Brooklyn, Conn.

IT COSTS TO SHIP

A carload of Holsteins was shipped by express from Hudson, Michigan, consigned to Little Falls, N. J. on October 13th. There were thirty animals and the express charges were over \$400. It is said that there has been about one hundred carloads of cattle shipped from Little Falls for dairy purposes and this is the best that has ever left the station.

JEWEL AGAIN AHEAD

Jewel, a purebred Holstein owned by Roy N. Finster of Eldorado, Iowa, again led the Hardin County C. T. A. for September by producing 67.8 lb. fat, 2,018 lb. milk. Jewel was also the leader for August. The Finster herd averaged 500.4 lb. fat, 13,957 lb. milk during the recently ended testing year; and this average is said to be the highest ever attained by any herd in the state of Iowa.

CLASSIFIED AD PAID HIM

In sending in copy for an advertisement to run on the classified page W. F. Herr of Brooklyn, Conn. who is now offering a farm for sale tells of his experience when a short time ago he advertised 400 white Leghorn pullets hatched April 15th at \$2.00 each. These pullets were of the Hollywood strain and Mr. Herr received so many inquiries that he says he could have sold a thousand.

WORTH CELEBRATING

Longheath Matilda Ormsby, owned by the Santa Monica Dairy Company of Santa Monica, California, won the grand championship at both the Riverside and Pomona fairs so Herman Michel, president of the company, staged a wild duck dinner at the Miramar hotel to a number of his friends and the heads of the civic societies. Before dinner the party went out to the ranch and inspected the cattle when a picture was taken of the champion.

KING ORMSBY CRIJNTJE HEADS HOWARD HERD

The accredited herd of John H. Howard of Wyalusing, Penna. is headed by the four-year-old bull, King Ormsby Crijntje, a son of King of the Ormsbys and Lady Pietertje Trijntje Segis. This daughter of Pietertje Hengerveld Segis has a large number of official records. Tested as a two-year-old she produced 21.28 lb. butter, 408.2 lb. milk in seven days. As a junior four-year-old she raised this record to 26.08 lb. butter, 556 lb. milk in a week and continued on yearly test produced 971.86 lb. butter, 21,627.5 lb. milk in a year. As a six-year-old she produced 30.10 lb. butter, 525.5 lb. milk in seven days, averaging 4.63 per cent fat.

King of the Ormsbys is the leading herdsire at Winterthur farms and the records of his daughters are too well known to need repeating here. He is a full brother to that remarkable producer, Bess Johanna Ormsby and so is a son of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke 2d, a cow that has four yearly records above 1,000 lb. butter and four, seven day records above 30 lb. She is credited with producing 38.23 lb. butter, 792.3 lb. milk in seven days, and 1,290.94 lb. butter, 24,918.1 lb. milk in a year.

The records of the dam and sire's dam of King Ormsby Crijntje average 34.31 lb. butter. The records of his three nearest dams average 29.88 lb., while the records of his three nearest yearly record dams average 1,118.98 lb. butter, 23,924.42 lb. milk.

The Howard herd is accredited and has been on the accredited list for some time. The majority of the younger cows and heifers are daughters of King Onyx Pledge Ormsby, whose dam, Onyx Pledge Segis, has seven day records of 27.83 lb. butter, 626.9 lb. milk, and a ten months' record of 789.5 lb. butter, 19,851.8 lb. milk. She is a daughter of King Pledge Segis and Onyx Pledge Dawning, a cow that two different years made over 32

lb. of butter in a week, and that has a year record of 1,100.21 lb. butter, 26,927 lb. milk.

King Onyx Pledge Ormsby was by Ormsby Lilit Clothilde, whose dam K. P. Lilit Clothilde produced 1,043.27 lb. butter, 22,229.8 lb. milk in a year as a junior four-year-old, world's record at time of making.

A PRIZE WINNER

James McTavish of Cass City, Michigan, is a member of the Tuscola county calf club and in the spring of 1924 drew a Holstein heifer which came from the herd of Carl Keinath of Reese, Michigan. His heifer was the only calf that went from Tuscola county to the Michigan State Fair in 1924 where it was made grand champion in the club classes. The heifer freshened this summer and was not in real show condition when she was exhibited at the Michigan State Fair this fall, yet she is such an excellent individual that she was again made grand champion of the club classes, also she had much stronger competition than she had last year.

GROWING MISSOURI HERDS

Ernest W. Trachsel is a young Holstein breeder of Helena, Missouri, who recently sold to the Harris and Rocklage Dairy Co. of St. Joseph, Missouri, four good purebreds; a five year old cow, two two-year-old heifers and a three-year-old. The cow is Cream Hill Cornucopia Sanesta, a daughter of Meadow Valley Cornucopia Regent and Ophelia Clothilde Sanesta. The three-year-old heifer is Canary Z. H. Helen Dorothy and the two-year-olds are twins, Gosome Canary Ellen Dorothy and Gosome Canary Ella Dorothy. The three-year-old is a full sister to the twins and all three were sired by Canary Zuba Homestead No. 318449. This bull, a son of the famous Canary Oak De Kol Homestead, was a splendid individual and is said to be as

handsome a bull as ever stood in the state of Missouri.

The Harris and Rocklage Dairy Co. are establishing a purebred Holstein herd and now have some of the best producers in the state when the practical aspect of a dairy herd is considered. They are producers of certified milk and have made great progress in that line.

The Harris and Rocklage Dairy Co. have purchased purebred Holsteins three or four different times from Ernest Trachsel or his father, Samuel R. Trachsel, and have taken in all 22 head of purebred Holsteins from the Trachsel establishment.

The bull heading the herd of Samuel R. Trachsel is King Homestead Veeman Segis No. 445453. He is from a cow that produced over 25 lb. of butter in seven days and is a grandson of Piebe Laura Ollie Homestead King, who is also the sire of the noted show cow and producer, May Walker Ollie Homestead, 1,523.23 lb. butter, 31,610.6 lb. milk in a year.

IN SKAGIT COUNTY

Fourteen registered Holsteins owned by A. J. Lawson, of Blanchard, Washington, led the Skagit County C. T. A. for the month of August by averaging 1,343 lb. milk, 43.1 lb. butterfat. The Holstein herd of the Northern State Hospital consisting of 44 cows averaged 41.2 lb. butterfat.

Bridget, a member of the Lawson herd was the high producer. In her second lactation month she produced 92.1 lb. butterfat, 2,362 lb. milk. There were 562 cows tested and they averaged 961.24 lb. milk, 31.26 lb. fat.

The latest fad in Canada is sending out engraved cards announcing the sender's divorce. An example given runs thus: "Mrs. John Henry Howard is pleased to announce her husband, John Henry, is given the bounce."

KING PONTIAC ALCARTRA FAYNE

One of our former herdsires. Notice his Size and Type. He is a grandson of KING SEGIS PONTIAC ALCARTRA and also of KING HENGERSVELD AAGGIE FAYNE. We have Cows and Heifers for sale at all times also a few choice bull calves. Come and see our Accredited herd, the oldest in Northumberland County. Visitors always welcome.

MURRAY A. MILLER
Sunny Lawn Stock Farm,
Milton, Pa. R. D. 3.

Crawford County

is one of the three counties in Pennsylvania that are MODIFIED ACCREDITED AREAS, consequently are good districts in which to buy Holsteins.

Log Cabin Herd has long been on the Accredited list. It is headed by KING HENGERSVELD LEFA JOH, a son of the great King Joh from a 32 lb. daughter of Dutchland Colantha Sir Inka.

Cows, Heifers or bull calves, can we do something for you?

RALPH C. JACKSON
Conneaut Lake, Crawford Co.,
Pa.

Females of Quality

Producers and choice individuals bred to

King Pontiac Alcartra Pietje

who has two daughters above 700 lb. milk in a week and is also sire of K P A P Gelsche, 687.06 lb. butter, 15,349.2 lb. milk in 10 months as a junior two-year-old, the class champion of Maine.

Come and See This Herd.

A. E. Robinson
Susquehanna Co., Montrose, Pa.

CHANGELING TIDY ABBEKERK HILDA

A former member of this herd.

She was by Changeling Butter Boy from a daughter of Tidy Abbecker Prince.

The present herd, which includes a number of her descendants, averaged 9,124.2 lb. milk, 315.6 lb. butterfat in a year of C. T. A. work.

Herd under State and Federal Supervision, latest test CLEAN.

RAY J. SABIN
Spencer, R. D. 2. Tioga Co., N. Y.

SONS AND DAUGHTERS OF

MODEL DARIUS KING SEGIS

inherit the producing blood that flows in his veins.

His sire was from a 30 lb. Glista cow that averaged 92 lb. milk a day.

His dam, Clara Clothilde Lyons, as a two-year-old, averaged 91 lb. milk a day during the week of her official test, and in 305 days produced 20,771.2 lb. milk, 723.40 lb. butter. She was from a 30 lb. daughter of a 32 lb. dam.

We'd like to sell you something that would please you from our Accredited Herd.

FRED B. KEENEY
Laceyville, Wyoming Co., Pa.

Your Chance

to secure choice calves, from an Accredited Herd, sired by a son of

WOODMONT ECHO SYLVIA CHAMPION

show bull and show sire.

He won first prize in his class at the New York State Fair and his dam, a noted show cow that produced 100 lb. milk in a day, 30.27 lb. butter in a week, was the Grand Champion of that fair the year previous.

A. R. BUSH
Susquehanna Co., Montrose, Pa.

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?"

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building, Scranton, Pa.

Owing to Ill Health I Must Sell

my ACCREDITED herd of 35 Milking Cows and Bred Heifers.

Several are granddaughters of Champion Echo Sylvia Pontiac or Judge Lyons. All are sired by good bulls and bred to Extra good ones.

This is your Opportunity to secure Good Healthy, Well-bred Quality Holsteins at a very reasonable price.

MRS. MAUD DWIGHT
SOUTH OTSELIC NEW YORK

MAPLEWAY HERD

was established 1880 and has been run from a dairy angle for 45 years.

It is ACCREDITED. Animals from here win in the show ring. Our cows make a profit over feed cost, and are just the kind YOU should own.

To secure them write or visit

Miller Brothers
Clark's Summit Penn'a

CLEAR SPRING FARM

Clear Spring Farm is a Holstein breeding establishment owned by Marvin H. Bennetch, located a short distance from Sheridan, Lebanon County, Pa.

The herd is headed by Berks Ormsby Posch, a son of King Tweede Spring Farm and the noted show cow, Hazlewood Ormsby Posch 2d. The records that are being made at the present time in the Deysher Herd have made King Tweede Spring Farm one of the best known herdsires of the breed. His daughters are making a wonderful showing both in short and long time work.

Hazlewood Ormsby Posch 2d had a great career as a show animal. When

BERKS ORMSBY POSCH
Head of the Clear Spring Herd.

she was a junior heifer calf she won first prize in her class and was junior champion at the Washington State Fair, the Waterloo Dairy Cattle Congress and the 1912 National Dairy Show. Exhibited again in 1915 she took first prize in her class at the Washington, Idaho and Oregon State fairs, then in 1920 she was first as a mature cow at the Pacific International and was grand champion at both the Oregon and Washington State fairs. She also has a large number of official records to her credit. As a four-year-old she produced 666.66 lb. butter, 16,399.9 lb. milk in ten months. As a mature cow she made a seven-day record of 25.48 lb. butter, 717.3 lb. milk, producing 106 lb. during the best day of her test.

Mr. Bennetch bought Berks Ormsby Posch when he was a calf and has grown and developed him. He is a very handsome bull, deep of chest and long of barrel. He stands well on his feet and is a real show bull, is nearly all white with a number of small black spots.

There are about sixty head in the Clear Spring herd, so we will only mention two or three of the outstanding animals. Bessie Osa De Kol is a large cow showing plenty of constitution. Her udder indicates that she is a producer. She is a granddaughter of Brookside Pontiac Paul and her dam is of Johanna and De Kol blood lines. Tested when nearly eight years old Bessie Osa De Kol produced 603.5 lb. milk, 20.74 lb. butter in seven days averaging 86.2 lb. milk daily.

Luna Colantha Lad is another very large cow, more white than black, very handsomely marked and also a very straight animal. Her sire is a son of Sir Copia Colantha Lad and her dam is a daughter of Granville Kriemhilt who was from a daughter of King Veeman De Kol.

A very light colored cow that is bound to attract your attention is Florence Fairvale Nudine. Her sire, King Lyons Nudine was a son of King Lyons from the thirty-pound cow Nudine Lyons De Kol. Her dam, also a great producer, was a daughter of Sir Genie Pontiac.

The milking cows in the Clear Spring Herd are not stanchioned but are kept in a long room or stable tied to mangers which extend from one end of the building to the other. The pens are heavily bedded and the appearance of the animals shows that they are well fed and cared for. Mr. Bennetch is quite a show man and has his animals graded, the largest ones nearest the door.

The buildings at Clear Spring Farm were built many years ago. Part of the house was built 1763 and the date is over one of the doors. There are old fire places both up stairs and down stairs. A portion of the house now used as a wash room was formerly a creamery and is said to be the first one built in this part of the country. In the cellar of the old creamery there is also a very large fire place, built many years ago. There is a big, clear spring in the cellar which was undoubtedly the reason why the house was built in its present position, and is the reason why the farm has its present name.

Antiquaries would be interested in looking over this building and examining the many old relics which have been preserved. Some of the inside doors have strap hinges which extend practically the width of the doors. The house is built of limestone and looks as though it would last for many years.

The Bennetches operate two farms of 100 acres each. Mr. Bennetch's grandfather had the farm before him. There

LUNA COLANTHA LAD
One of the big producers of the Bennetch establishment.

are four children in the family, three boys and a girl, and all are interested in farm life.

Mr. Bennetch is a first-class farmer as well as dairyman, and is ably seconded by his wife. On their good limestone soil they raise hogs as well as cattle and grow tobacco. Large flocks of poultry, including geese, ducks and guineas indicate that Mrs. Bennetch does her share and the Clear Spring Farm is worth while paying a visit.

He—"Why is the modern flapper like a bungalow?"

She—"I don't know. Why?"

He—"Well, she's painted in front, shingled in the back, and short in the upper story."

The Breeder and Dairyman Exchange

Copy must reach us by the 1st or 15th of each month to appear in the current issue.

Quality Cattle

OUR KIND

Every animal in this herd has passed Three Clean Tuberculin Tests. They are not only choice individuals and big producers, but produce milk of high quality, as our herd test runs from 3.7 to 3.9%.

I want to sell a few.

H. A. STOTTLEMYER
Hagerstown, Maryland R. 5

OLIVER F. TRANSUE

Oliver F. Transue, of Alliance, Ohio, head of the Transue and Williams Steel Forging Corporation, died October 19th, in a Cleveland hospital. Mr. Transue was about seventy years old. He was one of the founders of the corporation with which his name is associated.

It is reported that he was interested in a small iron working establishment and about the time that the first Ford cars were put on the market he contracted with Henry Ford to supply some parts of the car. The success of the Ford car and the fact that the materials furnished gave satisfaction laid the foundation of Mr. Transue's fortune and the success of his company. Every successive year the company supplied more material to the Ford Company. At the time of Mr. Transue's death he was a member of the Mt. Union College trustees, was a director of two banks and several industrial enterprises in Alliance, and of at least one large business in Canton.

Mr. Transue owned a farm that bordered Congress Lake, Stark County, Ohio, and a number of years ago stocked his farm with purebred Holsteins. In 1919 with G. M. Stadelman, manager of the Goodyear Tire and Rubber Co., and H. B. Stewart, a business man of Canton, Mr. Transue formed the Congress Lake Farm Company, which was expected to be the largest Holstein establishment in the country.

It was about this time that the change came in the management of the association's affairs. The president was paid a \$12,000 salary, expenses were increased and the transfer fee quadrupled. A reign of speculation seemed to replace an era of conservative management in Holstein affairs, and evidently, on careful investigation before their enterprise was fully developed they abandoned the project.

E. C. PETRIE

E. C. Petrie, one of the leading Holstein breeders of Walworth county dropped dead at his home in Springfield, Wis., on October 14th. His death was entirely unexpected as he had been in good health.

Mr. Petrie was born in Concord, Wisconsin, December 5, 1855. He had lived thirty-three years in Walworth County and at one time was president of the Walworth County Holstein Breeders' association and a member of the Town Board of Geneva. He is survived by his second wife, three children and a stepson.

BULL FOR SALE.—A son of SUELLA OF GRAYFIELDS, the cow that made 86.2 lb. butterfat in August, milking twice a day; and has a seven-day record, made as a three-year-old, of 25.67 lb. butter. His sire is the World's Record Bull, ROLO PONTIAC FAYNE 385047. He was born July 25, 1925; is a good, straight, toppy fellow. His two nearest dams average over 38 lb. butter in seven-day test. First check of \$150. CHAS. WERTHEIMER, Frederick, Md.

VETERAN'S CAMP HERD DISBANDED

A small herd of purebred Holstein cattle were donated by the New York Theater Assembly to the veterans' mountain camp of the American Legion located at Tupper Lake, New York. The camp intends to shut down for seven months or until spring comes. It was proposed to sell the cattle and use the money derived from the sale for camp purposes, but representatives of the Theater Assembly protested.

At a meeting of the executive committee of the corporation in charge of the camp Mrs. J. Christopher Marks, president of the Theater Assembly, lodged a protest against the sale and requested Mr. G. M. Ward, head of the camp, to turn the dairy over to some other institution caring for ex-service men. After considerable discussion Harry C. Wilder, state commander of the legion, moved a resolution that the bull, nine cows and three calves of which the herd consists, should be placed at the disposal of the donors and shipped to any institution Mrs. Marks and the assembly desired without expense to the Theater Assembly. This will be considered at the next meeting of the assembly and meets with the approval of its counsel, Charles Myers.

WILL HAVE WINNERS ANYWAY

The Shomont farms of Monticello, Iowa, exhibited at the Maquoketa, Anamosa, Monticello and Dyersville fairs and won 21 of the 24 championships. At the Dyersville fair their entry was defeated by a young bull which won the junior championship. Then Mr. Shover purchased the animal and has added it to the Shomont herd.

RAILROAD PAYS FOR COW KILLED

Some time ago a Rock Island train ran over and killed a valuable purebred Holstein cow that belonged to Charles A. Mark of Iowa Falls, Iowa. After considerable investigation regarding the value of the animal the company has agreed to pay Mr. Marks \$300 in payment for his loss.

GENEROUS ACTS

Eipperle Brothers of Ralston, Neb., recently donated a very handsome light colored bull calf to the Beatrice Chamber of Commerce. The bull will be used as a herdsire by the Boys Calf Club of Gage County, Nebraska. The Beatrice Chamber of Commerce has donated ten fine heifers to the Gage County Boys Calf Club.

HALLIDAY BUYING STOCK

Clark Halliday of North Chatham, N. Y., who holds an important position in the educational Department of New York State, visited Central Bridge, N. Y., around Sept 1, and purchased a valuable purebred Holstein-Friesian heifer from the herd of the Hon. W. H. Sidney.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

FIRST, SECOND AND THIRD

A purebred Holstein four-year-old owned by A. B. Craig of Sewickley, Penna. led the Allegheny County C. T. A. for September by producing 60.26 lb. fat, 1,674 lb. milk. Mamie owned by J. B. Jones & Sons was second with 59.31 lb. fat, and Lola, also of the Craig herd was third with 53.66 lb. fat, 2,064 lb. milk. All three of these purebred Holsteins were milked three times daily. Lola was first for milk with her stable mate second and Mamie third.

W. C. Chamberlin had seven registered Holsteins that led for average milk production with 900 lb. for average credit, while their average fat 30.77 lb. was third on the list. The Chamberlin herd stood high for average profit, their figures being \$15.92.

Tester L. M. Stark says that during the month 383 cows were tested in 25 herds. Of this number 28 each produced over 40 lb. of fat and five over 50 lb., while 13 exceeded over 1,200 lb. milk.

ONE OF THE REASONS

August Leistokow of Oran, Iowa, has a fine herd of purebred Holsteins that averaged 316 lb. fat in the Bremer County No. 2 Cow Testing Association last year. Perhaps one of the reasons the Leistokow Holsteins do so well is that they get lots of Alfalfa. The Oelwein Register reports that Mr. Leistokow got forty loads of alfalfa hay this year from eleven acres in two cuttings. Then in about three weeks when he turned his cows in it, it was fifteen inches high at the time.

PHIL ERICKSON'S BARN BURNT

The large barn on the Phil Erickson farm, one and one-half miles north of Waupaca, Wisconsin, was destroyed by fire, October 3d, causing a loss in excess of \$10,000. The fire was caused by a gasoline engine but was not discovered until the help were in the field. All the livestock was saved with some grain and machinery, but the silos had just been filled and they were destroyed. Phil Erickson is a son of the well-known Holstein breeder, John Erickson.

ROTARIANS HEAR DAIRYMAN

The Rotarians of Richmond, Utah, at their weekly luncheon September 25th, heard a talk by C. Z. Harris, prominent dairyman of Richmond and vice-president of the Utah State Holstein Breeders' Association. Mr. Harris told the businessmen to consider the value of the dairy industry which in Utah furnishes year around work for many residents and distributes annually a vast sum of money.

SAVINGS STEADILY INCREASE

That the thrift habit is thoroughly taking hold of Americans is revealed by a recent survey of about 1,000 savings banks. The survey showed that savings in these banks alone, had increased more than \$500,000,000 in the year ended July 1, 1925. This represents but a small part of the total savings of the 114,000,000 persons of the country.

Eastern Bradford Quality Sale!

NOVEMBER 14 1925

AT

Merryall Farms, near Wyalusing, Penna.

THE BURLINGTON BARN WHERE THE SALE WILL BE STAGED.

50 Head purebred Holsteins, 35 are Fresh cows or near-by Springers. A fine young bunch, only two or three over six years old.

Half a dozen daughters of King Onyx Pledge Ormsby, son of the noted sire, Ormsby Lilith Clothilde and Onyx Pledge Segis, 19,851.8 lb. milk, 789.5 lb. butter in ten months as a junior four-year-old. Her dam made 32.24 lb. butter in seven days 1,100 lb. butter in a year.

Several choice young bulls. One by the \$3,100 sire, Berylwood Prince Aaggie Chicago, whose dam produced 53,669 lb. milk, 2,273.85 lb. butter in two years. His sire is the celebrated California show bull, Prince Aaggie of Berylwood.

Other young bulls by Traverse Echo Sylvia King, whose dam produced 33.27 lb. butter, 736.4 lb. milk in seven days. This bull's three nearest dams average 33 lb. butter, his fourteen nearest dams average over 30 lb. You will like these big handsome dairy cows—they are just the kind that will make money for you.

SALE WILL BE HELD AT

MERRYALL FARMS, A. L. Burlington, (Owner)
WYALUSING, BRADFORD CO., PENNA.

BOY'S CALF GAINS FAST

Albert Jahnke of Durand, Wisconsin, owns a heifer calf, Violet Butter Girl Ormsby 2d. This calf was born April 2d. On July 10 she weighed 265 lb. and on August 23d, 358 lb., a gain of 93 lb. in forty-one days. On September 16 the calf weighed 415 lb.

Albert has been feeding his heifer a ration of 20 lbs. of skim milk, 3.5 lb. oats, 1.5 lbs. of oil meal. His calf is well behaved and broken to lead, and will be exhibited in the junior club department at the Chippewa Valley District Fair.

Standing on a street corner in a Texas town recently a farmer was discussing matters in general with a friend, when he was heard to remark: "After years of study and observation I am almost convinced that the average farmer is an impossible proposition. He likes to be skinned if only the skinner will pat him on the back and call him a good fellow."

A SPLENDID SHOWING

J. E. Chapman, Jr. of River Falls, Wisconsin, owns a herd of twelve purebred Holstein cows that averaged 11,473 lb. milk, 426.1 lb. butter, the highest record made in the five cow testing associations of Pierce County. There were 137 herds enrolled and the average production per cow was 6,920 lb. milk, 281.8 lb. fat.

GOOD NEWS

The high class herd of purebred Holsteins owned by the Plainview Academy at Redfield, South Dakota, has been placed on the accredited list. The herd now consists of 26 head, half of which are mature cows.

Cleveland Plain Dealer: "A One Horse Cow for Sale," was the sign O. T., Ravenna, Ohio, saw posted on the front of a farmhouse.

We Have For Sale

COWS OF THIS QUALITY

Also heifers—yearlings and calves.

Our service sire is the show bull KING PIEBE OF YORK 7TH, a grandson of Piebe Laura Ollie Homestead King from a granddaughter of King of the Pontiacs.

This herd is ACCREDITED and stock you obtain here is bound to make good.

No. 22

Court Action to Stop Bold Attempt

MR. Frank O. Lowden of Oregon, Ill., Mr. Frederick L. Houghton, Brattleboro, Vermont and Directors, W. S. Moscrip, Lake Elmo, Minn., James A. Reynolds, Cleveland, Ohio and Thomas Elder, Mt. Hermon, Mass., as officers of The Holstein-Friesian Association of America and members of a Committee are Defendants in an action brought to restrain them from taking any steps toward incorporating the Association in some state other than the State of New York presumably in Illinois.

When the present members joined the Holstein-Friesian Association of America they did so under the protection of the corporation laws of the State of New York. To remove this protection by incorporating the Association in some state other than the State of New York would be jeopardizing the interests of all the members.

If the Association is to perform the services for which it was originally intended and the officers propose to conduct it in a law abiding manner there is no reason why the Charter in the State of New York should be forfeited and it should be re-incorporated in the State of Illinois. If the Charter is to be surrendered then let the Association be dissolved, its assets divided among its members and those who want to organize a dealing Association combined with a Registry Association to function under the laws of the State of Illinois, let them go ahead.

The Plaintiff's complaint as alleged in part is as follows:

Third: That the present Officers of the defendant are—Frank C. Lowden of Oregon Ill., President. Frederick L. Houghton of Brattleboro Vt., Secretary, and that James A. Reynolds of Cleveland, Ohio is Treasurer, and Chairman of the Executive committee of the Board of Directors. That the defendant has now assets equalling or exceeding one-half million of dollars.

Fourth: That a majority of the present board of Directors have been in control of the affairs of the defendant since the month of June 1920—and that since then the association has been operated at a large loss to the defendant in each and every year, so gross has been the mismanagement of the affairs of the corporation by the said board of Directors, that the plaintiffs allege the fact to be that their management has operated not only to waste and deplete its resources, but also that the defendant has practically ceased to function within the state and has removed its taxable assets without the state, and away from the visitation

and control of the taxing power and courts of the state, and to further that end caused to be introduced a resolution at the annual convention held at Grand Rapids Mich., in June 1925, by one D. D. Aitken a former president of the defendant of which the following is a copy.

"*Resolved:* That a Committee consisting of President Lowden, Secretary Houghton and Messrs. Moscrip, Reynolds and Elder be a Committee to report at the next annual convention, such amendments as may be necessary to carry out more effectively, the purpose for which we are organized."

Fifth: That such resolution was instigated prepared introduced and adopted by and with the approval of the officers and Directors of the defendant Corporation with the avowed purpose on the floor of the convention, of incorporating a corporation or association in the state of Illinois, or some other state, where the rights of the individual member of said association would not be safeguarded, as well as under the laws of the State of New York, in disregard and defiance of the rights of these plaintiffs, and each of them and of the defendant itself, for the purpose of abandoning the charter of the defendant, consolidating it with a corporation to be formed by them, or at their direction in the state of Illinois, or some other state, with the intent and purpose of turning over the assets of the defendant to such new corporation, without a formal dissolution and division of the assets among the members of the corporation as provided by the laws of this state, and for the exploitation of its assets to their own personal advantage in such a way as would not be permitted by the laws of this state and which would effect a dissolution of the defendant in violation of law.

Sixth: That the plaintiffs are, and each of them is opposed to the scheme or plan initiated and outlined in the passage of such resolution and the policy enunciated by the mover of the resolution on the floor of the convention in support thereof, and the action of the officers, Directors and convention in adopting the same, unanimously, and that the plaintiffs are, and each of them is, opposed to the amalgamation or consolidation of the defendant with any corporation for any purpose.

WHEREFORE, the plaintiffs ask the judgment and decree of this court, perpetually enjoining the defendant, its officers, Directors, agents or employees from taking any further steps looking to the amalgamation or consolidation of the defendant with any other Association or corporation, together with such other equitable relief as to the Court may seem just and proper, with the costs and disbursements herein.

Amsdale and the Amsdens

FOR thirty years there has been a big producing herd of dairy Holsteins on the farms owned by the Amsden Brothers, between Black Creek and Cuba, Allegany County, New York. Originally the Amsdens raised purebred Shorthorns, but they found that Holsteins produced so much more that they switched over to the black and white breed and for many years the dairy at Amsdale has consisted exclusively of registered black and whites. The Amsden Brothers consist of Roy and Alva. Roy has no children, Alva has one, a daughter Helen, a graduate of the local high school. Helen is keenly interested in the farm and may often be seen riding her handsome saddle horse, Prince.

Alva Amsden has been one of the township assessors for seventeen years and both brothers are regarded very highly in their community. They are working farmers and their establishment shows that they both possess practical skill and knowledge of agriculture.

ALVA AMSDEN
Dairy Farmer, Holstein Breeder and
All-round Good Fellow.

There are about fifty animals in the Amsdale herd which is on the accredited list. Animals from this herd have gone into other herds in New York, Ohio, Pennsylvania and New Jersey, and have made good wherever they have gone. The Amsdens, being dairy farmers, have developed their herd from a dairy standpoint and animals of their breeding have made big records in other hands when given the right opportunity. At the head of the herd is King Echo Sylvia Colantha Spofford. He is a son of Sir Champion Sylvia and Sadie Butter Girl Spofford, a cow that as a five-year-old made a seven-day official record of 647.6 lb. milk, 29.99 lb. butter in seven days, and then calving exactly a year from her previous freshening made another seven-day record of 700.7 lb. milk, 30.55 lb. butter. This cow is a splendid individual as well as a producer.

Sir Champion Sylvia, sire of this bull, is also a handsome animal. His sire, Champion Echo Sylvia Pon-

tiac, is the best known son of the famous May Echo Sylvia, the only cow ever credited with producing over 1,000 lb. of milk in seven days. The records of the daughters and granddaughters of "Champ" are so well known that they need not be repeated here. The dam of Sir Champion Sylvia is Belle Model Champion Sylvia, a thirty pound daughter of Belle Model Johanna 2d, a cow credited with producing 37 lb. of butter in seven-day test two different years. The three

FAVORITES AT AMSDALE
Helen Amsden and her horse, Prince.

nearest dams of Sir Champion Sylvia have seven-day records that average 36.21 lb. butter, while his seven nearest dams average 35.33 lb.

King Echo Sylvia Colantha Spofford is a very handsome young bull and is siring splendid calves. His picture gives some idea of his superb conformation and depicts him as he can be seen every day. Former herd sires at Amsdale were King Maxie Colantha Segis whose name tells his breeding; King Lyons Clothilde

ALVA AND KING ECHO SYLVIA COLANTHA SPOFFORD

Walker, a son of King Colantha Clothilde and Betta Lyons Walker, and Dutchland Sir Hengerveld Colantha, a son of Colantha Johanna Lad from a daughter of Pietertje Hengerveld's Count De Kol. This last named bull sired the older members of the herd and they are wonderful cows, deep, broad and level, and show evidences of dairy capacity of the highest order.

The Amsdens seldom sell any of their cows, preferring to sell their surplus stock as young animals and just raise enough to keep up the herd. Consequently their surplus stock in the form of yearling heifers and heifer calves have been widely distributed and this dairy establishment has had a great influence on many herds in New York and neighboring states.

The Gafkes, Holstein Breeders

ROBERT GAFKE, dairy farmer and Holstein breeder living near Oregon, Wis., has apparently solved the problem of keeping his boys on the farm. He makes them his partners and he has one of the best farms and best dairy herds in Dane County.

His son, Maxwell Gafke, graduated from high school in the spring of 1924. Thereupon Mr. Gafke turned the management of the dairy herd over to him and gave him full control. The fine appearance of this herd and the amount of milk produced shows that he made no mistake in giving the reins to this eighteen-year-old boy.

A younger son, Marshall Gafke, is also interested in the farm and the herd. For two years he has shown a young Jersey at the Dane County Fair and won a share of the premiums. Marshall's grandfather, who lives near Tomah, was interested in Jerseys and would like to have his grandsons interested also, so sent each of the boys a Jersey calf, thinking that this would cause them to take to the Channel Island breed, but the boys prefer to stick with the breed their father favors.

Recently Maxwell and his father went into Jefferson County in search of a bull calf and a heifer calf to be the property of Maxwell. They found a young bull that they liked in the Will A. Sayre herd and the heifer in the herd of Nass & Belinken, both near the village of Jefferson. Both calves will probably be shown by Maxwell at the fairs this fall.

The Gafke herd is not entirely purebred but contains a number of purebreds and the percentage will undoubtedly increase. Careful selection has made the present herd consist of high class producers. Maxwell studied agriculture in the high school at Oregon and incidentally learned to operate the Babcock test. Twice each month he tests the cows in order to ascertain the amount of butterfat they are producing. By checking the value of the product he can tell whether or not they are earning a profit for their owner. For several months last winter the seventeen cows averaged 35 lb. butterfat per cow. They are good producers and it will be difficult to find a grade herd of the individual quality of the Gafke aggregation. For two years this herd has been tuberculin tested without finding a reactor.

During winter the cows receive a home mixed grain ration, consisting of 500 lb. bran, 500 lb. crushed oats and corn, 100 lb. oil meal and 100 lb. cotton seed meal. This is fed at a rate of one pound grain for every four pounds milk. The roughage consists of 40 lb. silage daily with a full feed of mixed clover and timothy hay. Fresh clean water is available at all times.

The Gafke farm consists of 137 acres. For seventeen years Robert Gafke has owned it and his father owned it before him. The appearance of the farm shows that the owners have been and are good farmers. Part of the farm is tile drained and the owners state

that tiling has been found profitable for them. Books are kept on the crops as well as on the cows and the owners know what departments pay and what departments lose money or break even.

Since Robert Gafke turned the dairy herd over to his boys he has put more time and attention on his purebred Durco-Jersey hogs which are as good as you will find anywhere in Dane County.

Spot Ridge Herd

SPOT Ridge Herd is owned by W. H. Higgins and Son of Akron, New York, and consists of purebred Holsteins that are handled exclusively from the standpoint of dairy production. Some idea of the value of this herd can be shown from the amount of milk marketed through the Dairymen's League. For the year 1923 this herd was credited with 77,606 lb. milk and for 1924 the figures were 75,068, this is in addition to the amount used for calves and taken out for home consumption. There has not been over nine cows in the herd during this two year period.

There has been only seventeen animals in the Spot Ridge Herd at any one time, when they get to be two

SPOT RIDGE HERD AT PASTURE
W. H. Higgins & Son owners, Akron, N. Y.

years old the animals are sold. At the present time there is only one cow in the herd that is more than five years old, so that the period of maximum herd production has not been reached, the owners preferring to market their stock while there is the greatest demand for them as most dairymen prefer to buy three and four year old heifers rather than mature cows.

Segis and Korndyke blood predominate in this stock and the present herdsire is Prince Echo Lyons Segis, a son of the Canadian bull, Prince Echo Sylvia Fayne from a daughter of King Walker Pietertje Lyons.

Spot Ridge Herd is tuberculin tested and is regarded as one of the best and cleanest in Western New York.

Love of One's Work

IT does not matter whether a man paint the petals of a rose or the chasms of a precipice, so that love and admiration attend on him as he labors and wait forever on his work. It does not matter whether he toil for months on a few inches of his canvas, or cover a palace front with color in a day; so only that it be with a solemn purpose, that he have filled his heart with patience or urged his hand to haste.—*Ruskin.*

Correct errors when shown to be errors, and adopt new views as fast as they shall appear to be true views.—*Abraham Lincoln.*

Amsdale and the Amsdens

FOR thirty years there has been a big producing herd of dairy Holsteins on the farms owned by the Amsden Brothers, between Black Creek and Cuba, Allegany County, New York. Originally the Amsdens raised purebred Shorthorns, but they found that Holsteins produced so much more that they switched over to the black and white breed and for many years the dairy at Amsdale has consisted exclusively of registered black and whites. The Amsden Brothers consist of Roy and Alva. Roy has no children, Alva has one, a daughter Helen, a graduate of the local high school. Helen is keenly interested in the farm and may often be seen riding her handsome saddle horse, Prince.

Alva Amsden has been one of the township assessors for seventeen years and both brothers are regarded very highly in their community. They are working farmers and their establishment shows that they both possess practical skill and knowledge of agriculture.

ALVA AMSDEN
Dairy Farmer, Holstein Breeder and
All-round Good Fellow.

There are about fifty animals in the Amsdale herd which is on the accredited list. Animals from this herd have gone into other herds in New York, Ohio, Pennsylvania and New Jersey, and have made good wherever they have gone. The Amsdens, being dairy farmers, have developed their herd from a dairy standpoint and animals of their breeding have made big records in other hands when given the right opportunity. At the head of the herd is King Echo Sylvia Colantha Spofford. He is a son of Sir Champion Sylvia and Sadie Butter Girl Spofford, a cow that as a five-year-old made a seven-day official record of 647.6 lb. milk, 29.99 lb. butter in seven days, and then calving exactly a year from her previous freshening made another seven-day record of 700.7 lb. milk, 30.55 lb. butter. This cow is a splendid individual as well as a producer.

Sir Champion Sylvia, sire of this bull, is also a handsome animal. His sire, Champion Echo Sylvia Pon-

tiac, is the best known son of the famous May Echo Sylvia, the only cow ever credited with producing over 1,000 lb. of milk in seven days. The records of the daughters and granddaughters of "Champ" are so well known that they need not be repeated here. The dam of Sir Champion Sylvia is Belle Model Champion Sylvia, a thirty pound daughter of Belle Model Johanna 2d, a cow credited with producing 37 lb. of butter in seven-day test two different years. The three

FAVORITES AT AMSDALE
Helen Amsden and her horse, Prince.

nearest dams of Sir Champion Sylvia have seven-day records that average 36.21 lb. butter, while his seven nearest dams average 35.33 lb.

King Echo Sylvia Colantha Spofford is a very handsome young bull and is siring splendid calves. His picture gives some idea of his superb conformation and depicts him as he can be seen every day. Former herd sires at Amsdale were King Maxie Colantha Segis whose name tells his breeding; King Lyons Clothilde

ALVA AND KING ECHO SYLVIA COLANTHA SPOFFORD

Walker, a son of King Colantha Clothilde and Betta Lyons Walker, and Dutchland Sir Hengerveld Colantha, a son of Colantha Johanna Lad from a daughter of Pietertje Hengerveld's Count De Kol. This last named bull sired the older members of the herd and they are wonderful cows, deep, broad and level, and show evidences of dairy capacity of the highest order.

The Amsdens seldom sell any of their cows, preferring to sell their surplus stock as young animals and just raise enough to keep up the herd. Consequently their surplus stock in the form of yearling heifers and heifer calves have been widely distributed and this dairy establishment has had a great influence on many herds in New York and neighboring states.

The Gafkes, Holstein Breeders

ROBERT GAFKE, dairy farmer and Holstein breeder living near Oregon, Wis., has apparently solved the problem of keeping his boys on the farm. He makes them his partners and he has one of the best farms and best dairy herds in Dane County.

His son, Maxwell Gafke, graduated from high school in the spring of 1924. Thereupon Mr. Gafke turned the management of the dairy herd over to him and gave him full control. The fine appearance of this herd and the amount of milk produced shows that he made no mistake in giving the reins to this eighteen-year-old boy.

A younger son, Marshall Gafke, is also interested in the farm and the herd. For two years he has shown a young Jersey at the Dane County Fair and won a share of the premiums. Marshall's grandfather, who lives near Tomah, was interested in Jerseys and would like to have his grandsons interested also, so sent each of the boys a Jersey calf, thinking that this would cause them to take to the Channel Island breed, but the boys prefer to stick with the breed their father favors.

Recently Maxwell and his father went into Jefferson County in search of a bull calf and a heifer calf to be the property of Maxwell. They found a young bull that they liked in the Will A. Sayre herd and the heifer in the herd of Nass & Belinken, both near the village of Jefferson. Both calves will probably be shown by Maxwell at the fairs this fall.

The Gafke herd is not entirely purebred but contains a number of purebreds and the percentage will undoubtedly increase. Careful selection has made the present herd consist of high class producers. Maxwell studied agriculture in the high school at Oregon and incidentally learned to operate the Babcock test. Twice each month he tests the cows in order to ascertain the amount of butterfat they are producing. By checking the value of the product he can tell whether or not they are earning a profit for their owner. For several months last winter the seventeen cows averaged 35 lb. butterfat per cow. They are good producers and it will be difficult to find a grade herd of the individual quality of the Gafke aggregation. For two years this herd has been tuberculin tested without finding a reactor.

During winter the cows receive a home mixed grain ration, consisting of 500 lb. bran, 500 lb. crushed oats and corn, 100 lb. oil meal and 100 lb. cotton seed meal. This is fed at a rate of one pound grain for every four pounds milk. The roughage consists of 40 lb. silage daily with a full feed of mixed clover and timothy hay. Fresh clean water is available at all times.

The Gafke farm consists of 137 acres. For seventeen years Robert Gafke has owned it and his father owned it before him. The appearance of the farm shows that the owners have been and are good farmers. Part of the farm is tile drained and the owners state

that tiling has been found profitable for them. Books are kept on the crops as well as on the cows and the owners know what departments pay and what departments lose money or break even.

Since Robert Gafke turned the dairy herd over to his boys he has put more time and attention on his purebred Durco-Jersey hogs which are as good as you will find anywhere in Dane County.

Spot Ridge Herd

SPOT Ridge Herd is owned by W. H. Higgins and Son of Akron, New York, and consists of purebred Holsteins that are handled exclusively from the standpoint of dairy production. Some idea of the value of this herd can be shown from the amount of milk marketed through the Dairymen's League. For the year 1923 this herd was credited with 77,606 lb. milk and for 1924 the figures were 75,068, this is in addition to the amount used for calves and taken out for home consumption. There has not been over nine cows in the herd during this two year period.

Corn and Thanksgiving Day

BY GEORGE LESLIE

THANKSGIVING Day is always a day of feasting as well as gratitude to Providence for the "fruits of the earth" and general prosperity; and while from long assured custom we link turkeys and pumpkin pies with this feast, the one article of food which really is most closely associated with the first Thanksgiving Day—corn—is seldom remembered.

History differs somewhat in what is told of the first knowledge white people on this continent had of corn. One tale is that in the spring of 1621, the settlers in Massachusetts whom we always think of as the "Pilgrims," found some corn—or "maize" as the natives called it—in a deserted Indian village. They were helped to plant it and care for it by friendly Indians and the resultant crop was one of the causes of the original Thanksgiving Day declared by Governor Bradford.

Another version has it that Squanto and Samoset, friendly Indians, taught the white settlers to plant corn brought by them as a gift.

At any rate, the scanty harvest was truly a godsend to the Pilgrims on that bleak coast, and from the few bushels which served for a small group of pioneers has grown an acreage which gave over three billion bushels for the United States, according to the last Year book of the Department of Agriculture, and is considered the most important of all the crops raised in this country.

We are told a cow or two came to these shores in the Mayflower and in the long winter of 1621, it may be a little was spared for them from the grain used for food by their masters. Now, however, at least 90% of all the corn we raise is consumed by animals as meal, forage and ensilage, and corn produces as much forage as all other plants added together.

Considering it as it applies to dairy cattle alone, (although a few other animals eat it), we find the meal, either pure or mixed with the cob, an excellent conditioner, being exceptionally palatable, very digestible and carrying a high carbohydrate content.

It should not be considered as a milk making food, but as a help in keeping up body heat and energy through the cold weather. While from ½ lb. to 2 lb. a day, according to the age and weight, will be an excellent addition to the milking cow's ration, it is a mistake to make a large portion of the winter feed corn or corn and oats, if liberal yields are expected.

Fodder or stover are found to make a saving in dry roughage, but should be in good condition. Left out in the fields for months, subject to all sorts of weather, they lose much of their palatability and nutritive qualities. Mouldy fodder is responsible for many cases of indigestion or scours.

Corn silage, which within the writer's memory was supposed to spoil milk and make bulls sterile, is now an absolute essential in modern dairy practice.

Used in moderation silage aids in keeping dairy cattle in good health—it's their fruit and vegetables to go along with the dry hays and fodders and grains through the winter; and the only dependable substitute for green crops or grass in a dry summer.

The generally accepted rule of 3 lb. of good ensilage

to 100 lb. of body weight for heifers and cows is a good one. Too heavy an allowance of this excellent succulent taxes the animal's digestion and affects its health in various ways. Sometimes it keeps them thin and out of condition. Again it will cause scours which are really a symptom of deranged digestion.

The value of these three forms of corn to the dairy cow owner can hardly be estimated, so this Thanksgiving we may well give a share in our thoughts to that golden grain, of which John Greenleaf Whittier wrote:

"Heap high the farmer's wintry hoard
Heap high the golden corn.
No richer gift has Autumn poured
From out her lavish horn!"

"Let earth withhold her goodly root,
Let mildew blight the rye,
Give to the worm the orchard's fruit,
The wheat field to the fly.

"But let the good old crop adorn
The hills our fathers trod,
Still let us for his golden corn
Send up our thanks to God!"

Testing—Why Keep On?

After the First Year

AFEW days ago a prominent breeder of purebred cattle asked the following question: "Is it desirable or necessary to keep records on each cow in the herd for more than one year?" In further explanation of the question he let it be known that he thought his individual cows would produce about the same amount of milk and butterfat each year.

The answer was that if a breeder or dairyman really wants to know the production and returns made by each cow each year that this could only be obtained by keeping production records and feed costs each year. It is not possible to judge a cow's ability as an economical producer for a term of years by keeping record on her for only one year.

A cow will not produce the same amount of milk and butterfat each year. Many things can happen which will cause a variation in production from year to year. It is quite true that if a cow under normal conditions produces enough milk and butterfat in one year to place her well above the border line of profits that the owner can safely count on that particular cow as being a profitable cow to keep.

Is that enough to know about the individual cows in your herd? Is it not true that the cows furnish the market for a large part of the roughage and grain growth on the farm? If this is correct, then it is certainly important to take the steps to make sure that these cows pay the best possible price each year for the feed they consume. In seasons of short crops this is doubly important and essential.

While it is important to know just what production a cow will make year after year the greatest advantage of systematic records such as are made in C. T. A. work is that the owner can check up on the individual cows from time to time and adjust his feeding and management to meet the requirements.

Cow testing associations furnish the best and most

economical method of keeping an exact record on the dairy enterprise of the farm.

In practically all lines of business, books are kept on the business continuously. These books are closed each twelve months, a new inventory is made and another year's work is begun. In this way the manager or owner has a check each year on his business. He can tell whether his business is going ahead or falling behind. Checking up on the cows in the herd every twelve months is good management, it creates interest, and if properly handled it will make for greater profits.

R. L. Peterson, tester in the Gogebic C. T. A., states in his annual summary that a total of 1,996,581 lb. milk and 78,675 lb. butterfat were produced by the 265 cows under test during the year just ended. The members received a total of \$37,048.54 for the product produced by these cows. Peterson pertinently asks the question, "Does a \$37,000.00 business need a bookkeeper?"—*Michigan Farmer*.

Proper Designs Make Homes More Inviting

By M. E. BOTTOMLEY

Assistant Professor of Landscape Architecture, Ames, Iowa
(Concluded from page 635.)

Trees in town are usually planted singly because there is room for only one in most situations. In the country, on the contrary, specimen trees will be used less because their perfect development is most unlike rural scenery where masses and groups predominate. Added to this is the fact that where shade or framing is needed there is room for and probably need for three or more trees. It is not necessary, indeed not desirable, that every individual reach perfection, for each would attract to itself too great attention.

This brings us to consider again the kinds of trees for the front yard or rather the kinds not to have. In the rural scenery even more than among city streets, highly exotic plants like the blue spruce would be out of place. The trees which are native will be easiest to get and will harmonize best with the surrounding woodlots. However, the homestead is unquestionably more artificial than the woodland and the addition of flowering trees for seasonal effect, perhaps one or two white birches and even a few evergreens, will give pleasure if there is sufficient normal foliage around them for the background. The country home needs not one or three or even five trees spotted over the lawn, but a dozen or more grouped in masses so that breadth and large scale will be expressed by these tree groups and also by the unbroken lawns between them. The presence of trees around the homestead and even along the roadside will go a long way toward making your farm an inviting and pleasant place to look at and to live in.

FLOWERS AND SHRUBS

Besides the open front lawn, there should be on every farmstead a private lawn well shaded and well screened from the highway. Usually this will be adjacent to one side of the house and naturally upon the living room side. Besides shade, there should be other interests in the boundaries of this area. Here is the place for flowering shrubs and flower beds against the en-

closing shrubbery. The amount of flowers present will determine whether this area is to be called a lawn or a garden. Whichever it is called, it should have a bit of the other in it. The design of this space can be quite informal, but rarely should be formless. It can even be quite regular and approaching the formal without being a discordant element of the entire homestead.

The location of vegetable garden, garage and drying yard depend so much upon the conditions that no general recommendations can be made. Upon most farms associated with the house there will be the garage, the pump-house, the chicken house, the lawns, drying yard and vegetable garden, making the living group. Functioning with the barn as the center will be the barn group consisting of the silo, the machine shed, the granary and houses for stock. As the barn is usually the best building of this group and because it expresses the business of farming, it should be placed so as to be seen. There is no good reason for hiding it, nor for that matter for hiding any farm building which is architecturally good enough to be a part of the farm picture.

As the entrance drive will usually be straight, a good building like the barn or granary will show to advantage at the end of it. If the main view into the farmyard can be terminated by a principal building, the yard will appear enclosed. Then if the minor buildings can be grouped about the central yard and related to each other, the result will be much more convenient and much more pleasing than the scattered arrangement.

If neatness is a virtue and a factor in the appearance of the city home, it is doubly so in the country. Beauty and neatness have an uplifting effect here as in the city. The farm is a business with the home attached. It must be efficient, carefully arranged and well equipped, and at the same time it must be livable. The farm which has a reputation to live up to will usually live up to that reputation in more ways than mere beauty.

Uncle Sam, contrary to the cartoonist's conception of him, is a gentleman with an unusually large waste.

This is a picture of the Pocket Herd Book which we are offering as a premium for a two years' subscription to THE HOLSTEIN BREEDER & DAIRYMAN for \$1.00, new or renewal.

This is the most convenient, practicable, up-to-date Pocket Herd Book on the market. If you are not satisfied with the Book, return it and we will refund your money.

NOT ABOUT COWS

Thanksgiving

WHILE all thoughtful people urge that the spiritual significance of our national holidays should be more emphasized, yet it must be admitted that more stress on material things may be permitted to Thanksgiving than to any other holiday of the year. And surely, gustatory enjoyments around the family table should be allowed a paramount place on this one day of the year. For while the Puritan Fathers celebrated the first Thanksgiving Day because they had found a place to worship as they pleased in freedom and safety, yet, it must be remembered that it was also for the material blessings of food after starvation. And for days beforehand, the women baked and boiled and roasted, and the feast lasted for three days. While not for one minute advocating the gross pleasure of over eating, there seems to be the best precedent in the world for making the Thanksgiving dinner one of the very best served during the year. That it may be appetizing yet not extravagant is shown by the following menus:

THANKSGIVING DINNER

Roast Chicken	Fruit Cocktail	Dressing
Creamed Onions	Mashed Potatoes	Baked Squash
Celery	Hot Biscuits	Mixed Pickles
	Cranberry Jelly	
	Perfection Salad	
	with	
Pumpkin Pie	Cheese Crackers	American Cheese
Nuts	Coffee	Bonbons
MENU No. 2		
	Oyster Cocktail	
Crown Roast of Pork	Mashed Potatoes	Dressing
Scalloped Corn	Glaced Sweet Potatoes	
Baked Apples	Hot Rolls	Celery
	Olives	
	Waldorf Salad	
Apricot Ice	Saltines	Small Cakes
Nuts	Coffee	Raisins

There is not much use in trying to be thankful one day in the year if one does not practice it the other three hundred and sixty-four. There is a bright side to everything; nothing is so bad but it might be worse; no one so evil that there is not some good in them. Dwelling on the good things of life rather than on the ills makes for that cheerfulness which is the foundation of thankfulness.

Men are funny creatures. They are trying by every imaginable means to find out how old the earth is, when they can't even find out the age of the average woman on it.

Taking the "Work" Out of Housework

(Concluded from page 670.)

When everything goes wrong in housework is the time when if it is humanly possible the housewife should take a vacation, even if only for a day, and longer if possible. Even if it means leaving the family to its own devices and on its own resources. It won't die of neglect in a day or so. When the refreshed housekeeper returns, all the kinks will smooth themselves out and work that seemed an unbearable burden will once more become a thing of joy. If, however, an utter absence is impossible, there are one or two other little schemes one can try. Avoid exhaustion by taking a little nap each afternoon. Let the work wait and it can be dispatched with ease a little later in the day. Try to plan a change of work so that variety may be added to a seemingly monotonous task. Variety is the spice of work as well as play. Another great help is the doing of some piece of work when just in the mood for it. A nice warm day in the spring reminds one of the heavy bedding which must be washed. Just the day for it! A similar day in the fall suggests the potting of bulbs and flowers for winter use indoors or the finishing up of the outdoor work. The impetus of the feeling carries one half way through such a job before one realizes that it is really work and housework at that.

DRESSING FOR HOUSEWORK

In considering some of the things that might be done to render housework more enjoyable, the question of dress should not be overlooked. Few subjects are more dear to the heart of the average woman and rightly so for the woman who no longer cares how she looks is beginning to lose all respect, her own and that of others. Because there is no one to see and because she has no intention of going outside, many an otherwise self-respecting woman will wear anything, even old party dresses, while doing housework. And shoes that are the most disreputable and uncomfortable in the wardrobe are finished up in the kitchen. And so many women do not dress the hair becomingly until afternoon, either keeping it under that abomination, the boudoir cap, or openly wearing it "wapsed" up any old way. Is it any wonder that under such conditions, seeing the teacher or stenographer going by neatly and suitably dressed, the average housekeeper gives way to a feeling of discontent? And what humiliating apologies must be offered to the chance caller at the door. There is no good and sufficient reason why women doing their own housework should not have their hair neatly and becomingly dressed in the morning, a pretty morning dress and good looking comfortable shoes. They are just as much entitled to proper and suitable clothing as the trained nurse is to her uniform. There are very few women so strong

minded that they do not respond to the lure of suitable clothes. To know one is looking one's best gives stimulus that carries one over the day's burdens easily. And one never feels quite so efficient as when well shod.

CONVENIENCES IN HOUSEWORK

The modern stenographer has her typewriter, the modern teacher her textbooks and the modern nurse her valuable aids in medicine and surgery. So too the modern housewife has or should have all the help that can be gained from the inventions of the past few years. The electric washer, the electric iron, the vacuum cleaner and the many electric aids in cooking need only a mere mention. The human servant may have left the kitchen, but she is replaced by the electric help. Few small towns are now without the electric current and the number of farm homes so equipped is growing larger each day. To say nothing of the saving of time and muscle, there is a fascination in the operation of machinery that takes much of the drudgery out of the work being done. It used to be true quite frequently that though there was a full up-to-date equipment for the farm work, the housewife indoors would be getting along with old makeshift appliances. But that belongs to a past generation and few men nowadays are willing to have their wives handicapped by such lack of modern help. Every real genuine labor saving device should be installed in the kitchen of every woman who has to be laundress, cook, chambermaid and lady of the house.

AN ATTRACTIVE KITCHEN

The kitchen should be an attractive room, well lighted, painted in some bright, cheery color with crisp, white curtains and a few flowers if possible. When one considers how many hours a woman spends in this, her workshop, it is not asking too much. A rocking chair and a high stool should be part of the furnishings and both should be used on every proper occasion, insuring less ache in backs and feet.

No doubt every individual woman has her own pet shortcuts in housework, and her own way of lightening her labors, but since help in the home is still a scarcity every wise housewife will certainly be interested in anything mental or material that will tend to take the work out of housework.

ASK THE MAN WHO OWNS ONE

I am man's faithful servant.
I lighten his days and cheer him as he toils.
My wages are small; my task great.
Because of me his house is kept in order.
Men admire my brilliance and enjoy my presence.
Some men fear me; others are unafraid.
In many homes I do the washing, ironing, sweeping and cooking.
Homes are made glad because I am there.
I am NOT electricity. I am WOMAN.

—Thomas U. Tilly.

Where the sunshine is very intense, plants guard against it by either increasing the thickness of their leaves or decreasing their size and number. In the opposite case, they increase their leaf surface.

The promise of next year keeps folks busy this year.

The Pre-School Age

WHILE mother carefully prepares the baby's food and the teachers emphasize proper lunches for the kiddies in school, the child of the "between age" is often unintentionally neglected, and fed an improper diet.

Milk has been found indispensable for all growing animals, not only for its minerals, proteins, fats, etc., but for its vitamins. Each child should drink one quart of milk per day, until twelve years of age. Include one vegetable each day, such as spinach, carrots, beets, beet tops, or other greens. Greens are especially good, and when the child is old enough should be given fresh. These vegetables are all rich in vitamins.

Fruit juices are especially good, the tiny baby can be fed orange juice, and the strained juice of tomatoes after two months of age. Older children can be given the juices from all kinds of fruit.

Baby's second summer need not be dreaded if the mother pays strict attention to the child's diet, and is careful about summer fruits. Some children as well as grown people cannot eat strawberries. The juice of peaches is good. Prune juice is a standard laxative.

Cereals are so good for the small child, whole wheat is splendid, oat meal is laxative, but produces gas in some children. The yellow corn meal is rich in fat vitamin, which is not found in the white meal. The brown rice is to be preferred to the white polished rice. All of these cereals require long cooking, a child's starchy food all needs long cooking. Oat meal and wheat should be cooked two hours in a double boiler, or allowed to cook slowly all night on the back of the range. Figs, dates, or raisins added for variety makes a pleasant change.

Potatoes can be served once a day, and they are best baked.

Whole wheat, Boston brown bread and raisin bread are much better than plain white bread for children. They can be taught to like these breads.

A child needs a certain amount of sugar, simple cakes, honey, syrup, are all good, but do not feed a child candy just before his meal time, candy should come last, and then be sure it is pure, and not a large quantity. Ice cream chills the stomach and should be eaten slowly.

Meat for the child is a much discussed question. A certain amount, and of the right kind, properly cooked is not harmful. Soups from meat, with soft eggs, for the small child and for the four and five year old, roast beef, chicken, crisp bacon, cheese, lamb, etc. but do not serve fried meats, they are very hard to digest. Peas and beans are high in protein, and may take the place of meat.

Plenty of people do not feed their children wisely, and still do not seem to experience bad results, yet when they commence school, and bring home reports that they are under weight, the parents usually say that everyone on the father's and mother's side was "skinny" and nervous, and the condition is just natural, thus placing the blame entirely on heredity.

Man's inhumanity to man is as nothing in comparison with the lack of charity of woman for woman.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

NOVEMBER 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

When the Breeders Fix the Rules

BREEDERS everywhere are enthusiastic over the provisions in the by-laws of the Holstein-Friesian Registry Association which provide that the Association shall be managed by breeders and not by men who have ceased to own Holsteins and are therefore likely to grow out-of-touch with the constantly changing problems of the cattle owners. These sections, which govern the Eligibility of Officers, are as follows:

ARTICLE X, Section 2. Only members who own a herd of purebred registered Holstein-Friesian cattle and who follow dairying as their major business are eligible to serve as a Director.

ARTICLE X, Section 3. Should a Director dispose of his herd during his tenure in office, his term of office shall be terminated at the next annual meeting following the dispersal of his herd, when his successor shall be elected to fill the unexpired term.

No better evidence could be submitted to show that the New Association represents the general feeling existing among the rank and file of the breeders who resent the fact that the control of the Old Association has been taken away from them through the action of the ONE SPECIAL MEETING IN THE OLD ASSOCIATION'S HISTORY, a meeting called a thousand miles west of the centre of Holstein population, at a time of year when many of the members were too busy to leave their farms and attend. No rawer political deal was ever put over on any group of farmers or breeders than the trick that was pulled at the special meeting at St. Paul, Oct. 11, 1921.

Many of the proxy votes cast in favor of the proposition would have been voted against it had the owners had time to study the proposition, others would have been cast against it if the givers had known, when they were giving their proxies, that it was designed to put the delegate system into operation at once instead of, as many thought, having it discussed at the St. Paul Special Meeting and a definite plan submitted

to the membership before the Annual meeting which was scheduled to be held at Kansas City the following June.

It must not be forgotten that the rank and file of the membership never had a chance to study the delegate plan before it was put into operation, for the plan which is now in operation was A SUBSTITUTE RESOLUTION, a motion submitted to the gathering at St. Paul when the Political Management found out that they held enough direct and proxy votes to control. There were fearful that such a time might not come again for years, experience had shown them that their opponents had the arguments that appealed to the rank and file of the general membership and that, at Kansas City, the Real Breeders were likely to have enough votes to control the meeting, to have candidates pledged to reform and elect their candidates to the Board of Directors. Once the Millionaire-Dealing-Political Group lost control of the Management they felt that it might be many years before another such opportunity came and they took advantage of it. The results are known to every Holstein owner: A loss of confidence in the Association; a lessened demand for purebred Holsteins with a consequent lowering of price; dissention among the members; breeders refusing to register their stock; and, although the transfer fee has been increased to six times what it was previous to 1919, management of the Association affairs so extravagant that the expenses have exceeded the income by no less than \$137,000 during the past three years.

It is no wonder then, that the breeders who formed the Holstein-Friesian Registry Association, Inc., profited by their experience and, into the by-laws of the New Association, wrote a proviso that should, for all time, prevent a bunch of Hasbeens, Politicians and Office Holders from perpetuating themselves in office and relegating the Active Breeders to the role of Payers of Taxes who have practically no voice in the management of the Registry Association of their favorite breed.

The Holstein-Friesian Association of America Defendant in Court Action

THE Holstein-Friesian Association of America is defendant in an equity action brought by Mr. George E. Stevenson, former Vice-President, and some forty-six other members.

The case is listed for trial in the Supreme Court of the State of New York for the term beginning November the 30th.

The suit is brought to stop the extravagant expenditures of the Association's funds and further to enjoin the Directors from any encroachment upon the Reserve Fund for the purpose of so-called Extension Work or propaganda connected therewith.

Witnesses will be called and it is assumed that the official conduct of the Board of Directors, who have been accused of loosely expending the Association's funds, will be reviewed.

As a guide choice has serious limitations.

Was Not Confidence Misplaced?

AT the Annual Meeting at Syracuse, Frank O Lowden, was elected President of the Holstein-Friesian Association by the votes of the REAL BREEDERS who were fighting the POLITICAL DEALING ELEMENT in their efforts to gain control of the Association and turn it into a sales and promoting organization through the activities of the PAID-STATE-SECRETARIES.

The very first meeting at which Mr. Lowden officiated, was the special meeting held at St. Paul on October the 11th, 1921. We find in reviewing the report of the meeting, in Vol. 47, Page 41 of the Herd Book, that one of the first official acts of Mr. Lowden, after calling the meeting to order, was to appoint a Committee of Tellers consisting of ten persons. Eight out of the ten were of the PAID-STATE-SECRETARY variety—just the element that the REAL BREEDERS were fighting.

We take the exact wording from the Herd Book so that our readers may know. It is regrettable that the REAL BREEDERS should have so misplaced their confidence.

"The first order of business is the appointment of tellers. Without objection the Chair will appoint as tellers the following gentlemen: Messrs. W. H. Mott, C. M. Long, J. W. Bartlett, C. F. Bigler, H. C. Barker, G. D. Brill, J. M. Henderson, F. A. Koenig, A. P. Bigelow, and B. D. Scott."

Ole-Moonshiners

THE comparatively high price of butterfat at the present time has greatly increased the incentive for unscrupulous persons to attempt violation of the Oleomargarine, Filled Cheese and Filled Milk laws. Recent cases in Jersey City have shown that many tons of cocoanut oil were bought at prices well below 15 cents per pound and sold in the form of spurious dairy products at prices around 50 cents per pound. This state of affairs will cause the oleo-moonshiners to become active. There are already suspicions that they have worked in the cities of Baltimore, Cincinnati, St. Louis and Chicago. The Government, which, besides being anxious to preserve the health of the general public, is concerned with the loss of license fees and taxes, wishes the coöperation of all interested in the dairy industry. All violations of the law should be reported to the Washington office of the National Dairy Union which can be depended upon to give the matter careful attention.

The Trend of the Times

IT IS rumoured that Chicago's Health Commissioner proposes, next spring, to issue an order prohibiting the sale in that great city of milk produced by herds that have not been tested for tuberculosis.

This will stimulate tuberculin testing in adjacent territory situated in Illinois, Wisconsin and Indiana. Illinois in particular is staging a great tuberculosis eradication campaign so that the expected order of the Commissioner, while it will probably be bitterly fought,

will not have the strong opposition it would have had three or four years ago.

Those who are close to the health authorities of New York City anticipate that the time is not far distant when a similar order will be issued by the health authorities of America's metropolis. The HOLSTEIN BREEDER AND DAIRYMAN has several times called attention to this possibility.

Pure foods are in demand. There is no better and purer food than milk when it is pure and that means free from dirt and bacteria. There is a rapidly growing belief that pasteurized milk is not as good as clean, unpasteurized milk produced by healthy cows. Those who plan for the growing demand caused by this belief will gradually improve the sanitation of their dairy plant and one of the greatest possible improvements is to make sure that all the dairy animals are healthy in every respect.

Money Makes the Mare Go

THE Millionaire-Political-Dealing Element that has been in control of the affairs of the Holstein-Friesian Association have not only disfranchised the members by depriving them of a direct vote in order to retain control of the Association, but have fortified themselves by every conceivable method to perpetuate a monopoly on the purebred Holstein-Friesian Registry business.

A monopoly to keep millionaires, politicians and dealers in control of the Registry business and keep the Real Breeders absolutely out of the Registry business.

As a political party tries to control certain daily newspapers so the "outfit" that has swooped down upon the Holstein-Friesian Association of America seemingly have tried to control the *Agricultural and Dairy Press* by paying vast sums of the breeders' money to these publications for advertisements and then flooding their reading columns with propaganda favoring their administration of the affairs of the Holstein-Friesian Association of America.

Now that the Real Breeders have organized a new Registry Association to free themselves from paying excessive fees and to get out from under the clutches of the dealing-political-element and restore public confidence and prosperity to the industry, some of these agricultural papers publish editorials regretting that there has been a division in the ranks of the Holstein-Friesian Fraternity.

The editor of the *Breeders Gazette*, a publication devoted to draft horses, fat cattle and hogs shows the spirit of some of these unfavorable comments and the editor, after telling his readers that "We have not tried to pry into the rights and wrongs involved in the controversy" thus admitting that he does not know much about it, tries to prejudice his readers against the new Association, and favors the old organization and the Political Management who have been contributing financially to the support of his paper.

When breeders of Holstein-Friesian cattle run across any of these editorials commenting unfavorably upon the new Registry Association, we would ask them to refer to the following list of publications and see if the name of the publication is listed among those who have

been living partly at the hand of the extravagant management of the Holstein-Friesian Association of America.

The following is a list of publications that have shared in the money collected from the breeders of Holstein-Friesian cattle as unnecessary fees. This money has been paid to them by the *political-millionaire-dealing management*:

Potash from Green Sand

FOR years the agriculture of Europe and America has been virtually dependent upon potash and nitrates as sources of plant foods. Germany practically had a natural monopoly of potash and Chile had practically a monopoly of nitrates. When in August, 1914, most of the nations of the world arranged themselves on opposite sides, the allied powers had the nitrates and the central European powers had the potash. If German chemists had not devised and perfected a process for making nitrates from the nitrogen of the air Germany could not long have carried on a war and probably would not have ventured upon one, says Dr. Edwin E. Slosson in his entertaining book "Creative Chemistry." But the outside world had no such substitute for the German potash salts and has not yet discovered one. Consequently the price of potash in the United States jumped from \$40 to \$400 a ton and the cost of food went up with it. Even under the stimulus of prices 10 times the normal and with chemists searching furnace crannies and "bad lands" the United States was able to scrape up less than 10,000 tons of potash in 1916, barely enough to satisfy our needs for two weeks!

"Yet potash compounds are as cheap as dirt. Pick up a handful of gravel and you will be able to find much of it feldspar or other material containing some 10 per cent of potash. Unfortunately it is in combination with silica, which is harder to break up than a trust."

When the American Chemical Society recently met in Los Angeles, Dr. J. W. Turrentine, C. W. Whitaker and E. J. Fox, chemists in the United States Bureau of Soils, told the assembled members that, "A thousand year's supply of potash for the American farmer, independence in the future from European supplies and the establishment of a new great industry in

the United States are all possible as a result of a new process for making potassium sulphate from the great quantities of green sand found in New Jersey, Delaware and Maryland." The green sand deposits, which are near the surface, can be worked with steam shovels, are close to water and rail transportation, are situated near good markets and with labor handy. The new process is being demonstrated in the laboratories of the Electro Company at Odessa, Delaware, where the raw material is treated with sulphuric acid.

Every little while some enthusiastic chemist or writer will discover something that is heralded as a panacea for all agricultural troubles. During the war it was announced that in some of her dried up or partially dried up western lakes the United States had sources of potash that would render her independent for all time to come of imported potash salts. In the seaweed growing around her shores there is probably more potash than is contained in the whole of the Alsace potash mines, but the expense of rendering this potash available for the farmer's use has been prohibitive. It is possible that a large proportion of the potash in the green sand deposits of the Atlantic coastlands originally came from seaweed.

Should the Government chemists be correct in their prophecy and the expense of manufacturing potassium sulphate from the green sand deposits be so low that the product can be placed upon the market at a cost within the reach of the American farmer, it will mean a great thing for American agriculture.

In 1649 there appeared in a sheet called *Moderate* the first-known English newspaper advertisement. It was an inquiry for a stolen horse and the offer of a reward for its return.

A Servant in Bondage

YOU may have recently received a circular signed by Mr. F. L. Houghton of Brattleboro, Vermont. We do not know whether the circular was sent out by Mr. F. L. Houghton personally of his own free will or whether it was prepared by or at the command of the Board of Directors and sent out over Mr. Houghton's signature in an effort to "WHITE-WASH" the true state of affairs that exist in The Holstein-Friesian Association of America.

Surely the statements made in the circular over Mr. Houghton's signature can not be verified by facts, and further, they do not represent Mr. Houghton's personal opinion as previously expressed.

Read what Secretary F. L. Houghton had to say about THE POLITICAL MANAGEMENT—THE INCREASING OF THE TRANSFER FEE—THE DEPRIVING THE MEMBERS OF THEIR RIGHT TO VOTE—THE EXTRAVAGANT AND WASTEFUL EXTENSION SERVICE—THE INGENIOUS BOOKKEEPING METHODS TO COVER UP CERTAIN OF THE ASSOCIATION'S EXPENDITURES.

These facts were furnished by Mr. Frederick L. Houghton to be used as "A MESSAGE OF WARNING TO BREEDERS OF HOLSTEIN-FRIESIAN CATTLE" in the year 1921.

DANGEROUS DAYS

HIGH HANDED MOVEMENT TO DESTROY MEMBERSHIP RIGHTS

Holstein-Friesian Association Members Will Resent Efforts of a Faction to Invest Directors with Power to Amend By-Laws at Will, and to Centralize all Power in the President

Continuance of High Transfer Fees—Removal of Executive Offices from Brattleboro to the Middle West—President's \$12,000 Salary and Extravagant Extension Department Expense—Should be Voted Down

This plain statement of facts is of vital interest to every member who has the welfare of the Holstein-Friesian Association at heart.

The Holstein-Friesian Association of America, for over a third of a century has functioned, primarily as a record association of the breed.

It has grown to considerable proportions, by reason of the superiority of Black and White cattle and the individual efforts and loyalty of the breeders.

It always has been a popular institution as to government, and its members have felt an interest and responsibility in its affairs.

Every member has been privileged to exercise his voting prerogative, and by his ballot to have a voice in the disposition of any organization questions which have been under consideration.

TAKING AWAY YOUR RIGHTS

A certain faction, determined on taking the power from the hands of the membership, has injected into the official call for the Annual Meeting, June 1, an amendment which provides that any changes in the By-Laws may be made at any time by the Board of Directors, and without regard to the will of the members at large.

Such unjust and most intensive centralization of power is contrary to the principles of popular government, and its malicious possibility is more apparent when you reflect that a board of directors so selected and constituted as to be subservient to an unscrupulous president or Chief Executive, (should the president be of the character) could exploit the Association's resources at will. It is further proposed to constitute the President as the Chief Executive Officer,—a high and mighty potentate, and a fitting capstone to the whole selfish structure.

TRANSFER FEES MULTIPLIED FOUR TIMES

Every member is aware of the fact that transfer fees have been four times as large as they were previous to the Annual Meeting at Philadelphia in 1919, but do all members realize that the increase in transfer fees was made at the instigation of the same leading spirit who now seeks to place the right of By-Law amendments exclusively in the hands of the directors and to centralize all power in the president?

The Association receipts for all transfer fees

Shall They
Exploit the
Association and
its Funds?

during the fiscal year ending April 30 were over \$175,000. Bear in mind that the great reason for placing this "four times too big" tax on the breeder was that the money was needed to defray expenses of the Extension Department.

WHERE SOME OF YOUR MONEY WENT

Contemplate if you will, that some of the principal items of that Extension Service were: **President's salary, \$12,000; one of traveling assistants, \$6,500; another \$4,000. To that total add at least \$8,000 for junketing and speech making from Maine to California and \$5,000 for unnecessary printing and you have \$35,000.** Then reflect: Did any of that \$35,000 speech making and propaganda increase the size of your milk check, reduce the cost of feed or raise the price of your cattle?

(Let any member ask for an itemized account of thousands of dollars worth of extension work, traveling and speech making and he will find it camouflaged or hidden, by most ingenious book-keeping methods.)

This high handed and most preposterous attempt to make a member's vote of little use,—to centralize all power in the hands of the president and directorate, all the while extracting the big transfer fee from the breeder to grease the wheels of the chariot and provide extravagant salaries for the Orators.

Mr. Member: You have one consolation. You know that prior to the possible centralization of all power in the president and directors, your vote is as big and powerful as it ever was.

If you want to stop these things:

- 1.—The Directors given power to amend your By-Laws at will.
- 2.—The President regaling himself with a \$12,000 salary and unlimited traveling expenses.
- 3.—The Extension Service wasting each year, 30 to 40 thousand dollars on useless speechmaking and traveling expenses.
- 4.—The transfer fees four times what they were prior to 1919.
- 5.—The removal of the Executive Offices to the Middle West.

THEN SEE THAT YOUR PROXY IS IN THE HANDS OF THE RIGHT PARTY.

At the time the above message of warning was submitted by Mr. Houghton he was responsible to the members of the Holstein-Friesian Association for his election to the office of Secretary. He was free to express his views in the interest of the REAL BREEDERS, and he shows his spirit of loyalty to their interest in every respect.

After the office of Secretary was made appointive by the Board of Directors by a resolution passed at the Kansas City Meeting, the first meeting at which the Delegate Form of Government was put into operation, Mr. Houghton became entirely responsible for his position as Secretary to the Board of Directors, and

in the message of warning that was recently circulated over his signature we see an entire change of attitude.

Mr. Houghton's radical change in attitude, deserting the interests of REAL BREEDERS and going over to the camp of their enemies, reminds us of a story which we once heard about a Politician who was able to retain a high-salaried Government position at Washington, D. C., through several changes of administration. A friend asked him how he was able to do it and he answered that "he could change politics just as often and just as quick as they could change administrations."

LETTIE DE KOL, CLOTHILDE

First prize aged cow, senior and grand champion female at the Hutchinson, Kansas and Oklahoma City Fairs. Owned by George Appleman, Mulvane, Kansas.

If civilized peoples were to lapse into the worship of animals, the cow would certainly be their chosen goddess. What a fountain of blessing is the cow! She is the mother of beef, the source of butter, the original cause of cheese, to say nothing of shoe-horns, hair-combs and upper leathers. A gentle, amiable, ever-yielding creature, who has no joy in her family affairs that she does not share with man. We rob her of her children, that we may rob her thereafter of her milk; and we only care for her when the robbery may be perpetrated.—*Charles Dickens.*

Ignorance is a minor element of courage.

CLUB ACTIVITIES

ELDERON HOLSTEIN CLUB

At a meeting in the town hall at Elderon, Wisconsin, the Elderon Holstein Breeders Club elected as president, Richard Robe; vice-president, Otto Braatz and secretary-treasurer, E. C. Pock. The new directors are: A. J. McVey, Henry Schwalbach, and Emil Schrank.

The club appointed a committee to supervise calf club enterprises. The principal speaker at the meeting was John H. Lasher, county club leader, whose subject was club activities and the dairy business.

AT GROVE CITY

At a recent meeting W. C. Dale, John White, J. C. Jack and George McDougall all of Grove City, Pa., were elected directors of the Grove City Holstein Cattle Association. The other three members of the board are Frank Dowell, George Barnes and J. W. Hunter. At the first directors' meeting the new board elected Mr. Hunter president, Mr. McDougall vice-president and J. C. Jack secretary-treasurer. They plan a meeting in December when a twelve dinner will be served at the Grove City Commercial Club. The annual banquet will be held in February at the Penn Grove Hotel. The directors plan to extend the work of the cattle association and will organize more calf clubs.

HONOR BOY PRIZEWINNERS

Ralph Patton and Ralph Miller, who did so well in the Junior Club demonstration contest at the National Dairy Show and other fairs were given a demonstration on November 3d, by the home folks at Jesup, Iowa.

There was a program by members of the local school, then George Ekstrom, agricultural instructor at the Jesup consolidated school told about the club work being carried on and told how he coached the demonstration team. The two boys followed and gave their demonstration as nearly as they could without the cow and barn equipment which they had at the fairs. They stressed the importance of clean milk and told how it could be produced.

Floyd Johnston, field secretary of the Iowa State Dairy Association, presented the boys with gold watches provided by the De Laval Separator Company. Then county agent L. A. Walters, gave the boys white gold chains to use with their watches, provided by the breeders of the state.

DANE COUNTY CLUB NEWS

J. D. Stone of Oregon, Wisconsin, was elected president of the Dane County Holstein Breeders' Association, at their third annual banquet held at the Simon hotel at Madison, October 29th. Werner Tasher, Verona, was elected vice president and Raymond Schuster, Oregon, secretary-treasurer. All of the directors were re-elected, and G. P. Nace of Mt. Horeb was added to fill the vacancy left by J. E. Stolen, who has changed his residence and occupation.

J. D. Jones, Jr. state commissioner of agriculture, said that success in dairying is achieved only by constant progress. "In all agricultural work the end is not soil improvement, not crop improvement, not dotting the landscape with silos, but in the improvement of character of men and women, the improvement of their standards of living and the perpetuation of a high type of citizenship throughout Wisconsin."

County agricultural agent, Milton H. Button, was elected sales agent for the association. The commissions realized will not go to him but will be paid to the county Holstein organization and be handled by the secretary-treasurer.

S. S. Miller of Madison gave a report on the 1925 Dane county show herd which paid its way with a possible small surplus when all bills are collected. The circuit included the Rock, Green, Dane and Grand county fairs, the Elroy fair and the state fair at Milwaukee.

WEST VIRGINIA DAIRYMEN MEET

By HARRY L. BERLOVICH

West Virginia, it is admitted, is not a dairy state. Yet West Virginia has a live wire and up-and-going state dairymen's association, as was shown at the annual convention of that body at Parkersburg on November 4 and 5.

In a state where \$40,000,000 of dairy products are consumed annually and but \$11,000,000 worth produced in its boundaries, in a state where market conditions, road development and soil topography has held dairying in check, has the West Virginia Dairymen's Association been doing remarkable work in promoting dairying.

Working hand in hand with the dairy extension and dairy division of the University of West Virginia the mountaineer farmers are profiting largely through the sane judgment of Prof. E. L. Anthony, head of dairying and Prof. J. V. Hopkins the active secretary-treasurer.

Last year a bull placement project was worked out by the association, it being agreed by members of the association that bull calves would be donated for use in farmers' herds, with no charge whatsoever. The farmer who procures the bull, is to stand the cost of feeding and caring for him and is to receive what service charges he can collect for the use of the bull by other farmers, it being agreed upon the price for outside services, and when necessary bulls will be exchanged between farmers or groups.

"When we started the work, last year, we set our goal at 10 bulls a year," explained Prof. Anthony, "but to-day we have 25 such bulls placed and have requests for 15 more. None of the bulls are yet of serviceable age, as they were placed just as young as they could be weaned. I feel that these bulls will bring untold benefits to the state, in a dairy way. Prof. Hopkins is to be complimented for extending this work as he has."

In addition to being a factor in legislative way the association is going to add to its extension activities by trying to sponsor a statewide cow-testing association, directing all its activities from the college of agriculture at Morgantown. Because of the lack of enough dairymen in certain districts to start cow testing associations has this work been held in the background. The association hopes, with its new plan to carry the gospel of testing work to the most remote section of the state.

There were approximately 200 enthusiastic dairymen at the convention. The relative importance of the association can be gleaned from the fact that such personages as Hon. John Smith, secretary of agriculture for West Virginia; Hon. Nat Frame, director of extension for the state; Dr. C. E. Clement, market milk specialist for the U. S. Department of Agriculture; Prof. Oscar Erf, Ohio State University; Prof. C. H. Henderson, University of West Virginia, appeared on the program.

Dr. Clement, opened the sessions on November 4th with a sane talk on "The Milk Producer and the Milk Dealer." He was followed by Prof. Henderson, who in the farmers' own language covered the subject of mineral feeding. He explained that lack of minerals in a cow's ration would deter development of its offspring, would keep the cow itself from being in prime condition and would have a material effect on the milk supply.

Next on the program was Prof. Erf, who went into details with some of the experiments now being carried on in Ohio. "It has been said that our problems are not so much with production as with marketing to-day," declared Prof. Erf. "It is true that marketing is a big end of the business, but we are not yet out of the haze in our production problems. When we know that a cow that produces 150 pounds of butterfat a year does so at a cost of \$1.18 per pound while one that produces 400 pounds a year does so at a cost of 51 cents a pound, we should realize that our production problems are not solved."

"The price of milk cannot be based on cost of production, but cost of production should be gauged by the price of milk, wherever possible."

The final speaker during the first afternoon was Dr. A. E. Hardy, health commissioner of Charleston, W. Va. He gave a demonstration in testing milk for bacteria and sediment and a good talk on sanitation work with the farmers.

At the banquet in the evening, judge Reese Blizzard acted as toastmaster. In addition to a few local personages the speakers were Hon. Smith, secretary of agriculture; Prof. Frame, director of extension and Prof. Anthony, head of dairying in the state. The state championship demonstration team from Cabell County gave the demonstration which won for them the trip to the National Dairy Show. They were coached by F. N. Darling, County Agent.

Rain interfered with the tour planned for the second day of the session. However, stops were made at three mighty fine farm dairies, namely: J. C. Russell and Sons, Williams-town; S. B. Tallman, Washington and Amos Tebay, Lube.

At the first place there was a head of purebred Jerseys developed from two foundation cows which are still in the herd. The milk from the thirty cows is sold at retail. For two years with a number of heifers milking this herd has averaged 325 lb. butterfat.

Mr. Tallman has one of the most uniform and profitable Jersey herds in West Virginia numbering sixty-five head. In 1923 there were 24 head in milk of which number were heifers and their average was 8,000 lb. milk, 381 lb. butterfat.

At Mr. Tebay's place, a wonderful lesson was gleaned. Here is a herd that lost 98 cows before it was finally cleaned up of tuberculosis. In spite of all his disappointments Mr. Tebay stayed by his work and is profiting to-day. He has a registered Holstein herd with a few Jerseys. Five years ago he had a clean herd, but purchased a cow that brought tuberculosis to the farm, and before it was stamped out he lost nearly 100 cows.

In the election of officers, H. L. Smith, Martinsburg was again chosen president; Dr. T. E. Gore, Clarksburg, first vice-president; S. B. Tallman, Parkersburg, second vice-president; W. G. Riggs, Martinsville, third vice-president; and Prof. J. V. Hopkins, secretary-treasurer. The next convention will be at Clarksburg.

CLUB DOINGS IN OTTER TAIL COUNTY

The Otter Tail County Holstein Breeders' Association had a meeting in Pelican Rapids, Minn., on October 29, and voted to circulate a petition asking the county commissioners to order all cattle in Otter Tail County to be tested for tuberculosis. Under the present state law this test can be ordered, the county pays 25c to have each animal tested and there is no charge to the owner.

A sale in connection with the meeting was said to be very successful. A cow consigned by A. R. Knutson and a bull from the Onal farm near Alexandria each brought \$250. A banquet in the evening was attended by about 250 people. The election of officers resulted as follows:

President, A. R. Knutson, Pelican Rapids; first vice president Searcey Wright, Buse; second vice president, Mr. Hughes, Pelican Rapids; secretary and treasurer, John Utne, Fergus Falls.

OFFICERS OF WAUSAU CLUB

On October 31st the Wausau Holstein Club held its annual meeting at Wausau, Wisconsin and elected Alex Trantow, president; L. W. Gleason, vice-president; A. G. Melang, secretary.

Country club leader John H. Lasher, spoke on the value of club work, while county agent, Rogan, asked for the appointment of a calf club committee.

The club passed a resolution asking the directors of the fair association to set aside a special day for calf club work and to arrange that the calves should be paraded in front of the grandstand.

"You should be ashamed of yourself for breaking an umbrella over the head of your husband!"

"I assure you I had no intention of breaking the umbrella."

NEW MINNESOTA CLUB

The Wabasha County Holstein Breeders' Association was organized at Plainview, Minnesota, with a membership of 35. John H. Dubbels, of Elgin, was elected president, W. F. Lamprecht, vice-president, and L. M. Schneider, of Plainview, secretary-treasurer. George Witte, of Kellogg, Roy Mayer, of Lake City, Edward Schneider, of Plainview and W. J. Kooough, of Millville, were named directors.

THE FARM AIN'T SUCH A BAD PLACE, AFTER ALL

By R. C. NEWCOMER

The farm ain't such a bad place after all
When food is scarce and jobs are hard to get,
When we note the things we've grown
On the place we call our own,
There is no need to worry or to fret.
The farm ain't such a bad place after all
With growing stock, contented, all around,
For the happy, singing hens
From their neat and tidy pens
Depict a sweet contentment, few have found.

The farm ain't such a bad place after all
With pork and milk and cream checks all galore;
For it's great to work and plan
In this biggest field for man;
A happy home, our own, that we adore.

The farm ain't such a bad place after all
When trains collide, and mines entomb complete;
Or when urban passers-by
Struck by cars are left to die,
We'd rather walk the furrow than the street.

The farm ain't such a bad place after all
While humans love and hate and rise and fall;
In a field to work and live,
In a world to take and give;
The farm ain't such a bad place after all.

Joshaway Crabapple says: "Some girls use dumb-bells to get color on their cheeks and lots of them use color on their cheeks to get dumb-bells."—Wallace's Farmer.

He—I didn't know you had a loud speaker.
She—That's just ma laying pa out.

Mr. Newlywed—Why did you take your maiden-hair ferns back to the florist, sweetheart?
Mrs. Newlywed—To have their hair bobbed, dear—they're so out of style.

"You're the light of my life," she whispered, as he kissed her once more good night.
Just then a voice from the stairway said sternly, "Put out the light."

Miss Young: "In Turkey a woman doesn't know her husband until after she's married him."
Mrs. Wed: "Why mention Turkey?"

THE PRACTICAL DAIRYMAN

RAISING DAIRY CALVES

Raise only the best heifer calves from the best cows in the herd.

The raising of a good dairy calf begins before it is born. Feed the mother well.

Give the calf the colostrum or "first milk" from its mother. Colostrum is nature's physic.

Give the calf not more than three pints of milk the first feed. Be careful not to overfeed at any time.

When the calf learns to drink give it from 6 to 12 pounds of whole milk a day, depending on its size. Increase the amount as the calf grows.

Feed three times a day during the first two or three weeks. Begin skimmilk feeding at two to three weeks of age, or later if the calf is not in good thrifty condition. Wean at six months of age.

Feed not to exceed 16 pounds of milk a day at any time unless the calf is exceptionally large and thrifty.

Commence feeding grain and hay when calf is about two weeks old.

The first grain fed may be either cracked corn or whole oats or a mixture of the two.

Almost any combination of the ordinary farm grown grains will prove satisfactory when fed along with skimmilk.

Feed not to exceed two pounds of grain a day up to the time the calf is weaned.

Give the calf all the clover or alfalfa hay it will eat all the time.

Do not turn the calf on pasture until at least three or four months old.

Provide the calf with fresh water to drink.

Be careful not to bring on digestive disturbances through careless methods.—T. W. Gullickson, University Farm, Minn.

WORTHWHILE BULLETINS

Farmers who have installed water and toilet systems in their houses and barns frequently have trouble with them which necessitates calling a plumber. Plumbers' charges are high for the work they do and it is often difficult for the farmer to get a plumber when in need of him. Farmers' Bulletin No. 1460 issued by the United States Department of Agriculture

describes simple ways of doing little things, with the aid of a few simple tools, to keep home plumbing in good working order. It can be obtained from the Secretary of Agriculture at Washington, D. C., is written in simple language and is a worthwhile addition to any farmer's library.

"The Farm Electrified" is the title of a thirty-eight page illustrated bulletin issued by the Pennsylvania State Department of Agriculture. It gives the details of the Rutherford Farm Exhibition staged last January when over one hundred electrical appliances were demonstrated.

Information as to how the farm buildings were wired and the appliances installed is given. The amount of interest shown by the nearly six thousand people that visited the demonstration is the reason why the Department of Agriculture at Harrisburg is publishing the bulletin which is numbered 407 and is free for the asking.

DOPE ON FEED

There is little change in feed prices as compared with last month says the New York Agricultural News Letter. High protein feeds have declined in price, while some of the low protein feeds have advanced. The steady price decline movement recently apparent seems to have practically stopped.

A suggested ration for feeding with mixed hay consists of 300 lb. hominy or corn, 300 lb. bran or oats, 200 lb. cottonseed meal, 100 lb. oil meal and 100 lb. gluten feed. This furnishes an eighteen per cent, digestible protein grain mixture. Other suggested mixtures to include home-grown grain are as follows:

200 oats, 200 buckwheat, 100 corn meal, 300 gluten feed, and 200 cottonseed meal. This contains 18 per cent digestible protein.

1400 peas, oats and barley and 600 linseed oil meal. This contains 15.7 per cent digestible protein.

1400 peas, oats and barley, 400 oil meal, 200 gluten feed. This contains 14.9 per cent digestible protein.

600 oats, 600 barley, and 800 cottonseed meal. This contains 20.4 per cent digestible protein.

700 oats, 700 barley, and 600 cottonseed meal. This contains 17.6 per cent digestible protein.

700 oats, 600 barley or corn, 600 cottonseed meal, and 100 oil meal. This contains 18.6 per cent digestible protein, and would make a very satisfactory mixture both as to quality and cost.

THE DAIRYMEN'S LEAGUE

Just before Thanksgiving the Dairyman's League Cooperative Association plans that its patrons will receive checks for their October milk. The price is \$2.31 per 100 pounds 3% milk at the base zone 201-210 miles from New York City. This price is 45 cents higher than the October price of a year ago. The official statement says that higher prices of milk and milk products accounts for 25½ cents per hundred pounds of the increase, the balance, 19½ cents being due to a reduction in association general overhead expenses and increased efficiency at the League milk plants.

The League milk plants during the past year have been concentrating on the fluid milk business and this has resulted in a reduction in overhead expenses.

The fourth annual report of the League is issued for the fiscal year ending March 31. The total number of contract signers on that date was 68,862. During the year 5,116 dairy-men joined the pool and 4,269 contracts were cancelled during the cancellation period. Of this number the association itself cancelled 674.

A substantial increase is shown in the amount of fluid and skim milk sold through association plants. On March 31, the association was operating 160 plants, a gain of twenty during the year. Ten of the new plants were built by the League's own engineers and are claimed to represent the most economic types of medium size milk shipping plants.

The average deduction per hundred pounds of milk handled for administrative overhead amounted to \$.0832 as against \$.0871 for the previous year. The deduction for certificates of indebtedness was also lower. During the year five large manufacturing plants owned by the association were either sold or leased and a contract was signed with the Borden Company which now handles evaporated and condensed milk under the League trade name "Dairy-leaf." The League did not sell its trade mark and has the privilege of, after giving prior notice, taking back its condensed milk manufacturing and sales business. Of the milk pooled by the association 51.9% was sold in fluid form. During the fiscal year certificates of indebtedness to the extent of \$1,151,278.12 were redeemed. These were to mature May 1, 1927. The purchasing price was 95c on the dollar with accrued interest to the first of the month in which they were purchased. This action will help to more evenly distribute the maturing of the League's indebtedness, to stabilize the value of the certificates and to reduce interest charges. A complete report will be printed in pamphlet form and sent to those interested upon request.

WORLD PROGRESS FOLLOWS THE COW

I have read many statements as to why the Anglo-Saxons rule the world, and none have given what to me appears as the true cause, which I think is the extensive use of fluid cows milk among the Anglo-Saxon races. The liberal use of cow's milk and its many products and by-products among these people date from the time when they began to assume among men a ruling prominence and as this use of cow's milk extended so did the rule of the Anglo-Saxon races. Particular in this line may be considered another interesting fact, and that is with the free use of cow's milk as a daily drink for home use, the Anglo-Saxons freed their children and women folks from the use of strong fermented drinks and in that manner were enabled to free more than one-half of the people from the nervating effects of all alcoholic drinks, building up in this half of all strong physical constitutions that kept half in clean living that has in the main enabled the Anglo Saxon to maintain the healthful vigor that has, and does, rule the world to-day.

It may often be said that all men are prone to look so far abroad for fortune that they fail to see the Golden Sands under foot. So it may be said of Ponce de Leon in his quest for the spring of perpetual youth if he had turned to the good old "bossy cow" and made free use of her milk and forsaken all alcoholic drink he would have found the spring of perpetual youth or as near that as is likely to be found on this earth.

In those good old times, when men were in their prime, when several hundred years old we find they were pastoral and much of their daily food was milk and cheese. Not "Bossy's" milk to be sure, but "Nanny's," but nevertheless, good. As more

and more of the Anglo-Saxon race turn from strong drink to milk for daily use, so has the physical well-being advanced and the average length of life increased. We in America rule the world. We use more milk and less strong drink than any other people and our average length of life is longer, and if there are people who use less strong drink than we do it will be found they use hardly any milk at all.

It is said that the stopping by law of the use of strong drink has increased crime. If this is true why are all criminals against a law which helps them in their crimes? If they would cut out the use of alcoholic drinks and make a free use of the old cow's milk they would have a more enlightened view of the wrongs in counselling criminal acts. The old Bossy's milk keeps a clean body, mind and soul—God's gift to mankind.—*Pacific Dairy Review.*

A SON OF A GREAT DAIRY COW

That well known owner of purebred Holstein-Friesians, Charles Wertheimer of Frederick, Maryland, is offering in this issue a son of his great cow, Suella of Grayfields, that two successive months has led the Maryland cow testing associations. In August, milking twice daily she produced 86.2 lb. butterfat. As a three-year-old she made a seven day official record of 25.67 lb. while her dam has an official record of 28.82 lb. butter in a week. The sire of the young bull, Rolo Pontiac Payne, heads the Elmwood herd. He is the son of the famous Rolo Mercena De Kol. She is credited with producing 51.93 lb. butter in seven days from 738.9 lb. milk. She also has a thirty day record of 201.17 lb. and a sixty day record of 342.58 lb. Her butter records for seven days, thirty days and sixty days have never been equalled by any other cow in the world. The young bull offered was born July 25, 1925. Mr. Wertheimer describes him as "a good, straight, toppy fellow." The

CHARLES WERTHEIMER AND ROLO PONTIAC PAYNE

records of his two nearest dams average 38.8 lb. butter in seven days and his three nearest dams average 35.47 lb., notwithstanding that his own dam was officially tested as a three-year-old heifer. She is a great dairy cow. In the month of September she was credited in cow testing association work with producing 2,223 lb. milk, 82.3 lb. butterfat so that in the months of August and September she has produced enough butterfat to equal 210.6 lb. butter if figured on the 80 per cent basis.

The Wertheimer herd is noted for production. During the month of August while enrolled in the Frederick County C. T. A. this herd of 17 milkers averaged 36.2 lb. fat, 1,080 lb. milk, the highest in the association and we believe the highest reported for any herd in the entire state of Maryland.

"Do you believe there is a devil?" seven-year-old Johnny Austin asked his companion in Sunday school.

"Of course I do."

"Huh! It's the same as the story about Santa Claus," said Johnny. "It's your father."

The fellow who greets an alarm clock with a smile will have no trouble in sprouting wings.

It's hard for a man to be satisfied with his lot unless he has a lot.

"THANKSGIVING EATS"

"When the frost is on the Pumpkin
An' the fodder's in the shock,
An' you hear the gobble, gobble
Of the struttin' turkey cock."

Tis' then indeed, that the housewife's thoughts naturally turn to the day of "Thanksgiving" so close at hand, and she begins to plan the meal for that day which our Pilgrim Fathers made memorial.

Instead of worrying over that which we do not perhaps have, let us make it a time of real Thanksgiving and Gladness for the many blessings we have to enjoy, and "just be glad."

Fortunately the majority of country people produce most of their food at home, so however lean the purse may be there is usually the makings of an appetizing and substantial meal on hand. Those living in towns and cities usually depend on groceries and markets for their holiday dinners. By taking extra pains everyday materials may be "dolled up" for festive occasions so that they do not appear ordinary. When not able to afford turkey have chicken, if oysters are prohibitive on account of high prices, scallop a cabbage, have macaroni and cheese, etc.

Naturally at Thanksgiving our thoughts turn to that King of birds, the turkey, as the backbone of our dinner, but if a turkey cannot be afforded a chicken nicely stuffed and roasted will be a delicious substitute, or if a real change is desired have chicken pie.

Two good sized chickens will make a nice chicken pie. It should be made as nearly like the Pilgrim Mothers made theirs as possible. Cut up the chickens, add half an onion, a few sprigs of parsley, cover with hot water and cook for one half hour, add salt and pepper to season well, then continue cooking until tender. Remove chicken from liquor and thicken this as for gravy. Place the chicken in a deep baking dish, taking out the largest bones, add gravy, if not enough to suit a little milk may be added. Cover with a rich biscuit dough, putting plenty of slits in it to allow the steam to escape properly while baking. If these openings close they must be cut again as it is important that the steam gets out of the pie.

One always associates mince and pumpkin pies with Thanksgiving. I have read that mincemeat was originated in the sixteenth century and this article quotes the following:

"He that discovered the new star in Cassiopeia deserves not half so much to be remembered as he that first married minced meat and raisins together."

There are any number of good recipes for mince pie. Nearly every housewife has her favorite, only one suggestion here. The next time you make mince pie try adding some preserved cherries, strawberries or peaches, they make a delicious addition.

PUMPKIN PIE

Pumpkin pie, golden brown, inch thick, flaky crust, "Ummm," the kind grandmother used to make. I wonder if grandmother knew that her pumpkin pies would always have a rich, golden brown top, if the yolk of an egg was beaten with one teaspoonful of cream, and this mixture poured over the top just before placing in oven? Try it.

DOUGHNUTS

Oh! those crumbling circles of richness that the real old-fashioned mothers use to make. A big crockful would be made days before the feast. The following recipe has been "handed down" for over a generation and cannot be surpassed.

- 4 cups rich sour milk,
- 4 cups sugar,
- 5 eggs,
- 1 cup shortening.

Two-thirds of a teaspoonful of soda to each cup of sour milk. Flavor with nutmeg and cinnamon. Flour to make a dough just stiff enough to roll out and handle well. Roll to one inch thickness and fry in deep hot fat.

CRANBERRY SAUCE

Cranberry sauce always adds the piquant flavor to so much rich food. My neighbor has a wonderful recipe and I will pass it on:

- 1 pint cranberries
- 1 pint water
- 1 lb. sugar.

Boil sugar and water together five minutes, then add the cranberries and cook slowly until soft.

Besides the dishes mentioned there are always the customary addition of soup, sweet potatoes, vegetables, brown and white bread, spicy pickles, jellies, fruit cake. Tradition seems to demand that groaning boards should be loaded with all these tempting viands.

However American holiday cookery is changing to an extent and now that we have touched upon these good old-fashioned dishes, let us think of something out of the "beaten path" this Thanksgiving.

Instead of the rich fruit cake have "Piccadilly Prune Cake." Half a pound of prunes are soaked and cooked until tender, then pitted and coarsely chopped. Sift together

- 2½ cupfuls of flour
- 1½ teaspoonfuls baking powder
- ½ teaspoonful soda
- 1 teaspoonful nutmeg
- 1 teaspoonful cloves

then add the prunes and 1¼ cupfuls sugar, next stir in 1 cup of sour milk and two well-beaten eggs; at the last add ¼ cup melted lard. Bake in a moderate oven. When nearly finished sprinkle surface with granulated sugar. This can be served warm with a rich sauce.

By "dessert time" everyone has eaten as much as they really ought to have, and the dessert is that much, too much. Everyone is warm from the heat of the rooms and the eating of rich food so a light dessert is ideal.

Any flavor of icecream can be used, but vanilla would blend well with a hot sauce, and this combination would be delicious for the ending of a big dinner. There are a number of these sauces, but a fig or date sauce would be especially appropriate for the occasion.

FIG OR DATE SAUCE

Chop fine one-half pound of dates or figs. Cook until soft in a cup of water, then add one cup sugar and cook in double boiler until smooth and thick enough. Flavor with one teaspoonful of vanilla and let cool some before serving.

A refreshing drink to serve is called "Cider Punch." Sounds right for Thanksgiving and it is.

- ½ cup orange juice
- ½ cup lemon juice
- ½ cup grape juice
- 2 cups sweet cider
- ½ cup sugar

Mix well and serve at once.

These are only a few suggestions that might be used to lighten the Thanksgiving menu. There can be many other changes worked out if one gives the matter a little forethought and time.

DAIRY PRODUCTS IN COLD STORAGE

The monthly report of the Bureau of Agricultural Economics, United States Department of Agriculture, shows the following cold storage holdings of dairy products September 1, 1925:

Creamery Butter—128,449,000 pounds compared with 156,440,000 pounds September 1, 1924, and a five-year average of 115,812,000 pounds.

American Cheese—76,593,000 pounds compared with 76,406,000 pounds September 1, 1924, and a five-year average of 60,200,000 pounds.

Swiss Including Block Cheese—7,549,000 pounds compared with 7,376,000 pounds September 1, 1924, and a five-year average of 4,817,000 pounds.

Brick and Munster Cheese—2,277,000 pounds compared with 1,815,000 pounds September 1, 1924, and a five-year average of 2,017,000 pounds.

Limburger Cheese—1,351,000 pounds compared with 1,239,000 pounds September 1, 1924, and a five-year average of 1,250,000 pounds.

All other varieties of Cheese—7,717,000 pounds compared with 8,375,000 pounds September 1, 1924, and a five-year average of 8,898,000 pounds.

THOMAS COOPER,

THE DAIRYMEN'S LEAGUE

Just before Thanksgiving the Dairyman's League Coöperative Association plans that its patrons will receive checks for their October milk. The price is \$2.31 per 100 pounds 3% milk at the base zone 201-210 miles from New York City. This price is 45 cents higher than the October price of a year ago. The official statement says that higher prices of milk and milk products accounts for 25½ cents per hundred pounds of the increase, the balance, 19½ cents being due to a reduction in association general overhead expenses and increased efficiency at the League milk plants.

The League milk plants during the past year have been concentrating on the fluid milk business and this has resulted in a reduction in overhead expenses.

The fourth annual report of the League is issued for the fiscal year ending March 31. The total number of contract signers on that date was 68,862. During the year 5,116 dairymen joined the pool and 4,269 contracts were cancelled during the cancellation period. Of this number the association itself cancelled 674.

A substantial increase is shown in the amount of fluid and skim milk sold through association plants. On March 31, the association was operating 160 plants, a gain of twenty during the year. Ten of the new plants were built by the League's own engineers and are claimed to represent the most economic types of medium size milk shipping plants.

The average deduction per hundred pounds of milk handled for administrative overhead amounted to \$.0832 as against \$.0871 for the previous year. The deduction for certificates of indebtedness was also lower. During the year five large manufacturing plants owned by the association were either sold or leased and a contract was signed with the Borden Company which now handles evaporated and condensed milk under the League trade name "Dairy Lea." The League did not sell its trade mark and has the privilege of, after giving prior notice, taking back its condensed milk manufacturing and sales business. Of the milk pooled by the association 51.9% was sold in fluid form. During the fiscal year certificates of indebtedness to the extent of \$1,151,278.12 were redeemed. These were to mature May 1, 1927. The purchasing price was 95c on the dollar with accrued interest to the first of the month in which they were purchased. This action will help to more evenly distribute the maturing of the League's indebtedness, to stabilize the value of the certificates and to reduce interest charges. A complete report will be printed in pamphlet form and sent to those interested upon request.

WORLD PROGRESS FOLLOWS THE COW

I have read many statements as to why the Anglo-Saxons rule the world, and none have given what to me appears as the true cause, which I think is the extensive use of fluid cows milk among the Anglo-Saxon races. The liberal use of cow's milk and its many products and by-products among these people date from the time when they began to assume among men a ruling prominence and as this use of cow's milk extended so did the rule of the Anglo-Saxon races. Particular in this line may be considered another interesting fact, and that is with the free use of cow's milk as a daily drink for home use, the Anglo-Saxons freed their children and women folks from the use of strong fermented drinks and in that manner were enabled to free more than one-half of the people from the nervating effects of all alcoholic drinks, building up in this half of all strong physical constitutions that kept half in clean living that has in the main enabled the Anglo Saxon to maintain the healthful vigor that has, and does, rule the world to-day.

It may often be said that all men are prone to look so far abroad for fortune that they fail to see the Golden Sands under foot. So it may be said of Ponce de Leon in his quest for the spring of perpetual youth if he had turned to the good old "bossy cow" and made free use of her milk and forsaken all alcoholic drink he would have found the spring of perpetual youth or as near that as is likely to be found on this earth.

In those good old times, when men were in their prime, when several hundred years old we find they were pastoral and much of their daily food was milk and cheese. Not "Bossy's" milk to be sure, but "Nanny's," but nevertheless, good. As more

and more of the Anglo-Saxon race turn from strong drink to milk for daily use, so has the physical well-being advanced and the average length of life increased. We in America rule the world. We use more milk and less strong drink than any other people and our average length of life is longer, and if there are people who use less strong drink than we do it will be found they use hardly any milk at all.

It is said that the stopping by law of the use of strong drink has increased crime. If this is true why are all criminals against a law which helps them in their crimes? If they would cut out the use of alcoholic drinks and make a free use of the old cow's milk they would have a more enlightened view of the wrongs in counselling criminal acts. The old Bossy's milk keeps a clean body, mind and soul—God's gift to mankind.—*Pacific Dairy Review.*

A SON OF A GREAT DAIRY COW

That well known owner of purebred Holstein-Friesians, Charles Wertheimer of Frederick, Maryland, is offering in this issue a son of his great cow, Suella of Grayfields, that two successive months has led the Maryland cow testing associations. In August, milking twice daily she produced 86.2 lb. butterfat. As a three-year-old she made a seven day official record of 25.67 lb. while her dam has an official record of 28.82 lb. butter in a week. The sire of the young bull, Rolo Pontiac Payne, heads the Elmwood herd. He is the son of the famous Rolo Mercena De Kol. She is credited with producing 51.93 lb. butter in seven days from 738.9 lb. milk. She also has a thirty day record of 201.17 lb. and a sixty day record of 342.58 lb. Her butter records for seven days, thirty days and sixty days have never been equalled by any other cow in the world.

The young bull offered was born July 25, 1925. Mr. Wertheimer describes him as "a good, straight, toppy fellow." The

CHARLES WERTHEIMER AND ROLO PONTIAC PAYNE

records of his two nearest dams average 38.8 lb. butter in seven days and his three nearest dams average 35.47 lb., notwithstanding that his own dam was officially tested as a three-year-old heifer. She is a great dairy cow. In the month of September she was credited in cow testing association work with producing 2,223 lb. milk, 82.3 lb. butterfat so that in the months of August and September she has produced enough butterfat to equal 210.6 lb. butter if figured on the 80 per cent basis.

The Wertheimer herd is noted for production. During the month of August while enrolled in the Frederick County C. T. A. this herd of 17 milkers averaged 36.2 lb. fat, 1,080 lb. milk, the highest in the association and we believe the highest reported for any herd in the entire state of Maryland.

"Do you believe there is a devil?" seven-year-old Johnny Austin asked his companion in Sunday school.

"Of course I do."

"Huh! It's the same as the story about Santa Claus," said Johnny. "It's your father."

The fellow who greets an alarm clock with a smile will have no trouble in sprouting wings.

It's hard for a man to be satisfied with his lot unless he has a lot.

"THANKSGIVING EATS"

"When the frost is on the Pumpkin
An' the fodder's in the shock,
An' you hear the gobble, gobble
Of the struttin' turkey cock."

Tis' then indeed, that the housewife's thoughts naturally turn to the day of "Thanksgiving" so close at hand, and she begins to plan the meal for that day which our Pilgrim Fathers made memorial.

Instead of worrying over that which we do not perhaps have, let us make it a time of real Thanksgiving and Gladness for the many blessings we have to enjoy, and "just be glad."

Fortunately the majority of country people produce most of their food at home, so however lean the purse may be there is usually the makings of an appetizing and substantial meal on hand. Those living in towns and cities usually depend on groceries and markets for their holiday dinners. By taking extra pains everyday materials may be "dolled up" for festive occasions so that they do not appear ordinary. When not able to afford turkey have chicken, if oysters are prohibitive on account of high prices, scallop a cabbage, have macaroni and cheese, etc.

Naturally at Thanksgiving our thoughts turn to that King of birds, the turkey, as the backbone of our dinner, but if a turkey cannot be afforded a chicken nicely stuffed and roasted will be a delicious substitute, or if a real change is desired have chicken pie.

Two good sized chickens will make a nice chicken pie. It should be made as nearly like the Pilgrim Mothers made theirs as possible. Cut up the chickens, add half an onion, a few sprigs of parsley, cover with hot water and cook for one half hour, add salt and pepper to season well, then continue cooking until tender. Remove chicken from liquor and thicken this as for gravy. Place the chicken in a deep baking dish, taking out the largest bones, add gravy, if not enough to suit a little milk may be added. Cover with a rich biscuit dough, putting plenty of slits in it to allow the steam to escape properly while baking. If these openings close they must be cut again as it is important that the steam gets out of the pie.

One always associates mince and pumpkin pies with Thanksgiving. I have read that mincemeat was originated in the sixteenth century and this article quotes the following:

"He that discovered the new star in Cassiopeia deserves not half so much to be remembered as he that first married minced meat and raisins together."

There are any number of good recipes for mince pie. Nearly every housewife has her favorite, only one suggestion here. The next time you make mince pie try adding some preserved cherries, strawberries or peaches, they make a delicious addition.

PUMPKIN PIE

Pumpkin pie, golden brown, inch thick, flaky crust, "Ummm," the kind grandmother used to make. I wonder if grandmother knew that her pumpkin pies would always have a rich, golden brown top, if the yolk of an egg was beaten with one teaspoonful of cream, and this mixture poured over the top just before placing in oven? Try it.

DOUGHNUTS

Oh! those crumbling circles of richness that the real old-fashioned mothers use to make. A big crockful would be made days before the feast. The following recipe has been "handed down" for over a generation and cannot be surpassed.

4 cups rich sour milk,
4 cups sugar,
5 eggs,
1 cup shortening.

Two-thirds of a teaspoonful of soda to each cup of sour milk. Flavor with nutmeg and cinnamon. Flour to make a dough just stiff enough to roll out and handle well. Roll to one inch thickness and fry in deep hot fat.

CRANBERRY SAUCE

Cranberry sauce always adds the piquant flavor to so much rich food. My neighbor has a wonderful recipe and I will pass it on:

1 pint cranberries
1 pint water
1 lb. sugar.

Boil sugar and water together five minutes, then add the cranberries and cook slowly until soft.

Besides the dishes mentioned there are always the customary addition of soup, sweet potatoes, vegetables, brown and white bread, spicy pickles, jellies, fruit cake. Tradition seems to demand that groaning boards should be loaded with all these tempting viands.

However American holiday cookery is changing to an extent and now that we have touched upon these good old-fashioned dishes, let us think of something out of the "beaten path" this Thanksgiving.

Instead of the rich fruit cake have "Piccadilly Prune Cake." Half a pound of prunes are soaked and cooked until tender, then pitted and coarsely chopped. Sift together

2½ cupfuls of flour
1½ teaspoonfuls baking powder
½ teaspoonful soda
1 teaspoonful nutmeg
1 teaspoonful cloves

then add the prunes and 1¼ cupfuls sugar, next stir in 1 cup of sour milk and two well-beaten eggs; at the last add ¼ cup melted lard. Bake in a moderate oven. When nearly finished sprinkle surface with granulated sugar. This can be served warm with a rich sauce.

By "dessert time" everyone has eaten as much as they really ought to have, and the dessert is that much, too much. Everyone is warm from the heat of the rooms and the eating of rich food so a light dessert is ideal.

Any flavor of icecream can be used, but vanilla would blend well with a hot sauce, and this combination would be delicious for the ending of a big dinner. There are a number of these sauces, but a fig or date sauce would be especially appropriate for the occasion.

FIG OR DATE SAUCE

Chop fine one-half pound of dates or figs. Cook until soft in a cup of water, then add one cup sugar and cook in double boiler until smooth and thick enough. Flavor with one teaspoonful of vanilla and let cool some before serving.

A refreshing drink to serve is called "Cider Punch." Sounds right for Thanksgiving and it is.

½ cup orange juice
¼ cup lemon juice
½ cup grape juice
2 cups sweet cider
½ cup sugar

Mix well and serve at once.

These are only a few suggestions that might be used to lighten the Thanksgiving menu. There can be many other changes worked out if one gives the matter a little forethought and time.

DAIRY PRODUCTS IN COLD STORAGE

The monthly report of the Bureau of Agricultural Economics, United States Department of Agriculture, shows the following cold storage holdings of dairy products September 1, 1925:

Creamery Butter—128,449,000 pounds compared with 156,440,000 pounds September 1, 1924, and a five-year average of 115,812,000 pounds.

American Cheese—76,593,000 pounds compared with 76,406,000 pounds September 1, 1924, and a five-year average of 60,200,000 pounds.

Swiss Including Block Cheese—7,549,000 pounds compared with 7,376,000 pounds September 1, 1924, and a five-year average of 4,817,000 pounds.

Brick and Munster Cheese—2,277,000 pounds compared with 1,815,000 pounds September 1, 1924, and a five-year average of 2,017,000 pounds.

Limburger Cheese—1,351,000 pounds compared with 1,239,000 pounds September 1, 1924, and a five-year average of 1,250,000 pounds.

All other varieties of Cheese—7,717,000 pounds compared with 8,375,000 pounds September 1, 1924, and a five-year average of 8,898,000 pounds.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

Nov. 24—Madison, Wis., Wisconsin Holstein Breeders' Sale.
Nov. 28—Crown Point, Ind., Lake County Breeders' Consignment sale.
Nov. 28—Adell, Wis., G. P. Doyle Dispersal.
Dec. 16-17—South St. Paul, Minn., Geo. E. Hanscom Dispersal.
Dec. 17—Morrison, Ill., A. L. Goodenough Dispersal.
March 4, 1926—Chambersburg, Pa., C. L. Barnhart, 40 head; S. R. Miller, sale manager.
March 16, 1926—Sheridan, Pa., M. H. Bennetch Spring Sale, 75 head; S. R. Miller, Chambersburg, Pa., sale manager.
March 23, 1926—Harrisburg, Pa., Dr. J. L. Lenker Dispersal, Accredited Holsteins and Guernseys.

LENKERBROOK HERD TO BE DISPERSED

First among the establishments of Dauphin County to be placed on the accredited list were the herds of Dr. J. L. Lenker and his brother, William D. Lenker of Harrisburg, Pa. These herds were for a time both managed by "Bill" Lenker but for more than a year the Doctor has been running his own establishment. Milk from the Lenker herds is sold in Harrisburg and brings at retail the top price, 28c per quart. Needless to say this dairy product is of unquestionable purity and the highest quality. Dr. Lenker has brought his vast store of scientific knowledge to bear on the farm bacteria problem with the result that "Lenkerbrook" milk is the standard of quality in the Capital City of the Keystone State.

It is difficult to run two businesses and to give each one the time and work that it requires. This is especially true if the owner or manager is a professional man, for the farm is a tyrant master at times while the practice of medicine does not regard factory hours or time schedules. Consequently Dr. Lenker has found that he cannot do justice to his profession and also to his favorite business so he is reluctantly compelled to dispose of his farm and herd. This he plans to do on March 23, 1926. The Lenker herd consists of both purebred Guernseys and purebred Holsteins, and the animals are of high quality and breeding. Besides being on the accredited list this herd is one of the few herds in the country to be officially guaranteed abortion free, and has passed several clean tests which were conducted by representatives of the Pennsylvania Bureau of Animal Industry. Before sale day we plan to tell our readers more about the Lenkerbrook herd which is known to be one of the very best in Dauphin County.

GREEN COUNTY BREEDERS' SALE

The sale of the Green County Holstein Breeders held at Monroe, Wisconsin, November 4, resulted in an average of \$113.50 for the 47 head sold. The total received was a little over \$5,300.

Dora Rag Apple Mercedes consigned by M. M. and O. M. Douglas of Brodhead, Wis. brought the top price of \$200, being purchased by a representative of the Cold Springs Farm at Monroe. The highest price for a bull was \$165 which Wayside Netherland Sir Ollie consigned by Theodore Bayrhofer of Monroe brought. He was purchased by Gottlieb Zimmerli of Monticello. All the animals stayed in Wisconsin with the exception of two which were purchased by Krausk Brothers of Peconia, Illinois.

Ros Andrews of Juda took seven head while Ed. M. Stauffacher of Monroe took six. Despite rainy weather there was a fair sized crowd but prospective buyers did not seem inclined to go above a price they had previously fixed in their minds. However, the average was higher than it was at last spring's sale or at the sale held just a year ago.

GOOD AVERAGE AT TROY

An average of \$173.27 was realized for the 58 head of registered Holsteins sold at Troy, Pa., under the management of the Troy-Canton Holstein Sales Association, October 24. The total was \$10,050.

Twenty mature cows averaged \$248.50, twenty heifers of milking age averaged \$173.50, six yearlings averaged \$90, two heifer calves averaged \$65 and the ten bulls averaged \$94.50.

The high cow was consigned by R. H. Fleming and was purchased by Breese and Dann of Elmira, New York for \$405. She had a private milk record of 11,615 lb., and is a daughter of Bradco Holingen Pontiac, one of the bull association sires.

IN GOODHUE COUNTY

The Goodhue County Holstein Breeders' sale realized an average of \$140, the sale total being \$9,005. The top price was \$600 for a cow consigned by A. J. Schafer of Cannon Falls, and purchased by Grahamholm farms of Rochester, Minnesota, who took sixteen head for \$3,065. The top bull brought \$185. He was from a cow that had made nearly 1,000 lb. butterfat in year test, was consigned by Carl Lunde of Zumbrota and went to Lester Tate of Cannon Falls. George C. Sherman and Sons of Minneapolis purchased five head for \$1,020.

AN IDAHO SALE

A Holstein sale staged at Caldwell, Idaho, on October 20th resulted in an average of \$124. The top price was \$175 for a female. The animals were good dairy producers as W. F. Turner's stock has topped the state in their class with a yearly average production of 367 lb. butterfat.

PAUL STEWART'S SALE

An average of \$149.50 was realized October 22d at the Paul Stewart sale held at Oelwein, Iowa. Twenty-nine head were sold, seventeen of these were bulls and averaged \$152.50.

The two first young bulls offered brought \$250 and \$285 being purchased by J. P. Eves for John Mallison and J. S. Livery of Independence, Missouri, who are members of a bull association.

DISPERSAL OF THE BANK'S HERD

The remainder of the herd formerly on the Sioux Falls Holstein farm were sold at Sioux Falls, South Dakota, October 29th. Thirteen purebred cows averaged \$178, the top price was \$325 for a four-year-old purchased by Grover Christensen of Beresford.

There was a large crowd, buyers being present from three states. The remainder of the machinery and other farm equipment was also sold at the auction which was ordered by the receiver of the bank.

DEMAND FOR FRESH COWS

Owing to the large number of young cattle offered, the fourth annual fall consignment sale of the McLeod County Holstein Breeders' Association, held at Glencoe, Minn., Oct. 27th, realized an average of \$81.17 for the 41 animals offered. This is a trifle more than the figures of last spring and about ten per cent over the sale of last fall. The total receipts were \$2,760.

The top price, \$200 was obtained for a mature cow while a three-year-old heifer brought the second price, \$190. It was evident that fresh cows or animals soon due to freshen were in demand.

RECENT WISCONSIN SALES

An average of \$124 was obtained for 67 head of registered Holsteins at the semi-annual sale of the Rock County Holstein-Friesian Breeders' Association held in the county pavilion at Janesville, Wisconsin, October 27th. The cows and heifers averaged \$133, the fourteen young bulls brought \$1,405.

"Beauty Pontiac Tritomia" consigned by W. J. Ward and Son of Janesville brought \$225 going to C. J. Wart of Ft. Atkinson. She had a ten months C. T. A. record of 444 lb. butterfat. The same party paid the top price \$215 for a bull, obtaining the yearling "Star Neta Butter Boy," junior champion at the Janesville fair.

H. M. Stephens of New Richmond, Wisconsin, purchased 31 head for North Dakota farmers. W. D. James of the James Farms, Fort Atkinson, was another buyer.

Under the auspices of the Green Lake County Holstein Breeders' Club twenty head of young purebred Holsteins were recently sold at Berlin on Market Square. Practically all of the calves went within the county. Some however went to Ripon, Rosendale and Omro. The top price was \$125 obtained for a young heifer from the Will Martin farm.

Grade Holsteins with good cow testing association records averaged \$129.25 at the Albert Marsten sale held near Beloit on October 28th. The cows averaged 12,375 lb. milk, 475 lb. butterfat. The top price of the sale was obtained for "Fannie" with a record of 15,566 lb. milk, 600.4 lb. butterfat made as a four-year-old. She was sold to Earl Stauffer of Beloit, a member of the same testing association as Mr. Marsten. W. J. Dougan also of Beloit paid \$165 for a cow that produced 615.2 lb. fat. L. A. Markham paid \$150 for a cow with 536.9 lb. fat and \$127.50 for another animal.

The sale comes near setting a high market for grade cattle prices in Southern Wisconsin. The stock came from accredited herds and every animal of milking age had a production record. Only two of the offerings were allowed to go out of Rock county which shows the estimate Mr. Marsten's neighbors had of his herd.

Cedarfield Cornucopia Ormsby, a cow with a good C. T. A. record, brought \$285 at the H. J. Barker sale, held at Elkhorn, Wis., Oct., 29th. She was struck off to a representative of the State School for the Deaf.

Cows were in the best demand but as there were 34 head of young stock, the average was around \$90 as the 63 animals offered brought \$5,630. Theresa Ormsby, sold to Albert Meyer, who took \$1,310 worth of animals. Most of the offerings went out of the Elkhorn district.

At the largest dispersal sale held in Wood county for several years the herd of August Knospe of Vesper, Wisconsin, was dispersed October 23d. Forty-six animals were sold, the top price being \$250 for the herdsire. The highest price for a cow was \$225. Ed Witzig and A. P. Bean of Vesper purchased fifteen head. They are establishing a new Holstein farm.

STILL CLEAN

My entire herd has just passed another Clean Tuberculin Test. There has never been any T. B. or Abortion in it.

Our animals are now winning at the fairs. In an early issue I'll tell you more about them.

Meanwhile, my prices are still low, especially on young bulls backed by wonderful producing strains. Will be pleased to give you full particulars. Drop a card to

DAVID FALCONER
Scottville, Michigan.

KING PIEBE OF YORK 7th
heads Lime Rock Herd, which contains 30 head of

ACCREDITED HOLSTEINS
He is a show bull, was Grand Champion at the 1924 Lebanon County Fair.
His sire is by Piebe Laura Ollie Homestead King from a 1,000 lb. year record daughter of King Segis Pontiac Count.
His dam is a showy granddaughter of King of the Pontiacs and has a year record of 796.9 lb. butter, 19,038.4 lb. milk.
We offer you Cows in milk, Heifers and Calves.

HUBERT S. MILLER
Myerstown, Lebanon County, Pa.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

Cow Testing Association Reports

KING AGAIN AT THE HEAD

For the third successive month the purebred Holstein herd of R. H. King of Belleville headed the Mifflin County C. T. A. by averaging 41.1 lb. butterfat during the month of October. There are twenty-four herds enrolled in this association containing 260 cows of which 222 were in milk. There were 23 that each produced over 40 lb. fat, five over 50 lb. while 23 cows exceeded over 1,200 lb. milk. Purebred Holsteins made a good showing, half of the leading ten being purebreds and two others grade Holsteins, although the two leading cows owned by J. C. Fleming were of mixed blood. Nancy is credited with 62.7 lb. fat and her stable mate with 61.8. A purebred owned by J. B. Byler is third with 57.2 lb. fat from 1,786 lb. milk. Sadie, a purebred Holstein owned by Jonathan Peachey is next with 52.3 lb. fat from 1,804 lb. milk; Lady, owned by R. H. King is next with 51.9 lb. fat and the other purebred Holsteins in the honor list are owned by R. H. King and A. C. Yoder. The tester of this association is S. Rupert Harshbarger of McVeytown, Pa.

A JUDGE OF PRODUCTION

Leonard Miller of Kennard, Nebraska, is claimed to be the champion guesser of the corn-husker state. The Union Pacific ran a dairy special throughout part of the state and on it was a purebred Holstein called "Miss Secrecy." At each stop along the route slips were given out to the audience. The receivers wrote down their estimates of her last year's production and deposited them in a box and when the box was opened it was found that Mr. Leonard estimated that

the cow had produced 21,000 lb. which was the nearest guess; the exact figures being 21,064.2 lb. Mr. Miller was awarded a set of milk scales donated by the Kennedy-Parson Company of Omaha.

Leonard is going to high school at Kennard, helps milk the cows at home, and he has won over \$100 worth of prizes this year on his club pigs and calves. At the Miller farm they are milking twenty-eight cows and Mr. Miller is a member of the Tri-County C. T. A.

IN MINNESOTA

Seven purebred Holsteins owned by A. Reek of Inlay City, Michigan, averaged 499 lb. milk, 51.38 lb. butterfat in the Lapeer Co-operative Cow Testing Association No. 1 for the month ending September 30th.

Five purebred Holsteins owned by Farley Brothers averaged 65.47 lb. fat.

A registered Holstein owned by H. J. Schultz & Son led the Le Sueur County (Minn.) Cow Testing Association for the month of September by producing 55 lb. butterfat, 1,686 lb. milk.

The registered Holstein herd of Ted Beckel averaged 30.06 lb. fat, 925 lb. milk. The Schultz herd of twenty-three animals averaged 77.3 lb. milk, 37.5 lb. fat.

L. M. Sorem and Sons of Northfield, Minn. had both high producing cow and high herd in the Rice County C. T. A. for September. One of their animals produced 65 lb. of butterfat and 1,500 lb. milk. The Sorem herd averaged 33.07 lb. butterfat, 857 lb. milk. The second highest producer, also a purebred Holstein was owned by Harry Parson of Northfield and she is credited with 64 lb. butterfat, 1,683 lb. milk.

MOLLIE WENT TO MICHIGAN

Mollie, the champion grade Holstein of the recent National Dairy Exposition was sold to James E. Larrowe and will be placed on the Larrowe research farm near Detroit, Mich. Mollie is a five-year-old granddaughter of Cedar Lawn Canary Paul, grand champion of the 1920 National Dairy Show.

Mollie has a good cow testing association record. She was in milk 322 days last year and produced 12,904 lb. milk, 571.9 lb. butterfat. She headed a class of thirty-five cows at the show and her owner, Paul Moritz of Kohlsville, sold her to Mr. Larrowe for \$325.

THIRTEEN NOT UNLUCKY

C. A. Marsh of Cheney, Washington, has thirteen purebred Holstein cows. From April 17 to September 17 he realized \$1,400.49 from the sale of their milk, and sold a bull calf for \$15. He owns twenty-four purebred Holsteins in all and is an enthusiastic booster of the black and white breed.

FIRST IN COLORADO

"Betty Ollie Pontiac Segis" owned by Casper Hofmann of Denver, Colorado, produced 78.8 lb. butterfat during September, thus leading all the cows enrolled in C. T. A. work in that state. She is credited with 1,791 lb. milk which is exceeded by 1,992 lb. produced by "Hazel" a grade Holstein owned by Floyd Donley of Pueblo. Hazel is credited with 75.7 lb. fat.

Burglar's Wife—"Bill, you ain't tendin' to business nights since you stole that three-tube set."—Judge.

SOUTH DAKOTA TESTING

For the first time for many months a purebred Holstein does not head the list of cows enrolled in South Dakota C. T. A. work. De Kol Sioux of the Sioux Falls Penitentiary herd is in second place with 2,276.1 lb. milk 82.44 lb. fat, just beaten out by an Ayrshire cow with 82.81 lb. fat. The Ayrshire had the rather abnormal test of 5.9%.

Frank Johnson of Hetland had the cow in fourth position, she being credited with 61.02 lb. fat, 1,605.8 lb. milk. A grade Holstein of the Hintermeister herd was next, then came a purebred owned by Guy McKibben of Webster with 59.04 lb. fat and then comes Rohde and Rogness's cow, College Bess, with 48.17 lb.

The October average for all the associations was 20.34 lb. while the September average was 18.41 lb. fat. Dairy specialist, H. M. Jones, anticipates that the November average is likely to be even higher. The average price for butterfat was 49c per pound during October, or 16c higher than it was for the corresponding month last year while feed prices are lower than they were a year ago. Consequently South Dakota dairy farmers are in a better Thanksgiving mood than they were at this time last year.

CUMBERLAND COUNTY C. T. A.

Registered Holsteins were first, second and third in the Cumberland County C. T. A. for the month of October. Spot, a registered Holstein owned by Jesse Kurtz headed the list by producing 1,795 lb. milk, 77.2 lb. fat. W. W. Pepper owned the cow in second position, she being credited with 62.9 lb. fat, 1,656 lb. milk. J. H. Lear of Carlisle was the owner of the third cow with 61.1 lb. fat, 1,798 lb. milk to her credit. Two grade Holsteins followed her, then came two registered Holsteins from the Lear and Kurtz herds, followed by another grade and then two registered Holsteins owned by Mr. Kurtz. Each of these ten exceeded 50 lb. fat in the month. There

were 241 cows milked in the 27 herds, 34 of these exceeded 40 lb. of fat and 36 produced over 1,200 lb. milk.

The Kurtz herd was high with an average of 1,680 lb. milk, 59.4 lb. fat, but it contained only four cows. The Lear herd of twelve registered Holsteins was second with an average of 40 lb. fat, 1,227 lb. milk. Tester Raudabaugh reports that 22 of the herds are tuberculin tested and he expects to report 100 per cent before the year is over. With two exceptions all the members are feeding home mixed rations. Production is starting off ahead of the corresponding period of last year and the members of the association are confident of the future of the dairy business.

Two members of the association, George L. Snyder and J. M. Conrad, have purchased herdsires. Mr. Snyder purchased a grandson of King Ormsby Abbecker Helena, now heading the herd of Ivo V. Otto who leased him from W. A. Woods. This bull is a son of King of the Ormsbys from a good daughter of Korndyke Abbecker.

Mr. Conrad purchased a grandson of Lothian De Kol Korndyke, the splendid bull that formerly headed the Otto herd and that is now leased by the Pennsylvania State College on account of the remarkable production of his daughters.

Both Mr. Snyder and Mr. Conrad purchased bulls after inspecting the dams and looking up their showing in cow testing association work. They are on the right track for dairy production is the greatest recommendation for any dairy animal.

COLLEGE BESS FIRST

"College Bess" owned by Rohde & Rogness of Madison, South Dakota, led the Lake and Northern Minnehaha County C. T. A. by producing 1,710.8 lb. milk, 73.56 lb. butterfat in 27 days. College Bess recently dropped twin calves. The Rohde & Rogness herd led the association by averaging 65.2 lb. milk, 25.06 lb. fat for eleven cows.

A HERD OF HOLSTEIN PRODUCERS

W. P. Ward and Sons of Avalon, Wisconsin, have bred Holsteins for more than twenty years. Mr. Ward and his sons, Harold and Lawrence, farm 320 acres and have a herd of registered and grade Holsteins consisting of more than 75 animals. There were 35 cows that milked during the past year and their average was 10,897 lb. milk, 368.1 lb. fat. Some of the best Holstein bulls ever in Rock county have been raised by the Wards who recently sold a young bull to Rockwell and Katterhenry of Beloit, owners of Beauty, the champion grade Holstein cow of the state.

A MONTANA MAID

"Maid" a purebred Holstein owned by Andrew Senty of Billings, Montana, produced 1,725 lb. milk and 100 lb. butterfat during October in the Yellowstone C. T. A. The average production of the 230 cows tested was 657 lb. milk, 25 lb. butterfat.

The Senty herd averaged 853 lb. milk, 35 lb. butterfat. The highest herd consisting of fifteen cows or more, is owned by Jan Jansma also of Billings, whose cows averaged 917 lb. milk, 31 lb. butterfat. Jansma's herd has been first for several months.

CHAMPION LADY JUDGE

Mrs. Karl L. Ulmer of North Manchester, Ind., who won second place in the Holstein classes for farmer judges at the recent National Dairy Show, was the only woman in the one hundred and one that competed. She is reported to have said that she would sooner see a cattle show than a style show, but this remark may have originated in the brain of some enterprising reporter with little regard for the truth.

"And what is a blind pool?"
"A place where poor fish are caught."

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

WITHERS HERD MAKES FINE SHOWING

The herd of W. A. Withers of Elizabethtown, Pa. was enrolled during the past year in the Garden Spot C. T. A. which finished its second year October first, with thirteen members. There were 288 cows in the association during all or part of the year, the average number of cows for the full period being 220.10. The Withers herd average was 9,671 lb. milk, 357.4 lb. fat, for an average of 21.17 cows. The average production in the entire association is 7,653 lb. milk, 304 lb. fat.

Next to the Withers herd was the registered Holstein herd of H. Earl Long of Landisville. The average of this herd was 10,206 lb. milk, 353.2 lb. fat, for an average of 13.25 cows. A Guernsey herd headed the association with an average of 397.5 lb. fat.

Q-Dale Ruby, Veeman Korndyke, owned by Mr. Withers was the leader of the association being credited with 14,936 lb. milk, 520.5 lb. fat. A registered Ayrshire of the State Masonic Home farm was second with 507.3 lb. fat, with Dijkstra Segis Creamelle, also of the Withers herd third with 14,731 lb. milk, 502.2 lb. fat. Withers cows were eighth, sixteenth and eighteenth on the list.

YOUR CHOICE OF LADIES

"Lady" owned by V. W. Peterson of Long Prairie, Minn. led the Clarissa C. T. A. for September by producing 57.1 lb. fat, 1,269 lb. milk on twice a day milking. Another "Lady," also a purebred Holstein owned by Ivar Hanson of Clarissa, was milked four times a day and is credited with 1,935 lb. milk, 67.7 lb. fat.

The Hanson herd of seven milking cows averaged 973 lb. milk, 34.7 lb. fat and the Peterson herd of thirteen milking cows averaged 673 lb. milk, 29.4 lb. fat.

BUELL BUNCH WAS BEST

Frank Buell of Milford, Michigan, owns twelve grade and purebred Holsteins that averaged to produce 34 lb. butterfat and 968 lb. milk during October while enrolled in the Oakland County C. T. A.

The high cow is a purebred Holstein owned at the Pontiac State Asylum and is credited with a production of 2,601 lb. milk, 70.2 lb. fat.

RETIRE FROM BUSINESS

At a sale held by A. McLellan near Grand Island, Nebr., early in October, a registered Holstein brought the top price, \$190, while one grade cow brought \$130. Three registered heifers were purchased on behalf of the Soldier's Home. Mr. McLellan is retiring from business. He owned a big producing herd.

FOR SALE—King Winnie Segis Payne, 23 months old, registered Holstein bull, mostly white. T. B. tested twice. Price \$150. **RAYMOND E. KELLER,** Bloomsburg, Pa., R. No. 3.

ALLEGHENY COUNTY HOLSTEINS

Lola, a purebred Holstein owned by A. B. Craig and Son of Sewickley, Pa., headed the Allegheny County Testing association for the month of October by producing 73.11 lb. butterfat, 2,437 lb. milk. A Jersey was second with 67.73 lb. fat followed by another Craig cow with 64.48 lb. fat. The Jones Dairy and Dr. G. W. Ely each have a cow in the honor list credited with producing over 50 lb. fat.

Lola led for milk as well as fat. Susanna, a cow from the Allegheny County Home was second for milk with another Craig cow third. Nine of the ten highest milk producers were registered Holsteins, four of them belong to the County Home herd.

The Craig herd of ten registered Holsteins led for milk average, the figures being 885 lb. W. C. Chamberlain's registered Holsteins were third with an average of 662 lb. A registered cow in the Glass Brothers herd has produced 6,084 lb. milk from July 1 to October 31 inclusive, a period of 123 days.

FIVE CALVES IN ELEVEN MONTHS

Regier Carrie, a four-year-old purebred Holstein owned by Regier & Sons, Whitewater, Kansas, evidently does not believe in "bovine race suicide," for she has presented her owners with five calves within a period of eleven months. About October 20th she dropped triplet calves that are normal in every respect, and last November she had twin calves.

KEEP THIS IN MIND

Colonel Jesse G. Langdon, a California Holstein enthusiast recently purchased the Bear Valley Dairy Farm near Oleuma, California. This is one of the largest ranches in Marin county and maintains a herd of several hundred dairy cows, their product being marketed in San Francisco as certified milk.

"Look here," he said, "I'm going to leave. I've never seen such dirty towels in my life, and I can never find any soap."

"But you've got a tongue in your head," was the landlady's curt reply.

"Yes," was the quick response, "but I'm not a cat."

Tuberculin Tested

Inquire **HORTON, CRARY & CO.**
WARREN, PENNA.

FIRST IN SOUTH DAKOTA

"Sioux Alice Burke Rue" owned by the South Dakota Penitentiary at Sioux Falls is the first cow in South Dakota that has produced over 1,000 lb. of butter in one year in cow testing association work. According to figures published by Warden George T. Jameson, she has produced in a year 1,033 lb. butter, 23,000 lb. milk. A sister of this cow, Sioux Homestead Rue, last year in cow testing association work produced over 900 lb. butter, the highest yield reported in association work during 1924.

The entire penitentiary herd with 35 cows freshening during the year of which ten were heifers with first calves averaged 534 lb. butter, 12,439 lb. milk. This is the highest herd average ever attained in South Dakota in cow testing association work.

ILLINOIS COW TESTING

A grade Holstein owned by George A. Conro is the highest producer in the Illinois Cow Testing Association for the month of October. She is enrolled in the Kane County Association No. 3 and is credited with producing 1,975 lb. Milk, 77 lb. fat. Twenty associations report production for October. Purebred Holsteins head three associations and grade Holsteins six others, or nearly half of the associations are headed by black and white cows. An even better showing is made in herds for twelve of the twenty herds consisting entirely or in part of Holsteins, purebred or grade.

The production of 16,460 lb. milk, 588.4 lb. fat in the first ten months is shown by the grade Holstein owned by Frederickson and Nystrom Brothers in the state 500 Pound Butterfat Cow Club. She is closely pressed by two purebred Brown Swiss and they are followed by eight Holsteins, seven of which are purebreds.

FLOWERS AND BLOSSOM

"Blossom," a purebred Holstein owned by J. L. Flowers of Galion, Ohio, led the cow testing association of Morrow county by producing 72.37 lb. fat during September, while her stable mate, Sylvia, was second with 62.48 lb. fat. The Flowers' herd of seventeen purebred and grade Holsteins averaged 931 lb. milk, 34.09 lb. fat.

PERSISTENT PRODUCERS

"Tulip Homestead Johanna" a cow owned by the Rock County Farm at Janesville, Wisconsin, has produced in 212 days 16,218.4 lb. milk, 541.96 lb. butterfat. Superintendent Archie Cullen also reports that Tulip Rag Apple Johanna in 315 days has produced 19,126 lb. milk, 657.87 lb. fat.

BULL WANTED, preferably 15 to 18 months old, must be from an Accredited herd and an extra good individual. His dam must show for herself that she is a real producer. If you have the goods, write Holstein, c/o Box 110, Harrisburg, Pa.

NEW YORK BULL FOR ILLINOIS

F. E. Reynolds of Chicago, Illinois who has had correspondence with a number of BREEDER AND DAIRYMEN subscribers secured a young herdsire from Mrs. Maud Dwight of South Otselic, New York. Mrs. Dwight describes the bull calf as a fine individual, beautifully marked and very well bred. His sire is King Sylvia Pontiac Pietje who was by Champion Echo Sylvia Pontiac and was from a granddaughter of the noted producer and record maker, May Echo Sylvia, the only cow ever credited with producing a thousand pounds of milk in seven days.

The dam of the calf is a daughter of Judge Lyons Walker whose 21 nearest dams have seven-day records that average over 30 lb. butter and 600 lb. milk. He was by Judge Lyons and from a 26.79 lb. daughter of King Colantha Clothilde and the thirty pound cow, Gelsche Walker also the dam of the great bull, Prince Gelsche Walker.

The second dam was a granddaughter of De Kol 2d's Butter Boy 3d, one of the greatest sires the Holstein breed has ever known. His daughters and granddaughters were great producers and his sons are among the greatest transmitting sires of the Holstein breed.

Mrs. Dwight's herd has been accredited for a long time so that Mr. Reynolds took no chances on health when securing his new herd bull. There is large production in every line of his pedigree and in her letter to the editor Mrs. Dwight says she feels sure that he will be satisfactory in every way to Mr. Reynolds.

"Waldron" as Mrs. Dwight's establishment is called has an enviable reputation for production, individuality and blood lines. It is with deep regret that those interested in the breed will learn that this herd is for sale owing to the ill health of the owner who does not feel able to continue to carry the cares of active management.

CHAMPION OF IRELAND

Stormont Belle, a five-year-old Friesian cow belonging to Mr. James Caldwell of Eden, Antrim County, Ireland, is the first Irish cow to produce 30,000 lb. milk in a year. In 352 days she is credited with a production of 30,573 lb. and was averaging nearly 70 lb. daily at that time. Stormont Belle was born August 23, 1920 and is in her third lactation period. Figures are not available for her first milking year but the second year she is credited with producing 20,820 lb. in 310 days. She is not only the first 30,000 pound cow to be developed in Ireland but was also the first Irish cow to produce 20,000 lb. milk in a year which she did in her second lactation period. She has a daughter, Ballyhill Brineen, just three years old that has produced 19,240 lb. milk in 336 days and is expected to reach the 20,000 lb. mark before her year is up.

"Ah wants a quote of sanctified milk." "What you all mean is pacified milk." "Look heah, small one, when Ah needs inflammation Ah'll specify."—Judge.

Cows That Produce

One of our former herdsires. Notice his Size and Type.

He is a grandson of KING SEGIS PONTIAC ALCARTRA and also of KING HENGELVELD AAGGIE FAYNE. We have Cows and Heifers for sale at all times also a few choice bull calves. Come and see our Accredited herd, the oldest in Northumberland County. Visitors always welcome.

MURRAY A. MILLER
Sunny Lawn Stock Farm,
Milton, Pa. R. D. 3.

HERE AND THERE

Dressel Brothers of Shakopee, Minnesota, own a purebred Holstein that led the local cow testing association by producing 55.5 lb. butterfat, 1,389 lb. milk during September.

Carl Smith of Defiance, Indiana, purchased a calf and enrolled in junior club work in 1920. He is now nineteen and has won two club championships with the original animal and two of her offspring. One of the heifers raised by Carl won first prize at the Auglaize county fair for the boy to whom the calf was sold last spring.

Zella Segis Hartog owned by Pat House led the Grays Harbor, Washington, Cow Testing Association by averaging 958.5 lb. milk, 32.44 lb. butterfat during September. A purebred in the herd produced 2,403 lb. milk 85.5 lb. butterfat.

A herd of 42 grade and purebred Holsteins owned by the State Hospital at Ionia, Michigan, led the Belding-Ionia Cow Testing Association by averaging 958.5 lb. milk, 32.44 lb. butterfat during September. A purebred in the herd produced 2,403 lb. milk 85.5 lb. butterfat.

Johanna Pontiac Rag Apple 2d, owned by J. W. Howell and Son of Johnstown, Colorado, headed all the cows enrolled in C. T. A. work during August in the State of Colorado by producing 1,995 lb. milk, 87.8 lb. fat.

IDAHO C. T. A. WORK

Lady, a registered Holstein owned by H. T. Jacobs of Declo, Idaho, led the Mini-Cassia Cow Testing association by producing 58 lb. butterfat, 1,611 lb. milk. The high herd consisted of ten grade and registered Holsteins owned by Joe Walker of Declo and averaged 1,141 lb. milk, 36.2 lb. fat.

Rachael and Queen are two registered Holsteins owned by George Haltom of Nampa, Idaho. Rachael produced 74.4 lb. fat, 1,854 lb. milk during September while enrolled in the Canyon County C. T. A. Queen was second with 66.1 lb. fat, 2,205 lb. milk. Haltom cows were also fourth and fifth and naturally the Haltom herd had the highest average in the entire association.

Polly, owned by G. H. Douglas and Son of Meridian, led the Ada County C. T. A. by producing 57.5 lb. fat during September. Polly is a purebred Holstein. Her mother, Dot, was second with 1,473 lb. milk, 57.4 lb. fat. Colantha, also a purebred Holstein owned by Alfred Records of Eagle was third with 51 lb. butterfat and 1,644 lb. milk.

The Douglas herd consisting of seven grade and registered Holsteins led with 1,264 lb. milk, 46.3 lb. fat. Ten grade and registered Holsteins in the Records' herd averaged 1,094 lb. milk, 32.8 lb. fat.

Why not induce your neighbor to subscribe for the HOLSTEIN BREEDER AND DAIRYMAN? He will enjoy reading it as much as you do.

A BIG HOLSTEIN DAIRY

The Pellissier Ranch Company of Whittier, California, has a herd of 500 cows which have all the marks of purebred Holsteins, yet there are only twenty-five purebred cows in the bunch, the others are high grades. The herd is managed by Frank Pellissier, Jr., who recently conducted thirty members of the Whittier Rotary Club over the ranch. They were particularly interested in Panseo Quality now fifteen months old, a young bull raised on the farm whose dam, Segis Pontiac Charlotte De Kol, has a record of producing 1,106 lb. butter in a year. The milking cows are kept in strings of thirty and are washed twice daily before they are milked. The milkers receive a bonus for every pound of milk from their string, above a certain minimum set for the month and consequently they keep their charges "fit" all the time. For four successive years the Pellissier cows enrolled in the local C. T. A. have averaged above 500 lb. butterfat.

HOLSTEINS FOR CHILI

November 4, Senor Schrivanih of Chili, South America, purchased three heifers, one a two-year-old and the others yearlings from the Linker-Lepien herd at Hartford, Wis. The price for the trio was \$2,200. Two of them are animals that have distinguished themselves at several of the great shows this fall. The Chilean gentleman has purchased a number of animals from various purebred herds and will ship them in two consignments to his native land. He took four youngsters from the W. H. Steffensen herd at Appleton, Wis., and purchased several animals at the recent E. N. Murphy dispersal.

CHAMPIONS OF WISCONSIN

With sixty-eight teams competing, the Fennimore high school judging team won the Wisconsin Livestock Breeders' judging contest staged at Madison, October 23 and 24. The winning score was 4,425 points. Viroqua was second with 4,380, Ft. Atkinson was third with 4,388.3 and Janesville fourth with 4,387.9.

Emmett Arnold of the Janesville team scored 99 points out of a possible 200 in judging Holsteins, thus winning the gold watch given by the Wisconsin Holstein Breeders' Association. The Milton team was first in judging beef cattle.

TOOK A GOOD ONE

Greene and Vaughn of Amboy, Ill., recently purchased a young bull from John Puls, well-known Holstein breeder of Hartford, Wis. There are 24 yearly records back of the animal, including the one made by his dam as a two-year-old, that average 948 lb. butterfat. Mr. Greene visited a large number of Wisconsin herds before finally selecting his new young herdsire.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

BOUGHT FROM HIS NEIGHBOR

Joe Szama of Abbotsford, Wisconsin, purchased a fine young bull from his neighbor Arland Stall, lately. The calf is nine months old, is a very good individual and nicely marked. He is a son of Ormsby Jewel Prince, the 2,800 lb. son of "37th" owned by the Cherokee Better Holstein Bull Association. His dam, Zerma DeSoto, has a seven day record of 450.40 lb. milk, 27.01 lb. butter and is reported to be a high class dairy cow. The twelve nearest dams of the young bull average 29.65 lb. butter in seven day test and six of these have yearly records averaging 1,022.66 lb. A number of prospective buyers had liked this bull but turned him down for a cheaper one when told that his price was \$100. Mr. Stall says: "Baltimore for oysters, Boston for its beans, New York for its pretty girls, CHEROKEE FOR HOLSTEINS."

RADIO IN THE BARN

Roy Menning is a dairyman living near Appleton, Wisconsin, and is also a radio fan. Finding that some of the best radio programs came in just as he had to milk he put an extension loud speaker in the barn, which is 500 feet away from the house containing his five tube set. Now the swish of good Holstein milk falling into a foaming pail mingles with orchestra and organ concerts from the air. Mr. Menning says that the cows seem to enjoy the programs but he has not yet determined the effect on milk production.

NORTH DAKOTA SHIPS HOLSTEINS

For years purebred cattle from Wisconsin, Minnesota, Ohio, New York and other states have been shipped into North Dakota, but the situation is now being reversed for a carload of purebred Holstein cows from the New Salem Holstein Breeders' circuit has been shipped to Russell, Ill. Everyone of the fifteen cows in the shipment had a testing association record of better than 300 lb. of butterfat in a year.

IDEAL HERD NEWS

Ideal King Creamelle, the handsome bull heading the herd of purebred Holsteins owned by Cecil L. A. Ressegue of Kingsley, Pa., is siring handsome calves. Cecil writes us that they are mostly heifers and that as far as individuality is concerned they could not suit him better.

He also announces that he will not reserve for his own use the full brother to Ideal King Creamelle. This is the young bull dropped on January 10, 1925, by Pietje Alcartra Fayne. There is exactly one year and six days between the birth dates of Ideal King Creamelle and his younger brother. We anticipate that now Cecil has decided to sell the younger bull that some good herd will soon have at its head a son of Pietje Alcartra Fayne.

There are two full sisters of these young bulls in the Ideal Herd and both

are splendid individuals. The sire is Dutchland Konigen Creamelle Boy, a son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale, 881.23 lb butter, 21,701.7 lb. milk in a year, a daughter of the former world's champion milk producer, Dutchland Colantha Vale.

The oldest daughter of Pietje Alcartra Fayne recently dropped a bull calf by King Pontiac Alcartra Pietje and this young fellow may be reserved as a future head of the Ideal Herd.

Last March we reported the sale of a bull, Ideal King Clothilde, to Allen Brumbaugh of Greencastle, Pa. This bull was a son of Miss Korndyke Clothilde, a 26 lb. cow in the Ideal herd. Miss Korndyke Clothilde now nearly fourteen years old, recently dropped a heifer calf by King Pontiac Alcartra Pietje, so that Mr. Ressegue now has two full sisters to Mr. Brumbaugh's herdsire.

BIG MIAMI DAIRY

Owing to the rapidly increasing demand for milk experienced at Miami, Florida, several carloads of registered Holsteins have been purchased by Dr. J. G. Du Puis, who operates a large dairy near Miami. The Doctor owns a dairy of over 700 animals, nearly all of which are Dutch Belts.

About 10 years ago the Doctor started in the dairy business, as some of the babies he was doctoring were not getting sufficient milk or the right kind of milk and he knew of no one who was producing milk of the desired quality. From this small start production has grown until at the present time 1,000 quarts are produced daily and sold at a retail price of 30 cents per quart. At first Mrs. Du Puis looked after the business of the dairy, but it became too large for her, so now Dr. Myers, a graduate of Ohio State College, looks after the bacteriological work.

There are 67 dairies and more than 7,000 head of dairy cows in Dade County, yet milk and cream is shipped in carloads to Miami from the north. So rapid has been the increase in population that the local dairies have been unable to increase their herds and business in proportion.

BULL FOR SALE.—A son of SUELLA OF GRAYFIELDS, the cow that made 86.2 lb. butterfat in August, milking twice a day; and has a seven-day record, made as a three-year-old, of 25.67 lb. butter. His sire is the World's Record Bull, ROLO PONTIAC FAYNE 385047. He was born July 25, 1925; is a good, straight, topky fellow. His two nearest dams average over 38 lb. butter in seven-day test. First check of \$150. CHAS. WERTHEIMER, Frederick, Md.

Washington reports that girl infants are harder than boys. They must be. A male child is not born with the constitution to stand the winter exposure that girls endure and continue to live.

WILLOW BROOK HERD

has for junior herdsire

KING ORMSBY ENDERCAMP

a son of King of the Ormsbys and Vandercamp Segis Aaggie Jewel. The seven-day records of his dam and sire's dam average 33.80 lb. butter and the year records average 1,097.61 lb. butter and more than 23,000 lb. milk. Owing to a lack of help we will sell you your choice of our ACCREDITED HERD.

Auctioneering Is a Profession

There Is More to It
Than Just a "Lingo"

A Successful Auctioneer Must

- Be a Salesman;
- Tell the Truth;
- Know how to handle a Crowd;
- Know the Value of the Goods he is Selling;
- Be Honest with Himself and with Others, (It always pays in the long run).

GRAFT, grand or petty, is Moral, Financial and Spiritual "SKIDDOO" for any man who indulges in it. Salesmanship should Inspire and Command Confidence.

A certain amount of Legitimate Mirth is beneficial and relieves the Monotony

Summing up the whole thing—PERFECT AUCTIONEERING is a study in PSYCHOLOGY and it is up to the Auctioneer to diagnose and develop each situation as it arises.

Mead's the Man

The Auctioneer

East Aurora, New York

PERUVIAN DAIRY STUDENT AT AMES

Alejandro Guerra of Siouani, Peru is a dairy course student of Iowa State College. He is specializing in cheese making. His father manufactures cheese on an 8,000 acre ranch. At present there are 400 cows on the ranch, all native animals.

Alejandro plans to take back to his native home a number of purebred Holsteins, so as to build up a more profitable herd. The average production of a native cow is not more than 2,000 pounds yearly. The cheese manufactured on the ranch is carried on the back of the Peruvian beast of burden, the llama to the nearest railroad, 50 miles away, and then shipped to Lima.

About 400 llama are kept on the ranch as well as 10,000 sheep and 400 alpacas. The only cultivated fodder crop is alfalfa. During the summer months the cattle graze on the native grass, the alfalfa is cut and baled for winter use. Irrigation is necessary for the production of alfalfa and one-third of the Guerra ranch can be irrigated. The water is collected by earth dams across a small river and also from wells with pumps operated by small gasoline engines. The ranch owners are of Spanish descent, most of the laborers are Indians. At present all sheep shearing is done by hand but Guerra plans to introduce machine clippers when he returns.

Alejandro has a brother taking the animal husbandry course at the North Dakota Agriculture College, while two of his sisters are attending an American private school in Lima.

ROSS RAISES WINNERS

Fred Ross of Oelwein, Iowa sold three calves to the Buchanan county calf club and all of them went to boys of a family named Zimmerman living near Brandon. At the Buchanan county fair held at Independence, Iowa, the calves exhibited by the Zimmerman boys placed first, second and third. A half-sister to these three heifers was first in her class at Sioux City and second at the state fair at Des Moines.

POWELL SELLS TO VIRGINIA

W. C. Swanson of Swansonville, Virginia, recently purchased a dozen purebred Holsteins, 10 two-year-old heifers and two young calves, from E. A. Powell of Syracuse, New York, the oldest living active breeder of black and white cattle. These heifers weighed from 1,000 to 1,200. They were shipped to Danville, Va., in the care of G. R. Kelts, an employee of the Powell farm and were carried to their new home by auto truck.

750-ACRE FARM on State Road, 5,000 cords wood, 300,000 timber, \$12,500. Cash required, \$5,000. W. F. HERR, Brooklyn, Conn.

Quality Cattle

OUR KIND

JOSEPHINE KAREL MECHTHILDE

Every animal in this herd has passed Three Clean Tuberculin Tests. They are not only choice individuals and big producers, but produce milk of high quality, as our herd test runs from 3.7 to 3.9%.

I want to sell a few.

H. A. STOTTMAYER
Hagerstown, Maryland R. 5

FROM COUNTY AGENT TO HOLSTEIN BREEDER

A. K. Rothenberger of Norristown, Penna., is a successful Holstein breeder. Mr. Rothenberger graduated from Cornell University in 1911 and was one of the first five Pennsylvania county agents. Mr. Rothenberger thought that he could farm better than he could teach others to farm, or else he thought he could teach better by practicing what he preached, so he started farming for himself and has met with a considerable degree of success.

Modern machinery is advocated by Mr. Rothenberger to save labor, and as far as possible he uses labor saving machinery. He grows wheat, sweet clover and soy beans while potatoes are one of his outstanding cash crops.

Like many beginners Mr. Rothenberger had bad luck with his first purebreds. He purchased some untested cows and they infected his entire herd. He started again with ten heifers which he purchased at an average price of \$200. Of their first ten calves seven were heifers, sired by a grandson of May Echo Sylvia.

A milk machine is in use. Mr. Rothenberger said he has used it every day for a year and a half and does not have a defective udder or a three-teater in the barn. The establishment is called Kriebelle Farms. The chief sources of income are milk and eggs with baby chicks as a side line. There is a flock of 1,500 White Leghorn hens. The eggs are carefully crated and shipped to the New York market.

THE SIOUX FALLS PENITENTIARY

The purebred Holstein herd owned by the Sioux Falls Penitentiary has headed the cow testing associations of South Dakota so many times that particular attention has been directed to this institution. Therefore a little information about the "Pen" Farm and herd will be in order.

The present penitentiary farm contains fifteen hundred acres. Originally there was only eighty acres including the buildings. A few cows were kept to provide milk and some driving horses for the officer's use, but as the population of the institution grew it became apparent that something besides a binder twine plant must be provided for the many idle hands about the place.

Armed with the proper state authority, officers of the institution bought a tract of nearly eight hundred acres and rented another seven hundred acres. Every foot of the land can be seen from the top of the stone wall surrounding the work shops of the institution. The farm buildings are about a mile north of the penitentiary. The farm residence is a roomy structure with all modern improvements. At present besides the superintendent and a night watchman there are twenty-two inmates who operate the farm and stay at the farm house.

The stock barn is modern in every essential. The Holstein herd is headed by Duke Segis Matador, a two-year-old bull for whom the state paid \$1,000. The

herd contains a number of animals that have made large records in cow testing association work and that are also high class individuals.

The hog houses are commodious and convenient and contain around 1,000 head. There are accommodations for \$3,000 chickens, Rhode Island Reds. In spite of an unfavorable year there were 12,000 bushels of corn picked, 13,000 bushels of small grain harvested and 300 tons of alfalfa and wild hay cut and baled. The potato crop turned out 2,000 bushels and we will not take space to tell of the amount of the garden produce, much of which was canned for winter use.

Including officers, guards and prisoners there are about 400 people to feed daily, this takes from eight to ten bushels of potatoes and about 25 lb. of coffee. Six hogs and three beeves are consumed every week. Last year three million pounds of binder twine was produced at the institution and every pound of it sold with the exception of the small quantity used on the farm.

DEMAND FOR BARRON HOLSTEINS

Three carloads of Holsteins were shipped from Barron, Wis., during the last week in October. One went to Fred Converse, an Illinois dairyman, another to P. O. Augustine of Grand Forks, and the third to H. J. Puggi and Frank Hubhorst of Howard Lake, Wright County, Minn. Fred J. Krahenbuhl, of the Barron County Holstein Breeders' Association showed the visitors around and his office handled the necessary clerical work.

BUILDING A MILKING HERD

Saville and McCordle of Lexington, Wash., have now 44 purebred Holstein milkers in the Cherry Hill dairy, having recently added nine obtained from the herd of James Chamberlain of Chehalis. The Chamberlain herdsire won second place last year at the Pacific International livestock exposition held at Portland.

FIFTY HEAD FOR JAPAN

Keitaro Mukai, who has been inspecting Holstein herds in many of the western states, recently purchased fifty head of purebred Holsteins from Californian herds on behalf of T. Shikata and Company of Osaka, Japan. A large proportion of the Japanese herds were depleted by pleura-pneumonia.

Smiff—What time is it, old boy? Or haven't you your watch with you?

Billfuzz—It's 11:45 a.m.; but I never carry a watch.

Smiff—Then how do you know what time it is?

Billfuzz—I shave at 7:30 every morning and I can tell what time it is, day or night, by feeling how much my beard has grown.

HOLSTEINS FOR SALE.—Several carloads grades and purebred springers. C. T. A. records and T. B. tested. Al. Motl, Secy., Marshfield Holstein Club, Marshfield, Wis.

HIGH IN COLORADO

The registered Holstein herd at the Turkey Creek Ranch owned by Spencer Penrose of Colorado Springs, Colo., and managed by George Sinton took the highest honors in the Pueblo Cow Testing association for the recently ended year by averaging 10,877 lb. milk. It was third highest for butterfat production with an average of 369.6 lb. Changeling, a member of this herd was high cow having 622.2 lb. fat credited to her, while Dirkey was fifth with 559.8 lb. The highest milk producer was Audrey Valdessa with 17,660 lb. and her stablemate Snowflake was second with 16,912 lb.

OLD HERDS DISPERSED

One of Michigan's oldest herds was sold recently at Howell. It was owned jointly by James I. VanKeuren, president of the First Bond and Mortgage Co. of Lansing, and George Barnes, editor of the *Livingston County Republican*. Mr. Barnes has been a breeder of purebred Holsteins for many years, while the original VanKeuren herd was started back in the old pioneer days by the father of the present Mr. VanKeuren.

FROM MICH. TO PENN'A.

Clark Patterson and Son of the Orchard Crest Farms at Eighty-Four, Pa., have placed the young bull, Serradella Echo Walker, at the head of their herd. This bull came from Serradella Farms, Oscoda, Michigan, owned by Carl E. Schmidt. The bull traces to May Echo Sylvia, K. P. Pontiac Lass and the noted sires King Walker, King Segis and Pontiac Korndyke.

SCOTT RUNS TWO HERDS

O. C. Scott of Ottertail and Brainerd, Minnesota, has farms at both places on which he keeps purebred Holsteins. He recently transferred 46 head of purebred Holstein cows from the Brainerd farm and placed them on the Echo Stock farm near Pleasure Park. The Echo Stock farm dairy now consists of 66 head of purebred Holsteins.

A NICE RECORD

A purebred Holstein cow owned by William Manska topped the Macomb County C. T. A. for the month of September by producing 80.13 lb. fat, 2,399.4 lb. milk. Her showing is all the more creditable as she freshened last May. The Manska herd was recently tuberculin tested without finding a reactor.

BIG C. T. A. RECORD

A purebred Holstein owned by the Illinois Masonic Home of Sullivan, has produced in 183 days 10,223 lb. milk and 320.3 lb. fat while enrolled in the Moultrie County Dairy Herd Improvement association.

"I understand you got rid of your loud speaker."

"Well, not exactly! I'm still paying her alimony."

MILLER SELLING STOCK

During the past two months S. R. Miller, of Thornwood Stock Farm, at Chambersburg, Pa., has sold six very fine large cows from his accredited herd to M. H. Bennetch, of Sheridan, Pa., and E. M. Gingrich, Jr., of Myerstown, Pa. He also sold a good cow and a heifer to W. H. Miller, of Carlisle, Pa. The two Millers are not related as far as we know, but have been acquainted for a number of years. W. C. Snoke, of Mowersville, Pa., also obtained two good heifers from Thornwood Stock Farm. Evidently there is a demand for good healthy Holsteins for dairy production purposes in southern Pennsylvania.

WHY HE WENT TO CHURCH

"Hey, what are you doing at church so often?" The question was asked of a grouch who had been noticed going down to church every Sunday for some weeks. "You are not a church member, have little use for religion, and yet you are seen every Sunday in the same seat, tell me why," remarked the interested party. "Well, sir" retorted the grouch, "I admire that preacher. I admire any man who can keep a hundred women quiet for an hour and a half." 'Nuff said.

STATE OWNED BUT GOOD

The Western State hospital at Steilacoom, Wash., has a herd of 68 milking Holsteins that were enrolled in the Pierce County Cow Testing association for the month of September. Despite its size the hospital herd led for high average, the figures being 1,542 lb. milk and 54 lb. fat, a splendid showing for a herd of this size consisting of both cows and heifers.

ALFAGOLD AGAIN

The purebred Holstein herd of the Alfagold Farms headed the McGregor Cow Testing Association for the month of September by producing 34.82 lb. butterfat. Alfagold cows are first, second and fifth on the list; Pietie making 74.8 lb. butterfat, Johanna 55.5 lb. and Forest Edge 54.1 lb.

GOT A GOOD ONE

L. W. Gleason of Texas, Wisconsin, recently purchased a fine young bull from A. G. Melang. The animal was sired by Sir Walters Snowdrop Ormsby, whose sire St. Olaf Ormsby Sensation, recently won second place at the Minnesota State Fair and was a son of Ormsby Sensation. The dam comes from a line of heavy milkers that give milk of high quality.

Garland Humphrey, who recently sold his farm at Fleet, together with his family, left Monday for Florida, where he expects to locate.—*Personal Item in the Chilhowie (Va.) Vidette.*

"Why don't you work? Hard work never killed any one!"

"You are wrong, lady. I lost both my wives in that way!"

How Do You Like Her?

There are others like her in PINE RIDGE HERD which is headed by

King Reliance Lockhart Veeman

whose dam produced 882.10 lb. butter in a year, 15,847.7 lb. milk—in the Dairyman's Division—two milkings a day.

Herd under State and Federal Supervision—last test CLEAN.

5 years	25.16	632.7	7 days
3 years	23.63	568.0	7 days
C. T. A. record	718.00	17,168.0	1 year

Highest record daughter of King Pontiac Alcartra Pietje for both milk and butter.
All records made by us.
She combines what all breeders are striving for, namely:

Individuality—Production—Breeding.

Her son, born Jan. 10, 1925, is well grown; nicely and evenly marked, and a very good individual. He is FULL BROTHER to our herdsire, Ideal King Creamelle and also has two FULL SISTERS in our herd, (both young).

Price \$500.

We want to show you this bull, his sire and dam, his full brother and many other relatives.

CECIL L. A. RESSEGUIE, Kingsley, Pa.

(This Herd has passed FOUR Clean Tests.)

HAMPSHIRE

PROFITABLE IN THE HANDS OF ANY PRACTICAL FARMER

1918	1921
1919	1922
1920	1923

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

Two of Susquehanna County's Accredited Herds

By F. Russell Howard

AMONG the leading breeders in Susquehanna County, Penna. are the Macks. L. M. Mack and his son Maurice live on one farm and his brother Floyd lives on an adjoining farm. While these farms are owned separately the herds are practically one as the herdsires and occasionally females are owned in common. The Macks are working dairymen, operating their own farms and milking their own cows, and are not only high class farmers and efficient dairy-

men but are also splendid judges of cattle and handle their herds from the standpoint of profitable production as well as individuality. Should by mischance a low producer or a poor individual be raised by the Macks they do not pass it on to an innocent purchaser with enthusiasm but little knowledge, but the animal is slaughtered for beef. This course, pursued over many years, with the use of high class sires selected for individuality and backed by producing blood lines, has resulted in a herd that will, from the angle of conformation or of profit-making ability, compete with any in the entire country. Then too, these herds are on the accredited list, the health of the animals vouched for by the highest State and Federal veterinary authorities.

KING RAG APPLE PLUM COPIA

is by an intensely bred Korndyke sire and is from a cow that two different years exceeded the 30 lb. mark in official seven day test, as a five-year-old making 30.47 lb. butter in a week from 668.6 lb. milk and then as a six-year-old increasing her butter record to 33.26 lb. King Rag Apple Plum Copia is not only a handsome bull but is also a high class sire as shown by the type of his offspring and the production of his daughters that are already in milk.

Floyd Mack has a farm of 120 acres and is also well stocked as he has fifty-seven head of purebred Holsteins at the present time. His dairy is turning out milk by the barrel and they do it easily. The cows are of real good type and the young cattle exceptionally fine. Floyd has a number of daughters of Colonel Joh Lyons that are just good enough to go anywhere.

"Lafe" Mack's cows are noted throughout the county for their type and production and his young stock gives promise of developing into real good dairy cows having the type and conformation that we all like to see in dairy cattle.

The older members of both herds are mostly daughters of Grand Champion Segis 2d and they are remarkably milky animals. This noted bull sired a splendid lot of daughters that have won in the show

COLONEL JOH LYONS

ring and that are capable of holding their own at the pail with the daughters of any bull in the country.

The calves sired by Colonel Joh Lyons would please the most critical judge. This bull was secured by the Macks after they had seen his offspring in the Riker herd. He was by King Joh from a 33 lb. daughter of King Lyons and his dam was a 29 lb. daughter of Judge Hengerveld De Kol. The seven-day records of the eleven nearest dams of the Colonel average over

At the present time "Lafe" Mack and his son have about eighty head of purebred Holsteins on their farm, consequently they are rather busy as most of the time they manage to get along with the help of one man. The past fall has been a good season for fall plowing and they have nearly sixty acres turned over preparatory for the crops of next year.

One of the bulls in service in these herds is King Rag Apple Plum Copia, leased from J. S. Howard and Son of Springville, Pa. This very handsome bull

32 lb. butter, but better still, he and his offspring are animals of remarkable type and conformation.

The Mack Brothers have exhibited some of their animals different years with signal success. At the 1924 Susquehanna County Fair the Macks exhibited the champion four dairy cows while their herdsire, Colonel Joh Lyons, not only headed his class but was also made senior and grand champion. The grand champion female came from this herd as did the leader of the two-year-old class. This year they did not exhibit at their home county fair but took some of their animals to the fair at Binghamton, New York, where their white herdsire was placed second and the two-year-old prize winner, now a three-year-old, headed her class, both meeting with plenty of high class competition.

State Owned Holsteins of Iowa

ONE of the largest owners of Holsteins in this country is the state of Iowa, for the Board of Control has under its supervision 842 animals, all of which are black and white. During the fiscal year 254 of these averaged better than 10,000 lb. milk. The total product of all the cows in the institutions of the state was 7,581,547 lb., all of which was used to feed the inmates and their caretakers. The best cow is No. 499 of the Cherokee hospital herd. She produced 20,810 lb. milk which was figured to be worth \$434.67 over her

CHEROKEE ORMSBY PIEBE

Noted show bull which won many honors at big cattle shows and expositions. Photographed as a three-year-old.

feed cost. The most profitable herd was that at the Cherokee hospital, the average net profit being \$194.44. The herd at the Mount Pleasant hospital was second with an average net profit of \$187.07 and this herd had the highest average production, 11,919 lb.

The Holstein herd at the state sanatorium at Oakdale is noted for the quality of its animals. Recently a grade Holstein of this herd produced over 20,000 lb. milk in a year. The Oakdale herd contains another cow that has given 19,449 lb. milk in twelve months. The average production of this herd is 9,554 lb. Of the eighteen grades milking the full year, ten gave over ten thousand, while sixteen of the 24 purebreds exceed the ten thousand lb. mark. The net profit of the Oakdale herd was \$152.81 per cow.

The herd at the state juvenile home at Toledo, Iowa,

consists of grade Holsteins. From September 1, 1924 to August 31, 1925, the twenty-three milkers produced 217,278 lb. milk valued at more than \$5,500. The net profit of this herd was \$2,655.53. The average was 9,446 lb. milk. This is estimated to be worth \$241.87 while the average feed cost was \$126.41 per cow. There was a nice profit to pay for labor and other expenses.

Several Iowa state institutions have exhibited purebreds different years and sometimes competed against each other. Last fall a show herd was exhibited by the Iowa State Board of Control which selected animals from different institutions and this met with a considerable degree of success. One member of this exhibit, Princess Piebe Mercedes Ormsby, was first prize aged cow, senior and grand champion female at the Missouri and Iowa State fairs. At the Missouri State Fair the Iowa State exhibit furnished the fire prize heifer calf and junior champion and the first prize two-year-old heifer and members of this exhibit won high honors at a number of great cattle exhibitions.

Perhaps the most noted animal owned by the state of Iowa was Cherokee Ormsby Piebe, a bull that headed the herd at the Independence State Hospital. This bull was shown in 1923 at the Iowa State fair, where he won first prize in the three-year-old class and was made senior and grand champion. At the Waterloo Dairy Cattle Congress and also at the National Dairy Show he won first in his class and was defeated only for the grand championship. In 1924 he was again exhibited at the Iowa State Fair, where he won first prize in the aged bull class. His offspring are very promising and are expected to bring great credit and considerable advertising to the state owned herds of Iowa.

Pioneer Electric Farm Lighting

THERE are now many American farms on which electricity furnishes light and power but it is not generally known that electric lights were in use on a farm in this country before they were adopted by the greatest cities of the world. Before electric lights brightened the pathway of wayfarers along Broadway or the boulevards of Paris they were already in use on a hill farm in Tompkins County, New York.

It was in 1875 that two Cornell University professors, William A. Anthony and George S. Moler, built the first dynamo constructed in America. This dynamo which meant the beginning of electrical engineering or the generation and transmission of electric power was exhibited at the Centennial exposition in Philadelphia, at Chicago in 1893 and in St. Louis in 1904. It is still at Cornell and recently served as a shop motor in Rockefeller Hall. A short time after the building of the dynamo it was used to supply current through underground cable to two arc lights which helped illuminate the college campus at Ithaca. This was the first known transmission of electric power by underground cable, and the first outdoor arc lighting in America.

Professor Moler, one of the builders of the first American dynamo, is still at Cornell. He recently improved the mechanism of the great clock in the Library Tower, the regulator of the student's classes and activities, and it is claimed that the time is now constantly accurate to the split second.

Reasons Why Bradford County Is a Dairy District

By GEORGE M. LYON

BRADFORD County is one of the great dairy counties of Pennsylvania. For many years this county has been noted for the amount of butter produced in it while the product of its dairy herds is sold in fluid form in the cities of New York, Scranton and Allentown. Considerable of the fame of Bradford County as a milk and butter producing district is due to the quality of its Holstein herds, both purebred and grade, and the reason for this quality is not hard to find. It lies in the character of the purebred bulls which in years past have headed its leading purebred Holstein herds. Daughters of these bulls have gone into many of the herds at present existing in the county while sons of these bulls have headed widely scattered herds of both purebreds and grades where their daughters have exceeded their dams in producing ability.

Among the many good sires that have headed purebred Holstein herds in Bradford County we find Korndyke Abbekerk, Rag Apple Korndyke, Judge Hengerveld De Kol, Prince Segis Korndyke Jr., Segis Hengerveld Beets Lyons, King Korndyke Hengerveld Veeman, King Pontiac Alcartra Wayne, Lakeland King Pontiac, Dutchland Colantha Denver Prince and several others of nearly equal fame.

Professor Gowen of the University of Maine claims that the factors in the order of their importance in selecting a bull for the transmission of producing ability are: first, the producing ability of his daughters; second, the demonstrated producing ability of his dam; third, the dairy qualities and producing ability of his half sisters. Everyone of the sires mentioned in the preceding paragraph has had his worth proven by each of these tests.

Perhaps the most outstanding sire that ever stood in Bradford County is Korndyke Abbekerk, who for several years headed the herd of G. M. Lyon and Sons of Wyalusing and who was also used in the Jenningshurst herd at Towanda and the Milanhurst herd at Milan. This bull was a son of Pontiac Korndyke and was from a daughter of Hengerveld De Kol, a combination of blood lines found in the pedigrees of a number of famous sires and noted cows. Korndyke Abbekerk was a bull of rare individuality and great transmitting ability which has been shown through both his sons and daughters. Although most of the life of this bull was spent in small herds where he did not have the opportunity afforded many other sires of lower quality, yet he is one of the so-called Century Sires and will rank with the best of this select circle.

The best son of Korndyke Abbekerk born and raised in Bradford County was Korndyke Abbekerk Netherland, a son of Milanhurst America De Kol. This cow, a beautiful animal of extreme dairy type, is credited with making a number of very large records. Tested as a four-year-old she produced over 34 lb. butter in seven days from 651 lb. milk. She was continued on strictly official test for the entire year and produced in that time 1,231.35 lb. butter, 26,433.4 lb. milk, a record

which the Blue Books show has never been equaled by any other heifer of her class in strictly official work.

Some of the best daughters of Korndyke Abbekerk were mated with King Korndyke Hengerveld Veeman, a son of Sir Korndyke Pontiac Artis from a good daughter of Sir Veeman Hengerveld with a record of over 30 lb. butter and over 600 lb. milk made in a week. This mating proved a very successful cross and the results were in great demand. When the J. G. Kerrick herd was dispersed in March 1919 the sale was topped by a daughter of King Korndyke Hengerveld Veeman from a daughter of Korndyke Abbekerk.

Daughters of King Korndyke Hengerveld Veeman were mated with sons of Korndyke Abbekerk, thus intensifying the blood of these two great sires. In many of the leading herds to-day in Bradford County you find the blood of Korndyke Abbekerk and where you find it, invariably you will find that combination desired and sought for by all breeders, combined individuality and production.

To-day there are many high class young sires in active service in Bradford County. One of these is Echo Car Born Sylvia, grand champion of all breeds at the county fair held at Towanda last fall and three-

KORNDYKE ABBEKERK

One of the really great sires of the Holstein Breed.

fourths brother to Echo-Sylv Car Born with a record of 31,982 lb. milk, 1,260 lb. butter in a year. Both are sired by Champion Echo Sylvia Pontiac.

Other very promising young sires are Traverse Echo Sylvia King, a very handsome bull heading the herd of A. L. Burlington and W. B. Kennedy & Son; Berylwood Prince Aaggie Chicago, a bull of remarkable backing heading the L. L. Allis herd; King Ona Belle Pontiac, The Sixth Korndyke, Winterthur King Segis Emer, Bell Farm Chieftain, King Onyx Pledge Ormsby and King Ormsby Crijntje owned by John Howard and a number of sons of King Sylvia Johanna Pontiac who formerly headed two of the best herds in this county and who now stands at the head of the Bernhard Meyer herd at FINDERNE, New Jersey.

In George Washington's time ice cream was a novelty, but the average United States citizen now eats two and one-half gallons a year.

Another very annoying place to live is just beyond your income.

Care of the Herdsire

By GEORGE LESLIE

THE herdsire, representing, as he does, half the value of every animal in the barn, should be handled with care and be suitably fed.

Many really good bulls get poor care, being shut off in a none too clean box stall, deprived of good light and exercise, and then, when they turn "mean" or "ugly" or become sterile, are killed.

Within the last year I have seen three notable instances of this thankless manner of keeping good and valuable bulls.

One was a Holstein—a remarkably fine individual of the well known and highly productive Ona family. He was in a very large box stall, but it was knee-deep in manure and straw, and poorly lighted. He was thin and looked, as he no doubt felt—miserable. Asked what the bull was being fed, the herdsman said: "Some hay and a little bran and oats."

Such handling of a valuable animal is poor economy, to say nothing of its inhumanity.

Another, an outstanding Ayrshire, was well fed and in a stallion in a good barn, but his hoofs had not been trimmed in so long that he walked with evident discomfort and with a slouchy gait, being forced back on his hind feet so that they turned partially upward. The owner of this bull was very proud of him, but was thoughtless as to the animal's comfort, probably not realizing the bad effect of such a condition.

The third was a well bred Jersey which was a sire of a number of cows and heifers of great capacity as milkers, and was in a box stall which hadn't been cleaned in months and was as thin as a lath. No exercise, no grooming, a very limited diet and not enough water—all these for the animal that had really made the herd!

One of the most essential things in keeping a herd sire in good health and breeding condition is exercise. This is the everyday necessity for both comfort and well being. If he is let out in the yard or in a paddock and provided with an empty keg or barrel to bunt around, he'll enjoy himself while getting the exercise he needs. Another way of reaching the same result is to have a stout wire stretched across a corner of the barnyard or the paddock, with a large ring on it, to which, by a light, strong chain and swivel his nose ring can be attached. The chain should be long enough so that he has freedom of movement. If there is no other method of exercise provided, the bull should be led and made to walk for at least half an hour every day, and an hour morning and afternoon would be better still.

Care of the feet is quite important. So that the animal may stand firmly and squarely on his feet, the hoofs should be kept trimmed down; the stall should be cleaned daily, and clean dry bedding provided so that the danger of foul foot may be lessened.

In the matter of feed a young bull two or three years old does not need as much in the way of concentrates as an older animal, even when in fairly constant use. As a rule 4 lb. to 5 lb. a day of a good standard milking ration not over 20% crude protein is plenty, with a liberal supply of roughage. The latter is very important for development of barrel, from calfhood up.

The more mature bull will generally consume as much hay as a cow in milk, and to good advantage. With legume hay, a high protein ration should not be used, and from 4 lb. to 8 lb. of grain is indicated, according to the weight of the bull and the frequency with which he is used.

A reasonable amount of silage will not be amiss, from 5 lb. to not over 15 lb. a day according to age and weight, being a fair allowance. If dried beet pulp is preferred, from one to three pounds per day, soaked so as to make it light and soft, is a palatable and healthful addition to the daily ration.

Water should be where the bull can get it whenever he wants, which is best arranged for by a drinking cup in his stall. If, however, the barn is not equipped with drinking cups but has some other form of water supply, don't fail to give the herdsire water as often as the cows.

The animal from which all your young stock derive 50% of their constitutional vigor, type, health and capacity for production, deserves to be treated not as a prisoner on short rations, but as a highly valuable member of the dairy family, with all that this carries in the way of good care, kindness and suitable food.

Farm Made Drinks

H. C. COLLINGWOOD, editor of the *Rural New-Yorker*, is claimed to be the originator of the Apple Consumer's League, the members of which pledge themselves to "call for apple" in some form at every public eating place at which they take a meal. Mr. Collingwood has recently been writing articles against the widespread use of "pop," carbonated water flavored and colored, often with essences derived from coltar. He favors the use of milk as a beverage and also pasteurized apple juice. If all tourists coming from the farms would call for one or both of these "drinks" when stopping for refreshments along the road they would soon be on sale at a large proportion of the stands. The increased demand would result in better prices for milk, and for cider apples, and so would benefit the farmers. Advertising of this kind results in increased demand which means more sales and better prices. It looks as though Mr. Collingwood has again hit the right nail on the head.

"Red" Grange

H. AROLD GRANGE, noted football star, drinks milk with nearly every meal, says his father, Deputy Sheriff L. N. Grange, of Wheaton, Ill. Before "Red" became noted as an iceman or as a football player, he worked on an uncle's farm and learned to do considerable farm work. He is said to be a lover of farm life and farm work. His many admirers, those who have seen him lead the University of Illinois team to victory, and those who only know him through the pages of the newspapers, wish him so great a degree of success in his professional football career that some day he may be able to own a farm of his own.

For modes of faith let graceless zealots fight; he can't be wrong whose life is in the right.

Improving Dairy Cattle by Continuous Use of Sires of Proven Breeding Quality*

R. R. GRAVES

Dairy Cattle Breeding Investigations, Bureau of Dairying, Washington, D. C.

RECENTLY there have appeared in the press such statements as the following: "Breeding production to production does not tend to result in further increase of productive capacity. It more often ends disastrously. It is now recognized by a steadily increasing number of leading breeders that the scales and Babcock test, great as have been their contributions to dairy advancement, can not safely serve alone in directing breeding plans."

There can be no question that breeding production to production, in the sense that this method of mating has been commonly followed, has not always brought desirable results. Inheritance for producing capacity has been gauged by breeders by the individual production record of a cow. If a bull is the son of a cow with a high record and is mated to a cow with a high record, this is breeding production to production and it is thought by many that the progeny of the mating should be a high producing animal. Frequently the results of this type of mating have been disappointing and have led to such statements as the one quoted. The difficulty is, that in the interpretation of the results of such matings, consideration has not been given to the fact that the inheritance of all animals for any given character, such as producing capacity, is double in its nature—that is, it has a double origin. Each individual possesses an inheritance for each character received from each parent, though outwardly the individual may for some features or characters show great resemblance to one parent, and in other features or characters show more marked resemblance to the other parent. Nevertheless, the individual does possess and will transmit an inheritance for each feature or character received from each parent, though it may be visible or invisible. Hence the statement that all individuals are double in their inheritance.

The cow that has a large record does not necessarily have an inheritance from both parents for high-producing capacity. She may be mixed, that is, heterozygous, in her inheritance for producing capacity. From one parent her inheritance for producing capacity may be for high production and from the other parent her inheritance for producing capacity may be for low production. If the factors determining a high-producing capacity are dominant over the factors determining low-producing capacity, this cow may be a high-producing animal and yet she may transmit a low-producing

capacity to half her offspring. Our failure to breed cattle that will be pure for an inheritance for high production by breeding production to production is not the fault of our production records, nor can we say that our production records are not indicative, but rather that we have not applied correctly the knowledge given by the production records to our selection and breeding methods. We have failed to take into account the double nature of the inheritance of each individual for each character.

In a number of papers and talks in the past few years the writer has advanced the theory that the sire's hereditary makeup for producing capacity is more accurately indicated by the production records of

a number of his daughters than is the hereditary makeup of the cow for producing capacity, by her individual production record.

Where all the daughters of a sire are uniformly excellent producers, it would seem to indicate that such a sire has in his germinal makeup only factors that will determine high producing capacity and, therefore, that he is pure—using the term "pure" as a synonym for the genetic term "homozygous"—in so far as hereditary factors controlling high producing capacity are concerned. We commonly refer to such a sire as being prepotent for high production. This prepotent sire for high production may or may not be prepotent in transmitting good type also.

If the sire gets some good-producing and some poor-producing daughters, it would seem to indicate that he is either heterozygous in his inheritance for producing capacity, and will therefore transmit to some of his offspring the inheritance that will determine high-producing capacity and to some the inheritance that will determine low-producing capacity or else that he is homozygous for recessive factors determining low production and that a part of his daughters may be good producers because of their having received from their dams dominant factors determining high-producing capacity. It is realized that there are all degrees of producing capacity but the terms "low" and "high" are here used to illustrate extremes. The real test to determine the hereditary makeup of both the sire and the dam is the breeding test—the inheritance that is actually passed along to a number of offspring. Because of the fact that it is possible to measure the inheritance of the producing capacity of a larger number of daughters that are by a single sire, and in a short space of time, than is possible for any considerable

*Reprinted from *Journal of Dairy Science*.

number of daughters from a single dam, it is possible to determine more accurately the hereditary makeup of the sire than of the dam.

Our theory is, therefore, that improvement in dairy cattle breeding will be brought about most rapidly by the discovery and use of these prepotent sires that are pure for the hereditary factors determining high production.

It may be questioned whether unrelated sires of the same breed possess the same factors or combinations of factors that enable them to be prepotent. This remains to be proved but the indications are that they do possess them. If they do, then by the use of proved sires of the same breed for six or seven generations, the resulting progeny will approach the condition of being homozygous for the factors determining high-producing capacity. The continuous use, for generation after generation, of sires of proven ability for transmitting high-producing capacity, in an effort to breed a pure line for high-producing capacity, is one of the breeding projects which the Bureau of Dairying has under way.

We have several calves at the Bureau of Dairying experimental farms that have three, four and five direct generations of proved sires. This statement should be qualified in two ways. In the first place it is not meant to imply that all the ancestral sires in four generations are proved. If the sire of the individual in question is definitely proved, no further attention need be paid to his ancestry. It is possible for this sire to be homozygous for the inheritance determining high production and yet for both of his parents to be heterozygous in their hereditary makeup for the factors controlling producing capacity. In Jersey cattle, for example, spotting is recessive to solid color. We may have two solid-colored parents that carry the recessive factor for spotting and from these parents we may get calves at different matings that are (1) homozygous for spotting and are therefore spotted; (2) homozygous for solid color and are therefore solid color; or (3) heterozygous in their inheritance for color and spotting, but are of solid color, possessing and transmitting, however, the inheritance for both solid color and spotting, as were the parents. Therefore, if either the sire or dam is once definitely proved to be homozygous for the character desired, there is nothing to be gained, insofar as that particular character is concerned, by consideration of the ancestry.

The second generation sire to be considered would be the sire of the dam, and the third generation sire to be considered would be the sire of the maternal granddam and so on. In the accompanying chart only the sires that need be considered, providing they are proved, are shown. If each of these sires be homozygous for factors determining high producing capacity and if each has the same combination of factors, the only opportunity for the individual in question to have received recessive factors must have come through the maternal great granddam, granddam and dam. So that in speaking of four direct generations of proved sires we are actually referring to only one sire in each ancestral generation.

The second qualification is in the statement that each of these sires is proved to be homozygous for the

hereditary factors determining high-producing capacity. To determine that a sire is homozygous for factors determining high-producing capacity is not as simple as it may appear. If a bull is heterozygous in the factors determining producing capacity and is mated with cows that are also heterozygous, some three-fourths of the daughters would be good or high producers and one-fourth poor producers.

If a sire is homozygous for the recessive factors determining low producing capacity and is mated with cows that are homozygous for dominant factors determining high-producing capacity, all the daughters should be good producers; they will be heterozygous in their inheritance, however, and will transmit low production to half their offspring. If a sire is mated with good cows it is a difficult matter to determine his hereditary makeup. A very large number of daughters from such matings would be required before his transmitting ability can be determined. It would seem that the best way to prove a sire would be to mate him with low-producing cows. Ordinarily, the low-producing cow would be homozygous for recessive factors determining low production unless she had some organic trouble that prevented the expression or fulfillment of her inheritance for high production. In the present stage of our breeding operations, when most cows are probably heterozygous for their inheritance governing producing capacity, a bull's hereditary makeup should probably not be estimated from the producing capacity of less than six daughters. As more cows become homozygous in their hereditary makeup for the dominant factors governing high-producing capacity, it will become more difficult to prove sires in such manner as to be certain of their being homozygous for dominant factors determining high producing capacity. Another factor that adds to the difficulty in determining the hereditary makeup of an advanced register or register of merit sire is the fact that breeders do not test the poor daughters of a sire due perhaps to not wanting the unfavorable publicity that such a record would bring, and due also to the high requirements for advanced registry and register of merit. As our testing of purebreds is handled to-day a sire that is homozygous for recessive factors determining low production, if mated to a few cows that are homozygous for dominant factors determining high production, and if only such daughters as are from these homozygous cows are tested, may acquire a reputation for being a great sire, whereas if the records of his poor daughters from poor cows were published it would give a more accurate indication of his real hereditary makeup. Certainly, breeding animals could be more intelligently selected if all records, whether good or poor, were published.

If the theory is correct that the use of proved sires for generation after generation will produce a strain that will be homozygous for dominant factors determining high production, then this same theory offers a method for the selection of bull calves that will prove to be prepotent sires.

So far as we know no attempt has been made to determine how many factors are concerned in the inheritance governing producing capacity. Perhaps the stimulation to secrete milk may be a simple inheritance.

The good dairy cow may vary from the poor-producing cow only in that she has this greater stimulation to secrete milk. Does the dairy cow have a different capacity for the assimilation, digestion and conversion of large amounts of nutrients, in the form of grains and roughage, into dairy products than the beef animal that produces a limited amount of milk? Or is it all in this one difference, the stimulation to convert nutrients into milk, or the stimulation to convert nutrients into meat? (Certainly the cow will not be a greater producer than is permitted by the strength of her weakest link in the chain of essential functions of the organs entering into the scheme of digestion, circulation and secretion.) In the herd of the Oregon Agricultural College several years ago were four full sisters, daughters of a noted sire. Three of the daughters made good records, but the fourth daughter seemed incapable of making one. On the death of this daughter it was found that she had a leaky heart valve. Perhaps this daughter had the same inheritance for producing capacity as did her three full sisters but because of this organic defect she could not utilize this inheritance to the fullest extent.

Since the number of factors entering into the determination of producing capacity is not known, no accurate prediction can be made as to the probability of securing an animal that is homozygous for the factors determining high-producing capacity, as a result of three or four generations of proved sire matings. If we assume that the stimulation to secrete milk is the variable characteristic that causes the difference in producing ability between the high-producing and the low-producing cow and if we further assume that practically all cows have the digestive capacity to consume, digest and assimilate large amounts of nutrients for the production of large amounts of milk and butterfat, and have the constitution that will enable them to withstand the consequent tax on their physiological makeup, we could, perhaps, credit the results of several generations of proved sire matings.

There is one other phase of inheritance in milk and butterfat-producing capacity that should be briefly discussed. Wherever there has been a cross between two distinct breeds of dairy cattle that have a considerable difference between their milk flow and range of butterfat percentage, such as the Holstein-Friesian cross on Guernseys or Jerseys, it has been observed that the resulting progeny have a milk flow and a percentage fat that is intermediate between the two parents. In these crosses the inbred F_2 generation has not shown a segregation of characters such as might be expected. This, together with a common belief of live stock breeders that a sire and a dam have a certain level of producing capacity and that the progeny will have a producing capacity that will represent an average of the parental levels, has led to a belief that the inheritance for milk and butterfat-producing capacity is a blending inheritance.

In the crosses between two distinct breeds there are probably so many independently inherited factors having a bearing on the milk flow and percentage fat in each parent that it is almost impossible to bring about in any limited number of animals a segregation of factors that will result in the exact reappearance of either

of the parental characteristics, or of the desired combinations of the characteristics of the two parents. According to Coulter, if two races of corn were crossed in which one parent had large grains, but those were few in number, and the other parent had small grains but many in number, the F_1 progeny would have grains intermediate in size and number. Now if the F_1 plants were inbred in the hope of obtaining a combination of the two extremes of large and also numerous grains, and if there were five factor pairs that influenced these quantitative characters in each case, in order to secure the desired pure type from this cross of two parents, each having five pairs of factors influencing their respective desired character, it is estimated that 100 acres of corn would have to be grown in order to have an even chance of securing one plant having the desired combination.

While in crosses between breeds having markedly different hereditary makeups as to such characters as milk flow and percentage fat, the following generations do seem to possess an intermediate milk flow and percentage fat, yet there is not the same evidence in crosses within a breed. No average or intermediate production such as is found in the crosses between distinct breeds will be found in the production records of the daughters of a single sire and their dams. The production records of the purebred daughters of an individual sire will be quite variable and cover a considerable range. A high record daughter may come from a low-producing dam and a low-producing daughter may come from a high-producing dam, or from two dams of approximately the same producing capacity may come daughters with records that vary widely. We have explained in this paper how that may very well come about through the dominant factors for high production and recessive factors for low production and the double nature of each individual in its hereditary makeup. In this discussion we have used the expression high and low producing capacity as illustrating extremes. There is need of further explanation, however, concerning the reason why some prepotent sires consistently raise the producing level of daughters coming from dams hav-

The records of the daughters of this sire appear in the columns on the left and at the right of each daughter's record is the record of the dam. This sire increased the milk producing capacity of each daughter. The per cent fat of the daughters was decreased in all but two cases, but the decrease in per cent fat was not sufficient to offset the increase in milk and consequently every daughter showed an increase yield of butterfat.

ing records of 500, 600 and 700 pounds butterfat. (See table 1, showing records of daughters of prepotent sire and their dams.) The most logical explanation would seem to be that of the cumulative or multiple factor hypothesis. The cumulative factor hypothesis explains variations in quantitative inheritance such as height, yield, number of rows of grain on ear of corn, length

of ear, etc. The theory is that quantitative characters are produced by cumulative factors—a factor that when added to another similar factor, affects the degree of development of that character. The theory is illustrated by Correns experiment in crossing red and white strains of *Mirabilis*. Instead of the F_1 's being red as was expected, they were pink; intermediate between red and white. When these pink— F_1 's—were interbred a ratio of 1 red: 2 pink, 1 white was secured, the explanation being that a single dose of the determiner for red gives pink, while when the F_1 's were interbred a double dose of the red determiner gave red. Similarly, varying degrees of redness in wheat were secured in experiments at the Swedish Experiment Station in which wheat with red and white kernels were crossed, the degree of red in the crossbred kernels depending upon the number of doses of red received.

An interesting case of an intermediate result in crossing two varying characters was secured by Phillips in crossing two breeds of ducks—Rouens and Mallards—of different sizes. The Rouens were more than twice as heavy as the Mallards. The F_1 birds were intermediate in weight between the Rouen and Mallard parents, and due to the number of independent factors influencing the weight the F_2 birds did not segregate, but were also intermediate in weight, though more variable than the F_1 birds. None of the F_2 birds were as heavy as the Rouens, nor as light as the Mallards.

Punnett and Bailey crossed two breeds of fowls differing widely in weight. The weight of the F_1 birds was much closer to that of the larger parent breed than to that of the smaller parent breed. This was taken to mean that one or more of the factors influencing large size showed dominance. Extreme variants were scarce in the F_2 generation, due to the small number of birds raised, but the F_3 birds had a great variation in weight, covering the ranges of both parent breeds. Individuals representing the extremes of the F_3 variants were mated and broods secured which averaged larger than the large parent, and smaller than the small parent. The interpretation was that there were four independent factors having among themselves unequal influence on the total weight; that when none of these factors were present birds of the minimum size were secured. Recombinations which included all four factors produced a race larger than the large parent. Similarly, recombinations which include the four allelomorphs of these factors produced a race smaller than the smaller parent. It was also assumed that two of the four hypothetical factors exerted a greater influence on total size than the remaining two factors.

Coulter says that the results of such experiments are in accord with the Mendelian method of inheritance, only two assumptions being necessary: (1) that dominance is absent, two doses having twice the effect of one; (2) that the independent similar factors are cumulative in their operation.

In connection with the cumulative factor concept, a modifying statement should be made as to the mechanism involved. Heretofore it has been assumed that we are dealing with numerous, separately inherited factors, absolutely identical in their nature, cumulative in their effect. No doubt one might regard with suspicion such a seemingly artificial mechanism.

Probably it would be easier to believe if it were modified in the following manner. Instead of assuming that the numerous factors are identical in function, we may assume that each factor has its own peculiar function, but that the function plays a part, directly or indirectly, in developing the quantitative character in question. For example, suppose height is the character. One of the factors determines the development of numerous nodes; another increases the amount of chlorophyll; another determines the size and vigor of the root system; another brings early germination and a long growing season. Such factors, although not identical, will be cumulative in increasing the height of the plant. Of course, a single dose of one type of factor may not bring the same increase in height as would a single dose of one of the other types, and therefore the mathematics of the situation will be slightly modified.

Applying the cumulative factor theory to producing capacity of milk and butterfat, if we assume that the presence of eight pairs of cumulative factors was necessary for the complete expression of an 800 pounds butterfat producing capacity, an animal with only four pairs of cumulative factors would have a producing capacity varying about the 400 pounds butterfat mark. If a sire were found that was homozygous for the eight factors necessary for an 800 pounds butterfat capacity and he were mated with heterozygous cows having enough of these cumulative factors to permit a 400 lb. butterfat capacity, then if the animals resulting from this mating were inbred, animals would be secured that would have producing capacities ranging from 400 to 800 or more lb. butterfat. This would seem to be in accord with what actually does happen in breeding work.

The great problem that has to be faced by the man who would breed uniformly high producing cattle, is that the hereditary material controlling producing capacity with which he must work is not purified or standardized. In order to make definite progress he must know the purity of the material with which he is working. The producing capacity of an individual cow is not a sufficient guide as to the purity of her germinal plasm for producing capacity, but the producing capacity of a number of daughters of a sire, especially if they be out of dams of known low producing capacity does give us a measure of the purity of the germinal plasm of the sire in regard to this character. It would seem to make little difference whether the theory of complete dominance or the theory of cumulative factors be followed. It is still the exceptional prepotent sire that offers to us the most rapid means of purifying the inheritance of our dairy cattle for high producing capacity. Coulter says: "We now know that individual variations are not always mere fluctuations or responses, but may be due to varying doses of cumulative factors. A selection on this basis may very well result in a new race that breeds true; and a race that breeds true is De Vries' definition of a new species." And so by the use of proved prepotent sires for generation after generation we may finally breed dairy cattle that will breed true for a high milk and butterfat producing capacity.

You can queer duty by making a problem out of it.

Secretary Jardine on His Department

SPEAKING before the National Coöperative Milk Producers' Federation on November 24th at Philadelphia, Penna., Secretary of Agriculture William M. Jardine, said:

"The policy of the Department of Agriculture has been and will continue to be one not of direction but of service in the lines in which farmers themselves have become convinced that service is needed. The department was established for promotion of American agriculture and it seeks to give farmer's constantly the service which they themselves have found essential to progress. Marketing problems have been studied in the department for some time. The Office of Markets was established in 1913 and one of its first projects dealt with problems of coöperative marketing and purchasing organizations. This project has expanded slowly. Research has been carried on in the fundamental problems of coöperation. Historical and statistical data regarding agricultural coöperation have been collected from all parts of the United States. The material available deals with marketing and operating problems of associations, the cost of doing business, and the economic and legal factors under which they operate, as well as the broad questions involved in the relationship of the members to the associations.

The department has also made various surveys of conditions surrounding the production and marketing of particular products in specific areas with a view to determining the possible advantages of a system of marketing the products coöperatively, thus assisting coöperative organizations in obtaining knowledge of the basic factors which are involved in both production and marketing.

Various other services of the department, not directly based on the coöperative marketing studies, are nevertheless of value to coöperative organization. Estimates, forecasts, and statistics of crop and livestock production are provided. A comprehensive market news service is given, reporting shipments, receipts, prices, and condition of commodities. Well defined and generally accepted standards for farm products have been established, and shipping point inspection is being extended rapidly. This type of service is vital to the fullest development of coöperative marketing. The licensing of public warehousemen under the United States Warehouse Act administered by the department has assisted coöperative marketing organizations in enabling them to secure improved credit facilities and to develop more orderly marketing. Studies of cost of production and cost of marketing are likewise of value, while closely akin to these are studies in accounting systems adapted to agricultural needs.

Recently intensive surveys and analyses of the operating, financial, and marketing problems of particular coöperative associations have been carried on. These studies have been of value not only in themselves, but because they have proved a valuable guide to coöperative organizations in setting up operating standards and methods. In short, it is a method of developing in the agricultural field the scientific business study which

has proved so valuable in corporations and other industrial organizations.

Although the department has made these and various other studies which have proved distinctly useful to the coöperative movement, the work has not grown as fast as have coöperative organizations. From 1919, when a wave of organization activity began to sweep agricultural America, until the present time, coöperation has grown among farmers until this year it is conservatively estimated that \$2,500,000,000 worth of farm products will be marketed coöperatively. This is a phenomenon of which no one interested in American agriculture or in the American nation can fail to take cognizance.

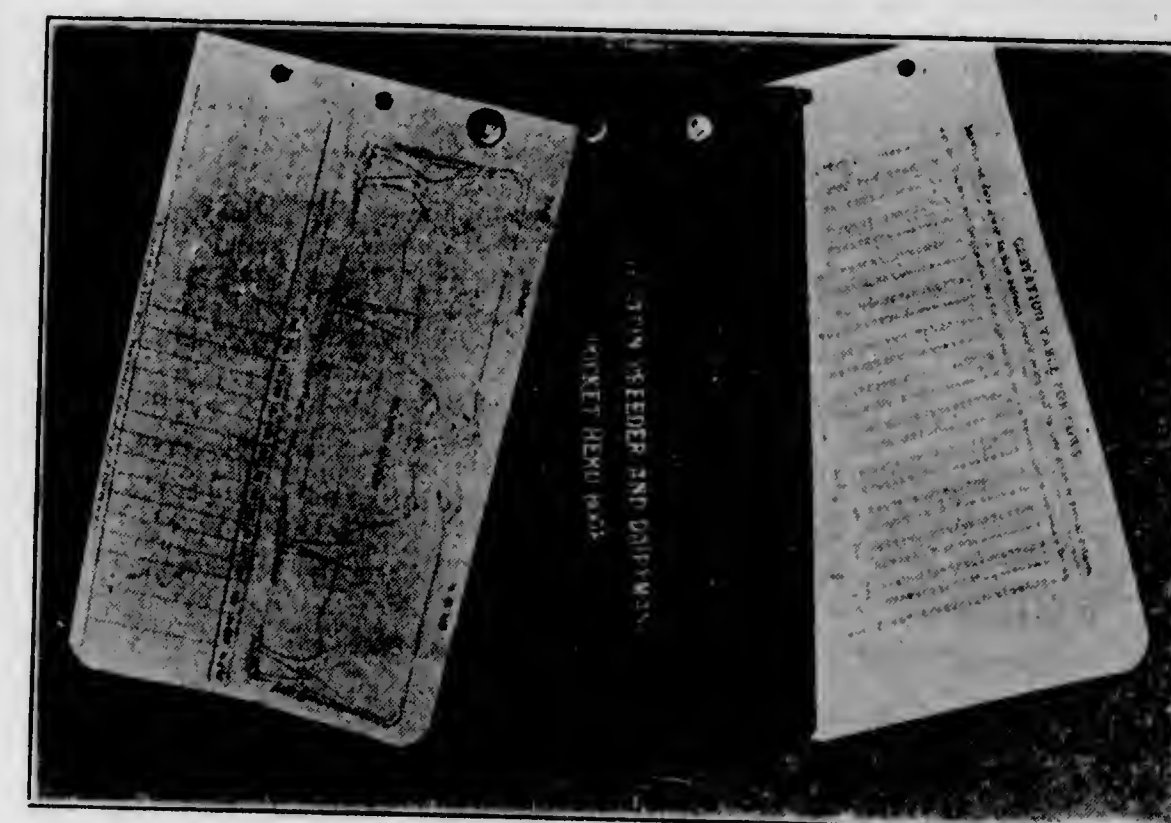

A Versatile Youngster

REED VORAN, who exhibited the champion heifer in the Calf Club division at last year's Kansas State Fair, recently distinguished himself by tying with two other youngsters for first place in the Reno County poultry club.

Reed started junior club work in the spring of 1923 with a Shorthorn heifer. The following year he changed to a Holstein and raised White Rock and Rhode Island Red fowls. His sister, Fairie Voran, cared for the champion heifer in Junior Club work the year before Reed carried off the honors. They are children of D. A. Voran, a banker at Pretty Prairie, Kansas, who is greatly interested in agriculture and who made it possible for his children to become leaders and prize winners in junior club work.

"I don't know what to do about our baby," said a modern young mother. "I can't get him to sleep because he tosses his head about so he shakes the radio sets right off his ears."

YOU SHOULD HAVE ONE!

This POCKET HERD BOOK is the result of years of experimentation by practical breeders. The result is the most convenient, practical, up-to-date BREEDERS' COMPANION you ever saw.

Given as a premium with a two year's subscription to THE HOLSTEIN BREEDER AND DAIRYMAN at One Dollar, new or renewal.

If you once use one you will never be without it while you own purebred cattle. The handiest premium you ever saw.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
M. M. LEEDOM, Advertising Manager

Contributing Editors
EUGENE B. BENNETT HELEN C. NEWMAN
J. H. LEWIS

Published semi-monthly by the Benn-Chester Publishing Co., Inc.,
Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year,
(two years \$1) payable in advance.
Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

DECEMBER 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

World-ly Editors and Windmills

MR. M. S. Prescott, Editor of the World, in his report of the Grand Rapids Convention, appearing in the June 13, 1925, issue of the Worlds tells his readers this:

"Under the head of new business, former president Aitken presented a resolution that a Committee consisting of President Lowden, Secretary Houghton and Messrs. Moscrip, Reynolds and Elder be a committee to report at the next annual convention such amendments as may be necessary to carry out more effectively the purposes for which we are organized. Mr. Aitken has in mind as within the scope of this resolution a study of the question of reincorporation in some state other than New York where more recognition will be given to the rights of membership corporations to govern themselves. He complained of the operation of the New York laws and the litigation in which we have been involved for the past five or six years, and urged reincorporation in some state like Illinois where these questions have already been settled by the courts of last resort in favor of the association. There was no particular discussion of the resolution and it was passed without objection."

In the November 22, 1925 issue of the Holstein Breeder and Dairyman we published an announcement that a legal action had been brought to enjoin the Committee appointed under the Aitken resolution from taking any action in the matter of incorporating the Association in some State other than the State of New York.

Now that the Political Cunningness has been detected in trying to sneak the Association out from under the corporation laws of the State of New York by a cleverly worded blanket resolution and thus be able to further exploit the Association's Reserve Fund, the Editor of the World, that represents or is controlled by the POLITICAL MILLIONAIRE outfit, has an entirely different story to tell his readers and, in his paper under date of November 28, 1925 this is what he has to say:

"We do not understand that the committee appointed under the Aitken resolution at Grand Rapids is intending to recommend reincorporation in any other state, or the amalgamation or consolidation of the Holstein-Friesian Association of America with any other association or corporation as Van Gorder charges in his complaint."

The Editor publishes his latest statement under the title "Tilting at WINDMILLS." That might be a new name for him but we have heard of a much more common expression used to designate those people who "could not tell the truth."

It looks to us as though The Directors of the Holstein-Friesian Association of America have had a "change of heart" in the matter, since Senator Van Gorder commenced this last action in the Supreme Court of New York State. They are evidently trying to put up a sort of "Jekyll-Hyde" alibi, we opine they will not succeed.

Appropriations for T. B. Indemnities

HEARINGS on the Agricultural Appropriation Bill will begin about the first week in December at Washington. Opportunity will be afforded any special agricultural interest that desires a hearing, announces chairman Walter W. Magee. It is unofficially reported that the officers of the Budget Bureau do not look with favor upon continuing the appropriations for tuberculosis eradication on the same scale as made by Congress last year. The cattle industry will offer a strong protest if these appropriations are reduced or cut out.

The possibility of a substantial reduction in appropriations for bovine tuberculosis control has been mentioned a number of times by the HOLSTEIN BREEDER AND DAIRYMAN, the only paper, we believe, that has called attention to the growing sentiment among government officials that cattle owners are now able to bear their own losses when tuberculosis is discovered in their herds. It must not be forgotten that it was because tuberculosis eradication is a matter of public health, that appropriations for indemnities were obtained in the first instance. It is apparent that herd owners who delay the testing of their herds may before many years, have to bear all losses without any indemnity from either the state or federal governments.

Report of the Secretary of Agriculture

THE dairy situation is more favorable than it was a year ago. Production is less than last year, consumptive demand has been good, and the storing season closed without burdensome surpluses. Prices of all dairy products are higher and have followed a more normal trend.

Production in 1924 was heavy. It was stimulated by ideal weather and by some increase in the number of cows. Production in 1925 will be less. Prices are higher. On September 1, 1924, the normal peak date for storage holdings, butter stocks were at a record high mark. These stocks were cleared before the 1925 producing season began, yet they exerted a depressing influence throughout the fall and winter. September 1 this year found stocks on hand more nearly in line with

prospective requirements. Fall production did not seem likely to be unusually large. The position, in short, was statistically more favorable to producers.

The foreign situation has strengthened domestic markets. Except for exports of condensed and evaporated milk, outlets for domestic production of dairy products are very largely confined to our own markets. There is always the possibility, however, of our domestic supply being supplemented by imports for Denmark and from countries in the Southern Hemisphere, which are forging ahead rapidly as sources of supply. The European demand has been sufficient this year to hold prices in European markets at levels which, together with our own tariff barrier, have prevented imports of any consequence.

Dairy production continues to expand in the Southern Hemisphere. New Zealand and Australia have just finished a season of record output. The production of these two countries has expanded greatly since the war. They still have room for expansion. Argentine dairy production has also increased considerably since the war. The further development of the western Provinces of Canada and the recovery of Europe are adding to the world's supply. Siberia, a large exporter of dairy products before the war, is also recovering.

That's Where the Money Goes Pop Goes the Weasel

VOLUME 51, Page 187 of the Holstein-Friesian Herd Book gives the members of the Holstein-Friesian Association a little idea as to where some of their money is going. To save you looking up the passage or finding a Herd Book, in case you do not happen to have this Volume, we are printing below the passage referred to:

ADJOURNED MEETING OF THE BOARD OF DIRECTORS OF THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA.

Cleveland, Ohio, Tuesday, June 5, 1923.

The Board went into Executive session to fix the salaries of the officers for the ensuing year, and salaried officers thereupon withdrew. Mr. Norton acted as secretary of the session and made the following report:

EXECUTIVE SESSION.

Officers present: President Lowden, Directors Mott, Bell, Moscrip, Armstrong, Elder, Schaefer, French, Pabst, Reynolds, Field and Norton.

Upon motion made by Mr. Field, seconded by Mr. French, the Treasurer's salary was raised to \$2,000. (An increase of \$200.)

Upon motion made by Mr. Field, seconded by Mr. Moscrip, the salary of the Superintendent of Advanced Registry was raised to \$6,000. (An increase of \$1,000.)

By motion of Mr. Field, seconded by Mr. Mott, the salary of the Secretary was raised to \$6,000. (An increase of \$1,000.)

Upon motion of Mr. Reynolds the matter of salary of the Assistant to the Secretary was referred to Secretary Houghton.

By motion of Mr. Field, seconded by Mr. Pabst, the salary of the Auditor was raised to \$5,000. (An increase of \$200.)

Upon motion of Mr. French, the salary of the Director of the Extension Service was raised to \$5,000. (An increase of \$500.)

On motion of Mr. Field, seconded by Mr. Bell, Mr. Cooper's salary was fixed at \$4,200. (An increase of \$600.); Mr. Barney, \$4,400; Mr. Horst, \$2,600; Mr. Bill, \$4,400; and Mr. Long, \$4,500.

Mr. Field moved that the Chairman of the Executive Committee should be paid \$3,000, for last year's services. Motion carried.

A motion was made by Mr. Mott, seconded by Mr. Field, that the Chairman of the Finance Committee should be paid \$1,000, for last year's services. Motion carried. (The foregoing to take effect June 1.)

The breeders will recall that a few months previous to the Cleveland meeting when this salary grab was staged, that Mr. James A. Reynolds, Chairman of the Executive Committee who was voted a \$3,000 slice, and Mr. F. L. Houghton, Secretary, who had his slice increased from \$5,000.00 to \$6,000.00, wrote a very pathetic letter to the members under date of March 22, 1923, telling them, or probably we had better say, warning them of the proposed raid of \$93,000.00 upon the Reserve Fund to do Extension work. Thus the expression

That's where the money goes.
Pop goes the Weasel.

The Draining Department

THE Holstein-Friesian Association was operated at a loss and depreciation of over \$59,000.00 for the year 1921; over \$39,000.00 for the year 1922; over \$40,000.00 for the year 1923 and over \$56,000.00 for the year 1924 or a total sum of over \$194,000.00 for the last four years.

Inasmuch as the Association's Treasury is being drained and the breeders' pocketbooks are being drained why not refer to a certain department that has its headquarters in Chicago as the "Draining Department" instead of the Extension Department? It is true that it extends the pocketbooks of a certain few but as it is draining the Association's Treasury and the breeders' pocketbooks, we believe the "Draining Department" would be more appropriate.

The Quiet Observer

(A contributed Editorial)

I HAVE been a member of the Holstein-Friesian Association of America since 1916. I was a reader of its official organ for a good many years. I am still a member of it but it has done me no good in recent years. It was a first class organization while it was poor and lived among the lowly but when it fell into the hands of those who have been directing it in recent years, doubling prices and doubling everything but service which it has really fallen down on, I don't think so much of the association.

In my humble opinion these fellows had better be careful about what they say or do, or they are going

to be licked in the controversy which has developed through the organization of the Holstein-Friesian Registry Association, Inc., Harrisburg, Pa. The fact that it is published in the good old Keystone State where there is whole lot of good, old-fashioned, flat-head Pennsylvania Dutch farmers, of which I am one, still doing business successfully, ought to spell "W-A-R-N-I-N-G" to those fellows who have been too long on the job of making the Holstein-Friesian Association of America a paying proposition.

I tell you its wonderful to *feel powerful* when you get the chance to feel that way. This is just how I look upon the whole circus they are running. Now personally I have nothing against the old association but I don't like its manners. It hasn't met any of the issues that has confronted it in recent years on the fair and square. I don't think it is good for the health or the digestion of anyone to hold office particularly the same office in the same organization for longer than a very short period of years.

To the members of the Holstein-Friesian Registry Association, I would say "Stick to the job." You seem to be disturbing the other fellows a good deal, and that in itself looks suspicious particularly when they are sending out to their members rather frantic letters and communications telling how bad you are and how good it is. Of course they have more dollars to spend in making noise but they have to make much more noise than you do in order to get there with you because you didn't have any noises to counteract when you started so you really have the big jump on them. I have a great many friends in the old association but "pumpkins is pumpkins," and there you are. I love them just as much as I ever did, at least after they began to decline, by that I mean the association and the individual who turned the wheels.

I knew Mr. Houghton years ago. Perhaps at the time when his association was too poor to do the job itself he started the *Register* which was for years the official organ. Of course that makes it hard for him to take short turns at the high rate of speed of what has never been more than a narrow gauge concern. Don't anyone know such an organ should never have been published by an officer of that or any other association that wants to run on an impartial basis. I have met Mr. Houghton several times, I thought he was a very fine gentleman and I think so yet but it is a hard job to serve man and master at one and the same time.

These are only the observations of one man, not meant for anyone to agree with them if he don't want to but if he will think a bit I believe his common sense will make him at least start him to think and if it does, well it pays to think of some things.

Breeders Pay

IT IS high time that the breeders of Holstein cattle refused to have their Association's Treasury or their pocketbooks drained of every dollar by outsiders. Of course we are not accusing any one of going into the Association's Treasury and lugging off bags of money, that would be thievery of the first order, but there seems to be other ways of getting the breeders' money that is about as effective as carrying it away in bags.

The so-called Extension waste as Secretary F. L. Houghton referred to it, seems to be one of the ways often resorted to to gain access to the treasury house of associations and organizations such as the Holstein-Friesian Association of America.

The Holstein breeders have seen politicians come into their ranks without the least trace of the odor of a cow stable, sit down beside the Association's Treasury box and the first thing the breeders knew, they were drawing a salary and in one instance the same politician got two salaries.

We have seen the millionaires advertise their record cattle at the Association's expense.

We have seen the Dealing Element promote, manage and advertise cattle sales at the Association's Expense.

We have seen the Association's funds used to design putty cows, these cows among other things are useful as playthings for the idle rich.

Now it is rumored that the Extension Committee, headed by Mrs. Ruth McCormick, purposes to use the Association's funds directly or indirectly to advertise certified milk, the kind of milk which is produced at the so-called breeding establishments where the cows are kept in palatial stables and the attendants wear white hats, white coats and white pants—such breeding establishments as are owned by some of the wealthy members and Directors of the Holstein-Friesian Association.

Is it any wonder then with all these outside influences draining the Association's Treasury and pulling at the breeders' purse string, that the Association should run behind year after year and that the breeders should withdraw and organize a new Association managed and controlled by real breeders?

Our Advice

WE HAVE received a number of inquiries from breeders asking our advice as to whether or not they should join the new Association, the Holstein-Friesian Registry Association, Inc.

Our advice to breeders is:

If they are interested in breeding purebred Holstein cattle for legitimate dairy purposes, by all means join the new Association.

If they want to restore public confidence in the breed, increase the price and demand for their surplus cattle, by all means join the new Association.

If they want to be free of the unjust and unnecessary tax levied through increased fees, by all means join the new Association.

Here are a few of the reasons:

First, The life Membership fee in the new Association is \$10.00. In the old Association it is \$25.00.

Second, The new Association has a Business Form of Government, the same as Banks, Railroads and Commercial Enterprises, where every member has a right to a direct vote in making By-Laws, electing officers and fixing fees. The old Association has a Political Form of Government. The members do not have a right to a direct vote in formulating By-Laws, electing officers and fixing fees. The cost of electing delegates and paying their expenses to the annual meeting places an unnecessary tax on the breeders.

Third, The new Association has a Board of six Directors elected by the members, each Director a breeder and dairyman who follows dairying as his major business. The old Association has a Board of sixteen Directors and at the present time one is a dairyman. The other fifteen are made up of Politicians, Dealers and wealthy breeders. Some are not herd owners nor ever were.

Fourth, The registration fee in the new Association is \$1.00 for males and females. The registration fee in the old Association is \$1.00 for females and \$2.00 for males.

Fifth, The transfer fee in the new Association will be 50 cents to members and \$1.00 to non-members. In the old Association it is \$1.50 to members and \$3.00 to non-members.

Fundamental Dairy Research by the Department of Agriculture

TO CARRY out the policy of enlarging the work in fundamental dairy research it was necessary to readjust the activities of the Department of Agriculture by cutting down the force devoted to co-operative work in the States so as to make it possible to undertake new investigations without additional funds. Work on the scientific principles governing the nutrition of dairy cows was considerably enlarged. The new building for research in nutrition was put into use and has greatly facilitated this important study.

On account of the large amount of calcium (or lime) in milk, heavy-milking cows require a great deal of it in their feed. Experiments have been conducted which show that if heavy milkers do not get sufficient calcium in their feed they will take it from the reserve supply in their bones in order to put it into the milk. This drain on the cow's body has a serious effect on her health and ultimately reduces her capacity for milk production and the bringing forth of normal, well-developed offspring. Dairy cows are more liable to suffer from a deficiency of calcium in their rations than from a lack of any other feed constituent so far studied.

It has also been found that calcium taken into the cow's stomach in various kinds of feed is assimilated into body tissue and milk with different degrees of readiness. The assimilation of calcium from such calcium compounds as ground rock phosphate, ground limestone, and bone meal has also been studied a good deal, and it has been found to be much lower than that from either alfalfa or timothy hay.

The quantity of phosphorus contained in the diet has an important effect on calcium assimilation. If a milking cow receives a diet which contains sufficient assimilable calcium, but not enough phosphorus, she will at first take phosphorus from her soft tissues to put into the milk; but the phosphorus which can be spared from the soft tissues is small in amount, and it is soon used up. When this has happened, the cow then begins to take phosphorus from her bones. The chemical composition of the bones is not easily changed; therefore, when phosphorus is taken from them, calcium comes along with it in the proportion of two parts by weight to one of phosphorus. Calcium coming

from the bones in this way, and not used for milk secretion, is lost in the manure. Thus a cow may lose calcium from her body on account of a shortage of phosphorus in her diet.

Cows which receive too little calcium or phosphorus in their rations go down in their milk yield, and finally come to grief in one way or another, just as surely as cows which receive too little general nourishment. The difference is that in the latter case the cow gets thin, and any one can see what is the matter with her as soon as he looks at her; whereas in the former case she may appear to be in very good condition, and the cause of the trouble can be discerned only by rather difficult and expensive investigations.

Farmers and dairy investigators generally recognize the fact that one of the quickest ways of increasing the net income from dairy farms is to have cattle that will produce more milk and butterfat than the average cow does at the present time. The average production of the cows of the United States is much too low. In round numbers it is about 180 pounds of butterfat a year. This can be increased, no doubt, in two ways: (1) By feeding our present cows better; (2) by raising the hereditary level of the producing capacity of our dairy cattle by better breeding. Both of these phases of the problem are being carefully studied by the department.

Breeding experiments are under way involving 1,500 head of dairy cattle in various parts of the United States. The object is to determine the method of breeding that will insure uniformity in the transmission of the capacity for high production of milk and butterfat. The methods of mating that are being compared are line breeding with outbreeding and inbreeding with outbreeding. With these goes the continuous use for generation after generation of sires that have proved their ability to transmit uniformly high-producing capacity to their offspring.

As a result of production studies made with the records of animals in the Advanced Register and Register of Merit, the theory has been advanced that a sire's hereditary make-up for producing capacity is indicated by the production records of a number of his daughters more accurately than a cow's hereditary make-up for producing capacity is indicated by her individual production record; that where all the daughters of a sire are uniformly excellent producers, this may be taken to indicate that such a sire has in his hereditary make-up only those factors that determine high-producing capacity, and therefore he is pure (or homozygous) for the factors controlling high-producing capacity; and finally, that by the use of such sires for generation after generation, dairy cattle might be bred that in the course of five or six generations will have an inheritance that will make it possible for all of them to be high producers, and that will make it impossible for them to transmit to their offspring an inheritance for low-producing capacity.

The difficulty is to find these pure sires. Up to this time we have looked to the Advanced Registry and Register of Merit to prove our sires. The difficulty in the selection of a proved sire through official testing is that the poor daughters of a sire may not be tested, because of the requirements for entry into the Ad-

vanced Registry or Register of Merit, and also for commercial reasons.

In the cow-testing association this difficulty may be largely overcome because it is the practice to test the entire herd, including the good and the poor daughters of a sire. Heretofore, the proving out of the thousands of well-bred sires in use in cow-testing associations in this country has not been emphasized. The department is now taking steps to secure the necessary data to measure accurately the transmitting ability of the sires in use in cow-testing associations.—*Secretary Jardine's Report for 1925.*

Edward A. Powell

EDWARD A. POWELL, of Syracuse, New York, pioneer importer and breeder of Holsteins, died November 19. Mr. Powell had been ill for several months. He would have been 88 years old had he lived until next January 27th.

E. A. Powell was born on a farm near Shadeland, Pennsylvania. In his later years he loved to tell stories of his early struggles and experiences. He came to Syracuse in the late sixties and went into the nursery business with W. Brown Smith, the first treasurer of the Holstein-Friesian Association. He married a daughter of Mr. Smith and became a brother-in-law to Wing R. Smith. With the two Smiths and Anthony Lamb a partnership was formed called Smiths, Powell and Lamb, and this firm was instrumental in bringing many purebred Holsteins from Holland to this country. Among the famous animals owned by this firm was the bull, "Netherland Prince" and the cow "Clothilde," winners of many prizes at shows. These animals with their collateral relatives founded famous families. The Aaggie strain was also developed in this country by this firm.

In later years Mr. Powell was in business for himself on the Lakeside Farm which adjoins the New York State fair grounds. At this fair Powell animals won many prizes.

Mr. Powell was President of the Holstein Breeders' Association of America and after this association was joined with the Dutch-Friesian to form the Holstein-Friesian Association of America he always took a leading part at the annual meetings.

Mr. Powell was very prominent in Syracuse business circles, was at one time president of the Syracuse Chamber of Commerce and was a vice-president and director of the Onondaga County savings bank. Mrs. Lucy Smith Powell survives him as well as one son, E. Alexander Powell, a well-known traveler, magazine writer and newspaper correspondent.

A Friend to the Real Breeders

WITH the passing of Edward A. Powell the Holstein fraternity has lost one of its greatest figures, a man who was instrumental in popularizing the breed in this country and who helped to build the Holstein-Friesian Association of America until it became the largest and best-known breed association in the world; a splendid judge of cattle and human nature, and a business man, farmer and Holstein breeder.

It is no secret that Mr. Powell was not in sympathy with the present management of the Holstein-Friesian Association of America. Back in 1918, Mr. Powell and some of his associates, notably the late W. A. Matteson, successfully checkmated the group of politicians who had been planning for some time to gain control of the association. When the big fight was on at Syracuse, June, 1921, Mr. Powell was ill, otherwise we feel certain that he would have been heard advocating the principles of service and economic management which he believed in. Before that meeting he had an interview with his friend, A. L. Brockway, and authorized the publication of a leaflet from which the following excerpts are taken:

First—"Tell the members of the Holstein-Friesian Association for me that the proposition to place the power to amend the by-laws in the hands of the directors, I consider to be the most vicious attempt on the part of a few men to control the Association that we have ever had to face!"

"In fact, the menace is so great that I hope the membership will RISE UP TO A MAN and insist that all authority in the great membership organization shall be kept exactly where it now is and where it has always been, right in the hands of the members, JUST WHERE IT BELONGS!"

"Why, the possibilities which this authority would give to a Board of Directors, and what it could do to our great reserve fund and income, is well nigh overwhelming."

"Tell them never to let out of their hands the rights that now belong to them, and which have always belonged to them from the very inception of our great organization. Tell them to keep the right of making or amending by-laws, or electing their Secretary and Superintendent of Advanced Registry strictly within their own grasp, in the hands of the membership and to rebuke by defeat, the men responsible for this attempt to take these powers away from the members."

Second—"Tell them that I feel that it is high time to return to former methods of conservative and efficient management, reducing expenditures to within such bounds as will lighten the burden to the individual breeder, without sacrificing results."

Third—"Tell my fellow members that while our Association was young, conservatively managed, everything was done for the benefit of the breeder. The service was good, the fees were as low as possible to do the work and guarantee the accuracy and honesty of the records. In consequence, the charges were moderate, making the burden to the farmer and breeder a light one, and at the same time, building up a surplus for the reserve fund each year as we went along."

"And now in the time of our great prosperity and financial richness, everything seems to be done to heap the burden upon the breeder by increasing the transfer fees to **FOUR TIMES THE FORMER CHARGE**, which is excessive and entirely unnecessary; and by extravagant expenditures in the so-called 'extension department' involving big traveling costs, a large salary to the President and others, expenditures generally which are only adding to the burden of the breeder and not producing any results."

FARM SCALES

This is the age of scales and weighing. The increase in the number, character, and use of scales is a sure index of advancement. This is true of agriculture. The farmer to-day is using scales for a greater variety of purposes and more of them than ever before. Scientists have weighed the earth. Now it appears to be profitable and useful for farmers to weigh about everything that comes out of it.

Many people watch their pocketbooks carefully but lose money through a failure to have scales or safeguard properly those that they have. It is hoped this article will cause farmers and other persons to consider their scales a little more seriously and take better care of them.

The compound lever scale has proved to be a sort of magic mechanism which has transmuted most of the volume measures of the farm into weights. The bushel, peck, etc., formerly units of volume, are now in most cases actually units of weight. This is the result of practical experience of commerce and the requirements of modern times. A bushel of wheat is no longer a certain container or volume filled with grain, but it is 60 pounds of it. In more primitive conditions it is convenient to use volume measures, but they will not meet many modern demands. We change our habits with reluctance and ever treasure old names after the things themselves have vanished. As a result we now possess a long list of weight units which are called bushels; but the exact weights of these bushels depend upon the kind and location of the commodity. It is one thing for wheat, another for shelled corn, another for ear corn, and something else for oats, rye, barley, apples, etc.

In many farm products the standard bushel weights differ in different states. In going across a river which serves as state line to a large city market the standard may increase or decrease. Weighing has come to stay and will increase, but the foregoing makes manifest a confusion that exists in our measures. Simplification will follow in course of time.

Progress in adopting weighing has gone quite far already in some things. In several large city markets to-day, radishes, beets, kale, spinach, onions, and the like are sold by weight.

The weight has also in some cases absorbed another old volume unit. In the dairy industry the best way of determining the yield of an individual dairy cow, and also of the herd, is to weigh the milk and from this deduce the number of gallons, if it is necessary to use gallons as the basis of comparison or for settlement. In the more advanced dairies the pound has come into use altogether for determining the milk yield and for the basis for selling milk to the distributors.

Agricultural investigators are studying a multitude of practical problems and the scale is a powerful tool for attacking most of them. For instance, in studying the habits of bees and the actual net yields of hives under different conditions, one of the most useful devices consists of a specially designed scale on which the continuous weight history of the colony is secured.

An accurate scale is the best fact finder in existence.

One member of the Packers and Stockyards Administration relates that while on the farm he put in a wagon scale that proved to be of very great value. It was then and is still the custom in that section for country buyers to purchase much of the livestock locally at so much a head, after which the animals are shipped to the terminal markets where they are sold by weight. The wagon scales afforded a means for those on the farm to weigh the cattle before the sale, and in this way they were in a position to check the offer made by the buyer on the price per head basis, and they were by their knowledge of the weights and market conditions protected against accepting unreasonably low bids and consequent losses. Other farmers not having this advantage were often the losers as a result of dealing with the experienced buyers.

A scale is a device which should receive respect as a useful and essential implement. It is capable of a variety of uses, and should be kept accurate and otherwise in first-class condition.—*Southwestern Stockman-Farmer.*

"That fellow was an impudent fraud. How did he manage to wheedle money out of you?"

"O John, he told me such a sad, pitiful tale about his poor wife who was a widow with six little orphaned children!"

THE FARMER MUST LOVE HIS LAND

With a love that is tender and keen and kind the farmer must love his land;

He must study its mood for ill or good if its whims he would understand;

He must tramp it in sun and frost and rain, he must ride it from plain to hill,

He must never dismay at its changeful way, but love it and trust it still.

This furrowed line that is soft and fine, and spread like a woman's hair,

Will move to answer his eager word, and burden beneath his care;

But that rugged hill, rough-scarred and still, where hawkweed runs like fire,

Will bear with scorn his scanty corn, and choke it with weed and briar.

Yet each, like a child to be loved no less, must share in his willing toil;

Man has his own—so he must condone the faults of his wayward soil;

For underneath, like a potent breath, the hill holds peace and power,

But only the care that is patient care can come to its rightful dower.

With a love that is watchful and wise and sure the farmer must love his land;

For the gift is good that the Giver of all has laid to his heedful hand;

He must see the beauty of barren hills; he must guard his fields like gold;

And the land will answer him back with love when the tale of his toil is told.

—*Katharine Atherton Grimes, in the Indiana Farmer's Guide.*

A hapless man may yet be hopeful.

DOMESTIC DAIRY MARKETS

Early in November a heavy shipment of New Zealand butter reached San Francisco and it is now reported that several thousand boxes are afloat coming from the Argentine to New York. Considerable of the New Zealand shipment was put in storage pending favorable price developments. No further large imports are expected owing to the firmness of foreign prices plus the domestic tariff.

At the close of October prices were nine cents a pound higher than last year but the difference narrowed during November and was only three cents on November 27th. High prices have continued to stimulate production and market receipts during November will probably be 10 per cent heavier than those of last year.

Current cheese production is apparently no heavier than last year, although for the year it will likely show a slight gain. Condensed milk production in October was almost identical with that of September, with neither month showing any material increase over 1924.

Turning to the other source of available supplies, stocks on hand, we find that on November 1 storage holdings of butter were approximately 30% lighter, American cheese 6% heavier and canned milk about 5% heavier than last year. Unless export conditions change, domestic trade will have to almost entirely absorb storage reserves as well as current production, but there is no feeling prevalent which even suggests that this cannot be done. All dairy products have moved fairly well despite high prices, which factor as much as any other is responsible for dairy markets pretty generally being in what may be termed a satisfactory condition.

THE FOREIGN DAIRY SITUATION

Foreign markets for dairy products are strong enough to keep this country practically free from foreign supplies except cheese of more or less non-competitive varieties. Unfavorable spring weather in Australia and New Zealand has retarded production while delivery has been interfered with until recently by the prolonged strike of British seamen. European production generally has entered its seasonal decline. Despite the new German tariff there has been a strong demand in that country. Weather and pasture conditions in the Argentine dairy section are generally excellent.

German consumption has reached a high level during the past two years. Nearly 20,000,000 pounds was imported into that country during October, the first month in which the new tariff became effective. Denmark and the Netherlands each supplied about a third with the rest largely from Russia and the states on the Baltic. German demand for foreign butter has definitely increased beyond the point regarded as normal

before the war, while reports indicate that production is not far below that of pre-war years.

October imports into the United Kingdom were considerably less than those of a year ago, the proportions being 77% of butter and 87% of cheese. In the corresponding month of last year nearly 10,000,000 pounds of butter were received from Australia and New Zealand against 3,000,000 pounds this year. In Great Britain October prices of dairy products and of dairy cows were somewhat lower than a year ago.

Due principally to the effects of cooler weather upon pasturage, butter production in Denmark showed a decline. Of the total exports 27% went to Germany and 72% to Great Britain. Several thousand pounds went during October to the United States, the first shipment since June.

According to the best authorities little more butter will be forthcoming from Russia this season. The total exports for the season amounted to 48,000,000 pounds of which about five and a half million were sent out of the country during October.

Shipping difficulties resulting from the prolonged strike of British seamen are reported as having been overcome in New Zealand and Australia, the strike practically collapsing. While some produce was shipped the congestion of supplies in New Zealand and Australian ports was becoming very serious. By the first of November shipments were afloat to English markets amounting to nearly 16,000,000 pounds.

The early months of the season have been unfavorable in both dominions. In New Zealand a long wet winter and a rough spring have resulted in cows entering the summer season in poor condition and an actual decrease from last year's dairy production is expected.

FRANCE AND PHOSPHATE

France's interest in Morocco is not confined to fighting tribesmen. In a report Basil Miles, American Commissioner, points out that the greatest economic wealth of Morocco lies in its phosphate beds, covering an area of 750,000 acres, between Casablanca and the Zem River.

"The latest estimate of total deposits here," he says, "is 25,000 million tons. Other enormous beds to the south have also been discovered. The Kourigha beds are being directly exploited by the French Government through its Office National des Phosphates. The area now being developed (since 1921) is said to contain several million tons, and is located 90 miles from the port of Casablanca. In 1921 there were shipped 8,000 tons of these phosphates, in 1922 80,000 tons, in 1923 about 200,000 tons, and in 1924 over 400,000 tons. The total output for 1925 is expected to reach 600,000 tons. This is only a portion of the phosphates produced in French territory. France, with Alsace and her colonies produces some 60 per cent of the total world output, which was 7,000,000 tons last year."

ENGINEERING AND AGRICULTURE

Various addresses interesting to farmers will be given at the Fall Meeting of the North Atlantic Section, American Society of Agricultural Engineers. The meeting will be held at Schenectady, New York in the Hotel Van Curler on December 10, 11 and 12, and this three days' session will be devoted to engineering problems as related to agriculture. The program covers a wide field and the phases of Rural Electrification, the Farm Building Situation and Farm Power Machinery, etc., will be discussed.

The importance of farm agricultural engineering can be seen when we learn that agriculture employs ten million more horse power than all industries in the United States; that agriculture uses about 46 per cent of all the lumber produced in this country as well as 20.6 per cent of all cement produced in the United States. The magnitude of this trade induces engineers to study the present agriculture situation and its future demands.

THE NATIONAL GRANGE AND LEGISLATION

At the 59th annual session of the National Grange which closed at Sacramento, California, November 20th, resolutions were passed demanding an equalization of railroad freight rates and opposing any horizontal increase until such equalization shall be made; favoring consolidation of railroads to eliminate the evils of competition, reduce the overhead cost and remove the necessity for raising carrying rates with representation of public interests on all utilities and control boards; insisting that county agricultural agents extend their activities to include farm marketing as well as production problems; advocating an Agricultural Day in October of each year; and deciding to take the lead in calling, at an early date, a conference of the executive committees of all dues-paying farm organizations in the United States to initiate a nation-wide agricultural program of farm leadership.

The National Grange goes on record as favoring:

A system of taxation based upon ability to pay and upon benefits derived.

A merchandising law to compel truthful branding of foods, foodstuffs, seeds, fertilizers, insecticides, germicides and fabrics.

Repeal of Parcels Post rate increase and return to former schedule.

Early construction of international waterways, such as Mississippi River and St. Lawrence projects.

High tariff on poultry products.

Increase of the nation's forest reserves and vigorous conservation of all natural resources.

Payment of war debts in full.

Early entrance by the United States into the World Court.

Exemption of coöperative associations from income tax provisions.

Continued federal aid in trunk line road-building and assistance to the states in practical road construction.

Conscription of Labor and Capital in time of war.

Leasing of Muscle Shoals on best possible terms to insure early operation.

An occupational tax for aliens and prompt deportation of alien law violators.

Liberal appropriations for eradication of bovine tuberculosis and the European corn borer.

Heavy penalties for all who traffic in narcotics.

Endorsement of the Purnell Bill in Congress and support of the Packers Consent Decree.

Higher duty on clover and alfalfa seeds to reduce importation of poor quality seeds.

THE NATIONAL GRANGE OPPOSES

The Twentieth Amendment concerning Child Labor.

Ship subsidies of every form, name or nature.

Branch banks, except within large cities where public convenience seems to demand branches.

Further expenditure for reclamation and irrigation projects except when demanded by actual production needs.

Creation of a Department of Education at Washington with its head a member of the President's Cabinet.

Any change in alien immigration laws.

Repeal or revision of plant and animal quarantine No. 37.

Continuance of franking privilege in post office department administration.

Any use of milk or milk products in combination with vegetable oils to manufacture imitation butter.

Any modification or weakening of present prohibition laws.

Any form of sales tax.

WELL MANAGED CLUB

The Cherokee Holstein breeders reelected all their officers at their recent meeting at Colby, Wis. E. A. Brehm is president, William Graumann, vice-president, and W. C. Wurthman, secretary-treasurer. The club is in a good financial condition, the auditors' report showing that there was over a hundred dollars in the treasury.

The club will continue to support the Cherokee Holstein Calf Club and a committee for that purpose was elected. A request was made to the railroad company to clean the stock yards at Colby which were said to be in bad condition. It was decided to give one dollar to each junior who exhibited an animal at the fairs next fall and, if financial conditions permit, this amount may be increased. There was also talk of a county show herd. The matter will be brought up at the next county board meeting.

MAPLEWAY HERD

was established 1880 and has been run from a dairy angle for 45 years.

It is ACCREDITED. Animals from here win in the show ring. Our cows make a profit over feed cost, and are just the kind YOU should own.

To secure them write or visit

Miller Brothers

Clark's Summit

Penn'a

Choice
Accredited Cows

Daughter of KING AL-CARTRA RAG APPLE POSCH, three times Grand Champion at the Susquehanna County Fair, bred to a son of WOODMONT ECHO SYLVIA CHAMPION, first prize three-year-old bull at the New York State Fair.

Our cows return a Profit above feed cost, ranging from \$100.00 to \$171.00 in a C. T. A. year.

NOT ABOUT COWS

The Christmas Tree

AS the Christmas season rolls around again, no doubt someone will once more voice the usual protest against the cutting of Christmas trees. And, once more, everybody who wants a tree will go out and get one, either in the market or in the wood lot. In order that we may all enjoy our Christmas trees this year with a clear conscience, let us consider the question carefully. Of course, those who voice this annual protest are moved by the very proper spirit of conservation and wish to save the forests of the country from the axe, overlooking entirely the sentimental side of the matter. They hear of the five million trees that are cut each year to supply the needs of the American children and they vision with horror the enormous waste thereby incurred. Now just what is waste and what is conservation? Waste means needless destruction; loss without equivalent gain. Does this apply to the use of Christmas trees?

True conservation means the wise use of anything at the time most needed. That every precaution should be taken for the prevention of forest fires needs no argument nor defence. But the cutting of trees for the Christmas season by no means comes into the same classification as forest fires. True conservation of the forest permits the proper use of trees when they are needed and at whatever size, not merely leaving them to grow old and die. And surely anything may be said to be properly used when it serves a wise purpose, meets a legitimate need and forms the basis of a profitable business; all of which may be truly said of the use of Christmas trees.

OTHER USE

To what use would many of these trees be put if allowed to grow a few years longer? In all probability the greater part of them would be made into wood pulp and converted into paper. It has been claimed by authorities that it takes the amount of wood pulp that would be furnished by forty acres of woodland to supply the paper for the average Sunday editions of newspapers published in any of the large cities. Even the most inveterate Sunday newspaper reader will admit that it would be worth while for every large city in the United States to forego one or more Sunday editions if thereby the children of the country might be assured of their Christmas Tree. And certainly the hundreds of trashy magazines that now litter up every news stand might better never be printed and the original source of their paper be devoted to making the youngsters happy. For of all the holidays of the year Christmas is conceded as belonging to the children, and, to them, the crowning feature of the season is the Tree in all its glory, trimmed with glittering ornaments, lighted by tiny electric bulbs and loaded with the gifts so long and so eagerly awaited.

Who will dare to say that all this should be foregone that a few Sunday newspapers or confessional magazines should be printed.

GOOD BUSINESS

Aside from sentiment, the use of Christmas Trees is to be defended because the supplying of them has taken its place as a proper seasonal industry, just as much as the raising of turkeys for Thanksgiving. Trees are graded, shipped in carload lots and quoted on market price lists. Many people are now engaged in a gainful occupation in supplying this holiday demand, and a revenue is thus afforded many a farmer from land otherwise unproductive. Also it is often quite necessary for some of these trees to be cut down in order to keep the pasture open for grazing purposes, thus serving a double purpose in the cutting of them.

So well established has such trade become that men are devoting land, otherwise wasted and unproductive to the raising of trees for the Christmas trade. When planted two or three feet apart each way, the trees attain the proper size in six or seven years, usually growing at the rate of about a foot each year. And as soon as one crop is gathered another is planted. In recognition of this industry, this year for the first time a proper tariff has been levied on all trees coming into this country from Canada.

STATISTICS

It has been stated recently by the United States Forest Service that the forests of the country are being cut at the rate of about ten million acres a year, a rate which all will admit is entirely too high. Now, supposing that it takes five million trees a year for the Christmas trade and figuring on trees six by six feet, this would give about twelve hundred trees to the acre and forty-one hundred acres for each year—all of which figures out about one-twentieth of one per cent of the entire cutting. One might be even more generous and allow double the acreage, which would be very, very much more than is actually used and still have only that familiar one tenth of one percent. Does it not seem like "picking" on the youngsters to make so much ado about the trees that mean so much to them, yet form so small a percentage of what is used?

OTHER REASONS

Now, if all this cutting were final and meant the entire and continued clearing of the land, it would be a very bad thing from many standpoints. But natural regeneration restocks much of the land from which the trees have been taken, and if anyone doubts this he has only to visit a wood lot which has been left to itself for a few years and note the way in which the young timber is growing up. Many small trees grow in the woods so deeply shrouded that they can never reach maturity and it is for the better growth of the larger trees that these smaller ones should be removed.

A LAST USE

When Christmas is over the usefulness of the Tree need not be ended for it may be taken outdoors and fastened to the ground and be an ornament to the lawn all winter. The best place to put it is where it may be seen from a much used window, then a piece of suet should be tied to the branches and all winter long one may watch the fun the birds will have with their unexpected treat.

When all these things are considered surely this year we can enjoy our Christmas trees without any twinges of conscience.

"A Barbecue Picnic"

USUALLY by the time August and September have put in their appearance all the ideas for socials and parties have become exhausted.

One unusual way to entertain formally during late summer or early fall is to give a barbecue, either as a private party, or as a community affair for financial returns.

In the west and southwest such a manner of entertainment would not be unusual, for barbecued meats can be readily obtained, and are always in evidence at the "Rodeos," fairs and picnics. Motorists who contemplate a picnic party usually order plenty of barbecued meat at the various stands devoted to that purpose.

From fifteen to thirty guests might be accommodated on a lawn for a party. If a community affair was planned, it would be best to hold it in a pasture or meadow.

When the barbecue is planned the first preparation is to dig a trench. A good size for a pit for the lawn party would be two feet deep, two and one-half feet wide, and four and one-half feet long, the more guests the longer the trench should be. If the best results are to be obtained the bottom and sides should be lined with brick, but this can be omitted. The ends are left open so coals may be dug out with a furnace poker if the meat is cooking too rapidly. Stones could be used in place of the brick. Flat stones are arranged over the top, and extend over the sides a few inches, on these rests the broiler.

For the broiler nothing is better than metal lath cut the length and width of the pit. A wood fire is necessary. This is built early enough in the afternoon so it will die down to bright coals before time to commence cooking the meat. It is best to allow about one and one-half hours for this. By starting the cooking at six p. m., plenty of time is provided for eating, one hour being allowed for cooking the meat.

Everyone who has eaten barbecued meat is surprised at its rich flavor, and the secret of that taste is the hot sauce with which the meat is basted constantly. The following is a famous western sauce recipe:

2 lb. butter	1 teaspoon red pepper
2½ qt. water	2 tablespoons Worcestershire
1 cup vinegar	Sauce
1½ tablespoons dry mustard	2 tablespoons Tabasco Sauce
	3 tablespoons black pepper
¼ cupful sugar	4 tablespoons paprika
3 tablespoons salt	1 onion chopped fine
3 tablespoons chili powder	1 clove garlic

Mix dry ingredients first. Then add butter, cream and all liquids. Mix thoroughly, and boil slowly thirty minutes. This sauce can be prepared in the morning and is enough to baste about thirty pounds of beef or pork.

Beef is the favorite meat to barbecue, thick steaks of beef or pork chops are delicious, mutton or chickens can be barbecued, also thick slices of ham. However beef is cheapest, the least work, and very good.

When the fire has died down to bright coals the meat is dipped in the sauce, first being cut in convenient sized pieces to serve nicely. Then it is placed on the broiler and the fun begins.

A crew of workers called "swabbers" and "turners" can take charge. Each "swabber" should be armed with a long stick on the end of which is tied a roll of clean cloth. This "mopstick" is dipped into the sauce (which should stand by conveniently in a large kettle) and is then rubbed on the meat constantly during cooking. Much of the success lies in the basting. The "turners" have long sticks on the ends of which are tied kitchen forks, they should turn the meat constantly so it will broil evenly.

When the meat is cooked tender it should be served at once. A table on the lawn or wherever the event takes place holds dishes and silver, other food may consist of potato salad, sliced tomatoes, cottage cheese, rolls or bread and butter, hot coffee and doughnuts. The coffee can be made over the trench and corn on the cob roasted at another end from the meat.

This all may sound like lots of work but in reality very little work beforehand is required for the frolic. The trench can be made in a short time. If it is to be a community social, several can put together and make the sauce, others furnish meat and so on. The menu can all be furnished from farmer's homes, which lessens expense if the social is to be held for financial returns.

The barbecue offers opportunity for picturesque costumes, and could take the form of a masquerade near Hallowe'en, the men coming attired as cowboys, ranch hands, Indians and Mexicans and the ladies may wear any outfit suggestive of western attire of days gone by, for the western woman of to-day does not dress any different than her eastern sister, except in the thrilling (?) western movie plays. Games can be played, an old fashioned square dance being appropriate. When all other forms of social diversions have failed try a "Barbecue" for the fun that everyone will derive from it will be worth the extra work.

When putting away summer clothes don't trust your memory to recall several months from now what is in these boxes. How much easier it is to label the box when you are putting a dress away than it is to open box after box in search of it next summer! Boxes containing a number of small articles may have the pieces listed on the outside.

More has been asked of Dame Nature in the craze for extremely high records than she can give without suffering, and, in revenge, she is kicking the foundation (stamina) from under the stock forced for production.

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

EASTERN BRADFORD QUALITY SALE

An average of \$133.33 was obtained for the 48 animals sold in the Eastern Bradford County Quality Sale held November 14th at Merryall Farm, Wyalusing, Penna. The top price, \$325, was obtained for Lucy Jucunda, a seven-year-old cow just fresh, sired by Albina Butter Boy Fayne. Wynola Pietje Wandermeere, a large handsome daughter of Sir Pontiac Wandermeere, brought \$260; two other cows each brought \$220, Cornucopia Albina Belle and De Jeanne Daylight. The animals were from accredited herds and were sold subject to a sixty day retest guarantee. The sale committee were E. P. Kennedy and A. L. Burlington while the animals came from the herds of these two gentlemen, and from the herds owned by L. L. Allis and P. V. Fisher of Rummerfield, J. H. Howard of Wyalusing, J. D. Kerrick of Towanda and D. H. Lewis of New Albany, Penna.

SALE OF YOUNG STOCK

Bad roads and unpleasant weather reduced the attendance at the Arthur O'Neill sale held at Ravenna, Nebraska, November sixth. There was only one mature cow in the offering and she brought \$205 being purchased by Fred Rasmussen of Hazard. O. F. Fenner of Anselmo bought four heifers which cost \$580.50 while C. E. Millidge of Holyoke, Colorado, obtained five for \$566.50. M. Whittaker of Poole bought a four year old heifer for \$175.

KANSAS DEMAND FOR MILKERS

Snowball Skylark De Kol, purchased by Delaney and Jarvis of Winfield, Kansas brought \$185, the top price realized at the Tom Weddle dispersion sale held at Valley Center, Kansas, November sixth. Her heifer calf a few weeks old brought \$75. Lady Snowball Korndyke brought \$175 and was purchased by Dan Clausen of Sedgwick county. Cows in milk sold readily but heifers went at lower prices. There was a good crowd and a number of them came from distant points.

PRICES AT THE STUBBE SALE

Henry Stubbe's Holstein sale, held November 11th at Central City, Nebraska, resulted in averages of \$175 on females and \$115 on bulls. In all sixty head were sold. The top price on a female was \$207.50 and on a bull, \$200. Bidding was brisk and there was a good attendance.

Many of the animals went to farms in the vicinity of Central City.

For several years Mr. Stubbe was superintendent for Dr. B. B. Davis of Omaha and had under his care one of the best herds in the southwest.

OUR ACCREDITED DAIRY

Study the Size and Type of these cows, note the producing capacity they show, then remember that they are bred to

TRAVERSE ECHO SYLVIA KING

whose dam produced 33.27 lb. butter, 736.4 lb. milk in 7 days and has two daughters each over 32 lb.

We have the kind YOU want and they're accredited, too.

W. B. KENNEDY & SON,
BRADFORD COUNTY, WYALUSING, PA.

THE J. D. BACON SALE

J. D. Bacon sponsored a Holstein sale November 6th on the fair grounds at Grand Forks, North Dakota. There were about forty grade Holstein cows and they ranged in price from \$70 to \$130. Thirteen purebred Holstein bulls were offered and the prices ranged from \$55 to \$155 for a yearling.

VIRGINIA BREEDERS' SALE

Bidders from four states attended the Virginia Holstein Breeders' Sale held November 4th and 5th at Orange, Virginia. There were 62 females and one bull offered. He was consigned by Sam Sullivan of Brady, Virginia, and was struck off for \$135 to A. C. Wambesie of Orange. The females of all ages averaged around \$198.

RECENT WISCONSIN SALES

The top price for a purebred at the Rusk County Holstein Breeders' Sale held at Ladysmith, November tenth was \$225, obtained for a cow consigned by Charles Oldeen and Son of Cumberland and was purchased by Volk Brothers of Flambeau. The top price for grade was \$127.50. Frank Jerkich of Sheldon paid \$175 for a cow consigned by J. A. Schmidt. John M. Hoagland of Catawba purchased eleven grade cows and a purebred bull while John Bordner of Walworth took six purebred and grade cows and a young bull.

The Clover Valley Dairy Herd consisting of 58 purebred Holsteins owned by Dan Kolosso of Manawa brought \$5,480 when sold at public auction November tenth. Also the average price was \$94.56, this represents a number of young animals. The top price was \$275, one cow was sold at private sale for \$200 which was the price obtained for Sir Bess Daisy purchased at private sale by M. L. Gorman and Pat Malloy.

In 1913 Mr. Kolosso started to build a purebred herd with four head of cattle and by painstaking care he built up a high class bunch.

Fifty registered Holstein dairy cattle were sold at Darlington, Wisconsin, October 21st consigned by members of the LaFayette County Holstein Breeders' Association. The total realized was \$4,722 or an average of \$94.44. Many of the animals were young.

W. J. Martin, secretary of the association, sold nineteen animals for \$1,845. W. C. O'Donnell sold eighteen calves for \$1,094.

The top price of the sale was \$200 which Andrews Brothers of Argyle obtained for a son of Ormsby Sensation 15th. E. Moyer secured this young bull which was born March 5, 1925. Another young bull from the same bunch brought \$170.

STOCK STAYS AROUND HOME

The sale of C. Majerus & Sons held at Falls City, Nebraska, November 9th attracted lots of attention. Although the cattle were not in sale condition the prices realized are said to be very satisfactory. Walter M. Lee of Clarinda, Iowa, paid the top price, \$190, for a cow. A large percentage of the offerings remained in Richardson County.

DEMAND FOR DAIRY STOCK

The herd of W. S. Goodland consisting of 21 head of purebred Holsteins was sold at public auction at Racine, Wisconsin, early in November. This herd had made a splendid showing in cow testing association work and the result was that the dairymen of Racine county kept them in the home territory. The average selling price of the milking herd was \$163. Uneeda Korndyke Joan topped the sale, a representative of the Racine County Agricultural school bidding \$235 for her.

Alex Sands and J. C. Ellis of Thompsonville obtained some of the best cows and Henry Kuiper purchased the yearling herdsire.

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

Cow Testing Association Reports

MARYLAND TESTING

Registered Holstein herds, owned respectively by Dr. R. L. Forrest and Charles Wertheimer, lead the Maryland testing association for the month of October. The Forrest or Java Farm herd of 12 cows averages 37.3 lb. fat with 1,086 lb. milk and the Wertheimer herd of 19 purebreds averages 37 lb. fat, 1,002 lb. milk, one heading the Anne Arundel and the other the Frederick County C. T. A.

A Java farm cow leads the state with 83.3 lb. fat, 1,987 lb. milk to her credit. A grade Holstein owned by J. Ryan of Howard County is second with 75.9 lb. fat from 1,996.4 lb. milk while in third place stands a purebred Holstein of the Mountain View Herd with 73.3 lb. fat, she heading the Upper Montgomery County C. T. A.

Wertheimer cows stand second, third and fourth in the Frederick Association, first place being taken by a purebred Holstein owned by Clyde W. Smith and credited with 2,033 lb. milk, 65 lb. fat. One Wertheimer cow made 62.2 lb. fat, another 60.2 lb. and the other 58.7 lb. It is interesting to note that the seven highest cows as well as the one in tenth place in the Frederick Association are purebred Holsteins, while the ten highest producers in the Upper Montgomery association are all black and white, four of them being purebreds and the other six grades.

IN THE OHIO VALLEY

According to The Intelligence of Wheeling, West Va., the five biggest producers in the Ohio Valley C. T. A. for the month of October were registered Holsteins. W. G. McClain of Bellaire,

Ohio owned the leader with 64.7 lb. fat, 1,649 lb. milk and the cows in fourth and fifth places with 54.3 lb. fat and 49.2 lb. fat. The animals standing second and third were owned by Carroll and Ebbert and were credited with 60 lb. fat from 1,764 lb. milk and 59.1 lb. fat from 1,643 lb. milk. Nineteen cows in this association produced 40 lb. of fat or more during the month reports the tester C. H. Zents.

HONORS EASY

Phillip O'Connell of McGregor, Mich., had the high herd for October in the Sanilac County C. T. A. as his fifteen registered and grade Holsteins averaged 1,015 lb. milk, 31.07 lb. fat. The grade and registered herd of Robert Nichol was third with an average of 944 lb. milk, 29.71 lb. fat and a member of this herd was high producer with 63.2 lb. fat in only 23 days.

ON TWICE A DAY MILKING

With the month of October the Mason City, Iowa, Cow Testing Association has completed six months of testing. A purebred Holstein owned by Keeler & Faktor has averaged 65 lb. daily during this period on twice a day milking. She has produced 11,941 lb. milk and 319.9 lb. fat and made a net profit over feed costs of \$121.40.

PENNSYLVANIA C. T. A. WORK

By the production of 2,700 lb. milk and 83.7 lb. fat a registered Holstein cow owned by L. A. Zimmerman of Leighton topped the list of the 10,788 cows tested in Pennsylvania C. T. A. work during October. Registered Holsteins were also

second and third for milk, one owned by A. B. Craig of Sewickley being credited with 2,437 lb. and one by Harrington & Co. with 2,272 lb. For fat production a registered Ayrshire was second with 78.7 lb. but she was closely followed by another registered Holstein owned by Jesse Kurtz of Carlisle with 77.2 lb.

In the 33 associations reporting there are 789 cows that produced more than 40 lb. fat, 204 cows more than 50 lb. with 475 cows credited with producing more than 1,200 lb. milk.

HOLSTEIN MONEYMAKERS

Nine registered Holsteins owned by Lloyd Brown of Toledo, Ohio, are proving themselves moneymakers. He has owned them only nine months and their average milk production has been 14,579 lb., while they have averaged 434.5 lb. butterfat. One cow he purchased December 5, 1924, has paid for herself, all the feed she consumed and made a profit of \$68.00, while another cow purchased March 10, has made a profit of \$97.80.

IN THE ALLEGAN ASSOCIATIONS

A purebred Holstein owned by M. E. Parmelee of Hilliards, Michigan, headed the East Allegan C. T. A. by producing 67.4 lb. fat, 1,686 lb. milk as a three-year-old. A two-year-old member of the herd was credited with 57.3 lb. fat, 1,367 lb. milk. Parmelee Holsteins were first and second in the three-year-old class and took the first three places in the two-year-old division.

In the North Allegan Association a purebred owned by George Newell of Dorr, Mich., headed the list with a production of 59.1 lb. fat, 1,906 lb. milk; second was a purebred Holstein owned by

Clarence Bisbee that produced 57.7 lb. fat, 1,804 lb. milk. In the three-year-old division a purebred owned by D. G. Thaler produced 55.5 lb. fat, 1,415 lb. milk in 25 days.

WISCONSIN C. T. A. WORK

F. N. Phillips of Wyocena, Wisconsin, had the high herd in the Poynette-Columbia County C. T. A. for October, his purebred Holsteins averaging 41.7 lb. butterfat. The grade Holstein herd of John McFarlan was second with 36.5 lb. fat and a member of this herd produced 72.3 lb. fat. A purebred Holstein at the Columbia County Asylum Farm was second with 71 lb. fat to her credit.

Lady Jewel Johanna 4th owned by E. J. Makovsky produced 54.5 lb. butterfat in the Caledonia-Mount Pleasant association. Of the 449 cows tested 39 produced over 40 lb. butterfat and three herds averaged over 30 lb.

Nine registered Holsteins owned by L. Pamperin was high herd in the Allenton-Kohlsville association by averaging 1,085 lb. milk, 37.64 lb. fat. A senior two-year-old owned by Fred Pamperin produced over 60 lb. fat during the month, while a heifer owned by Charles Roecker again produced over 40 lb. fat, her tenth successive time in her first lactation period.

The three highest producers in the Dane C. T. A. for October were registered Holsteins. Andrew Mell had the leader "Pauline" with 1,401 lb. milk, 54.7 lb. fat credited to her; "Johanna" owned by Leonard Ginde was second with 1,364 lb. milk, 53.2 lb. fat, while "Marlow" owned by John Mell was third with 1,428 lb. milk, 51.4 lb. fat. John Mell's herd of eleven cows averaged 931 lb. milk, 33.1 lb. fat.

"Snowball" a purebred Holstein owned by Frank E. Neff of Muscoda headed the Muscoda-Homer C. T. A. for October by producing 52.9 lb. fat. The ten leading cows were all black and white although only two of them were registered.

YOUNG AND GOOD

"Bess," a four-year-old Holstein owned by M. C. Hampton, of Calien, Michigan, took first honors in the South Berrien County Cow Testing Association for October by producing 65.08 lb. fat and over a ton of milk. The Hampton herd averaged 1,148.5 lb. milk and 38.07 lb. fat.

The purebred Holstein herd owned by Mrs. Edith Franz of Niles, consisting of 12 head was second with an average of 1,026.1 lb. milk and 36.05 lb. fat. A member of this herd was third with a product of 57.07.

BEST PRODUCING HERD

L. F. Rayton's herd of purebred Holsteins led the Lewis County (Washington) Cow Testing Association for October by an average of 1,073 lb. milk and 38.1 lb. butterfat. A grade Holstein four-year-old owned by the Washington State Training School was the highest producer, 1,922 lb. milk and 76.9 lb. fat.

During the month 573 cows were tested and the average production was 755 lb. milk and 30.9 lb. fat, an increase of 74 lb. milk and three lb. fat over the previous month.

IN VERMONT TOO

A purebred Holstein owned by Fred B. Howe of Burlington, Vermont, producing 57.7 lb. fat and 1,861 lb. milk during October in the Chittenden County Cow Testing Association. Another purebred at the Mary Fletcher Hospital Farm was a close second with 55.7 lb. fat and 1,687 lb. milk. Another Howe milker was third with 52.1 lb.

Seven members of the Howe herd exceeded 40 lb. fat. There were 629 cows tested in the 26 herds during the month and their average production was 19.8 lb. fat.

If you like the HOLSTEIN BREEDER AND DAIRYMAN—say it with subscriptions.

AN IOWA PET

"Pet" a purebred Holstein owned by Wylam & Son of Plainfield, Iowa, produced 17,357 lb. milk, 598 lb. butterfat in the Bremer County C. T. A. No. 3, which finished its first year November 1. Pet is only a three-year-old. The Wylam herd consisting of sixteen cows averaged 11,700 lb. milk, 386 lb. fat, and every animal made over 300 lb. fat during the year. A grade Holstein herd owned by Simon Thompson averaged 10,400 lb. milk and 362 lb. fat.

WORLD'S RECORD

Nellie Segis Hengerveld Sharon, born March 1, 1917, has produced 86,000 lb. milk up to July 31, of this year and is expected to reach 100,000 lb. milk by the time she is seven-years-old. She is said to hold a world's record, because she had nine calves before she was six-years-old.

Nellie is a member of the herd of Rosharon Farms owned by Geo. O. Stringer of Sharon Springs, New York. Her production is said to have been reached without special feeding, having received the same care as other members of the herd.

HOLSTEINS LEAD IDAHO

Aloys Schuler of New Plymouth, Idaho, had seven purebred Holsteins in cow testing association work last year and they averaged 14,162 lb. milk, 520.7 lb. butterfat. This is the highest yield reported in the entire state of Idaho for the year from July 1, 1924 to June 30, 1925. The average production of all cows in the United States completing a year record in a testing association during that period was 7,294 lb. milk, 299.5 lb. fat.

The Los Angeles County Cow Testing Association entered the current year on September 1 with a total of over 6,000 cows signed up.

She is bred to KING PIETJE AAGGIE PONTIAC whose four direct descendant dams average 611.3 lb. milk, 30.62 lb. butter in 7 days official work.

Others with her type and individuality in this herd which is under State and Federal Supervision.

You will want our cattle if you see them.

ROBERT I. SPRINGER,
R. D. 1 Factoryville, Pa.
Susquehanna Co.

A SATISFACTORY BUSINESS

Arthur Dreyer of Whittimore, Iowa, has been breeding Holsteins for about fourteen years. During this time he has sold 33 purebred bulls and 24 females, all of which were born on the farm and in addition has sold 13 cows which he originally bought as calves. He has at the present time 40 head. Besides these 110 head, he has sold several for beef.

The twenty-four females, many of them quite young, averaged \$126.45. Thirteen mature cows sold at an average price of \$214.61. The thirty-three bulls averaged \$98.18.

The present herdsire, King Chloe Pietertje Hengerveld, is owned jointly by Mr. Dreyer and C. F. C. Laage. He is three and one-half years old and his five nearest dams have records averaging over 1,000 lb. butter in a year. His dam as a two-year-old made 15,592 lb. milk, 604.68 lb. butterfat in a 305-day test. King traces four times to the noted herdsire, Sir Pietertje Ormsby Mercedes.

The Dreyer herd exhibited at the Kosuth County Fair this year won many prizes. A son of the herdsire was junior champion male and a daughter was junior champion female. In addition, the twelve head shown won five third prizes, five second prizes and seven first premiums.

AN ACCREDITED IOWA HERD

The purebred Holstein dairy owned by A. J. Loveland of Janesville, Iowa, is on the accredited list. There are between 35 and 40 animals in the herd of which 20 are in milk. The product is marketed through the Cedar Falls Empire Dairy.

A milking machine is used with good results. The barn which is large and modern was erected two years ago. A small field of alfalfa sown three years ago has given good results and it is planned to put in a larger acreage. Nearly all the buildings have been erected since Mr. and Mrs. Loveland took possession of the property twelve years ago. Mrs. Loveland is a believer in Rhode Island Red fowls and has a large flock which under her care prove very profitable.

SUNNY KNOLLS FARM

Half a mile from Lawersville, New York, is Sunny Knolls Farm owned by Floyd M. Holmes. This farm or farms, for there are really three of them, contain 400 acres and maintain a dairy of 70 purebred Holsteins.

From Sunny Knolls Farm around 400,000 lb. milk is marketed yearly at the Grade A plant of the Dairyman's League at Cobleskill.

Sixteen years ago Mr. Holmes purchased the home farm of 240 acres. The house was erected in 1865 and is an attractive farm home. Although Mr. Holmes raises purebred Percheron horses he is a believer in modern machinery and besides two tractors uses a milking machine in the barn.

HERE AND THERE

Many of our readers have seen the motion picture "The Ten Commandments" but how many of them noticed that the herds the children of Israel drove before them out of Egypt were composed of Herefords and Durham cattle with a few Holsteins, breeds that were unknown until several thousand years after the exodus.

Nellie, a registered Holstein owned by the State School for the Deaf and Blind at Colorado Springs produced 87 lb. butterfat, 2,830 lb. milk during October while enrolled in the Pueblo Cow Testing association.

Diamond, a grade Holstein the property of the Fresno Farms company of Kernman, California, produced 15,023 lb. milk, 603.5 lb. butterfat during the year from July 1, 1924 to June 30, 1925 while enrolled in the local cow testing association.

A. G. Melang of Settlin, Wisconsin, recently bought from A. J. Lashbrook of Northfield, Minnesota, a fine young bull to replace his former herdsire, Sir Walker Snowdrop Ormsby. The young bull is a descendant of Sir Pietertje Ormsby Mercedes and Piebe Laura Ollie Homestead King.

George Van Wagoner of Linden, Michigan, recently sold a fine cow to Calcite Brothers of Rogers City. In 155 days she made a record of 9,827 lb. milk, 312 lb. butterfat.

Mr. Van Wagoner is an enthusiastic advocate of registered cattle. "It doesn't cost any more to keep a good one than a poor one," he says, "and a good one is many times as profitable."

A four-year-old owned by H. N. Herrick of Fredericksburg, Iowa, produced 1,290 lb. milk, 59.3 lb. butterfat during October in the Chickasaw County Cow Test Association.

F. W. Kuhlman of Richland, Minnesota, has sixteen purebred Holstein cows that averaged 10,439.7 lb. milk and 345.2 lb. butterfat in a year while enrolled in the Rice County Cow Test Association. One cow produced 431.6 lb. butterfat and six averaged over one pound butterfat a day for the entire year.

BULL WANTED, preferably 15 to 18 months old, must be from an Accredited herd and an extra good individual. His dam must show for herself that she is a real producer. If you have the goods, write Holstein, c/o Box 110, Harrisburg, Pa.

Nurse—Yes, Johnny, the doctor brought twins.

Johnny—Gee, that's what we get for having a specialist.

While you were reading this, Henry Ford made ten dollars.

JOHN L. FISHER

John L. Fisher, one of the leading Holstein breeders of Rock County, Wisconsin died at his home at Janesville, November 9th after an illness of several months.

Mr. Fisher was born in March 1874. He spent his boyhood on the farm and was educated in the public schools, Beloit College and the University of Wisconsin, graduating from the latter law school in 1899 and then engaging in the practice of law in Janesville.

In his younger days Mr. Fisher was quite an athlete and was manager of the first Wisconsin team to play in the East. As a farmer he specialized in Holstein cattle and Duroc-Jersey swine and met with a considerable degree of success with both breeds.

PALMERDELL

"Palmerdell" is the name of a Holstein breeding establishment near Richmondville, New York, owned by John E. Palmer. Mr. Palmer began farming here seventeen years ago. At that time he owned one hundred acres and the dairy consisted of nine cows. Today there are 220 acres in the farm and last winter the herd consisted of 60 purebred Holsteins.

The outstanding sires of the herd have been a grandson of Pontiac Korndyke and a grandson of King Segis. The herd is accredited and three years ago a member of the herd won the grand championship at the Cobleskill Fair.

WHAT'S IN A NAME?

Although possessing the name of Grover C. Guernsey, the owner of Highland Grove Farm, East Cobleskill, New York, is a Holstein breeder; having a herd of thirty purebreds. During 1924 this dairy averaged around 10,500 lb. of milk per cow.

Corn and alfalfa are the major fodder crops at Highland Grove. Mr. Guernsey was a former school teacher and bank employee but prefers farming and has made a success at it. He has been president and also treasurer of the Schoharie Farm Bureau and at present is president of the County Dairymen's League.

A MISSOURI TRANSACTION

G. W. Rogers of Carrollton, Missouri, recently purchased a young bull, Duke Homestead Pride, from the Whitacre Farms at Walnut Grove, Missouri.

Duke Homestead Pride is twelve months old; his dam has produced over 700 lb. butter in a year on twice a day milking. One of her daughters won the cow race at the Missouri State Fair. The sire of "Duke" is a son of Funderne Pride Johanna Korndyke.

Mr. Rogers has only been breeding purebreds a little over two years. This is his second herdsire, he recently selling the first one to Dr. H. B. Scovern.

A divorcee has been granted a woman whose husband knew but three stories and kept telling them. He should have gone up for life.

NORTHFIELD HOLSTEINS IN DEMAND

W. F. Schilling of Northfield, Minn., furnished nine grade Holstein and seven purebred females as well as two purebred bulls for a carload of stock which left Northfield the first week in November, consigned to Held and Winter of Hinton, Iowa. Three purebreds went from the Carleton college herd.

Chas. Tower, a former Congregational minister, who is now managing the C. P. Davis farm near Sioux City, Iowa, bought 22 head from breeders of the Northfield community. There were several purebreds in the car and a young bull from Hunter Brother's herd.

PARTNERSHIP BULL

Glenward Hafele, Tobinsport; Jake Metz, Tell City; Fred Lehman, Cannelton and Gnau Bros., Tell City, Indiana, have purchased a Holstein bull, King Piebe 34th, of Hargrave and Arnold, Norwalk, Iowa.

The dam of this bull as a three-year-old produced 905 lb. butterfat in 305 days. Each of the purchasers have good herds of Holsteins and believe that the quality of their herdsire will be reflected in his offspring.

CITY FLATS FOR COWS

Believe it or not, the following story comes by way of England, being published in the *London Live Stock Journal*:

"In New York Messrs. Bordens, who are the biggest milk suppliers in the states, have plans drawn up for the construction of a four-story building in that city capable of housing 10,000 cows, 2,500 on each flat, and although the building only exists yet on paper, the foundations for this 'cow sky-scraper' are being put down, and in a very short time an experimental herd of 1,000 cows will be milked without even seeing a green field at any hour of day or night."

BULL FOR SALE.—A son of **SUELLA OF GRAYFIELDS**, the cow that made 86.2 lb. butterfat in August, milking twice a day; and has a seven-day record, made as a three-year-old, of 25.67 lb. butter. His sire is the World's Record Bull, **ROLO PONTIAC FAYNE 385047**. He was born July 25, 1925; is a good, straight, toppy fellow. His two nearest dams average over 38 lb. butter in seven-day test. First check of \$150. **CHAS. WERTHEIMER**, Frederick, Md.

Notice in Kansas paper: "Positively no more baptizing on my pasture. Twice in the last two months my gate has been left open by Christian people, and I can't afford to chase cattle all over the country just to save a few sinners."—*Boston Transcript*.

"What could be more sad," said the school teacher, "than a man without a country?"

"A country without a man," answered the pretty girl.

SUSQUEHANNA JUDGE SEGIS LEORALINE

stands at the head of Sunny Lawn Herd.

A bull of superb individuality, he is a grandson of **DUTCHLAND COLANTHA SIR INKA**, and his eight nearest tested dams average 29.51 lb. butter in a week. His dam was a splendid show cow and his daughters in this **ACCREDITED HERD** are exceptionally promising.

We also have a few good bulls by him.

MURRAY A. MILLER
Milton, Penna., R. D. 3

YEAR AFTER YEAR

Our herd of nearly 100 purebred Holsteins passed a Clean T. B. Test.

Our cows are of superior Type and Dairy Quality and Profit Makers.

Our herdsire **Ormsby Korndyke Hockster Lad** is by **Ormsby Korndyke Lad** from a cow that produced 35.14 lb. butter, 636.3 lb. milk in seven day official test.

It will pay You to buy your Accredited Holsteins here.

Cheney Brothers & Jones

Randolph, Virginia

SENSATION CLOTHILDE TEHEE

is not only a splendid individual but is siring handsome calves. His dam produced 21,968 lb. milk, 945 lb. butter in a year as a three-year-old; his sire's dam 30,024 lb. milk, 1,250 lb. butter in a year. He is a Dairy Bull and heads a big producing Dairy.

This herd is **ACCREDITED** and Crawford County is now a Modified Accredited Area.

L. S. BROWN,
R. D. No. 1, Saegertown, Pa.

FARM BUTCHERING

Farmers in Pennsylvania who have slaughtered animals and attempted to sell them to meat dealers in town have been told that under the provisions of the existing law dealers were not allowed to purchase farm slaughtered animals that had not been inspected by employees of the State Department of Agriculture before their slaughter.

Dr. T. E. Munce, State Veterinarian, says that this report is erroneous. The law requires that farm slaughtered animals be in a healthy condition and then be dressed and handled under clean and sanitary conditions. Otherwise the meat may be condemned as contaminated and the farmers subject to prosecution.

The principle which the State seeks to enforce at all times is that the occasional farm butcher, as other butchers, shall dress the animals in a clean place and protect the dressed meat from contamination until delivered to the retailer or consumer.

WHAT TO LEARN

There are five things in life which we ought to learn. Here they are:

1. Learn to laugh. A good laugh is better than medicine.
2. Learn how to tell a helpful story. A well-told story is as welcome as a sunbeam in a sick room.
3. Learn to keep your troubles to yourself. The world is too busy to linger over your ills and sorrows.
4. Learn to stop croaking. If you cannot see any good in this world, keep the bad to yourself.
5. Learn to greet your friends with a smile. They carry too many frowns in their own hearts to be bothered with any of yours.—*Brooklyn Eagle*.

"Should a man tell his wife everything?" asked the prospective groom. "Not unless he is fond of trouble. He escapes more trouble by giving her everything," replied the old married man.

SUDAN GRASS

Last year at the Hays experiment station in western Kansas 7.4 acres of Sudan grass pastured seven milking cows all summer, in addition 2.3 tons of hay was cut to the acre. The grass was seeded on creek bottom land May 12 at the rate of 40 pounds of seed to the acre. Seven mature Holstein cows were turned on half of the field June 17 and then were later turned on the other half. They were on this pasture until September 19, a three months period. In addition to the pasture each cow received a pound of grain for each five pounds of milk she produced. This mixture was made up of 400 lb. of ground kafir, 200 lb. bran and 100 lb. cottonseed meal. During the summer the cows averaged 25 lb. of milk each day and five of them were heavier at the end of the pasture season than they were at the beginning.

FARM ELECTRICITY

"How Farmers Can Secure Electric Service by Coöperative Effort" is the theme of Bulletin 412 just published by the Pennsylvania Department of Agriculture. The bulletin follows an investigation of the laws of the Commonwealth which shows the methods of procedure open to farm communities desiring electrical service. One section of the bulletin tells of communities in Pennsylvania where farmers have secured electric energy through coöperation. It can be obtained free from the State Department of Agriculture at Harrisburg, Pa.

HOLSTEINS FOR SPAIN

The Clark Company of West Salem, Wisconsin, on November 16 shipped two dozen head of purebred Holsteins from La Crosse to a buyer in old Spain. A resident of St. Louis is reported to have been the agent for the Spanish buyer. As far as we know, this is the first big shipment of Holsteins from an American point to that distant country.

POLLED CATTLE IN ANCIENT SCOTLAND

During the exploration of the ruins of a fort built by the Romans at Newstead near Melrose, Scotland, skulls found show that polled cattle were fairly common in the south of Scotland during the first century of the Christian era.

Since reading the editor has been wondering whether this fact explains the liking of the veteran Pennsylvania Holstein breeder, George E. Stevenson, for Polled Holsteins. The name of "Stevenson" is quite common in Scotland; for instance, Robert Stevenson, one of the most famous lighthouse builders of earlier days was born near Glasgow and the British thought so much of his work as a lighthouse builder and bridge designer that he is buried in Westminster Abbey, the British Hall of Fame. Perhaps "Hornless George" is distantly related to this civil engineer.

THE POSTAGE STAMP

I am LICKED before I start out, yet I always deliver the goods.
I am STAMPED on at the beginning, but never at the finish.
I always get in a CORNER and I start in by getting in a BOX, but I find my way out.
I sometimes look like TWO CENTS, but that doesn't lessen my importance.
I always have a HEAD on me, but I keep it to myself.
I've got to be STUCK on something before I can do any work.
I'm just a little piece of paper with the seal of UNCLE SAM.
But the business world without me isn't worth a tinker's dam.
—H. G. Noland.

FOR SALE.—King Winnie Segis Fayne, 23 months old, registered Holstein bull, mostly white. T. B. tested twice. Price \$150. RAYMOND E. KELLER, Bloomsburg, Pa., R. No. 3.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

Auctioneering Is a Profession

*There Is More to It
Than Just a "Lingo"*

A Successful Auctioneer Must

- Be a Salesman;
- Tell the Truth;
- Know how to handle a Crowd;
- Know the Value of the Goods he is Selling;
- Be Honest with Himself and with Others, (It always pays in the long run).

GRAFT, grand or petty, is Moral, Financial and Spiritual "SKIDDOO" for any man who indulges in it. Salesmanship should Inspire and Command Confidence.

A certain amount of Legitimate Mirth is beneficial and relieves the Monotony

Summing up the whole thing—PERFECT AUCTIONEERING is a study in PSYCHOLOGY and it is up to the Auctioneer to diagnose and develop each situation as it arises.

East Aurora, New York

GLADYS HAD A WINNER

An eleven-year-old girl, Gladys Oney of Reeve, Wisconsin, exhibited a purebred heifer at five fairs this fall. At the Reeve Community Fair and at the Rice Lake Fair her calf won first on the calf club and open competitions. At the Northern States fair the animal was placed first in the calf club division and was first in the open class at the Tri-State Fair at Superior. At the Clear Lake fair Gladys was awarded first in the calf club division and second in the open classes. At Rice Lake her calf was made junior champion.

Gladys is a member of the girl's calf club and is in the sixth grade at the Reeve school.

NICE WASHINGTON SALE

Cerialia farm is a Holstein establishment located at Ceres, Washington, and owned by Mr. and Mrs. J. C. Chamberlain. They recently reported the sale of nine registered cows in milk, which were sold to Messrs. Saville and McCorkle of the Cherry Hill Farm, Lexington, Washington. Five of these were half sisters of the Chamberlain herdsire which won second prize last year at the Pacific National Livestock Show at Portland, Oregon. The other four were bred to this sire. Three of the cows had produced 20,000 lb. milk in a year.

STEWART'S NEW BULLS

In partnership with the Iowa State College, P. P. Stewart of Maynard, Iowa, purchased a calf from the Gustave Pabst farms at Dousman, Wisconsin, and also purchased a seven-months-old calf from the Carnation farms. The Stewart herd includes 52 daughters of Tritonia Pietertje Ormsby, a former National Dairy Show grand champion.

WON HIS SHARE

B. Coman of Phoenix exhibited this year at the Arizona State Fair and won 20 blue ribbons, 14 second prizes, 9 third prizes and 5 fourth premiums as well as the junior championship with both the senior and grand championships. There were six other competitors. The other junior championship went to William McNeil.

A college professor had two razors, a big one and a little one. One day when he was shaving he called to his small son:

"Johnny, this big razor is dull. Go get the baby razor."

Johnny went to the foot of the stairs. "Ma," he called, "Pa wants you."

"When they opened up th' keg o' cider over at th' store yesterday I only had one glass—but they filled 'er up several times."

750-ACRE FARM on State Road, 5,000 cords wood, 300,000 timber, \$12,500. Cash required, \$5,000. W. F. HERR, Brooklyn, Conn.

RYE MEAL FOR CALF FEED

Charles Kirk who lives at West Elkton, Ohio, buys young calves from large dairies and grows them, purchasing them at four days old. He has tried a number of commercial brands of calf meal but has discarded them. When the calves are first received they are fed equal parts of milk and water with varying amounts of rye meal until they are six weeks old. Then they receive dry grain consisting of a mixture of ground oats, corn and alfalfa meal with clover or alfalfa hay, or, in the proper season, good pasture.

The young calves are fed from pails which are set in a trough constructed so that the pails cannot be upset. Each calf soon learns its place. Last winter Mr. Kirk raised 145 calves and only lost seven. November first there was 137 animals on the place ranging from four days up to 18 months old. A few cows the kept to furnished milk for the "babies."

WALKERDALE FARM

Four generations of Walkers have operated "Walkerdale Farm" located near Cobleskill, New York, and at present it is owned and operated by William M. Walker. This farm has been in the Walker family since 1828.

Warner Walker, who now lives in the village, set the first can of milk on the receiving platform of the Cobleskill receiving station. There is a dairy of 40 purebred Holsteins on Walkerdale Farm and the average last year was 13,386 lb. milk per cow. Accurate milk records are kept and the animals are scientifically fed.

William M. Walker is a graduate of the Cobleskill State School of Agriculture. While sentiment helps keep the farm in the family, the present owner has made a financial success of his business and is making the farmstead widely known for high quality stock.

HE KNOWS HIS BUSINESS

Pleasant View Farm is the name of an establishment owned by the Hon. Charles A. Wieting, for a long time assistant commissioner of agriculture for New York State and first legal advisor of the agricultural department.

Pleasant View Farm is near Cobleskill, New York. Six hundred quarts of certified milk are produced daily and shipped to New York City. Part of the herd consists of Holsteins.

The farm contains 430 acres and produces good crops of corn and alfalfa. Mr. Wieting lives in the village of which he was elected president last year. He is also president of the Cobleskill Agricultural Society.

CHAMPION OF HER COUNTY

A grade Holstein cow at the Soldiers' Home, Grand Island, Nebr., took first place over all other milkers in Hall County by producing 507.04 lb. butterfat in a year. Another cow in the herd yielded over 12,000 lb. of milk during the same period.

ADVISE HOME GROWN SEED

Several State experiment stations have during the past few years warned farmers against using foreign grown alfalfa seed. Even without the risk of introducing new weeds there is always the probability that foreign grown alfalfa seed will not germinate as well as home grown seed.

The southwestern states, particularly Kansas, grow a large percentage of the alfalfa seed raised in this country. One of the firms which farmers patronize is the Bowman Seed Company of Concordia, Kansas, an establishment which runs both a wholesale and retail business. The present company carries on the business of George Bowman, one of the pioneer dealers of the Southwest. This firm handles home grown seeds, particularly alfalfa and sweet clover. Any of our readers who are considering sowing alfalfa next season, and we trust that all of them are, should obtain Bulletin No. 32 from the Department of Agriculture at Lincoln, Nebraska, which gives some very interesting information concerning experiments made with different varieties of alfalfa seed.

MIAMI LAND SALE

One of the recent transactions in land around Miami, Florida was the sale of 155 acres of farm land near the city which was purchased by Harry Crawfish, a wealthy Indian, who is one of the leading hog raisers of Ottawa County. Mr. Crawfish, who paid \$19,000 for his new farm intends to stock it with purebred Holsteins and to market the product in Miami. C. J. Fribley, who sold the land, retains an adjacent tract of 200 acres and plans to erect a large modern dairy barn thereon. The rapid growth in the city's population has caused a tremendous demand for dairy products and wideawake dairymen are taking advantage of it.

BREEDER OF FANCY POULTRY

John Hass of Bettendorf, Iowa, has been fifteen years in the poultry business. He runs two farms of 160 acres and raises all the feed his stock consumes. Birds from the Oak Hill Poultry Farm have been shipped to every state in the union. At the present time there are nearly a thousand fowls, White Leghorns and Fancy Bantams, beside Pheasants, Peafowl, Wild Ducks and Geese. There are flocks of geese numbering 250, about 1,200 pigeons and more than 200 ducks. Mr. Hass has built up a poultry business that has made him well known to breeders in many parts of this country.

SONS OF KING DIXIE KEYES

Among the animals sold recently from Waldron Farm were two sons of King Dixie Keyes. One of them is from a very fine three-year-old heifer, one of the best in Mrs. Dwight's herd. She is a high tester and on twice a day milking is producing about 60 lb. daily. The young bull went to Edgar Knapp of South Otseic.

The second calf from a two-year-old heifer of good breeding went to Mr. Slater of North Pitcher. Both Mr. Knapp and Mr. Slater reside in the same territory as Mrs. Dwight and so are in a position to learn of the producing quality and breeding of Waldron Herd.

King Dixie Keyes, the sire of these young bulls, is from a daughter of King Korndyke Sadie Keyes, while his dam's dam is a sister to the sire of De Kol Plus Segis Dixie, the American champion for yearly production. Sylvia King Keyes, the sire of King Dixie Keyes, is a grandson of Champion Echo Sylvia Pontiac, the 29-lb. cow Alice Tensen and the 36-lb. show cow, Lulu Keyes. Many big producers and show animals are related to King Dixie Keyes whose ten nearest dams have official records that average better than 30 lb. butter.

A TRANSMITTING SIRE

"Colony Rag Applé Aaggie" was the name of a herdsire owned by the Tranquille sanatorium at Kamloops, B. C. He sired a large number of grade daughters but we believe he only had five daughters that were purebreds. These five have made records that average 9,312 lb. milk, 832.3 lb. butter in a year. The lowest milk producer made 18,196 lb., the highest 19,853 lb. The largest butter record was 870 lb. and the lowest 798.7 lb. so it can be seen that his daughters were very uniform.

In 1915 the Sanatorium herd, then consisting mostly of grade cows, averaged 6,003 lb. milk per cow while in 1924 the average production was 15,548 lb., this great increase is due to selection and breeding as well as improved feeding methods. Sires of the very best blood lines have been at the head of the herd and they have certainly left their mark.

MARYLAND LEADERS

"Howard Star Annetta Prince" owned by the Springfield State Hospital at Sykesville, Maryland, made the largest amount of butterfat, 6,527 lb., recorded for any cow enrolled in Maryland official test work during the month of October. Her milk production, 161.8 lb., was exceeded by her stable mate, Sebe-waig Flossie Elzevere with 175 lb. milk which contained 5,516 lb. fat. Among the Holsteins tested were cows owned by Wade H. D. Warfield of Sykesville and the United States Naval Academy Dairy at Gambrills. During the month there were 103 Guernseys, 106 Holsteins, 1 Ayrshire and 57 Jerseys on test.

The waiter was exceedingly slow and the diner began to get annoyed.

"Look here, waiter," he said at last, "Bring me some coffee, and while you're away don't forget to drop me a line occasionally, just to let me know how you're getting on!"

The pump from the scrub cow to high producing herds and to purebreds has been a big one in Converse County. Item in the Casper, Wyoming, Herald. That's a cruel, cruel blow.

ONE OF OUR MILKERS

This cow and 21 of her stablemates of all ages, averaged 10,782 lb. milk in a year of Cow Testing Association work.

You can obtain good stock at farmers' prices here. Then, too, this herd is ACCREDITED.

STATE

Type and Quality

From this picture you get an idea of the character of the younger members of our herd, many of which are granddaughters of the noted CLARA CLOTHILDE LYONS, 639.8 lb. milk in a week, who averaged 79.8 lb. milk a day for three months and produced 20,771.2 lb. milk, 723.40 lb. butter in ten months AS A TWO-YEAR-OLD HEIFER.

Let us sell You a few. Herd Accredited.

FRED B. KEENEY

Wyoming Co. Laceyville, Pa.

The Type You All Like

This is a Two-year-old daughter of my herdsire, ORMSBY SENSATION 3D.

Study this picture, note her straight back, square rump, deep chest, length of body and depth of barrel, the size and squareness of her udder, the teat placing and the constitution and vigor apparent to every eye.

This is the kind YOU like. Let me sell you a Daughter or a Son of ORMSBY SENSATION 3D, or even a few good females bred to him.

This herd is ACCREDITED. You take no chances, either in Quality or Health.

S. T. WITMER

Dauphin County Hummelstown, Pa.

My Herdsire

GRAY VIEW KING SYLVIA

is from Sylvia Prilly Pontiac and was sired by a son of Carnation King Sylvia and the 34.55 lb. cow Heilo Ormsby De Kol, 805 lb. butter and nearly 20,000 lb. milk in 295 days.

He is a splendid individual, straight, deep, long and handsome; a robust, hearty, healthy bull and his offspring take after him.

Let me sell you one of his sons or a few good females bred to him.

O. I. MARTIN

Cambridge Springs, Penna.

This herd consists of Real Producers and is under State and Federal Supervision.

Entered as second-class matter April 8, 1922 at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

KING ORMSBY ABBEKERK HELENA

is now heading Boiling Springs Herd. His sire is King of the Ormsbys, his dam is a good daughter of Korndyke Abbecker.

He is a choice individual and sires splendid calves. He is bred to the big producing daughters of Lothian De Kol Korndyke.

Stock for Sale—Herd Accredited

IVO V. OTTO

CARLISLE

PENNA.

Must Be Sold!

My Accredited Purebred Herd of 35 Milking Cows and Bred Heifers.

They are choice Individuals, Big Producers and Royally Bred. Several are granddaughters of Champion Echo Sylvia Pontiac or Judge Lyons. All are sired by Good bulls and bred to Extra Good ones.

This is your opportunity to secure Good, Healthy, Well-bred Holsteins of real Dairy Quality at a very reasonable Price.

Mrs. Maud Dwight

South Otselic, Chenango Co., New York

AN IDEAL HERDSIRE

SON OF

PIETJE, ALCARTRA FAYNE

Age	Butter	Milk	Time
8 years	30.03	707.7	7 days
5 years	25.16	632.7	7 days
3 years	23.63	568.0	7 days
C. T. A. record	718.00	17,168.0	1 year

Highest record daughter of King Pontiac Alcartra Pietje for both milk and butter.

All records made by us.

She combines what all breeders are striving for, namely:

Individuality—Production—Breeding.

Her son, born Jan. 10, 1925, is well grown; nicely and evenly marked, and a very good individual. He is FULL BROTHER to our herdsire, Ideal King Creamelle and also has two FULL SISTERS in our herd, (both young). **Price \$500.**

We want to show you this bull, his sire and dam, his full brother and many other relatives.

CECIL L. A. RESSEGUIE, Kingsley, Pa.

(This Herd has passed FOUR Clean Tests.)

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

Uncle Sam and His Purebreds

Theoretical and Practical Problems Under Investigation

YOUR Uncle Sam is a cattle breeder who is experimenting to learn the science of cattle breeding for your benefit. Ever since the dawn of history men and sometimes governments have endeavored to improve livestock by selection and by mating the best. Arabian horse pedigrees run back for hundreds of years. Every European king and many European statesmen own stock farms and take pride in winning prizes at agricultural shows in competition with the public. But no government, man or body of men has ever studied stock breeding from as many angles as has the government of the United States of America.

The main farm of the United States Government is at Beltsville, Maryland, and is under the charge of Dr. R. R. Graves whose knowledge and ability is known the world over. At Beltsville there are now eight permanent buildings used for experimental work and to house the persons employed. The original farm comprised 190 acres but an additional 129 acres were acquired during 1925. The soil is heavy clay and not very fertile. The herd now numbers about 220 head.

There are four field stations at which the Bureau of Dairying maintains herds for breeding and feeding experiments.

The herd at Ardmore, South Dakota, was established in 1917 with eighteen cows and the present herd consists entirely of their descendants, and is federally accredited. So rapidly has the herd increased that it became necessary, in order to stay within the allotted funds, to reduce it during the year. Several animals have been lent to the Utah Agricultural Experiment Station for cooperative breeding experiments. Nine bulls have been lent for proving. The twenty cows now in this herd have been tested for a year at an average age of three years and nine months, and they have averaged 13,844.6 lb. milk, 462.14 lb. butter.

At Huntley, Montana, another herd is maintained and a number of important experiments are being conducted. Thirty purebred Holstein bulls have been lent to dairy farmers on the Huntley project and in the Yellowstone and Big Horn valleys. One of the young bulls tested out in a farmer's herd showed remarkable transmitting ability and is now being used in the experiment station herd.

At Woodward, Oklahoma, a herd was established in 1921. Twelve cows and heifers in it at an average age of four years, have made records that average 15,893.3 lb. milk, 557.21 lb. butterfat. Four of these were two-year-old heifers and, omitting the records made by these bovine babies, the records of the others average 17,102.9 lb. milk, 600.47 lb. fat.

At Jeanerette, Louisiana, a Jersey herd is maintained consisting of 21 cows, 18 heifers under two years old and 12 young bulls. During the past year four bulls were lent out, making nine now being proved by Louisiana dairymen. Seventeen cows were milked throughout the year but only three completed official records and they averaged 8,429.5 lb. milk, 463.58 lb. fat.

At the Beltsville station a number of experiments interesting to men who own cows, particularly Holsteins, have been conducted. Milking the cows three times a day for short periods showed only about 12.5 per cent increase over twice a day milking, but milking three times a day during whole lactation periods gave an increase of about 18 per cent. The experiment indicated that cows milked three times a day held up better near the end of the lactation period than did cows milked twice a day. The first question that comes to the mind of the dairymen is "Did it pay to milk three times a day?" It is to be regretted that no figures are available on this subject. The economy of three times a day milking depends upon several factors, chief of which are quantity of production, value of product and cost of labor.

Along the same line is an experiment where one entire herd has been maintained on test conditions to obtain forced production while the other herd has been managed under general dairy conditions. Twenty-three cows in each herd have finished a year's work. The cows under test conditions gave about 50 per cent more milk and fat than did the other herds; the principal causes of the increase being the extra milking each day and the larger quantity of feed consumed. A little later it is expected that figures will be published showing the relative profit of maintaining each of the herds.

Holstein owners in particular will be interested in

the Linebreeding-Outbreeding project being conducted at Beltsville. The foundation cows in this project were all mated with the Holstein bull Denton Colantha Sir Rag Apple, a son of Colantha Johanna Lad and Dutchland Rag Apple Aaggie, who in turn was a daughter of Dutchland Sir Pontiac Rag Apple; the full brother to the famous cows, Pontiac Rag Apple and Pontiac Clothilde De Kol 2nd.

"Rags" as the men on the farm call him, was purchased in the fall of 1919 because his daughters did so well in general dairy work and showed so much improvement over the work of their dams at similar age. There are now 29 daughters of this bull at Beltsville. There are thirteen of the original foundation cows still in the herd, six of them now in calf by "Rags." To date seven daughters of this bull have completed year records that average 15,567.6 lb. milk, 553 lb. fat at an average age of two years and eight months.

When the experiment was planned it was intended to breed the first generation of daughters to an unrelated Holstein sire and the bull, Ponderosa Pietertje Ormsby, was secured for this purpose. He was a son of Sir Pietertje Ormsby Mercedes 37th and his dam was a daughter of Jessie Fobes Homestead. Unfortunately this bull died in April but there are four of his daughters in the herd and seven daughters of "Rags" are in calf by him. Then the bull, Varsity Derby Matador, was purchased. His sire was by King Segis Hengerveld Vale from Kittie Gerben Lincoln, the highest record daughter of the famous Nebraska cow "Katy Gerben"; his dam "Mesa Lincoln" was a granddaughter of The Milk & Butter King and Kaan Marie Clothilde. This bull was secured because six of his daughters had completed records in the herd owned by the experiment station at North Platte, Nebraska, that averaged 645 lb. fat at an average age of two years and eleven months. Other daughters of this bull are making large records and they indicate that he is remarkably prepotent in transmitting high milk and butterfat producing capacity. This project with two more of four being conducted have for their object the determination of the method of mating that will produce dairy cattle that are bound to be producers or as the scientific man puts it "will be pure in their inheritance for a uniformly high producing capacity." The project of which we have given a detailed account contemplates the continuous use for generation after generation of sires that have proved, by the uniformly high-producing capacity of their daughters, that they possess the inheritance that will give only high-producing capacity.

The second project is the comparison, generation by generation, of inbreeding and outbreeding on animals that are descendants of the same foundation animals. This project has been under way since 1920.

The third project started in 1919 is the comparison, generation by generation, of line breeding and outbreeding, in which both the line-bred and the out-bred animals come from the same foundation animals.

The fourth project attempts to throw some light on the breeders' idea of "nicking." All four of these projects are being carried out in the Beltsville herd.

For the purpose of obtaining figures of comparison

on the relative animals in the different herds the animals are "officially" tested twice, once when at the age of two years and again at five or six. When these tests are being made the cows are milked three times a day, are kept in box stalls and on dry feed throughout the year, and a careful record is kept of all the feed they consume. The records thus made are used as a basis for analyzing the results of the breeding projects.

All bull calves born in the government experimental herds are lent to farmers living in the vicinity under an agreement whereby their ability to transmit power to produce milk and butterfat will be ascertained. The bulls that prove to be especially prepotent in this respect are used in the government experimental projects or are lent to institutions that are cooperating in this work.

In the purebred herds at Beltsville there are 84 females of breeding age of which twelve are classed as doubtful breeders. Owners of purebreds often argue the percentage of male and female calves born in different herds. The Beltsville herd was on a fifty-fifty basis during the past fiscal year, exactly thirty bull calves and thirty heifer calves being born. The bull calves seemed more vigorous as only one died and two were stillborn, of the heifer calves one was dead at birth and four others died a short time afterwards, so there was a net gain of twenty-five females. At Beltsville 49 bulls have been lent to farmers, of his number 21 were placed during the year and six died or were withdrawn from service.

In all fifty-seven records have been made by Holstein cows in the breeding projects. These average 17,050 lb. milk, 3.43 per cent fat, and 584 lb. butterfat at an average age of four years. During the past year ten Holstein records were completed, eight of which were made by heifers in their first lactation period and the ten averaged 14,876 lb. milk, 532 lb. fat. Fifty records have been made by Jerseys at Beltsville and these average 9,569 lb. milk, 531 lb. butterfat at an average age of three years and eight months. Fourteen records were made during the year of which eight were by heifers in their first lactation period and the fourteen averaged 10,276 lb. milk, 562 lb. fat. It should be understood that the records are not made by selected cows but are simply the production of all the cows in the breeding projects as they reach the proper age for testing according to the system followed.

Some of the present beliefs held by breeders throughout the country are bound to be badly shattered in the future according to production studies made by the Bureau of Dairying. The ability to produce as shown by records made by the dam, apparently is not transmitted with any degree of certainty by her sons to her granddaughters. On the other hand where all the daughters of a sire are uniformly excellent producers, his sons seem to be able to transmit producing ability to their daughters. The scientists of the Bureau of Dairying say that such a sire has in his germinal make-up only those factors that determine high producing capacity, and therefore he is pure or homozygous for the factors controlling high producing capacity; and that by the use of such sires for generation after generation the time may come when all dairy cattle

will possess big producing capacity and will breed true for his character.

In the experiments at Beltsville and the studies thereof made by the government experts, the weakness of the present Advanced Registry systems as followed by the purebred dairy breed associations is indicated. Because of the requirements for entry into the Advanced Registry or the Register of Merit, performances of the low producing daughters of a sire may never be recorded and then too, owners are not inclined to test their poorest heifers or to report the records they make when tested so that a true line on the value of the sire cannot be obtained, to say nothing about the available data being thrown out of balance because of the practice of fattening animals before they are put on test, a practice that is followed by owners of registered cattle of all the dairy breeds.

C. W. Larsen, chief of the Bureau of Dairying, in his report for this year points out that cow testing association records are more reliable than the records of the dairy breed associations' Advanced Registers. In the cow testing association herds well-bred registered bulls are in service. Because all the animals in a herd are tested the records made by the dams are available for comparison and the sire's transmitting ability will be more accurately measured because all his daughters will be tested. For this reason it is planned to tabulate and analyze the data secured from the cow testing associations of the country and it is thought that this plan may have a vital and far-reaching effect on dairy cattle improvement.

Another Dairy Country

WE ARE not accustomed to think of East Africa as a dairy country, but in a recent report sent to the Department of Commerce, Consul Avra M. Warren points out that East Africa has herds of cattle owned by Europeans that total approximately 200,000 head, in addition to millions of cattle owned by the pastoral tribes of Kenya and Tanganyika. Fine milk and butter producing strains of cattle have resulted from crosses of native and European stock.

Butter and cheese are good and plentiful but not cheap in East Africa due to the management of the Farmers' Coöperative Creamery with headquarters at Lumbwa in Kenya Colony and to price agreements among butchers and grocers. The farmers claim that a retail price of 24c a pound gives the tradesmen a profit but the retail price in Nairobi fluctuates between 48c and 66c a pound, while the price of Kenya-made cream and Edam cheese is approximately the cost of the imported article. Cattle raising and dairying is increasing in Kenya Colony as they have grazing the year round with increasing immunity from bovine diseases. Besides the Lumbwa Coöperative Creamery, which returns a good annual profit, another coöperative creamery has been organized and the government has authorized the necessary expenditure to erect a cold storage plant at Mombasa, the chief seaport, in order that the dairy products of Kenya may be exported over seas to India and South Africa.

THE new Registry Association is receiving the hearty endorsement of the breeders and owners of purebred Holstein cattle living in every section of the United States.

Many of the older breeders who were actively engaged in the business when the Holstein-Friesian Association of America was managed efficiently and economically and who contributed to its Reserve Fund, resent the manner in which the Association's finances are being exploited and realize full well that no institution so conducted can long endure.

We are printing below a few of the many letters that are being received from breeders. These letters speak for themselves as to the manner in which the new Association is being welcomed.

Okla., December 12, 1925.

HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION, INC.,
Harrisburg, Penna.

Dear Sirs:

I have been informed that this is a new registry association and much cheaper than the old but just as good. Please send me some information.

I have some cows and one bull registered in the other association and some calves to register.

Please send me information at once.

I remain

Yours truly,

OKLAHOMA BREEDER.

Ill., December 12, 1925.

Dear Editor:

I have been reading everything I see regarding the new Holstein Association. I think H. C. Reynolds has put Secretary Houghton in a very uncomfortable position. I am rather sorry, for I have, for many years been on very friendly terms with him. Also with his father, who was one of the charter members, when the Association was first formed, but I won't defend any one that has proved double faced.

The editor of *Hoards' Dairyman* made criticising comment in the December 11th issue on the forming of the new Association. I replied to it but am not sure they will use it. I notice the editor of the *Breeders Gazette* has some to say on the subject. He always mixes in where he has a chance, but I put no value on his criticisms on any matter for he is too conceited.

In what I wrote to *Hoards' Dairyman* I explained what I thought were the good reasons for a new Association.

I also said I was sorry some other way could not have been tried in getting satisfaction. I do feel so, for I have known of several other similar cases in which the desired results were not obtained.

I have never had any respect for that *Holstein-Friesian World* and I am glad to see the way H. C. Reynolds handles it. I won't know how the *World* answers Mr. Reynolds for I do not take it. I am keeping on file all of the pieces in your paper so I can read them over. I am very anxious to see what the result will be. Mr. Houghton sent me the circular he published telling of the damage that may result of the formation of the new Association. I will not reply to it unless he sends me another.

Truly yours,

ILLINOIS BREEDER.

Michigan, December 9, 1925.

HOWARD C. REYNOLDS, Secretary,
Harrisburg, Penna.

Dear Sir:

We have a herd of about 12 Holstein-Friesian cows now registered in the H. F. Association of America at Brattleboro,

Vermont. We think we would like to transfer them into your Association, also would like to have a membership.

Will you please send application blank for membership and also application blanks for registry, about 24 as we have some young stock to be registered, also one-half dozen blanks for transfer and all information necessary to accomplish the charges.

Respectfully, MICHIGAN BREEDER.

Wisconsin, December 5, 1925.

HOLSTEIN REGISTRY ASSOCIATION:

Your letters both received in regard to joining the Association and will say that I am out of the business. I have retired from farming but I am going to write you a word in regard to the old Association.

I had quite a little business with them and can say that all you state in your letter to me is true. A lot of sports and speculators and politicians have ruined the purebred business and to-day if a man is wise he will keep out of it.

I know what I am talking about as I still have one son and one son-in-law in the business and they are losing money every day by being in it. I can't put it strong enough that the old Association has been the ruin of so many men of limited means that my advice to all is to let them alone. Why, here in this country to-day you can't sell a purebred cow. They won't look at them while grades and scrubs are in good demand. The Holsteins are fine cattle but so many have been persuaded to invest large amounts of money in them and then found that their neighbors with grades could get just as much from their milk as they could and they are done with it.

WISCONSIN BREEDER.

Colorado, December 5, 1925.

HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION,
Harrisburg, Penna.

Gentlemen:

Enclosed you will please find my check in the sum of \$5.00 to cover cost of six transfers and one registration of a female more than one year old. You will observe that the applications are on the forms of the old "Hold-Up" Association. I hope you can interline these so as to make them serve the purpose. These forms had been signed long before your blanks were received and since the purchaser lives fifty miles up in the mountains and will not be accessible before next spring, it is very inconvenient to get new applications made out. I hope, therefore, you can make these answer the purpose of your own blanks.

Yours truly,

COLORADO BREEDER.

HOLSTEIN-FRIESIAN ASSOCIATION, INC.,
Harrisburg, Penna.

Dear Sir:

Please send me full information in regard to the organization of the Holstein-Friesian Association, Inc., and facts concerning the same. Also two application blanks for registry.

I have received a warning from the Holstein-Friesian Association of America in regard to the new Association. I am not a member of it and have been registering cattle with them for a number of years but the fees are something fierce for registry and transfer.

I am enclosing part of the letter I received from the Association. Please answer in detail in regard to items in this letter sent out by the old Association. I would like to support your Association if it is O. K.

Respectfully,

ILLINOIS BREEDER.

Penna., December 12, 1925.

HOLSTEIN-FRIESIAN REGISTRY ASSOCIATION,
Harrisburg, Penna.

Gentlemen:

Some time ago I received a blank membership application to join your association and some other explanatory literature.

Being very busy at that time with T. B. testing and 40 other

pressing things it was laid away for some more convenient time to reread and consider.

Having looked them over again am becoming very much interested and see the real need of a new Association and would like to become a member, but I see the time has expired (Oct. 1st) to become a life time member for a fee of \$10.00. How has procrastination cut me out?

Also, how would we go about registering offspring of animals that I lost in T. B. test that were registered in the old Association? I have several that should have been registered long ago.

Hoping to hear from you at your convenience.

PENNSYLVANIA BREEDER.

Dear Sirs:

Received a letter from you about registering cattle.

I have 6 head which were already registered by the old one of the other Co. Now how much would it cost me to join your company and have these cattle papers changed and transferred? Then I have three more to register which are fall calves. Last fall I had a bull which I had borrowed out to the neighbors and then I sold him and had to get him registered and they charged me \$14.00 to register him and transfer so you know I thought I would not register any more.

Let me know by return mail what it would cost to change the six head of cattle which I have in the other company. If you don't charge too much I'll join it.

Yours truly,

ILLINOIS BREEDER.

A LETTER FROM NEW ENGLAND

I am writing to ask you for all the information you can give me concerning the new Association of which you are Secretary and Treasurer.

I became a member of the H.-F. Association of America some years ago, and have always tried to be loyal. In the past I have been a strong supporter of Mr. Houghton, believing that he was entitled to more credit than any other for the splendid record and great achievements of the organization. When disagreement arose a few years ago and an effort was made to oust Mr. Houghton from the office of Secretary of the Association that he had been most instrumental in founding and advancing, I was unalterably opposed to the faction that was working against him and was eager to forward my proxy for his support to suppress such wild-cat schemes as the erection of "A permanent home," the deprivation of the right of proxy, extension service, etc.

I was at that time greatly disgusted with the course pursued and the sayings and writings of Messrs. Prescott & Price of *The Holstein-Friesian World*. I stood steadfastly with Mr. Houghton and his strong army of supporters, such men as E. A. Powell, our lamented ex-Treasurer, Wing R. Smith, Judge Peasley, Mr. Newman, Jacob S. Brill, A. L. Brockway and others of his party.

Judge Peasley said when this discord arose, "We are at the parting of the ways." I did not want to think that his statement was true, but I fear that he uttered more truth than fiction.

As I view the situation, affairs have steadily since then been going from bad to worse. In my opinion the substitution of the delegate system of voting in place of the proxy was most ill-advised. It seems to me a death blow was struck when the members were deprived of their right to vote by proxy.

Another fatal blow was struck, it seems to me, when the transfer fee was raised to \$1.50 and \$3.00 for so-called "Extension Service."

I might go on mentioning acts that I do not approve, to say nothing about the Board of Directors and other officers that are not pleasing to me; but what can I do to obtain satisfaction? I have had no voice in the management of affairs since the Delegate System was inaugurated.

Again referring to Mr. Houghton, I must admit that I do not like his attitude of late. He seems to have forgotten the principles for which he once stood. He appears now to be catering to the very same ones whom at one time he opposed. Is it because he believes he cannot do otherwise and retain his office? If his interest is a selfish and personal one, that is all that one needs to know. I did not think it formerly.

I have several animals that are eligible to registration that I have not troubled about recording, simply because I could take no interest in the matter when affairs of the Association are being managed so recklessly and indiscreetly.

Before I consider registering in a new Association I want to know that I am not leaping from the frying-pan into the fire. I would like to become familiar with its constitution and by-laws and be assured that no ulterior motive prompted its formation. Were the members, or Holstein-Friesian cattle breeders throughout the country properly informed and duly notified so that all could have a voice in forming it? I would not approve an organization that did not stand for the interest of the breed and breeders as a whole. One member should be on a level with all other members and have the same rights and privileges. There should be no cliques or factions—no friends to favor or enemies to punish. Any light you may be able to give me will be appreciated.

I am, and have been since it was started, a subscriber and interested reader of *THE HOLSTEIN BREEDER AND DAIRYMAN*. I have read with special interest the editorials and articles pertaining to the Holstein-Friesian Association and its officers.

Apparently your statements are well grounded and your motives just, although Mr. Houghton in his circular, "A Warning to Breeders" charges you with having ulterior motives. But his silence concerning the new Association and the charges you bring against him and the old Association, except in this single letter is noticeable. I wish he would reply to the charges. I think we should know through his paper, how he stands.

H. F. REGISTRY ASS'N,
Harrisburg, Pa.

I am returning your applications unsigned because I have sold my farm and gone out of the Holstein business, otherwise I would transfer all my herd records to you. I wish you the greatest success and if I have any influence amongst Holstein breeders it will be for the H. F. Registry Association.

May the New Year bring you prosperity.
Very respectfully,

MICHIGAN.

We Have For Sale

COWS OF THIS QUALITY

Also heifers—yearlings and calves.

Our service sire is the show bull KING PIEBE of YORK 7TH, a grandson of Piebe Laura Ollie Homestead King from a granddaughter of King of the Pontiacs.

This herd is ACCREDITED and stock you obtain here is bound to make good.

Maryland Breeders Reject Milk Advertising Campaign

MARYLAND breeders assembled for their annual banquet at Baltimore, December seventh, turned down the proposal to advertise and place Holstein milk on the Baltimore market under a trade name and requested that, if they were entitled to any field man, that his services be limited to working with boards of health and civic bodies in order that such bodies might learn the value of milk, particularly that produced by Holsteins, so that no laws or regulations might be made that would restrict the sale of milk produced by black and white cattle.

H. E. Robertson, of York, Pa., and M. J. Sheridan, Jr., of Lebanon, New Jersey, told of the plan to advertise Holstein milk in Philadelphia as explained at the Harrisburg and Trenton meetings.

Mr. Charles Wertheimer of Frederick, Maryland, presided at the banquet and at the business meeting. He said the breeders of Frederick county had no trouble in selling Holstein milk, their chief trouble was to supply the demand.

It was announced that Mr. Wertheimer was responsible for the furnishing of Holstein milk to forty children in the Frederick schools. A report will be made on their growth and development as compared with the children who are not receiving milk.

R. E. Haeger of Algonquin, Illinois, laughed at the idea that Holstein breeders should worry about the competition from the Channel Island breeds. He reminded his hearers that they had been told that about 85 per cent of the milk sold in fluid form in the United States was produced by black and white cows.

Mr. John M. Dennis endorsed Mr. Haeger's remarks and said that the milk business is divided into two parts, wholesale and retail. Judging by his experience as a banker and businessman there was very little profit in the milk distributing business. There was an added expense of at least twenty cents a gallon in shipping milk direct to the consumer against selling it at wholesale. A campaign to sell Holstein milk as such in the city of Baltimore or any other eastern city meant a lot of work and expense.

A ten thousand pound cow, that is a cow that will produce 10,000 lb. milk in a year under ordinary farm feed and care was a good one but there were many such cows in Maryland. He believed advanced registry records of any breed were largely a waste of time. The idea of milking a cow four times daily for a year or even for seven days! He believes in records made under some plan similar to those of the cow testing associations.

John M. Dennis, Jr., said that Baltimore was short of milk to-day. Owing to the number of cattle slaughtered for reaction to the tuberculin test there was a demand for cattle to-day and he advocated a field man in the territory to promote educational work. Too many red cows were being brought into the state.

Mr. Wertheimer said that Washington was also short of milk. The dealers were advising the dairymen to put in the Channel Island breeds, purebred or grades, because under four cents a point differential they were

enabled to buy butterfat below the market price.

Dr. Meade of the Maryland State College said that the difference in the milk produced by the various breeds existed rather in the minds of the public and the dairymen than it did in the milk itself.

Granville Hibberd said that the milk as sold in the city of Baltimore now tested around four per cent. He asked about the White Nectar experiment in Milwaukee, Wisconsin, which the Association representative said the directors had dropped for a time. A distribution of 1,200 quarts had been reached when the advertising was dropped and this figure was being kept up very well. Mr. Hibberd explained the milk trade of Baltimore. The Fairfield Company put out one grade of milk which they claim is the best and would not handle any other. The Western Maryland Company had three grades which included Walker-Gordon milk. He had not been successful in getting any company to handle milk under a brand or farm name. He said the requirements to produce raw milk to be sold in Baltimore was a low bacteria count; a tuberculin tested, disease-free herd; the milkers must submit to a medical inspection four times a year and wear clean white suits at milking time, while the barn must score satisfactorily and the water supply pass an analysis. So rigid were the requirements that he only knew of four dairies now producing raw milk for the Baltimore trade.

Mr. R. L. Forrest, owner of Java Farm, said he believed there were two problems, a breed problem and a political one, the dealer problem being political for they want only one brand and could make more money at present prices by using high testing milk. The Jersey and Guernsey breeders had taken advantage of the situation. He advised that the housewives and the members of the boards of health be educated as to the value of the Holstein product.

Mr. N. Peterson said that seventy per cent of the demand for Jersey and Guernsey milk was caused by dealers and he believed in a campaign for the promotion of the sale of Holstein milk. Mr. Fuller, fieldman from the state college said that the tuberculosis eradication work in Carroll county had caused many cattle to be brought in mostly from Tennessee, the proportions were three Holsteins to one grade Jersey. He advocated a field man rather than milk advertising.

"Uncle Jerry" Conover, who is in charge of the state C. T. A. work, deplored that there was no milk on the table at the banquet. Breeders of Holsteins should know that their cattle predominated in the state cow testing association work for the past ten months. The poorest showing was in April when five of the leading ten producers were registered Holsteins, in the other months they made an even better showing. Holstein breeders should let the general dairy public know these things.

Mr. Rody, Baltimore county agent, did not know any farmer producing Holstein milk who could not sell it. He advised talking and advertising that the Holstein cow produced milk cheaper than any other dairy animal.

A resolution or recommendation to lay before the directors of the Holstein-Friesian Association was requested. Thereupon Mr. John Dennis moved a resolution requesting a field man to work in Maryland for three months on breed promotion and with the

boards of health and other civic bodies. There were several seconders and this resolution was passed while it would have been impossible to have passed one asking for or advising any milk advertising campaign.

Winter Comfort

By GEORGE LESLIE

TO HAVE our herds go through the winter in good health and producing to their full capacity, it is needful to keep them comfortable as well as to feed them properly.

Health plays a much more important part in swelling the amount of the monthly milk check than most of us realize; and health depends on more than the feed we supply.

In many barns we have heard the owners of dairy cattle say, "Yes, we have garget in the herd, especially in the winter, but we expect just about so much of it anyway, and do the best we can."

Seldom indeed do men with this viewpoint take any precautions so that such a condition will not arise; which is a pity, because they could save loss to themselves and suffering to the cows with ordinary care in a few directions.

A liberal supply of dry bedding, so that the newly filled udder of the fresh cow will not get chilled by coming in contact with the cold cement or earth floor, may save inflammation and caking which leads to garget. Cork brick in the stalls is not only more comfortable, but much warmer. Making sure that the fresh cow is not standing in a draught from window or door is a very easy thing to do, and it too may save a case of caked bag.

Giving the cow that has just had her calf very cold water to drink is likely to cause retention of the after-birth or inflammation of the udder, or both. It's not a very difficult chore to see that she has warm water to drink for a few days, and it's worth the small amount of extra work to save a cow from being in such a condition with its lowering of her milk yield and vitality.

While on this subject, we would like to stress the importance of clean drinking water. In many stables which were otherwise clean, we have seen the watering cups nearly half full of hay and feed and dirt so that the cows had to drink it fouled with a mass of stuff that was slimy and dirty. The cups should be kept clear of such accumulations.

We have seen a Brown Swiss cow with a wooden leg, a regular breeder and a good producer but she's the only one we ever did know of, and broken bones generally mean a dead cow. Big knees are not only unsightly, but they detract from the animal's sale value. So it's real economy to keep the hoofs level so the cattle will be less likely to slip on the barn floor. A cow or bull with its toes grown so long that it cannot stand squarely on all four feet is not comfortable and ill effects in several directions may result. Also, the discomfort experienced by the animal, if a cow, will show in a lowered production.

Nowadays all barns have windows to let in light, but in thousands of them this object is defeated because the glass is so grimy that a good bit of light is kept out.

Science has discovered that the most beneficial light rays—the ultra violet—cannot act when they come through window glass; but plenty of light, even through glass is a great help in keeping down the germs of various sorts which will multiply rapidly in a dark or poorly lighted barn. Keep the stable windows clean and let in all the sunshine there is through the winter. This flood of light will show up dirt too, and you will be less likely to let it get ahead of you.

While, as the late D. W. Hoard said, "There is nothing darker than the inside of a cow," or words to that effect, we believe she is much more comfortable in a stable that is full of light than in one that is darkened by dirty windows.

In the winter it is quite important that the dairy herd should not suffer from faulty elimination. The feed should have succulence enough to keep the bowels open. Corn silage, beet pulp, roots, cane molasses and a grain mixture with oil meal and bran in it are all aids in this direction. Grain, hay and fodder or stover will not keep the cows in as good health as if they had a succulent of some kind. If there is no other succulent to be had, use cane molasses, which is a pure carbohydrate feed, and thus very suitable for winter feeding.

A lady went into a department store and said to the clerk:

"I would like a diminutive cone semi-perforated, with symmetrical indentations."

The clerk said he did not have such a thing.

"Oh yes," replied the customer. "I'd like a thimble."

The Secretary of the New Registry Association

By R. A. Baldwin

DR. HOWARD C. REYNOLDS, Secretary of the new Registry Association at Harrisburg, Penna., is well known to the inner circles of the Holstein-Friesian Fraternity, yet he belongs to that class of intelligent, conservative workers who prefer to remain in the background and devote their whole time and efforts to real constructive work.

Unquestionably Dr. Reynolds is the best qualified person the real breeders could have obtained to take charge of the Secretary's office of the new Association to carry the movement through to a successful termination. He is a master of the art of animal husbandry and a thorough student of its various branches. He knows livestock; he knows dairy cattle, and he is an authority on purebred Holsteins. With his knowledge as a herd owner and breeder of Holsteins, as a text book writer, as an author and as an editor, he enters the new work thoroughly trained.

Dr. Reynolds was raised on a farm in Wyoming County, Pennsylvania. After finishing at the district school he entered Keystone Academy, located in his home town of Factoryville, and graduated in the year 1900. He studied agriculture at Pennsylvania State College for one year. He then entered Ohio State University, graduating with the class of 1904 with the degree of Doctor of Veterinary Medicine.

For twelve years he had an extensive practice in Northeastern Pennsylvania, during which time he owned and operated a dairy farm. As a veterinarian he was very successful; his ability on many occasions receiving special recognition.

He is a member, and was first Chairman, of the Northeastern Veterinary Medical Association of Pennsylvania, a position which he held for several years; is also a member of the Veterinary Medical Association of Pennsylvania and of the American Veterinary Medical Association and has qualified to practice veterinary medicine in several states.

Dr. Reynolds has not only been associated with livestock and agriculture, but he has given the subject of cattle breeding and dairy husbandry careful study and, as a recognition of his ability along these lines, he was tendered a position by the International Correspondence Schools in their Agricultural Text Book Department, which he accepted and was with the schools six years, during which time he also acted as Superintendent of their Demonstration Farms.

He became a member of the Holstein-Friesian Association of America in 1914 and was listed as one of its speakers. He was made Secretary of the Pennsylvania State Holstein-Friesian Association in 1918, which

position he held until 1920, when he declined to permit his name to be presented for reelection. While he was Secretary of the Pennsylvania Holstein-Friesian Association it grew to be one of the strongest State Holstein Associations.

At Philadelphia, in June, 1919, as Secretary of the State Association, he had charge of the Committee on Entertainment and this was the first, if not the only time in the history of the Holstein-Friesian Association of America, that the local breeders furnished the entire entertainment and defrayed all the expenses. Breeders who attended the Philadelphia Convention and saw the way in which the entertainment was managed must realize that the new Association cannot be anything but a success with a man like Dr. Reynolds as Secretary.

DR. HOWARD C. REYNOLDS

The Holstein-Friesian cow is Dr. Reynold's favorite dairy animal and he cannot do or say enough for her from a dairy standpoint, but he is absolutely opposed to the practices that have been indulged in by those who have promoted purebred Holstein-Friesian cattle from a speculative and exaggerated standpoint. He not only believes that speculation has no place in improved livestock promotion, but he stands up for what he believes and, like others who dare take a stand for right and justice against dishonest practices and wrong doings, Dr. Reynolds has had the hearty support of the fair-minded, clear-thinking, plain people.

When the effort was made to come into Pennsylvania and organize the State by the so-called WHIRLWIND CAMPAIGN methods, Dr. Reynolds took his gun and got right out in the front trenches, if I may use the expression, and through his efforts, backed by a strong State organization, the State of Pennsylvania was never invaded by the PAID STATE SECRETARY MOVEMENT, and the breeders were saved thousands and thousands of dollars and, further, the Holstein industry in Pennsylvania has remained in a more healthy state than anywhere else in the Union.

Dr. Reynolds' activities in connection with the Annual Convention at Philadelphia, in June, 1919, brought him in close association with Mr. Houghton, who, recognizing and appreciating his ability, often invited him to Brattleboro in conference on Association matters.

In 1920, at Mr. Houghton's suggestion, the Doctor spent some time calling on prominent breeders living in various sections of the country, conferring with them in regard to Holstein matters in their vicinity, getting their views as to how the Association should be managed, and what should be done in an effort to

check extravagance and protect the rights and interests of the breeders and members.

In the proxy campaign, previous to the Annual Convention in 1921, Dr. Reynolds acted as one of Mr. Houghton's lieutenants in Mr. Houghton's efforts to get proxies to be voted to reduce fees and defeat the efforts of the Directors to gain control of the Association through a By-Law amendment which, if passed, would have placed the power of altering, amending, or repealing the By-Laws in their hands.

At one time Mr. Houghton was negotiating with Mr. Eugene B. Bennett, former President of the Holstein-Friesian Association of Pennsylvania, and Dr. Reynolds, with a view of selling them his paper, *The Holstein-Friesian Register*, but was unsuccessful. Although his relations with Dr. Reynolds remained friendly, the Doctor and Mr. Bennett started a new paper, *THE HOLSTEIN BREEDER AND DAIRYMAN*, which is published at Harrisburg, Pennsylvania, to promote the interests of the real breeders. In the short period of four years this paper has grown to be the leading Holstein publication in the field.

At first the paper was issued semi-monthly, on the 1st and 15th. However, at the suggestion of Judge Peasley, and confirmed by Mr. Houghton, the publishing dates were changed to the 8th and 22nd, in order not to conflict with Mr. Houghton's paper, which was published on the 1st and 15th. A few months after the *BREEDER AND DAIRYMAN* was started, Mr. Houghton was successful in bringing about a clubbing arrangement whereby a subscription to his paper and the *HOLSTEIN BREEDER AND DAIRYMAN* could be obtained at a single subscription price.

The new Registry Association, of which Dr. Reynolds is Secretary, from the very beginning has been more than a success. Breeders living in all sections of the United States have sent in their memberships and are transferring their records to the new Association.

The Secretary has a corps of well-trained assistants and his motto is PROMPT, EFFICIENT and COURTEOUS SERVICE at REASONABLE FEES.

Out of the Earth

I LONG ago convinced myself that whatever is on the earth and shares its life is of the earth, and, in some way not open to me, came out of the earth, the highest not less than the humblest creature at our feet. I like to think of the old weather-worn globe as the mother of us all. I like to think of the ground underfoot as plastic and responsive to the creative energy, vitally related to the great cosmic forces, a red corpuscle in the life current of the Eternal, and that man, with all his high-flying dreams and aspirations, his arts, his Bibles, his religions, his literatures, his philosophies—heroes, saints, martyrs, sages, poets, prophets—all lay folded there in the fiery mist out of which the planet came.—*John Burroughs.*

Any one who doubts that the world is growing better should pause and compare the modern motor bus with the old-time stage coach.

or 27th of each month preceding date of issue.

DECEMBER 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

"A Serious Joke"

MEN who are really acquainted with the operation of the Extension Department of the Holstein-Friesian Association of America consider it one huge joke.

The most serious feature entering into the program is that it is the real breeders' money that is being wasted.

It would not be as serious if the few who desire to make playthings of purebred Holsteins would pay their own bills and not try to make a plaything out of the Holstein-Friesian Association and use its funds to promote their *pet hobbies and whims*.

At the present time the Chairman of the Extension Committee of the Holstein-Friesian Association happens to be a society lady who owns an estate where certified milk is produced and therefore, we see an effort being made to expend \$50,000.00 of the Association's funds in an advertising campaign advertising Holstein milk.

What would the breeders of Holstein cattle and members of the Holstein-Friesian Association have thought of Mr. E. A. Stuart, when he was a director, had he been appointed Chairman of the Extension Committee and immediately set out to have the Association indulge in an advertising campaign to advertise an increased consumption of Carnation's Condensed, Evaporated or Powdered milk, just because he happened to be engaged in the manufacture of that particular kind of milk.

THE HOLSTEIN BREEDER AND DAIRYMAN is not in sympathy with the wasting of the breeders' money in any such way as is being proposed by the Extension Committee and we are glad to announce that at a meeting of the breeders in Kansas City and also at a meeting in Baltimore, the proposal to spend the Association's funds in an advertising campaign was voted down.

The Quiet Observer

A CONTRIBUTED EDITORIAL

I SEE a number of the agricultural papers of this country are jumping more or less on the recently organized Holstein-Friesian Registry Association, Inc., which has its headquarters at Harrisburg, Pa. Now if I was a contributor to the aforesaid papers I would hold over a bit. I am a member of the original Holstein-Friesian Association of America. I gave every attention to and have carefully studied the purpose of the new association but I don't think that the one with headquarters in Brattleboro, Vermont is quite justified in some of the things it is attempting to say for itself and I do not think some of its past actions will shine as mortal or immortal stars in the crown of glory which it is making desperate efforts to hold over its snow-white brow. In trying to explain its own many virtues and the many vices of the younger organization it is making a good many of the members of the old organization feel quite bad and sickly. The truth is, in my humble judgment, that there is room for both of these associations and if the old association don't look out and mend its ways it is likely to be licked before very long.

I am not here to tell stories about the Holstein-Friesian Association of America, but for some reason I think it has had too much business in recent years for its own good and that many of its leaders are too haughty in their attitude toward the simple farmers who are endeavoring to make a living from their purebred Holstein dairies.

Advertising Breed Milk

"IT IS the opinion of the executive committee that attempts to sell milk under breed designations is attended by possibilities of danger to the entire industry and this tendency should be carefully studied by the various elements," reads a part of a report made to the American Dairy Federation in session at Chicago this week.

The committee is absolutely right. A strenuous selling campaign designed to convince the consumers of the superiority of milk from a certain breed of cows can not help but reflect on other breeds, with the eventual result that the claims made for all of them will be discredited. Unlike most products where a seller by sticking to the merits of his own products can conduct a good, legitimate business, claims made for the milk of certain breeds are almost certain to react unfavorably upon milk from other breeds. If carried to extremes (and it would be extremely difficult not to "go to the limit"), such selling campaigns would harm the entire industry.

The breed associations have plenty to occupy their attention right now in selling their breeds to the dairy farmer. If at the end of the next 100 years or so they have converted the 95 per cent now using grades to the value of the purebred animal, it will then be time to start creating a consuming market for the milk of a particular breed.—*Stock and Dairy Farmer*.

A Registry Association for Breed Purposes vs. a Registry Association That Guarantees a Bologna Market

M R. F. L. HOUGHTON, Secretary of the Holstein-Friesian Association of America, in a letter to a breeder living in the state of Maine, infers that the Holstein-Friesian Association of America has been given special recognition by Uncle Sam and will guarantee breeders registering cattle in his Association, an increased Bologna price over animals registered in the new Registry Association.

All breeders of diseased cattle and others who are looking for a "Bologna market" might do well to investigate Mr. Houghton's proposition. On the other hand, all breeders who are desirous of finding a market for their increased stock as breeding animals at increased prices, should by all means investigate the new Registry Association—The Holstein-Friesian Registry Association, Inc.

However, to be perfectly frank, we do not believe Uncle Sam will pay any more for Bologna cows registered in the Holstein-Friesian Association of America than he will for the same class of cattle registered in the Holstein-Friesian Registry Association, Inc., yet the breeders must not look to Uncle Sam to market their increased stock. The real dairymen are the ones whom the breeders of purebred Holstein cattle must look to in order to dispose of their surplus, and that this class of breeders have refused to recognize the certificates issued by the Holstein-Friesian Association of America is shown by the fact that thousands and thousands of purebred Holstein cattle are changing hands without the papers.

The Holstein-Friesian Registry Association, Inc., represents the real breeders who constitute 90% of the breeders and owners of Holstein-Friesian cattle, and it is this market and not the Bologna market that the breeders and owners of purebred Holstein-Friesian cattle should cater to.

Register your purebreds in an Association that has a standing with and recognition with the real breeders and that Association is the Holstein-Friesian Registry Association, Inc.

Rock County Club Withdraws from Wisconsin State Association

THE members of the Rock County Holstein Association met in the courthouse Janesville, Wisconsin, December 1, and recommended to its directors that affiliation with the state association be discontinued.

Member after member declared that they could see no good resulting from the present state association and that the dues paid by the county club to the state association could be used to better advantage at home.

"Illinois farmers are going to buy Wisconsin cattle when the test issue there is straightened out and Chicago will take our milk," reported Secretary John W. Jones. During the past year the secretary sold 53 purebreds and 43 grades.

E. P. Coon said there were 28 Holsteins in the 1925 calf club, which won third prize at the state fair last fall.

Frank Milbrant of Evansville, reported that at the county sale, 67 head sold for \$8,315, the sale expense running 12.04%.

It was urged that the association aid in the formation of two more Cow Testing Associations. Area work was approved, several members holding that it is the most important step for the advancement of the county ever undertaken.

A committee composed of Archie Reid, Jr., Henry Wieland, Jr., and Howard Miller will prepare an association memorial for the late John L. Fisher, "always a hard worker and loyal booster for Rock county and the Holstein cow."

The following were elected directors—L. A. Markham, Janesville; L. T. Williams, Clinton; John W. Jones, Milton Junction; Archie Reid, Jr., Janesville; and Dr. G. E. Post, Milton. J. A. Craig, who is largely responsible for the building up of the present association, refused to take office again. At the close of the meeting, an honorary membership was voted to Mr. Craig,—"regardless of whether he ever owns another Holstein cow or not."

Keeping Out Disease

AFTER the destruction of many of the herds in Los Angeles County during the campaign to eradicate foot-and-mouth disease, an ordinance was adopted by the authorities in the hope of keeping tuberculous cattle from being brought into the county. Although this ordinance was enforced, it was found that infected cattle found their way into the county, supposed to come from badly infected herds. Although they passed a tuberculin test themselves they carried the germs latent in their bodies.

A new ordinance was recently adopted by the authorities under which cattle brought into the county must not only pass the tuberculin test administered by veterinarians on the approved list, but they must come from herds that have been tested and that show less than 10% reactors. The new ordinance prohibits the sale of all cattle for dairy or breeding purposes within the county unless they have been tested within 30 days of date of sale and all reactors branded.

Keep This in Mind

LAST year the experts of the Federal Bureau of Animal Industry examined in their laboratories specimen tissues from 132 cattle that had reacted to the tuberculin test but had shown no visible lesions of tuberculosis on autopsy. By microscopic examination, in some cases accompanied by animal inoculations, the presence of tubercle bacilli was demonstrated in 51 of the samples, whereas 81 gave negative results.

Books are the legacies that a great genius leaves to mankind, which are delivered down from generation to generation, as presents to the posterity of those who are yet unborn.—*Addison*.

Dorothy as a Calf Raiser

LAST spring Dorothy Swaney of Weyerhauser, Wisconsin, purchased a calf at the spring sale of the Barron county Holstein breeders. The calf had been raised by Fred Osterkamp of Almena. Dorothy was one of the 4-H Club members of western Rusk county and raised the calf through the season from May to December.

Dorothy's record book was selected as being one of the best in Rusk county and was sent to Madison to be compared with the best from other counties. The original value of the calf was \$90, the total cost of feed \$28.68 and Dorothy values her labor at exactly \$12, making a total of \$130.68.

The prizes won includes second in its class at the Tri-State fair at Superior, first prize in the calf club division at the Rusk county fair and first in the open class as well as junior and grand champion.

Dorothy had her calf 150 days. It weighed 785 lb. at the end of the time making a gain of 2.29 lb. per day during the contest or a total gain of 343 lb.

The Law on the County Area Plan

WHETHER or no the county area law on bovine tuberculosis eradication is constitutional is a question that has been asked many times. In Iowa the Supreme Court recently decided that it was. An attempt to obtain an injunction to prevent the application of the county area plan was made in Black Hawk county and was made the occasion of a test case. This important decision will undoubtedly be quoted many times in other states.

The Prevalence of Bovine Tuberculosis

BOVINE tuberculosis is far less common than the general public believes for in more than seven million animals tuberculin tested last year under the accredited herd plan there were only three and one-tenth per cent reactors. The total number of animals reacting were 214,491 which seems quite a number but 3.1 per cent puts a very different complexion on affairs. For six consecutive years the percentage of reactors has been falling. During 1920, four and one-tenth per cent of the animals tested showed a reaction. Since that time there has been a steady decrease up to and including 1925. There are now more than a million and a quarter animals on the accredited list with more than eight million that have passed one clean test.

It was in 1918 that the first accredited area work was started. To-day there are 6,412 accredited practicing veterinarians in the country. During the past year nearly nineteen thousand accredited herds were

Fiscal year	Cattle tested	Number of reactors	Per cent of reactors	Accredited Herds	Cattle	Passed one test	Cattle

The Kind We Raise

Cows of this size, type and evident producing capacity, bred and raised on this farm, are mated with

MODEL DARIUS KING SEGIS

whose dam produced 639.8 lb. milk in a week, averaged 79.8 lb. milk a day for three months and produced 2,771.2 lb. milk, 732.4 lb. butter in 10 months all as a two-year-old heifer.

This herd is Accredited.

Stock for sale at reasonable prices

FRED B. KEENEY,

Wyoming Co.

Laceyville, Pa.

surveyed in order to find out why herds were removed from the accredited list. In all there has been 984 cases of herds being taken off the list. An accurate history of all the cases was not ascertained but it was found that the causes of reinfection were: the addition of infected cattle to such herds, the exposure of accredited cattle to infected cattle on show circuits, etc., and the feeding of unpasteurized raw milk from unknown sources.

State and Federal appropriations for indemnity were increased over the preceding fiscal year. The Federal appropriation was \$3,277,600, of which \$850,000 was allotted for operating expenses and \$2,427,600 for indemnity purposes. This is an increase of \$400,000 for indemnity for the year. The combined State appropriations were approximately \$7,000,000. This increase in funds made possible an increase of about 32 per cent in the number of cattle tested.

The following table shows the progress made in establishing accredited tuberculosis free herds. The total number of cattle tested during the period from 1918 to 1925 inclusively is 20,688,526 with 685,012 reactors or 3.3 per cent.

Prominent Members of the Holstein-Friesian Registry Association

HENRY W. FLIESCHMAN

DOUGLAS B. DIAMOND, JR.

S. R. MILLER

HENRY W. FLIESCHMAN

Henry W. Flieschman of East Aurora, New York, a World War veteran, represents the Holstein breeders of the Empire state in the directorate of the Holstein-Friesian Registry Association, Inc.

Mr. and Mrs. Flieschman keep a good herd of Holsteins on Helen Mary Farm. This herd has made a splendid showing in the East Aurora Dairy Improvement Association. Mr. Flieschman has exhibited cattle at the fair held at South Wales, Erie county, and also at the Hamburg fair and won a number of prizes. Animals that he has sold have won prizes at different fairs and his senior herdsire, Paul Lenox De Kol, was selected to head the Erie county herd exhibited at the New York State Fair.

The Flieschmans have two children, a girl five years old and a boy two years old. Mr. Flieschman is highly esteemed in his own community and beside being one of the leading Holstein breeders in Western New York, is president of the local Dairymen's League.

DOUGLAS B. DIAMOND, JR.

Douglas B. Diamond Jr. of Gaithersburg, Maryland, was born on Zoar Farm, where he now resides. He is a graduate of the Georgetown Preparatory School and also studied at Georgetown College and Princeton University. For the past fifteen years he has operated his father's farms.

Zoar Farm, on which Mr. Diamond lives, contains 350 acres, mostly under cultivation. Mr. Diamond personally owns seventy head of Holsteins and ships whole milk to Washington, D. C.

He is a director of the Holstein-Friesian Registry Association, Inc. and as he comes from south of the Mason-Dixon line he brings to the deliberations of the

board a personal viewpoint and knowledge of what capable judges consider the greatest undeveloped Holstein market in this country.

S. R. MILLER

Ask any Holstein man who is the best know breeder of black and white cattle in south-central Pennsylvania and without hesitation he will answer, S. R. Miller. Mr. Miller has been a breeder of Holsteins for many years and has a wide circle of customers and friends throughout southern Pennsylvania and northern Maryland. In this section of the country the value of a dairy cow is estimated by her ability to earn a profit over the cost of her feed and labor. Therefore when Mr. Miller talked with the Holstein owners about the organization of the Holstein-Friesian Registry Association, Inc. he met with men who thought along similar lines. He called on 127 Holstein owners before the completion of the organization in the capitol at Harrisburg, July 31, 1925 and of this number no less than 116 became charter members of that organization.

Dairy Business Predictions

J. A. SCOLLARD, who addressed the Rotarians at Chehalis, Wash., recently, told his hearers that the Dairy Business would never be right until the spread of Ten Cents a glass or \$18. per hundred pounds charged consumers in hotels and cafes, and the \$2.50 paid producers, was adjusted.

He also predicted that before very long, comparatively less milk would be sold at retail or delivered to consumers, who would buy milk powder from the grocer and make their own liquid solution of the quality and richness they desired.

Not About Cows

A Good Plum Pudding

- | | |
|-------------------------------|--------------------------|
| 1 cup chopped suet | 1½ teaspoons baking soda |
| 1 cup sugar | 1 teaspoon cinnamon |
| 1 cup raisins | 1 teaspoon nutmeg |
| 1 cup bread crumbs | ½ teaspoon allspice |
| 1 cup flour | 1 teaspoon salt |
| 1 cup buttermilk or sour milk | |

Mix at night and put in steamer, let stand until morning, then steam for three hours. A good addition is a cupful of chopped mixed fruits—orange and lemon peel and citron. If this is used, add one teaspoonful of baking powder.

SAUCE

- | |
|----------------------|
| 2 tablespoons Butter |
| 1½ tablespoons Flour |

Blend on top of stove and add one cup warm water, cook till it thickens, stirring all the time. Season with three tablespoons of sugar, a pinch of salt and a little nutmeg.

This pudding will keep four or five weeks and is better steamed in several containers, to used one at a time.

Christmas Candy

WHAT magic words! "Candy" is music to the ears of any child from two years old to seventy—but Christmas candy! Oh-o-o.

Even the most carefully fed youngster, who has never even been allowed sugar on her oatmeal, somehow catches the candy contagion at this holiday time. And, while we all agree that too many sweets are a very bad thing for children, yet if *ever* there is a time when rules may be relaxed it is at Christmas, when indulgence is granted in many things forbidden at other times. Yet, even at this merriest time of all the year, the wise mother watches carefully what her children eat and insists that it be of the purest. For that reason, home-made candies are very desirable, since one knows exactly what goes into them. Then too, they are economical, for good candy sells for sixty cents to one dollar a pound and one who is skilled in candy making may count herself lucky. With her skill and a small amount of money, she may have a wonderful array of good pure candy for home consumption or for gifts to friends.

AMATEURS' ATTEMPTS

Candy, like all other foods, should be attractive to the eye, and it is often in the finishing touches that the amateur fails. However, a few trials with even the most difficult kinds will result in a finished product that even the commercial candy maker might envy. And one may always depend on one thing and that is that even the failures are not wasted for the youngsters with both eyes and mouths wide open will readily dis-

pose of any and all that fall short of perfection and they will not be the least bit critical.

WHEN COOKING

Now there are a few general rules, which if followed will contribute largely to success in candy making. First of all, a thermometer is of great help and gives a certainty that can be assured in no other way, but failing the possession of one, one must rely on the old-fashioned "threading" or cold water test. Where the latter is used one should be very sure that the water is cold, and this can be done by keeping a small piece of ice in it.

FRENCH CREAMS

In making the fondant which is the basis of so many candies there are two ways in which it can be done. The French creams are made without boiling, by taking the white of one egg, adding an equal quantity of cold water then stirring in enough XXXX confectioner's sugar until it is stiff enough to mold into shape with the fingers, after which the flavoring, coloring, nuts or chocolate may be added according to ones preference. The secret lies in using the proper sugar which should be fine as flour when rubbed between the thumb and finger. Very often ordinary powdered sugar has a little grain and will not do since the one thing to be desired in a fondant is smoothness.

BOILED FONDANT

To make a boiled fondant take one pound of granulated sugar and one-half cup of water. Boil until the syrup will spin a heavy thread in cold water. When cool enough to bear your fingers in it beat rapidly until it is soft, white and creamy. Dust the bread board with XXXX sugar, turn the mixture on it and knead as you would biscuit dough until it is very soft and smooth when it will be ready for use.

In making the cooked fondant, the main requisite is to keep it from graining, a thing that happens only too easily. It should *never* be stirred *after* it begins to boil, and should be covered while cooking. Covering prevents the escape of the steam, which in turn prevents the forming of sugar crystals on the sides of the pan. The use of part corn syrup instead of all granulated sugar will prevent this tendency to crystallize or grain. If corn syrup is not at hand add a little cream of tartar, lemon juice or vinegar. As with the French creams, once having made the foundation, any number of additions may be made for the sake of variety.

OTHER KINDS

Other delicious candies may be made of which gelatin is the foundation and these are not so rich and cloying as some of the creams. To one envelope of gelatin (such as is used to make one quart of ordinary gelatin) take one-half pound of granulated sugar. Soak the gelatin in one-third cup of cold water for five minutes. Put the sugar in one-third cup of cold water on the

stove and when it comes to a boil, add the gelatin and boil very slowly for twenty minutes. Add fruit juices—one-quarter cup for flavoring and coloring—orange, pineapple or raspberry are good. Pour into pan to depth of one inch and when cold turn out on board sprinkled with powdered sugar, cut with a knife dipped in hot water and roll in powdered sugar.

MARSHMALLOWS

To make delicious marshmallows use one envelope of gelatin and two cups of sugar. Soak the gelatin in three-quarters cup of cold water. Put the sugar into a saucepan with three-quarters cup of water and boil until it spins a heavy thread. Add gelatin and let stand until partially cool, then beat with an egg beater until too stiff and use a heavy spoon. When light and fluffy, spread in pans that have been sprinkled with powdered sugar. When cold cut in squares. Variety may be added by using shredded cocoanut, chopped almonds, candied fruits and various colorings and flavorings as part of the mixture.

The Silver Chest

NEARLY every family has more or less silverware that carries with it associations and sentiments aside from the money value represented. But usually this silver is carefully put away until entertaining is done, or company comes, or the semi-annual cleaning and polishing.

It is true that such care keeps it in a nice state of preservation, knives do not become scratched, spoons lost, the solid pieces do not get bent and worn.

However, we are surely growing older each day and why not enjoy our silver while we may and still take care of it, so there will be family heirlooms to hand down too.

No one will think so much of our wedding silver as we did ourselves when received at that happy time, and no one can associate the same memories with it and really, we are getting no enjoyment out of our silverware to speak of if we do not get use from it during our life time.

Solid silver will last several lifetimes with good care, and those who are fortunate enough to possess solid pieces can use them carefully, and have no anxious thoughts in the least. Good plated silver may be used a great many years and show very little wear.

The replating process is not an expensive one, it costs about one-half of the price of new silver. It is good judgment to take silver to be replated to a reliable jeweler, the traveling salesman about whom we know nothing is not to be trusted. The jeweler may charge a little more but in the end the work will prove satisfactory, and the replated articles should be as good as new.

There is nothing that can make a table appear more attractive than shining silver. Of course a great many people have perfectly good reasons for putting their silver away, careless handling or washing, danger of loss, more frequent polishing and cleaning are big factors, but these reasons can be overlooked too.

Always wash the silver first, washing and drying each kind by itself. Some kinds of food discolor silver quickly if left on for any length of time. Use soft

cloths for drying, a few drops of ammonia added to the rinsing water helps to keep silver bright.

Nearly every housewife has a favorite method of cleaning silver, some prefer a powder, others a silver cream, etc. Any good silver polish that will not scratch or mar is all right.

To help guard against loss place all the silver after it is washed or cleaned in a drawer or box kept for that special purpose.

A thrifty housewife plans to replenish part of her linen and bedding each year, why not plan to add a few pieces of silver if possible, not necessarily solid, and then establish the custom to use and enjoy it, bearing in mind that no one will enjoy it as much as herself.

Memorial to Discoverer of Camembert

LOVERS of Camembert cheese will be interested to learn that the 150th anniversary of its discovery or invention is to be celebrated by the unveiling of a handsome memorial tablet which will be placed upon the little farmhouse, still standing, in which Mme. Harel, a farmer's widow, discovered the secret of its manufacture. This was in the little village or hamlet of Camembert, Normandy, France and the town fathers, in token of the fame as well as wealth brought to their village, will erect the tablet in honor of the lady who certainly made a contribution to human welfare that far outranks many more spectacular deeds.

Tomato Soup

- | |
|---------------------------|
| 1 quart canned tomatoes |
| 4 tablespoonfuls butter |
| 1 teaspoonful salt |
| ¼ teaspoonful pepper |
| ¼ teaspoonful baking soda |
| 1 quart milk |
| 2 tablespoonfuls flour |
| 1 tablespoonful sugar |

Strain tomatoes through a sieve, add sugar, salt, pepper and soda. Melt the butter in a sauce-pan, add flour, then milk. When hot—not boiling—pour the tomato into the milk and serve at once. In many recipes, the directions are to pour the milk into the tomato, but a moment's thought will readily show that this is wrong, for the simple reason that the first of the milk, being a little milk in a lot of tomato, is much more apt to curdle, as so often happens in making cream tomato soup, than a little tomato in a lot of milk. Home-made tomato soup may be easily made in the fall when tomatoes are plentiful. The preliminary steps are the same as in making catsup. Scald and peel the tomatoes, add celery tops and onion, boil and strain. If used for soup, can at once. If used for catsup add vinegar and spices and boil down.

The darkest hour may be just before dawn, but the biggest blowout doesn't come in sight of a service station.

Advertising is meant either to tell something or sell something.

BUSY DAYS AT HARRISBURG

For several years the Holstein banquet has been the leading social event during Farm Products Show week at Harrisburg. The Pennsylvania State Farm Products Show is held in January every year at the Capital city of the Keystone state. The exhibits come from all parts of the state and the attendance not only from Pennsylvania, but also from surrounding states. Although many valuable prizes are given for exhibits there is no admission charged, and despite weather conditions, which are quite often unfavorable at that time of the year, the buildings are thronged during the whole week.

The Holstein banquet has somewhat overshadowed the other breed celebrations during that week. It is only fair to say that the Jersey, Guernsey and Ayrshire men who have attended this banquet have all contributed to make it a success. Usually one or more non-Holstein men have appeared on the program. The opinion has grown up that it would be only fair to make this banquet a general dairy celebration rather than limit it to the black and white breed.

On Wednesday evening, January 20th, the 1926 banquet will be held in the Harrisburg Masonic Temple. The speakers on the program are R. W. Balderston, secretary of the Interstate Milk Producers' Association and C. L. Burlingham, now assistant manager of the *Breeders' Gazette* and former secretary of the Ayrshire Breeders' Association. Mr. Burlingham had much to do with formulating the Ayrshire herd testing plan, which is being seriously considered by lovers of each of the dairy breeds. Instead of testing one or two selected animals and running them for all they are worth regardless of profit, the herd testing plan contemplates keeping records on every producing animal in the herd and is somewhat along the line of the work now being done in the cow testing associations.

The banquet comes as the culminating event of Dairy Day at the Farm Products Show. Starting at 9 a. m. and continuing until around 5 p. m. the dairymen who assemble in the State Capitol will hear addresses by prominent educationists and others high in the dairy industry. The addresses are to be short, followed by open discussion from the floor, so

that the views of the speakers will not be the only ones made known to the assembly.

Therefore, the business meeting of the Pennsylvania Federation of Holstein-Friesian Clubs will not be held Wednesday but will take place Thursday morning, January 21st, at which time officers will be elected and matters considered concerning the Holstein industry of Pennsylvania. The meeting is open to the public and all lovers of the black and white cow are invited to attend.

POLK COUNTY TO HAVE SHOW HERD

Polk County, Wisconsin, will be represented by a show herd at the Wisconsin State Fair next fall. At a meeting of the directors of the Polk County Holstein Breeders Association, held at Balsam, Wisconsin, November 24, this was decided upon. The Holstein men are coöperating with other live stock owners in order to help show the world what Polk County can produce.

Polk does not have a county agent and the directors think that the county is losing out thereby. The officers of the association are: Ernest Nelson, Lamar, president; George Kinney, Lincoln, vice-president; and Ray DeGoller, Lincoln, secretary and treasurer. The directors are: Andrew Jepson and Mr. Benson, Milltown; Gust Sandgren, Centuria; James Lawson, Luck; H. E. Billie, Luck; and Carl Seekins, Garfield.

BOYS NOW HEAD JUNIOR CLUB

November 21, the Cherokee Calf Club started its 3d year of work. John H. Lasher, Marathon County's Club leader attended the meeting at Colby, Wisconsin, and gave the youngsters some good advice. Officers were elected. Last year all the officers were girls, this year the following boys will handle the affairs: Melvine Brehm, president; Harold Miller, vice-president; John Szama, secretary; and Donald Smart, treasurer.

Arland V. Stall will continue to be the leader of the club. Last fall animals owned by the members made a good showing at the Wausau Fair, six of their calves winning first place in their respective classes. Two members, Melvine and Bernice Brehm, won trips to the state fair. The club's judging team won a silver cup at Wausau, given by the Marathon County Banker's Association. With an early start it may be expected that the club members will do even better this year than they did last year.

DIRECTORS NAMED

Directors of the Sanilac County Holstein-Friesian Association were named December 1, at the annual meeting of the organization held at Sandusky, Michigan. The association went on record as favoring a county-wide campaign in an effort to eradicate tuberculosis among cattle. The breeders will also sponsor a calf club. Directors chosen include the following: Ralph Wood, Melvin; Oscar Merriman, Deckerville; Edward VanCamp, Crosswell; Audrey Murray, Valley Center; George Black, Sandusky; Fred Lawson, Snover; Thomas Pattullo, Deckerville. The board of directors are scheduled to meet soon to name a president and secretary. The selection of George Black, Sandusky, as president and Ralph Wood, Marlette, as secretary, has already been made, although the directors failed to vote on the matter before adjourning.

WAUPACA BREEDERS' CLUB

At the annual meeting of Waupaca County Holstein Breeders at Manawa, Wisconsin, November 14th, A. E. Smith was re-elected as director. C. L. Raisler of Bear Creek and John Huffcut of Ogdensburg were elected to succeed O. F. Peterson of Scandinavia and John Erickson of Waupaca. Hold-over directors are Arthur Grueger, Herbert Steege of Clintonville, A. C. Klempf of Bear Creek, Stewart Lindsay of Manawa, Franklin C. Nace of Iola, and A. B. Rowe, Waupaca.

A. E. Smith was re-elected president, F. A. Nace, vice-president, and Stewart Lindsay, secretary-treasurer.

The members voted against holding any cattle sale this fall under the auspices of the club.

Most wild oats are sown on the night shift, and reaped in the cold gray dawn.

TO PROMOTE CALF CLUBS

The Ottumwa District Holstein Breeders Association was organized at Ottumwa, Iowa, November 16. For the first year the main project of the new organization will be to promote calf club work. The officers of the club are as follows: C. J. Mottet of Ottumwa, President; John Hamaker, Highland Center, Vice-President; Leo Emery, Highland Center, Secretary and Treasurer and Arthur E. Coolidge, Highland Center, Director in the State Association. The directors are: M. L. Truitt, Agency; Raymond Warren, Eldon; A. P. Ellis, Ottumwa; C. A. Evans, Hedrick, and Tom Michaels, Ottumwa.

IN THE WEEK'S ACTIVITIES

The Holstein-Friesian Club of Winnebago County, met December 3, at Oshkosh, Wisconsin. This was one of the many agricultural activities of the week, one of which was a banquet of the live stock associations and Oshkosh business men. The gathering was addressed by a number of interesting speakers, in addition to the general amusement program.

The Holstein association elected as directors: Louis Sorenson, Larson; Hugo Merk, Oshkosh; Arnold Pettrick, Oshkosh; John Cox, Omro; Earl Hughes, Neenah; Frank Scoville, Buttes des Morts and H. L. Ellis of Eureka.

WHO WAS AT FAULT?

Washington state has a war veteran and Holstein mixup. The state has a farm project at White Bluffs-Hanford, on which veterans were encouraged to settle. Then the state appropriated a sum of money as a loan to enable the veterans to purchase cows on the installment plan, paying for them from the monthly receipts for milk and butterfat. The legislators when making the plans specified that only registered Holsteins could be purchased with the money borrowed from the state.

On November 19, one of the veterans, G. L. Brockway, told the legislators that the cows were too highly bred and too high priced to make the venture a success. The prices ranged from \$150 to \$250 each. He said, "We can't make money with them, because the payments are too high in proportion with what we get for butterfat. We wanted milk and butter and we got high bred, blue ribbon cattle."

When one of the legislators wanted to know what became of the cows after the state took them back from the veterans, he was informed that Dr. Robert Prior, state veterinarian, had them on his ranch at Benton City. When the legislator suggested that keeping cows with butter selling at 55 cents a pound might be profitable, Dr. Prior said there was a deficit in handling them.

Placing purebred dairy cattle with inexperienced farmers is

about the surest way to give the industry a black eye. Had the animals been fully paid for and the veterans known something about livestock raising it is likely that, after a few losses which could be blamed to inexperience, the cattle venture would have proved profitable, providing the animals were worth the money as dairy producers. But when the stock was purchased at purebred prices, and the purchase price to be paid in monthly installments from the sale of dairy products, failure was almost inevitable.

HOLSTEIN PRICES IN IOWA

Three sales of purebred Holsteins were held in Iowa early in December. The first was at Tripoli where 51 head averaged \$110.19. The second was at Waterloo where the average was \$113.92 for 58 head. At the third sale which was held at Fort Dodge an average of \$86.34 was obtained for 63 head which included a number of very young animals.

Nearly all of the 173 animals sold were just good plain Holstein dairy cattle. In the three sales there were 37 head of fresh cows and their average price was \$128.92. There were eighteen head that could be classed as close springers and they averaged \$150.55. Eleven heifers that had recently freshened with their first calf averaged \$120, while 15 close springers averaged \$118.33. There were 21 unbred yearling heifers in the sales and their average price was only \$59.40 while the eighteen under a year old averaged \$52.50. Twelve bulls of serviceable age averaged \$113.33 and they included two herdsires. There were fourteen bull calves under a year old and they averaged only \$28.00.

IN MARATHON COUNTY

The annual meeting of the executive officers of the Marathon County Holstein Association was held at Edgar, Wis., Nov. 14, eight of the nine clubs in the association being represented.

Officers were elected as follows—Ed. Brehm, president, Emil Herman, vice-president; Chas. Symonds, secretary and F. X. Schilling, treasurer.

The sum of \$55.00 was appropriated to wipe off the debt incurred last year in handling the county show herd. A further sum of \$100.00 was set aside to give each first year club member who exhibits a calf at the Wisconsin Valley fair next fall without winning a prize, the sum of \$2.

A resolution will be sent to the county board asking for an appropriation to aid the various breeders' clubs to exhibit county show herds.

County agent W. J. Rogan talked on the importance of backing calf club work and Senator Joseph L. Barber spoke of legislation.

Fully Accredited Cattle

COLONEL JOH LYONS

One of the well-bred, handsome bulls heading our ACCREDITED purebred herds which now number around 140 head.

Just think, 140 head of ACCREDITED HOLSTEINS for YOU to choose from. For many years these herds have been handled to produce profitably, the result is that cattle obtained here make good anywhere. We want to reduce our herds to the capacity of our stables.

L. N. MACK & SON and FLOYD E. MACK

Montrose,

Pennsylvania.

Sylvan Lawn Farm

KORNBEK LILITH

a daughter of Ormsby Lilith Clothilde.

Only a heifer, but study her outlines, depth and apparent constitution.

Herd under State and Federal Supervision. Let me quote prices to you.

E. C. COBB

Chenango Co., Greene, New York

Accredited Holsteins

Of good type and superior dairy quality.

Bred to the grand young bull, Berylwood Prince Aggie Chicago, whose sire is a show bull of wonderful merit and whose dam produced 53,664.1 lb. milk, 2,268.59 lb. butter in two years.

Reasonable Prices

Highest Quality

L. L. Allis

Rummerfield, Bradford Co., Pa.

SADIE BUTTER GIRL SPOFFORD

700.7 lb. milk, 30.54 lb. butter in a week as a six-year-old, while the year previous she produced 647.6 lb. milk, 29.99 lb. butter in seven days. This cow with her stablemates in my ACCREDITED HERD mate with SIR CHAMPION SYLVIA, a son of the noted CHAMPION ECHO SYLVIA PONTIAC from a 30 lb. daughter of a twice 37 lb. cow.

GLENN L. WARNER

Cuba, R. 5 Allegany Co. New York

FEED DOPE

Under date of November 25, the State College of Agriculture at Ithaca, New York, issued its monthly news letter containing substantially the following advice on feeds and feeding.

Since late October the average price of feed has advanced \$1.50 a ton. The price of wheat products has climbed about \$2.00. In spite of a huge corn crop, with relatively few hogs and steers to consume it, seasonal demands have caused the price of hominy to increase \$2.50 a ton, gluten feed \$2.60 and gluten meal \$4.60. Bran has been carried up by related feeds until oats are a better buy at this time as a source of bulk, and of medium to low protein ingredients.

There is nothing in the present feed outlook to warrant buying in large quantities unless lower prices for cash can be secured. Nearly all other lines of industry are operating on a hand-to-mouth basis. There is plenty of feed in sight. Present visible surpluses should operate to discourage violent price changes.

On the basis of prices prevailing around the first of December, a mixture composed of 200 lb. of hominy, 100 lb. of corn or barley, 300 lb. of oats, 200 lb. of cotton seed meal, 100 lb. of oil meal and 100 lb. of gluten feed is advised, one ton of this will contain 1,560.2 pounds of digestible nutrients with 351.6 lb. digestible protein. The mixture contains a number of home grown grains and will be found satisfactory if fed in the usual way with good corn silage and alfalfa or clover hay.

Under prevailing conditions, the above grain mixture, which contains 17.5 per cent of digestible protein will be found economical as to cost and efficient in its effect upon the cows and their production. Substituting barley for corn and corn for the hominy will not greatly affect the feeding value. If fed with mixed hay, increase the oil meal 100 pounds, and decrease the hominy 100 lb. If timothy is fed, the alteration should be even greater.

PRICE, BUTTER AND OLEO

That the price of butter governs the manufacture of oleomargarin in this country has long been known to students of the dairy situation. This is confirmed by the report of the Commissioner of Internal Revenue which shows that during October 1925, the amount of oleomargarin manufactured increased nearly 50% over the amount manufactured during October 1924. This sudden increase in production is coincident with an increase in the price of butter for the same period and illustrates, in a very specific way, the constant impediment in the way of fair prices for dairy butter in the period of

expensive production costs, through the ability of a competing industry to rush its product into the market whenever opportunity offers.

The concern which the dairy industry justly feels over this situation is due to the fact that the cost of the materials from which oleomargarin is made is no greater, practically speaking, one month of the year than another, while the cost of butterfat fluctuates widely in different years and different seasons. The price of coconut oil in New York at the present time is but 13¼ to 14c a pound.

DAIRYMEN'S LEAGUE MILK PRICE

According to a report from the office of the Dairymen's League Coöperative Association, Inc., the League farmers will receive a net pool price for November milk of \$2.41 for 100 pounds. This is for 3% milk at the 200-210 mile zone from New York City. This is ten cents above the October price and fifteen cents higher than the November price of 1924. The increase is said by President Slocum to be the result of a gradual increase in efficiency in the league during recent month and partly because of more milk sold in fluid form.

The Association's monthly statement shows that a total volume of 132,313,211 pounds of pooled milk was delivered to the markets, during the month of November; ninety-seven and one-half million of this, or nearly 74% was sold in Class I as fluid milk. Of this amount, the League's own plants handled 43,126,724 pounds, of which nearly forty million pounds or 92% were sold in Class I or fluid market milk.

The official statement also announces the total gross sales of milk and milk products for October, 1925, as \$5,279,548.98. Of this amount, fluid milk sold to dealers and through the League's plants, amounted to a total of \$4,985,940.04.

John D. Smith, of Delhi, Delaware County, New York, Second Vice-President of the Dairymen's League, died December 10. This is the first death of a league director while in office.

Mr. Smith lived on a farm near Walton, New York, and had been there since he was seventeen years of age. His herd sometimes ran as high as 100 cows, largely purebred Holsteins. At the time of his death he was Sheriff of Delaware County. He was elected director of the old Dairymen's League in December, 1921, of the Coöperative Association in 1922, and was elected Second Vice-President in June, 1924. He is survived by his wife and five children.

FARMERS AND THE TRUST LAWS

Farmers of Ada County, Idaho, assembled in a County Grange meeting recently took some action urging support of the dairy industry in the use of butter instead of oleomargarin in their community. As a result, a complaint has been filed with the Federal Trade Commission, charging these farmers with violation of the Anti-Trust Laws and practices in restraint of trade. The case apparently is very similar to the one against a Wisconsin coöperative creamery association about a year ago.

The Idaho case has not yet come to the attention of the full Commission, but has been referred to its San Francisco office for investigation. I am advised by the Secretary of the Commission as follows: "If it should be found that the case should be dismissed without further action, no hearing will be necessary. If, however, it is concluded that a complaint should be issued, the Commission's amended rules apply."

The principle involved is that of invoking the Anti-Trust laws of the U. S. to prevent a farmers' organization from expressing its views on the subject, Butter versus Oleo.

Secretary A. M. Loomis, of the National Dairy Union in calling attention to this matter, writes that should the Federal Trade Commission decide to hold a hearing, the dairy industry will be represented.

Amelia—"Swear not by the moon, the inconstant moon."
Augustus—"Then what shall I swear by?"

"Swear by that which you hold invaluable; something which is dearer to you than all else; something which you cannot live without."

"Then, Amelia, I love you! I swear it by my salary."

"What is the difference between a cold man and a tired dog?"
"One puts on an overcoat and the other pants."

A TRIP AROUND THE EASTERN SHOW CIRCUIT

BY F. RUSSELL HOWARD

No doubt a good many people who read the HOLSTEIN BREEDER AND DAIRYMAN visited some of the fairs where the Essex Farms' Herd of Holstein Friesians were exhibited this year, and although we tried to see that everyone received a card telling about Essex Farms and its owners, probably quite a few people failed to learn that Essex Farms are owned by John M. Dennis and Son and managed by the oldest Holstein showman in the United States, Mr. Frank White, who was in charge of the show herd this year.

Dennis and Son have been breeding and showing Holsteins for quite a number of years. Until 1923 their showing was confined to local territory, in 1923 they showed a small herd at Timonium, Md., Syracuse, N. Y., and at the Eastern States Exposition at Springfield, Mass., winning the grand championship on Westview De Kol Walker at all three shows. At the National Dairy Show that year, she was placed second in the aged cow class, and was made reserve all American aged cow for 1923.

This was not "Westview's" first season in fast company, she had been placed second as a four-year-old at the 1922 National, and had won the grand championship at the leading fairs in the Central West.

During 1924 "Westview" was on yearly test, and consequently was not out on the show circuit. She finished the year with 24,894 lb. milk, 1,006 lb. butter, which I consider a very good record for any cow to make.

In 1924 Mr. John M. Dennis decided to get the best man that he could find to manage his farms and fit and show a herd of real Holsteins. After much traveling he discovered just the man that he was looking for, and after a lot of persuasion secured the services of Mr. Frank White, a man who is generally conceded to be the best Holstein showman in the country. As fitter of show cattle he has few, if any, equals.

Mr. White came to Essex Farms in March 1925, and immediately returned to Wisconsin to secure some real top-notch show animals for Dennis and Son's 1925 show herd, and now comes something that ought to be of interest to every reader of the BREEDER AND DAIRYMAN. He went to the herds owned by Plain Breeders and Dairymen to find show cattle, and there was where he found what he wanted.

Naturally a man with his experience can pick cattle of show quality in the rough, which is the only safe way to select cattle for either showing or for dairying, and they did not cost a car load of money. Of the eighteen head that we took around the circuit this year, thirteen head were from the group that Mr. White selected in Wisconsin, and there was only one of that number that cost over two hundred dollars.

If the average breeder and dairyman thinks that a real show herd is gotten together with money alone, he is sadly mistaken and if he thinks that the man who fits and shows a herd of eighteen or twenty animals has a "cinch" he is all wrong. How would you like to get up every morning at four o'clock, milk eight or ten cows, feed around forty head of cattle, and carry milk to about forty calves, do a lot of outside work, and on top of that repeat the stunt of feeding at noon, and milking and feeding in the evening, manage a farm of two hundred seventy-five acres, and a gang of men? That was Mr. White's "daily dozen," seven days a week, from April until September, and then it was the show circuit for five weeks.

Don't think that a grand champion cow or bull just happens along, steps in and wins. To be sure you have to have a real type animal to begin with, but a great many judges seem to like to see Holsteins looking like "black and white Herefords," and as long as judges want them looking beefy, they have to receive a lot of care and feed to put them in show condition, and then a lot of extra work put on them to keep them so that they look pleasing to the public.

I think that the Essex Farms herd show up as well as any herd that was on the Eastern Circuit, when you take into consideration the fact that they were picked from several different herds, and as a consequence we could not show many groups.

At the Maryland State Fair we had the grand champion bull and the grand champion cow, first prize exhibitor's herd, and first and third prize dairy herds. We also had the fourth prize three-year-old heifer, second prize two-year-old; first third and fourth prize senior yearling while our heifer and bull calves were well inside the money.

At the New York State Fair we won the grand championships with Sir Jamolso Pontiac Segis and Westview De Kol Walker. Our three-year-old heifer was again fourth, we won fourth and fifth prize with our senior yearling heifers. Our exhibitor's herd was placed third and our dairy herd was placed fourth and that show at Syracuse was a hot one and I don't mean maybe. At the eastern states exhibition Westview De Kol Walker again won the grand championship. We took third prize with a four-year-old, fourth with a two-year-old, first and third with our senior yearling, while we had first prize A. R. O. cow and the leading exhibitor's herd in a good strong class.

At Trenton, Westview was again grand champion and first prize senior A. R. O. cow. Sir Jamolso Pontiac Segis was first prize aged bull, while we took second in the four-year-old cow class, second for three-year-old heifer, first for two-year-old, second, third and fourth for senior yearling, second for junior yearling, third for heifer calf, second and fifth with bull calves and our exhibitor's herd was placed third.

At Richmond, Westview De Kol Walker had to take second in the weakest class of aged cows that we had shown in, and what makes it seem so strange is that she went into the ring looking the best that she had looked this year. Sir Jamolso Pontiac Segis was placed third. We won second for three-year-old heifer, first for two-year-old, first and third for senior yearlings and third with exhibitor's herd.

There is a thing that seems very strange to me and that is, although we have our True Type models to go by, the judges seem to disagree just as much as they ever did on what comes nearest to being the true type Holstein male and female. Some of the judges seem to go crazy about deep middles and straight top lines. It did not matter if an animal had ribs as flat as a griddle-cake, if they had a deep barrel they were put up "in the money." What does depth amount to without width and spring of ribs to balance it? There is one judge (I will not name him) who seems to be the most practical of the big show judges. He likes to see a Holstein cow look like a dairy cow and not like a beef cow, and he likes to see an animal built in proportion. For instance let a bull come into the ring looking like an old broken down milk cow, that extreme dairy type that they tell about—he sends such an animal out if possible.

Here I have mentioned the two extremes that we see in the show ring and I don't think that either is to be desired.

All things considered we had a good season and I hope to be able to travel the circuit again next year. It is a great game if you don't weaken.

Note from the *Heckville Bugle*:

"Our distinguished citizen, Colonel Guzzler, the Civil War veteran, recently celebrated the fiftieth anniversary of his marriage. The colonel tells some interesting stories of the great conflict."

ONLY A CALF

By E. G. BENNETT, *Missouri Dairy Commissioner*

W'y, I'm just a calf—ain't been here long—
And that old hired man, so big and strong,
Just put my head between his knees,
And gave it such an awful squeeze,
Tryin' to make me drink skimmilk
Out of a Dirty Pail.

He put his hand on the top of my head,
And as he pushed my nose in the milk he said:
"Now drink, you stubborn little cuss,
There's not any sense in all this fuss!"

But I just kicked and butted so,
That feller was glad to let me go.
I turned that milk pail upside down,
For I thought sure I was going to drown.
I want my mamma—where can she be?
She'd better hurry up and come to me,
For I'm gettin' hungry and don't want that feller
Hurtin' my mouth and makin' me "beller,"
Tryin' to make me drink sour milk
Out of a Dirty Pail.

YOU SHOULD HAVE ONE!

This POCKET HERD BOOK is the result of years of experimentation by practical breeders. The result is the most convenient, practical, up-to-date BREEDERS' COMPANION you ever saw.

Given as a premium with a two year's subscription to THE HOLSTEIN BREEDER AND DAIRYMAN at One Dollar, new or renewal.

If you once use one you will never be without it while you own purebred cattle. The handiest premium you ever saw.

SALES MANAGER—PEDIGREE DIRECTOR

Are you planning to dispose of your purebred Holsteins?

My lifetime experience may not only save you money but also enable you to obtain more for your stock. Charges Reasonable.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

March 4, 1926—Chambersburg, Pa., C. L. Barnhart, 40 head; S. R. Miller, sale manager.
March 16, 1926—Sheridan, Pa., M. H. Bennetch Spring Sale, 75 head; S. R. Miller, Chambersburg, Pa., sale manager.
March 17, 1926—Elizabethtown, Pa., W. A. Wither's Dispersal, Accredited Holsteins & Guernseys.
March 23, 1926—Harrisburg, Pa., Dr. J. L. Lenker Dispersal, Accredited Holsteins and Guernseys.
March 23, 1926—Carlisle, Pa., Dispersal of W. S. Ker's Accredited Herd.

HOLSTEINS OUTSELL GUERNSEYS

Thirty registered Holsteins and Guernsey bulls were sold at Holtville, California, November nineteenth. They brought from \$180 to \$440, the highest priced animal being purchased by A. Stokalper of Holtville. T. H. Wilson held the sale. The Holsteins brought better prices than the Guernseys, averaging \$249.66 while the latter averaged \$159.

GOOD SALE AT WOODSTOCK

The annual sale of the McHenry County Holstein breeders was held at Woodstock, Illinois, November 19th. Purebred females averaged \$150 and purebred bulls, \$115. There were forty-six purebreds and twenty-six grades sold and the sale was very successful, amounting to \$9,000. The high price for a bull was \$170, the animal being bought by Gus Schultz of Harvard, and consigned by A. D. Cornue of Hebron. Willis Gardner of Solon Mills and Geyer & Smiley of Harvard had the highest priced cows, \$190 each. A number of the animals remained in McHenry county although there were buyers from St. Charles, Dundee and Arlington Heights.

RECENT WISCONSIN SALES

A good demand for bulls was the feature of the semi-annual Holstein sale held at Elkhorn, Wisconsin, November 17th. Walcowis Ormsby Mooie Creamelle, born February 1, 1925, was purchased by Will Libby of Zenda. East Troy King Jiggs brought \$190. He was consigned by William O'Leary and purchased by Will Behing. This bull was first in his class at the Walworth county fair this fall and was also a prize winner at the state fair. Several of the animals were in poor condition which brought the average down to \$92.01, the 46 animals bringing \$4,232.50.

At the Holstein bull sale held at Sparta, November 26th, fourteen bulls were sold, the average price being \$85. The top price was \$125 for an animal consigned by George Weiner and purchased by Ben Mee of Tomah.

DENNIS REDUCTION SALE

The Essex Farm Reduction Sale held on the state fair grounds at Timonium, Maryland was well attended. The forty-three animals offered brought \$5,720. The eight bulls averaged practically \$82.00, the thirty-five females \$144.56. The large number of young heifers and calves brought down the average.

The highest price for a bull was \$140.00 obtained for SX King Konigen Lad, a young show bull fifteen months old. His dam as a two-year-old produced 8,631 lb. milk in ten months in C. T. A. work and has won a number of prizes in the show ring. "Lad" will head the herd at the St. Mary's Industrial School at Baltimore.

Charles H. Anderson of Baltimore took a number of good animals and paid the top price, \$450 for SX Konigen Beauty, a very fine animal by Dutchland Konigen Sir Rag Apple from the show cow, SX Pontiac Beauty. It is interesting to note that the top price for a male and the top price for a female were obtained for full brother and sister.

Princess Segis Neeltje with a cow testing association record of 192.9 lb. fat made in four months from nearly 5,000 lb. milk brought \$310. Her purchaser was James F. Hall of Churchhill, Maryland, and Mr. Hall obtained a real producer.

Three other animals brought \$200.00 or more. The auctioneer was R. E. Haeger of Algonquin, Illinois, while Forrest Farr, superintendent of the Springfield State Hospital, read the pedigrees; Frank White was leadsman, and County Agent Snarr collected the signatures of the buyers. Among the attendance were some of the boys that Mr. Snarr had trained to select cattle notably Arthur Dunnigan, high man at the recent National Dairy Show junior judging contest. The boys appeared keenly interested in the progress of the sale and from their comments appear to be good judges of values as well as type.

Buyers were present from Pennsylvania as well as Maryland with visitors from Delaware, Virginia and New Jersey. Cattle were purchased by Walter S. Price, Phoenix; Geo. B. John, Union Bridge; Crownsville State Hospital, Crownsville; N. Ford, Cockeysville; St. Mary's Industrial School, Baltimore; Bausum Bros., Annapolis; Geo. B. Chilcoat, Sparks; James F. Hall, Church Hill; Martin L. Myers, Westminster; Jos. S. Archer, Fallston; Vincent Rogers, Frederick; Dr. C. H. Conley, Frederick; Geo. P. Buckley, Union Bridge; Chas. H. Anderson, Baltimore; W. T. James, Jr., Darlington; J. Wm. Deverse, Reistertown and J. Roy Enfield, Maryland; Davis Brothers, Seven Valleys; John M. Fisher, Jonas S. Fisher and J. K. Petersheim, all of Gordonville, Pa.

BULLS OUTSELL FEMALES

Ten Holstein bulls sold at the eastern Iowa breeders' sale at the Dairy Cattle Congress grounds at Waterloo, Iowa, December 1st, averaged \$130.50. A February bull calf consigned by the Iowa farm was bought on behalf of the Independence State Hospital for \$250. The females, forty-two in all, averaged \$110. This included several small heifers bought for calf club purposes at very low prices. Iowana Coronis Veeman with a year butter record of nearly 700 lb. went to the Iowa Soldiers' Orphans' Home at Davenport for \$225.

A CANADIAN SALE

The fourteenth annual consignment sale of the Elgin Purebred Holstein Breeders Club was held at St. Thomas, Ontario, December 1st. The few male animals sold brought comparatively good prices averaging around \$115, the females averaged around \$100. In all fifty-one head were sold, the total receipts being nearly \$6,000. The top price for a male was \$190, obtained for Sir Ormsby Banostine Payne 7th a six months old bull consigned by Van Patter Brothers and purchased by Frank George of Mosley. Woodland Pontiac Schuiling, a six-year-old cow of the Van Patter herd at Dunboyme brought \$235 and was bought by Ed Legg of Belmont.

About half of the animals went out of the district, two of the heaviest buyers being L. P. Wigle of Kingsville and William Dunn of London, buying for the Queen Alexandra Sanatorium.

DISPERSAL OF THE LENKER HERD

Herds that are producing milk which is being retailed for a price of 28c per quart are seldom offered at public auction but the public will have an opportunity to secure such a herd when Dr. Jesse L. Lenker's herd is sold by Colonel Mead at Harrisburg, Penna., on Tuesday, March 23d.

The Lenker herd has long been noted as one of the best in Dauphin County. It has always contained both purebred Holsteins and purebred Guernseys and the genial doctor spared no expense to insure that his foundation stock should be both fine individuals and big producers.

In later issues we plan to tell more about the breeding of the animals in Dr. Lenker's herd, both the purebred Holsteins and the purebred Guernseys. It is enough now to say that the herd is on the accredited list. As the Wither's herd, which will be sold at Elizabethtown on March 17th is also accredited and also contains purebred Holsteins and purebred Guernseys it can be seen that these sales offer opportunities for owners of the two principal breeds of Southern Pennsylvania to secure real good cattle at the prices they bid upon them.

WITHERS HERD TO BE SOLD

On March 17th at Elizabethtown, Lancaster County, Penna., the W. A. Withers herd will be dispersed at public auction. This herd has only been in existence about two years. Mr. Withers however purchased his stock from accredited herds and then proceeded to develop the animals with the result that in the Sunshine Dairy they have exceeded by a wide margin their cow testing association records made in their old homes.

In the recent published annual report of the Garden Spot cow testing association the Withers herd stood second, the twenty-one animals averaging 9,671 lb. milk, 357.4 lb. fat. The highest cow and the animal in third place are both members of Sunshine Dairy. First position is held by the four-year-old Q-Dale Ruby Veeman Korndyke. Her record is 520.5 lb. fat, 14,936 lb. milk. She is a granddaughter of Pontiac Korndyke and her dam, Rena De Kol Veeman, has a C. T. A. record of 558 lb. butter, 13,312 lb. milk and is a daughter of King Korndyke Hengerveld Veeman.

In third position on the roll of the association stood Dijkstra Segis Creamelle, a daughter of Dutchland Creamelle Segis Konigen from a daughter of King Hengerveld Hartje with a record of 14,731 lb. milk, 502.2 lb. fat. Two other members of this herd have exceeded 12,000 lb. milk in the past C. T. A. year. De Kol Aaggie Elmeta produced 12,522 lb. which contained 426.5 lb. fat and Dijkstra Hengerveld Pender produced 12,377 lb. milk with 414.8 lb. fat. She is the dam of Dijkstra Segis Creamelle and they certainly made a great mother and daughter combination.

Q-Dale Emma Johanna Korndyke, another granddaughter of Pontiac Korndyke, is credited with producing as a three-year-old 10,513 lb. milk, 463.9 lb. fat.

At the head of the herd is the bull, King Piebe of York Pontiac. He is the son of King Piebe of York 3d, a noted show bull and junior champion at the Maryland State Fairs of 1922 and 1923. King Piebe of York Pontiac is from a daughter of King Piebe of York and her dam is a granddaughter of King of the Pontiacs.

Naturally the question will come to our readers, "Why is Mr. Withers selling so soon?" The fact is that he chose his farm with his usual business ability and the improvements he has made on it and its natural attractiveness has made it desired by the managers of a philanthropic institution who have offered an attractive price for the land. Therefore the herd, registered Holsteins and registered Guernseys, will be dispersed of. Colonel Glenn Mead, of East Aurora, has been secured to officiate.

For Your Next Bull

A son of KING ORMSBY PONTIAC CREATOR whose EIGHT nearest dams average over 35 lb. butter in a week.

From a daughter of LONG BEACH DE KOL KORNDYKE, whose dam made 1,226.27 lb. butter in a year.

Big records, short time and yearly, appear in every line of their pedigrees.

The young bulls are show animals and their dams prize winners.

This herd has never had any T. B. or Abortion.

Cow Testing Association Reports

IN CUMBERLAND COUNTY

Registered Holsteins occupy nine of the ten leading places in the report of the Cumberland County Cow Testing Association for the month ending November 20, according to Tester A. A. Raudabaugh. "Spot" owned by Jesse Kurtz led with 71.3 lb. fat, 1,980 lb. milk. Another Spot owned by J. H. Lear of Carlisle, Pa., was second with 70.6 lb. fat from 1,680 lb. milk, while another Lear cow was third with 64 lb. fat from 1,683 lb. milk. A registered Guernsey was tied for fourth place with C. G. Niesley's registered Holstein "Lady," each being credited with 63 lb. fat. Another tie resulted for sixth place, Mr. Kurtz and Mr. Lear each having a cow with 60.9 lb. fat to her credit. Strange to say another tie resulted for eighth place and again the Lear and Kurtz herds furnished the animals, each having 60.8 lb. fat to her credit. "Pearl" a member of the Lear herd was in tenth place with 60.6 lb. fat, the ten leading cows averaging 1,655 lb. milk, 63.6 lb. fat.

Mr. Kurtz's "Spot" with 71.3 lb. fat and his cow "Princess" with 60.8 lb. fat with Mr. Niesley's "Lady" having 63 lb. fat are daughters of King Ormsby Abbecker Helena, now at the head of the herd of I. V. Otto. This handsome bull is a son of King of the Ormsbys from a daughter of Korndyke Abbecker and his offspring are equally as good individuals as they are producers.

Mr. Lear's cows "Spot" with 70.6 lb. fat, "Filetta" with 64 lb. fat, "Polly" with 60.9 lb. fat and "Joe" with 60.8 lb. fat are all daughters of the former Lear herdsire, Ormsby Clothilde Lad, a son of the famous old sire, Ormsby Korndyke Lad.

The registered Holstein herd of Jesse Kurtz numbering six purebred Holsteins stands first with an average of 1,596.5 lb. milk, 57.6 lb. fat. The Lear herd which consists of fifteen purebred Holsteins averaged 1,280 lb. milk, 45.6 lb. fat. Mr. Lear had ten cows that milked 50 lb. or better a day which means two-thirds of his entire milking herd. C. J. Niesley produced 1,250 lb. cans 3.66 per cent milk from sixteen animals, four of which were heifers. The herd of I. V. Otto contained one cow 11½ years old that milks 73.9 lb. per day, a ten-year-old that milked 80 lb. and several heifers that produced over 60 lb. daily in their second lactation period.

The Cumberland County Testing Association is going strong for quality instead of quantity. In 1920 they had 360 cows, in 1925 only 295.

During the month 27 herds containing 249 milking cows were tested. Of this number 52 cows produced over 40 lb. fat and 26 over 50 lb., while 46 animals exceeded 1,200 lb. milk during the test period.

A GRAND OLD COW

Leda Cornucopia is a Holstein cow bred in the herd owned by the South Dakota State College. Leda is past seventeen years old and during her life has produced 174,795.7 lb. milk and 5,744.99 lb. butterfat. This is over 86 tons of milk or four freight carloads. Leda is not yet through as she was milking around thirteen quarts daily the first of November.

If she completes another milking period, she will crowd the world long-time production for butter making and butterfat.

FIRST IN MICHIGAN

Seven purebred Holsteins owned by A. Reek of Port Huron, Michigan, stood first in the Cow Testing Association Bulletin recently issued by the Michigan State College. These 7 animals averaged 1,499 pounds milk and 51.38 pounds fat.

Third place went to a Holstein herd of Chris Evans in the Sanilac-Crowell association. This herd averaged 1,202 pounds milk and 44.143 pounds fat.

There were 22,811 cows enrolled in the Michigan Associations during October.

A purebred Holstein owned by Neil Muir, on twice-a-day milking produced 13,416 pounds milk and 75.05 pounds fat, standing fifth for the entire state.

A GOOD SHOWING

Twelve purebred and grade Holsteins owned by John Brandt of Hazel Dell, Iowa, carried off honors in the Pottawattomie County C. T. A. during October by averaging 1,043 lb. milk, 36.8 lb. fat. Two members of this herd each produced over 50 lb. fat. During the month 294 cows were in milk every day the association which was organized only a few months ago held sixth place in the state of Iowa last month.

LEADERS FOR FOUR MONTHS

For four consecutive months the purebred and grade herd of William Kroll has headed the Jo Daviess County Cow Testing Association, according to the official report issued from the University of Illinois. During November this herd averaged 1,032 lb. milk and 34.4 lb. butterfat. A three-year-old purebred member of the herd was credited with 1,188 lb. milk and 44 lb. fat, the second highest record made in the association.

SOUTH DAKOTA TESTING

Byronia Redfield Lyons, one of the cows in the Sioux Falls Penitentiary herd produced 109.32 lb. fat and 2,733 lb. milk during November, thereby making a new high record for cows enrolled in the South Dakota Cow Testing Associations. Spot owned by Eales & Makepeace, produced 73.57 lb. fat in the Watertown Association. Ada, owned by Frank Johnson of Hetland, made 63.96 lb. fat. A purebred owned by W. G. Magee, produced 59.20 lb. fat in Hamlin Association, while another owned by Rohde & Rogness was credited with 51.48 lb. fat. The herd that averaged highest consisted of eleven grade Holsteins with an average of 48.42 lb. fat and 1,263 lb. milk. The five leading herds consisted of black and white cows, the next one of purebred Holsteins and grade Guernseys and the next two were all black and white cows. Cow testing association work is proving very effective in South Dakota for the herds average 10% smaller than they did a year ago, while the efficiency of the remaining cows is greater, thus putting dairying on a more profitable basis.

The price level for butterfat decreased slightly from the October figures, which were 49 cents per lb. against 48 cents for November. A year ago the price was 35 cents a lb. For November this year the average production was 23.14 lb. butterfat per animal as compared with 20.34 lb. last month and 21.74 lb. for November 1924.

WISCONSIN C. T. A. WORK

Robert L. Ray, Eau Claire, Wisconsin, had 14 purebred Holsteins enrolled during November in the Eau Claire C. T. A., and they averaged 1,125 lb. milk and 39.2 lb. butterfat. Seven of Mr. Ray's animals produced 40 or more lb. fat, the leader of the association being credited with 79.5 lb. fat from 2,091 lb. milk. A stablemate was second with 64.9 lb. fat from 1,804 lb. milk.

An unregistered purebred Holstein at the Southern Wisconsin Colony, has been enrolled in the Racine County Cow Testing Association for the past 12 months and has produced 552.9 lb. fat. During November she was credited with 85.1 lb. fat from 2,127 lb. milk. Pauline Maplewood Pel DeKol, owned by the Colony, has just completed 12 months of work in which she produced 20,008 lb. milk and 650.4 lb. fat. Norway Spruce DeKol Burke, owned by Hans P. Olson, Franksville, Wisconsin, as a two-year-old made 11,784 lb. milk and 431.9 lb. fat.

The Marinette County Asylum furnished the leading producer in the Marinette County Cow Testing Association, but she only led by a very slight majority. The Asylum cow produced 59.6 lb. fat from 2,070 lb. milk, while another purebred Holstein owned by Philip Augustine of Pound, Wisconsin, produced 59.5 lb. from 1,907 lb. milk. The Augustine herd consists of only six milkers, but they averaged 1,070 lb. milk and 34.1 lb. fat, the highest of any herd in the association.

Nine purebred and grade Holsteins owned by W. J. Mortensen of Birnamwood, Wisconsin, led the Plover-Marathon Cow Testing Association for the month of November, by averaging 1,043 lb. milk and 35.3 lb. butterfat. A grade Holstein owned by E. J. Jirovec of Harrison, was the highest producing cow, being credited with 64.6 lb. butterfat from 1,503 lb. milk.

Henry Thiede of Columbus, Wisconsin, has one of the best herds in Columbia County. One of his cows produced 73.8 lb. fat and his herd average is 41.8 lb. fat during October, the first month of the local cow testing association. There are 27 members of the new association, thirteen live in Columbia County, eleven in Dodge County and three in Dane County.

Eleven registered and grade Holsteins owned by Harry Hansen of Denmark, Wisconsin, averaged 1,050 lb. milk and 37.5 lb. fat in the Denmark Cow Testing Association. A registered two-year-old of this herd produced 1,092 lb. milk and 39.3 lb. fat.

A registered Holstein owned by Richard Connell of Chippewa Falls led the County Line Cow Testing Association for the 30 days ending December 1, with a production of 1,731 lb. milk and 65.8 lb. butterfat.

HOLSTEINS PROMINENT

J. Harlan of Newark, Ohio, has eighteen purebred Holsteins that averaged 1,166 lb. milk, 41.6 lb. butterfat during October in the Licking county cow testing association. The purebred and grade Holstein herd owned by J. H. and E. O. Myer averaged 981 lb. milk. A Myer cow was second with 1,736 lb. milk and exactly 66 lb. of fat to her credit; a Daweswood farm Holstein was third with 62.5 lb. fat from the same amount of milk, while a Harlan Holstein was fourth with 1,628 lb. milk, 61.9 lb. fat to her credit.

STATE OWNED LEADERS

The Michigan Reformatory herd of 48 purebred Holsteins heads the Ionia-Belding C. T. A. for October by averaging 1,094 lb. milk, 36.5 lb. butterfat. A member of the state hospital herd which is also located at Ionia topped the association by producing 2,849 lb. milk, 102.6 lb. fat. She also is a purebred Holstein.

The cannibal chief was weeping profusely, whereupon the inquiry was made, "Why do you weep?" "I am weeping for my dear Gullabazoo, the pride of my heart," sobbed the chief. "And why do you weep for her?" "Alas! Poverty compelled me to swallow my pride!"

Big Milkers and High Testers Combined

Bull born April 26, 1925. Right in every way, 7/10 black, well marked.

His dam, Hillside Rhododendron produced 35.15 lb. butter in seven days. She averaged 92 b. milk a day for 30 days, average fat, 4.29%.

His sire is from a cow that produced 3,019.6 lb. milk, 135.83 lb. butter in 30 days.

The dam and sire's dam averaged 96.3 lb. milk a day for 30 days, with an average test of 3.93%. Persistency—Production—High Testing.

My present herd of 60 purebreds is descended from Five Foundation Animals of choice Individuality and Large Producing Capacity.

Menzo A. Brooker

South New Berlin, R. D. 2

Chenango County, New York

*Under State and Federal Supervision.***A COMPLETE STATEMENT**

Elmer Lundberg of Dimondale, Michigan, had twelve registered Holsteins that averaged to produce 11,885 lb. milk, 400.8 lb. butterfat while enrolled in the North Eaton cow testing association. The tester figured that they produced one pound fat for every 24c invested in feed, that their milk cost 69c per 100 pounds, and that they returned Mr. Lundberg \$2.33 for every dollar's worth of feed they consumed.

First place in the association however, was taken by a registered three-year-old heifer owned by G. T. Warren of Dimondale; she produced 14,445, 486.1 lb. fat. The average for the association was 8,049 lb. milk, 285 lb. butterfat and the average feed cost of 100 pounds of milk was 74c.

AGAIN IN FRONT

First place in the Livingston County C. T. A. is held by a purebred Holstein owned by Fred Bless of Brighton, Michigan. She is credited with 2,223 lb. milk, 78 lb. butterfat, second place is taken by another purebred Holstein owned in the State Sanatorium herd with 64 lb. fat, 1,890 lb. milk; and these two animals stand first and second for milk as well as fat production. The highest herd average was made by the State Sanatorium aggregation consisting of 36 purebred Holsteins that averaged 903 lb. milk, 31.4 lb. fat. A two-year-old heifer in this herd made 52 lb. fat, 1,290 lb. milk.

NELLIE STANDS FIRST

Nellie, a Holstein Friesian owned by the Colorado State School for Deaf and Blind, Colorado Springs, produced 2,830 lb. milk and 78.7 lb. butterfat during the month of October, thereby becoming the leading cow of the state enrolled in C. T. A. work.

The leading herd was owned by Casper Hofmann of Broadway, Denver. This herd consists of seven purebred Holsteins and their average production was 1,101 lb. milk and 38.1 lb. butterfat. The feed cost per 100 lb. milk was \$1.16, while the feed cost of each lb. fat was 31 cents.

IDAHO HERD BUILDING

Howard Jenkins of Arimo, Idaho, was one of the first members of the Bannock County Cow Testing Association. The records his cattle made in that association caused him to weed out his herd. He replaced his culls with three purebred Holstein heifers and three grades, daughters of cows that have made at least 400 lb. butterfat in a year while enrolled in cow testing association work. In addition he will head his herd with a bull whose dam produced 800 lb. butterfat in a year.

FOR SALE.—King Winnie Segis Fayne, 23 months old, registered Holstein bull, mostly white. T. B. tested twice. Price \$150. **RAYMOND E. KELLER**, Bloomsburg, Pa., R. No. 3.

SUNSHINE DAIRY

Several times during the past year we have reported some of the performances of the purebred Holsteins owned by W. A. Withers of Elizabethtown, Pa. The Withers' herd goes by the name of "Sunshine Dairy" and is enrolled in the Garden Spot cow testing association. This association finished a year of test work October first with cows of the Withers' herd in first, third and eighth places. Four animals of this herd each produced over 400 lb. fat in the year, two above 500 lb. and the entire herd, old and young, averaged 357.4 lb. butterfat.

September was the final month of the year. Mary Lyons Hartje, although she is only a four-year-old at the present time, led the entire association for the month by producing 67.6 lb. butterfat from 1,827 lb. milk while her average test was 3.7%. A stable mate was second with 57 lb. fat and two other stable mates were among the ten highest cows.

October was the first month of the new C. T. A. year. Cows of the Sunshine Dairy were second, third and fourth, a purebred Holstein owned by H. Earl Long being first with 66.7 lb. fat. The highest Withers' cow is credited with 1,552 lb. milk, the lowest with 1,532 lb., certainly a very even production for three stable mates.

Sunshine Dairy is on the accredited list. The milk is sold at retail in Elizabethtown and owing to its quality and cleanliness the demand is increasing very rapidly.

STATE OWNED AND GOOD

Sioux Homestead Rue owned by the state penitentiary at Sioux Falls, South Dakota, was enrolled during the year in the local Cow Testing Association. She actually milked for only 11 months and produced 703.30 lb. butterfat and 18,873.9 lb. milk. During her best 30 days she was credited with 98 lb. butterfat.

There are 23 herds in the Sioux Falls Cow Testing Association and the penitentiary herd makes the best showing. The 29 purebred Holsteins in this herd, which includes 11 two-year-old heifers, averaged 427.25 lb. butterfat and 12,439.4 lb. milk.

FROM MINNESOTA TO MISSOURI

A carload of Holsteins containing 12 grades and 10 purebreds were shipped from Northfield, Minnesota, early in November by Glen Davis of Columbia, Missouri, formerly president of the Missouri State Holstein-Friesian Association. The price paid the Northfield dairymen is reported as being \$1,900.

A GOOD SHOWING

Farley Brothers, of Almont, Michigan, have a herd of 26 purebred Holsteins. A recent report of the Cow Testing Association of Michigan shows that there were 2,607 herds tested and that Farley's stood 15th, with an average milk production of 1,536 lb. and an average butterfat production 67.58 lb.

WELL BRED JUNIOR HERDSIRE

Because he has so many daughters of his herdsire, Ormsby Sensation 3d, the well-known breeder and dairyman, S. T. Witmer of Hummelstown, Pa. has leased for a time the Sunshine Dairy junior herdsire, Colonel Lyons Hartje Segis.

Colonel Lyons Hartje Segis is a very handsome bull, a son of Colonel Segis Mechthilde and Mary Lyons Hartje. In the Garden Spot cow testing association which operates in part of Lancaster county this cow was enrolled as a three-year-old heifer. In 273 days she produced 10,172 lb. milk, 341.9 lb. butterfat, certainly a very creditable showing in nine months, as practically all the time she was milked but twice a day. She is a splendid young cow and on account of her individuality, breeding and producing capacity her son was retained as a junior herdsire by Mr. Withers.

Mary Lyons Hartje was by Colonel Joh Lyons from Mary Hengerveld Hartje, a daughter of King Hengerveld Hartje with a record made in cow testing association work of 508 lb. butter, 11,575 lb. milk. One of her sisters in

COLONEL LYONS HARTJE SEGIS
Now junior sire in the S. T. Witmer Herd.
Owned by W. A. Withers, Elizabethtown, Pa.

semi-official test produced 960.6 lb. butter, 26,233 lb. milk in 305 days, being the first cow to produce 26,000 lb. milk in the ten months' tests.

Colonel Segis Mechthilde, sire of Colonel Lyons Hartje Segis, is a very handsome bull backed by a number of famous animals. His twenty nearest dams have seven day records that average 29.95 lb. butter. He is a son of the celebrated Colonel Joh Lyons, and his dam, Belle Segis Mechthilde, is a daughter of King Hengerveld Hartje with a seven day record of 26.74 lb. butter, 584.6 lb. milk. She is one of the very handsomest daughters of her noted sire, whose offspring are among the biggest and best cows in a number of northern Pennsylvania herds.

Sunshine Dairy is owned by W. A. Withers of Elizabethtown, Pennsylvania. It contains about five purebred Guernseys with the rest purebred Holsteins. In the Garden Spot C. T. A. last year the twenty-one milkers of this herd averaged 9,671 lb. milk, 357.4 lb. fat. This herd furnished the highest cow and the third highest cow in the association. When you consider this and then consider that Mr. Withers selected the son of Mary Lyons Hartje for a junior herd bull you can easily see why Mr. Witmer has secured this bull to breed to the daughters of Ormsby Sensation 3d.

JUNIORS REPAY CATTLE LOAN

Last spring the Converse County Calf Club was financed by members of the Kiwanis Club of Douglas, Wyoming, in the belief that the bringing in of purebred dairy stock and cooperation with a bunch of energetic youngsters would be beneficial to the dairy interests of the county and to the members of both the Calf Club and the Kiwanis Club.

Five cows and calves, purebred Holsteins were purchased at a delivered cost of \$1,260.41 and were turned over to the club members with the understanding that the purchase price was to be paid back from returns from the cows. Treasurer Howard Esmay and Trustee W. A. Spear, the first week in November repaid \$230.08, 20% of the loan to the lenders of the fund. This money was made from the sale of milk and from winnings at the State Fair.

PRIZE WORTH WINNING

John D. Christie, president of the Marathon county, Wisconsin agricultural society is interested in seed corn and has offered to give a registered Guernsey or Holstein calf to the boy or girl who will grow the best dent corn next summer and exhibit the corn at the Marathon county fair next fall. His competition is limited to members of a Marathon county junior club.

A quiet and retiring citizen occupied a seat near the door of a crowded car when a masterful, stout woman entered.

Having no newspaper behind which to hide, he was fixed and subjugated by her glittering eye. He rose and offered his place to her. Seating herself—without thanking him—she exclaimed in tones that reached to the farthest end of the car:

"What do you want to stand up there for? Come here and sit on my lap."

"Madam," gasped the man, as his face became scarlet, "I beg your pardon, I—I—"

"What do you mean," shrieked the woman. "You know very well I was speaking to my niece there behind you."

A GOOD TALKING POINT

Much gray matter is expended by advertisers in trying to make the public place its orders at once, but we doubt if any more convincing piece of copy has been written than this one:

"TO THE PUBLIC"

"The reason why I have hitherto been able to do painting so much cheaper than anybody else is because I am a bachelor and do not need to make a profit for the maintenance of a wife and children.

"Tis now my duty to inform the public that this advantage will shortly be withdrawn as I am about to be married. You will therefore do well to send in your orders at once for the old rate."

—The De Laval Monthly.

Mud may be a pretty good beautifier for women, but it hasn't seemed to help the turtle any.

**KING PONTIAC ALCARTRA FAYNE**

One of our former herdsires. Notice his Size and Type.

He is a grandson of KING SEGIS PONTIAC ALCARTRA and also of KING HENGERVELD AAGGIE FAYNE. We have Cows and Heifers for sale at all times also a few choice bull calves. Come and see our Accredited herd, the oldest in Northumberland County. Visitors always welcome.

MURRAY A. MILLER

Milton, Pa. R. D. 3.

YEAR AFTER YEAR

Our herd of nearly 100 purebred Holsteins passed a Clean T. B. Test.

Our cows are of superior Type and Dairy Quality and Profit Makers.

Our herdsire Ormsby Korndyke Hockster Lad is by Ormsby Korndyke Lad from a cow that produced 35.14 lb. butter, 636.3 lb. milk in seven day official test.

It will pay You to buy your Accredited Holsteins here.

Cheney Brothers & Jones

Randolph, Virginia

**SENSATION CLOTHILDE TEHEE**

is not only a splendid individual but is siring handsome calves. His dam produced 21,968 lb. milk, 945 lb. butter in a year as a three-year-old; his sire's dam 30,024 lb. milk, 1,250 lb. butter in a year. He is a Dairy Bull and heads a big producing Dairy.

This herd is ACCREDITED and Crawford County is now a Modified Accredited Area.

L. S. BROWN,
R. D. No. 1, Saegertown, Pa.

SMALL AND GOOD

It is not always the largest cow that is the best producer. This has been the experience of L. L. Allis in his herd at Rummerfield, Pa. For instance, Rachel Pontiac Lyons Johanna is a cow of medium size or perhaps you might term her small for a Holstein, yet she is every inch a cow and has produced over 90 lb. milk in a day. She was put in official test as a six-year-old and is credited with producing 581.7 lb. milk, 25.68 lb. butter in a week. This record was made 33 days after she freshened and for thirty days she averaged 83.1 lb. milk daily.

Rachel Pontiac Lyons Johanna is a very handsome animal nearly all white. She was sired by Segis Hengerveld Beets Lyons, a bull with many good daughters in northern Pennsylvania herds; and her dam, Rachel Pontiac Johanna, was sired by one of the many good sons of King Segis Pontiac.

At the head of the Allis herd is the bull, Berylwood Prince Aaggie Chicago. His sire was the noted California show bull, Prince Aaggie of Berylwood and his dam has produced in two years 53,664.1 lb. milk, 2,268.59 lb. butter.

WON VALUABLE PRIZE

At the first annual farmers' institute staged by the community club at Battle Creek, Michigan, Albert Hagelshaw of Union City won the grand prize, a Holstein calf valued at \$150. There were about four hundred exhibits at the Institute representatives of Calhoun county. Mr. Hagelshaw won in more different classes than did any other farmer.

A interesting program was given both days by speakers from Battle Creek and Lansing. They covered agricultural subjects of interest to farmers.

A WASHINGTON TRANSACTION

Ole Pearson of Mount Vernon, Washington, recently purchased a young bull from Youngquist Brothers of the Vernway farms.

Mr. Pearson owns twenty good purebred cattle and has built up a nice herd. The young bull he purchased was sired by Cascade Sir Jessie Piebe, while his dam, Princess Fayne Johanna, as a three-year-old heifer made a record of 19,080.1 lb. milk, 852 lb. butter in ten months. Jacob Dekker of Bow, Washington, also has a son of this same cow sired by LaConner Pontiac Segis, formerly senior herdsire at the Vernway farm.

PUNCTUATION REMARKS

The punctuation marks have personality. The period is imperative. It says "Stop here!" The comma is a free and easy little chap. He says "Slow up a bit, get your breath, and then trot along." The colon calls, "Oh, look what's coming—get ready!" Quotation marks give notice that the writer is letting some one else do the talking for a while. Parentheses mark the side paths when we leave the main line for a detour. Asterisks flash the message: "We're skipping something." The hyphen is a notice of partnership; sort of a typographical wedding ring.—*Inland Printer.*

KARLEN BUYS NEW PLACE

Fred C. Karlen of Monroe, Wisconsin, has purchased a farm of 136 acres at Monticello, Wisconsin, paying \$22,500 for it. He will take possession next March and stock it with purebred Holsteins. Mr. Karlen is familiar with the land around his new premises, for he formerly lived at Monticello.

MINNESOTA TESTING

An average of a little over 25 lb. butterfat was made during October by the 257 cows enrolled in the Le Sueur County, Minnesota Cow Testing Association. Ralph Swain owned the high producing cow, a Holstein credited with 1,838 lb. milk and 77.2 lb. butterfat.

UTAH TO HAVE HOLSTEIN HERDS

Purebred Holsteins have produced milk and butterfat so profitably and satisfactorily in the state owned herds of Utah that all other breeds will be disposed of and only Holsteins kept to supply milk for the various state institutions. The mental hospital at Salt Lake City has had a high class Jersey herd which has won many prizes, but instructions have been given Superintendent Dunn to consider the advisability of disposing of it and installing Holsteins.

Governor Geo. H. Dern said that while he recognized that the Jersey herd at the hospital was a very good one he felt that the state should not maintain a show herd at the sacrifice of efficiency, and that the needs of the institution demanded a bigger production of milk. Recently the mental hospital has been purchasing dairy products to the value of \$400.00 monthly.

A short time ago the herd at the state prison was changed from Guernseys to Holsteins which resulted in increasing the production of milk from 20 to 65 gallons daily. This did away with the purchase of additional milk and the experiment has been so successful and economical that it is likely that the Governor and the Board will change the color of all the state owned herds to black and white.

A VALUABLE SIRE

Traverse Hengerveld Admiral is the name of a bull owned by Albert Stock, Metamora, Michigan. This bull is closely related to the noted, recordmaker and producer Traverse Colantha Walker. Two-year-old daughters of the Admiral have been milking during the past year and are producing more than their mothers do as mature cows. Records of the local cow testing association show that these heifers are producing 13,800 lb. milk a year and 455 lb. butterfat. Their dams averaged 10,000 lb. milk and 350 lb. butterfat.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

I am aware of the fact that my success of the past has been largely due to the co-operation of my many Friends, and I wish to express my appreciation to you All. May the Sunshine of Prosperity attend You throughout the New Year.

Glenn R. Mead

The Auctioneer

East Aurora New York

A BELIEVER IN PEDIGREE STOCK

Chas. K. Konop who lives on an eighty-six acre farm near Cato, Wisconsin, in 12 years has built up a herd of 25 purebred Holsteins that averaged last year 16,500 lb. milk and 700 lb. butter.

In recent years Mr. Konop has exhibited cattle at the Manitowoc County Fair where 31 animals of his raising have won prizes. Sixteen of them obtained blue ribbons and three of them championships. At the 1925 fair four calves won three firsts and one second. It was impossible for them to win four firsts, because two of the animals were in the same class. One of the calves was junior champion male and another junior champion female, and the Konop exhibit was the first prize get of sire.

Last year from the Konop herd, milk was delivered at the cheese factory valued at \$2,374.16. Purebred cattle sold amounted to \$963.65, making a total of \$3,337.81. In addition, Konop's family of six are liberal users of milk and dairy products. The feed given the cattle, ten head of hogs and three horses cost \$1,476.76, so that the net profit above feed costs was \$1,365.14, this is in addition to the cash value of the hogs.

Wisconsin pedigree No. 2 rye, Wisconsin No. 1 oats, Wisconsin No. 2 winter wheat and pedigree barley are raised. The fields have been rotated with sweet clover, alfalfa and receive liberal applications of manure, lime and fertilizer.

Mr. Konop has been quoted as saying "Build up the soil as we do our herd because without a sound foundation on which to build we must fail." With the pedigree crops and high producing Holsteins Mr. Konop carries purebred Chester White and Yorkshire hogs, besides a fine producing flock of Rhode Island Red Chickens.

GIRL LEADS JUNIOR CLUB

Miss Ottilia Miller, daughter of Mr. and Mrs. Kosmos Miller, won a trip to the Chicago International Livestock Show for her work while enrolled in the Manitowoc County Boys and Girls Calf Club. Miss Miller who is sixteen years old was the guest of the Chicago and North Western Railway company, which took a large number of boys and girls to Chicago from various parts of the state.

Miss Miller was one of 120 boys and girls enrolled in calf club work in Manitowoc County. Of this number 72 exhibited at the county fair where Miss Miller showed the first prize, senior Holstein bull calf. This performance and on the exact and neat manner in which she kept the records of feed and labor which won her the trip prize. This is her second year in club work.

Following is the story of her project in her own words which was recorded in her calf club record book and following is a reprint of her summary sheet on the feed and labor costs for the period covered from the time of the calf's birth, December 6, 1924 until the latter part of August when the calf was shown at the County Fair.

"On December 6, 1924 Sir Bess Ormsby Netherland 19th was born on the Elm Lawn Farm. His sire being Sir Bess Ormsby Netherland No. 28452, the grand champion bull in Manitowoc county for the past three years, is now owned by the State University of Wisconsin. Sir Bess Ormsby Netherland 19th is also a grandson of the famous 37th. His dam is Lady Sarcastic De Kol Fobes. At birth he weighed 100 pounds and was very healthy. At first I wanted to sell him to the butcher but as he grew older his good points began to show so I decided to join the calf club with him. So I began to feed him whole milk until he was ten weeks old. From then until the first of June I fed him skimmilk to take the place of the whole milk. At five weeks of age I began to feed him grain and gave him all the alfalfa hay he wanted to eat. The ground feed he received was mixed with whole milk and skimmilk until it was discontinued. He did not care very much for the dry feed so I changed the ration and put in less corn and gave him some bran with it.

Grain mixture used—2 parts oats, 2 parts corn, 1 part oil meal, later 50 parts oats, 30 parts wheat bran and 10 parts corn and oil meal.

Kind of hay fed—Alfalfa.

Other material fed—Silage and middlings.

	Pounds Fed	Price Per Lb.	Cost
Silage	142	@ \$.002	\$.36

Total gain 550 lb.
Daily gain 2.11 plus lb.
Cost per 100 lb. \$10.41.

PET STOCK

Ladies are almost always good hands to take care of pet stock, especially small birds and many of them add materially to their pin money by raising animals or birds for sale. Mrs. Daisy Calvert of Fall Creek, Wisconsin, keeps a number of different varieties of birds as well as Buff Rock fowls. She makes a speciality of canary birds. Those of our readers who are fond of these entertaining, attractive little songsters should investigate Mrs. Calvert's offerings.
